En trigo se han exportado en menos \$22,386,820. En pasto seco hay una disminución de \$321,044. En cambio se produjeron los siguientes aumentos:

Lino.....	5, 859, 252	Azúcar	2, 751, 375
Maíz	6, 954, 650	Harina	939, 213
Maní	153, 438	Afrecho	291, 508

Los derechos de importación produjeron \$32,188,032, de los cuales \$3,953,274 corresponden al cinco por ciento adicional que, restado de la anterior suma, dan \$28,235,758. En el cálculo de recursos para el corriente año se habían estimado estos derechos en \$30,000,000 y el adicional en \$4,400,000.

Los derechos de exportación, debido á la salida extraordinaria de lana, han dado \$3,107,660.

Las demás recaudaciones importaron oro \$2,734,559 y papel \$878,716.

El total de las rentas aduaneras ha sido \$38,130,251 oro y \$878,716 moneda nacional.

Comparado con el año anterior hay en la renta á oro una disminución de pesos 479,320 y en las á papel un aumento de 138,615.

EXPORTACIONES PRINCIPALES EN 1901.

Durante el año de 1901, la República Argentina exportó los siguientes artículos (que representan las principales exportaciones) comparadas con las exportaciones de artículos semejantes en 1900:

Artículos.		1901.	1900.
Cueros de buey secos	Núm.	2, 421, 957	2, 308, 726
Cueros de buey salados.....	Núm.	1, 082, 111	1, 050, 737
Cueros de caballo secos.....	Núm.	125, 745	81, 658
Cueros de caballo secos.....	Núm.	135, 615	38, 445
Pieles de carnero	Pacas.	74, 799	63, 806
Pieles de cabra	Pacas.	4, 354	3, 507
Pelo.....	Pacas.	5, 159	4, 727
Lana	Pacas.	532, 942	253, 633
Carneros congelados.....	Núm.	2, 722, 727	2, 372, 969
Cuartos de carne de vaca	Núm.	497, 375	261, 365
Sebo.....	Barricas.	257, 744	177, 021
Mantequilla.....	Cajas.	55, 696	40, 487
Trigo.....	Toneladas.	972, 514	2, 042, 167
Maíz	Toneladas.	1, 129, 431	740, 685
Harina	Toneladas.	63, 464	37, 916
Afrecho	Toneladas.	96, 932	68, 915
Linaza	Toneladas.	371, 599	201, 093
Semilla oleaginosa	Sacos.	108, 132	112, 123
Heno.....	Pacas.	1, 844, 423	1, 423, 967
Moyuelo.....	Sacos.	309, 676	154, 821
Quebracho	Toneladas.	184, 654	221, 223
Tabaco	Tercios.	17, 087	14, 887
Azúcar	Toneladas.	57, 931	17, 855

En la República Argentina un fardo de pieles de carnero, ó una paca de lana ó pelo, pesa 450 kilogramos (ó sean 992.7 libras); un fardo de pieles de cabra, 370 kilogramos (ó sean 815.7 libras); una paca de heno, 50 kilogramos (110.23 libras); una barrica de sebo, 100 kilogramos (220.46 libras) y una caja de mantequilla 25 kilogramos (55.115 libras). Las toneladas que se han mencionado son métricas y representan 1,000 kilogramos de 2204.60 libras.

Los expresados artículos se exportaron á los países siguientes, debiendo advertirse que sólo se mencionan los principales de estos últimos:

Á los Estados Unidos.—1,096,563 de cuero de buey secos; 48,496 cueros de buey salados; 550 cueros de caballo secos; 254 fardos de pieles de carnero; 27,198 pacas de lana; 802 pacas de pelo; 59 barriles de sebo; 2,455 fardos de pieles de cabra; 33,335 toneladas de linaza; 4,647 toneladas de quebracho, y 11 toneladas de azúcar.

Al Reino Unido.—59,784 cueros de buey secos; 47,035 cueros de buey salados; 1,013 cueros de caballo salados; 8,502 fardos de pieles de carnero; 70 fardos de pieles de cabra; 288 pacas de pelo; 57,252 pacas de lana; 178,133 barriles de sebo; 2,722,727 carneros congelados; 480,101 cuartos de carne de vaca congelada; 120,031 toneladas de trigo; 258,537 toneladas de maíz; 63,027 toneladas de linaza; 355 toneladas de harina; 7,884 toneladas de afrecho; 14,459 sacos de semilla oleaginosa; 41,601 sacos de moyuelo; 3,085 pacas de heno; 1,342 toneladas de quebracho; 55,356 cajas de mantequilla, y 57,081 toneladas de azúcar.

Á Alemania.—228,258 cueros de buey secos; 447,474 cueros de buey salados; 119,582 cueros de caballo secos; 2,947 fardos de pieles de carnero; 368 pacas de pelo; 97,881 pacas de lana; 4,700 barriles de sebo; 35,589 toneladas de trigo; 106,963 toneladas de maíz; 59,347 toneladas de linaza; 2 toneladas de harina; 44,719 toneladas de afrecho; 1,580 sacos de moyuelo; 52,343 sacos de semilla oleaginosa; 237 pacas de heno; 81,840 toneladas de quebracho; 5,255 tercios de tabaco, y 15 cajas de mantequilla.

Á Francia.—37,993 cueros de buey secos; 145,019 cueros de buey salados; 1,791 cueros de caballo secos; 134,602 cueros de caballo salados; 52,679 fardos de pieles de carnero; 1,674 fardos de pieles de cabra; 541 pacas de pelo; 248,042 pacas de lana; 8,919 toneladas de trigo; 67,389 toneladas de maíz; 29,840 toneladas de linaza; 10,557 toneladas de afrecho; 261,329 sacos de moyuelo; 13,143 sacos de aceite oleaginoso; 14,020 toneladas de quebracho; y 659 toneladas de azúcar.

Á Bélgica.—128,981 cueros de buey secos; 369,522 cueros de buey salados; 2,557 cueros de caballo secos; 699 fardos de pieles de carnero; 151 fardos de pieles de cabra; 95,044 pacas de lana; 2,189 pacas de pelo; 10,369 barriles de sebo; 127,576 toneladas de trigo; 136,857 toneladas de maíz; 37,534 toneladas de linaza; 292 toneladas de harina; 4,998 toneladas de afrecho; 2,882 sacos de moyuelo; 26,372 sacos de

semilla oleaginosa; 5,503 pacas de heno; 23,016 toneladas de quebracho, y 11,664 tercios de tabaco.

Á Italia.—286,605 cueros de buey secos; 50 cueros de caballo secos; 9,469 fardos de pieles de carnero; 7 fardos de pieles de cabra; 7,430 pacas de lana; 936 pacas de pelo; 46,618 barriles de sebo; 35,772 toneladas de trigo; 29,027 toneladas de maíz; 8,906 toneladas de linaza; 100 toneladas de harina y un tercio de tabaco.

Á Brasil.—5,836 cueros de buey secos; 21 fardos de pieles de carnero; 24,915 barriles de sebo; 126,093 toneladas de trigo; 14,532 toneladas de maíz; 5 toneladas de linaza; 61,212 toneladas de harina; 1,302 toneladas de afrecho; 1,312 sacos de moyuelo; 410,906 pacas de heno, y 326 cajas de mantequilla.

CERTIFICACIÓN DE LA CORRESPONDENCIA.

El día 2 de enero de 1902, el Departamento de Correos de los Estados Unidos envió una comunicación á los Administradores de correos, relativa á la correspondencia certificada para la República Argentina. En dicha comunicación se hace constar que al Departamento se le había hecho saber oficialmente, que en la actualidad puede certificarse cualquiera correspondencia que se envíe á cualquiera administración de correos de la República Argentina, y que la certificación no se limita ya exclusivamente á ciertos artículos enviados á determinadas localidades.

LA INMIGRACIÓN EN 1901.

Los informes que ya se han publicado relativos á la inmigración en 1901, muestran que durante los doce meses de ese año llegaron á la República Argentina 160,582 personas y salieron 112,665; 125,951 de las personas que llegaron eran inmigrantes, de los cuales 90,127 vinieron directamente de países extranjeros, y 35,824 vinieron por la vía de Montevideo. En el número de las personas que salieron del país figuran 80,251 inmigrantes y 32,414 pasajeros. En 1900 llegaron 132,456 personas, de las cuales 105,902 eran inmigrantes, y en 1899 llegaron 145,699, de las cuales 111,083 también eran inmigrantes. En 1901 la mayor parte de los inmigrantes consistió en italianos, aunque se notó un aumento en la inmigración de judíos polacos y rumanos. La mayor parte de estos inmigrantes se ha dedicado á trabajos agrícolas.

MUESTRARIO DE LANAS PARA NORTE AMÉRICA.

Consecuente con la propaganda de expansión comercial que viene haciendo la Cámara mercantil para ensanchar el radio de acción de la exportación de los productos agropecuarios de la República, la Comisión

directiva ha autorizado á su Presidente, el Sr. CARLOS LIX KLETT, para la confección de un muestrario de lanas cruza Lincoln de la actual cosecha, para ser enviado á los Estados Unidos por intermedio del Sr. MICHAELSEN, quien lo solicitó de la asociación citada.

La colección se compone de ocho vellones y de ocho muestras, las que están técnica y científicamente clasificadas por el Sr. LIX KLETT.

Cada muestra lleva su correspondiente rótulo indicando la raza ó cruzamiento, finura, procedencia, zona, pastos y la estimación de rendimiento en lavado. Acompaña á las colecciones un catálogo, redactado por el mismo Señor, detallando las muestras con las observaciones pertinentes sobre la producción ovina de la República y las particularidades de la tarifa norteamericana para la introducción de las lanas argentinas á los Estados Unidos, cuyas tarifas son prohibitivas.

Son plausibles estos trabajos de vulgarización y de propaganda comercial que realiza la Cámara mercantil.

LOS "ESTUDIOS" DEL SEÑOR DON CARLOS LIX KLETT, SOBRE LA PRODUCCIÓN, EL COMERCIO, ETC., DE LA REPÚBLICA ARGENTINA.

[De la "Tribuna" de Buenos Aires, enero 22 de 1902.]

RECOMPENSA AL MÉRITO—UNA OBRA ARGENTINA EN EL EXTERIOR.

No deja de ser satisfactorio para el nombre patrio constatar que la obra que ha preparado nuestro compatriota el Señor CARLOS LIX KLETT, sobre la República Argentina, haya merecido primero por la Sociedad de Geografía Comercial de París, la alta distinción premiándola con la medalla "Crevaux," premio especial de oro; más tarde, la Sociedad de Geografía Comercial del Havre acordó también un premio, consistente en una gran medalla de oro; otras dos medallas de oro discernieron el Museo Comercial de Filadelfia y los jurados de la Exposición de Búfalo. La Sociedad de Estudios Coloniales y Marítimos de París premió el mismo libro con la más alta recompensa que le conceden los estatutos, esta es una medalla de plata de gran formato.

Por el último paquete ha recibido el Señor LIX KLETT, el premio que discernió á sus "Estudios sobre Producción, Comercio, Finanzas é Intereses Generales de la República Argentina," la Sociedad Nacional de Agricultura de Francia, consistente en una espléndida medalla de oro grabada especialmente con la efigie de OLIVIER DE SERRES. Acompaña á la medalla un diploma firmado por el presidente de la Sociedad de Agricultura de Francia el Secretario perpetuo, M. PASSY, miembro del Instituto de Francia y diputado, y por el Ministro de Agricultura, M. DUPUY.

Es oportuno manifestar que se considera en Francia esta distinción la más preferida y la de mayor alcance social, con esta particularidad:

que hasta la fecha no se había acordado á nación extranjera alguna; por lo tanto la República Argentina, entre las naciones extranjeras, es la primera que la recibe, gracias al trabajo del Sr. LIX KLETT y también á los estudios sobre las enfermedades del ganado realizados por el Señor LIGNIÈRES, Director del Laboratorio bacteriológico de esta capital.

El libro del Señor LIX KLETT ha obtenido con esta última distinción seis medallas y varios diplomas en Europa y América, formando un total de siete medallas, tres diplomas y una placa de oro, con las distinciones acordadas por un numeroso grupo de comerciantes, hacendados, industriales y agricultores de nuestro país.

Es, pues, con viva satisfacción que damos á conocer el resumen de estas manifestaciones de mérito á un trabajo argentino, que ha sido juzgado por las principales instituciones científicas y comerciales del mundo, reflejando naturalmente estos triunfos no solamente sobre el autor, sino ventajosamente sobre el país. Es quizás la primera vez que una obra argentina haya merecido en el exterior una acogida tan simpática. Es, pues, un gran honor para el autor, que puede estar satisfecho del éxito alcanzado.

RECURSOS DEL DISTRITO DE SANTA CRUZ.

Según recientes publicaciones francesas el territorio de Santa Cruz, en la parte meridional de la República Argentina, ofrece oportunidades muy grandes á los que quieran dedicarse á su fomento agrícola é industrial. La crianza de carneros, y en general de toda clase de ganado, puede convertirse allí en una gran fuente de riqueza.

El clima de aquella región se parece en muchos casos al del Canadá; y tan á propósito es para la crianza antedicha, que según se asegura hay todavía diversas localidades en que el ganado se cría silvestre.

En su suelo no se han cultivado todavía los cereales; pero la alfalfa abunda, y los prados están cubiertos de buenos y abundantes pastos.

El Gobierno vende estas tierras á precios muy moderados y bajo cómodas condiciones. Es muy fácil para los compradores adquirir pronto un título de dominio claro y perfecto. Las más valiosas de estas tierras, que son también las que ofrecen mayores facilidades para el trabajo del que emprenda utilizarlas, son las situadas cerca de la costa, y pueden comprarse á razón de 7,000 ú 8,000 pesos por legua cuadrada. En el interior los precios bajan á 5,000, y en ocasiones á 3,000 pesos la misma medida. Las mejores tierras del interior son las situadas en las márgenes del río de Santa Cruz.

Se dice que el Gobierno de la República se ocupa en la actualidad de mejorar los puertos de este distrito.

EL PRESUPUESTO DE 1902.

El presupuesto general de gastos para el corriente año queda fijado en \$33,027,223.26 oro, \$102,943,692.66 moneda nacional, distribuidos en los siguientes anexos:

	Oro.	Papel.
Congreso	\$2, 558, 180. 00
Interior		14, 609, 481. 84
Relaciones Exteriores y Culto	\$387, 141. 20	1, 350, 840. 00
Hacienda		7, 857, 621. 82
Deuda pública	23, 984, 123. 51	12, 093, 810. 12
Justicia é Instrucción Pública		13, 039, 099. 24
Guerra		18, 001, 580. 76
Marina	11, 462. 40	11, 033, 284. 00
Agricultura	12, 000. 00	2, 991, 960. 00
Obras públicas	300, 000. 00	11, 262, 086. 00
Pensiones, etc		5, 500, 748. 88
Extraordinario	8, 332, 496. 15	2, 645, 000. 00
Total	33, 027, 223. 26	102, 943, 692. 66

BOLIVIA.

TRATADO DE EXTRADICIÓN ENTRE BOLIVIA Y LOS ESTADOS UNIDOS.

Firmado en La Paz, abril 21 de 1900.

Ratificado por los Estados Unidos, agosto 2 de 1901.

Ratificado por Bolivia, diciembre 19 de 1901.

Ratificaciones cangeadas en La Paz, diciembre 23 de 1901.

Proclamado, diciembre 30 de 1901.

La República de Bolivia y la Republica de los Estados Unidos de América, deseosas de estrechar sus relaciones de amistad y de servir la causa de la justicia, han convenido en celebrar un Tratado para la extradición de los criminales que hayan huido de la justicia, tanto de Bolivia como de los Estados Unidos de América, y han designado con tal fin á los siguientes Plenipotenciarios:

El Presidente de la República de Bolivia, al Señor Doctor ELIODORO VILLAZÓN, Ministro de Relaciones Exteriores. El Presidente de los Estados Unidos de América, al Señor Doctor GEORGE H. BRIDGMAN, Enviado Extraordinario y Ministro Plenipotenciario en Bolivia, quienes, después de haberse presentado sus respectivos plenos poderes y encontrádoslos en buena y debida forma, han convenido en los siguientes artículos:

ARTÍCULO I. El Gobierno de Bolivia y el Gobierno de los Estados Unidos convienen en entregarse recíprocamente las personas que habiendo sido acusadas ó convietas de cualesquiera de los crímenes ó delitos especificados en el artículo siguiente, cometidos dentro de la jurisdicción de una de las partes contratantes, busquen un asilo ó sean

encontradas dentro del territorio de la otra, siendo necesario para ello que una prueba evidente de criminalidad, de acuerdo con las leyes del lugar en que el fugitivo ó la persona acusada sea encontrada, justifique su aprehensión y compruebe la existencia del crimen ó delito.

ART. II. Será acordada la extradición por los siguientes crímenes y delitos:

1°. Homicidio, comprendiendo el asesinato, parricidio, infanticidio y envenenamiento, tentativa de asesinato, homicidio voluntario.

2°. Incendio voluntario.

3°. Robo, comprendiéndose en esta palabra el acto de que una persona arrebatase á otra su dinero, bienes, documentos ú otra propiedad con felonía y violencia, por la fuerza ó por la intimidación; saqueo.

4°. Falsificación de documentos y emisión de ellos, falsificación de documentos oficiales del Gobierno, ó de las autoridades públicas, ó de los tribunales de justicia y la circulación de objetos falsificados.

5°. La imitación, falsificación ó alteración de la moneda, sea metálica ó de papel ó de los títulos de la deuda emitidos por los Gobiernos Nacional, del Estado, Provincial ó Municipal, ó de sus cupones, ó de billetes de banco, ó la emisión ó circulación de ellos; ó la imitación ó falsificación de los sellos del Estado.

6°. Defraudación por empleados públicos; defraudación por personas empleadas ó sujetas á sueldo en perjuicio de sus jefes, siempre que en cualquiera de los diferentes casos la defraudación exceda de la suma de 200 dollars, y hurto.

7°. Fraude ó abuso de confianza de un depositario, banquero, agente, apoderado ú otra persona que administre bienes, ó director ó miembro ó administrador de alguna institución, cuando dicho acto es considerado criminal por las leyes de ambos países y el monto del dinero ó el valor de la propiedad usurpada no baje de \$200, ó de B^s 500.

8°. Perjurio ó soborno para conseguirlo.

9°. Rapto, violación y robo de una persona.

10°. Destrucción ú obstrucción premeditada é ilícita de las líneas férreas que pongan en peligro vidas humanas.

11°. Crímenes cometidos en el mar.

A. Piratería según los reglamentos ó las leyes de las naciones.

B. Rebelión ó conspiración para la revuelta por dos ó más personas á bordo de una nave en alta mar contra la autoridad del Jefe.

C. Hundir ó destruir criminalmente una nave en el mar ó la tentativa de hacerlo.

D. Asaltar á bordo de un navío en alta mar con la intención de infligir un grave perjuicio corporal.

12. Crímenes y delitos contra las leyes de ambos países relativos á la abolición de la esclavitud y al comercio de esclavos.

La extradición tendrá también lugar por la complicidad en cualquiera de los crímenes y delitos enumerados en este Tratado, con tal

de que dicha complicidad pueda ser castigada como crimen, según las leyes de ambos países.

ART. III. Las requisitorias para la entrega de los fugitivos de la justicia, serán hechas por medio de los Agentes diplomáticos de las partes contratantes ó en ausencia de ellos del país ó del asiento del Gobierno, podrán ser hechas por los Agentes consulares superiores.

Si la persona cuya extradición es solicitada, ha sido convicta de un crimen ó delito, debe ser presentada una copia debidamente autorizada de la sentencia del tribunal ante el cual ha sido acusada, ó si el fugitivo ha sido simplemente acusado de crimen, una copia debidamente autorizada del mandamiento de arresto en el país dónde se ha cometido y de las declaraciones ú otras pruebas en que dicho mandamiento se ha fundado.

La extradición de los fugitivos según las prescripciones de este Tratado, será efectuada en Bolivia y en los Estados Unidos respectivamente, en conformidad con las leyes que regulan la extradición en el país ante el cual se ha hecho la petición respectiva.

ART. IV. Cuando se pida el arresto ó detención de un réo prófugo, por telégrafo ó por cualquier otro medio anterior á la presentación de las pruebas en debida forma, el procedimiento en los Estados Unidos será recurrir á un juez ú otro magistrado con facultades para librar mandamientos de arresto en casos de extradición y presentará la demanda bajo juramento, como está establecido por las leyes de los Estados Unidos.

Cuando, según lo establecido por este artículo, se desee el arresto y detención de un fugitivo en Bolivia, el procedimiento será recurrir al Ministerio de Relaciones Exteriores, el que tomará inmediatamente las medidas necesarias para asegurar su detención ó arresto provisional.

La detención provisional de un fugitivo cesará y el prisionero será puesto en libertad, si no se produce una requisitoria en forma para su entrega, acompañada de las pruebas suficientes de su criminalidad, según las estipulaciones de este Tratado, dentro de los dos meses de la fecha de su arresto provisional ó detención.

ART. V. Ninguna de las partes contratantes estará obligada á entregar á sus propios ciudadanos según las estipulaciones de este Tratado.

ART. VI. Un criminal fugitivo no será entregado, si el delito por el cual es solicitada su entrega tiene un carácter político ó si prueba que la petición de su entrega ha sido hecha con el propósito de perseguirlo ó castigarlo por un delito político.

Ninguna persona entregada por una de las altas partes contratantes á la otra será juzgable ó juzgada, ni será castigada por ningún crimen ó delito político ó por ningún acto relacionado con él, cometido ántes de su extradición.

Si se suscitase cuestión sobre si el caso de que se trata está ó no comprendido en las estipulaciones de este artículo, la decisión de la

autoridad del Gobierno ante el cual se ha hecho la demanda de entrega, ó la de que debe acordar la extradición, será definitiva.

ART. VII. No será concedida la extradición, en ejecución de las estipulaciones de este Tratado, si los procedimientos legales ó la ejecución de la penalidad por el acto cometido por la persona reclamada han quedado prescritos ó limitados por las leyes del país al cual se ha dirigido la requisitoria.

ART. VIII. Ninguna persona que haya sido entregada por una de las altas partes contratantes á la otra podrá, sin su consentimiento, libremente manifestado y públicamente declarado, ser procesable ó procesada, ni sera castigada por ningún crimen ó delito cometido en época anterior á la de su extradición y distinto á aquél por el cual ésta ha sido concedida, mientras no haya regresado al país de dónde fué extraído.

ART. IX. Todos los objetos secuestrados á la persona que debe ser entregada al tiempo de su aprehensión, ya sean productos del crimen ó del delito imputado ó ya sean capaces de dar una evidencia ó prueba material del crimen ó del delito, serán remitidos de acuerdo con las leyes del país en cuanto sea posible á tiempo de concederse la extradición. Sin embargo, los derechos de terceros sobre dichos objetos serán debidamente respetados.

ART. X. Si el individuo reclamado por una de las altas partes contratantes, en ejecución del presente Tratado, fuere también reclamado por uno ó varios Estados distintos con motivo de crímenes ó delitos cometidos dentro de sus respectivas jurisdicciones, su extradición será concedida á aquél cuya solicitud haya sido recibida primero, siempre que el Gobierno al cual es solicitada la extradición no esté comprometido por un Tratado á dar á otro la preferencia.

ART. XI. Los gastos que se efectúen en el arresto, detención, identificación y entrega de los fugitivos, según este Tratado, deben ser á cargo del país en cuyo nombre se ha pedido la extradición. Sin embargo, el Gobierno demandante no estará obligado á ningún gasto por los servicios de los empleados públicos del Gobierno al cual se ha pedido la extradición si éstos están sujetos á sueldos fijos. Todo cargo por los servicios de dichos empleados públicos cuando sólo reciben premios ó gratificaciones, no debe exceder de los usuales por los actos ó servicios prestados por ellos en los procedimientos criminales ordinarios según las leyes del país en el cual son empleados.

ART. XII. El presente Tratado se ejecutará á los 30 días después de la fecha del canje de las ratificaciones y no podrá tener efecto retroactivo.

Las ratificaciones del presente Tratado serán canjeadas en la ciudad de La Paz, tan pronto como sea posible, y continuarán en vigencia por un período de seis meses después de que uno de los Gobiernos contratantes haya manifestado al otro su propósito de ponerle término.

En fe de lo cual, los respectivos Plenipotenciarios han firmado los

anteriores artículos en los dos idiomas español é inglés y fijado sus respectivos sellos.

Hecho por duplicado en la ciudad de La Paz, Bolivia, el veintiuno de abril de mil novecientos.

ELIODORO VILLAZÁN. [SEAL.]

GEORGE H. BRIDGMAN. [SEAL.]

CONVENCIÓN PARA EL CAMBIO DE GIROS POSTALES, ENTRE LOS ESTADOS DE NORTE AMÉRICA Y LA REPÚBLICA DE BOLIVIA.

El Departamento de Correos de los Estados Unidos y la Administración de Correos de Bolivia, deseosos de establecer un sistema de cambio de giros postales entre ambas naciones y hallándose debidamente autorizados para ello, los suscritos, Dr. JORGE H. BRIDGMAN, por los Estados Unidos de América, y el Dr. FEDERICO DIEZ DE MEDINA, por la República de Bolivia, han acordado los artículos siguientes:

ARTÍCULO I. Se establece un cambio regular de giros postales entre ambas Repúblicas.

ART. II. El monto de los giros expedidos en ambas direcciones será especificado en moneda de los Estados Unidos, y á consecuencia de la constante fluctuación del cambio entre ambos países, se conviene que todas las cantidades se conviertan á su equivalente en esta moneda por la sección de Correos de Bolivia; es decir, que las cantidades que reciba la Administración de Correos de Bolivia por letras giradas á cargo de los Estados Unidos, se convertirán al realizarse éstas á su equivalente en moneda de los Estados Unidos al cambio que en la fecha rigiese, y las cantidades por las que se girase de los Estados Unidos á cargo de Bolivia, al tipo de cambio que rija el día del arribo de la fórmula á que se refiere el artículo IX.

ART. III. (1) El máximo de cada giro se fija en cien dollars (100).

(2) Ningún giro contendrá fracciones de centavo.

ART. IV. El valor de los giros postales será entregado por los remitentes y pagado á los destinatarios en moneda de oro ó en moneda legal y corriente. Sin embargo, si circulase en ambos países papel moneda autorizado legalmente pero de menor valor que la de oro, la Administración de Correos de dicho país podrá recibirla y emplearla en sus transacciones con el público, teniendo en cuenta la diferencia de su valor.

ART. V. (1) La sección de Correos de Bolivia queda autorizada para fijar la comisión que debe pagar el público sobre los giros postales hechos en Bolivia, y el Departamento de Correos de los Estados Unidos tendrá la misma atribución para los giros postales que se hagan en los Estados Unidos.

(2) Cada una de las naciones dará conocimiento á la otra de tiempo en tiempo de la tarifa de derechos que cobra (derechos pagados por el público) y que se establezca según esta convención, y estos derechos deberán en todo caso ser pagados al contado por los remitentes, no siendo reembolsables dichos derechos.

(3) Además, se estipula que cualquiera de las dos naciones podrá suspender temporalmente los giros postales si se cometiesen abusos ó tuviesen causas que redunden en perjuicio de los ingresos postales.

ART. VI. Corresponden á cada nación los derechos cobrados al público sobre todos los giros postales expedidos dentro de su jurisdicción.

ART. VII. El servicio de giros postales entre las dos Naciones será desempeñado exclusivamente por intermedio de Oficinas de cambio. De parte de los Estados Unidos la oficina de cambio será Nueva York, y por parte de Bolivia, La Paz.

ART. VIII. No se librará ningún giro postal hasta que el interesado haya suministrado su nombre y dirección y el nombre y dirección de la persona á quien debe pagarse el monto del giro, ó el nombre y dirección de la casa comercial ó compañía que es el remitente ó el destinatario, dándose además el nombre y dirección de ambas.

ART. IX. (1) El pormenor de todos los giros postales librados en los Estados Unidos á cargo de Bolivia se anotará en la oficina de cambio de Nueva York, en una fórmula idéntica al anexo A (en el Apéndice) en la cual se demostrará el valor de cada giro en moneda de los Estados Unidos, la que después de haber recibido en Nueva York la impresión del timbre fechador, se remitirá á la oficina de cambio de Bolivia, donde también recibirá la impresión del timbre fechador de esa oficina y donde se llevará á cabo la disposición necesaria para efectuar el pago de los giros.

(2) De igual manera se anotará por la oficina de cambio de La Paz, el pormenor de los giros hechos en Bolivia á cargo de los Estados Unidos en una fórmula idéntica á la que va marcada B (en el Apéndice), en la que se especificará el importe de cada giro en la moneda de ambos países, cuya fórmula después de haber recibido la impresión del timbre fechador usado en esa oficina, se remitirá á la oficina de cambio de Nueva York, donde recibirá la impresión del timbre fechador usado en aquella oficina, y donde se llevará á efecto la disposición necesaria para efectuar el pago de los giros.

(3) Cada fórmula, así como cada anotación en las fórmulas despachadas, deberán ser numeradas consecutivamente 1, 2, 3, 4, 5, etc. en el orden de despacho; principiando el 1º de julio de cada año, y se acusará recibo de las fórmulas por cada una de las partes, mediante la primera fórmula subsiguiente que se dirija á la otra oficina.

(4) Esta fórmula se remitirá por cada correo que se despache de Bolivia al puerto de Nueva York y vice versa, y de cada fórmula despachada, se remitirá un duplicado por el siguiente correo.

(5) Si sucediese que en el día en que debe despacharse la fórmula no hubiese que anunciar giro alguno, ésta se despachará de todos modos. En tal caso la oficina de cambio anotará al través de la fórmula “ningún giro.”

(6) Si alguna de las fórmulas ó sus duplicados dejasen de llegar en su debido tiempo á su destino, la oficina de cambio remitora enviará un duplicado ó triplicado, debidamente legalizado, tan luego como reciba aviso del extravío.

ART. X. (1) Tan pronto como lleguen las fórmulas de la oficina expeditora á la receptora, ésta reexpedirá giros postales á favor de las personas á quienes debe hacerse el pago, por las cantidades especificadas en la fórmula, y las enviará al destinatario ó á las oficinas de recepción, libres de porte, en conformidad con las disposiciones de cada país para el pago de los giros postales.

(2) Si las fórmulas contuviesen irregularidades que la oficina receptora no pudiese rectificar, pedirá á la brevedad posible una aclaración. Mientras llegue esta aclaración quedará en suspenso la remisión de los giros postales correspondientes á las anotaciones erróneas encontradas en la fórmula.

(3) La oficina de cambio receptora devolverá à la expeditora una copia de cada fórmula de cambio recibida, pero antes de devolver dicha copia, anotará en ella los nombres de las distintas oficinas donde se hubiese hecho el pago de los giros contenidos en la fórmula de origen y en las fórmulas de los Estados Unidos que fuesen devueltas por la oficina de cambio de La Paz, se anotará también el valor de cada giro en moneda boliviana según el cambio al que los hubiese convertido.

ART. XI. (1) Los giros postales librados por cada nación á cargo de la otra, quedarán sujetos en cuanto á supago á las disposiciones que gobiernan el pago de los giros postales en el país á cuyo cargo han sido librados.

(2) Los giros pagados quedarán en poder del país en que se hizo la cancelación.

ART. XII. Cuando se desee corregir algún error en el nombre del remitente ó destinatario, ó que el valor del giro postal deba ser devuelto al remitente, éste deberá solicitarlo de la Administración de Correos donde se hizo el giro.

ART. XIII. Sólo se podrán emitir duplicados de giros postales por la Administración de Correos del país donde los originales debían pagarse, y en conformidad con las disposiciones establecidas ó por establecer en dicho país.

ART. XIV. (1) El reembolso de los giros postales á los remitentes no se efectuará mientras no reciba la autorización para dicho reembolso el país remitente, del país donde deben pagarse dichos giros, y las sumas de los giros reembolsados serán debidamente abonadas al primero de dichos países en la cuenta trimestral. (Artículo XVI.)

(2) Es de atribución de cada una de las Administraciones indicar la manera cómo debe efectuarse el reembolso á los remitentes.

ART. XV. (1) Los giros postales que no se hubiesen pagado en el término de doce meses desde la fecha de su emisión, se considerarán nulos y las cantidades recibidas quedarán en beneficio y á disposición del país de origen.

(2) La Administración de Correos de Bolivia por lo consiguiente, abonará á la de los Estados Unidos en su cuenta trimestral los giros postales que hubiese recibido conforme á las fórmulas enviadas de los Estados Unidos y que hubieren quedado sin pagarse á la terminación del plazo mencionado. (Artículo XVI.)

(3) Por otra parte, el Departamento de Correos de los Estados Unidos deberá así mismo remitir á la Administración de Correos de Bolivia, al fin de cada mes, para su anotación en las cuentas trimestrales, un cuadro detallado de todos los giros postales incluidos en la fórmula despachada por la Administración de Correos de Bolivia, que hubiesen quedado nulos en conformidad con el presente artículo.

ART. XVI. (1) Al fin de cada trimestre se formará por la Administración de Correos de Bolivia una cuenta detallada de los totales de las fórmulas, con los pormenores de los giros hechos en ambos países durante el trimestre y demostrante el saldo que resultare de esta operación.

(2) Dos copias de esta cuenta se remitirán á la Administración principal de Correos de los Estados Unidos en Wáshington, y si el saldo que resultare después de verificada la comprobación, fuese en contra del Departamento de Correos de los Estados Unidos, será pagado en La Paz; mas si fuese en contra de la Administración de Correos de Bolivia será pagado en Nueva York y en moneda corriente del país al que se hace el pago.

(3) Pueden también hacerse estos pagos en dinero ó por medio de letras sobre otros puntos que no sean La Paz ó Nueva York, por mutuo acuerdo entre ambas administraciones.

ART. XVII. (1) Si mientras se verifique el ajuste de una cuenta llegase una de las administraciones, á establacer que debe á la otra una suma mayor de mil dollars (\$1,000), la oficina deudora remitirá á la brevedad posible á la oficina acreedora la cantidad aproximada de dicho saldo, no habiendo ninguna estipulación en el presente convenio que impida á la Administración deudora remitir una suma menor de mil dollars (\$1,000) si así lo tuviere por conveniente. Esta cuenta así como las cartas que acompañen estas remesas intermedias, irán en conformidad con modelos C, D, E, F (Anexos á esta Convención).

(2) Si la Administración deudora no verificase el pago del saldo hasta los tres meses de la fecha en que se conozca dicho saldo, la Administración acreedora tendrá el derecho de exigir y recibir el interés correspondiente á ello.

ART. XVIII. (1) Las Administraciones de Correos de ambos países quedan autorizadas para adoptar cualquiera medida adicional (que no fuese incompatible con lo que precede) para mayor seguridad contra el fraude ó para el mejor servicio del sistema en general.

(2) Todas estas medidas adicionales deberán, sin embargo, ser comunicadas oportunamente al Departamento de Correos de la otra nación.

ART. XIX. Ambas administraciones quedan autorizadas en casos extraordinarios que justifiquen tal medida, á suspender temporalmente el servicio de giros, ya sea en su totalidad ó en parte, con la condición de dar aviso inmediato de tal suspensión y si lo creyere necesario avisará por medio del telégrafo.

ART. XX. La presente Convención se pondrá en vigencia el día primero de diciembre de 1901, y continuará rigiendo hasta los doce meses después que cualquiera de las dos partes contratantes haya notificado á la otra su intención de terminarla.

Las ratificaciones de la presente Convención se canjearán en La Paz á la brevedad posible. En fe de lo cual los respectivos Plenipotenciarios firman los anteriores artículos en los idiomas inglés y español y fijan sus respectivos sellos.

Hecho por duplicado en la ciudad de La Paz á los 20 días del mes de junio, 1901.

LA PAZ, de, 1901.

Señor DIRECTOR-GENERAL DE CORREOS,

Washington, E. U., de América.

MUY SEÑOR Mfo: Adjunto al presente oficio, tengo el honor de remitir á Ud. mi endoso de libranza número por el valor de girarda por
 á cargo de
 pagadera á la vista en

He de merecer á Ud. se sirva acreditar esa cantidad en nuestra cuenta de giros postales por el trimestre en curso.

Reitero á Ud. las seguridades de mi muy distinguida consideración.

El Director-General de Correos.

DECRETOS ESTABLECIENDO DERECHOS DE EXPORTACIÓN SOBRE LOS CUEROS.

I.

JOSÉ MANUEL PANDO, PRESIDENTE CONSTITUCIONAL DE LA REPÚBLICA.

Por cuanto el Congreso Nacional ha sancionado la siguiente ley:

“El Congreso Nacional decreta:

“ARTÍCULO 1. Se establece el impuesto de un boliviano por cuero de ganado vacuno que se exporte del Departamento de Tarija fuera de la República.

“ART. 2. El producto de este impuesto de carácter departamental será aplicado á la apertura y conservación de un camino carretero de la ciudad de Tarija por Papachaera y San Luis hasta Crevaux.

“Comuníquese al Poder Ejecutivo para los fines constitucionales.

CONTRATA PARA LA CONSTRUCCIÓN DE UN PUERTO, UN CANAL Y UN FERROCARRIL.

La Revista del Río de La Plata anuncia que el Gobierno boliviano ha firmado un contrato con la Compañía Africana para llevar á cabo la construcción y explotación de un puerto en Bahía Negra, con un canal en el Alto Paraguay. También ha contratado la construcción de un ferrocarril desde el ramal del oeste de Bahía Negra hasta Santa Cruz, con un ramal que va á Sucre y á Potosí, de un metro de ancho, de fuerza motriz eléctrica ó de vapor. Los planos de 400 kilómetros de la línea se han de presentar dentro de 18 meses, en tanto que toda la vía se ha de concluir en 10 años. Como compensación la Compañía ha de percibir un 6 por ciento de los ingresos de la aduana de Bahía Negra durante un período de 25 años, y además 400 leguas cuadradas de terreno.

RIQUEZA DE LOS DEPÓSITOS DE ESTAÑO DE LA REPÚBLICA.

Es un hecho que los metalúrgicos saben de sobra, que de los metales que se usan comúnmente, el estaño es el metal que se encuentra más escasamente distribuido en el mundo. Si bien es verdad que apenas

existe un país en que el oro no se haya explotado ó pueda explotarse con utilidad, sólo existe media docena de distritos en el mundo que producen estaño en cantidades que pueden realizarse con ganancia. Dícese que los depósitos de Cornwall, cuyo estaño ha sido famoso desde los tiempos más remotos, se han agotado prácticamente, siendo así que el producto total de esta fuente en 1900 sólo ascendió á 3,910 toneladas. Las minas de Bohemia, Toscana y España se están agotando rápidamente, y ni en la América del Norte ni en Africa, se han encontrado cantidades suficientes de este metal que se puedan explotar con utilidad. Los dos distritos productores de este metal en Asia, á saber, el distrito de Hunau en China, y las colonias inglesas en la Indo-China, han constituido las fuentes principales de abastecimiento en estos últimos años, y últimamente Australia también ha venido á figurar en la lista de los países productores de estaño.

Se sabe que en México existen extensos depósitos de estaño en el Estado de Durango, pero en la actualidad no se están explotando por la falta de medios para transportar el producto de las minas. En el Brasil, el Perú y Bolivia, hay minas de estaño que pueden explotarse con utilidad, pero en la actualidad las únicas que producen son las minas de las dos Repúblicas últimamente mencionadas. El producto de las minas de Bolivia es digno de especial mención, siendo así que los informes correspondientes al año de 1900 indican que la exportación de este artículo por el puerto de Antofagasta ascendió á 12,000 toneladas, incluyendo los minerales en barras y los residuos, de los cuales se enviaron 4,350 toneladas á Londres.

La "Iron and Coal Trades Review", de Londres, publicó recientemente un artículo relativo á algunos de los recursos minerales de Centro y Sud América. El resumen que hace la Revista acerca de los depósitos de estaño de Bolivia es completo é interesante, y muestra, además, que dichos depósitos son casi inagotables. Las minas de estaño están situadas y se describen de la manera siguiente:

El distrito de Huanuni en Bolivia ha sido durante muchos años un centro importante de explotación de minas de estaño. Pozoconi, montaña cónica de una altura de 1,800 pies aproximadamente sobre el nivel de la barranca adyacente, está atravesada por una multitud de filones y venas que se han explotado considerablemente. Si bien es verdad que muchos de éstos contienen piritas de estaño á una profundidad como de 100 á 200 pies, también es cierto que en uno de los filones principales que atraviesa la cúspide de las montañas, se ha encontrado el mineral puro sin alteración, á una profundidad de 600 pies. La mayor parte de los depósitos en Pabellón Negro, Morococala, y Huanuni, contienen venas continuas de piedra de estaño sólida de diferentes anchos, hasta dos pies, y como es de suponer, en tales circunstancias, se tropieza con ciertas dificultades debidas á la dureza extrema, tanto de la vena misma como de las rocas adyacentes; pero

también se encuentran y explotan con utilidad filones de barro que contienen riñones y granos interpuestos, en tanto que de las piritas de estaño se extrae mineral mediante el procedimiento de calcinación en hornos, y mediante los procedimientos de molienda y lavatorio.

Las minas denominadas Challa-Apacheta están situadas como á diez millas al sur de Huanuni, siendo así que los filones atraviesan las lomas que se elevan como á 250 pies sobre el nivel de la hondonada adyacente. Uno de estos filones es muy notable porque tiene un ancho descomunal, á saber, de 25 á 30 pies, siendo así que el mineral de estaño está tan espesamente entremezclado en forma de granos y arena á través de un guijo levemente arcilloso, que toda la masa rinde un promedio como de un 20 por ciento. Este filón se ha explotado horizontalmente sobre una extensión de 250 pies, y como hasta una distancia igual verticalmente debajo de la superficie. Cuando se encuentra la pirita, el filón es sumamente blando, y el material se saca con picos y palas á un costo muy bajo. Sin embargo, se requiere cierto grado de molienda para que las partículas de estaño adquieran un tamaño uniforme y para tratarlo eficazmente en el lavador. En una loma adyacente se encuentra lo que parece ser la continuación del mismo filón, pero en condiciones muy diferentes. En este último punto es una vena relativamente angosta y dura, de 12 á 18 pulgadas de ancho, muy sólida en algunas partes, pero con una mezcla de pirita más ó menos considerable que hace necesaria la calcinación antes de molerse. Esta calcinación se efectúa en pilas al aire libre, siendo suficiente el uso de una cantidad muy pequeña de combustible en la base para iniciar la combustión, que después se mantiene mediante el azufre que aquélla contiene.

La mina denominada de "Avecayo," situada en una empinada montaña en la extremidad sur del distrito de estaño de Oruro, contiene filones cuyo ancho varía de 1 hasta 3 pies, de los cuales se sacan masas muy regulares de mineral sólido que rinden un promedio como de un 40 por ciento del metal. El distrito minero de Berenguela se halla situado como á 45 millas al este de Oruro, sobre las alturas que hay justamente al sur de la quebrada de Arque. Los españoles lo explotaron mucho, pero principalmente para extraer la plata, que algunos de los filones parece que contenían en gran abundancia. Los que contienen estaño son distintos y casi vírgenes. El óxido de estaño de cuando en cuando se encuentra macizo y puro, pero se encuentra mayormente en forma de granos diminutos entremezclados con un guijo ferruginoso y silíceo que tiene de 3 á 6 y hasta 9 pies de ancho. Esta sustancia es blanda y se tritura fácilmente con picos á un costo muy insignificante, pero es necesario molerla finamente para extraer bien el estaño. Se examinaron varias muestras que indicaron mucha uniformidad en su composición, y que rendían un 7 por ciento de estaño metálico. Cuando se efectúa la molienda con agua, como un

50 por ciento del material terroso desaparece casi inmediatamente, y entonces es necesario volver á triturar los residuos—que consisten de partículas silíceas—para reducirlos. Al efectuarse el lavatorio, el óxido de estaño queda convertido en una arena fina.

El estaño del distrito de Berenguela se dice que es de una calidad superior á la de cualquiera otra mina de Bolivia. Existe una fuerza hidráulica permanente, muy buena y adecuada para las turbinas de Pelton, á una distancia de 900 á 1,000 yardas de las minas.

Además de los depósitos ya mencionados, existen muchos otros aunque de menor importancia, en tanto que las hondonadas que descienden de algunas de las minas, como por ejemplo, la denominada Pabellón Negro, Morococala, y Huanuni, contienen estaño en mayor ó menor cantidad, y se han explotado hasta cierto grado, siendo así que el producto obtenido ha rendido de un 62 á 68 por ciento.

BRASIL.

TRABAJOS DE DESAGÜE EN EL ESTADO DE RÍO DE JANEIRO.

La Legación Belga en Río de Janeiro ha enviado al “Boletín Comercial” de Bruselas, una notificación procedente del Departamento de Obras Públicas é Industria del Estado de Río de Janeiro, relativa al desagüe y mejora del estado sanitario de los terrenos de la parte baja de este Estado, desde su frontera con el Estado de Espíritu Santo hasta la del Estado de San Pablo. En dicho Departamento se habían de recibir las propuestas para esta obra hasta el 20 de marzo de 1902, pero no cabe duda de que este plazo se prorrogará.

Las principales obras que se han de emprender son la rectificación y profundización de los ríos y sus afluentes, la apertura de pequeños canales y zanjás, y el uso de los ríos y canales para los fines de la navegación y el riego.

Los contratistas tienen que (1) someter los planos y proyectos de estas obras á la aprobación del Gobierno del Estado; (2) trazar un plano parcial de todas las vías fluviales que atraviesan esta región; (3) trazar un plano parcial de la zona marítima; (4) presentar planos para la nivelación de todo el territorio; (5) comprobar é indicar los puntos del nivel máximo á que llegan las aguas de los ríos y del mar; (6) efectuar los sondeos necesarios para mostrar la composición de los fondos de las vías fluviales.

A los contratistas se les harán las siguientes concesiones: el derecho de cobrar, mientras dure el contrato, las contribuciones fijadas por unidad de área á los terrenos desaguados ó mejorados, y á una zona de 3 kilómetros adyacente á dichos terrenos; la cobranza de una contribu-

ción sobre los buques que efectúen el transporte de mercancías; el privilegio de suministrar toda la fuerza hidráulica de las caídas de agua para surtir fuerza eléctrica; la preferencia de hacer las exploraciones que juzguen convenientes para el desarrollo de los recursos naturales; las franquicias relativas á la inmigración; el derecho de cobrar una contribución por la distribución del agua de los canales de riego, y el derecho de expropiación forzosa en bien del público.

El Estado de Río de Janeiro no puede prestar ninguna ayuda financiera á esta empresa.

DESARROLLO MINERO.

Según un informe reciente, la ciudad de Pitanguy, Estado de Río Grande do Sud, está llamada á ser un centro minero importante. En la época de su fundación se explotaron depósitos de oro que de entonces acá se han abandonado; pero en la actualidad se están haciendo investigaciones que prometen muy buen resultado. El Señor JOACHIM DA SILVA ha comprado terrenos, y espera atraer la atención de los capitalistas y compañías de minas.

EXPORTACIÓN DE GOMA ELÁSTICA EN 1901.

El Cónsul de los Estados Unidos en Pará ha enviado al Departamento de Estado en Wáshington un informe sobre los embarques de goma elástica del valle del Amazonas en 1901, busado en los asientos hechos en la aduana. Dicho informe muestra que en 1901 hubo un aumento en los embarques de goma que se hicieron de Pará comparados con los 3,255 toneladas que se embarcaron en 1900, 2,755 toneladas de cuyo aumento fueron á los Estados Unidos y 500 toneladas á Europa.

El total de embarques de Pará (del distrito bajo del Amazonas) en 1901 ascendió á 30,132 toneladas, de las cuales 15,377 toneladas se enviaron á los Estados Unidos, en tanto que 14,755 toneladas se embarcaron para Europa. En 1900 los embarques que se hicieron de este puerto ascendieron á 26,875 toneladas y su destino fué como sigue: 12,621 toneladas fueron á los Estados Unidos, y 14,254 á Europa. Durante el año de 1901, el total de exportaciones de goma elástica de Manaos (en el distrito del Alto Amazonas) ascendió á 15,469 toneladas de las cuales 8,132 toneladas fueron enviadas á los Estados Unidos y 7,337 toneladas fueron enviadas á Europa. Durante el año anterior el total de embarques de goma elástica de Manaos ascendió a 8,012 toneladas.

De Iquitos (Perú) que también está situado en la región del Alto Amazonas, los embarques de goma en 1901 ascendieron á 1,391 toneladas, comparadas con 920 toneladas que se embarcaron en 1900. El total de exportaciones de goma según estas cifras, fué 46,992 toneladas en 1901, comparadas con 31,052 toneladas en 1900.

COSTA RICA.

COMERCIO DE COSTA RICA EN 1901.

El Señor Don MANUEL ARAGÓN, miembro correspondiente honorario de la Unión Internacional Americana en la República de Costa Rica, se ha servido favorecer al BOLETÍN con los trabajos siguientes:

I.

IMPORTACIÓN.

Artículos.	Valor.	Observaciones.
Mercaderías por las aduanas	\$3,727,060.76	Según facturas consulares.

Total	5,583,197.91	

Liquidación.—Importación, 4,410,422.45; exportación, 5,583,197.91; diferencia, 1,172,775.46 en favor de la exportación.

S. E. ú O.

DEPARTAMENTO DE ESTADÍSTICA, San José, 19 de febrero de 1902.

La cuenta del oro acuñado y en barras que se ha importado se compone de—

\$74,561.35 equivalente á \$0.465 de 160,390 colones, acuñación de 1901.

313,000.00 oro americano importado por la United Fruit Company en 1901.

437.43 oro en pasta importado para usos industriales.

388,018.78

La cuenta del oro exportado se forma de—

Colones.

1, 156, 153. 73	oro nuevo y antiguo exportado en el año (paquetes postales).
26, 000. 00	oro nuevo y antiguo exportado por Lindo y ferrocarril vía Limón.
10, 910. 00	barras y polvo de oro embarcados por Rohrmoser vía Limón.
267, 227. 00	valor declarado de barras oro, exportación de productos minerales, vía Puntarenas.
6, 433. 00	valor declarado de barras de oro, exportación hecha por el Gobierno.
823. 00	valor declarado de barras de oro, exportación por Pajés Hermanos.
1, 467, 546. 73	que al cambio de \$0.465 hacen \$682,409.23.

La cuenta de la plata exportada se forma de—

Colones.

100, 000. 00	plata acuñada, exportación hecha por el Gobierno.
2, 823, 78	plata en barras, exportación hecha por el Gobierno.
200. 00	plata acuñada, exportación hecha por ferrocarril.
103, 023. 78	que á \$0. 38 hacen \$39,149.04.

La cuenta de animales en pie se forma de—

Colones.

711 novillos gordos de Chiriquí, á 50 colones.....	35, 550
10,534 novillos á Nicaragua; por agua 478 y tierra 10,056 á 30 colones.....	316, 020
10 caballos ordinarios (Chiriquí) á 30 colones.....	300
1 mula ordinaria (Chiriquí).....	40
4 cerdos ordinarios (Chiriquí) á 30 colones.....	120

352, 030

Que á 212.6, promedio del cambio sobre Londres, hacen oro \$165,583.25.

La exportación de animales en pie comprende: 600 novillos gordos embarcados para Cuba, 10 mulas embarcadas para San Salvador, valuados á 47 colones los novillos y en 1,564 colones las mulas, ó sea en junto 29,764 colones que á 212.6 hacen oro \$14,000.

II.

MOVIMIENTO MARÍTIMO DE 1901.

PUERTO DE LIMÓN.

Clase.	Bandera.	Embarcaciones.		Tonelaje de registro.
		No.	Carácter.	
Vapores	inglesa	126	Mercantes	185, 789
	id	1	De guerra	2, 500
	americana	62	Mercantes	20, 732
	noruega	43	id	25, 223
	sueca	23	id	14, 344
	francesa	21	id	32, 503
	alemana	63	id	88, 569
	austriaca	1	De guerra	2, 350
	italiana	2	Mercantes	22, 671
	española	11	id	22, 671
	danesa	14	id	19, 863
	nicaragüense	1	id	50
	costarricense	2	id	88
	inglesa	7	id	5, 171
Veleros	americana (Barca)	8	id	5, 902
	nicaragüense	3	id	6
	hondureña	3	id	37
	colombiana	8	id	125
	costarricense	16	id	165
	Total	415	423, 759

Esas embarcaciones salieron durante el mismo período, con excepción de 1 vapor inglés (872 toneladas), 1 vapor noruego (509 toneladas), 1 velero colombiano (2 toneladas), 1 velero de Costa Rica (1 tonelada), que quedaban en el puerto el día 31 de diciembre de 1901.

El movimiento de pasajeros por Limón comprende: Entradas 5,071, salidas 2,921; diferencia en favor de las entradas 2,150.

El movimiento por Puntarenas se detalla en la hoja siguiente:

PUERTO DE PUNTARENAS.

Clase.	Bandera.	Embarcaciones		Tonelaje de registro.
		No.	Carácter.	
Vapores	inglesa	51	Mercantes	67, 068
	americana	55	id	97, 751
	chilena	33	id	48, 459
	id	1	De guerra	3, 500
	alemana	8	Mercantes	17, 943
	austro-Húngara	1	De guerra	2, 340
Veleros	inglesa	2	Mercantes	2, 055
	noruega	9	id	8, 741
	alemana	6	id	4, 854
	italiana	1	id	1, 399
	danesa	1	id	1, 050
	colombiana	2	id	52
	costarricense	1	id	14
	Total	171	255, 226

Todas esas embarcaciones salieron con excepción de 4 veleros noruegos (3,408 toneladas) y 1 velero alemán (1,036 toneladas), que quedaban cargando madera el 31 de diciembre de 1901, y 1 velero costarricense (14 toneladas) que quedaba en puerto.

Los pasajeros traídos y llevados por estos vapores fueron: entrados, 636; salidos, 702; diferencia contra entrados, 66.

El total del movimiento de ambos puertos da:

	Embarcaciones.	Tonelaje.
Limón	415	423, 759
Puntarenas	171	255, 226
En conjunto	586	678, 985

Diferencia de pasajeros á favor de las entradas, 2,084.

El tonelaje real desarrollado por el movimiento comercial del año, en cuanto á las importaciones, sólo puede darse en toneladas métricas (de 1,000 kilos cada uno) pues las facturas consulares sólo dan el peso de las mercancías, que ha sido de 37,992 toneladas. Si se calculara en 700 kilos el peso de cada tonelada, tanto de peso como de medida, el tonelaje total podría estimarse en algo más de 54,000 toneladas.

El tonelaje de salida puede calcularse así—

Café.....	toneladas métricas..	18, 563
Bananos.....	30 racimos por tonelada..	129, 005
Cedro	toneladas de 40 pies c. l..	18, 322
Caoba	idem.....	841
Cocobolo y mora.....	toneladas métricas..	1, 731
Cueros varios.....	idem.....	339
Caucho	idem.....	59
Cacao.....	idem.....	23
Mollejones	idem.....	75
Otros productos.....	(cálculo).....	1, 000
Total		169, 958

S. E. ú O.

III.

Como no se han publicado en detalle los datos referentes á la exportación de café de las cosechas de 1899-1900 y 1900-1901, me permito darlos con la presente para conocimiento de esa Secretaría; los de las cosechas anteriores fueron publicados en el Suplemento á la Gaceta Oficial correspondiente al 1° de mayo de 1900.

Embarques de—	1899-1900.		1900-1901.	
	Sacos.	Kilos.	Sacos.	Kilos.
Limón	288, 993	14, 399, 799	286, 683	14, 751, 583
Puntarenas	32, 251	1, 815, 092	34, 251	1, 955, 536
Total.....	321, 244	16, 214, 891	320, 934	16, 707, 119

Las exportaciones totales de las dos cosechas anteriores fueron:

	1897-98.	1898-99.
Sacos.....	556, 009	281, 434
Kilos.....	19, 614, 795	14, 843, 757

Como se ve la cosecha recién pasada es la mayor que ha habido en Costa Rica de 1883 para acá, con excepción de la de 1897-98, que parece ser la mayor exportada del país.

Las cantidades de café de esas cuatro cosechas, exportadas en pergamino, han sido:

	Sacos.	Kilos.	Relación con el total.
			<i>Por ciento.</i>
1897-98.....	114,252	4,759,543	24.26
1898-99.....	136,124	5,967,396	40.20
1899-1900.....	196,622	8,499,589	52.40
1900-1901.....	208,552	11,471,162	68.70

Del peso del café en pergamino se ha deducido el 18 por ciento descontado por la aduana por peso de la paja; por tanto el peso indicado es el neto sobre el cual se pagó el derecho de exportación.

Las cantidades de café inferior (terceras) exportadas correspondientes á cada una de esas cosechas es como sigue:

	Sacos.	Kilos.	Relación.
			<i>Por ciento.</i>
1897-98.....	19,133	1,156,862	5.90
1898-99.....	16,754	1,017,843	6.85
1899-1900.....	17,307	1,041,756	6.42
1900-1901.....	18,667	1,183,132	7.08

El tanto por ciento anterior representa únicamente la parte exportada del café de clase inferior; mucho, la mayor cantidad, de ese café se deja para el consumo doméstico.

Los embarques de café de las dos últimas cosechas se hicieron con los siguientes destinos:

Para—	1899-1900.		1900-1901.	
	<i>Sacos.</i>	<i>Kilos.</i>	<i>Sacos.</i>	<i>Kilos.</i>
Londres.....	202,367	9,562,334	223,888	11,088,164
Nueva York.....	49,350	2,793,028	33,732	2,059,971
Hamburgo.....	24,754	1,296,164	19,354	1,022,594
San Francisco.....	21,090	1,245,177	24,223	1,448,519
Bremen.....	10,264	519,981	8,739	438,054
Burdeos.....	8,948	533,560	7,964	477,677
El Havre.....	217	11,522	1,129	59,876
París.....	107	6,497	757	44,759
Panamá.....	61	3,581	215	13,300
Barcelona.....	173	10,837	67	4,381
Trieste.....	366	21,857	237	15,155
Otros puertos.....	3,547	210,353	203	10,439
	426			24,230
Total.....	321,244	16,214,891	320,934	16,707,119

El mercado de Nueva York ha recibido la mayor parte del café inferior de Costa Rica, como resulta de la siguiente comparación:

	Total.	Enviado á Nueva York.	Propor- ción.
	<i>Kilos.</i>		<i>Por ciento.</i>
1897-98.....	1,156,862	1,004,894	86.90
1898-99.....	1,017,843	846,462	83.10
1899-1900.....	1,041,756	759,238	72.86
1900-1901.....	1,183,132	932,237	78.80

La cantidad de café clase corriente enviada á Nueva York de la cosecha última es bastante menor que la enviada en 1899-1900, es decir, 1,127,734 kilos en 1900-1901 contra 2,033,790 en 1899-1900.

Los principales consignatarios del café destinado á Londres fueron:

	1900-1901.		1899-1900.	
	<i>Sacos.</i>	<i>Kilos.</i>	<i>Sacos.</i>	<i>Kilos.</i>
Wm. Le Lacheur.....	84,759	4,021,606	53,630	3,793,908

Las partidas de café enviadas á otras plazas son de poca importancia, variando en cada año los consignatarios, lo cual demuestra que esos embarques no son ocasionados por el establecimiento de un negocio regular. Por ese motivo se ha omitido reseñarlas con detalles.

El promedio de los precios obtenidos en Londres en la venta de 119,710 sacos de café de los cuales se han obtenido detalles, da 53.9 para cada 112 libras, promedio que da neto en Costa Rica 8.67 oro para

cada 46 kilogramos (1 quintal), contra 12.26 oro que dejaba el promedio de las ventas en Inglaterra en la cosecha pasada de 1899-1900.

El promedio de la venta de esta última cosecha es el menor que se ha alcanzado desde que se inició la baja en los precios. Los promedios anteriores han sido:

1897-98.....	58.8
1898-99.....	60.0
1899-1900.....	70.8
1900-1901.....	53.9

Como explicación del poco satisfactorio resultado de las ventas de esta última cosecha, dicen algunas casas de Londres que ha sido relativamente superior á la de otros años la cantidad de café de grano pequeño ó menudo que ha resultado, según las clasificaciones hechas en aquel mercado, del café remitido de aquí en cascarilla ó pergamino.

Para corregir ese defecto parece que no hay otro remedio que abonar los cafetales para que aumentada la fertilidad de la tierra, los productos adquieran pleno desarrollo. Sería conveniente que se hicieran experimentos con el fin de precisar la cantidad y calidad de los abonos con que se ha de mejorar la tierra en cada distrito ó región, y averiguar por ese medio el resultado que se obtiene tanto en el mejoramiento del tamaño del grano, como en la cuenta que traiga la operación, lo cual se averigua por la comparación de los extra gastos con los extra productos. Esos experimentos puede hacerlos cada hacendado en su finca, aplicando el mismo abono en cantidades diferentes á pequeñas porciones del cafetal, dejando algunos sin abono, para comprobar el resultado, y abonando con sustancias diferentes en la misma cantidad. De esa manera no corren los experimentos el peligro de que por haber sido hechos en terrenos de distinta naturaleza ó composición, no correspondan á lo que se requiere en cada distrito.

Como está cerca el fin del año en que esta oficina cierra las cuentas, otros informes acerca del café se encontrarán en la relación anual que se hace de la labor de esta oficina.

IV.

El Gobierno de la República de Costa Rica por Decreto No. 4, fechado el 18 de febrero 1902 y publicado en la Gaceta No. 42, fecha 20 de febrero corriente, dispuso de conformidad con lo establecido por el Artículo XVII de la Ley de moneda vigente, que á contar desde esta fecha el valor legal de las monedas de oro de los Estados Unidos de Norte América, Inglaterra, Francia y Alemania, con respecto á la moneda nacional de oro (el Colón) será el siguiente:

	Colones.
1 dollar americano.....	2. 15
1 libra esterlina	10. 45
1 franco	0. 4125
1 marco	0. 51

Este decreto reforma el que se había emitido bajo el No. 2, con fecha 4 de mayo de 1900.

CUBA.

RENTA DE LAS ADUANAS EN 1901.

La división de asuntos insulares del Departamento de la Guerra de los Estados Unidos ha hecho publicar un estado demostrativo de la importancia de la renta de aduanas de la Isla de Cuba en el año de 1901, del que resulta que dicha renta ascendió á \$15,626,388.80, ó sea cerca de medio millón menos que en 1900, y sobre setecientos mil pesos más que en 1899.

Las cifras exactas fueron: en 1899, \$14,894,374.43; en 1890, \$16,099,922.52.

En 1° de abril de 1901 se abolieron los derechos de exportación que en 1899 habían representado \$764,106.37, y en 1890, \$1,066,005.53.

De aquí resulta que la renta de aduanas, excluyendo los derechos de exportación, aumentó realmente, en 1901, nada menos que en \$325-031.39, ó sea cosa de un dos por ciento.

COMERCIO DE CUBA EN LOS NUEVE PRIMEROS MESES DE 1901.

La sección de asuntos insulares del Departamento de la Guerra de los Estados Unidos, ha publicado un resumen comparativo referente al comercio de la Isla de Cuba en los nueve meses que terminaron el 30 de septiembre durante los años de 1901, 1900 y 1899, del cual resumen se han obtenido los siguientes datos estadísticos:

El valor total de las mercancías que se importaron durante los nueve meses que terminaron el 30 de septiembre de 1901, fué \$48,616,814 contra \$49,701,988 durante el mismo período en 1900 y \$46,833,122 en ese mismo período en 1899. El valor total de las mercancías exportadas fué \$52,861,672 contra \$37,911,367 durante el mismo período en 1900, y \$37,435,298 durante igual período en 1899. Las importaciones muestran una disminución de un 2.2 por ciento en los nueve meses del año de 1901, comparadas con las de 1900, y muestran un aumento de un 3.8 por ciento comparadas con las de 1899. Las exportaciones muestran un aumento de un 39.4 por ciento comparadas con las de 1900, y de un 41.2 por ciento comparadas con las importaciones de 1899.

En 1901, en los nueve meses comparados, se importaron oro y plata por valor de \$1,165,275; en 1900, se importaron \$3,406,704, y en 1899 \$7,803,625. Las exportaciones de oro y de plata hechas durante los nueve meses correspondientes al año de 1901 se valoraron en \$1,884,902, comparadas con los \$2,176,664 y los \$3,610,434, en que se valoraron las exportaciones que se hicieron en 1900 y en 1899, respectivamente.

El valor de las mercancías importadas de diferentes países durante los nueve meses que terminaron el 30 de septiembre de 1901, fué el siguiente: de los Estados Unidos, \$20,489,451; de otros países ameri-

canos, \$2,292,795; de la Gran Bretaña, \$6,910,853; de Alemania, \$2,416,633; de Francia, \$2,096,561; de España, \$7,033,915; de otros países europeos, \$1,080,527; de Asia, \$237,947; de África, \$9; de Centro América, \$94,073; de Sud-América, \$5,009,366; de Puerto Rico, \$854,211, y de otros países, \$100,473.

El valor de las mercancías exportadas á los diferentes países, respectivamente, durante los nueve meses que terminaron el 30 de septiembre de 1901, fué como sigue: á los Estados Unidos, \$41,773,251; á otros países norteamericanos, \$367,178; á la Gran Bretaña, \$4,262,339; á Alemania, \$3,127,992; á Francia, \$1,174,620; á España, \$283,033; á otros países europeos, \$765,986; al Asia, \$8,350; al África, \$168,936; á Centro América, \$14,594; á Sud América, \$639,293; á Puerto Rico, \$6,294; y á otros países, \$269,806.

CHILE.

RECEPCIÓN DEL SEÑOR DON CARLOS WALKER MARTINEZ COMO MINISTRO DE CHILE EN LOS ESTADOS UNIDOS DE AMÉRICA.

El Señor Don CARLOS WALKER MARTINEZ, literato, abogado y estadista chileno, que últimamente representó tan dignamente á su país en la Segunda Conferencia Panamericana que acaba de celebrarse en México, fué recibido el 4 del corriente mes de marzo de 1902, por el Sr. Presidente de los Estados Unidos de América, con el carácter de Enviado Extraordinario y Ministro Plenipotenciario de Chile cerca del Gobierno de Wáshington.

Según la "Enciclopedia Biográfica de Contemporaneos" del Señor Godoy, el Señor WALKER MARTINEZ nació en Valparaíso en 1842, y ha figurado activamente en la política de su país desde el año de 1870, en que fué miembro del cuerpo legislativo. Fué luego Senador, y desempeñó también más tarde el puesto de Secretario del Interior. Como representante diplomático de su país cerca de otros gobiernos, adquirió fama merecida, y como escritor y poeta aseguró su reputación con sus "Romances Americanos" y otras obras, especialmente de biografía é historia, que son muy apreciadas y populares.

Los discursos que se cruzaron en la ceremonia de recepción fueron los siguientes:

DISCURSOS DEL SR. WALKER MARTINEZ.

Señor PRESIDENTE: Con viva satisfacción pongo en manos de V. E. la carta credencial con que el Presidente de Chile me acredita en el carácter de Enviado Extraordinario y Ministro Plenipotenciario ante el Gobierno de los Estados Unidos de América.

Encargado de esta alta misión cuando mi país tuvo la desgracia de perder al distinguido servidor de su política exterior, Don CARLOS

MORLA VICUÑA, ha retardado mi arribo á esta capital la representación que me cupo en la Segunda Conferencia Internacional Americana, que promovió vuestro digno antecesor, el genial estadista y esclarecido mártir, Mr. WILLIAM McKINLEY.

Mas si esta circunstancia contrarió mi anhelo de llegar á expresaros más pronto que la norma y guía de mis actos ha de ser, uniformemente, el propender á que nuestros países estrechen cada día con más vigor los vínculos de amistad que felizmente les unen, me proporcionó, en cambio, la oportunidad de anticipar con hechos los propósitos que traigo de procurar la aproximación de Chile á los Estados Unidos dentro de una política equitativa, justa, fraternalmente americana, pero serena y razonable, exenta de alucinaciones utópicas y atenta siempre á considerar las exigencias ineludibles del estado social de nuestro continente.

Fuera del órden político me ha encomendado mi Gobierno trabajar con especial solicitud por acrecentar las relaciones comerciales de ambos pueblos, que no corresponden por hoy á lo que podrán ser una vez que desaparezcan causas que renovará fácilmente un mayor conocimiento, aquí, de nuestras producciones, artes, recursos, estabilidad y progreso y una mayor corriente, allá, hacia este grande y potente centro de la civilización moderna.

Os pido en consecuencia, Exemo. Señor, que junto con vuestra benevolencia personal—de que ha menester la escasez de mis dotes individuales—os digneis acordarme vuestra alta cooperación, de la cual espero todo el éxito de la misión cuyos propósitos dejo indicados. Al mismo tiempo acepte V. E. la expresión de los votos que hago, en nombre del Presidente de Chile y en el mío propio, porque Dios continúe velando por los prodigiosos destinos de esta gran República, y por la felicidad personal de un mandatario que, como V. E., ha revelado desde los comienzos de su Gobierno, que conoce los rumbos porque debe conducir á su pueblo.

DISCURSO DEL SR. PRESIDENTE.

Señor MINISTRO: Es un placer para mí recibir de manos de usted la carta en que S. E., el Presidente de Chile, se sirve acreditarlo como Enviado Extraordinario y Ministro Plenipotenciario cerca de este Gobierno.

Como el propósito de los Estados Unidos ha sido en todo tiempo fomentar y robustecer vínculos de amistad con las Repúblicas americanas, es grato para mí recibir de usted las seguridades de que se esforzará en mantener esos amistosos lazos, y en aumentar el tráfico comercial entre su país y los Estados Unidos. Estoy cierto de que los esfuerzos de usted encontrarán cordial cooperación. Bajo la influencia de este común propósito, las relaciones de usted con este Gobierno, no menos que las que tuvo su lamentado predecesor, tendrán que

resultar necesariamente en el provecho mutuo y el progreso de los dos países. Confío, Señor Ministro, en que su residencia entre nosotros sea larga y feliz.

En nombre del pueblo americano, y hablando también en mí propio nombre, ruego á usted que transmite á S. E., el Presidente de Chile, la expresión de los mejores deseos por su bienestar personal y la prosperidad de la República chilena.

DATOS ESTADÍSTICOS.

Según una obra oficial reciente, titulada “Sinopsis Estadística de Chile,” el área de la República es 724,712 kilómetros cuadrados. Chile, comparado con los demás países sudamericanos, ocupa el séptimo lugar en cuanto al tamaño, el quinto en densidad de población, y el cuarto en cuanto al número de sus habitantes. En 1895 la República tenía 2,712,145 habitantes, de los cuales había 1,240,353 residentes en las ciudades, y 1,471,792 en el campo. El 31 de diciembre de 1900 se hizo un cálculo de la población de las principales ciudades de Chile, cuyo resultado se muestra en la siguiente tabla:

Ciudades.	Población calculada según el aumento proporcional de Censo á Censo.	Ciudades.	Población calculada según el aumento proporcional de Censo á Censo.
Santiago.....	291,725	Antofagasta.....	19,482

Maule	120	Llanquihue	172
Nuble	No hay.	Chiloé	20
Concepción	210	Territorio de Magallanes	No hay.
Arauco	86		
Bío-Bío	54	Total	1,562

* Este número comprende 58 kilómetros de vía en lagunas.

Durante el año de 1900 el Gobierno gastó \$165,971.87 en la construcción y reparación de caminos públicos y \$284,311.56 en la construcción y reparación de puentes.

En 1900 en la República había 751 oficinas de correos, y 1,948 empleados en el servicio postal de el todo país. Además, de los ferrocarriles chilenos que se usan en el transporte de la correspondencia, también se emplearon 223 empresas particulares que tenían 67 carruajes y 1,614 caballos en la manipulación de dicha correspondencia. En el año á que se ha hecho referencia las rutas ó caminos de correos de la República, comprendían 3,696 kilómetros de ferrocarriles, 8,340 kilómetros de caminos públicos y 18,476 kilómetros de vías marítimas. La distancia recorrida durante el año para la explotación de todas las líneas de la República, ascendió á 7,645,121 kilómetros. Chile tiene un promedio de una oficina de correos por cada 4,062 habitantes y por cada 965 kilómetros cuadrados de territorio. La siguiente tabla muestra los

ingresos y egresos del Departamento de Correos durante los años de 1899 y 1900:

	Ingresos.	Egresos.
1900	\$1, 137, 887. 32	\$1, 178, 322. 47
1899	1, 023, 377. 13	1, 065, 612. 58
Aumento	113, 510. 19	112, 709. 89

El número de piezas de correspondencia despachadas durante el año ascendió á 33,287,492, ó sea un aumento de 1,346,632 piezas más que las que se despacharon en 1899. En 1900 se expidieron 270,156 giros postales, cuyo valor total ascendió á \$9,043,800.90, comparados con los 234,233 giros postales expedidos en 1899, que se valuaron en \$7,814,195.84.

En 1900 la República de Chile tenía 19,135 kilómetros de líneas telegráficas del Gobierno, que agregadas á los 4,463 kilómetros pertenecientes á empresas particulares, hacen un total de 23,948 kilómetros de líneas telegráficas. En 1900 se enviaron 1,166,707 mensajes por estas líneas, comparados con 1,083,599 telegramas que se enviaron en 1899. Durante el año de 1900 el Gobierno chileno construyó líneas telegráficas que representaron un valor de \$39,723.41, distribuidas de la manera siguiente:

Líneas telegráficas del Estado, construidas en 1900.

	Costos.
De San Rafael á Ranquil	\$500. 00
De Temuco á Valdivia	12, 914. 20
De El Carmen á San Félix y de El Carmen á El Tránsito	12, 851. 81
De Pintados á Pica	2, 154. 50
De San Fernando á Resguardo de Tinguiririca	3, 087. 90
De Illapel á Punitaqui (vía Pozos)	7, 735. 00
De Pinto á San Ignacio	480. 00
Total	39, 723. 41

Además de esto, el Gobierno hizo reconstrucciones en las líneas telegráficas del Gobierno que importaron \$109,149.32 y reparaciones que costaron \$3,735.

El sistema telefónico de la República comprende una extensión de 9,850 kilómetros, que en 1900 representaron un valor aproximado de \$910,000.

El 31 de diciembre de 1900 en la República había en operación 42.97 kilómetros de tranvías eléctricos, y 143.27 kilómetros de tranvías de fuerza animal, que hacen un total de 186.24 kilómetros. En 1900 el número de pasajeros conducidos en los tranvías eléctricos ascendió á 2,990,132 y 39,077,110 en los tranvías de fuerza animal, ó sea un tráfico total de 42,069,242 personas durante dicho año. La siguiente es una lista de las principales ciudades de la República que tienen tranvías, y del número de kilómetros en cada ciudad:

Locomoción animal.

Ciudades.	Número de tranvías.	Kilómetros.	Ancho de la trocha en metros.

El 31 de diciembre de 1900 la deuda extranjera de la República de Chile ascendía á 86,153,400 pesos (£17,230,680), cada uno de los cuales representa un valor de 18 peniques y la deuda interior ascendía á \$75,826,488.17 en moneda nacional.

En el presupuesto para el año de 1900, el Gobierno chileno asignó \$7,985,257 para el mantenimiento de las escuelas públicas. En el año mencionado, el número total de escuelas de la República ascendió á 1,547, distribuidas de la manera siguiente:

Del Fisco.....	330
De los Municipios.....	27
De particulares, arrendadas por el Fisco.....	1,105
De particulares (cedidas).....	85
Total.....	1,547

En 1900 el número total de matriculados ascendió á 114,410, de los cuales 55,423 eran varones y 58,987 hembras. La siguiente tabla muestra las inscripciones y promedio de asistencia á las escuelas de Chile durante un período de diez años:

Años.	Alumnos.	Promedio de asistencia.
1891.....	95,454	64,737
1892.....	100,554	71,179
1893.....	102,701	72,899

1896.....	111,361	81,168
1897.....	109,058	65,507
1898.....	99,889	65,619
1899.....	106,348	70,607
1900.....	114,410	72,912

EXPORTACIONES DE COBRE FINO EN 1901.

Los Señores JACKSON BROTHERS, de Valparaíso, anuncian que las exportaciones de cobre de Chile durante el año de 1901 han sido las siguientes, expresándose las cantidades en quintales:

	Total.	Contenido de cobre fino.
Míneral de cobre.....		526,950
Cobre régulo.....	135,489	62,245
Barras de cobre.....	486,868	90,630
Total de cobre fino.....		679,825

Los 679,825 quintales de cobre fino equivalen á 30,834 toneladas inglesas.

El total de cobre fino contenido en los minerales de cobre, régulo y barras exportados en 1900, fué 565,062 quintales (25,630 toneladas), que muestran un aumento de 114,763 quintales (ó sean 5,205 toneladas), ó un 20.3 por ciento, en 1901.

PUBLICACIÓN DE DOCUMENTOS DE LA RECIENTE COMISIÓN MIXTA DE RECLAMACIONES DE CHILE Y LOS ESTADOS UNIDOS.

Acaban de publicarse en inglés, en esta ciudad de Wáshington, las Actas de la Comisión Mixta de Reclamaciones chilenas y americanas que celebró aquí sus sesiones por virtud del tratado de 24 de mayo de 1897 entre Chile y los Estados Unidos, desde el 15 de junio de 1900 hasta el 18 del mismo mes de 1901.

Estas Actas con su índice forman un tomo de 104 páginas en 4^o.

Se han publicado igualmente, en un volumen de 239 páginas de la misma forma y tamaño, y también en inglés, las Decisiones pronunciadas por la Comisión, acompañadas con los respectivos votos particulares, cuando aquéllas no fueron por unanimidad.

Ha visto también la luz publica el informe presentados al Señor Secretario de Estado de los Estados Unidos, por el Señor JOHN HOYT PERRY, que fué el agente y abogado de los Estados Unidos ante la referida Comisión, dando cuenta de los trabajos de la misma, y acompañando multitud de documentos relacionados con ella.

Todas estas publicaciones son importantes, y necesitan consultarse por cuantos tienen que ocuparse de esta clase de negocios.

REPUBLICA DOMINICANA.

MEDIDAS PARA EL FOMENTO DE LA INDUSTRIA AZUCARERA.

El Cónsul General de los Estados Unidos en Santo Domingo, con fecha 27 de enero de 1902, envió al Departamento de Estado en Wáshington, un recorte del "Listín Diario," relativo á la industria azucarera, en el cual se dice que el Presidente JIMENEZ ha manifestado que el Gobierno está estudiando la conveniencia de abolir la pequeña contribución de 3 centavos sobre el azúcar, y de incluir los envases vacíos en la lista de artículos libres de derechos; celebrar un convenio con las compañías de transporte para obtener rebaja en el tipo de los fletes, y para rebajar los derechos de muelle y almacenaje, y proponer al Gobierno de los Estados Unidos la reducción de sus derechos sobre el azúcar á cambio de una rebaja de los derechos de importación sobre los artículos de procedencia americana.

ECUADOR.

LAS EXPORTACIONES DE GOMA ELÁSTICA.

El informe de la Cámara de Comercio de Guayaquil hace constar que las exportaciones de goma elástica del Ecuador, en 1900 ascendieron á 1,103,511 libras, comparadas con 1,441,823 libras que se exportaron en 1899; 1,588,660 libras en 1898, y 1,121,288 libras en 1897. Dícese que la disminución se debe al hecho de que los “caucheros” ó recogedores de goma elástica, que han empezado su trabajo en los bosques silvestres de las provincias del interior y del este, no encuentran ninguna clase de ayuda y se vuelven á sus hogares rendidos por el cansancio. Debido al hecho de que el consumo de esta goma se está extendiendo tanto, el Presidente de la Cámara de Comercio opina que ha llegado el momento de pedir al Gobierno toda la ayuda posible para los exploradores, y que este auxilio debe comenzar con la apertura de nuevos caminos que conduzcan á las regiones productoras de goma.

El derecho de exportación sobre la goma elástica en el Ecuador, de 20 centavos que antes se cobraban, se ha reducido á 15 centavos en plata por kilogramo (de 8.07 centavos á 6.80 centavos por libra), siendo así que el tipo actual equivale como á 3.40 centavos en oro por libra.

ESTADOS UNIDOS.

COMERCIO CON LA AMÉRICA LATINA.

IMPORTACIONES Y EXPORTACIONES.

En la página 637 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los Estados Unidos. Estos datos se refieren al valor del comercio arriba mencionado. La estadística corresponde al mes de enero de 1902, comparada con la del mes correspondiente del año anterior, y también comprende los datos referentes á los siete meses que terminaron en enero de 1902, comparados con igual período de 1901. Debe explicarse que la estadística de las importaciones y exportaciones de las diversas aduanas referente á un mes cualquiera, no se recibe en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de enero, por ejemplo, no se publican sino en marzo.

COMERCIO EXTRANJERO EN ENERO DE 1902.

Durante el mes de enero de 1902, los Estados Unidos importaron mercancías por valor de \$79,138,192, contra análogas importaciones en enero de 1901, por valor de \$69,307,080. Las importaciones libres de derechos en enero de 1902 se valoraron en \$36,461,913, y las de enero de 1901 se valoraron en \$27,382,894. Las importaciones que adeudaban derechos en enero de 1902 se valoraron en \$42,676,279, comparadas con las de enero de 1901, que se avaluaron en \$41,924,186. La mayor parte del aumento que hubo en el mes de enero de 1902 respecto del mismo mes en 1901, se debió al aumento en la importación de artículos en bruto y manufacturados nada más que parcialmente, que se emplean en los diferentes procedimientos de fabricación en los Estados Unidos y que representan un valor de \$7,654,544, y también al aumento en la importación de artículos de lujo, que se valoraron en \$1,306,440, y al sumarse ambos aumentos representan \$8,960,984 del aumento total de \$9,831,112.

Las importaciones hechas en los siete meses correspondientes al año económico de 1902, se valoraron en \$526,116,998, comparadas con las del mismo período del año económico anterior que representaron un valor de \$459,038,141. En el aumento total de \$67,078,857, las importaciones de artículos ya listos para el consumo muestran un aumento de \$9,095,514.

El siguiente es un resumen de las importaciones correspondientes al mes de enero de 1902, comparado con el de enero de 1901:

Clasificación.	1902.	1901.
Comestibles y animales.....	\$16, 273, 453	\$16, 718, 448
Artículos en bruto que se emplean en los procedimientos de fabricación doméstica.....	30, 445, 623	23, 166, 281
Artículos entera ó parcialmente manufacturados que se emplean en los procedimientos de fabricación y en los artes mecánicas.....	6, 886, 890	6, 411, 668
Artículos manufacturados ya listos para el consumo.....	12, 910, 991	11, 709, 259
Artículos de lujo, etc.....	12, 621, 235	11, 301, 404
Total.....	79, 138, 192	69, 307, 080

Las exportaciones de los Estados Unidos en el mes de enero de 1902, incluyendo las mercancías extranjeras reexportadas, se valoraron en \$129,136,444, comparadas con las exportaciones del mes de enero de 1901, que se valoraron en \$136,325,601. La disminución se atribuía por completo á la baja en el valor de los productos agrícolas que se enviaron al extranjero, puesto que en el valor de los artículos manufacturados se muestra un aumento como de \$2,000,000. Durante los siete meses del año económico que terminó en enero de 1902, el valor de las exportaciones ascendió á \$872,659,682, comparado con el de las exportaciones del mismo período del año económico anterior, que ascendió á \$902,237,970.

El resumen oficial de las exportaciones correspondientes al mes de enero de 1902, comparado con el de las del mes de enero del año anterior, es como sigue:

Clasificación.	1902.	1901.
Productos agrícolas.....	\$84,477,950	\$92,565,242
Productos de las manufacturas.....	34,412,992	32,654,035
Productos de las minas.....	2,912,011	3,011,212
Productos de los bosques.....	3,328,987	3,983,475
Productos de la pesca.....	477,719	656,301
Productos diversos.....	756,651	505,310
Total doméstico.....	126,366,310	\$133,375,575
Extranjeros reexportados.....	2,770,134	3,950,026
Total general.....	129,136,444	\$136,325,601

RESUMEN DEL CENSO DE LA INDUSTRIA.

Los boletines recientes del censo contienen datos estadísticos que muestran los cambios que han tenido lugar en las industrias fabriles en el intervalo transcurrido de 1890 á 1900. En las tablas adjuntas, se compara la estadística correspondiente al año de 1900 con la del año del censo anterior de 1890.

	Fábricas.*		
	1900.	1890.	Aumento.

Valor de los productos.....	\$779,147,433	\$561,611,668	38.7

* Estas cifras no incluyen las fábricas que producen menos de \$500, ni las fábricas del Gobierno, ni las instituciones penales, de beneficencia y de educación.

^b Aumento.

En relación con las tablas relativas á la industria del rastro y empaque de carne, la estadística que muestra la variedad y el total de las cantidades y valores de las exportaciones de carnes y productos de carne correspondientes al año común de 1901, son interesantes por cuanto muestran las enormes proporciones que dicha industria ha adquirido. Estas cifras oficiales son las siguientes:

	Libras.	Valor.
Carne de vaca fresca.....	354,421,731	\$32,294,877
Carne de vaca salada en salmuera.....	51,761,505	3,035,025
Carne de vaca en latas.....	767,007	64,467
Sebo.....	52,239,582	5,233,782
Tocino.....	51,846,765	2,698,692
Jamones.....	447,620,337	39,402,500
Carne de puerco fresca.....	230,456,004	24,739,003
Carne de puerco salada ó en adobe.....	40,348,780	3,224,726
Carne de puerco en latas.....	127,863,335	10,254,695
Manteca.....	9,341,262	744,455
Compuestos de manteca, etc.....	607,266,176	51,626,346
Longanizas y carnes para las mismas.....	30,513,728	2,039,698
	7,140,383	699,841
Envolturas para longaniza.....		2,022,496
Carnero.....	298,700	22,815
Carnes en latas que no son de vaca ni de puerco.....		1,821,610
Acéites.....	163,823,675	12,951,745
Oleomargarina.....	5,094,541	499,489
Otros productos de carne.....		3,850,836
Valor total.....		197,227,098

Además de los artículos mencionados arriba, en 1901 se exportaron aves y caza, en cuya matanza y envase se ocupan en la actualidad algunos de los grandes establecimientos de enlatar carne del país, por valor de \$866,322; 24,249,565 libras mantequilla de valuadas en \$4,184,966; 31,396,115 libras de queso, valuadas en \$3,006,344, y leche por valor de \$1,646,579, que hacen un valor total de la carne y productos de lechería de \$206,931,309.

LAS FÁBRICAS DE GÉNEROS DE LANA.

La Oficina del Censo ha publicado un informe preliminar acerca de las fabricas de géneros de lana de los Estados Unidos, que proporciona los siguientes datos para el año de 1900, así como el promedio del aumento desde el año del censo anterior:

	1900.	Por ciento de aumento.
Número de establecimientos.....	1,414	*16.5
Promedio del número de obreros.....	159,108	3.1
Capital.....	\$210,179,749	26.1
Total de jornales.....	\$57,933,817	6.6
Gastos diversos.....	\$17,329,932	10.9
Costo del material.....	\$181,150,669	8.3
Valor de los productos.....	\$296,990,484	9.8

* Disminución,

EL CULTIVO DEL TABACO DE SUMATRA EN CONNECTICUT.

El Gobierno, por conducto del Departamento de Agricultura, ha estado consagrandó su atención al cultivo del tabaco de Sumatra en el Valle de Connecticut, y hasta ahora ha obtenido resultados que prometen ser sumamente satisfactorios. El costo de producción en un estado vendible se calcula como en 90 centavos por libra, cuando se trata del tabaco que se cultiva en el país, y como quiera que el tabaco de Sumatra se vende en Amsterdam á precios que varían desde 50 centavos hasta \$3 la libra, se cree que la clase de tabaco que Connecticut produce podrá venderse como á \$2 la libra, dándole así al productor una ganancia de más de un 100 por ciento.

El Gobierno, al esforzarse por establecer este cultivo en la República por conducto del Departamento de Agricultura, suministró la semilla para la siembra, dió instrucciones completas para cuidar de la cosecha, y envió un cuerpo de peritos á inspeccionar el cultivo, y para curar y embalar el tabaco. Los verdaderos gastos del cultivo y recogida de la cosecha, los pagaron los cultivadores, y se sembraron 45 acres en la inteligencia de que debían proporcionarse las de bidas instrucciones durante el período de cultivo experimental para poder continuar la industria. El tabaco se cultivó bajo tiendas de campaña de un lienzo semejante al que se usa para envolver quesos, y la cantidad total que se ha de vender asciende como á 40,000 libras. Los cultivadores han convenido en que la venta de toda la cosecha tenga lugar bajo la dirección del Gobierno, por que se desea establecer un precio corriente en el mercado, á fin de demostrar lo que se ha obtenido mediante los gastos hechos por el Departamento.

Se dice que los corredores de tabaco que han tenido muestras para elaborarlas en sus fábricas, declaran que el experimento ha sido un gran éxito, y que la extensión de dicha industria significará centenares de miles de pesos en el desarrollo comercial del país.

EXISTENCIA DE GANADO EN 1901.

Según los informes que el Departamento de Agricultura ha recopilado recientemente, la existencia de ganado en los Estados Unidos en 1901 se distribuye como sigue: Ganado mayor, incluyendo las vacas de leche, 71,301,897; ganado lanar, 64,484,725; id., de cerda, 66,462,11; id., caballar y mular, 18,428,369. El valor real de estos animales, calculándolos á un precio moderado, era \$4,650,000,000. Durante el curso del año, la Oficina de la Industria Pecuaria inspeccionó 37,000,000 de animales sacrificados. De 5,000,000 de cabezas de ganado mayor que se inspeccionaron, sólo se rechazó un cuarto de un 1 por ciento. De 6,500,000 carneros sólo se rechazó un décimo de un 1 por ciento, y de 24,000,000 de cerdos sólo se rechazó un tercio de un 1 por ciento. Se

efectuaron más de 1,500,000 inspecciones para contener la enfermedad denominada “fiebre tejana;” 8,000,000 más se hicieron por causa de la “scabies” y más de un millón de carneros fueron sometidos á tratamiento. A más de un millón y medio llegaron las dosis del virus distribuido para combatir la enfermedad denominada “black leg,” (“pierna negra” ó “carbúnclo”) y la pérdida causada por esta enfermedad se ha reducido gradualmente de un diez por ciento á sólo el uno por ciento. Se suministraron 44,000 dosis de tuberculina para combatir la tuberculosis en el ganado vacuno, y 700 dosis de “malleín” para combatir el muermo en el ganado caballar.

IMPORTACIONES DE PLÁTANOS.

Durante el año común de 1901, los Estados Unidos importaron plátanos por valor de \$6,846,867, que representan un aumento de \$1,198,652 respecto del año anterior, en el cual las importaciones de esta fruta se valoraron en \$5,648,215. Los países de los cuales se recibieron plátanos durante los dos años mencionados, fueron los siguientes:

	1901.	1900.	Aumento.
Posesiones británicas en Norte América.....	\$101,550	\$49,449	\$52,101
Centro América.....	2,795,265	2,385,891	409,374
Antillas Inglesas.....	2,735,310	1,956,765	778,545
Cuba.....	471,132	288,528	182,604
América del Sur.....	582,506	819,873	*237,367
Otros países.....	167,104	147,709	13,395

* Disminución.

LAS IMPORTACIONES DE CUEROS Y PIELES DE LA AMÉRICA LATINA.

El peso de los cueros y pellejos, sin contar los pellejos que se usaron como pieles, importados por los Estados Unidos en los doce meses del año de 1901, fué 310,539,594 de libras, que representaban un valor de \$55,565,388. Esto mostraba un aumento tanto en el peso como en el valor, comparado con el año anterior, en que el peso y el valor fueron 307,315,840 de libras y \$51,587,993, respectivamente. Las importaciones de la América latina durante los dos años fueron las siguientes:

	1901.		1900.	
	Libras.	Valor.	Libras.	Valor.
Centro América.....	3,075,666	\$484,505	3,896,668	\$599,725
México.....	18,198,218	3,157,885	13,137,851	2,393,478
Las Antillas.....	1,934,181	377,507	1,487,704	341,610
Sud-América.....	63,907,566	11,504,133	57,141,912	10,626,802
Total.....	87,115,631	15,524,030	75,664,135	13,961,615

LA CONSTRUCCIÓN DE LOCOMOTORAS EN 1901.

La "Railroad Gazette" dice que el número de locomotoras construidas en las fábricas de los Estados Unidos del 1° de enero al 31 de diciembre de 1901, ascendió á 3,384. Estas cifras representan un aumento de 231 locomotoras, ó sea un 7.3 por ciento más que en 1900, y constituye la producción mayor, en un año, que jamás se ha conocido desde que se fabrican locomotoras. Este total representa la producción de ocho compañías constructoras de locomotoras que tienen 15 talleres en operación. La siguiente tabla muestra la producción de los talleres en la última década:

1901	3,384	1895	1,101
1900	3,153	1894	695
1899	2,473	1893	2,011
1898	1,875	1892	2,012
1897	1,251	1891	2,165
1896	1,175	1890	2,240

En la lista que antecede no se han incluido las locomotoras que se han construido en las estaciones de ferrocarriles, aunque las cifras correspondientes al año de 1901 comprenden 170 locomotoras de engranaje, 45 eléctricas y 44 de aire comprimido, y como 300 para trabajos ligeros como, por ejemplo, para los trabajos en las minas ó en las haciendas, ó para el uso de los contratistas. Del número que se construyó en 1901 se exportaron 337, ó sea menos de un 10 por ciento.

IMPORTACIONES DE CAOBA EN 1901.

Durante el año común de 1901, los Estados Unidos importaron 39,682,000 pies de caoba, valuados en \$2,123,195. De esta cantidad, la América latina en 1901 suministró 32,894,000 de pies, valuados en \$1,539,256, comparados con los 25,062,000 de pies, valuados en \$1,274,524 que se importaron en el año común do 1900.

Los países de los cuales los Estados Unidos recibieron caoba durante los años comparados, son los siguientes:

	1901.		1900.	
	Pies.	Valor.	Pies.	Valor.
Centro América.....	14,442,000	\$729,178	7,752,000	\$388,883
México	12,579,000	537,156	11,520,000	503,291
Cuba.....	4,333,000	217,378	4,705,000	328,925
Otras Antillas.....	682,000	27,640	512,000	32,813
Sud América.....	858,000	27,904	573,000	19,612
Otros países.....	6,788,000	583,939	6,389,000	530,667
Total.....	39,682,000	2,123,195	31,551,000	1,804,191

LA INDUSTRIA DE OLEOMARGARINA.

La Oficina del Censo, en un boletín especial, muestra que de 1890 á 1900 el número de establecimientos para la fabricación de oleomar-

garina en los Estados Unidos, de 12 fábricas se ha aumentado á 24, de 1890 á 1900, con un capital total invertido que asciende á \$3,023,646, ó sea un aumento de un 376 por ciento. Además, se dan los siguientes detalles: 1,085 asalariados, ó sea un aumento de 311 por ciento. Total de sueldos pagados, \$534,541, ó sea un aumento de 246 por ciento. Gastos diversos, \$2,489,784, ó sea un aumento de 545 por ciento. Costo de los materiales usados, \$7,639,501, ó sea un aumento de 251 por ciento. Valor de los productos, \$12,988,525, ó sea un aumento de 318 por ciento.

En estos datos estadísticos no se ha incluido la oleomargarina que han fabricado los establecimientos donde se beneficia el ganado y se prepara y enlata la carne.

INFORME ACERCA DE LA COSECHA CORRESPONDIENTE AL MES DE MARZO.

Con fecha 10 de marzo de 1902, el Departamento de Agricultura de Wáshington publicó el siguiente informe relativo á la cosecha:

“Hasta que la publicación de las cifras del censo respecto del número total de acres cultivado, basado en la investigación hecha de finca en finca, permita hacer algunas alteraciones necesarias en las cifras relativas al número total de acres cultivado, según el cálculo de este Departamento, el oficial encargado del ramo de estadística no hará ningún cálculo de la cantidad de granos que aún quedaba en poder de los agricultores el día 1° de marzo. Sin embargo, los informes que se han recibido de los corresponsales del Departamento, indican que como un 23 por ciento de la cosecha de trigo del año pasado está todavía en poder de los agricultores, comparado con un 24.5 por ciento (ó sean 128,100,000 de bushels) de la cosecha de 1900 que aún tenían en su poder el 1° de marzo de 1901, y un 29 por ciento (ó sean 158,700,000 de bushels) de la cosecha de 1899, que tenían en su poder el 1° de marzo de 1900.

“El maíz que hay todavía en poder de los agricultores se calcula como en un 29 por ciento de la cosecha del año pasado, contra un 36.9 por ciento (ó sean 776,200,000 de bushels) de la cosecha de 1900, que los agricultores tenían aún en su poder el 1° de marzo de 1901, y un 37.2 por ciento (ó sean 773,700,000 de bushels) de la cosecha de 1899, que los agricultores aún tenían en su poder el 1° de marzo de 1900.

“Dícese que como un 30 por ciento de la cosecha de avena del año pasado está todavía en poder de los agricultores, comparado con un 36.2 por ciento (ó sean 292,900,000 de bushels) de la cosecha de 1900 que los agricultores tenían en su poder el 1° de marzo de 1901, y un 36.5 por ciento (es decir, 290,900,000 de bushels) de la cosecha de 1899 que tenían en su poder el 1° de marzo de 1900.

* * * “A juzgar por los informes que este Departamento ha recibido, resulta evidente que la cosecha de trigo de 1901 fué una de

las más grandes que jamás se ha cogido; que la cosecha de maíz fué la más pequeña, con una sola excepción en 20 años, y que la cosecha de avena no llegó al término medio de la cosecha ordinaria. Á esta notable discrepancia de la producción relativa ordinaria de los tres granos principales, parece que se agregó el hecho de que el trigo se usó como alimento de animales en una extensión geográfica mayor—sino en volumen verdadero—que la que jamás se había usado.”

GUATEMALA.

REVISTA FINANCIERA.

La importante casa comisionista de RICARDO FRANZ, de Guatemala, publica una Revista mensual en la que concreta todos los datos sobre importación y exportación de la vecina República, que es sin duda de gran interés para nuestro comercio.

El valor de las importaciones en el año pasado fué de \$3,127,102.06 oro, y el total de derechos que produjeron fué de \$1,296,139.09.

La exportación ascendió á \$7,393,203.84 oro. Solo el café significó una exportación de 729,826.37 quintales, con valor de \$6,485,936.34 en oro.

El azúcar, los cueros de res y las maderas vienen después en proporción de cantidad.

El cacao se cotiza de \$160 á \$170 quintal, según clase. El tabaco, clases buenas de \$120 á \$155 carga de 200 libras. El maíz, en la costa, se vende á \$12 las 600 mazorcas.

El dinero disponible sigue siempre abundante. El descuento fuera de los Bancos está bastante en baja, y se puede decir que el tipo oficial del 8 por ciento, que mantienen los Bancos, no corresponde á la abundancia de capitales. Las perspectivas á que se aludía al hablar de cambio, influyen notablemente en que los ánimos están más satisfechos.

DERECHOS DE IMPORTACIÓN.

Según anuncia á su Gobierno el Ministro francés en Centro América, el Presidente de la República de Guatemala, por un decreto fechado el 18 de noviembre de 1901, publicado en el “Diario Oficial” correspondiente al 24 de dicho mes, ha resuelto que las mercancías que se importen á este país desde el día 1° de enero de 1902, estarán exentas del pago del recargo de un 15 por ciento que se impuso por virtud del decreto de 20 de diciembre de 1893.

MINERALES QUE SE HAN ENCONTRADO EN LA REPÚBLICA.

Dentro de los límites del Departamento de Huehuetenango, Guatemala, hay cierto número de depósitos de oro, plata, hierro, plomo y sal que aún no se han explotado. En Toljón se está explotando una

mina de plomo, y una salina en San Mateo. En el Departamento de Izabal se encuentran varias vetas de carbón de piedra que se dice contienen un carbón de piedra bituminoso muy rico, que contiene un 50 por ciento de material volátil. Estas vetas empiezan en San Felipe del Golfo, cerca de la laguna de Izabal (situada en la parte oriental de la República y que se conecta con el Golfo de Honduras por el Río Dulce) y entonces pasa por debajo del Golfo hasta el pie del volcán apagado denominado San Gil, cerca de Santo Tomás.

HAITÍ.

EXTRACTO DE LA LEY DE PRESUPUESTOS DE 16 DE OCTUBRE DE 1901, Y PROMULGADA EL 29 DE IGUAL MES Y AÑO.

[Le Moniteur de 7 de diciembre de 1901.]

ARTÍCULO 1º. La percepción de los impuestos para el ejercicio de 1901-2 se llevará á cabo de conformidad con las leyes existentes.

Sin embargo, cuando las circunstancias lo exijan, las mercancías extranjeras de una ó varias procedencias se sujetarán á un arancel máximo que será triple del vigente en la actualidad.

En este caso, los otros derechos relativos á la importación, principalmente los de tonelaje, se aumentarán en la misma proporción con respecto á las referidas procedencias.

Toda disposición relativa á este objeto se dictará por decreto del Presidente de Haití, el cual quedará derogado tan pronto como dejen de existir las circunstancias que lo hayan motivado.

ART. 3. Los derechos de aduana de todas clases relativos á la exportación, excepto los de escala y de pilotaje, se pagarán en oro americano.

HONDURAS.

COMERCIO DE LA REPÚBLICA EN 1901.

De la memoria presentada al Congreso Nacional Legislativo de Honduras por el Secretario de Estado en el despacho de Fomento y Obras Públicas, acerca de los actos de su Departamento en el año económico de 1900 á 1901, se toma lo siguiente:

Gracias á la estabilidad del cambio, que fué tan favorable como en el año anterior, manteniéndose entre el 115 y 130 por ciento sobre oro americano, el comercio del país sigue prosperando, como lo demuestra el establecimiento de nuevas casas al por mayor, tanto en la capital como en la costa Norte, y el hecho de no haber suspendido sus pagos ningún comerciante de Honduras. El crédito de que goza nuestro comercio en el exterior es excelente; y á esto se debe que visiten hoy nuestro país gran número de agentes de casas extranjeras.

La importación ascendió en el año, en moneda del país, á la suma de \$4,168,599.51, de la manera siguiente:

	Bultos.	Kilos.	Valor.
Importación gravada.....	162,404	6,686,084	\$3,344,574.90
Importación libre por concesión.....	40,937	3,809,488	632,920.76
Importación por dispensa oficial.....	14,276	556,712½	88,195.35
Importación por reciprocidad.....	8,011	414,527	102,908.50
Total.....	225,628	11,466,811½	4,168,599.51

La importación por aduanas se distribuye así:

	Bultos.	Kilos.	Valor.
Amapala.....	68,516	4,397,608	\$1,857,002.05
Puerto Cortés.....	85,581	4,716,213	1,521,168.81
Trujillo.....	20,853	756,870	264,143.47
La Ceiba.....	42,455	1,343,601½	454,563.69
Roatán.....	8,228	252,519	71,721.49
Total.....	225,628	11,466,811½	\$4,168,599.51

Como veréis, el mayor movimiento corresponde al puerto de Amapala, aunque la importación gravada fué superior en Puerto Cortés.

La importación, dividida según los países de que procede, es así:

	Bultos.	Kilos.	Valor.
Estados Unidos.....	174,682	8,573,905½	\$2,792,822.40
Alemania.....	11,399	594,282½	486,273.68
Inglaterra.....	9,391	456,881½	471,690.83
Francia.....	1,632	99,652½	101,855.94
España.....	6,014	190,327½	33,513.17
Diversos países de Europa.....	611	34,230½	18,301.26
Belice.....	11,271	285,782½	152,800.02
Centro-América.....	10,383	517,135	107,412.15
Diversos países hispanoamericanos.....	231	712,977½	1,673.12
África y Asia.....	14	1,636½	2,256.94
Total.....	225,628	11,466,811½	4,168,599.51

Comparando la importación de este año con la del anterior, que fué de libras 31,409,703, ó sean 15,086,656½ kilos, tenemos una diferencia en contra de 3,619,846 kilos, diferencia que se explica fácilmente por el hecho de haber entrado en vigor en el año económico último una nueva tarifa aduanera.

La exportación fué de \$6,183,023.37, y se descompone de la manera siguiente:

Metales.....	\$2,279,115.50	Cueros y pieles.....	\$182,349.70
Frutas.....	1,945,388.43	Añil.....	107,365.20
Ganado.....	557,316.00	Hule.....	82,958.40
Café.....	275,193.95	Zarzaparrilla.....	88,503.54
Maderas.....	274,255.00	Diversos (sombreros, trigo,	
Tabaco.....	213,423.75	artefactos, sal, etc.).....	177,153.90

De esta exportación corresponde un 70 por ciento á los Estados Unidos, y el 30 por ciento restante á Alemania y á Centro-América en su mayor parte.

Hubo un aumento regular en la exportación de metales, cueros, pieles y zarzaparrilla, y una baja considerable en la exportación de ganado, á causa de la falta de demanda, en condiciones favorables, en El Salvador y Guatemala.

Aunque se ha tratado de reunir los datos más exactos posible referentes á la exportación, ésta, en realidad, es superior á la suma expresada, porque no solamente no corresponden los valores calculados á los que efectivamente tienen en los mercados extranjeros, pues los que constan son los de las plazas del país, sino también porque se exportan por las fronteras terrestres muchos productos cuya cantidad y valor no siempre es posible fijar con exactitud. Sin embargo, aun así la exportación fué superior á la importación, dejando á favor de la riqueza pública la suma de \$2,014,423.86, balance nada desfavorable si se considera que una gran parte de los países latinoamericanos importa mayor cantidad de la que exporta. Esto no obstante, es de sentirse que sea relativamente insignificante nuestra exportación, comparada con la gran riqueza natural de nuestro suelo. Es verdad que nos hacen falta capitales extranjeros para el desarrollo de estas riquezas, pero si nuestro comercio se dedicara con mayor empeño al negocio de exportación, podría aumentarla considerablemente, pues por simple descuido ó negligencia no se recogen entre nosotros muchos productos que son fuente de riqueza para otros países.

Llamo la atención sobre las materias siguientes: las fibras, la crín de caballo, los cueros de ganado caballar y lanar, las pieles de nuestros animales silvestres, el dividivi ó nacascoco, tan común en nuestra costa sur; la resina, las gomas y bálsamos, la vainilla, los chiles y otros condimentos que donde quiera, casi sin cultivo, se producen; la pimienta olorosa, silvestre en nuestros bosques, que se usa para la fabricación del *bay rum*, y se exporta en las Antillas en grandes cantidades; y muy especialmente sobre las materias oleaginosas. Pocos países del tamaño del nuestro poseen en tal extensión bosques de palmeras que produzcan frutas oleosas como Honduras, y sin embargo, no se exporta hoy día ni una libra de aceite de palma. De igual manera las semillas de castor (palma Christi) se pierden en cantidades enormes, mientras introducimos aceite de castor, muchos veces de cuestionable calidad. Ojalá nuestra comercio se fijara en tan importante asunto, para el bien propio y de la riqueza nacional.

LA COMPAÑÍA MINERA DENOMINADA "NEW YORK AND HONDURAS ROSARIO MINING COMPANY."

El informe de los directores de la "New York and Honduras Rosario Mining Company," correspondiente al año que terminó el 30 de noviembre de 1901, dice que los dividendos que se han pagado ascendieron á \$300,000, ó sea un 20 por ciento sobre el capital social. Hasta el año pasado, inclusive, el total de dividendos de esta compañía ascendió á \$1,695,000. El mineral de alta ley á propósito para tritararlo que hay á mano en la mina, se calcula en 33,500 toneladas, y hay probabilidades fundadas de que este número se aumente en lo porvenir. En las obras subterráneas se excavaron 8,505 pies contra 7,204 pies en 1900.

La propiedad de esta compañía representa un capital social de \$1,500,000. Los ingresos durante el año procedieron de las siguientes fuentes: barras de metal, \$780,760; interés, etc., \$6,110; total, \$786,870. Los gastos fueron los siguientes: abastecimientos generales, \$159,555; gastos hechos en Honduras, \$354,939; flete y seguros, \$18,468; gastos generales, \$18,142; total, \$551,142; utilidad líquida, \$235,766.

MÉXICO.

LA INDUSTRIA AZUCARERA.

"El Hacendado Mexicano" de la Ciudad de México, en enero de 1892, publicó la tercera edición de la memoria denominada "The Mexican Sugar Report," correspondiente á 1901-2. En esta memoria se ha procurado obtener la cantidad exacta de azúcar que el hacendado mexicano ha producido. Dicho informe contiene también una lista oficial, no sólo de los hacendados que cultivan la caña de azúcar, sino de los fabricantes de azúcar en México, Centro América, Cuba y Puerto Rico, junto con sus direcciones por correo, y otros datos interesantes.

En cuanto á la República de México, los datos estadísticos que se citan muestran que el aumento de producción de azúcar en 1900 á 1901, comparado con el año anterior, fué considerable, al paso que se anuncia otro aumento en el corriente año de 1901 á 1902, puesto que ya están en vía de fomento seis fábricas más. La cantidad total de azúcar que en México han producido las fábricas que han enviado sus relaciones al "Hacendado Mexicano" en 1900-1, ascendió á 76,361,712 de kilogramos, á los cuales hay que agregar 17,633,288 de kilogramos, que es el total de azúcar aproximado producido en los varios estados que no han enviado sus relaciones, haciendo así un total general de 95,000,000 de kilogramos, ó sean 95,000 toneladas métricas. La cantidad total de miel que se ha hecho se calcula en 50,000 toneladas.

La siguiente tabla muestra los datos estadísticos de la producción de

azúcar por Estados, tal como se ha anunciado durante la zafra correspondiente á 1901-2:

Estados	No. de ingenios.	Número de haciendas y fabricantes.	Peso en kilogramos.
Campeche.....	35	29	201,200
Chiapas.....	216	214	659,764
Colima.....	4	4	1,239,700
Guerrero.....	48	44	578,990
Jalisco.....	233	230	5,037,397
México.....	15	14	200,000
Michoacán.....	31	27	970,000
Morelos.....	29	29	27,784,463
Nuevo León.....	21	21	818,000
Oaxaca.....	134	132	2,029,659
Puebla.....	19	19	10,535,338
Querétaro.....	1	31	30,000
San Luis Potosí.....	36	31	786,800
Sinaloa.....	6	6	6,260,000
Tabasco.....	47	47	867,485
Tamaulipas.....	135	135	651,916
Territorio do Tepic.....	2	1	2,750,000
Veracruz.....	161	153	11,010,000
Yucatán.....	18	17	4,951,000
Total.....	1,191	1,154	77,361,71

LA INDUSTRIA PECUARIA.

Según los informes proporcionados por la Legación Belga en México, en la actualidad la cría y ceba de ganado vacuno en las regiones donde abunda la aguada, es una de las empresas agrícolas más productivas en México, si bien es verdad que el cultivo de la caña de azúcar en las tierras calientes da los mejores resultados. El dueño de terrenos que compra ganado vacuno para cebarlo y luego venderlo para el matadero, por lo regular gana un 75 por ciento respecto del capital invertido, siendo así que en una hacienda bien organizada, los gastos resultan relativamente pequeños. El sueldo más alto que se paga á un vaquero no excede de un peso plata por día, y además, algunas veces, la manutención y el alojamiento, y cuando no se incluye la comida, le conceden 2 reales adicionales por día. Un buen vaquero puede cuidar 100 cabezas de ganado.

En la parte norte de las grandes planicies mexicanas, donde se encuentran las empresas más importantes de esta clase, hay propietarios que tienen más de 100,000 cabezas de ganado.

Cuando el ganado está cebado, ó sea en buenas condiciones para el matadero, se embarca en trenes especiales para los Estados Unidos, principalmente con destino á Chicago. Por consecuencia, es necesario que un ranchero ó criador de ganado, que posee tantos hatos, pueda disponer de un gran capital sobrante y que tenga agentes en las principales ciudades de los Estados Unidos.

En esta industria, tan sencilla y antigua, es en la que emprende el mayor número de especuladores, después de haber hecho experimentos, sin éxito apreciable, en otras empresas más complicadas. El precio de

los terrenos para pastar ganado es muy bajo, y al cabo de un año el capital invertido produce un alto interés. El que intente comprar terrenos debe estudiar cuidadosamente las condiciones del mismo.

Sin embargo, esta industria ofrece varias desventajas, entre las cuales puede citarse la epidemia que se propaga en las haciendas y que á veces destruye una gran parte del ganado vacuno. La sequía, que suele ser la plaga de las grandes planicies mexicanas, también ocasiona grandes pérdidas en esta industria. La inspección del sistema de riego no debe efectuarse durante la estación de las lluvias tropicales, sino en el invierno, en el mes de marzo y especialmente en abril, que es la época en que puede apreciarse debidamente el valor de los terrenos de pasto de México.

Hasta ahora, los españoles son los que mayor éxito han obtenido en esta industria, siendo así que es casi indispensable conocer el castellano para dirigir debidamente esta clase de explotación.

EMPRESAS AGRÍCOLAS.

La Legación belga en la ciudad de México, envió al "Boletín Comercial," de Bruselas, correspondiente al 25 de enero, las siguientes cifras tomadas de la última estadística oficial relativa á las empresas agrícolas de México:

En los diferentes Estados de la República hay 8,101 haciendas, de las cuales 3,300 están consagradas al cultivo de cereales y 1,560 á la cría de ganado vacuno. Dichas haciendas están esparcidas por todo el país, y la cría de ganado constituye la fuente principal de riqueza en las haciendas del norte de la República, en tanto que las de las grandes planicies centrales se dedican al cultivo de cereales.

Hay 108 haciendas que se dedican al cultivo del algodón, de las cuales hay 70 en el Estado de Coahuila, 23 en el de Veracruz y 15 en el de Guerrero.

En el Estado de Tabasco hay 124 haciendas que se dedican al cultivo del cacao y 115 en el de Chiapas.

En el Estado de Veracruz hay 98 cafetales, 42 en el de Oaxaca y 181 en el de Chiapas.

En el Estado de Yucatán hay 348 haciendas dedicadas al cultivo del henequén, y 38 en el de Campeche.

Las haciendas que se dedican al cultivo del tabaco se encuentran en los siguientes Estados en los números que á continuación se expresan: Veracruz, 45; Tabasco, 12; Oaxaca, 28, y Sonora, 13.

El Estado que más pulque produce es Hidalgo, en el cual hay 102 fincas dedicadas al cultivo del maguey; en el de Puebla hay 32, en el de México 17, y 7 en el Distrito Federal.

En el Estado de Jalisco hay 45 haciendas que se dedican al cultivo del agave del cual se hace el mezcal. Las principales de estas hacien-

das se encuentran en el distrito de Tequila, donde se fabrica el mejor licor de este nombre, que se asemeja al whiskey escocés y á la ginebra holandesa.

Los ingenios de azúcar se encuentran esparcidos por toda la comarca de la tierra caliente, á saber; 244 en el Estado de Chiapas, 226 en el de Nuevo León, 106 en el de Veracruz, 94 en el de Yucatán, 82 en el de Michoacán, 75 en el de Oaxaca, 72 en el de Guerrero, 67 en el de Puebla, 53 en el de Jalisco y 67 en el de Morelos. De hecho, los ingenios de azúcar se encuentran esparcidos por casi toda la extensión de este último Estado.

SITUACIÓN ECONÓMICA DE LOS ESTADOS DE JALISCO Y COLIMA.

El “Boletín Comercial” de Bruselas, correspondiente al 1° de febrero, publica los siguientes datos relativos á la situación económica de los Estados de Jalisco y Colima y á su probable porvenir.

La construcción del Ferrocarril Central Mexicano, que ya se ha terminado hasta Tuxpan, y que ha de conectar á Tampico con Manzanillo, en la costa del Pacífico, pronto acortará considerablemente la distancia que hay de los Estados de Jalisco y Colima al resto de México, los Estados Unidos y el Canadá.

Esta distancia quedará reducida á 700 kilómetros cuando se termine la línea directa de Aguascalientes á Guadalajara, al paso que la línea transcontinental más corta excede de 2,900 kilómetros.

La región que el nuevo ferrocarril atraviesa de Guadalajara á Manzanillo, es sumamente fértil. El Estado de Jalisco, con sus 86,752 kilómetros cuadrados de llanuras, valles y montañas, va á la cabeza de los demás Estados mexicanos como productor de granos.

En toda la línea se encuentran magníficas haciendas y fincas de cría de fácil acceso, que producen grandes cantidades de granos, azúcar, ganado vacuno y tequila. Estos terrenos rinden una renta como de 7 á 10 por ciento.

Entre los productos principales del país pueden mencionarse el henequén, varias clases de maguey, algodón, goma elástica, copal, chicle, naranjas, limones, plátanos, peras, melocotones, café, cacao, vainilla y tabaco.

También abundan los bosques de pino, cedro, caoba y quebracho, en tanto que en la línea de Tehuantepec, casi toda la madera de esta clase ha desaparecido ya, y es necesario ir á la frontera guatemalteca, donde se encuentran varias clases de madera que todavía no se han introducido en el comercio, para iniciar nuevas explotaciones.

En la actualidad en el Estado de Jalisco hay cinco fábricas de algodón que, en 1899, produjeron 248,180 piezas de tejidos de algodón, y otros tejidos. La última estadística muestra que el Gobierno ha hecho 349 concesiones para la explotación de minas, que comprenden

4,775 acres de terreno, incluso 32 minas que sólo producen oro, 68 que producen oro y plata, 178 que producen plata únicamente, 9 que producen plata y cobre, 2 que producen plata y estaño, 2 que producen mercurio, 20 que producen oro y cobre, 5 que producen oro, plata y cobre, 15 que producen cobre solamente, 1 que produce cobre y estaño, y 16 que producen hierro.

En el Estado de Jalisco hay también fábricas de tabaco, que producen anualmente como 13,924,991 cajetillas de cigarrillos, 2,398,723 de cigarros, y 175 paquetes de picadura, que representan un total de 153,908 kilogramos de tabaco del país. También hay 96 destilerías de alcohol, que fabrican anualmente 3,194,209 de litros de licores espirituosos, que se hacen del maguey y de la caña de azúcar. Hay cervecerías que producen 1,184,400 litros de cerveza. El consumo anual de carne en este Estado asciende á 10,502,000 de kilogramos, producto de 132,292 cabezas de ganado de todas clases, que representan un valor de \$3,015,381 plata mexicana.

El valor calculado de las propiedades rurales asciende á \$31,765,295 plata, y el de las propiedades urbanas asciende á \$20,886,074 plata, ó sea un valor total de \$52,653,469 de bienes raíces que pagan contribuciones. Los terrenos que por la ley están exentos de contribuciones, no se han incluido en este cálculo. Éstos incluyen los ferrocarriles, las iglesias y los bienes del Estado y del municipio. Por consiguiente, el valor exacto de los bienes de este Estado es casi el doble del que representan las cifras citadas.

En 1899 las rentas del Estado ascendieron á \$1,291,924 plata, y de entonces acá han aumentado un tanto, aunque también han aumentado proporcionalmente los ingresos y egresos.

La ciudad de Guadalajara cuenta con un establecimiento financiero—El Banco de Jalisco—fundado con la autorización del Gobierno Federal con un capital de \$1,500,000. Este banco está muy bien dirigido y sus negocios prosperan. Las acciones se cotizan con algún premio, y son muy pocas las que se encuentran á la venta. El Banco Nacional de México y el Banco de Londres y México, tienen sucursales en Guadalajara.

La cría de ganado se desarrolla más y más cada año en este Estado. Hay muchas haciendas y fincas de cría que se dedican exclusivamente á esta industria. Se han importado varias razas escogidas de ganado vacuno de los Estados Unidos para mejorar así la raza del país, y el Estado de Jalisco en la actualidad puede suministrar ganado excelente para el matadero, así como buenas vacas de leche para las lecherías.

Tanto la ciudad de México como otras ciudades importantes del país, se surten en gran parte del Estado de Jalisco. Ese Estado ofrece magníficas oportunidades á los capitalistas que deseen invertir capital y establecer empresas agrícolas de esta clase, entre otras razones, por

el hecho de que dicho Estado cuenta con muy buena comunicación ferroviaria.

Á unos cuantos kilómetros de Tuxpán, ó sea hasta donde ya se ha construido la nueva línea de ferrocarril, el Ferrocarril Central Mexicano entra en el pequeño y fértil Estado de Colima, que sólo contiene un área de 5,887 kilómetros cuadrados y 65,026 habitantes. La agricultura constituye la fuente principal de riqueza de este Estado. El clima es más cálido que el del Estado de Jalisco, pero la fertilidad del terreno es igual á la de este último. Colima cuenta con tres fábricas de algodón que en 1899 fabricaron 22,051 piezas de percal y otros tejidos, que contenían de 25 á 30 yardas cada una; nueve fábricas de tabaco que en el expresado año produjeron 5,174,300 cajetillas de cigarrillos y 564,050 cigarros, y seis destilerías que en el año citado produjeron 87,522 litros de licores espirituosos extraídos del maguey y de la caña de azúcar.

El Estado de Colima, así como el de Jalisco, tiene terrenos propicios para la cría de ganado, y muchos agricultores se están dedicando á esta industria.

Contando con que el Ferrocarril Central Mexicano se ha de extender hasta la costa del Pacífico, el puerto de Manzanillo se ha ensanchado y mejorado bajo la dirección del ingeniero Sr. EDGAR SMOOT, que al efecto ha celebrado un contrato con el Gobierno Federal. Esta obra no se ha terminado aún, pero se está activando y progresa rápidamente. Cuando este ensanche y estas mejoras se terminen, el puerto ofrecerá á toda clase de buques un fondeadero como de 70 hectáreas que puede contener cien buques y que es de fácil acceso.

LA NUEVA MÁQUINA DESCORTEZADORA.

Hace algunos meses que el "Boletín de la Sociedad Agrícola Mexicana," que ve la luz en la ciudad de México, publicó una relación de los varios ensayos públicos que se han hecho, con éxito, de una nueva máquina para descortezar las plantas fibrosas nativas, tales como el maguey, el henequén y otras especies de la familia del agave. En otro número más reciente de dicho boletín, se dice que esta máquina, inventada por el Señor MANUEL PIETRO, ha pasado ya del período experimental y en la actualidad se está fabricando en le capital mexicana, y se vende con facilidad en varias partes de la Republica. En dicha relación se anuncia que esta máquina está haciendo el trabajo para el cual se destina con mayor eficacia que ninguna otra de su clase, siendo así que la economía es uno de los rasgos característicos de su operación. Además, hace que ciertas fibras puedan venderse, las cuales, à causa de la difícil decortezación, se han usado hasta ahora nada más que en el país, y hasta un grado muy limitado. Como consecuencia del trabajo de esta máquina, se pronostica un gran aumento en la industria de las plantas fibrosas de la República.

LA INMIGRACIÓN JAPONESA AL ESTADO DE COAHUILA.

La inmigración japonesa al Estado de Coahuila está aumentando rápidamente. En una semana llegaron 80 familias japonesas á Barroterán, para trabajar en las minas de carbón de piedra que hay cerca de esta ciudad. De San Francisco de California anuncian que 300 familias japonesas habían salido para los puertos mexicanos del Pacífico, con objeto de dedicarse á las faenas agrícolas.

EL CAPITAL ITALIANO EN MÉXICO.

Según las investigaciones hechas por conducto de la Legación italiana en la ciudad de México, y con la cooperación de la Cámara de Comercio italiana de esta capital, aparece que en el Estado de Nuevo León solamente los capitalistas y fabricantes italianos han invertido más de \$20,000,000.

Este capital se ha invertido especialmente en empresas industriales, en casas importadoras, exportadoras y de comisiones, en bancos, telares, colonias agrícolas, etc.

LA DEMANDA DE MÁRMOL Y ÓNIX.

La demanda del mármol y ónix mexicanos se aumenta cada día tanto en los Estados Unidos como en Europa. Las ricas canteras que se descubrieron recientemente cerca de Oaxaca y Tehuacán, no pueden, ni con mucho, dar abasto á los pedidos que se reciben diariamente. No cabe duda de que la explotación de las canteras de mármol y de ónix, de Mexico, está destinada á ser una nueva fuente de riqueza para sus afortunados dueños.

LA FABRICACIÓN Y COMERCIO DE MUEBLES.

El “Boletín Comercial,” en un número reciente, publica un informe de la Legación belga en la ciudad de México, á su Gobierno, que anuncia, entre otras cosas, que la industria de muebles de esta última ciudad se halla todavía en su infancia, siendo así que la producción de las fábricas locales se limita á una clase de muebles muy ordinaria y de poco valor. Todos los muebles que se usan en las salas de recibo y demás habitaciones de lujo, son importados y, por tanto, están sujetos al pago de subidos derechos, y los agentes de las fábricas europeas los venden á precios exhorbitantes.

En tales circunstancias, el establecimiento de una fábrica de muebles de primera clase, desde cualquier punto de vista que se considere, sería una magnífica empresa. Comprendiendo esto, una compañía de capitalistas americanos ha dedicado \$300,000, plata, para establecer una fábrica de muebles en la ciudad de México. Esta compañía espera poder vender muebles finos á un precio más bajo que el de sus rivales extranjeros. Dos aserraderos de vapor, equipados con maquinaria

moderna americana para efectuar la preparación de la madera que vendrá de los bosques del Golfo de México, han de constituir importantes accesorios de este establecimiento. La nueva compañía ha de emplear obreros americanos.

Por lo general, los muebles en México se importan, de Francia y Alemania, y también se encuentran en esta ciudad algunos muebles incrustados italianos.

NOTAS DIVERSAS.

El número de carros de carga que atravesó el Río Grande y entró en el territorio mexicano procedente de los Estados Unidos en las varias estaciones de ferrocarril, durante los doce meses que terminaron el 30 de junio de 1901, ascendió á 38,629, que condujeron 535,640 toneladas de mercancías. El número que atravesó dicho río en dirección opuesta durante el mismo período de tiempo, ascendió á 20,368, que condujeron 223,720 toneladas de carga.

NICARAGUA.

INFORME BELGA SOBRE LOS RECURSOS NATURALES DE LA REPÚBLICA.

El "Recueil Consulaire Belge" contiene un informe interesante y detallado sobre la República de Nicaragua, escrito por el Chargé d'Affaires Belga en Centro América, del cual se toman los siguientes datos relativos al comercio, los recursos naturales, y la industria de la República.

Las importaciones de Nicaragua, expresadas brevemente, consisten principalmente de toda clase de tejidos, y especialmente tejidos de algodón, armas de fuego, provisiones secas, saladas ó en lata, cristalería, vidrios para ventanas, velas, fósforos, hierro y acero en varias formas, clavos, machetes, loza y loza de China, papel de todas clases, quincallería, ferretería, muebles de todas clases, pinturas, instrumentos de música, instrumentos para la agricultura y herramientas para talleres y uso doméstico, cueros curtidos, lámparas, vinos y licores, objetos de arte, etc.

Las exportaciones consisten de café, goma elástica, plátanos, plata acuñada, oro acuñado y en barras, minerales de oro y amalgama de oro, cueros, azúcar, gamuza, maderas finas, y entre los artículos de menor importancia pueden mencionarse el cacao, el carey, el maíz, la sal, suelas, queso del departamento de Chontales, etc.

El café, la goma elástica, los plátanos, el oro y las maderas finas, constituyen los principales artículos de exportación de Nicaragua. El café se embarca principalmente para Alemania, Francia, Inglaterra y

los Estados Unidos. La goma elástica encuentra su mejor mercado en los Estados Unidos, pero Inglaterra, Francia y Alemania también reciben cantidades de importancia. Los plátanos se exportan exclusivamente á los Estados Unidos. El oro se embarca principalmente para los Estados Unidos é Inglaterra. La mayor parte de las maderas finas se embarca para los Estados Unidos é Inglaterra, y una pequeña parte se envía á Alemania.

La riqueza vegetal de Nicaragua, así como la de las otras repúblicas de Centro América, se encuentra en abundancia en los terrenos bañados por los dos océanos, en las márgenes de los lagos y ríos, en los valles, en las faldas y en un gran número de llanos. Además de los productos de exportación mencionados, el país produce pita, henequén, madera de construcción y de ebanistería, plantas medicinales y tintóreas, resinas de varias clases, etc. Maíz, arroz, frijoles, yuca, y otras plantas alimenticias, así como frutas tropicales, incluso las naranjas, los limones, las piñas, y otras.

En la actualidad los terrenos baldíos adecuados para la agricultura se venden al tipo de \$3 la manzana.

Según la opinión que el Señor F. BELLY expresa en su obra titulada "Á Través de Nicaragua," esta república es *par excellence* la tierra de promisión para todos los productos naturales de la zona tropical. Los resultados que se obtienen empleando solamente el cultivo más rudimentario, son verdaderamente maravillosos. Mientras en Algeria el algodón necesita 18 meses para madurarse, en Nicaragua se siembra en octubre y se recoge en el mes de febrero en todos los terrenos de la parte occidental. En Nicaragua, así como en todo Centro América, la caña de azúcar produce por lo menos dos cosechas anuales y algunos veces tres, y además la planta vive de 15 á 20 años. En los terrenos vírgenes como los de las faldas orientales, pueden cogerse cuatro cosechas por año. En la misma zona la cosecha de arroz es muy abundante, y el añil puede cortarse tres veces antes que sea necesario volverlo á sembrar.

Los cafetos se encuentran en todas partes en Nicaragua, pero en este país, como en todas partes, se sabe que este árbol crece mejor en los terrenos altos. Por ejemplo, en los terrenos situados de 200 á 2,000 pies sobre el nivel del mar, la producción anual por cada árbol sólo llega de media libra á una libra, en tanto que en las plantaciones situadas de una altura de 2,000 á 3,000 pies, la producción varía de 1 á 4 libras, según la elevación y calidad del terreno. Cuando los terrenos están situados á una elevación de más de 3,000 pies, la producción disminuye. En 1898 el número de cafetos que había en la República ascendió á \$36,965,237. En el Departamento de Managua es donde más se cultiva el café, pero el Departamento de Matagalpa ocupa el primer lugar en cuanto á la calidad de este grano.

El costo para fomentar un cafetal de un área de una manzana en

terrenos vírgenes, hasta la época en que la producción empieza á pagar los gastos de cultivo, es decir, á los tres años, es poco más ó menos el siguiente:

	Pesos.
Compra de una manzana de terreno virgen de.....	3 á 14
Desmonte y limpieza.....	6 á 15
Preparación del terreno	7 á 10
Costo de mil cafetos.....	2 á 10
Transporte y siembra	4 á 16
Asistencia durante 3 años.....	50 á 120
Total.....	72 á 165

El cafeto puede producir realmente á los tres años, pero su producción no excede de un cuarto de libra. Sólo de los 4 á los 5 años, empieza la cosecha á tener alguna importancia, y entonces aumenta gradualmente hasta el décimo año, época en que la producción permanece siendo la misma durante 15 ó 20 años por lo menos, y algunas veces más, si el cafetal se asiste bien. Á fin de desarrollar el cultivo del café, el Gobierno le ha hecho varias concesiones á los cultivadores de este producto. La goma elástica que durante largo tiempo se cogía de los árboles silvestres, en la actualidad se cultiva sistemáticamente. Este cultivo florece en los terrenos situados á una altura menor de 1,000 pies. La goma se recoge principalmente en los Departamentos de Zelaya, Rivas y Chontales, y en la comarca de San Juan del Norte.

El gasto aproximado de una plantación de goma de una manzana (7,000 metros cuadrados) que tenga 156 árboles sembrados á una distancia de 24 pies unos de otros, es el siguiente:

	Pesos.
Una manzana de terreno virgen	3. 00
Desmonte, preparación y asistencia del terreno	20. 00
Una limpieza ó asistencia anual durante 10 años, á razón de \$9	90. 00
Gastos imprevistos	9. 00
Interés al 6 por ciento durante 10 años por 122 pesos.....	73. 20

El Gobierno le hace ciertas concesiones al cultivo de la goma, así como al del café.

Los plátanos se cultivan en gran escala en el Departamento de Zelaya, en la comarca del Cabo de Gracias á Dios y en el distrito de Siquia, y proporciona un comercio de exportación importante. Los plátanos se encuentran principalmente en las regiones occidentales en los departamentos de Managua y León, pero en estos lugares se consume toda la producción.

Los plátanos se cultivan fácilmente y exigen muy poca asistencia. Hay muchas clases de plátanos, como, por ejemplo, el guineo común y el manzano, del cual se hace un vinagre muy bueno, y el dominicano que produce una harina muy nutritiva.

El cultivo del henequén y la pita, que se introdujo recientemente, ha

tenido éxito en los Departamentos de León y Chinandega, y cuenta con la protección del Gobierno.

El tabaco se cultiva principalmente en la costa y en los valles del interior, con especialidad en los Departamentos de Managua, Masaya, Rivas, Chinandega y Nueva Segovia. El tabaco que se produce en este último Departamento se considera el mejor del país, y casi tan bueno como el cubano.

La caña de azúcar se cultiva con éxito en muchos Departamentos, y especialmente en los de Masaya, Granada, Carazo, Rivas, León, Chinandega, Matagalpa y Nueva Segovia. Se fabrican el azúcar refinado y otras clases inferiores, que allí denominan chancaca y mascabado.

El cacao, que es de excelente calidad, se cultiva en el Departamento de Granada. La casa de MENIER, de París, posee una gran plantación á poca distancia de Nandaime, al costado del volcán apagado de Mom-bacho, en el Departamento de Granada. El Gobierno protege también el cultivo del cacao.

El añil abunda mucho en las praderas cálidas situadas á una elevación que varía desde 200 hasta 250 pies. La calidad del producto, especialmente la del Departamento de Rivas, puede rivalizar con el añil de India. Esta planta abunda también en los Departamentos de Granada y Chinandega.

En los bosques se recogen la vainilla, la cera vegetal, la zarzaparilla, la ipecacuana, la cáscara de quina, el ruibarbo, el copal, el bálsamo, las resinas, etc., pero estos productos no están comprendidos entre los artículos de exportación. La vainilla se encuentra principalmente en el distrito de Prinzapolka, y las plantas medicinales y oleaginosas se encuentran especialmente en los Departamentos de León, Carazo, Nueva Segovia y Zelaya.

Se hacen dos cosechas de maíz anuales, una en agosto, que se denomina de agua, y la otra en diciembre, que se denomina de frío. El maíz se siembra en mayo y en septiembre. Los Departamentos que más maíz producen son los de Managua, Granada, Carazo, Rivas, León, Chinandega, Matagalpa y Nueva Segovia.

Los frijoles se consumen en gran cantidad y se cultivan en mayor escala, principalmente en los Departamentos de Granada, León y Matagalpa.

En toda la República se cría el ganado vacuno en cierta escala, pero esta industria está bastante atrasada, y es necesario introducir en ella muchas reformas. En la actualidad, salvo algunas excepciones, esta clase de empresa es la menos lucrativa del país. Casi nada se ha hecho para mejorar la raza de ganado vacuno, y los métodos de recoger el forraje necesitan modificarse. Sin embargo, fuera de los terrenos que se prestan para la crianza de ganado, hay dos elementos que favorecen esta industria, á saber: el aumento del consumo de carne de vaca y el aumento en la exportación.

El precio actual de los terrenos baldíos adecuados para la crianza de ganado vacuno es \$2 por manzana de 7,000 metros cuadrados.

La riqueza de los bosques de Nicaragua es muy grande y la madera de ebanistería constituye uno de sus artículos principales de exportación. Entre las maderas principales pueden mencionarse la caoba, el cedro, el ébano, el guayacán ó palo santo, el ronrón, el granadillo, el quebracho, el palo de rosa, el melón, etc. Hay también otras maderas como la mora, el palo amarillo y el brasileño, que se usan para teñir, que se embarcan en su estado natural, ó el zumo que de ellos se extrae en el país se envía al extranjero.

La explotación de la madera se lleva á cabo casi en toda la República, pero especialmente en los Departamentos de Managua, Rivas, León, Chontales, Matagalpa, Jinotega, Estali, Nueva Segovia y Zelaya, y también en la comarca del cabo de Gracias de Dios, y el distrito de Prinzapolka.

Una compañía americana ha obtenido una concesión del Gobierno para efectuar la explotación, durante quince años, de la caoba, el cedro y palo de rosa de la vastísima comarca próxima al océano Atlántico.

En cuanto á la riqueza mineral de las cinco Repúblicas Centro Americanas, Nicaragua le sigue á Honduras que ocupa el primer puesto.

La riqueza mineral de esa República está distribuida próximamente como sigue: el oro se encuentra en los Departamentos de Nueva Segovia, Chontales, León, Matagalpa, Jinotega, y el distrito de Prinzapolka. La plata se encuentra también en estos Departamentos, salvo en Prinzapolka. El cobre se encuentra en Nueva Segovia, León y Matagalpa. El plomo y el hierro se encuentran en Nueva Segovia y en Matagalpa. El níquel y el cinc se encuentran en Matagalpa, y el estaño en Nueva Segovia. La piedra calcárea se encuentra en León y Matagalpa; el mercurio, sulfato de cal, la sal, el azufre y los minerales combustibles se encuentran en León.

En la actualidad sólo se explotan las minas de oro, las cuales se encuentran principalmente en los Departamentos de Nueva Segovia y Chontales, en las faldas orientales de la Cordillera, y en el distrito de Prinzapolka.

Las únicas dos industrias fabriles de alguna importancia en Nicaragua, son la fabricación del azúcar y la extracción de la mora para la tintorería. Entre las industrias menos importantes pueden mencionarse las fábricas de quesos que hay en el Departamento de Chontales, las fábricas de muebles, fábricas de jabón común y la fábrica de sombreros de jipijapa, fábricas de velas, de almidón, zapatos, sogas, suelas, hielo, aguas minerales, loza común, cestos, arneses, etc. Esta tabla la completan los establecimientos de sastrerías, joyerías, y cerrajerías.

PERU.

PRODUCCIÓN DE SAL.

Según el “Boletín de Minas,” entre las riquezas naturales con que ha sido favorecido el Perú, merece especial mención la sal común, ó cloruro de sodio por lo abundantemente repartida que se encuentra en su territorio.

De los veinte Departamentos en que está dividida la República, solamente en cinco no existe sal; en los demás no solamente en un solo lugar, sino en muchos, se encuentra dicha sustancia. Así en el Departamento de Ancachs existen 21 lugares de donde se extrae sal; en Apurímac 12; en Arequipa 1; en Ayacucho 10; en El Cuzco 3; en Huancavelica 6; en Huánuco 5; en Ica 2; en Junín 18; en Lambayeque 1; en La Libertad 11; en Lima 1; en Moquegua 4; en Piura 14; en Puno 2, ó sea un total de 111.

Las fuentes que producen la sal peruana están clasificadas en el libro titulado “Estudio Técnico de las Salinas del Perú,” con el nombre genérico de salinas, y según el modo como producen la sal, en salinas de mareas, filtraciones, inundaciones, vertientes, lagunas y de sal gema.

Desde el punto de vista económico los sitios productores de sal pueden clasificarse en dos grupos, uno que incluye las lagunas, vertientes y sal gema de la Cordillera, que solamente pueden servir para abastecer los lugares vecinos, y el otro que abraza las mareas, filtraciones inundaciones y sal gema de la costa, que además de satisfacer la condición citada pueden dar lugar á una activa exportación.

Ocupándo se tan sólo del segundo grupo por la importancia que tiene, dice el “Boletín de Minas:”

“*Mareas.*—El único dato que se tiene para calcular su producto anual por hectárea, es el que arroja la salina de Zarumilla y refiriéndonos á él, resulta que con un trabajo primitivo se obtien en por hectárea y por año 124.2 toneladas métricas.

“*Filtraciones.*—Los lugares productores de sal que tienen el indicado origen son 34. Á continuación copiamos los datos referentes á la producción de algunos de los más importantes de éstos:

Lugares productores.	Producción anual.	Superficie de evaporación.	Producción anual por metro cuadrado.	Producción anual por hectárea.
	<i>Kilogramos.</i>	<i>Metros cuadrados.</i>	<i>Kilogramos.</i>	<i>Toncladas métricas.</i>
Guadalupito	767,280	4,000.00	191,820	1,918.20
Los dos Amigos	122,360	668.25	183,105	1,831.05
Nuestra Señora de Guadalupe	1,023,750	5,687.50	180,000	1,800.00
Puerto de Santa	21,600	120.00	180,000	1,800.00
Trinidad	432,400	3,500.00	123,540	1,235.40
Chao	374,976	3,124.80	120,000	1,200.00
Chinos	270,000	3,000.00	90,000	900.00
San José	90,000	10.00	9,000	90.00
Cerro Negro	675,360	9,380.00	72,000	720.00

Salanca ó Particular de Malabrigo	486,432	13,512.00	36,000	360.00
Nazareno	17,800	890.00	20,000	200.00

Inundaciones.—Los lugares productores de sal comprendidos bajo el título que precede existen tan sólo en el Departamento de Piura y los más importantes por la calidad de sal y la facilidad del transporte marítimo son: la Vieja del Cerro, el Lobo, el Hornito y las Culebras ó Culebrera. La sal se presenta bajo la forma de una capa superficial y compacta, cuyo espesor varia entre 4 y 15 centímetros y llega á 50 y 75 centímetros en los pozos abiertos artificialmente, para que la sal que disuelvan las lluvias se deposite en ellos; en otros lugares la sal se presenta formada naturalmente y se renueva de modo que cada avenida ó lluvia aumenta el espesor de la capa de sal.

El trabajo de explotación queda reducido á cortar la sal en panes de $0.12 \times 0.06 \times 0.07$ centímetros. La carga, que la componen 1,200 panes ó sea algo más que 1,200 kilogramos, se paga á \$3.64 plata.

Sal gema de la costa.—Los depósitos de sal gema de la costa son los siguientes: el de Mórrope en el Departamento de Lambayeque y los de Loreto, Pampa Colorada, Osmore y Puíte en el de Moquegua.

En Mórrope está constituida por una capa superficial que tiene una extensión aproximada y mínima de 60 kilómetros cuadrados, variando su espesor desde algunos centímetros hasta 50 y 60 que tiene en el sitio que se explota. Está cubierta de una capa de arena de un espesor mínimo de 0.20 centímetros. En Loreto se presenta en dos capas que son las únicas reconocidas hasta hoy, de las cuales la más próxima al suelo está á 5 metros de profundidad y la segunda á 7 metros 20 centímetros, estas capas son horizontales.

En Pampa Colorada la región salina tiene algunas leguas cuadradas de superficie y la sal se encuentra formando una capa superficial á una profundidad que varía entre 25 y 50 centímetros, con una potencia de 5 á 37 centímetros.

En Osmore se encuentran reconocidas diferentes capas. Así la primera se encuentra más ó menos á 1.50 centímetros debajo del nivel del suelo y con una potencia de $6\frac{1}{2}$ centímetros; la segunda, separada de la primera por una capa estéril de 0.15 centímetro, tiene 0.50 metro de potencia y en seguida siguen dos capas de sal, una de 0.05 metro y otra de 0.12 metro de potencia, separadas como las anteriores por una capa estéril. Debajo de éstas se encuentra, en fin, una de 0.50 metro de espesor, distando de la de igual potencia 2 metros próximamente.

En Puíte la sal se presenta en capas inclinadas y se distinguen á la simple vista seis capas cubiertas con terreno estéril, con un espesor de 10 metros próximamente. La potencia de la sal varía mucho, pero la más común oscila entre 20 y 25 centímetros. -

Dejando aparte las demás fuentes productoras de sal, para revelar la importancia de esta riqueza, nos basta referirnos al yacimiento de Mórrope, en el Departamento de Lambayeque que, como hemos dicho, cubre su extensión de 60 kilómetros cuadrados una ligera capa de

arena; estimando, pues, su espesor medio en 0.20 metro, tercera parte del máximo conocido hoy, hay un volúmen de 12,000,000 de metros cúbicos, que á 2,250 kilogramos por metro cúbico equivalen á un peso de 27,000,000,000 de kilogramos ó á 27,000,000 de toneladas métricas, que al precio actual de \$58.70 plata la tonelada, representan la respectable suma de \$1,584,000,000 plata.”

EXTINCIÓN DE LA MONEDA DE PLATA.

Con fecha 18 de enero de 1902, el Secretario de la Legación de los Estados Unidos en Lima, remitió al Departamento de Estado en Wáshington, una traducción de un decreto, por virtud del cual la moneda de plata se sustituye con la de oro. En virtud de este decreto, que lleva la fecha de 17 de enero de 1902, se autoriza la fundición en la Casa de moneda de Lima, de 500,000 soles para convertirlos en plata en barras, y se ordena que dichas barras se envíen á Europa para venderse allí. Con el producto de esta plata se ha de comprar oro, en conformidad con los preceptos del decreto del 14 de diciembre de 1901, que dice lo siguiente: “El Poder Ejecutivo desmonetizará, á su juicio, hasta un millón de soles de plata, y su valor lo convertirá en libras peruanas de oro.”

SALVADOR.

RESUMEN DEL CENSO DE 1901.

El “Boletín de la Dirección General de Estadística de la República de El Salvador” publica en su número del 1° de enero de este año de 1902, los siguientes datos, arrojados por el censo oficial de 1901.

Superficie total de la República, 34,126 kilómetros cuadrados.

Población total, 1,006,848 habitantes.

Densidad de población, 29.5 habitantes por kilómetro cuadrado.

El área, población por número total y por sexos, y densidad de población por departamentos, es como sigue:

Departamentos.	Población.	Área en kilómetros cuadrados.	Densidad.	Sexos.	
				Varones.	Hembras.
Santa Ana.....	112,944	3,559	31.7	55,403	57,541
Ahuachapán.....	59,856	2,082	28.7	29,362	30,494
Sonsonate.....	78,528	2,242	35.0	38,521	40,007
La Libertad.....	79,320	2,184	36.3	38,909	40,411
San Salvador.....	117,096	2,047	57.2	57,439	59,657
Chalatenango.....	61,608	3,346	18.4	30,221	31,387
Cuscatlán.....	75,024	1,740	48.9	36,802	38,222
La Paz.....	61,752	2,354	26.2	30,291	31,461
San Vicente.....	55,296	2,287	24.8	27,125	28,171
Cabañas.....	43,032	819	52.5	21,108	21,924
San Miguel.....	80,040	3,481	23.0	39,262	40,778
Usulután.....	80,400	3,344	24.0	39,439	40,961
Morazán.....	52,368	2,355	22.2	25,688	26,680
La Unión.....	49,584	2,286	41.4	24,323	25,261
La República.....	1,006,848	34,126	29.5	493,893	512,955

Distribuida por razas y divisiones políticas la población resulta como sigue:

Departamentos.	Razas.		Número de Indios 100 por cada blancos.	Divisiones políticas.				
	Blancos.	Indios.		Distritos.	Ciudades.	Pueblos.	Aldeas.	Lugares.
Santa Ana	110,400	2,544	2.30	3	3	2	5	10
Ahuachapán	29,808	30,048	100.81	2	2	1	8	11
Sonsonate	41,544	36,984	89.02	3	2	3	8	13
La Libertad	63,816	15,504	24.29	2	2	4	15	21
San Salvador	73,896	43,200	58.46	3	2	5	8	15
Chalatenango	57,312	4,296	7.50	2	1	6	28	35
Cuscatlán	37,152	37,872	101.94	2	2	4	11	17
La Paz	32,064	29,688	92.59	2	1	4	16	21
San Vicente	52,992	2,304	4.35	2	1	10	2	13
Cabañas	36,696	6,336	17.27	2	2	5	2	9
San Miguel	79,320	720	.91	3	2	5	12	19
Usulután	73,488	6,912	9.41	3	4	3	11	18
Morazán	39,264	13,104	33.37	3	1	6	19	26
La Unión	44,448	5,136	11.55	2	3	5	9	17
Total	772,200	234,648	30.39	34	28	63	154	245

Distribuida por sexos la población en 1899 y 1900 fué como sigue:

Departamentos.	1899.			1900.		
	Varones.	Hembras.	Total.	Varones.	Hembras.	Total.
Santa Ana	2,176	2,050	4,226	2,444	2,262	4,706
Ahuachapán	1,223	1,243	2,466	1,264	1,230	2,494
Sonsonate	1,435	1,371	2,806	1,704	1,568	3,272
La Libertad	1,500	1,483	2,983	1,694	1,611	3,305
San Salvador	2,294	2,219	4,513	2,431	2,448	4,879
Chalatenango	1,255	1,165	2,420	1,288	1,279	2,567
Cuscatlán	1,674	1,392	3,066	1,656	1,470	3,126
La Paz	1,207	1,180	2,387	1,376	1,197	2,573
San Vicente	1,217	1,112	2,329	1,170	1,134	2,304
Cabañas	845	807	1,652	914	879	1,793
San Miguel	1,605	1,458	3,063	1,711	1,624	3,335
Usulután	1,526	1,493	3,019	1,694	1,656	3,350
Morazán	1,062	1,061	2,123	1,150	1,032	2,182
La Unión	955	978	1,933	1,116	950	2,066
Total	19,974	19,012	38,986	21,612	20,340	41,952

La población de las principales ciudades es como sigue:

Departamentos.	Nombres de las ciudades principales.	Habitantes.
Santa Ana	Santa Ana	48,120
Ahuachapán	Ahuachapán	14,136
Sonsonate	Sonsonate	17,016
La Libertad	Nueva San Salvador	18,768
San Salvador	San Salvador	59,544
Chalatenango	Chalatenango	7,942
Cuscatlán	Cojutepeque	11,620
La Paz	Zacatecoluca	15,130
San Vicente	San Vicente	17,892
Cabañas	Sansuntepeque	12,456
Usulután	Usulután	11,856
San Miguel	San Miguel	24,768
Morazán	San Francisco	2,151
La Unión	La Unión	4,272

El consumo de ganado en 1900 fué 56,762 reses, 200 carneros y cabras y 68,878 puercos. El valor de todos los animales sacrificados fué \$2,184,872.

Las tablas siguientes muestran el consumo por Departamentos:

Departamentos.	Toros.			Añojos.			Bueyes.		
	Número.	Valor total.	Precio medio.	Número.	Valor total.	Precio medio.	Número.	Valor total.	Precio medio.

EL CAFÉ EN EL SALVADOR.

La Legación del Brasil en los Estados Unidos, solicitó del Salvador datos acerca del café, en el propósito de formar una liga para levantar el precio de este artículo, con motivo de la Exposición de Búfalo.

Don CARLOS A. IMENDIA obtuvo esos datos de los señores Doctor Don RAMÓN GARCÍA GONZÁLEZ y Don ROBERTO ALVAREZ, datos cuya importancia es innegable. Nos los suministra el señor IMENDIA. Hélos aquí:

1. Área actualmente cultivada con cafetales en El Salvador, 50,000 hectáreas.
2. Área cuya cultura se ha abandonado por cansancio de la tierra, 2,000.
3. Área cuya cultura se ha abandonado por causa de los malos precios, ninguna.
4. Área propia para cafetales, no cultivada aún, 20,000 hectáreas.
5. Término medio de la producción anual por árbol, 350 gramos.
6. Duración media del árbol de café produciendo remunerativamente, treinta años.

7. Exportación en cada año, conocida por estadística ó tradición, 500,000 quintales españoles.

8. Precios, por kilo, en los puertos de salida, en cada año. Dependen de los precios en Europa.

9. Costo regular de producción en los puertos de salida—9 centavos oro americano por kilo.

10. Mínimo del precio de venta en el puerto de salida, para que la cultura del café no deje perjuicio, \$5 oro americano á bordo, los 50 kilos.

11. Países á donde se exporta el café y cantidades que se han exportado en cada año á cada uno de ellos: Alemania, 7,420,280 libras; Australia, 1,343,251; Bélgica, 210,834; España, 38,344; Francia, 23,815,148; Inglaterra, 5,329,398; Italia, 4,462,905; Estados Unidos, 7,477,476; Colombia, 2,290; Chile, 1,830 en el año de 1900.

12. Clase en que se divide el café antes de exportarlo y relación del precio de unas para otras, por kilo. Lavado y corriente ó sin lavar, valiendo el primero, de uno á cinco pesos oro más que el segundo, según calidad.

13. Vasijas en que el café es exportado. Cuál es la que se considera mejor para conservar las buenas calidades del grano? Los sacos de yute.

14. Grados de beneficio en que se exporta el café. Sin lavar y lavado.

15. Maquinaria usada para el beneficio. Nombres y direcciones de los fabricantes: GORDON, Lóndres; MASON & Co., New York.

Nota.—Los datos que no pudieron presentarse exactos, se formaron por aproximación.

LA IMPORTACIÓN POR LA UNIÓN.

Según el cuadro publicado últimamente por la Sección de contabilidad fiscal, la importación por La Unión, durante el mes de octubre de 1901, produjo de impuestos y derechos, \$141,641.81. Las entradas se descomponen como sigue, por países:

Países.	Bultos.	Valor en oro.	Pago fiscal.
Alemania.....	6,356	\$110,448.20	\$123,679.34
Bélgica.....	62	458.70	1,426.10
Costa Rica.....	50	464.00	212.82
Colombia.....	39	657.00	688.39
Cuba.....	4	951.00	810.54
Chile.....	50	70.00	265.20
Ecuador.....	111	3,669.87	6,197.76
España.....	264	5,545.53	8,361.66
Total.....		122,244.30	141,641.81

RECAUDACIÓN DE RENTAS.

Según el cuadro publicado por el “Diario Oficial” correspondiente al 25 de diciembre de 1901, los productos de las rentas marítimas y

fiscales, durante los meses de enero á septiembre de dicho año, ascendieron á \$4,835,064.06. Comparada esta cantidad con la que se recaudó en los primeros nueve meses del año de 1900, resulta un aumento de \$282,375.72 en 1901. El monto total de lo recaudado se compone como sigue: importación, \$2,542,967.51; exportación, \$526,396.56; renta de licores, \$1,354,262.91; rentas diversas, \$411,437.08.

URUGUAY.

EXPORTACIONES PRINCIPALES POR MONTEVIDEO EN 1901.

Según “La Revista del Río de La Plata,” las principales exportaciones por el puerto de Montevideo, durante el año de 1901, fueron las siguientes:

Cueros de buey secos, 995,808; cueros de buey salados, 540,568; pelo, 1,509 pacas; lana, 74,334 pacas; pieles de carnero, 15,587 fardos tasajo, 537,886 bultos y 2,943 toneladas; sebo, 44,916 bocoyes; harina, 24,083 sacos; afrecho, 8,303 sacos; maíz, 279,420 sacos; trigo, 4,513 sacos; linaza, 16,356 sacos y 31 toneladas; huesos, 14,778 toneladas, y ceniza de hueso, 14,106 sacos. Los cuernos de res constituyeron un artículo adicional en dichas exportaciones, habiéndose enviado 1,049,219 cuernos al extranjero en 1901.

LOS MINERALES DE LA RÉPUBLICA.

Se cree que las colinas y terrenos altos del Uruguay son muy ricos en minerales. Entre los metales se han encontrado el oro, la plata, el cobre, el hierro, el estaño y el mercurio, al paso que los mineralogistas han encontrado topacios y diamantes en la provincia de Minas, y además, amatistas y ágatas en cantidad suficientes para poder exportarse á Europa. Se dice que los minerales de plata domésticos rinden un 87 por ciento de metal; el mineral de cobre rinde un 56 por ciento, y el mineral magnético rinde un 72 por ciento. El promedio de rendición de oro por tonelada de cuarzo aurífero de tres distritos en 1886 fué 70 onzas. En la República no se explotan minas de carbón de piedra, pero se han descubierto varios depósitos de este mineral.

El “Mining Journal” de Londres, correspondiente al 8 de febrero de 1902, dice que las minas de oro Cuñapiru, San Gregorio y Santa Ernestina, rindieron 71,946 gramos de oro de 6,193,380 toneladas de cuarzo en 1901.

VENEZUELA.

DECRETO RESPECTO DE PATENTES DE INVENCION.

MINISTERIO DE FOMENTO.

En vista de que con frecuencia se dirijen al Ejecutivo Federal, por órgano de este Ministerio, solicitudes de patentes de las mejoras de invención de que trata el Artículo 1° de la Ley de la materia, sin especificar claramente el arte, máquina, manufactura ó composición de materia que se haya mejorado, lo cual causa pérdida de tiempo é inconvenientes á este Despacho y á los interesados; el Ejecutivo Federal resuelve: que todo aquel que pretenda obtener una patente de mejoras de invención, debe expresar en la solicitud, descripción, dibujos ó muestras que envíe á este Ministerio, cuál es el arte, máquina, manufactura ó composición de materia que haya sido mejorada.

Comuníquese y publíquese.

Por el Ejecutivo Federal,

FELIPE AROCHA GALLEGOS.

CARACAS, 31 de enero de 1902.

PRODUCCIÓN DE AZÚCAR EN EL MUNDO.

(1901-1902.)

El "Bulletin Commercial" de Bruselas anuncia que, según los informes obtenidos de varias fuentes fidedignas, la producción total de azúcar de remolacha del mundo llegará á 6,363,000 toneladas en 1901-2, contra 6,048,000 toneladas en 1900-1901.

La producción de los diferentes países comparada con la del año anterior es como sigue:

	1901-2.	1900-1901.
	<i>Toneladas.</i>	<i>Toneladas.</i>
Alemania.....	2,125,000	1,979,000
Francia.....	1,150,000	1,170,000
Austria.....	1,125,000	1,074,000
Rusia.....	1,050,000	920,000
Bélgica.....	350,000	340,000
Holanda.....	190,000	178,000
Suecia.....	115,000	112,000
Dinamarca.....	60,000	53,000
España.....	100,000	84,000
Italia.....	77,000	66,000
Rumania.....	18,000	24,000
Otros países.....	3,000	48,000
Total.....	6,363,000	6,048,000

Las cifras de la producción de azúcar de caña durante los períodos comparados se dan á continuación:

	1901-2.	1900-1901.
	<i>Toncladas.</i>	<i>Toneladas.</i>
Cuba.....	755,000	512,061
Java.....	720,000	704,456
Estados Unidos.....	400,000	350,000
Hawai.....	340,000	320,000
Brasil.....	190,000	180,000
La Isla de Mauricio.....	170,000	174,938
Perú.....	135,000	120,000
Demerara.....	100,000	95,188
Las Antillas Menores.....	95,000	85,000
Egipto.....	90,000	85,000
Puerto Rico.....	80,000	55,089
Las Islas de Barbados.....	60,000	61,074
La Isla de Trinidad.....	50,000	47,942
Filipinas.....	50,000	55,559
Reunión.....	40,000	42,631
Guadalupe.....	40,000	37,946
Martinica.....	35,000	33,543
Jamaica.....	30,000	30,000
Total.....	3,380,000	2,990,427

Según este cálculo es evidente que, considerada en conjunto la producción de azúcar del mundo en 1901-1902 será considerablemente mayor que la del año anterior.

CÁLCULO ALEMÁN DE LA PRODUCCIÓN DE AZÚCAR DE REMOLACHA.

El Cónsul de los Estados Unidos en Bremenenvio, con fecha 16 de diciembre de 1901, al Departamento de Estado de Wáshington, un informe relativo á la producción de azúcar de Europa. En este informe se expresa que el resultado de las investigaciones que sobre el asunto de la cosecha de azúcar de remolacha en Europa hizo la Unión Internacional de Estadística de Azúcar, aparece de las siguientes cifras correspondientes á los años de que se trata:

	1901-2.	1900-1901.
Alemania.....	2,220,850	1,974,785
Austria.....	1,306,900	1,083,300
Francia.....	1,080,300	1,100,171
Rusia.....	1,079,550	893,520
Bélgica.....	325,000	320,000
Holanda.....	200,100	178,100
Suecia.....	121,392	115,547
Dinamarca.....	57,500	50,760
Otros países.....	221,000
Total.....	6,612,592	5,716,183

Al parecer habrá un exceso de producción de azúcar en Europa, según el informe que se acaba de citar, que ascenderá á 1,000,000 de toneladas, y las existencias que se han de agregar á la próxima estación, pueden llegar á 1,500,000 toneladas.

CÁLCULOS PRESENTADOS Á LA CONFERENCIA DE BRUSELAS.

En un cablegrama reciente dirigido á la prensa, se anuncia que los fabricantes de azúcar europeos están muy alarmados con motivo de la presente crisis azucarera. Los informes presentados á la Conferencia de Bruselas por los productores de azúcar de remolacha, muestran que durante la estación de fabricación de azúcar de 1901, Alemania fabricó como 2,000,000 de toneladas de azúcar, y consumió 850,000 toneladas; Austria fabricó 1,200,000 toneladas, y consumió 400,000 toneladas. Francia fabricó 1,000,000 de toneladas, y sólo consumió 450,000 toneladas, en tanto que Rusia, que produjo 1,000,000 de toneladas, las consumió casi todas, siendo así que el convenio celebrado entre los fabricantes en dicho país, puede hacer frente á las exigencias de cualquiera situación que surja. Bélgica produjo 330,000 toneladas de azúcar, y consumió 70,000 toneladas, y Holanda produjo 190,000 toneladas, y consumió 75,000 toneladas. Otros países europeos, á saber, España, Italia, y Rumania, han venido á ser ahora países productores de azúcar, causando así perjuicios de consideración á los países que antes les suministraban este artículo.

Los cálculos que la Conferencia azucarera ha aceptado como exactos, fijan la producción total del azúcar de remolacha correspondiente al año de 1901, en 6,470,000 toneladas, en tanto que el consumo de estos países sólo asciende á 3,600,000 toneladas. Por tanto, el excedente que resulta asciende á 2,870,000 toneladas, de las cuales Inglaterra recibió cerca de 1,700,000 toneladas, siendo así que una parte del resto se envió á los Estados Unidos, y la otra se depositó en almacenes en los cuales, como están sujetos al convenio celebrado entre los fabricantes, constituye un factor importante en el mercado europeo.

CÁLCULO DE LA PRODUCCIÓN AMERICANA.

La mayor parte del azúcar que se consume en los Estados Unidos es azúcar de caña, y desde este punto de vista, se hace difícil comprender que dos terceras partes del azúcar que en el mundo se produce se hace de remolacha. La siguiente tabla muestra las fuentes de abastecimiento de azúcar de caña del mundo, comparándose por toneladas la cosecha del año de 1901-2, con la de 1900-1901, según las autoridades americanas aceptadas:

Países.	1901-2.	1900-1901.
Estados Unidos (Luisiana).....	300, 000	275, 000
Puerto Rico.....	100, 000	80, 000
Hawái.....	300, 000	321, 461
Cuba (zafra).....	875, 000	635, 000
Trinidad (exporta).....	50, 000	50, 000
Barbados (exporta).....	60, 000	60, 000
Jamaica.....	30, 000	30, 000
Antigua y St. Kitts.....	25, 000	25, 000
La Martinica (exporta).....	32, 000	32, 000
Guadalupe.....	35, 000	35, 000
Santa Cruz.....	13, 000	13, 000

Países.	1901-2.	1900-1901.
Haití y Santo Domingo.....	45,000	45,000
Las Antillas menores.....	8,000	8,000
México (zafra).....	95,000	95,000
Guatemala (zafra).....	9,000	9,000
Salvador.....	5,000	5,000
Nicaragua (zafra).....	3,500	3,500
Costa Rica (zafra).....	1,500	1,500
Guayana Inglesa (exporta).....	95,000	95,000
Guayana Holandesa (zafra).....	6,000	6,000
Venezuela.....	3,000	3,000
Peru (exporta).....	105,000	105,000
República Argentina (zafra).....	115,000	114,252
Brasil (zafra).....	215,000	190,000
Total en América.....	2,526,000	2,204,252
La India Inglesa (exporta).....	15,000	15,000
Las Islas Siam (zafra).....	7,000	7,000
Java (zafra).....	725,000	710,120
Filipinas (exporta).....	70,000	48,000
Total en Asia.....	817,000	780,120
Queensland (Australia).....	117,000	92,554
Nueva Gales del Sur.....	19,000	19,000
Las Islas Fiji (exportan).....	33,000	33,000
Total en Australia y Polinesia.....	169,000	144,554
Egipto (zafra).....	95,000	94,580
Isla de Mauricio.....	180,000	175,267
Reunión.....	35,000	35,000
Total en África.....	310,000	305,147
España.....	33,000	33,000
Producción total de azúcar de caña.....	3,855,000	3,502,390

Los Estados Unidos consumen la mayor parte del azúcar de caña del mundo. En 1900 toda la producción de la América del Norte, del Sur y de Centro América, ascendió á 2,204,252 toneladas de azúcar de caña, y el consumo en los Estados Unidos ascendió á 2,219,847 toneladas. Se calcula que en el año común de 1901, los Estados Unidos consumieron 2,372,317 toneladas inglesas de azúcar de todas clases, que comparadas con las 2,219,847 toneladas inglesas que consumieron en 1900, acusan un aumento de 132,469 toneladas, ó sea un 6.87 por ciento. Este consumo se descompone de la manera siguiente:

De azúcar de caña doméstica, 292,150 toneladas; de azúcar de remolacha doméstica, 124,859 toneladas; de azúcar de mepile, 5,000 toneladas; de azúcar de miel, 17,977 toneladas; es decir, un total de 439,986 toneladas de producción doméstica; y 1,672,529 toneladas de azúcar de caña extranjera, 217,286 toneladas de azúcar de remolacha sin purgar extranjera y 42,515 toneladas de azúcar refinada extranjera, ó sea un total de 1,932,330 toneladas de azúcar de países extranjeros y de posesiones insulares. De las importaciones 309,070 toneladas vinieron de Hawai, 66,269 toneladas de Puerto Rico y 5,100 toneladas de Filipinas.

La cantidad de azúcar de refino que se destinó al consumo en 1901, ascendió á 2,287,828 toneladas, y las existencias de azúcar de refino que no se habían distribuido á la terminación del año, se calculan en 30,000 toneladas, contra 30,000 toneladas en 1900.

Un cablegrama de Hawai, vía San Francisco, fechado el 16 de enero de 1902, anunció que se calculaba que la zafra de azúcar en Hawai, correspondiente al año que terminó el 1° de noviembre de 1901, sería de 281,000 toneladas, ó sea mucho que los acusado por las cifras menos de las tablas precendentes. De las 281,000 toneladas se enviarán 100,000 toneladas á San Francisco para distribuirse en varios puntos de los Estados Unidos; 68,000 toneladas se enviarán por el Estrecho de Magallanes y 18,000 por el Cabo de Hornos á la parte oriental de los Estados Unidos.

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

El canje de publicaciones de Centro y Sud América puede efectuarse por conducto de la "Smithsonian Institution," Wáshington, D. C., por medio de las agencias de distribución que tiene en aquellos países, y que son las siguientes:

Argentina: Museo Nacional, Buenos Aires.

Bolivia: Oficina Nacional de Inmigración, Estadística y Propaganda Geográfica, La Paz.

Chile: Universidad de Chile, Santiago.

Colombia: Biblioteca Nacional, Bogotá.

Costa Rica: Oficina de Depósito, Reparto y Canje Internacional, San José.

Guatemala: Instituto Nacional de Guatemala, Guatemala.

Honduras: Biblioteca Nacional, Tegucigalpa.

México: Todos los envíos gozan de la franquicia del correo.

Nicaragua: Ministerio de Relaciones Exteriores, Managua.

Paraguay: Oficina General de Informaciones y Canje y Comisaria General de Inmigración, Asunción.

Perú: Biblioteca Nacional, Lima.

El Salvador: Museo Nacional, San Salvador.

Uruguay: Oficina de Depósito, Reparto y Canje Internacional, Montevideo.

Venezuela: Museo Nacional, Caracas.

El Bachiller POULTNEY BIGELOW, miembro de la Real Sociedad Geográfica, que ha hecho un estudio bastante extenso de la colonización y sus problemas, acaba de publicar (casa editora de McCURE, PHILLIPS & Co., de Nueva York, 1901) un tomo de 365 páginas en 8° que lleva

el siguiente título, significativo "The Children of the Nations" (Los Hijos de las Naciones). Esfuérsase el autor por explicar en este libro, de la manera más sucinta posible, la influencia que la madre patria ejerce sobre las colonias, y la acción refleja de éstas, ya sea para el bien ó para el mal. También procura el autor demostrar porqué unos países han fracasado y otros han tenido éxito en su política colonial. Como quiera que los Estados Unidos en la actualidad tienen posesiones coloniales, el Sr. BIGELOW abriga la esperanza de que el Congreso reconocerá la conveniencia de establecer una Universidad nacional para estudiar los ramos en que todo funcionario colonial debe estar bien versado. Uno de los capítulos de esta obra se ha consagrado al desarrollo de la América del Sur, y trata de las primitivas colonias de los españoles en aquella parte del Nuevo Mundo.

En un juicio crítico del libro de KRÜGER intitulado "Das Zuckerrohr und seine Kultur" (La Caña de Azúcar y su Cultivo) Magdeburgo, 1900, publicado en la Revista titulada "Geographische Zeitschrift," el Profesor KIRCHHOFF dice que el cultivo de la caña de azúcar empezó probablemente en el Delta del Ganges, y mucho tiempo después se extendió hasta China. Los árabes lo llevaron al Norte de África y al Sur de Europa, y Colón lo llevó á América en 1493. El terreno para la caña de azúcar necesita tener ácido fosfórico y, sobre todo, ácido silíceo y potasa y, por consiguiente, su cultivo requiere el abono y el riego. Es una planta de terreno seco que requiere calor y bastante agua, pero que no puede resistir el agua estancada. El período de vegetación generalmente es de dieciocho á veinticuatro meses, pero en la América del Norte este período se ha reducido á diez meses.

"La Línea de Demarcación del Papa Alejandro VI y el Tratado de Tordesillas en el Año de Nuestro Señor de 1493 y 1494," por SAMUEL EDWARD DAWSON, Dr. en Leyes (Laval), J. HOPE & SONS, Ottawa, Canadá, 1899, editores. Este trabajo se publicó primeramente en las "Transactions" (Memorias), de la Real Sociedad del Canadá, segunda serie de 1898, 1899 y 1900 (pp. 468-546, inclusive), y ahora ha salido á luz en forma de folleto. Los temas discutidos son los siguientes: El Derecho Público Internacional en 1493; Las Bulas del Papa; La demarcación de 1493, que es la primera línea trazada; El Tratado de Tordesillas celebrado en 1494, y la línea sustituida; El Punto de partida; Las Medidas antiguas y medioevales de longitud; Las Líneas de demarcación en el Océano, y su supuesto contacto con la costa noreste de América.

Debido á la baja temperatura, en el sudeste de los Estados Unidos y en China, el límite de cultivo de la caña de azúcar es 34° de latitud norte en el Brasil 30° y 39° en España. En Java no se cultiva la caña de azúcar á una altura mayor de 550 metros; en Nepal la altura máxima

es 1,327 metros; en las colinas de Nilgiri á 1,524 metros y en México, Colombia y el Perú á 1,800 metros. En 1896-97, se produjeron por lo menos 1,317,000,000 de kilogramos (acaso 4,000,000,000 de kilogramos) de azúcar de caña y 4,747,000,000 de kilogramos de remolacha. Alemania, que en la actualidad produce más azúcar que ningún otro país, hace una cantidad mayor de remolacha que la que toda la América produce de caña de azúcar.

La Biblioteca de la Oficina de las Repúblicas Americanas ha recibido un libro publicado por el Gobierno de Honduras, cuyo título es "Mensaje del Presidente de la República, Contestación del Congreso, y Memorias de los Secretarios de Estado, referentes á los actos del Poder Ejecutivo durante el año económico de 1899 á 1900." El libro está esmeradamente impreso, consta de 793 páginas, y contiene numerosas tablas estadísticas y datos valiosos relativos á la República de Honduras durante el mencionado período.

En otro capítulo se describe cómo Portugal colonizó al Brasil, y en no menos que cinco capítulos se trata de los varios aspectos de la historia de las Antillas. Uno de dichos capítulos es de especial interés para los Estados Unidos en la actualidad, por que trata de las Islas Danesas. Esta obra representa, en gran manera, el resultado de las observaciones personales del autor en diferentes países del mundo que están bajo el dominio de las grandes potencias colonizadoras del globo.

"Estadística Comercial de la República de Chile" es el título que lleva una útil recopilación que se ha publicado recientemente en Valparaíso. El tomo consta de 754 páginas, y trata exclusivamente de la estadística relativa al comercio extranjero y doméstico de Chile, durante el año de 1900. Esta obra contiene numerosas tablas estadísticas que han sido preparadas con gran esmero, y constituye un índice completo del comercio chileno durante el período mencionado.

El "Dunbar's Western Mining Directory" (publicado en Denver y San Francisco en 1901), correspondiente á 1901-2, contiene importantes informes sobre la maquinaria en uso para la explotación de las minas, los sistemas de fundición y los procedimientos al cianuro y de cloruración que se emplean en la Columbia Británica y en la República de México, así como también en algunos puntos de la parte occidental de los Estados Unidos.

BOLETIM MENSAL

DA

SECRETARIA DAS REPUBLICAS AMERICANAS,

União Internacional das Republicas Americanas.

VOL. XII.

MARÇO DE 1902.

No. 3.

DECISÕES DO DEPARTAMENTO DO THESOURO
DOS ESTADOS UNIDOS DE AMERICA RELATIVAS
Á TARIFA DAS ALFANDEGAS, LEIS DE NAVEGA-
ÇÃO, IMMIGRAÇÃO, ETC. (ANNO DE 1902).

No. 23465.

IMPORTAÇÕES DAS ILHAS DE HAWAÏ.

Esta decisão, datada de 14 de Janeiro de 1902, determina que a Junta de Avaliadores Geraes não está investida de jurisdição para julgar si uma mercadoria é ou não importada. De conformidade com a resolução conjunta de 7 de Julho de 1898, direitos serão cobrados sobre mercadorias importadas de Hawaï conforme ás leis aduaneiras em vigor até que o Congresso modifique as relações aduaneiras.

No. 23466.

TRANSPORTE COMMUM.

Esta decisão, datada de 16 de Janeiro de 1902, autoriza que a “Chicago, Rock Island and Pacific Railway Company” forneça nova fiança como companhia de transporte commum para effectuar o transporte de mercadorias avaliadas e não avaliadas.

No. 23467.

TRANSPORTE COMMUM.

Esta decisão, datada de 16 de Janeiro de 1902, autoriza a approvação da fiança da “Southern Pacific Company,” como companhia de trans-

porte commun para effectuar o transporte de mercadorias que não forem sido avaliadas.

No. 23468.

ANIMAES DE CRIAÇÃO.

Registro de cavallos Boulonnais no livro genealogico francez denominado "Chevaux de Trait."

DEPARTAMENTO DO THESOURO,
16 de Janeiro de 1902.

SENHOR: Referindo-me ás disposições deste Departamento de 22 de Junho de 1899 (T. D. 21298), relativas á importação de animaes de criação conforme o disposto no paragrapho 473 da lei de 24 de Julho de 1898, devo manifestar-vos que o Secretario de Agricultura avisou a este Departamento que o livro genealogico denominado "Chevaux de Trait," mencionádo na pagina 3 das ditas disposições, consta de varias secções, uma das quaes está consagrada ao registro de cavallos Boulonnaise; que as secções comprehendidas neste livro são as seguintes: Boulonnaise, Nivernaise, Ardennaise, Bretonne, Maine-Anjou e Normandie; que se publica uma secção para cada classe dos mencionados cavallos de tiro, e que, por conseguinte, de accordo com estas disposições é possível a entrada de cavallos Boulonnaise que mostrem o registro e certificado de genealogia tomado da secção denominada Boulonnaise do livro genealogico "Chevaux de Trait Français." Devereis proceder de accordo com as ditas disposições.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

AO INSPECTOR DA ALFANDEGA,
Nova York, N. Y.

No. 23469—A. G. 5061.

RECORTES DE METAL.

Esta decisão dispõe que os recortes de metal velho que consistam de capsulas que ja tenham sido usadas ou descarregadas, e recortes de metal de que foram originalmente feitas, recolhidos nos arsenaes e compostos de cobre e nickel com vestigios de chumbo, mas que não contenham zinco, sendo o cobre a substancia componente mais valiosa que contenham, não podem ser classificados como "argentina, albata ou prata allemã sem manufactura," de accordo com o disposto no paragrapho 174 da lei de 24 de Julho de 1897, e não estão comprehendidos nas disposições do artigo 6, ou paragrapho 588 de dita lei, mas se incluem especificadamente nas disposições do paragrapho 533 da dita lei, e têm direito a entrar livremente de accordo com as ditas disposições.

No. 23470—A. G. 5062.

MEDIÇÃO DE TAPETES COM ORLAS OU BORDAS.

Esta decisão dispõe que a orla dos tapetes orientaes será incluída na medida para pagamento de direitos, de accordo com as disposições do paragrapho 379 da lei aduaneira de 1897, á razão de 10 centavos por pé quadrado e 40 por cento ad valorem.

No. 23471—A. G. 5063.

RECORTES DE METAL HOLLANDEZ—ATTRIBUIÇÕES DOS AVALIADORES LOCAES—PROTESTO CONTRA A ENTRADA LIVRE.

Esta decisão dispõe o seguinte.

1. De conformidade com o paragrapho 505 da lei aduaneira de 1897, os recortes de metal hollandez que só sirvam para os fins de manufactura estão isentos de direitos, e de accordo com o paragrapho 193 não estão sujeitos a direitos como manufacturas de metal (Grempler contra os Estados Unidos, 107 Fed. Rep., 687; 46 C. C. A., 557).

2. Os avaliadores locaes não são, em sentido algum, funcionarios classificadores, sendo suas recommendações aos inspectores de alfandega quanto á natureza das mercadorias puramente em forma de conselho.

3. *Quære.* Si uma pessoa que importa mercadorias que entram livres de direitos, pode protestar legalmente e allegar que devem pagar direitos.

No. 23472—A. G. 5064.

SACCOS PARA GRÃOS, REIMPORTADOS.

Esta decisão dispõe o seguinte.

Aprovisionamento de navios.—A razão que se dá para considerar isentos de direitos, os equipamentos de um navio, é que os mesmos formam parte do navio, tanto assim que os aprovisionamentos que chegam no curso da navegação não se consideram mercadorias dentro da significação da lei aduaneira.

Saccos para grãos.—Os saccos para grãos que se exportarem cheios de alimento para o gado vaccum durante a navegação, e que forem devolvidos vazio, em fardos, mas que não pertençam absolutamente ao navio reimportador, ou que não sejam usados em viagem, nem estiverem em nenhum sentido identificados com seus utensilios, não formam parte do equipamento.

Os Estados Unidos contra Chain Cable (2 Sumn., 362; 25 Fed. Cas., 391); The Conqueror (49 Fed. Rep., 99; ib., 166 U. S., 110); The Gertrude (3 Story, 68; 10 Fed. Cas., 265); In re Swift Beef Company (A. G. 4754). Kennedy v. United States (95 Fed. Rep., 127).

CACHIMBOS E FORNILHOS DE CACHIMBOS.

Os cachimbos e os fornilhos de cachimbos, feitos principalmente de barro, pagam direitos como “cachimbos e fornilhos de cachimbos de barro,” ao typo de 50 centavos por grossa e 25 por cento ad valorem, de conformidade com o paragrapho 459 da lei de 1897, e não como “cachimbos e fornilhos de cachimbos, seja qual for o material de que se componham,” á razão de 60 per cento ad valorem, de conformidade com o dito paragrapho. As palavras “feitas de barro” neste paragrapho significam “feitas inteira ou principalmente de barro.” A. G. 4547. e 4532 citados.

No. 23473a—A. G. 5065a.

O COGNAC FRANCEZ DA HABANA.

AS PREROGATIVAS DA RECIPROCIDADE—O TRANSITO DESDE FRANÇA TEM QUE SER CONTINUO.—Para que possam ter direito aos beneficios do convenio commercial reciproco com aquelle paiz (T. D. 19405), as mercadorias embarcadas de França não devem desviar-se em nenhum porto intermedio, de tal maneira que se convertam em uma parte do commercio de outro piaz. In re Booth (G. A. 4719); In re La Montagne (G. A. 4538).

A BALDEAÇÃO.—A simples baldeação não constitue uma desviação. Grant contra Peaslee (2 Curt., 250; 9 Fed. Cas., 1143); In re Hermann (A. G. 4751).

EXPORTAÇÕES CUBANAS.—O cognac comprado na Havana, Cuba, levado alli de França e da Havana para os Estados Unidos e manifestado em uma factura de Habana, tem que considerar-se como uma exportação de Cuba, a menos que todos os factos justifiquem uma deducção distincta. Uma factura consular franceza feita depois de chegar as mercadorias a este paiz, e uma declaração jurada ex parte e declarações de alfandega feitas por pessoas interessadas, não se consideram provas sufficientes de um transito continuo desde França com a baldeação na Habana.

Quære: Si o carregamento, ainda que comprado em Cuba, se consideraria uma importação d'alli, si a travessia desde França não houvesse sido interrompido.

[Perante os avaliadores geraes de Nova York, 21 de Janeiro de 1902.]

No protesto 47620b-156, de The Florida Brewing Company, contra a decisão do inspector da alfandega de Tampa, Fla., em quanto a quantia dos direitos que devem pagar certas mercadorias importadas a bordo do *Olivette* e que entraram no dia 22 de Dezembro de 1900.

Decisão de SOMERVILLE, *Aforador geral*.

Este protesto é relativo a 199 caixas de cognac importadas pelo porto de Tampa, Fla., pela Florida Brewing Company. As circumstancias do caso são as seguintes: Ao fazerem a declaração de entrada, os importadores apresentaram uma factura das mercadorias que não estava certificada, feita por Dussaq & Co., de Havana, Cuba, contra a dita Florida Brewing Company, expressando que o cognac fora recebido de Saint Nazaire, França, pelo vapor *La Navarre* e que fora trasbordado para Tampa pelo vapor *Olivette*.

Depois apresentaram uma factura certificada pelo Consul dos Estados Unidos em Bordeaux, França, com o seguinte titulo: Factura de 199 caixas de cognac compradas pelos Senhores DUSSAQ & Co., de Havana, de transito para Key West, de — de Bordeaux, para ser embarcadas no vapor *Dragut*, via de S. Nazaire, e trasbordadas ao vapor *La Navarre*. A declaração do exportador acerca desta factura, diz que se intentava fazer o desembarque das mercadorias em Key West, mas a factura foi feita e certificada, ao pedido dos protestantes, depois de haverem chegado as mercadorias a este paiz, o qual diminue sensivelmente seu valor como evidencia. Tambem temos á vista uma declaração jurada do director da “Florida Brewing Company,” expondo o seguinte:

Que a referida “Florida Brewing Company” comprou de DUSSAQ & Co., de Havana, Cuba, 199 caixas de cognac, as quaes tinham de ser embarcadas de S. Nazaire, França, a Tampa, Florida, via de Havana; que as ditas 199 caixas de cognac foram embarcadas effectivamente de S. Nazaire, França, pelo vapor *La Navarre* para Havana, Cuba, de onde se baldearam para o vapor *Olivette* e se trouxeram a Tampa.

A declaração de entrada dos importadores diz que as mercadorias foram importadas de “França via de Havana.”

Baseados nestas provas, se nos pede que decidamos que as mercadorias se produziram em França e se importaram deste paiz, e que, por conseguinte, têm direito a entrar pagando um direito de \$1.75 por gallão, de conformidade com o convenio de reciprocidade commercial com França (T. D. 19405), e não á razão de \$2.25 por gallão, de conformidade com o paragrapho 289 da lei aduaneira de 1897, segundo a classificação do inspector de alfandega. Os importadores allegam que a firma de Havana fez as vezes simplesmente de seu corretor.

Si quando as mercadorias sahiram de França se intentava desembarcal-as em um porto dos Estados Unidos, a baldeação na Havana não podia alterar seu character como uma importação de França (In re Hermann Brothers, G. A. 4751). Segundo manifestou o Juiz CURTIS no caso de Gant contra Peaslee (2 Curt., 250; 9 Fed. Cas. 1143), este facto “só se referiria ao caminho e aos meios de seu transito, mas não ao lugar de sua partida, nem ao ponto de seu destino.” Por outro lado, si o carregamento desviou-se na Havana de maneira tal que a exportação se fizesse em effeito d’alli, a origem franceza das mercadorias não pode isental-as do pagamento de um direito total (In re La Montague, G. A. 4638; In re Booth, G. A. 4719).

As provas resultam deficientes em varios pormenores. Não se tem apresentado nenhuma prova directa de que as mercadorias foram produzidas em França. As relações que se allega que existiam entre DUSSAQ & Co., de Havana e os importadores, não têm sido demonstrado de uma maneira terminante. Pelos factos consignados apparece que a transacção foi uma venda que a firma de Havana fez aos importadores

de mercadorias compradas em França. Não podemos dizer si este facto affectaria o carácter da importação, si seu transito de França houvesse sido continuo, com excepção da baldeação, porque cremos que a deducção deste ultimo facto, das provas adduzidas, seria injustificada.

Todo o que as provas indicam acerca de uma travessia continua, resulta *ex parte* e de um caracter parcial, e não é sufficiente para apoiar a deducção de que as mercadorias não se converteram em uma parte do commercio de Cuba. A factura franceza não faz menção de nenhum consignatario nos Estados Unidos, e no expediente não se encontra nada que demonstre satisfactoriamente que o cognac de que se trata, não poudo haver sido vendido em Cuba por DUSSAG & Co., e que a ordem da "Florida Brewing Company" não foi satisfeita de uma existencia que a firma tivesse á mão ou que tinha de chegar. (In re Booth, *supra*.) Deve ter-se presente que este caso volveu a iniciar depois da falta por parte dos protestantes de apresentar mais provas, para que lhes foram concedidos dous mezes.

Portanto, fica indeferido o protesto e confirmado a decisão do inspector de alfandega.

MERCADORIAS DE TRANSITO.

De conformidade com o art. 3005 dos Estatutos Revisados, as mercadorias de transito podem desembarcar-se no primeiro porto ao qual cheguem, para seu transporte e exportação por qualquer porto ou subporto dos Estados Unidos.

DEPARTAMENTO DO THESOURO,
24 de Janeiro de 1902.

SENHOR: Este Departamento está de posse de vossa carta de 19 de Novembro ultimo, na qual exprimis a razão que tivestes para não permittir a entrada, de accordo com o art. 3005 dos Estatutos Revisados, das mercadorias que se destinam a passar de transito pelos Estados Unidos e exportar-se de Sumas, Washington.

Dizeis que: Como Sumas não é designado, de accordo com o art. 730, regulamento de 1899, como um porto pelo qual podem ser embarcadas mercadorias afiançadas, julgou-se opportuno não permittir o uso de dito porto como um porto fronteiro para effectuar o transporte e a exportação de mercadorias afiançadas. Nesta alfandega entende-se que a decisão do Thesouro no. 21829, é a ultima decisão que designa portos para o fim acima mencionado.

Em resposta, devo informar-vos que as mercadorias que mediante a factura, o conhecimento, o manifesto ou outro documento comprovativo, se mostrarem que se destinam a passar de transitio pelos Estados Unidos e exportar-se destes, podem entrar no porto de chegada para seu transporte e exportação por qualquer porto ou subporto dos Estados Unidos de conformidade com a lei de 21 de Maio de 1900, que emenda o art. 3005 dos Estatutos Revisados. (Vejam-se as decisões do Thesouro no. 22250 de 25 de Maio de 1900, e no. 22605 de 14 de Novembro de 1900.)

Sou com respeito,

AO INSPECTOR DE ALFANDEGA

de Boston, Mass.

**FIANÇAS DE TRANSPORTE E DE EXPORTAÇÃO DE ACCORDO COM
O ART. 3005 DOS ESTATUTOS REVISADOS.**

[Circular No. 9.]

DEPARTAMENTO DO THESOURO,

25 de Janeiro de 1902.

Aos inspectores e outros funcionarios de alfandegas:

Achou-se que o prazo de quatro e de seis mezes, segundo o destino das mercadorias, especificado no art. 785 do Regulamento das Alfandegas de 1899 e a decisão do Thesouro no. 22605 de 14 Novembro de 1900, para as fianças que comprehendem mercadorias que entram para serem transportadas e exportadas, de accordo com o art. 3005 dos Estatutos Revisados, tal como foi emendado pela lei de 21 de Maio de 1900 (Decisão do Thesouro n. 22250) em muitos casos é um periodo, demasiado curto para poder cumprir devidamente com o regulamento que rege os ditos carregamentos. Por consequente, este Departamento pela presente emenda o dito artigo 735 do regulamento de modo que se prorogue o prazo de ditas fianças até um anno, a contar desde a data da declaração de entrada, seja qual for o destino das mercadorias.

O. L. SPAULDING,

Subsecretario.

No. 23480.

O CODIGO INTERNACIONAL DE SIGNAES.

[Circular No. 10.]

DEPARTAMENTO DO THESOURO,
 SECÇÃO DE NAVEGAÇÃO,
Washington, D. C., 25 de Janeiro de 1902.

Aos inspectores de alfandegas, capitães de navios e demais pessoas interessadas:

Segundo se exprime na lista do codigo que esta repartição publicou para o anno de 1901, o novo codigo internacional de signaes poz-se em pratica no dia 1º de Janeiro de 1901. Tanto a nova como a antiga edição do codigo, se haviam de usar conjuntamente desde o 1º de Janeiro de 1901 até o 1º de Janeiro de 1902, mas já se ordenou que desde o 1º de Janeiro de 1902 sómente se usará a nova edição.

Agora apparece que a Camara de Commercio Inglesa resolveu que, si bem é certo que em todos os casos ha de entender-se que o novo codigo ha de ser usado desde o 1º de Janeiro de 1902, sem embargo, si em qualquer caso os officiaes de signaes não pudessem interpretar um signal pelo novo codigo, e acham que podem traduzil-o pelo antigo, não deverão negar-se a recebê-lo.

Nos Estados Unidos pode tomar-se uma medida semelhante e os signaes que em taes casos se fizerem dos navios, de accordo com o antigo codigo, podem ser recebidos e annunciados.

Faz-se a indicação de que cada vez que um navio usar o antigo codigo, seja o facto communicado á Secção de Navegação do Departamento do Thesouro.

Em cada alfandega deverá fixar-se uma copia desta circular para o conhecimento dos capitães de navios e demais pessoas interessadas.

E. T. CHAMBERLAIN,
Commissario.

Approvada.

O. L. SPAULDING,
Subsecretario do Thesouro.

 No. 23481.
COUROS.

METHODO DE AVALIAR OS COUROS.—O direito adicional disposto no artigo 32 da lei de 1897, não deverá ser imposto si o augmento de valor se deve unicamente ao encolhimento depois do embarque.

DEPARTAMENTO DO THESOURO,
25 de Janeiro de 1902.

SENHOR: O contador do Departamento do Thesouro chama a attenção deste Departamento para o facto de que a declaração de entrada do armazem No. 7, de 1901, de vosso porto, comprehende certos couros.

Parece que os couros encolheram-se durante a viagem; que o numero total de libras desembarcadas e das quaes deu conta o pesador, como succede regularmente em taes casos, foi menor que o numero de libras consignado na factura; e que o avaliador ao encontrar o valor corrente no mercado, multiplica o numero de libras desembarcadas pela unidade de valor consignada na factura, o qual geralmente faz que o valor total avaliado seja menor que o valor de factura.

Incumbe aos avaliadores avaliar a mercadoria no estado em que esta se importa, e não no estado em que se factura e embarca. Por exemplo, os couros verdes podem ser facturados e embarcados, mas a sua chegada encontra-se que se têm seccado e encolhido até certo grão, durante a travessia de importação e, por conseguinte, ao avaliador apresentam-se couros de um character distincto e de um valor indubitavelmente maior que os couros que se facturaram e embarcaram, e é seu dever encontrar o valor que tinha no mercado estrangeiro, na data em que se embarcou a classe de couro que tem á vista, e não a classe de couro facturada e embarcada. (Vejam-se os artigos 10 e 19 da lei administrativa de alfandega.)

A este respeito, chama-se vossa attenção para o caso de Reiss contra Magone (39 Fed. Rep., 105), o de Robertson contra Bradbury (132 U. S., 491), e o da American Sugar Refining Company, contra os Estados Unidos (181 U. S., 610); e tambem a decisão do Thesouro No. 9305, de 23 de Março de 1889, relativa ao sabão de Castilha, na qual se mantem que quando a differença entre o peso consignado na factura e o que apparece no relatorio do pesador possa ser devida á evaporação ou a outras causas semelhantes, e o avaliador e o inspector de alfandega convençam-se de que o valor por libra no mercado estrangeiro das mercadorias tem augmentado proporcionalmente, de modo que não resulte nenhuma diminuição do valor total declarado da factura no mercado estrangeiro, o dito valor por libra no mercado estrangeiro seria representado pelo resultado que se obteria dividindo o valor total da factura no mercado estrangeiro pelo numero de libras desembarcadas.

Em tal caso, o valor total sujeito ao pagamento de direitos não pode ser menor que o valor da factura. Sempre que o augmento do avaliador ou qualquer parte de dito augmento, se deva unicamente ao encolhimento dos couros depois de seu embarque, não podendo, nem o exportador nem o importador, impedir a alteração do estado das mercadorias, o dito augmento não será considerado como um augmento per se, para que resulte o valor do mercado, e não será imposto um direito addicional de conformidade com o artigo 32 da lei de 24 de Julho de 1897. Portanto, deveis proceder de accordo com o que acaba de ser exposto.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

Ao INSPECTOR DA ALFANDEGA,
Erie, Pa.

No. 23482.

LIMÕES IMPORTADOS EM CAIXAS.

Esta decisão, datada de 25 de Janeiro de 1902, dispõe que para determinar o peso liquido verdadeiro dos limões importados em caixas, é necessario achar o verdadeiro peso bruto de cada classe importada, pesando separadamente um numero sufficiente de caixas de diferentes classes do tamanho regular, devendo ser marcado o peso bruto em cada caixa que se pesar. É necessario obter os pesos brutos totaes das diferentes classes, fixando a média dos pesos determinados ao numero de caixas de cada classe, e a tara deverá ser determinada pesando um numero sufficiente de caixas vazias de cada tamanho.

No. 23483.

RECORTES DE TABACO.

Os recortes de tabaco que se exportam de um armazem de fabricação afiançado, ao reimportarem-se, pagarão direitos como tabaco manufacturado.

DEPARTAMENTO DO THESOURO,
25 de Janeiro de 1902.

SENHOR: Este Departamento recebeu opportunamente vossa carta de 15 do corrente, relativa á decisão da Junta de Avaliadores Geraes dos Estados Unidos, datada de 30 do proximo passado (G. A. 5056—T. D. 23443) que comprehende certa importação de “recortes de tabaco.”

Em vossa carta dizeis o que segue:

“Quando estas mercadorias se declararam originalmente, pareciam ter direito á entrada livre como productos nacionaes devoltos no mesmo estado em que estavam quando foram exportados e, por conseguinte, as ditas mercadorias foram examinadas no caes, e a declaração de entrada das mesmas foi liquidada no dia 23 de Novembro de 1900. Posteriormente, esta repartição recebeu um T. e E. declaração entrada de Petersburg, Virginia, que mostra que as mercadorias foram exportadas de um armazem de sexta classe, e em vista da dita relação e da interpretação que esta repartição tem dado ás disposições do artigo 27 da lei de 24 de Julho de 1897, a declaração de entrada foi liquidada e sobre as mercadorias foi imposto um direito de 55 centavos por libra, de accordo com o disposto no paragrapho 215, por virtude dos termos empregados no artigo 27, isto é, ‘excepto os artigos manufacturados em armazens afiançados e exportados em conformidade com a lei, os quaes pagarão os mesmos direitos que si fossem importados originalmente.’”

A junta encontra, de facto, que o tabaco em questão não estava manufacturado, e que como não se pagou neuhuma contribuição de renda

interna sobre o mesmo antes da exportação, fica comprehendido em dito artigo 27, como um producto dos Estados Unidos que volveu a importar-se, depois de haver sido exportado sem haver pago nenhum direito de renda interna, e por conseguinte pagará um direito igual á contribuição imposta pelas leis de rendas internas sobre artigos semelhantes, como se allega no protesto.

Citaes a clausula final do paragrapho 483 da lei de 24 de Julho de 1897, que impõe um direito igual á contribuição interna dispensada sobre o tabaco manufacturado reimportado e o regulamento revisado relativo á contribuição sobre o tabaco, o rapé e os charutos (serie 7, no. 8, revisada, da Repartição de Rendas Internas) que mostra que em certos casos os recortes de tabaco são considerados como tabaco manufacturado que paga a contribuição de renda interna á razão de 12 centavos por libra e deduzis que—

“A decisão da Junta de Avaliadores de que o tabaco de que se trata ‘não está manufacturado,’ allegando depois no mesmo paragrapho, que deverá pagar um direito equivalente á contribuição imposta pelas leis de rendas internas, as quaes mantêm que os recortes de tabaco são tabaco manufacturado, é uma contradicção evidente.”

Este Departamento está de accordo com esta opinião, e pela presente ordena-vos que appelleis da decisão de que se trata, de accordo com o artigo 15 da lei de 10 de Junho de 1890.

Chama-se vossa attenção para o facto de que a exportação de um armazem de fabricação afiançado constitue uma prova prima facie de que as mercadorias estavam manufacturadas, posto que, de accordo com o artigo 15 da lei de 24 de Julho de 1897, sómente artigos manufacturados podem ser retirados de armazens para a exportação.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

Nova York, N. Y.

No. 23484.

FACTURAS.

Sempre que se compre realmente uma mercadoria, a factura e declaração que se façam da mesma deverão ser firmadas pelo comprador ou seu agente devidamente auctorizado.

DEPARTAMENTO DO THESOURO,
28 de Janeiro de 1902.

SENHOR: Tenho a honra de accusar o recebimento de vossa carta de 13 do proximo passado, transmittindo-me uma copia de um telegramma recebido do consul-geral em Marselha, relativo á difficuldade

de applicar o regulamento que prescreve que os commissarios no estrangeiro que comprarem mercadorias para embarcal-as e que as remetterem a importadores deste paiz, deverão firmar a declaração que se ha de fazer na factura como agentes do comprador. Allega-se que a applicação deste regulamento offerece muitos inconvenientes, tanto aos remettentes como aos agentes consulares, porque em certos casos, ainda que os commissarios no estrangeiro não discutam a conveniencia da applicação da regra a suas transacções mercantis, os importadores americanos não tem querido enviar poderes. Os consules americanos em outros pontos permitem que os commissarios firmem as facturas como vendedores, e os commissarios no estrangeiro que têm uma longa lista de freguezes occasionaes nos Estados Unidos, o dia menos pensado podem receber um telegramma auctorizando-lhes a fazer uma compra em circumstancias em que não lhes seja possivel conseguir um poder a tempo.

A circular de vosso Departamento, datada de 18 de Dezembro de 1900, que comprehende a carta deste Departamento de 3 de Dezembro de 1900 (Decisão do Thesouro, No. 22546) baseou-se no facto de que a partida da commissão que apparece nas facturas que contêm uma declaração firmada por um commissario como “vendedor,” seria considerada como uma parte do valor que paga direitos das mercadorias comprehendidas em dita factura, e o Departamento, com o fim de proteger os commissarios de boa fé, indicou a conveniencia de exigir que os commissarios firmem as declarações como agentes do comprador. A attitude do Departamento parece ser de accordo com o disposto nos artigos 2 e 3, da lei de 10 de Junho de 1890.

No primeiro dos referidos artigos dispõe-se:

“Que todas as facturas de mercadorias importadas deverão ser firmadas pela pessoa que as possua ou embarque, si as ditas mercadorias foram realmente compradas, ou pelo fabricante ou dono das mesmas, si foram obtidas de outra maneira que não seja uma compra, ou pelo agente devidamente auctorizado de dito comprador, fabricante ou dono.”

Comprehender-se-há que a pessoa que possui e embarca as mercadorias é o comprador, e a lei prescreve que a factura deverá ser firmada por elle ou pelo agente devidamente auctorizado de “dito comprador.”

O artigo 3 dispõe o seguinte:

“Que todas estas facturas * * * deverão conter uma declaração firmada pelo comprador, fabricante, dono ou agente.” É evidente que as palavras “fabricante” e “dono” referem-se unicamente ás mercadorias que não foram obtidas por compra, e que sempre que as mercadorias são compradas realmente, tanto a factura como a declaração que nella apparece, deverão ser firmadas pelo comprador ou seu agente. Não ha nenhum preceito que exige que o “vendedor” faça uma declaração como tal. Si bem é certo que o artigo 3 não exige expressa-

mente que o agente esteja devidamente auctorizado, o artigo 2 o exige, e como na maioria dos casos, a factura e a declaração seriam firmadas pela mesma pessoa, não seria injusto exigir que o agente do comprador, que firma a declaração, seja devidamente auctorizado; mas em relação a isto, estou de opinião de que a devida auctorização dada por uma pessoa residente neste paiz, a um commissario no estrangeiro, para que compre mercadorias e firme a factura, seria uma auctorização sufficiente para que o dito agente firme a declaração.

Sou com respeito,

O. L. SPAULDING,
Subsecretario.

Ao SECRETARIO de ESTADO.

OS TIJOLOS DE PEDRA POMES.

Esta decisão dispõe que os tijolos para limpar feitos de pedra pomes moida e mesclada com areia e depois impressada em differentes tamanhos, deverão pagar direitos á razão de \$6 por tonelada, de accordo com o paragrapho 92 da lei de 24 de Julho de 1897, á semelhança da pedra pomes em todo ou em parte manufacturada.

No. 23489—A. G. 5070.

O CIMENTO PARA DENTISTAS.

Esta decisão dispõe que dous compostos independentes, um dos quaes é um pó e o outro uma mistura de *formaldehyd*, azeite de cravos e creosoto, os dous juntos sendo vendidos sob a denominação commercial de “formagen,” que se usam juntos e se conhecem no commercio por “cimento para dentistas,” pagam direitos á razão de 20 por cento ad valorem, de accordo com o paragrapho 89, da lei de 24 de Julho de 1897, como “outro cimento.”

Que um composto de *formaldehyd*, azeite de cravo e creosoto, que se importa separadamente para ser usado junto com um pó para formar um cimento, e que tambem serve de antiseptico, paga direitos como uma preparação medicinal não alcoolica, de conformidade com o paragrapho 68 da citada lei.

No. 23490—A. G. 5071.

ROLOS DE VIAGEM FEITOS EM PARTE DE LÃ, CUJO MATERIAL COMPONENTE MAIS VALIOSO É O ALGODÃO OU O LINHO.

Esta decisão dispõe que a clausula contida no paragrapho 391, tarifa de sedas, lei aduaneira de 1897, que diz que “todas as manufacturas nas quaes a lã seja um material componente, deverão ser classificadas como

manufacturas de lã," só refere-se ao dito paragrapho, ou ao mais ao quadro no qual se encontra o dito paragrapho. Portanto, os rolos de viagem assim chamados, que se compõem em parte de lã, sendo o algodão ou o linho o seu material componente mais valioso, pagam direitos de conformidade com o paragrapho 322 ou 347 da dita lei, como manufacturas de algodão ou de linho não especificadas. Que não é necessario determinar qual dos dous paragraphos da tarifa é applicavel ás mercadorias importadas, sempre que não seja duvida de que deve applicar-se um delles, si o direito em cada caso é o mesmo.

REPUBLICA ARGENTINA.

REGISTRO DE ENCOMMENDAS POSTAES.

O Departamento dos Correios dos Estados Unidos communicou, no dia 2 Janeiro de 1902, aos agentes de correio que fora avisado officialmente de que podem ser agora registradas encommendas endereçadas para sevem entregues em qualquer agencia postal da Republica Argentina. Até agora o registro havia sido limitado a encommendas destinadas a agencias especificadas.

IMMIGRAÇÃO EM 1901.

O movimento geral das entradas e sahidas de immigrants na Republica Argentina em 1901, accusou um algarismo de 160,582 individuos para as primeiras e de 112,665 para as ultimas. Dos 125,951 immigrants chegados, 90,127 vieram directamente de paizes estrangeiros e 35,824, por via de Montevideo. As sahidas foram representadas por 80,251 emigrantes e 32,414 passageiros. Em 1900, o numero total de pessoas que entraram foi de 132,456, das quaes 105,902 eram immigrants; em 1899, o numero das entradas foi de 145,699, das quaes 111,083 eram immigrants. A maior parte dos immigrants em 1901 eram de nacionalidade italiana, ainda que se nota tambem um augmento no numero dos polacos e roumanios. A maior parte dos immigrants foram engajados na industria agricola.

BOLIVIA.

CONVENIO POSTAL COM OS ESTADOS UNIDOS.

O Superintendente de Correios Estrangeiros dos Estados Unidos, expediu a seguinte circular no dia 16 de Janeiro de 1902.

Tendo sido concluido um convenio postal entre os Estados Unidos e a Bolivia, que começará a reger no dia 1º do proximo mez (Fevereiro de 1902) pacotes postaes expedidos da Bolivia com destino aos Estados

Unidos e os expedidos dos Estados Unidos com destino á Bolivia poderão ser admittidas entre os dous paizes a partir daquella data.

Os pacotes não devem pesar mais de 11 libras, nem ter mais que 3 pés e 6 pollegadas de extensão, e mais que 6 pés de comprimento e circumferencia junctamente.

O porte para pacotes com destino á Bolivia será 20 centavos por libra ou fracção de libra e 5 centavos, pela distribuição, serão cobrados do expedidor de cada pacote recebido da Bolivia.

A remessa deve ser effectuada entre as agencias postaes de Nova York e San Francisco, nos Estados Unidos e de La Paz na Bolivia.

BRAZIL.

QUANTIDADE DE PAPEL-MOEDA EM CIRCULAÇÃO.

Quadro demonstrativo dos valores, quantidade e importancia das notas do papel-moeda em circulação em 31 de Janeiro de 1902.

Valores.	Quantidade de notas.	Importancia por valores.
\$500	12, 848, 813	6, 424, 406\$500
1\$000	14, 733, 901	14, 733, 901\$000
2\$000	10, 124, 811½	20, 249, 623\$000
5\$000	6, 175, 877½	30, 879, 387\$500

ESTADOS UNIDOS.

COMMERCCIO ESTRANGEIRO EM JANEIRO DE 1902.

Os Estados Unidos importaram durante o mez de Janeiro de 1902, mercadorias no valor de \$79,138,192, contra \$69,307,080 no mesmo mez de 1901. As importações que entraram livres de direitos em Janeiro de 1902, foram por valor de \$36,461,913, contra \$27,382,894 em Janeiro de 1901. As importações que pagaram direitos foram avaliadas em \$42,676,279 em Janeiro de 1902, comparadas com \$41,924,186 em Janeiro de 1901. O grande augmento nas importações de Janeiro de 1902 sobre as do mesmo mez de 1901, foi devido principalmente ás importações de materia prima e artigos em parte manufacturados que se empregam nas industrias dos Estados Unidos e ás importações de artigos de luxo. O augmento havido nestas duas classes de mercadorias foi de \$8,960,984.

As importações durante os sete mezes do exercicio de 1902 foram avaliadas em \$526,116,998, comparadas com \$459,038,141 para o mesmo periodo do exercicio anterior. Do augmento total que foi de \$67,078,857, \$9,095,514 representam o augmento nas importações de artigos manufacturados promptos para o consumo.

As importações durante o mez de Janeiro de 1902, comparadas com as do mesmo mez de 1901, se classificaram da maneira seguinte:

Classificação.	1902.	1901.
Productos alimenticios e animaes	\$16, 273, 453	\$16, 718, 448
Materia prima para industrias nacionaes	30, 445, 623	23, 166, 281
Artigos em todo ou em parte manufacturados que se empregam nas fabricas	6, 886, 890	6, 411, 668
Artigos promptos para o consumo	12, 910, 991	11, 709, 259
Artigos de luxo, etc	12, 621, 235	11, 301, 404
Total	79, 138, 192	69, 307, 080

As exportações dos Estados Unidos em Janeiro de 1902, incluindo os productos estrangeiros reexportados, foram avaliadas em \$129,136,444, comparadas com \$136,325,601 no mesmo mez de 1901. A diminuição é devida ao decrescimento das exportações de productos agricolas, pois as exportações de artigos manufacturados augmentaram em cerca de \$2,000,000. Durante os sete mezes que terminaram em Janeiro de 1902, as exportações foram avaliadas em \$872,659,682, comparadas com \$902,237,970 para o mesmo periodo do exercicio anterior.

As exportações feitas em Janeiro de 1902, comparadas com as do mesmo mez de 1901, foram classificadas como se segue:

Classificação.	1902.	1901.
Productos de agricultura	\$84, 477, 950	\$92, 565, 242
Productos de fabricas.....	34, 412, 992	32, 654, 035
Productos de minas.....	2, 912, 011	3, 011, 212
Productos de florestas.....	3, 328, 987	3, 983, 475
Productos de pesca	477, 719	656, 301
Productos miscellaneos	756, 651	505, 310
Total de productos nacionaes.....	126, 366, 310	133, 375, 575
Artigos estrangeiros reexportados	2, 770, 134	3, 950, 026
Total geral.....	129, 136, 444	136, 325, 601

A MAIOR NAÇÃO EXPORTADORA EM 1901.

Os Estados Unidos continuaram a ser durante o anno de 1901 a maior nação exportadora do mundo. As estatisticas da exportação dos principaes paizes do mundo em 1901, organizadas pela Repartição de Estatisticas do Departamento do Thesouro, demonstram que as exportações dos Estados Unidos foram maiores que as de qualquer outra nação. Ao passo que a exportação total para todo o anno é indicada sómente no caso de algumas das nações mais importantes, a exportação média mensal durante o periodo do anno de que se podem obter estatisticas, é dada para todos os paizes. Segundo essa relação, a exportação média mensal dos diversos paizes durante o anno de 1901, foi como se segue:

Estados Unidos, \$119,840,333; Reino Unido, \$113,753,987; Allemanha, \$90,242,000; França, \$66,929,329; Paizes Baixos, \$56,790,923; Austria-Hungria, \$32,012,746, e Belgica, \$28,678,729. A exportação total dos Estados Unidos durante o anno foi no valor de \$1,438,083,000, e a do Reino Unido, no de \$1,365,047,843. Destes algarismos parece que as exportações dos Estados Unidos em 1901 soffreram uma diminuição de cerca de \$12,000,000, comparados com as de 1900, mas isto é devido ao facto de que os embarques para Hawaï e Porto Rico não se incluíram nas estatisticas da exportação. As exportações do Reino Unido em 1901 foram de \$1,365,047,843, comparadas com \$1,417,085,849 em 1900, o que mostra uma diminuição de cerca de \$52,000,000. As exportações da Allemanha durante os nove mezes

que terminaram em Setembro mostram um augmento de \$4,000,000, comparadas com as do periodo correspondente do anno anterior. Nos onze mezes que terminaram com Novembro, as exportações da França excederam em \$18,000,000 ás do mesmo periodo do anno anterior. No referido periodo as exportações da Belgica, e da Austria-Hungria, comparadas com as do mesmo periodo do anno anterior, mostram uma differença para menos de \$7,000,000 e \$9,000,000, respectivamente.

Quanto ao commercio de importação, os Estados Unidos occupam o quarto lugar na lista das nações. A importação média mensal dos diversos paizes foi como se segue: Estados Unidos, \$73,368,421; Reino Unido, \$211,789,669; Allemanha, \$111,646,000; França, \$75,483,423; Paizes Baixos, \$65,922,642; Belgica, \$34,942,018, e Austria-Hungria, \$28,600,569. Convem accrescentar que os algarismos consignados para os Paizes Baixos correspondem ao anno de 1900, não podendo-se obter ainda estatisticas da importação em 1901.

O seguinte quadro mostra a importação e exportação média mensal dos principaes paizes do mundo durante o periodo do anno civil de 1901 de que se tem podido obter estatisticas:

Paizes.	Importações.	Exportações.	Paizes.	Importações.	Exportações.
Estados Unidos.....	\$73,368,421	\$119,840,333	Italia.....	\$29,700,743	\$22,657,465
Reino Unido.....	211,789,669	113,753,987	Canadá.....	16,097,469	18,959,203
Allemanha.....	111,646,000	90,242,000	Brazil.....	5,258,454	15,051,841

Oleomargarina.....	5,094,541	499,489
Outros productos de carne.....		3,850,836
Valor total.....		197,227,098

Além dos productos enumerados, foram exportados durante o anno de 1901, aves domesticas e caça no valor de \$866,322; 24,249,565 libras de manteiga, no valor de \$4,184,966; 31,396,115 libras de queijo, no valor de \$3,006,344, e leite por valor de \$1,646,579, attingindo os productos de carne e de leite a um valor total de \$206,931,309.

O CULTIVO DO TABACO DE SUMATRA.

O Governo, por intermedio do Departamento de Agricultura, tem feito experiencias sobre o cultivo de tabaco de Sumatra na região do rio Conneticut, com resultados que promettem ser altamente satisfactorios. O custo de producção no paiz é calculado em 90 centavos por libra, e como o tabaco de Sumatra é vendido no mercado de Amsterdam a preços que variam de 50 centavos a \$3 por libra, crê-se que o producto de Connecticut poderá ser vendido por cerca de \$2 a libra, obtendo assim o productor um lucro de mais de 100 por cento.

O Departamento de Agricultura, com o objecto de fomentar o cultivo desta qualidade de tabaco na Republica, distribuiu sementes, forneceu instrucções e enviou peritos para superintender a preparação e o acondicionamento do tabaco. As despesas feitas com a cultura e colheita do tabaco foram pagas pelos cultivadores e quarenta e cinco geiras foram plantadas, tendo ficado entendido, como condição da experiencia que sufficiente instrucção seria dada para que se pudesse proseguir a industria. O tabaco foi cultivado debaixo de tendas feitas de panno denominado "cheese cloth," attingindo a produccão total a 40,000 libras. Os cultivadores concordaram em effectuar a venda da colheita sob a fiscalização do Governo, afim de que se possa estabelecer um typo de preço do producto para mostrar o resultado obtido com as despesas realizadas pelo Departamento com a experiencia.

Diz-se que os manufactureiros de tabaco que têm tido amostras deste tabaco declaram unanimemente que a experiencia teve grande exito e que o desenvolvimento da industria importará em centenas de milhares de dollars para o paiz.

IMPORTAÇÕES DE MOGNO EM 1901.

Durante o anno civil de 1901, os Estados Unidos importaram 39,682,000 pés de mogno, no valor de \$2,123,195. Para esta quantidade a America latina concorreu com 32,894,000 pés no valor de \$1,539,256 em 1901, contra 25,062,000 pés no valor de \$1,274,524 em 1900. As procedencias do mogno importado pelos Estados Unidos nos annos em comparação foram as seguintes:

	1901.		1900.	
	Pés.	Valor.	Pés.	Valor.
America Central.....	14,442,000	\$729,178	7,752,000	\$388,883
Mexico	12,579,000	537,156	11,520,000	503,291
Cuba.....	4,333,000	217,378	4,705,000	328,925
As Antillas (exceptuando-se Cuba).....	682,000	27,640	512,000	32,813
America do Sul	858,000	27,904	573,000	19,612
Outros paizes	6,788,000	583,939	6,389,000	530,667
Total.....	39,682,000	2,123,195	31,451,000	1,804,191

A INDUSTRIA OLEOMARGARINA.

Segundo um boletim especial da Repartição do Recenseamento, o numero dos estabelecimentos nos Estados Unidos para a fabricaçã de oleomargarina augmentou de 12 a 24 no periodo de 1890 a 1900, com um capital total de \$3,023,646, ou seja um augmento de 376 por cento. Outros dados estatisticos são os seguintes: numero de empregados, 1,085, ou um augmento de 311 por cento; importancia total dos salarios, \$534,541, o que mostra um augmento de 246 por cento; despesas miscellaneas, \$2,489,784, ou um augmento de 545 por cento; materia

prima, \$7,639,501, ou seja um augmento de 251 por cento; valor dos productos, \$12,988,525, ou um augmento de 318 por cento.

Não está incluída nestes algarismos a quantidade de oleomargarina manufacturada pelos estabelecimentos de preparação de carnes.

O RELATORIO DA REPARTIÇÃO DE PATENTES DE INVENÇÃO.

De accordo com o relatorio annual apresentado ao Congresso pelo Commissario de Patentes, o numero de patentes de privilegio expedidas durante o anno de 1001, foi de 27,373, que é o maior numero jamais registrado. O numero de marcas de fabrica, impressos e rotulos registrados foi de 2,965.

As receitas da Repartição durante o anno de 1901 foram de \$1,449,-398.16, ou \$100,000 mais que as de qualquer anno anterior. As despezas do anno foram de \$1,297,387.64, o que deixa um saldo de \$152,012.52.

Quanto ao numero de patentes de invenção expedidas á cidadãos de paizes estrangeiros, a Allemanha occupa o primeiro lugar, com 1,045; seguem-se-lhe a Inglaterra, com 986, e o Canadá com 376.

EQUADOR.

EXPORTAÇÕES DE BORRACHA.

Segundo o relatorio da Camara Commercial de Guayaquil, as exportações de borracha de Equador em 1900 foram de 1,103,511 libras, comparadas com 1,441,823 libras em 1889, 1,588,660 libras em 1898, e 1,121,288 libras em 1897. A diminuição é devida, segundo se diz, ao facto de que os apanhadores de borracha nas mattas virgens do interior e provincias de leste carecem de facilidades de transporte. Em vista da crescente procura da borracha, o presidente da Camara Commercial é de opinião que o Governo deve auxiliar esta industria, abrindo novos caminhos para as seringueiras.

O direito de exportação sobre a borracha de Equador baixou de 20 a 15 centavos, prata, por kilogramma, a taxa actual sendo equivalente a cerca de 3.40 centavos, ouro, por libra.

MEXICO.

A INDUSTRIA DO ASSUCAR.

A terceira edição annual da “Revista Assucareira” (1901-1902), publicada por “El Hacendado Mexicano” na cidade de Mexico, sahio á luz em Janeiro de 1902. Neste relatorio têm-se feito esforços para obter dados exactos sobre a quantidade de assucar produzida por cada

cultivador mexicano. A publicação também contém uma lista dos cultivadores de canna e fabricantes de assucar do Mexico, America Central, Cuba e Porto Rico, juntamente com seus endereços e outras informações pertinentes.

Quanto á Republica do Mexico as estatisticas mostram que o augmento na producção de assucar de 1900-1901, sobre a do anno anterior, é consideravel e se prevê que haverá um augmento ainda maior este anno (1901-1902), pois já está em projecto a construcção de seis novas fabricas. A quantidade total de assucar produzida no Mexico em 1900-1901, segundo as informações subministradas ao Hacendado Mexicano, foi de 77,361,712 kilogrammas, a que deve-se juntar 17,633,-288 kilogrammas que representam approximadamente a quantidade produzida nos diversos Estados sobre a qual não foram recebidas informações, fazendo um grande total de 95,000,000 kilogrammas ou 95,000 toneladas metricas. A quantidade total de melaço produzido é calculada em 50,000 toneladas.

O seguinte quadro mostra a producção de assucar, por Estados, conforme informações recebidas durante a safra de 1901-1902.

Estado.	Nº. de propriedades.	Nº. de cultivadores e fabricantes.	Quantidade.
			<i>Kilogrammas.</i>
Campeche	35	29	201,200
Chiapas	216	214	659,764
Colima	4	4	1,239,700
Guerrero	48	44	578,990
Jalisco	233	230	5,037,397
Mexico	15	14	200,000
Michoacan	31	27	970,000
Morelos	29	29	27,784,463
Nuevo Leon	21	21	818,000
Oaxaca	134	132	2,029,659
Puebla	19	19	10,535,338
Queretaro	1	1	30,000
San Luis Potosi	36	31	786,800
Sinaloa	6	6	6,260,000
Tabasco	47	47	867,485
Tamaulipas	135	135	651,916
Territorio de Tepic	2	1	2,750,000
Veracruz	161	153	11,010,000
Yucatán	18	17	4,951,000
Total	1,191	1,154	77,361,712

NOTAS MISCELLANEAS.

O numero de carros de cargas que entraram no Mexico procedentes dos Estados Unidos durante os doze mezes findos em 30 de Junho de 1901, foi de 38,629, levando 535,640 toneladas de mercadorias. O numero dos que entraram nos Estados Unidos do Mexico foi de 20,368, conduzindo 223,720 toneladas de cargas.

URUGUAY.

O PORTO DE SAUCE.

O “Montevideo Times,” em sua edição de 9 de Janeiro de 1902, publicou as seguintes informações relativas ao porto de Sauce: “O porto de Sauce é o ponto onde convergem, por meio das estradas de Ferro Central e Oeste do Uruguay, todos as vias-ferreas de bitola larga da Republica, e é tambem o ponto inicial das vias ferreas de bitola estreita que se estendem á Ombues de Lavalle. Alli ha depositos para a armazenagem de cereaes e outros productos. Embarcações a vapor ou de vela que entrem no porto de Sauce podem atracar ao caes a profundidade da agua sendo de 20 pés. O ancoradouro é abrigado dos ventos e nelle se fazem as cargas e descargas com perfeita segurança.

Os concessionarios do porto não cobram taxas ou direitos por seus serviços. Praticagem gratuita é dada a todas as embarcações que viajam entre Sauce e Buenos Aires, Montevideo e La Plata e que carreguem ou descarreguem 1,500 toneladas de mercadorias em Sauce. Assegura-se que navios até 18 pés de calado podem sahir do porto de Sauce com carga pelo canal do norte, no qual os concessionarios collocaram boias.

Os planos, informações, etc., serão enviados a commerciantes, exportadores e outros interessados. Os concessionarios mantem um serviço de vapores entre Sauce e Buenos Aires para o transporte de passageiros e cargas e um serviço de lanchas entre Sauce, Buenos Aires e La Plata. Mais informações podem ser obtidas no escriptorio central á rua Rivadavia, 1365, Buenos Aires.

PRODUÇÃO DE ASSUCAR DO MUNDO EM 1901-2.

O “Bulletin Commercial” de Bruxellas diz que segundo informações recebidas de varias fontes fidedignas, a produção total de assucar de beterraba no mundo em 1901-2, attingirá a 6,413,000 toneladas, contra 6,048,000 toneladas em 1900-1901.

A produção dos diversos paizes é calculada como segue, sendo comparada com a do anno anterior:

	1901-2.	1900-1901.		1901-2.	1900-1901.
Allemanha	2,125,000	1,979,000	Dinamarca.....	60,000	53,000
França	1,150,000	1,170,000	Hespanha.....	100,000	84,000
Austria	1,125,000	1,074,000	Italia	77,000	66,000
Russia	1,050,000	920,000	Romania.....	18,000	24,000
Belgica	350,000	340,000	Outros paizes.....	3,000	48,000
Paizes Baixos.....	190,000	178,000			
Suecia	115,000	112,000	Total.....	6,363,000	6,048,000

Os algarismos da produção de assucar de canna nos dous periodos em comparação são como se seguem:

	1901-2.	1900-1901.		1901-2.	1900-1901.
Cuba	755,000	512,061	Porto Rico	80,000	55,089
Java	720,000	704,456	Barbadas	60,000	61,074
Estados Unidos	400,000	350,000	Trindade	50,000	47,942
Hawai	340,000	320,000	Philippinas	50,000	55,559
Brazil	190,000	180,000	Rennião	40,000	42,631
Maurícia	170,000	174,938	Guadalupe	40,000	37,946
Peru	135,000	120,000	Martinica	35,000	33,543
Demerara	100,000	95,188	Jamaica	30,000	30,000
As Pequenas Antilhas.....	95,000	85,100			
Egypto	90,000	85,000	Total	3,380,000	2,990,427

Deste calculo se vê que a produção de assucar do mundo em 1901-2, tomada em seu conjunto, será consideravelmente em excesso da do anno anterior.

CALCULO ALLEMÃO DA PRODUÇÃO DE ASSUCAR DE BETERRABA.

O consul dos Estados Unidos em Bremen, remetteu ao Departamento de Estado das Relações Exteriores dos Estados Unidos no dia 16 de Dezembro de 1901, um relatorio sobre a produção de assucar da Europa. Segundo este relatorio, as investigações sobre a produção de assucar de beterraba na Europa feitas pela União Internacional, dão por resultado os seguintes algarismos para os annos de que se trata:

	1901-2.	1900-1901.		1901-2.	1900-1901.
Allemanha	2,220,850	1,974,785	Suecia	121,392	115,547
Austria	1,306,900	1,053,300	Dinamarca	57,500	50,760
França	1,080,300	1,100,171	Outros paizes	221,000
Russia	1,079,550	893,520			
Belgica	325,000	320,000	Total	6,612,592	5,716,183
Hollanda	200,100	178,100			

Segundo o relatorio citado, a produção de assucar na Europa em 1901-2 excederá á de 1900-1901, em cerca de 1,000,000 toneladas, podendo attingir a 1,500,000 toneladas o *stock* para ser levado para a estação proxima vindoura.

CALCULOS APRESENTADOS Á CONFERENCIA DE BRUXELLAS.

Um telegramma recente diz que a actual crise na industria de assucar occasiona grande inquietação aos manufactureiros deste producto na Europa. Segundo informações subministradas ao Congresso de Bruxellas pelos cultivadores de assucar de beterraba, a Allemanha produziu em 1901, 2,000,000 toneladas de assucar, das quaes 850,000 toneladas foram para o consumo nacional; a Austria produziu 1,200,000 toneladas, com um consumo nacional de 400,000 toneladas; a Franca produziu 1,000,000 toneladas, com um consumo de apenas 450,000 toneladas; a produção da Russia foi de 1,000,000 toneladas, quantidade que foi quasi em sua totalidade consumida no paiz; a Belgica produziu 330,000 toneladas de assucar, com um consumo de 70,000 toneladas e

a Hollanda produziu 190,000 toneladas, com um consumo nacional de 75,000 toneladas. Outros paizes da Europa, isto é, a Hespanha, Italia e Romania tornam-se agora productores de assucar com prejuizo dos paizes que outr'ora lhes suppriam deste producto.

Os calculos considerados como exactos pela Conferencia de Assucar accusam uma producção total de assucar de beterraba em 1901 de 6,470,000 toneladas, com um consumo sómente nestes paizes de 3,600,000 toneladas. Existe, pois, um excedente de 2,870,000 toneladas, das quaes a Inglaterra recebeu cerca de 1,700,000 toneladas, uma porção consideravel foi enviada aos Estados Unidos e a restante foi depositada em armazens, onde, sujeita a *cartels*, constitue um factor importante no mercado europeu.

CALCULO DA PRODUÇÃO DA AMERICA.

Como a maior parte do assucar que se consome nos Estados Unidos é fabricada da canna, é difficil comprehender que dous terços do assucar do mundo é produzido da beterraba. O seguinte quadro mostra a colheita de assucar do mundo em 1901-2, por procedencias, comparada com a de 1900-1901:

Paiz.	1901-2.	1900-1901.
	<i>Toneladas.</i>	<i>Toneladas.</i>
Estados Unidos (Luiziana).....	300,000	275,000
Porto Rico	100,000	80,000
Hawai	300,000	321,461
Cuba (colheita).....	875,000	635,000
Trindade (exportações).....	50,000	50,000
Barbadas (exportações).....	60,000	60,000
Jamaica.....	30,000	30,000
Antigua e S. Kitts	25,000	25,000

Republica Argentina (colheita).....	115,000	114,252
Brazil (colheita).....	215,000	190,000
Total na America.....	2,526,000	2,204,252
India ingleza (exportações)	15,000	15,000
Java (colheita)	725,000	710,120
Philippinas (exportações).....	70,000	48,000
Total da Asia.....	817,000	780,120
Queenslandia	117,000	92,554
Nova Gallas do Sul.....	19,000	19,000
Ilhas de Fidji (exportações).....	33,000	35,000
Total da Australia e Polynesia.....	169,000	144,554
Egypto (colheita).....	95,000	94,880
Mauricia	180,000	175,267
Reunião	35,000	35,000
Total da Africa	310,000	305,147
Hespanha.....	33,000	33,000
Producção total de assucar de canna	3,855,000	3,502,890

A maior parte do assucar de canna do mundo é consumida nos Estados Unidos. Em 1900, a produção total de assucar de canna na America do Norte, America Central e do Sul foi de 2,204,252 toneladas, ao passo que a quantidade consumida nos Estados Unidos foi de 2,219,847 toneladas. Calcula-se que no anno civil de 1901, o consumo nos Estados Unidos de assucar de todas as qualidades foi de 2,372,316 toneladas de 2,240 libras cada uma, o que accusa um augmento de 152,469 toneladas, ou seja 6.87 por cento. O consumo de assucar nacional foi de 439,986 toneladas, distribuidas como se segue: assucar de canna, 292,150 toneladas; assucar de beterraba, 124,859 toneladas; assucar de bordo, 5,000 toneladas; assucar de melaço, 17,977 toneladas. A quantidade de assucar importada de paizes estrangeiros e as possessões insulares para o consumo foi de 1,932,330 toneladas, distribuidas como segue: assucar de canna, 1,672,529 toneladas; assucar de beterraba crú, 217,286 toneladas, e 42,515 toneladas de assucar refinado. Das importações de assucar, 309,070 toneladas vieram de Hawaï, 66,279 toneladas de Porto Rico e 5,100 toneladas das Philippinas.

A quantidade de assucar refinado consumida em 1901, foi de 2,287,828 toneladas e a existencia de assucar refinado no fim do anno é calculada em 30,000 toneladas, comparada com igual quantidade em 1900.

Um telegramma de Hawaï, datado de 16 de Janeiro de 1902, diz que a colheita de assucar de Hawaï para o anno findo em 1º de Novembro de 1901 foi calculada em 281,000 toneladas, o que é consideravelmente menor que os algarismos consignados nos quadros precedentes. Das 281,000 toneladas, 100,000 serão enviadas a San Francisco para serem distribuidas em diversos pontos dos Estados Unidos; 68,200 toneladas serão enviadas por via do Estreito de Magalhães e 18,000 por via do Cabo Horn com destino á parte oriental dos Estados Unidos.

BIBLIOGRAPHIA.

Nesta secção do Boletim Mensal se tratará dos livros e folhetos enviados á Secretaria das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

A Secretaria das Republicas Americanas recebeu da Universidade de Chicago varios pamphletos e publicações, entre as quaes figuram as seguintes: “Notes on Mexican Archaeology” (Notas sobre a Archeologia mexicana), por FREDERICK STARR, Imprensa da Universidade, 1894, sendo uma descripção da “casa pintada em San Juan de Teotihuacan,” Mitla e Monte Alban, com numerosas illustrações de texto e gravuras; “The Little Pottery Objects of Lake Chapala” (Os pequenos objectos de barro do lago Chapala) por FREDERICK STARR, Imprensa da Universidade, 1897. O referido lago é a maior bacia de agua fresca no Mexico e está situado no Estado de Jalisco á distancia de 250 milhas ao norte da cidade de Mexico. Os objectos de

barro descriptos consistem em pequenos vasos, conchas, fusos e figuras de barro que, segundo parece, foram atirados pelas aguas do lago e não são encontrados em qualquer outro local; “The Mapa de Cuauhtlantzinco or Codice Campos” (O Mappa de Cuauhtlantzinco ou Codice Campos) por FREDERICK STARR, Imprensa da Universidade, 1898, descreve varias pinturas, comprehendendo scenas da conquista e retratos de aborigines. Cada quadro traz um texto na lingua Nahuatl, traduzido ao hespanhol por Padre CAMPOS. Dizem os indios que as pinturas pertencem ao seculo XVI e foram feitas por Tepoztecatl. A povoação de San Juan de Cuauhtlantzinco está situada entre Puebla e Cholula no Estado de Puebla, Mexico. Esta publicação contem 43 gravuras reproduzindo em miniatura as pinturas como apparecem hoje. “Recent Mexican Study of the Native Language of Mexico,” por FREDERICK STARR, Imprensa da Universidade, 1900. Este pamphleto é de interesse á bibliographia e ethnographia, pois contem uma lista dos escriptores do Mexico e dos livros publicados nas linguas nativas mexicanas, exclusive da lingua Maya. “The Ethno-Botany of the Coahuila Indians of Southern California” (A Ethno-Botanica dos Indios de Coahuilla da California do Sul), por DAVID PRESCOTT BARROWS. Esta monographia é um estudo da cultura nativa de uma das tribus de indios que habitam as planicies e montanhas do deserto da California. Os assumptos tratados são as affinidades linguisticas e de tribu dos Indios de Coahuilla, habitat, construcção de casas, cestos e sua manufactura, plantas usadas nas manufacturas e artes, a colheita, preparação e armazenagem de productos alimenticios, plantas de alimentação e bebidas, substancias narcoticas e remedios.

O Departamento de Agricultura dos Estados Unidos publicou um boletim preparado por EDWIN S. HOLMES, que dá estatisticas sobre a industria de fructas da California. Essa industria data do tempo do estabelecimento das missões pelos frades franciscanos. Ainda em 1792, tinham 5,000 arvores fructiferas. A era de fructas, porém, não começou no Estado até a descoberta de ouro em 1849, quando milhares de pessoas entraram no paiz. O clima e o solo do paiz são especialmente adaptaveis a essa industria. As variedades produzidas comprehendem maçãs, damascos, cerejas, figos, uvas de todas as variedades, pecegos, peras, ameixas, azeitonas, marmelos e todas as fructas de cidra. O numero total de arvores fructiferas em 1900 foi de 29,402,287, das quaes 16,192,876 dão fructas e 13,209,411 ainda não produzem. Estas arvores cobrem uma area de 409,557 geiras, a que se deve addicionar os vinhedos com uma area de 157,000 geiras, 22,852 geiras plantadas de amendoeiras e 19,843 geiras de nogueiras, fazendo um total de 609,252 geiras.

“The lines of Demarcation of Pope Alexander VI, and the Treaty of Tordesillas, A. D. 1493 and 1494” (As Linhas de Demarcação do Papa Alexandro VI, e o Tratado de Tordesilhas, A. D. 1493 e 1494), por

SAMUEL EDWARD DAWSON, publicado por J. HOPE & SONS, Ottawa, Canadá, 1899. Esta publicação é uma parte das Transacções da Sociedade Real do Canadá, segunda serie, 1899-1900 (páginas 468-546) publicada em forma de pamphleto. O estudo tem por objecto esclarecer a linha de demarcação traçada em 1493 entre o novo e o velho mundo pelo referido Papa, e sua subsequente modificação por tratado, e é de interesse especial aos que estudam a historia primitiva da America. Os assumptos tratados são: Direito publico internacional em 1493; As bullas do papa; A demarcação de 1493; A primeira linha; O tratado de Tordesilhas em 1494 e a linha substituida; O ponto de partida; Medidas de comprimento antigas e da idade media e as linhas de demarcação sobre o oceano e seu supposto contacto com a costa nordeste da America.

O Departamento de Agricultura publicou um pamphleto de 30 paginas com 10 illustrações, descriptivo dos productos de lacticínios na Exposição de Pariz de 1900. Essa publicação é uma reimpressão de uma parte do decimo-setimo relatorio annual da secção de industria animal do Departamento. Sómente dous paizes da America concorreram com productos desta industria na Exposição de Pariz—os Estados Unidos com 152 exhibições, e o Mexico com 9. Dous outros paizes sobrepujaram os Estados Unidos no numero de productos expostos—a França com 800, e Suissa com 160.

O “Western Mining Directory” (Directorio das Minas do Oeste) para 1901-1902, preparado por A. R. DUNBAR, contem informações relativas ás principaes minas, baterias, fornos de fundição, dragas e installações de cyanuração e chloruração na Colombia Britannica e Republica do Mexico, assim como as situadas na parte oeste dos Estados Unidos. Com relação á este paiz, os Estados comprehendidos são: California, Colorado, Idaho, Montana, Nevada, Oregon, Dakota do Sul, Utah, Washington, Wyoming e os Territorios de Arizona e de Novo Mexico.

Acaba de ser publicado pelos Srs. ELLIOTT STOCK, de Londres, 1901, um pequeno volume por FELIX SEEBEE, cujo titulo é “Travelling Impressions in, and Notes on Peru” (Impressões de Viagem em e Notas sobre o Peru. Este livro descreve acontecimentos que tiveram lugar em 1880-1881, e, posto que os caracteristicos physicos do paiz não tenham alterado, as mudanças na historia politica e condições commerciaes em toda a Republica têm sido de natureza tal que o livro se torna insufficiente para a actualidade.

“Jornal do Recife.” Recebemos e agradecemos este importante jornal que se publica em Pernambuco.

Recebimos um exemplar do Annuario do Estado do Rio Grande do Sul para o anno de 1902.

No. 3.

REPUBLIQUE ARGENTINE.

EXPORTATIONS PRINCIPALES EN 1901.

Pendant l'année 1901, la République Argentine a exporté les articles suivants, représentant les exportations principales, comparées avec celles des articles semblables, en 1900:

Articles.	1901.	1900.
Peaux de bœuf séchées.....nombre..	2, 421, 957	2, 308, 726
Peaux de bœuf salées.....do.....	1, 082, 111	1, 050, 737
Peaux de chevaux séchées.....do.....	125, 745	81, 658
Peaux de chevaux salées.....do.....	135, 615	38, 445
Peaux de mouton.....balles..	74, 799	63, 806
Peaux de chèvres.....do.....	4, 354	3, 507
Poils.....do.....	5, 159	4, 727
Laine.....do.....	532, 942	253, 633
Moutons congelés.....nombre..	2, 722, 727	2, 372, 969
Quartiers de bœuf.....do.....	497, 375	261, 365
Suif.....barils..	257, 744	177, 021
Beurre.....caisses..	55, 696	40, 487
Blé.....tonnes..	972, 514	2, 042, 167
Maïs.....do.....	1, 129, 431	740, 685
Farine.....do.....	63, 464	37, 916
Son.....do.....	96, 932	68, 915
Graine de lin.....do.....	371, 599	201, 093
Graine oléagineuse.....sacs..	108, 132	112, 123
Foin.....balles..	1, 844, 423	1, 423, 967
Têtards (pollards).....sacs..	309, 676	154, 821
Québracho.....tonnes..	184, 654	221, 223
Tabac.....balles..	17, 087	14, 887
Sucre.....tonnes..	57, 931	17, 855

Une balle de peaux de moutons, de laine, ou de poils pèse, dans la République Argentine, 450 kilogrammes (992.07 livres); une balle de peaux de chèvres pèse 370 kilogrammes (815.7 livres); une balle de foin, 50 kilogrammes (110.23 livres); un baril de suif, 100 kilogrammes (220.46 livres), et une caisse de beurre, 25 kilogrammes

(55.115 livres). Les tonnes dont il s'agit sont des tonnes métriques représentant 1,000 kilogrammes ou 2,204.60 livres.

Voici les principaux pays où ces produits furent exportés:

Etats-Unis.—Peaux de bœufs séchées, 1,096,563; peaux de bœufs salées, 48,496; peaux de chevaux séchées, 550; peaux de moutons, 254 balles; laine, 27,198 balles; poil, 802 balles; suif, 59 barils; peaux de chèvres, 2,455 balles; graine de lin, 33,335 tonnes; québracho, 4,647 tonnes, et sucre, 11 tonnes.

Royaume-Uni.—Peaux de bœufs séchées, 59,784; peaux de bœufs salées, 47,035; peaux de chevaux salées, 1,013; peaux de moutons, 8,502 balles; peaux de chèvres, 70 balles; poil, 288 balles; laine, 57,252 balles; suif, 178,133 barils; moutons congelés, 2,722,727; bœufs congelés, 480,101 quartiers; blé, 120,031 tonnes; maïs, 258,357 tonnes; graine de lin, 63,027 tonnes; farine, 355 tonnes; son, 7,884 tonnes; graine oléagineuse, 14,457 sacs; pollards, 41,601 sacs; foin, 3,085 balles; québracho, 1,342 tonnes; beurre, 55,356 caisses, et sucre, 57,081 tonnes.

Allemagne.—Peaux de bœufs séchées, 228,258; peaux de bœufs salées, 447,474; peaux de chevaux séchées, 119,582; peaux de moutons, 2,947 balles; poil, 368 balles; laine, 97,881 balles; suif, 4,700 barils; blé, 35,589 tonnes; maïs, 106,963 tonnes; graine de lin, 59,347 tonnes; farine, 2 tonnes; son, 44,719 tonnes; pollards, 1,580 sacs; graine de lin, 52,343 sacs; foin, 237 balles; québracho, 81,840 tonnes; tabac, 5,255 balles, et beurre, 15 caisses.

France.—Peaux de bœufs séchées, 97,993; peaux de bœufs salées, 145,019; peaux de chevaux séchées, 1,791; peaux de chevaux salées, 134,602; peaux de moutons, 52,679 balles; peaux de chèvres, 1,664 balles; poil, 541 balles; laine, 248,042 balles; blé, 8,919 tonnes; maïs, 67,389 tonnes; graine de lin, 29,840 tonnes; son, 10,557 tonnes; pollards, 261,329 sacs; graine oléagineuse, 13,143 sacs; québracho, 14,020 tonnes, et sucre, 659 tonnes.

Belgique.—Peaux de bœufs séchées, 128,981; peaux de bœufs salées, 369,522; peaux de chevaux séchées, 2,557; peaux de mouton, 699 balles; peaux de chèvres, 151 balles; laine, 95,044 balles; poil, 2,189 balles; suif, 10,369 barils; blé, 127,576 tonnes; maïs, 136,857 tonnes; graine de lin, 37,534 tonnes; farine, 292 tonnes; son, 4,998 tonnes; pollards, 2,882 sacs; graine oléagineuse, 26,362 sacs; foin, 5,503 balles; québracho, 23,016 tonnes, et tabac, 11,664 balles.

Italie.—Peaux de bœufs séchées, 286,605; peaux de chevaux séchées, 50; peaux de moutons, 9,469 balles; peaux de chèvres, 7 balles; laine, 7,430 balles; poil, 936 balles; suif, 46,618 barils; blé, 35,772 tonnes; maïs, 20,026 tonnes; graine de lin, 8,906 tonnes; farine, 100 tonnes, et tabac, 1 balle.

Brésil.—Peaux de bœufs séchées, 5,836; peaux de moutons, 21 balles;

suif, 24,915 barils; blé, 126,093 tonnes; maïs, 14,532 tonnes; graine de lin, 5 tonnes; farine, 61,212 tonnes; son, 1,302 tonnes; pollards, 1,312 sacs; foin, 410,906 balles, et beurre, 325 caisses.

STATISTIQUES DES CHEMINS DE FER POUR L'ANNÉE 1901.

Les chiffres suivants ont été obtenus d'un tableau publié dans la "Review of the River Plate" du 4 janvier 1902, donnant approximativement les statistiques des chemins de fer de la République Argentine; le capital, les recettes, les dépenses et les bénéfices étant représentés en or:

CHEMINS DE FER DU GOUVERNEMENT.

Noms des lignes.	Longueur.	Capital.	Recettes.	Dépenses.	Bénéfices.	Passagers.	Fret.	Intérêt.
	<i>Km.</i>						<i>Tonnes.</i>	<i>Pourcent.</i>
Andino	355	\$8,655,607	\$639,450	\$327,598	\$311,852	92,390	460,588	3.50
Central Norte.....	1,098	33,243,838	1,209,510	853,661	355,849	281,097	557,089	1.07
Argentino del Norte	563	13,059,337	142,447	178,351	35,904	35,485	40,699
Totaux	2,016	54,958,782	1,991,407	1,359,610	631,797	408,972	1,058,376	1.15

CHEMINS DE FER PRIVÉS.

Noms des lignes.	Longueur.	Capital.	Recettes.	Dépenses.	Bénéfices.	Passagers.	Fret.	Intérêt.
	<i>Km.</i>						<i>Tonnes.</i>	<i>Pour ct.</i>
Great Southern	3,683	\$112,474,878	\$12,265,996	\$5,971,395	\$6,294,601	6,190,384	3,105,067	5.60

* Perte.

La longueur totale de tous les chemins de fer du gouvernement et privés est de 16,761 kilomètres (10,414.78 milles), avec un capital total de \$541,575,613. Le total des recettes se montait, en 1901, à \$45,414,523 et celui des dépenses à \$23,902,605, laissant un bénéfice se montant à \$21,511,918. Le nombre de passagers transportés était de 20,105,222 et le nombre de tonnes de marchandises transportées était de 14,501,775.

L'INDUSTRIE DES VIANDES CONGELÉES.

Le "Bulletin Commercial" a publié récemment un rapport de la Légation de Belgique à Buenos-Ayres, relatif à l'industrie des viandes congelées dans la République Argentine, donnant comme suit le mouvement des *saladéros* du Rio-de-la-Plata et de Rio-Grande pendant l'année 1901, en comparaison des deux exercices précédents:

Nombre d'animaux abattus.

Établissements.	1901.	1900.	1899.
Buenos-Ayres (province de).....	73,300	39,000	19,500
Rivières de la République Argentine et de l'Uruguay.....	39,700	22,000	8,600
Montevideo.....	115,800	88,400	86,200
Rio-Grande.....	50,000	3,000
Totaux	278,800	150,100	117,300

Comme on le voit par les chiffres ci-dessus, c'est surtout dans la province de Buenos-Ayres que les progrès réalisés par l'industrie de la salaison ont été les plus remarquables.

D'autre part, le Consul de Belgique dans la ville communique au "Bulletin Commercial" le résumé suivant des exportations de viande congelée de la République Argentine, durant les trois dernières années:

Années.	Moutons.	Quartiers de bœuf.
1889	2,485,949	113,431
1900	2,385,214	265,965
1901	2,722,727	497,375

L'augmentation considérable constatée pour la viande de bœuf, provient surtout de l'interdiction d'importer en Angleterre des animaux sur pied de l'Argentine, par suite de la fièvre aphteuse qui a régné dans ce dernier pays en 1900 et qui semble maintenant avoir complètement disparu.

LES RESSOURCES DU DISTRICT DE SANTA-CRUZ.

D'après le "Bulletin Commercial" du 22 février 1902, le territoire de Santa-Cruz, situé au sud de la République Argentine, semble devoir être, dans l'avenir, un champ d'entreprises prospères. On y élève déjà des moutons en nombre considérable et l'on pourra y acclimater du bétail de toute espèce. Il paraîtrait d'ailleurs qu'on y rencontre encore des troupeaux vivant à l'état sauvage.

Le climat de ce pays offre beaucoup d'analogie avec celui du Canada; on n'y cultive pourtant pas de céréales, mais seulement de l'alfalfa; le pays est couvert d'immenses prairies naturelles.

Les terrains, y sont encore vendus, par l'Etat, à des prix très peu

élevés, ce qui donne aux acheteurs le moyen de se procurer des titres en bonne et due forme. Les propriétés qui offrent le plus d'avenir et les plus grandes facilités d'exploitation sont situées près de la côte; elles peuvent s'acquérir au prix de 7,000 à 8,000 piastres la lieue carrée. Un peu plus avant dans l'intérieur, le prix de la lieue carrée descend à 5,000 et même à 3,000 piastres. Dans ce dernier cas, les terrains les plus avantageux se trouvent sur les bords de la rivière de Santa-Cruz.

Le gouvernement de la République Argentine aurait, paraît-il, l'intention d'améliorer les ports assez primitifs qui bordent les côtes de Santa-Cruz.

BRÉSIL.

TRAVAUX D'ASSAINISSEMENT DANS L'ÉTAT DE RIO-DE-JANEIRO.

La Légation de Belgique à Rio-de-Janeiro a transmis au "Bulletin Commercial," de Bruxelles, un avis de la Secrétairerie des Travaux Publics et des Industries de l'Etat de Rio-de-Janeiro, relatif aux travaux de dessèchement et d'assainissement des terrains de la partie basse de cet Etat, depuis sa frontière avec l'Etat d'Espirito-Santo jusqu'à sa limite avec celui de Saint-Paul.

Les propositions relatives à cette entreprise ront sereques à la dite secrétairerie à Pétropolis, jusqu'au 20 mars prochain, mais ce délai sera probablement reculé.

Les principaux travaux à effectuer sont la rectification et l'approfondissement des rivières et de leurs affluents, l'ouverture de petits canaux et de fossés, l'appropriation des rivières et des canaux pour la navigation et l'irrigation.

Les contractants devront : 1° soumettre à l'approbation du Gouvernement de l'Etat les plans et projets pour l'exécution de ces ouvrages; 2° lever le plan partiel de tous les cours d'eau qui traversent cette région; 3° lever le plan partiel de la zone maritime; 4° procéder au nivellement de tout le territoire; 5° vérifier et indiquer les points du niveau maximum qu'atteignent les eaux des rivières et de la mer; 6° pratiquer les sondages nécessaires pour reconnaître la nature du terrain.

Par contre, les avantages suivants seront concédés aux contractants: perception, durant la durée de la concession, de taxes fixes par unité de superficie sur les terrains desséchés ou assainis et sur une zone de 3 kilomètres adjacents à ces terrains; perception d'une taxe de conservation des rivières et canaux sur les barques transportant des marchandises; privilège pour l'approvisionnement de toute la force hydraulique des chutes d'eau pour la fourniture de l'énergie électrique; préférence pour l'exploration des richesses naturelles non utilisées;

faveurs pour l'établissement d'émigrants; droit de percevoir une taxe pour la distribution d'eau des canaux d'irrigation; droit d'expropriation pour utilité publique.

L'Etat de Rio ne pourrait prêter aucun concours financier à cette entreprise.

DÉVELOPPEMENT DES MINES.

La ville de Pitanguy, dans l'Etat de Rio Grande du Sud, serait appelée, dit le "Nouveau-Monde" du 1^{er} février 1902, à devenir un centre minier important; aux temps de sa fondation on y exploitait des gisements aurifères abandonnés depuis. Actuellement des recherches ont été faites dans les environs de la ville. M. JOACHIM MARQUES DA SILVA a acheté des terrains et espère attirer, par ses découvertes, l'attention des capitalistes et des sociétés minières.

CHILI.

SUPPRESSION DES DROITS DE DOUANE POUR LES VIVRES ET COMESTIBLES DESTINÉS À LA MARINE MARCHANDE.

D'après le "Moniteur Officiel" (Paris) du 23 janvier, le Gouvernement chilien aurait supprimé les droits de douane applicables à l'entrée des vivres de la marine marchande.

Cette franchise s'étend à tous les bâtiments de commerce qui se livrent à la navigation au long cours ou au cabotage, ainsi qu'aux navires de guerre chiliens et étrangers.

CONSTRUCTION D'UN PORT MILITAIRE À TALCAHUANO.

D'après la Mission de Belgique à Santiago, le pouvoir exécutif du Chili a déposé dernièrement un projet de loi en vue d'obtenir du Congrès un crédit de 6,390,390 piastres, pour compléter le port militaire de Talcahuano.

Le Gouvernement a profité de la présence au Chili de M. JACOB KRAUSS, ingénieur hollandais qui a dirigé la construction de la cale sèche de Talcahuano, pour lui faire étudier un projet d'ensemble pour le port militaire dont il s'agit. Le crédit demandé est destiné à la mise en exécution du projet de M. KRAUSS.

La durée des travaux est estimée à cinq années; ils comprendront une darse à construire entre le continent, le brise-lames de Marinos et le terre-plein de la digue actuellement élargie, renforcée et enclose du côté sud par un mur de blocs artificiels. Cette darse aura une superficie de 12½ hectares, sera parfaitement abritée et aura une profondeur de 9.50m, qui est suffisant pour permettre l'entrée de tous les navires de l'escadre actuelle. Les ouvrages complémentaires prévus comprennent des installations pour le désarmement, des appareils pour charger et décharger le charbon, des ateliers et dépôts pour marins, etc.

CONSTRUCTION D'UN CHEMIN DE FER AÉRIEN SUR LA FRONTIÈRE CHILIENNE-ARGENTINE.

La Mission de Belgique à Santiago écrit au "Bulletin Commercial" de Bruxelles, que le Congrès chilien a approuvé le contrat de M. ABE-LARDO PIZARRO, entrepreneur, pour la construction et l'exploitation d'un chemin de fer aérien, pour voyageurs et marchandises, entre Juncal (Chili), situé à 2,234 mètres d'altitude, et Paramillo de las Cuevas, (Argentine), à l'altitude de 2,968 mètres. Cette partie de la traversée de la Cordillère est non seulement toujours difficile, mais elle est même impraticable l'hiver, pendant plusieurs mois, à cause des tempêtes de neige.

Le chemin de fer aérien est projeté à peu près sur le tracé du chemin de fer transandin, dont la construction et l'exploitation sur le territoire chilien sont arrêtées à Salto de Soldado, situé à 25 kilomètres environ de Juncal, mais qui, sur le territoire argentin, sera exploité bientôt jusqu'à Las Cuevas, entrée du grand tunnel à percer sous le sommet de la Cordillère (3,900 mètres d'altitude) appelé La Cumbre.

La distance du Salto del Soldado à Juncal devra être franchie, comme maintenant, en voiture ou à dos de mule, suivant l'époque de l'année, tandis que sur le territoire argentin le chemin de fer aérien sera immédiatement en contact avec le chemin de fer transandin exploité.

La ligne aura une longueur totale de 22,154 mètres, dont 11,682 mètres sur le territoire chilien. Elle sera formée de deux câbles en acier de 40 millimètres de diamètre qui serviront de rails destinés à supporter les wagons et de deux câbles de traction, également en acier, de 16 millimètres de diamètre pour la traction de la charge.

Les câbles seront supportés par de solides colonnes en fer de 8 mètres de hauteur, placées à 110 mètres de distance en moyenne. Dans aucun cas, les colonnes n'auront plus de 25 mètres de hauteur avec une portée maximum de 230 mètres.

Le coût total de la ligne est évalué à \$59,687 livres sterling et la construction pourra être achevée de façon à pouvoir utiliser la ligne aérienne pour les travaux du chemin de fer transandin dont on recommence à s'occuper sérieusement.

En effet, à la suite d'un contrat passé avec le gouvernement du Chili, une société vient de se constituer à Londres sous le nom de Compañía Limitada del Ferrocarril Transandino, à l'effet d'achever la construction et d'exploiter le chemin de fer transandin sur le territoire chilien.

Le capital nominal de cette compagnie légalement formée est de 500,000 livres sterling, dont 167,000 livres sterling souscrites par la maison MORGAN et 70,000 livres sterling par la maison GRACE, ces deux maisons s'engageant à souscrire le restant du capital, si c'est nécessaire.

ÉTATS-UNIS.

COMMERCE EXTÉRIEUR EN JANVIER 1902.

Pendant le mois de janvier 1902, les Etats-Unis ont importé pour \$79,138,192 de marchandises, contre \$69,307,080 durant le mois correspondant de 1901. Les articles importés exempts de droits de douane représentaient, en janvier 1902, une valeur de \$36,461,913, contre \$27,382,894 en janvier 1901. Les importations sujettes aux droits de douane valaient \$42,676,279 en janvier 1902, contre \$41,924,186 en janvier 1901. La plus grande partie de l'excédent constaté en janvier 1902, en comparaison du même mois de 1901, fut due à l'augmentation des importations des articles bruts ou partiellement manufacturés entrant dans les différents procédés de l'industrie aux Etats-Unis (\$7,654,544) et à l'augmentation des importations des articles de luxe (\$1,306,440), représentant ensemble \$8,960,984 de l'augmentation totale de \$9,831,112.

Pendant les sept mois de l'année fiscale 1902, la valeur des importations se montait à \$526,116,998, contre \$450,038,141 pendant la même période de l'année fiscale précédente, soit une augmentation de \$67,078,857; la valeur des importations des articles manufacturés pour la consommation augmenté de \$9,095,514.

Voici quelles étaient, pendant le mois de janvier 1902, les importations des Etats-Unis, comparées avec celles du mois de janvier 1901.

Classification.	1902.	1901.
Denrées alimentaires et animaux.....	\$16,273,453	\$16,718,448
Articles bruts entrant dans les différents procédés de l'industrie du pays.	30,445,623	23,166,281
Articles entièrement ou partiellement manufacturés, destinés à être employés comme matériaux dans les manufactures et les arts mécaniques.....	6,886,890	6,411,688
Articles manufacturés pour la consommation.....	12,910,991	11,709,259
Articles de luxe.....	12,621,235	11,301,404
Totaux.....	79,138,192	69,307,080

La valeur des exportations des Etats-Unis, y compris les marchandises étrangères réexportées, se montait, en janvier 1902, à \$129,136,444, contre \$136,325,601 en janvier 1901. La perte constatée est due entièrement à la diminution qui s'est produite dans la valeur des produits agricoles exportés à l'étranger, les articles manufacturés ayant augmenté d'environ \$2,000,000. Pendant les sept mois de l'année fiscale finissant avec le mois de janvier 1902, la valeur des exportations se montait à \$872,659,682, contre \$902,237,970, valeur des exportations pendant la même période de l'année fiscale antérieure.

D'après les statistiques officielles, voici quelles étaient les exporta-

tions des Etats-Unis pendant le mois de janvier 1902, comparées avec celles du même mois de l'année précédente:

Classification.	1902.	1901.
Produits agricoles.....	\$84,477,950	\$92,565,242
Produits manufacturiers.....	34,412,992	32,654,035
Produits miniers.....	2,912,011	3,011,212
Produits forestiers.....	3,328,987	3,983,475
Produits des pêches.....	477,719	656,301
Produits divers.....	756,651	505,310
Total des produits du pays.....	126,366,310	133,375,575
Marchandises étrangères réexportées.....	2,770,134	2,950,026
Totaux généraux.....	129,136,444	136,325,601

RAPPORT SUR LA RÉCOLTE, MARS 1902.

Le 10 mars 1902, le statisticien du Ministère de l'Agriculture a publié le rapport suivant relatif aux récoltes:

Jusqu'à ce que les chiffres du Bureau de Recensement relatifs à l'aireensemencée de toutes les fermes soient publiés, le Ministère de l'Agriculture ne peut pas estimer exactement la quantité de grains restant entre les mains des fermiers, au 1^{er} mars 1902. Les rapports reçus des agents du ministère indiquent cependant qu'environ 23 pour cent de la dernière récolte de blé est encore entre les mains des fermiers, contre 24.5 pour cent (128,000,000 de boisseaux) de la récolte de 1900 en possession des fermiers le 1^{er} mars 1901 et 29 pour cent (1,158,700,000 boisseaux) de la moisson de 1899, en magasin le 1^{er} mars 1900.

Le maïs qui se trouve entre les mains des fermiers est estimé être environ 29 pour cent de la dernière récolte, contre 36.9 pour cent (776,200,000 boisseaux) de la moisson de 1900, en mains le 1^{er} mars 1901 et 37.2 pour cent (773,800,000 boisseaux) de la récolte de 1899, en magasin le 1^{er} mars 1900.

On rapporte aussi que les fermiers ont encore environ 30 pour cent de la dernière récolte d'avoine contre 36.2 pour cent (292,800,000 boisseaux) de la moisson de 1900 existant dans les fermes le 1^{er} mars 1901 et 36.5 pour cent (220,000,000 boisseaux) de la récolte de 1899 en possession des fermiers le 1^{er} mars 1900. Les rapports reçus par le Ministère de l'Agriculture montrent clairement que la récolte du maïs a été la moins abondante, avec une seule exception en 20 ans, et que la moisson de l'avoine a été aussi, bien au-dessous de la moyenne.

Généralement parlant, le maïs est toujours, aux Etats-Unis, produit en plus grande quantité que les autres céréales et quand une diminution se produit c'est presque toujours dans le rendement du blé qu'elle a lieu, mais dans le cas actuel c'est la moisson du blé qui a été beaucoup plus riche et beaucoup plus employée que jadis pour la nourriture des animaux, à cause des récoltes moins abondantes de maïs et d'avoine.

STATISTIQUES INDUSTRIELLES COMPILÉES PAR LE BUREAU DE RECENSEMENT.

Les bulletins publiés récemment par le Bureau de Recensement contiennent des statistiques qui montrent les changements qui ont été opérés dans les industries manufacturières de 1890 à 1900. Dans les tableaux suivants, les statistiques de 1900 sont comparées avec celles du recensement précédent qui a eu lieu en 1890:

	Etablissements manufacturiers, ^a			Minoteries et moulins à farine.		
	1900.	1890.	Augmen- tation.	1900.	1890.	Augmen- tation.
			<i>Pour cent.</i>			<i>Pour cent.</i>
Nombre.....	512, 586	355, 415	44.2	25, 258	18, 470	36.8

^a Ces chiffres ne comprennent pas les établissements qui produisent moins de 500 d'articles, ni les manufactures du gouvernement, les maisons pénitenciaires, les institutions charitables et les maisons d'éducation.

^b Diminution.

En connexion avec les tables relatives aux abattoirs et à l'industrie des conserves alimentaires, les statistiques montrant les variétés, les quantités et valeurs totales des exportations de viandes et la production des viandes pendant l'année civile 1901, sont intéressantes, car elles font voir dans quelles proportions énormes elles ont augmenté. Voici quels sont les chiffres officiels:

	Livres.	Valeurs.
Bœuf frais.....	354, 421, 731	\$32, 294, 877
Bœuf salé ou en saumure.....	51, 761, 505	3, 035, 025
Autre bœuf salé.....	767, 007	64, 467
Bœuf conservé.....	52, 239, 582	5, 233, 782
Suif.....	51, 846, 765	2, 698, 692
Lard fumé.....	447, 620, 337	39, 402, 500
Jam-bons.....	230, 456, 004	24, 739, 003
Porc frais.....	40, 348, 780	3, 224, 726
Porc salé ou en saumure.....	127, 863, 335	10, 254, 695
Porc conservé.....	9, 341, 262	744, 455
Saindoux.....	607, 266, 176	51, 626, 346
Saindoux composé.....	30, 513, 728	2, 039, 698
Saucisse et chair à saucisse.....	7, 140, 383	699, 841
Boyaux à saucisse.....		2, 022, 496
Mouton.....	298, 700	22, 815
Conserves de viande, autres que celles de bœuf ou de porc.....		1, 821, 610
Huiles.....	163, 82 ^a , 675	12, 951, 745
Oléomargarine.....	5, 094, 541	499, 489
Autres viandes.....		3, 850, 836
Total des valeurs.....		197, 227, 098

En dehors des articles ci-dessus, on a exporté, en 1901, pour \$866,322 de volaille et de gibier; 24,249,565 livres de beurre, évaluées à \$4,184,966; 31,396,115 livres de fromage, évaluées à \$3,006,344 et du lait pour une valeur de \$1,646,579, montant le total général de la valeur des viandes et des produits des laiteries, à \$206,931,309.

LA PRINCIPALE NATION EXPORTATRICE EN 1901.

Pendant l'année civile 1901, les Etats-Unis ont conservé leur place à la tête des nations exportatrices du monde. Les chiffres compilés par le Bureau des Statistiques du Ministère des Finances, montrent les exportations de chacun des pays principaux du monde à la date la plus récente et indiquent clairement que, pendant l'année, les Etats-Unis ont exporté plus de marchandises que n'importe quelle autre nation. Le total de toute l'année civile n'est seulement donné que pour un petit nombre de nations les plus importantes, mais la moyenne mensuelle est indiquée pratiquement pour chaque pays. Voici quelles sont, d'après ces statistiques, la moyenne mensuelle des exportations pendant l'année 1901: Etats-Unis, \$119,840,333; Royaume-Uni, \$113,753,987; Allemagne, \$90,242,000; France, \$66,929,329; Pays-Bas, \$56,790,923; Autriche-Hongrie, \$32,012,746, et Belgique, \$28,678,729. Pour l'année civile entière, les chiffres des Etats-Unis et du Royaume-Uni sont les suivants: Etats-Unis, \$1,438,083,000; Royaume-Uni, \$1,365,047,843.

Les exportations des Etats-Unis ont ainsi excédé de près de \$75,000,000 celles du Royaume-Uni. En réalité, les exportations des Etats-Unis, comparées avec celles de l'année 1900, semblent montrer une réduction d'environ \$12,000,000, mais cette dernière est due au fait que les produits expédiés aux îles Sandwich et à Porto-Rico ne sont plus classés parmi les exportations à l'étranger, car si on tenait compte de ces marchandises, on constaterait certainement une augmentation dans les exportations des Etats-Unis. Les chiffres pour le Royaume-Uni, sont: \$1,365,047,843 pour l'année 1901 et \$1,417,085,849 pour l'année 1900, soit une diminution d'environ \$52,000,000. Pendant les neuf mois finissant avec le mois de septembre, les exportations de l'Allemagne, d'après les derniers chiffres obtenus, ont augmenté de \$4,000,000. Durant les douze mois finissant avec le mois de novembre, les exportations de la France ont diminué de \$18,000,000; celles de la Belgique, de \$7,000,000 et celles de l'Autriche-Hongrie, de \$9,000,000.

En ce qui concerne les importations, les Etats-Unis occupent la 4^{ème} place sur la liste des nations; les importations pendant l'année civile étant, en moyenne, de \$73,368,421 par mois, contre \$211,789,669 pour le Royaume-Uni, \$111,646,000 pour l'Allemagne, \$75,483,423 pour la France, \$65,922,642 pour les Pays-Bas, \$34,942,018 pour la Belgique, et \$28,600,569 pour l'Autriche-Hongrie. Il est bon d'ajouter que les chiffres relatifs aux Pays-Bas, concernent l'année 1900, aucune statistique n'ayant été donnée pour le commerce de l'année 1901.

Le tableau suivant montre la moyenne mensuelle des importations et exportations des principaux pays du monde pendant les parties de l'année civile 1901 qui sont données, les chiffres des Pays-Bas, comme il est dit ci-dessus, étant ceux de 1900:

Pays.	Importations.	Exportations.	Pays.	Importations.	Exportations.
Etats-Unis	\$73,368,421	\$119,840,333	Italie	\$29,700,743	\$22,657,465
Royaume-Uni	211,789,669	113,753,987	Canada	16,097,469	18,959,203
Allemagne	111,646,000	90,242,000	Brésil	5,258,454	15,051,841
France	75,483,423	66,929,329	République Argentine	9,449,168	14,061,897
Pays-Bas	65,922,642	56,790,923	Suisse	17,071,874	13,127,468
Autriche-Hongrie	28,600,569	32,012,746	Espagne	13,464,488	10,698,054
Russie d'Europe	22,838,052	30,227,582	Japon	10,803,457	10,176,972
Inde Anglaise	21,803,746	30,891,350	Chine	13,446,163	9,553,055
Belgique	34,942,018	28,678,729			

CULTURE AMÉRICAINE SUR LA CÔTE DU PACIFIQUE.

Le Ministère de l'Agriculture a publié un rapport sur les conditions agricoles de la côte du Pacifique. Il y est dit qu'il y a eu tendance à réduire graduellement la superficie des fermes individuelles durant les vingt-cinq dernières années, mais que, en dépit de ce fait, les fermes y sont encore plus grandes que la moyenne de celles de l'Est et même du centre-ouest. Cela est particulièrement vrai pour la Californie. Ce qui caractérise encore la culture de cette région et surtout des immenses vallées de la Californie, c'est l'usage que l'on fait de machines de grand rendement, ce qui signifie une économie de travail humain. On fait tous les efforts possibles pour combiner plusieurs opérations en une. Le transport des énormes quantités de blé produites sur la côte du Pacifique est devenu une science. On réalise une grande économie en faisant passer le blé des wagons directement dans les navires; les trains vont du champ de blé à la mer; il suffit de donner avis quelques heures à l'avance.

Toutefois, dans les Etats de Washington et d'Orégon, le blé passe d'abord par une sorte d'entrepôt désigné sous le nom d'élevateur (elevator). Là, on le nettoie à nouveau et on le mélange avec du blé de différentes qualités afin d'obtenir la qualité que l'on désire, puis on le met de nouveau dans des sacs et on l'expédie sur des navires ou dans des wagons. On exporte annuellement de la côte du Pacifique 27,450,000 boisseaux de blé environ, dont la valeur totale est d'environ 20,000,000 de dollars. Des 2,000,000 de barils de farine qui ont été expédiés annuellement, depuis dix ans, des ports de la côte du Pacifique, près de la moitié part de San Francisco. Le rapport ajoute qu'il a fallu environ 36,000,000 de boisseaux de blé pour approvisionner les marchés étrangers du blé et de la farine de la côte du Pacifique. De cette quantité, les ports de la Californie ont fourni plus de 20,000,000 de boisseaux.

PRODUCTION DE LA TÉRÉBENTHINE ET DE LA RÉSINE.

D'après des chiffres publiés récemment par le "Bradstreet's," de New York, il résulte que la production de la térébenthine et de la résine s'est considérablement développée aux Etats-Unis.

Cette industrie est représentée actuellement par 1,503 établissements au capital total de \$11,847,500.

Cette somme correspond à la valeur des terrains, installations, bâtiments, outillage, etc., des usines et ne comprend pas les actions émises par les sociétés exploitantes.

La production totale des usines s'élève à la somme de \$20,345,000, alors que les dépenses atteignent \$779,000 pour les appointements des directeurs et employés, \$8,393,500 pour les salaires des ouvriers, \$476,000 pour dépenses diverses, y compris les frais de location, taxes, etc., \$6,186,500 pour les matériaux employés, les fournitures, les frais de transport et le combustible.

En 1900, les Etats-Unis ont produit 774,670 barils d'essence de térébenthine, d'une valeur de \$14,960,000; 2,563,087 barils de résine valant \$255,385 et pour \$255,385 de produits divers, tels que goudron, poix, huile de résine, charbon de bois, goudron raffiné, etc. En ce qui concerne la térébenthine, 461,227 barils ont été reçus dans les principaux ports de distribution et 293,443 barils ont été expédiés directement des usines aux centres de consommations de l'intérieur.

Durant l'année 1900, les 1,503 usines précitées ont distillé en tout 4,033,161 barils de térébenthine brute et en ont retiré 24 pour cent d'essence de térébenthine, 55 pour cent de résine et 21 pour cent d'autres produits.

La consommation de l'essence de térébenthine aux Etats-Unis n'atteint que 20,397,600 gallons ou 53 pour cent de la production, alors que le pays n'absorbe que 193,969 barils ou 7.6 pour cent seulement de la résine produite localement.

La production de la térébenthine brute se répartit comme suit entre les divers Etats de l'Union:

Etats.	Quantité.	Valeur.	Etats.	Quantité.	Valeur.
	<i>Barils.</i>			<i>Barils.</i>	
Alabama	373, 005	\$2, 033, 705	Mississippi	359, 529	1, 772, 435
Floride	1, 212, 935	6, 469, 685	Caroline du Nord	361, 729	1, 055, 659
Géorgie	1, 515, 569	8, 110, 468	Caroline du Sud	190, 095	787, 678
Louisiane	20, 299	115, 324			

MACHINES POUR LA FABRICATION DU SUCRE.

Le journal "Export Implement Age," publié mensuellement à Philadelphie, contient dans son numéro du mois de février 1902, un article relatif aux machines pour la fabrication du sucre, dont voici la teneur:

Ceux qui, dans les Indes, s'occupent de la production du sucre, trouveront que les fabricants américains d'instruments agricoles peuvent

leur fournir certaines machines qui méritent d'attirer leur attention. On a institué la production du sucre dans les Indes sur de nouvelles bases; le but que l'on poursuit maintenant c'est de supprimer la concurrence écrasante des importateurs de sucre enrichis de primes et d'encourager l'industrie indigène. Des matériels volumineux et complets ont été récemment expédiés aux Indes. Voilà un procédé qui promet de donner de bons résultats dans un pays où les millions abondent, et pour lequel le sucre a été plus ou moins un luxe. Tout ce qui peut contribuer au développement de la culture sucrière intéresse tous ceux qui cherchent à entrer en relations commerciales avec cette terre lointaine, et ceux-ci trouveront dans les fabriques américaines, maintes machines qui peuvent contribuer à la culture économique de vastes superficies. S'il y a dans l'outillage agricole américain une chose qui se recommande plus qu'une autre aux cultivateurs, c'est le rendement des lourdes machines, mises en mouvement par le cheval ou la vapeur. C'est sur ce point que le génie inventif et mécanique de l'américain concentre ses efforts. Les grandes fermes de blé de l'ouest montrent les merveilles qui ont été accomplies sous ce rapport. Ce qui a été fait pour le blé en Amérique peut être fait pour le sucre aux Indes.

VALEUR DES PRODUITS DE LA GRAINE DU COTONNIER.

Le rapport du Bureau de Recensement montre qu'en 1900 il existait aux Etats-Unis, 357 établissements engagés dans l'extraction de l'huile de coton, employant 2,479,386 tonnes de graines, coûtant \$28,632,616, ou une moyenne de \$11.55 par tonne. La quantité totale de graines broyées et pressées représentait 53 pour cent de la quantité total produite. Pendant l'année du recensement, le poids total de la graine de coton produite aux Etats-Unis se montait à 4,668,346 tonnes, évaluées à \$54,345,677. La valeur des graines était de \$42,411,835 et la valeur de ses produits se montait à \$80,371,375.

GUATÉMALA.

RÉGIME DOUANIER À L'IMPORTATION.

D'après une communication du Ministre de France à l'Amérique Centrale, le Président de la République du Guatemala, par un décret en date du 18 novembre dernier, publié au "Journal Officiel" du 24 du même mois, aurait décidé qu'à partir du 1^{er} janvier 1902, les marchandises importées dans ce pays, seraient exemptées de la surtaxe additionnelle de 15 pour cent qui avait été établie par une ordonnance du 20 décembre 1893.

DEMANDE DE CATALOGUES ET PRIX-COURANTS.

D'après les renseignements obtenus à bonne source, il y aurait un débouché à créer au Guatemala pour les machines agricoles. L'atten-

tion des manufacturiers est aussi attirée sur le fait que l'on demande actuellement pour ce pays des revues de prix-courants pour les produits qui se vendent dans les pays tropicaux; des catalogues de machines et ustensiles agricoles; des catalogues des maisons qui s'occupent de semences et d'engrais et les noms des revues d'agriculture et d'autres publications se rattachant aux industries agricoles de tous genres.

HAÏTI.

EXTRAIT DE LA LOI BUDGÉTAIRE.

La loi budgétaire 1902, passée le 16 octobre 1901 et promulguée le 29 octobre de la même année, contient les dispositions suivantes:

“ARTICLE 1^{er}. La perception de l'impôt pour l'exercice 1901-2 sera faite conformément aux lois existantes:

“Néanmoins seront, toutes les fois que les circonstances l'exigeront, soumises à un tarif maximum, lequel sera le triple de celui actuellement en vigueur, les marchandises étrangères d'une ou de plusieurs provenances. De ce chef, les autres droits classés au titre de l'importation, notamment les droits de tonnage, seront à l'égard des dites provenances augmentés dans la même proportion.

“Toute disposition à prendre à ce sujet sera l'objet d'un arrêté du Président de Haïti, lequel sera rapporté dès que cesseront les motifs qui y auront donné lieu.

“ART. 3. Tous les droits de douane généralement quelconques perçus au titre de l'exportation, à l'exception des droits d'échelle et de pilotage, seront payés en or américain.”

“Le Moniteur Officiel du Commerce” du 26 décembre 1901 a fait savoir qu'une loi promulguée le 20 septembre 1901 avait décidé notamment que la surtaxe de 25 pour cent, prélevée en monnaie nationale haïtienne sur les droits d'importation réunie, serait perçue en or américain, à partir du 1^{er} octobre de la même année. Cette disposition n'a pas été maintenue dans la pratique, et au commencement de janvier 1902 la douane haïtienne n'exigeait le paiement en or que de la moitié de la surtaxe de 25 pour cent, la seconde moitié demeurant payable en billets.

MEXIQUE.

DE TAMPICO AU PACIFIQUE.

[Suite du rapport sur le Mexique par M. le Baron MONCHEUR, Ministre Plénipotentiaire de Belgique à Washington.]

DE MAZATLAN À SONORA PAR VOIE DE TERRE.

J'ai déjà dit que l'Etat de Sinaloa s'étend comme une longue bande entre la mer et la Cordillère. Cette bande a près de 600 kilomètres de longueur sur une largeur variant de 100 à 150 kilomètres. Elle est

arrosée par de nombreux cours d'eau descendant de la montagne. Les vallées où coulent les rivières sont très fertiles; le reste de la plaine peut être cultivé également; les parties montagneuses seules sont stériles.

Jusqu'à présent l'immigration étrangère ne s'est pas portée vers cette région qui lui offre pourtant de grands avantages, entre autres, un climat excellent.

Les Espagnols qu'on rencontre partout en si grand nombre au Mexique y sont rares, et les Américains n'y viennent que pour des entreprises minières.

Ayant visité le pays avec soin, j'ai pu juger qu'il offrait dans certaines de ses parties un champ favorable aux entreprises de colonisation de nos compatriotes. Pour donner une idée aussi exacte que possible de sa nature et des ressources qu'il présente, je ferai la description de la route que j'ai parcourue, durant près d'un mois, de Mazatlan à la frontière de Sonora.

En quittant Mazatlan on se dirige vers le nord. La mer est à gauche et l'on entrevoit à droite, à une distance d'environ 50 kilomètres, les derniers contreforts de la Sierra-Madre qui se découpent très nettement sur l'horizon. La route est bonne sur tout le parcours jusqu'à Sonora. Elle date du temps de la domination espagnole et c'est une des meilleures que j'ai vue au Mexique, du moins sur une distance aussi longue.

La plaine qu'on traverse est très légèrement ondulée et entièrement couverte de bois aussi loin que la vue peut porter. C'est un taillis avec fort peu de futaie. Celle-ci a été coupée depuis longtemps près des voies de communication. Pour en trouver encore, il faut s'écarter beaucoup des routes, là où l'absence des moyens de transport la rend inexploitable. C'est pour cette raison qu'il est plus économique de faire venir les bois de construction des Etats-Unis.

De loin en loin, on rencontre une "milpa," c'est-à-dire une clairière défrichée et semée de maïs ou de frijol (lentilles). Ce terrain est toujours soigneusement enclos pour empêcher le bétail errant dans les bois d'y pénétrer. Sur cette première partie du parcours les "milpas" sont distantes en moyenne d'un kilomètre.

Elles ne sont pas irrigables et ne donnent, par conséquent, qu'une récolte, en décembre, après la saison des pluies.

Après un trajet de 56 kilomètres, on rencontre le premier cours d'eau avec une petite localité du nom de Quelite, bâtie sur ses bords. La fertilité du sol, le long de cette rivière, est grande, surtout en aval de Quelite jusqu'à la mer. Une très faible partie est cultivée. Il y a là des terrains qui, défrichés et irrigués au moyen de canaux de dérivation pratiqués le long de la rivière, pourraient donner la canne à sucre, le coton et le tabac. Jusqu'à présent la population s'est bornée à y faire quelques "milpas," ainsi que l'élevage du bétail.

Les propriétés de grande étendue encore couvertes de "monte"

(bois) et vendues en bloc, contenant par conséquent du bon et du mauvais terrain, valent en moyenne 1,000 piastres le sitio, soit 1 fr. 50 c. l'hectare.

Elles ont un désavantage, c'est que le cours de la rivière a une faible pente, ce qui rend les prises d'eau difficiles à établir. Il arrive aussi, les années de sécheresse, que la rivière tarisse précisément quand les irrigations sont le plus nécessaires.

Les terres de bonne qualité, déjà mises en culture et entourées d'une clôture en ronces artificielles, valent jusqu'à 30 piastres (75 francs) l'hectare. Les frais de défrichement ne s'élèvent qu'à environ 8 piastres (20 francs) l'hectare.

En continuant la route après Quelite, le pays devient plus accidenté; le bois dénote moins de fertilité et les "ranchos" sont rares.

A 90 kilomètres de Mazatlan, on arrive à Limon (300 habitants). On est sorti du district de Mazatlan pour entrer dans celui de San-Ignacio. La nature du terrain et le genre de culture y sont les mêmes jusqu'à ce qu'on arrive au Rio Pliaxtla (120 kilomètres de Mazatlan).

Cette rivière a un lit d'au moins 2 kilomètres de largeur qui se remplit entièrement durant la saison des pluies. Même pendant la saison sèche, l'eau ne tarit jamais. Tous les terrains situés sur les deux rives, depuis le point où la route traverse le cours d'eau jusqu'à la mer, sont verdoyants et se prêtent admirablement à la culture. Il ne serait même pas nécessaire de recourir aux irrigations, parce que le terrain d'alluvion garde suffisamment d'humidité après les inondations de la saison des pluies. Cette région passe, après celle du Rio-Fuerte, dans le nord de Sinaloa et dont il sera question plus loin, comme la plus fertile de l'Etat.

Si on remonte la rivière en amont de la route, on arrive à San-Ignacio, capitale du district.

On est à peu de distance de la Sierra. Le pays est beaucoup plus accidenté; la culture ne se fait que dans les dépressions du sol entre les collines; l'élevage du bétail s'y pratique avec succès. Comme exemple de la valeur de la propriété dans ces parages, je citerai l'hacienda de Candelero de la contenance de 10 sitios (17,500 hectares), vendue 40,000 piastres (100,000 francs) avec tout son bétail et le matériel d'agriculture.

En reprenant la route vers le nord à partir du Rio-Pliaxtla on traverse 15 kilomètres d'un terrain sec et couvert de taillis rabougris et l'on arrive sur les bords de la rivière Elota qui sépare le district de San-Ignacio de celui de Cosala.

La localité du même nom que le cours d'eau (1,000 habitants) était récemment encore bâtie sur la rive même, au fond de la vallée. Elle fut entièrement détruite il y a quatre ans par une inondation et maintenant on l'a rebâtie à mi-côte.

Les terrains, le long du cours d'eau, ressemblent à ceux du Rio-Pliaxtla et se prêteraient à toutes sortes de cultures.

Le régime de la propriété est celui de la communauté qui existe dans une grande partie de l'État de Sinaloa. Ces communautés ont une origine très ancienne; les unes proviennent d'un auteur unique dont la succession n'a jamais été partagée; les autres existaient déjà lors de la conquête espagnole. Le régime de ces biens est très singulier. Chacun de ces "comuneros" (membres de la communauté) peut mettre en culture autant de terrains qu'il désire. S'il l'entoure d'une clôture, il en devient l'unique propriétaire. C'est pour cela qu'on voit, entourées de barrières, des étendues considérables à peine cultivées et qui ne semblent pas valoir les frais que ce travail a nécessité.

Il est possible à un étranger de devenir, grâce à cette disposition de la loi, propriétaire de grandes étendues, à peu de frais. Il lui suffit d'acheter une part indivise d'un "comunero." Ce système donne même à des abus. Des capitalistes ayant acheté pour une somme minime une petite part indivise, ont mis en culture et clôturé la presque totalité de la communauté, évinçant ainsi les co-propriétaires.

Le régime de communauté est trop souvent un obstacle au progrès du pays. Quelquefois, mais rarement, on procède à un lotissement pour faire cesser l'indivision.

Il ne faut pas confondre ces communautés avec les "biens communaux" qui n'existent pas au Mexique.

La seule grande propriété du district de Cosala qui ne soit pas en communauté est celle de Ceuta, au bas de la rivière Elota, près de la mer, d'une contenance de 5 à 6 sitios (environ 10,000 hectares). Les terrains sont excellents et en partie irrigables; ils sont bien loin d'être tous mis en culture.

On exploite dans cette propriété des salines naturelles qui donnent annuellement 20,000 à 30,000 cargass (138 kilogrammes) de sel. Chaque carga vaut sur place 1 piastre et son prix de revient n'est que de 18 centavos.

Le long de la côte, près de Ceuta, on rencontre de grands bois de limoniers dont on ne se donne plus la peine de récolter les fruits, depuis que le prix ne compense plus les frais de transport qui, de cet endroit reculé, sont naturellement fort élevés.

Après Elota, la route vers le nord devient plus accidentée; la région est boisée et peu cultivée. On commence à rencontrer beaucoup de petites fabriques d'eau-de-vie, où l'on distille le "mezcal" sauvage, ressemblant beaucoup à celui de Tequila.

A 224 kilomètres de Mazatlan, on arrive à la petite ville de Quila, située sur les bords du fleuve San-Lorenzo, dans une vallée aussi large que celle de la Loire. Des travaux d'irrigation ont donné à la végétation aux alentours de la ville un aspect enchanteur.

Avec son climat admirable, ses champs verdoyants et la Sierra-Madre ferment l'horizon du côté opposé à la mer, la vallée du San-Lorenzo m'a rappelé les riantes campagnes de la Toscane le long de l'Arno. D'un côté du fleuve, sur la rive gauche, la hacienda del Oso est

arrosée par un canal de $4\frac{1}{2}$ mètres de large qui va prendre l'eau à 4 kilomètres en amont et la distribue sur toute la propriété. Les terrains sont couverts de récoltes magnifiques—maïs, frijol, canne à sucre. Le propriétaire de ce bien, qui n'avait presque pas de valeur avant les travaux qui y ont été exécutés, venait de recevoir quand je l'ai visité, de très belles offres d'achat d'une compagnie de San-Francisco. On va y bâtir une sucrerie.

Sur la rive droite, un spéculateur, avec une dépense de moins de 10,000 piastres (25,000 francs), a creusé un canal de 8 kilomètres de long, débitant $\frac{1}{2}$ mètre cube par seconde et dont il se propose de louer l'eau aux riverains. On pourra ainsi irriguer des milliers d'hectares en aval, entre Quila et la mer. Le terrain y est déjà de sa nature d'une fertilité remarquable, ainsi que le prouve la force de la végétation du bois qui le couvre. Une fois cultivé et abondamment arrosé, il donnera certainement de magnifiques récoltes.

Ces terres encore boisées pourraient, d'après ce que m'a dit le chef politique (sous-préfet) de Quila, être achetées à un prix assez bas—environ 5,000 piastres le sitio, soit 7 francs l'hectare; les frais de défrichement seraient de $8\frac{1}{2}$ à $11\frac{1}{2}$ piastres l'hectare (21 à 28 francs). La dépense augmenterait là où la futaie serait plus épaisse.

Toutes les terres, depuis Quila jusqu'à l'embouchure de San Lorenzo, sur une distance d'environ 35 kilomètres, sont de même nature, couvertes de bois d'une végétation exubérante, et n'attendent que la main de l'homme pour être converties en riches campagnes.

Ces parages m'ont paru réunir d'excellentes conditions pour la colonisation européenne. Le climat est sain; on n'est plus dans la véritable terre chaude dont la chaleur humide abat le travailleur européen. Certes, en été, le thermomètre y dépasse 30 degrés centigrades, mais le voisinage de la mer rafraîchit l'air, qui d'ailleurs est sec et n'a rien d'accablant. Les salaires ne sont pas élevés: 37 centavos (environ 1 franc). Un très bon chemin longe le fleuve depuis la mer jusque Quila, et cette ville elle-même est reliée par une route carrossable de 48 kilomètres à Culiacan, capitale de l'Etat, où l'agriculture trouve un débouché pour ses produits.

A l'embouchure du fleuve se trouve la grande propriété de l'Eldorado, où un capitaliste mexicain a fait de grands frais pour créer une hacienda de premier ordre.

En attendant l'achèvement du grand canal de dérivation qui doit amener l'eau du San-Lorenzo sur les terres, l'irrigation s'y fait au moyen d'une pompe à vapeur. Les frais ne sont pas considérables, parce que les défrichements donnent du combustible en abondance.

En général, dans toute la région de Quila, le bois à brûler est d'un bon marché extrême—5 ou 6 réaux (moins de 2 francs) la "corde" de 2 mètres cubes. Les essais de plantation de coton à l'Eldorado n'ont pas donné de bons résultats; mais il paraît qu'ils avaient été faits dans

des conditions trop défavorables pour qu'on puisse porter un jugement définitif.

Le fleuve San-Lorenzo a un lit d'une largeur énorme qui atteint 3 à 4 kilomètres en temps d'inondation. Ce sont ces cours d'eau, d'une impétuosité inouïe durant la saison des pluies, qui rendront bien difficile la construction d'un chemin de fer reliant entre eux les divers districts de l'Etat.

En continuant la route à partir de Quila, on traverse en ligne droite une contrée absolument déserte, couverte de taillis et après un trajet de 48 kilomètres on arrive à Culiacan, la capitale de l'Etat de Sinaloa (272 kilomètres de Mazatlan).

La ville de Culiacan, de 10,000 habitants n'a eu aucune ressource pendant longtemps, ainsi que le prouve l'absence complète d'édifices datant de l'époque de la domination espagnole. Elle a beaucoup progressé sous l'intelligente administration du gouverneur actuel et depuis qu'une ligne de chemin de fer d'environ 80 kilomètres la relie au port d'Altata, sur le golfe de Californie.

Elle est située dans une vallée très fertile à la jonction de deux rivières. Les principales industries dans les environs sont une fabrique de cotonnades et deux sucreries. L'une d'elles, la Aurora, est située un peu en amont de Culiacan, dans une plaine arrosée par un canal de dérivation de la rivière, d'une longueur de 3 kilomètres. On y utilise 100 tonnes de canne par jour.

Quand je visitai l'établissement, la campagne sucrière était déjà terminée. La production avait été de 335,000 kilogrammes de sucre blanc, se vendant 22 centavos (55 centimes) le kilogramme. Le sucre s'emballa dans des caisses fabriquées sur place avec des planches de sapin venant des Etats-Unis. Les machines viennent en partie des Etats-Unis et en partie de France.

La manufacture de cotonnades, El Coloso, appartient au même propriétaire que la Aurora. Elle est fort ancienne, car elle a été établie en 1848, sous la direction d'ingénieurs belges. Ce sont aussi des ouvriers belges qui ont mis ceux du pays au courant de la fabrication. La production est de 50,000 pièces, de 26 mètres chacune, de calicot écriu et de tissus de coton de couleur. Il y a 120 métiers, mais leur nombre va être considérablement augmenté. Auparavant, la force motrice était fournie par une turbine hydraulique, mais on l'a remplacée par la vapeur afin de pouvoir utiliser plus complètement l'eau pour les irrigations. Le combustible est à bas prix, le bois ne coûtant que 22 centavos (55 centimes) les 92 kilogrammes.

La fabrique est fort bien installée et réunit toutes les conditions d'hygiène. Autour de l'établissement, le propriétaire a bâti un certain nombre de maisons, composées chacune d'une chambre et d'une cuisine. Elles sont éclairées à l'électricité et ont une distribution d'eau. Elles se louent aux ouvriers au prix modique de 3 piastres par mois,

de sorte que l'ouvrier, avec le salaire de trois jours, peut payer le logement et l'éclairage du mois entier.

Les deux fabriques, Aurora et Coloso, donnent ensemble du travail à 560 personnes.

A 30 kilomètres en aval de Culiacan, sur la ligne du chemin de fer d'Altata, la belle hacienda La Primavera, à Navolato, montre ce qu'on peut faire dans cette région avec du travail et du capital. Là où l'on ne voyait il y a huit ans qu'une forêt vierge on trouve aujourd'hui une localité de 3,000 habitants et des champs magnifiques.

Des capitalistes du pays, les frères ALMADA, ayant acquis 20,000 hectares de "monte" (terrains boisés) à Navolato, ont commencé par dépenser 100,000 piastres (251,000 francs) pour creuser un canal qui va chercher l'eau du Rio de Culiacan, à 15 kilomètres en amont, à un niveau suffisant pour irriguer toutes les parties de la plaine. Ils possèdent maintenant 1,000 hectares plantés en canne et, en outre, des champs immenses de maïs et de frijol, ainsi que de véritables forêts de bananiers et d'orangers. J'y ai vu des orangers de 7 ans, hauts déjà de 4 mètres.

La plantation de canne donne en moyenne 90 tonnes par hectare ; la fabrique de sucre se trouve au milieu de la propriété et à côté de la gare du chemin de fer. Les machines et tous les appareils très perfectionnés ont été fournis par une maison hollandaise. La production de la dernière saison a été de 2,000 tonnes d'un sucre presque aussi blanc que celui qui sort des raffineries et tel que peu de fabriques le produisent au Mexique ; le rendement de la canne, quand il s'agit d'obtenir du sucre de cette qualité, est de 7 pour cent. Le prix de vente est élevé en ce moment, les divers producteurs de sucre du versant du Pacifique ayant constitué un trust. Il atteint maintenant 21 à 23 centavos (52 à 60 centimes) le kilogramme. Comme le prix de revient ne dépasse pas 8 à 10 centavos (20 à 25 centimes), on voit quels bénéfices peut réaliser encore dans cette partie du Mexique un établissement bien dirigé.

Le sucre ne s'exporte pas ; il se vend dans les États de la côte du Pacifique, ainsi qu'à Chihuahua et à Durango où on l'envoie par Guaymas et le chemin de fer de Sonora.

La culture de la canne se fait en partie par les propriétaires eux-mêmes, en partie par les colons. Ceux-ci reçoivent gratuitement la terre déjà défrichée et l'eau pour l'irrigation ; on leur donne aussi les mules nécessaires au travail ; mais ils doivent se charger de la plantation, de l'entretien et de la récolte. Ils reçoivent 2 piastres (5 francs) par tonne de canne amenée jusqu'à la sucrerie. Le bois employé comme combustible provient des parties de la propriété non encore défrichées. Les Indiens qui le coupent et le transportent jusqu'aux chaudières, reçoivent 2 piastres (5 francs) pour 120 pieds cubes.

Les plantations étant établies dans de grandes plaines unies, l'em-

ploi des chemins de fer de Decauville serait tout indiqué comme au Yucatan. Jusqu'à présent, tous les transports se font par charrettes. Cinq cents mules sont employées à ce travail.

Les mélasses sont traitées dans la distillerie adjointe à la sucrerie et produisent 4,000 litres d'alcool par jour. On y fabrique toutes espèces d'imitations des liqueurs françaises, sans toutefois en contrefaire les marques. Cette industrie a fait diminuer notamment l'importation des liqueurs étrangères à Mazatlan.

Enfin, la maison ALMADA a des industries accessoires. Ainsi elle possède des ateliers de menuiserie pour la confection des caisses à sucre; elle les utilise aussi pour la fabrication de malles de voyage et surtout de lits portatifs, très en usage dans les haciendas. Elle achète 300,000 pieds courants de planche de sapin en Amérique.

Les terrains en aval, le long de la rivière, sont de la même nature que ceux de Navolato et pourraient se prêter aux mêmes entreprises.

SITUATION ÉCONOMIQUE DES ÉTATS DE JALISCO ET DE COLIMA.

Le "Bulletin Commercial," de Bruxelles, publie dans son numéro du 1^{er} février les détails suivants au sujet de la situation économique des Etats de Jalisco et de Colima et sur leur avenir probable:

La construction de la ligne du "Mexican Central Railway" (déjà terminée jusqu'à Tuxpan), qui doit relier Tampico à Manzanillo, sur le Pacifique, va bientôt raccourcir notablement la distance qui sépare, par terre, les Etats de Jalisco et de Colima du reste du Mexique, des Etats-Unis et du Canada.

Ce trajet atteindra 900 kilomètres; il se réduira à 700 kilomètres quand la ligne directe d'Aguascalientes à Guadalajara sera terminée, tandis que la ligne transcontinentale américaine la plus courte dépasse 2,900 kilomètres.

De Guadalajara à Manzanillo, la contrée traversée par le nouveau chemin de fer est une région très favorisée par la nature. L'Etat de Jalisco, avec ses 86,752 kilomètres carrés de plaines, de vallées et de montagnes, se place en tête des autres Etats mexicains comme producteur de grain. Tout le long du tracé de la ligne, on rencontre de belles haciendas et de nombreux ranchos facilement accessibles, produisant en abondance du grain, du sucre, du bétail et de l'alcool (tequila). Ces terres rapportent de 7 à 10 pour cent.

Parmi les principaux produits du pays, on peut citer le hennequen, différentes espèces de maguey, le coton, le caoutchouc, le copal, le chicle, les oranges, les citrons, les bananes, les ananas, les poires, les pêches, le café, le cacao, la vanille et le tabac.

On y rencontre aussi des forêts de pins, de cèdres, d'acajou, d'ébène et de bois de fer, alors que, sur tout le parcours de la ligne de Tehuantepec, presque tous les bois de ce genre ont déjà disparu et qu'il faut

se rendre aux frontières du Guatémala pour créer de nouvelles exploitations. On y découvre aussi des bois, qui n'ont pas encore été introduits dans le commerce.

Il y a actuellement, dans l'Etat de Jalisco, cinq fabriques de coton; elles ont produit, en 1899, 248,180 pièces de calicots et d'autres tissus.

Les dernières statistiques ont constaté l'existence de 349 concessions de mines, couvrant 4,775 acres, accordées par le gouvernement et comprenant 32 mines d'or, 68 mines d'or et d'argent; 178 mines d'argent, 9 mines d'argent et de cuivre, 2 mines d'argent et d'étain, 2 mines de mercure, 20 mines d'or et de cuivre, 1 mine de cuivre et d'étain et 16 mines de fer.

L'Etat de Jalisco possède aussi des fabriques de tabac livrant chaque année au public environ 13,924,991 paquets de cigarettes, 2,398,723 cigares et 175 paquets de tabac coupé, ce qui représente un total de 153,908 kilogrammes de tabac du pays.

Les distilleries d'alcool sont au nombre de 96; elles fabriquent annuellement 3,194,209 litres de spiritueux, extraits du maguey et aussi de la canne à sucre. La consommation annuelle de viande s'élève, dans cet Etat, à 10,502,000 kilogrammes; 132,292 têtes de bétail de tout genre, représentant une valeur de 3,015,381 piastres, sont abattues chaque année.

Il y a deux brasseries produisant 1,185,400 litres de bière.

La valeur déclarée des propriétés rurales atteint 31,765,295 piastres et celle des propriétés bâties 20,886,174 piastres, ce qui donne un total de 52,653,469 piastres de propriétés soumises à l'impôt. Dans cette évaluation ne sont pas comprises les propriétés exemptées de contribution par la loi, comme les chemins de fer, les églises, les propriétés de l'Etat et des communes, de sorte que l'on pourrait doubler le chiffre précédent pour arriver à une évaluation exacte des propriétés de cet Etat.

Les revenus de l'Etat ont été de 1,291,924 piastres en 1899; depuis lors ils ont quelque peu augmenté, alors que les recettes et les dépenses sont presque équivalentes.

La ville de Guadalajara est dotée d'un établissement financier spécial, la Banque de Jalisco, fondée avec l'autorisation du gouvernement fédéral, au capital de 1,500,000 piastres. Cet établissement est bien dirigé; ses affaires sont prospères; les actions sont cotées au-dessus du pair et on rencontre peu de vendeurs. La Banque Nationale du Mexique et la Banque de Londres et Mexico ont des succursales à Guadalajara.

L'élevage du bétail prend chaque année un plus grand développement dans ce pays. Beaucoup de haciendas et de ranchos s'occupent exclusivement de cette branche d'industrie. On importe des Etats-Unis de nombreux bestiaux de race pour améliorer l'élevage indigène,

et l'Etat de Jalisco peut fournir maintenant d'excellents produits pour la boucherie et la laiterie.

La ville de Mexico et beaucoup d'autres villes importantes du pays sont en grande partie approvisionnées par l'Etat de Jalisco. La contrée offre d'excellents placements aux entrepreneurs qui voudraient fonder des établissements agricoles de ce genre, grâce à la facilité des communications par chemin de fer.

A quelques kilomètres de Tuxpan, jusqu'où la nouvelle ligne est construite, le tracé du Mexican Central Railway entre dans le petit et fertile Etat de Colima; il ne contient, en effet, que 5,887 kilomètres carrés et 65,026 habitants. La principale ressource de cette contrée est l'agriculture. Le climat y est plus chaud que dans l'Etat de Jalisco; la fertilité du sol est la même. On y trouve trois fabriques de coton ayant produit en 1899, 22,051 pièces de calicots et autres tissus, de 25 à 30 yards chacune; 9 fabriques de tabac, qui ont produit la même année 5,174,300 paquets de cigarettes et 563,050 cigares; 6 distilleries qui ont fabriqué en 1899, 87,522 litres de spiritueux, extraits du maguey et de la canne à sucre.

De même que l'Etat de Jalisco, celui de Colima offre des terrains favorables à l'élevage du bétail, et beaucoup de fermiers s'y adonnent à cette industrie.

En prévision du prolongement de la ligne du Mexican Central jusqu'à la côte du Pacifique, le port de Manzanillo a été agrandi, amélioré, sous la direction de l'ingénieur EDGAR SMOOT, qui a signé un contrat avec le gouvernement fédéral pour l'entreprise de ces travaux. Cette entreprise n'est pas encore complètement terminée, mais elle est menée très rapidement. Le port de Manzanillo offrira aux navires un bassin de 70 hectares environ, qui pourra abriter une centaine de vaisseaux et sera facilement accessible.

Outre ces richesses agricoles et minières, l'Etat de Jalisco est aussi le centre d'excursions le plus recherché des touristes.

LES EXPLOITATIONS AGRICOLES.

La Légation de Belgique a transmis au "Bulletin Commercial" de Bruxelles du 25 janvier, les quelques chiffres statistiques officiels suivants, relatifs aux établissements agricoles du Mexique:

Les Etats de la République contiennent 8,101 haciendas, parmi lesquelles 3,400 sont consacrées à l'exploitation des céréales et 1,560 à l'élevage du bétail. Elles sont dispersées dans tout le pays; l'élevage constitue la principale source de profit des haciendas du Nord, tandis que les haciendas du grand plateau central sont livrées à la culture des céréales.

Les plantations de coton comprennent 108 *haciendas*, dont 70 dans

l'Etat de Coahuila, 23 dans celui de Vera-Cruz et 15 dans celui de Guerrero.

Les haciendas cultivant le cacao sont au nombre de 124 à Tabasco et de 115 dans l'Etat de Chiapas; il y a 98 plantations (*haciendas*) de café dans l'Etat de Vera-Cruz, 42 dans l'Etat d'Oaxaca et 181 dans l'Etat de Chiapas.

Le Yucatan compte 348 plantations de hennequen, tandis qu'il y en a 38 dans l'Etat de Campêche.

Les plantations de tabac se partagent ainsi: 45 dans l'Etat de Vera-Cruz, 12 dans l'Etat de Tabasco, 28 dans l'Etat d'Oaxaca, 13 dans l'Etat de Sonora.

Le plus grand producteur de *pulque* est l'Etat d'Hidalgo; on y compte 102 plantations de maguey; il y en a 32 dans l'Etat de Puebla, 17 dans l'Etat de Mexico, 7 dans le District Fédéral.

Dans l'Etat de Jalisco, il existe 45 plantations d'agave (produisant le mezcal); les principales se trouvent dans le district de Tequila, qui donne son nom à la meilleure marque de cette liqueur, laquelle ressemble, à la fois, à un dérivé du Scotch whisky et du genièvre de Hollande.

Les plantations de canne à sucre se trouvent éparpillées dans toute la région des terres chaudes: 244 dans l'Etat de Chiapas, 226 dans l'Etat de Nuevo-Leon, 106 dans l'Etat de Vera-Cruz, 94 dans le Yucatan, 82 dans le Michoacan, 75 dans l'Etat d'Oaxaca, 72 dans celui de Guerrero, 67 dans l'Etat de Puebla, 53 dans celui de Jalisco, 67 dans l'Etat de Morelos. Les plantations de canne couvrent, en fait, presque toute l'étendue de cette dernière contrée.

ÉLEVAGE DU BÉTAIL.

L'élevage et l'engraissement du bétail, d'après des renseignements fournis par la Légation de Belgique à Mexico, constituent actuellement, dans les régions suffisamment irriguées du Mexique, la plus productive des exploitations agricoles, alors que la culture de la canne à sucre donne les meilleurs résultats dans les terres chaudes.

Le propriétaire foncier qui achète du bétail pour l'engraisser gagne, en général, 75 pour cent sur le capital engagé; quant aux frais d'exploitation, ils sont presque insignifiants dans une hacienda bien organisée. Le salaire journalier le plus élevé d'un *vaquero* ou gardeur de bétail ne dépasse pas 1 piastre argent; les frais de nourriture et de logement sont quelquefois compris dans le contrat; quand la nourriture est cotée à part, on compte 2 réaux par jour.

Un bon *vaquero* suffit pour garder 100 têtes de bétail.

Dans le nord du grand plateau mexicain, où se trouvent les plus vastes exploitations agricoles de ce genre, certains propriétaires possèdent plus de 100,000 têtes de bétail.

Quand ils sont propres à la vente, les animaux sont expédiés généralement par trains spéciaux aux Etats-Unis, surtout à Chicago.

Il est donc nécessaire pour un *ranchero* ou éleveur possédant d'aussi nombreux troupeaux, de disposer d'un capital roulant très considérable et d'avoir des agents dans les principales villes des Etats-Unis.

Cette industrie, si simple et si primitive, est celle à laquelle s'adonnent la plupart des spéculateurs, après avoir tenté sans succès appréciable des cultures compliquées. Les pâturages se vendent dans le pays à des prix peu élevés. Le résultat pratique de ce mode d'exploitation est de retirer, dès la fin de la première année, un intérêt fort élevé du capital.

Tout acheteur d'hacienda doit, avant la vente, étudier soigneusement l'état des terres.

Cette industrie présente néanmoins plusieurs inconvénients, tels que : les épidémies, qui viennent parfois détruire une grande partie du bétail des haciendas, et la sécheresse, cette plaie du grand plateau mexicain. Il faut éviter de procéder à l'inspection du mode d'irrigation pendant la période des pluies tropicales; c'est en hiver, au mois de mars et avril surtout, que l'on peut se rendre compte de la valeur des pâturages au Mexique.

Jusqu'ici, ceux qui ont le mieux réussi dans cette branche d'industrie sont les Espagnols; la connaissance de la langue castillane est indispensable pour diriger ces exploitations.

L'INDUSTRIE SUCRIÈRE.

La troisième édition annuelle du "The Mexican Sugar Report" (1901-2) publié par "El Hacendado Mexicano," ville de Mexico, fut mise en circulation au mois de janvier 1902. Dans ce rapport on s'est efforcé d'obtenir la quantité exacte de sucre produite par chaque planteur mexicain. La publication contient aussi une liste officielle des planteurs et raffineurs de canne à sucre au Mexique, dans l'Amérique Centrale, à Cuba et Porto-Rico, ainsi que leurs adresses et d'autres renseignements pertinents. Les statistiques contenues dans ce rapport, relatives à la République du Mexique, montrent que la production de sucre en 1900-1901 a été considérablement plus grande que pendant l'année précédente et on prédit un plus grand rendement en 1901-2, car on a déjà projeté l'établissement de six nouvelles raffineries. La quantité totale de sucre produite au Mexique par ces raffineries et haciendas se montait, dit ce journal, en 1900-1901, à 77,361,712 kilogrammes, auxquels il faut ajouter 17,633,288 kilogrammes, total approximatif du sucre produit dans les différents états dont on a pas encore obtenu les statistiques, ce qui donne un total général de 95,000,000 kilogrammes ou 95,000 tonnes métriques. La quantité totale de mélasse est estimée à 50,000 tonnes.

Ci-après les statistiques de la production de sucre par état, comme elles ont été données pendant la saison de 1901-2.

Etats.	Nombre des propriétés.	Nombre des planteurs et raffineurs.	Quantité.
			<i>Kilos.</i>
Campêche.....	35	29	201, 200

FABRICATION ET COMMERCE DES MEUBLES.

Un rapport de la Légation de Belgique à Mexico, publié dans un récent numéro du "Bulletin Commercial" dit que jusqu'ici l'industrie de la fabrication des meubles n'existait dans cette ville qu'à l'état rudimentaire et que les fabriques locales ne livraient au consommateur que des articles grossiers peu estimés; que les meubles dits de salon et de bibliothèque étaient presque tous d'origine étrangère, par conséquent soumis à des droits de douane élevés et vendus par des intermédiaires à des prix exorbitants.

Dans ces conditions, la création d'une fabrique de meubles fins à Mexico constituait donc, à tous les points de vue, une excellente affaire. Aussi, un groupe de financiers américains vient-il de réaliser ce projet. Une somme de 300,000 piastres a été réunie pour fonder à Mexico une fabrique de ce genre; elle espère pouvoir livrer au public des produits à des prix moins élevés que ses concurrents étrangers. Deux scieries à vapeur outillées à l'américaine seront adjointes à cet établissement pour préparer les bois de construction venant des forêts du golfe du Mexique. Le capital de ces scieries sera de 200,000 piastres.

La nouvelle compagnie emploiera des ouvriers mexicains. Les meubles d'origine étrangère viennent en général de France et d'Allemagne. On trouve également, à Mexico, des meubles en marqueterie italienne.

CONCESSION ET EXPLOITATION DE GISEMENTS DE PÉTROLE.

D'après des informations françaises, le Congrès des Etats-Unis Mexicains vient d'autoriser le Pouvoir Exécutif à accorder l'autorisation d'explorer le sous-sol des terrains nationaux—lacs, lagunes et marais—de juridiction fédérale, afin de découvrir les sources ou dépôts de pétrole ou carbure gazeux d'hydrogène qui peuvent y exister.

Le gouvernement fédéral est également autorisé à délivrer des patentes en vertu desquelles on pourra entreprendre, conformément aux prescriptions de la loi, l'exploration des sources ou dépôts de pétrole ou carbure gazeux d'hydrogène.

La plupart des terrains où l'on a découvert récemment des gisements de pétrole se trouvent dans l'Etat de Tamaulipas (Tampico). En ce moment, des ingénieurs et des géologues américains explorent les côtes du Pacifique, où l'existence de nombreux dépôts de ce genre sera bientôt déterminée d'une façon positive.

Comme le charbon est encore à un prix très élevé et que le déboisement des forêts mexicaines devient de plus en plus général, les découvertes de sources de pétrole et leur exploitation constituent, pour le pays, un champ d'entreprises d'une importance considérable.

CHEMIN DE FER MINIER.

Plusieurs grands propriétaires de mines de l'Etat de Chihuahua se sont réunis, récemment, à l'effet de discuter l'utilité qu'il y aurait pour eux de fonder un chemin de fer qui sillonnerait le sud du district de Santa-Eulalia, dans l'Etat de Chihuahua. Ce projet a été adopté: les travaux de construction de la nouvelle voie ferrée seront incessamment commencés. Les centres miniers qui seront desservis par le chemin de fer sont: Santa-Eulalia, Santo-Domingo, Galeana, Bustillos et San-Juan.

STATISTIQUES RELATIVES AUX CHEMINS DE FER.

D'après des renseignements officiels, la longueur des chemins de fer en exploitation, au Mexique, était, à la date du 31 décembre dernier, de 15,439 kilomètres 954 mètres.

Ces chiffres se décomposent comme suit:

	Kilomètres.
Lignes fédérales	14, 319. 646
Voies ferrées construites dans les Etats	685. 593
Embranchements particuliers	434. 715

MARBRES ET ONYX.

De nombreuses demandes de marbre et d'onyx mexicains parviennent aussi bien des Etats-Unis que d'Europe. Les riches carrières de marbre et d'onyx, récemment découvertes près de Oaxaca et de Tehuacan, ne suffisent pas, et de beaucoup, à satisfaire les demandes qui leur

arrivent journellement. Il n'est pas douteux que l'exploitation des carrières de marbre et d'onyx au Mexique devienne une nouvelle source de richesses pour les heureux propriétaires de ces mines.

CAPITAL ITALIEN.

Il résulte d'une enquête faite par les voies de la Légation d'Italie à Mexico et avec le concours de la Chambre de Commerce italienne de cette capitale qu'une somme de plus de \$20,000,000 fournie par des capitalistes et des industriels italiens est engagée au Mexique dans le seul Etat de Nuevo-Leon.

Ces capitaux sont engagés surtout dans des entreprises industrielles, dans des maisons d'importation, d'exportation, de commission, de banque, filature, colonies agricoles, etc.

IMMIGRATION JAPONAISE DANS L'ÉTAT DE COAHUILA.

Dans l'Etat de Coahuila, l'immigration japonaise s'accroît rapidement. Dans une seule semaine, 80 familles japonaises sont arrivées à Karroterau pour travailler aux mines de charbon qui se trouvent près de cette ville.

On annonce de San-Francisco que 300 familles japonaises se sont embarquées pour les ports mexicains du Pacifique afin de se livrer aux travaux agricoles.

URUGUAY.

EXPORTATION DE LAINE.

D'après le Consul des États-Unis à Montévidéo, les exportations de laines par ce port ont été comme suit pour les exercices finissant au 31 octobre des deux dernières années:

[Balles de 500 kilogrammes.]

Destination.	1899-1900.	1900-1901.
Dunkerque	16, 194	31, 828
Hambourg	6, 552	17, 415

La première tonte de la saison actuelle a commencé en novembre dernier et promettait d'être très abondante. Aucuns estiment même que l'Uruguay pourra exporter cette année 100,000 balles de laine.

PRODUCTION DE SUCRE DANS LE MONDE EN 1901-2.

D'après des informations puisées à diverses sources, la production totale du sucre de betterave dans le monde atteindra 6,413,000 tonnes en 1901-2, contre 5,028,000 tonnes en 1900-1901.

Ces chiffres se répartissent comme suit entre les divers pays:

Pays.	1901-2.	1900-1901.	Pays.	1901-2.	1900-1901.
	<i>Tonnes.</i>	<i>Tonnes.</i>		<i>Tonnes.</i>	<i>Tonnes.</i>
Allemagne	2,125,000	1,979,000	Danemark	60,000	53,000
France	1,150,000	1,170,000	Espagne	100,000	84,000
Autriche	1,125,000	1,074,000	Italie	77,000	66,000
Russie	1,050,000	920,000	Roumanie	18,000	24,000
Belgique	350,000	340,000	Autres pays	3,000	48,000
Hollande	190,000	178,000			
Suède	115,000	112,000	Totaux	6,363,000	6,048,000

Quant au sucre de canne, sa production a été comme suit durant les deux derniers exercices:

Pays.	1901-2.	1900-1901.	Pays.	1901-2.	1900-1901.
	<i>Tonnes.</i>	<i>Tonnes.</i>		<i>Tonnes.</i>	<i>Tonnes.</i>
Cuba	755,000	512,061	Porto-Rico	80,000	55,089
Java	720,000	704,456	Barbados	60,000	11,074
Etats-Unis	400,000	350,000	Trinidad	50,000	47,942
Hawaï	340,000	320,000	Philippines	50,000	55,559
Brésil	190,000	180,000	Réunion	40,000	42,631
Maurice	170,000	174,938	Guadeloupe	40,000	37,946
Pérou	135,000	120,000	Martinique	35,000	33,543
Démérara	100,000	95,188	Jamaïque	30,000	30,000
Petites-Antilles	95,000	85,000			
Egypte	90,000	85,000	Totaux	3,380,000	2,990,427

On voit donc que, prise dans son ensemble, la production du sucre dans le monde en 1901-2 sera considérablement supérieure à celle de la campagne précédente.

A la date du 16 décembre 1901, le Consul des Etats-Unis à Brême a transmis au Ministère des Affaires Etrangères à Washington, un rapport sur la production de sucre en Europe. Ce rapport dit que l'Union Internationale des Statistiques sucrières vient de publier les résultats suivants de ses investigations, faites en décembre 1901, relatives à la récolte actuelle de sucre de betterave dans les pays européens:

Pays.	1901-2.	1900-1901.	Pays.	1901-2.	1900-1901.
	<i>Tonnes.</i>	<i>Tonnes.</i>		<i>Tonnes.</i>	<i>Tonnes.</i>
Allemagne	2,220,850	1,974,785	Suède	121,392	115,547
Autriche	1,306,900	1,083,300	Danemark	57,500	50,760
France	1,080,300	1,100,171	Autres pays	221,000
Russie	1,079,550	893,520			
Belgique	325,000	320,000	Totaux	6,612,592	6,716,183
Hollande	200,100	178,100			

Il y aura apparemment une surproduction de sucre en Europe qui se montera, d'après le rapport ci-dessus, à plus de 1,000,000 tonnes de la consommation normale, laissant en magasin, pour la saison prochaine, un stock de 1,500,000 tonnes.

ESTIMATIONS PRÉSENTÉES À LA CONFÉRENCE DE BRUXELLES.

Une dépêche récente de la presse dit que la présente crise sucrière a considérablement alarmé les sueriers européens. Les rapports soumis à la Conférence de Bruxelles par les producteurs de sucre de betterave montrent, que pendant la saison sucrière de 1901, l'Allemagne a manufacturé 2,000,000 de tonnes environ de sucre, dont elle a consommé 850,000 tonnes; l'Autriche a fabriqué 1,200,000 tonnes et consommé 400,000 tonnes; la France a manufacturé 1,000,000 de tonnes et consommé seulement 450,000 tonnes; pendant que la production russe de 1,000,000 de tonnes fut presque toute consommée dans le pays, l'accord existant entre les manufacturiers dans ce pays, faisant face aux exigences de tous les événements qui peuvent se produire. La Belgique a produit 330,000 tonnes de sucre et en a consommé 70,000 tonnes. La Hollande en a produit 190,000 tonnes et en a consommé 75,000 tonnes. Les autres pays européens, c'est-à-dire, l'Espagne, l'Italie et la Roumanie, sont maintenant devenus producteurs de sucre, ce qui est conséquemment un très grand désavantage pour les pays qui jadis les approvisionnaient de cet article.

Les calculs acceptés comme exacts par la Conférence sucrière, estiment la production de sucre de betterave, pendant l'année 1901, à 6,470,000 et la consommation dans ces pays à 3,600,000 tonnes seulement; l'excédent existant étant par conséquent de 2,870,000 tonnes, dont près de 1,700,000 ont été expédiées en Angleterre, une partie du restant allant aux Etats-Unis et la différence déposée dans des magasins où, contrôlée par une association manufacturière de sucre, est un facteur important sur les marchés européens.

ESTIMATION DE LA PRODUCTION AMÉRICAINE.

Presque tout le sucre consommé aux Etats-Unis est extrait de la canne à sucre, c'est pourquoi il est difficile de réaliser que les deux-tiers de la quantité de sucre produite dans le monde provient des betteraves. Voici quelles ont été, d'après les statisticiens américains, les sources d'approvisionnements de canne à sucre du monde, la production, en tonnes, pour l'année 1901-2 étant comparée avec celle de 1900-1901.

Les Etats-Unis consomment la plus grande partie de sucre de canne du monde. En 1900, la production entière de l'Amérique du Nord, de l'Amérique Centrale et de l'Amérique du Sud, était de 2,204,252 tonnes de sucre de betteraves; la consommation des Etats-Unis se montant à 2,219,347 tonnes. Pendant l'année civile 1901, on estime que les Etats-Unis ont consommé 2,372,316 tonnes de sucre de toutes sortes, contre 2,219,847 tonnes en 1900, soit une augmentation de 152,469 tonnes ou une augmentation d'environ 6.87 pour cent. Voici comment se répartissait cette consommation : sucre de canne produit dans le pays, 292,150 tonnes; sucre de betterave du pays, 124,859 tonnes; sucre d'érable, 5,000 tonnes; mélasse, 17,977 tonnes; montant la production domestique à 439,986 tonnes; celle du sucre de canne à l'étranger à 1,672,529 tonnes; celle du sucre de betterave étranger à 217,286 tonnes; celle du sucre raffiné étranger à 42,515 tonnes, soit 1,932,330 tonnes de sucre provenant des pays étrangers et des possessions insulaires. Des importations de l'étranger, 309,070 tonnes provenaient des Iles Sandwich, 66,279 tonnes de Porto-Rico, et 5,100 tonnes des Iles Philippines.

En 1901, la quantité de sucre raffiné qui fut consommé se montait à 2,287,828 tonnes, et le stock de sucre raffiné restant en magasin à la fin de l'année était estimé à 30,000 tonnes, contre 30,000 tonnes en 1900.

Un télégramme d'Hawaï, par voie de San-Francisco, daté du 16 jan-

vier 1902, dit que l'on estimait que la récolte de sucre de ces îles, pendant l'année finissant le 1^{er} novembre 1901, rapporterait 281,000 tonnes, chiffre bien moins considérable que celui donné dans les tableaux précédents. De ces 281,000 tonnes, 100,000 seront envoyées à San-Francisco pour être distribuées aux Etats-Unis; 68,200 seront expédiées par le détroit de Magellan et 18,000 par le cap Horn dans les différentes sections orientales des Etats-Unis.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

La maison GIBSON FRÈRES de Washington, D. C. (1902), a publié récemment sous la forme d'une brochure le rapport du Comité du Chemin de fer Pan-Américain à la Deuxième Conférence Internationale des Etats Américains qui s'est réunie dans la ville de Mexico pendant l'hiver de 1901-2. Les membres de ce comité étaient: Señor Don J. B. CALVO, de Costa-Rica; Hon. H. G. DAVIS, des Etats-Unis; Señores Don ALBERTO ELMORE, du Pérou; Don BALTAZAR ESTUPINIAN, du Salvador; Don J. LEONARD, de Honduras; Don AUGUSTO MATTE, du Chili; Don FRANCISCO ORLA, de Guatémala; Don JOSÉ LÓPEZ PORTILLO Y ROJAS, du Mexique et Don RAFAEL REYES, de la Colombie.

D'après un tableau incorporé dans le rapport, la distance de New York à Buenos-Ayres est de 10,228.06 milles (16,460.32 kilomètres), dont 4,771.93 milles (7,679.61 kilomètres) sont encore à construire si l'on veut relier entre elles les lignes existantes. Le comité estime que la partie de la route inachevée est de 5,000 milles et croit que les travaux de construction coûteront \$40,000 en moyenne, par mille, de sorte que \$200,000 seront nécessaires pour la réalisation de ce grand projet. Le comité est unanime pour recommander la construction d'une ligne intercontinentale, avec les embranchements nécessaires la mettant en communication avec les villes principales, traversant les Républiques différentes et reliant les voies ferrées des Etats-Unis et du Mexique avec celles de la République Argentine.

Le comité a aussi approuvé les recommandations adoptées par la première conférence qui a eu lieu dans la ville de Washington, et a ajouté à ces dernières celles ci-après: 1° que les délégués obtiennent de leurs gouvernements respectifs des concessions libérales à l'entreprise; 2° d'inviter les Etats-Unis à adopter, d'accord avec les Ministres des autres Républiques à Washington, des mesures qui auront pour résultat

d'envoyer, dans l'espace d'un an, dans ces Républiques, des personnes compétentes et dignes de foi, qui devront faire un rapport sur les ressources des différents pays, les conditions des voies ferrées existantes, les affaires commerciales et celles qui pourront résulter de la construction d'une ligne intercontinentale et de s'assurer quelles concessions chacun de ces pays est disposé à accorder pour la réussite d'une telle entreprise; 3° de pourvoir à la nomination, par le président de la conférence, d'un comité permanent, composé de cinq membres, résidant aux Etats-Unis, qui devra adresser un rapport à la prochaine conférence et fournir, dans l'intervalle, tous les renseignements possibles se rapportant à l'entreprise, donnant au dit comité, après consultation avec le Ministre des Affaires Etrangères des Etats-Unis et les Ministres des pays intéressés habitant à Washington, le pouvoir de convoquer, dans l'espace d'un an, une assemblée composée des Représentants de toutes les Républiques, dans le but de prendre les mesures nécessaires pour la construction du chemin de fer continental projeté.

Le rapport du comité fut approuvé à l'unanimité et le président de la conférence nomma un comité permanent, composé de cinq membres qui seront chargés de faire avancer ce projet après l'ajournement de la conférence et dont voici les noms: MM. HENRY G. DAVIS, de la Virginie Occidentale; ANDREW CARNEGIE, de New-York, U. S. A.; Señores Don MANUEL DE ASPÍROZ, Ambassadeur du Mexique aux Etats-Unis; Don MANUEL ÁLVAREZ CALDERÓN, Ministre du Pérou aux Etats-Unis, et Don ANTONIO LAZO ARRIAGA, Ministre de Guatémala aux Etats-Unis. L'appendice qui est à la fin de ce rapport contient les renseignements des délégations, demandés par le comité, relatifs aux lignes des chemins de fer en exploitation, en construction et que l'on se propose de construire dans les différents pays représentés. Cette brochure contient aussi une carte sur laquelle sont indiquées toutes les voies de transport entre les Etats-Unis et les pays américains.

Dans un gros volume in-octavo de 576 pages, illustré de 178 gravures, Mr. W. GOLDEN MORTIMER, M. D., fait l'histoire du coca, arbrisseau du Pérou, des feuilles du quel on extrait l'alcaloïde anesthésique cocaïne. Cet ouvrage, publié par la maison J. H. VAIL ET CIE. (New-York, 1901), a pour titre: "Peru: History of Coca, the Divine Plant of the Incas" (Pérou: Histoire du coca, la plante divine des Incas). Quoique ce livre soit une œuvre scientifique, il n'a pas été écrit exclusivement pour les savants. Avant de commencer l'histoire du coca, l'auteur fait une description des Incas, de leurs rites, de leurs cérémonies, de leur conquête par les Espagnols et des Indiens d'aujourd'hui. Un chapitre est consacré à la géographie physique du Pérou et un autre à la région du pays produisant le coca. L'écrivain essaye de prouver, au moyen de nombreux

témoignages, que la coca est non seulement une substance aussi innocente que le thé ou le café mais qu'il est extrêmement supérieur à ces derniers et devrait, en conséquence, être employé davantage, à cause de son action dépurative du sang, aussi bien qu'en raison de la propriété qu'il possède de provoquer un changement chimique-physiologique dans les tissus, donnant ainsi une plus grande activité aux nerfs et aux muscles du corps humain. Cet ouvrage contient aussi une table de matières et un glossaire des termes Incan et Quichua.

La Bibliothèque du Bureau des Républiques Américaines vient de recevoir un ouvrage de 472 pages, magnifiquement illustré, dont l'auteur est Mme. ALEC TWEEDIE, une anglaise et voyageuse de distinction. Ce livre, publié par la maison MACMILLAN ET CIE., New-York, 1901, a pour titre "Mexico, as I saw it" (Le Mexique, comme je l'ai vu), et est principalement consacré au récit de scènes familières à la vie mexicaine et de leur impression sur l'écrivain. Un chapitre est dédié au Président DIAZ et à son administration, un autre à l'histoire du pays et un autre à l'Empereur MAXIMILIEN et à l'Impératrice CHARLOTTE. De tous les nombreux souvenirs de l'ancienne civilisation qui existent en abondance dans les confins de la République, les mines des Aztèques de Xochicalco et les anciennes ruines de Mitla, enthousiasment particulièrement l'auteur. Deux appendices sont ajoutés à la fin de cet ouvrage; l'appendice A donnant les statistiques minières et commerciales jusqu'en 1899 et l'appendice B contenant quelques renseignements très utiles pour les personnes voyageant dans la République. Les gravures qui l'embellissent sont des reproductions de photographies prises par l'auteur, pendant qu'une carte géographique parfaitement bien dressée, ajoute à la beauté de cet ouvrage.

"A Summer Journey to Brazil" (Un voyage au Brésil pendant l'été), tel est le titre d'un volume in-octavo de 150 pages, de la plume de Mlle. ALICE R. HUMPHREY et publié par BROWNELL, SILVER ET CIE., éditeurs, Londres, 1900. En dehors de la ville de Rio-Janeiro, l'auteur fait une description assez étendue de toutes les villes qu'il a visitées: Petropolis (le centre diplomatique), Pernambuco, Santos et Saint-Paul. Dans le chapitre consacré aux "Faits relatifs au Brésil," il est dit que la République "contient près d'un quinzième du monde habitable, un cinquième des deux Amériques et trois-septièmes de l'Amérique du Sud," "qu'elle est plus grande que les Etats-Unis et ses territoires, à l'exception de l'Alaska, et quatorze fois aussi grande que la France," que "ses côtes s'étendent sur une longueur de près de 5,000 milles, qu'elle possède cinquante-deux ports de mer, dont quelques-uns sont les plus grands et les meilleurs du monde," que "ses ressources matérielles sont presque incalculables, comprenant les produits de

la zone tempérée et de la zone torride, pendant que son climat est variable et très favorable.” Cet ouvrage contient de nombreuses illustrations.

“Les Aztèques, leur histoire, leurs mœurs et coutumes,” par LUCIEN BIART, traduit du français par J. L. GARNER, A. C. McCLURG ET CIE., Chicago, 1900. Quoique le Mexique d’aujourd’hui soit bien connu, le Mexique du passé, le Mexique des Aztèques, est presque ignoré par les écrivains du siècle présent. Dans cet ouvrage, l’auteur se servant des observations des personnes qui ont connu le Mexique, à l’époque des Aztèques, Cortez et autres conquérants et explorateurs du Mexique, essaye de faire revivre ce peuple dont les descendants, subjugués par les races de leurs anciens oppresseurs, ont oublié, non seulement leur histoire, mais même encore le nom de leurs ancêtres. Les chapitres de ce livre sont respectivement consacrés au culte religieux, à l’instruction, aux institutions militaires, à l’agriculture, au commerce, au langage, à la poésie et aux arts de ce peuple ancien, les Aztèques.

“Au Pacifique et au Mexique,” par A. K. McCLURE, LL. D., J. B. LIPPINCOTT ET CIE., Philadelphie, 1901. Cet ouvrage de 162 pages est composé de lettres qui originairement parurent dans le journal “Philadelphia Times” et furent écrites pendant un voyage à travers les Etats-Unis jusqu’à San-Francisco et de là, en passant par El Paso jusqu’à la ville du Mexique, retournant par Eagle-Pass et la Nouvelle-Orléans. La scène ravissante des chaînes de montagnes occidentales des Etats-Unis et les leçons historiques au Mexique excessivement plus intéressantes, ont inspiré l’écrivain de faire part au public de ses impressions. Ce volume contient, outre un portrait de l’auteur, six gravures, dont quatre représentent des scènes mexicaines.

MM. HERBERT S. STONE ET CIE., éditeurs (Chicago, 1901), ont publié un ouvrage de 208 pages, écrit par OLIVE PERCIVAL et intitulé “Mexico City; an Idler’s Note-Book” (La ville de Mexico; Carnet de notes d’un oisif). Dans ce livre, qui contient une grande quantité d’illustrations originales, l’auteur essaye de faire pénétrer dans l’esprit du lecteur les impressions que la capitale mexicaine a produites journellement sur un étranger et particulièrement un citoyen des Etats-Unis. La plupart des sujets traités dans cette œuvre paraissent d’abord sous la forme de lettres adressées de la capitale mexicaine au journal “Los Angeles Times.”

Dedicamos especial atención á la conversión y blanqueo de géneros de algodón para llenar los requerimientos de todos los mercados extranjeros.

Solicitamos corresponsales en todas partes del mundo.

Nuestra dirección por cable: "CLAFLIN." Usamos la clave "A. B. C.," la "A1" y "Liebers."

Se reciben productos extranjeros en consignación, ó en cambio de mercancías.

COMPANÍA INCORPORADA CON EL TÍTULO DE

WRIGHT'S INDIAN VEGETABLE PILL CO.

372 PEARL STREET,

NEW YORK.

ESTABLECIDA HACE 50 AÑOS.

Es la única fabricante de las preparaciones siguientes: Píldoras Indias Vegetales de Wright, Jarabe Indio Vegetal de Wright, Elixir de Opio de McMunn, Gotas Anodinas de Clavo de comer para el dolor de muelas, Vermífugo pronto y eficaz de Perry, Píldoras de Zarparrilla de Leidy para la sangre, Bálsamo Romano para los Ojos, Mistura Específica de Crossman.

Los Importadores de Drogas y Medicinas en los países de la América Latina se servirán escribir pidiendo las listas de los precios, y preguntando cuáles son los términos y condiciones del pago. Estos remedios están ampliamente anunciados en los dichos países, y se venden en todas partes del mundo.

**El Corsé de Forma Erecta conocido
con el nombre de**

"W.B." ERECT FORM CORSET

ES EL ÚNICO ENTERAMENTE CORRECTO.

En la Exposición Pan-Americana le fué concedido el premio más alto. Sigue fielmente los perfiles naturales del cuerpo, y no comprime el busto. Toda la fuerza que se necesite para encintarlo se ejerce en él sobre los músculos fuertes y vigorosos de las caderas y de la espalda, y así es que con su uso se hace resaltar de la manera más admirable, como es esencial para las exigencias de la presente moda, el bien redondeado busto y las caderas. Hay un modelo especial para cada forma de cuerpo.

Para obtener catálogos, listas de precios, y cualesquiera otros informes, debe dirigirse quien los desee á

WEINGARTEN BROS.,

377-379 Broadway,

New York,

Que son los fabricantes de corsés, en mayor cantidad, que existen en el mundo.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES.

The rates of postage from the United States to all foreign countries and colonies (except Canada, Mexico and Cuba) are as follows:

	Cents.
Letters, per 15 grams ($\frac{1}{2}$ ounce)	5
Single postal cards, each	2
Double postal cards, each	4
Newspapers and other printed matter, per 2 ounces	1
Commercial papers ---- {	
{ Packets not in excess of 10 ounces	5
{ Packets in excess of 10 ounces, for each	
2 ounces or fraction thereof	1
Samples of merchandise {	
{ Packets not in excess of 4 ounces	2
{ Packets in excess of 4 ounces, for each	
2 ounces or fraction thereof	1
Registration fee on letters and other articles	8

Ordinary letters for any foreign country (except Canada, Mexico, and Cuba) must be forwarded, whether any postage is prepaid on them or not. All other mailable matter must be prepaid, at least partially.

Matter mailed in the United States addressed to Mexico is subject to the same postage rates and conditions as it would be if it were addressed for delivery in the United States, except that articles of miscellaneous merchandise (fourth-class matter), not sent as *bona fide* trade samples, should be sent by "Parcels Post;" and that the following articles are *absolutely excluded* from the mails without regard to the amount of postage prepaid or the manner in which they are wrapped:

All sealed packages, other than letters in their usual and ordinary form; *all* packages (including packages of second-class matter) which weigh more than 4 pounds 6 ounces, except such as are sent by "Parcels Post;" publications which violate any copyright law of Mexico.

Single volumes of printed books *in unsealed packages* are transmissible to Mexico in the regular mails without limit as to weight.

Unsealed packages of mailable merchandise may be sent by "Parcels Post" to Bolivia, British Guiana, British Honduras, Chile, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Salvador, and Venezuela, at the rates named on page xv.

(See page 1X.)

PROHIBITED ARTICLES TO ALL FOREIGN COUNTRIES.

Poisons, explosives, and inflammable articles, live or dead animals, insects (especially the Colorado beetle), reptiles, fruits or vegetable matter liable to decomposition, and substances exhaling a bad odor, excluded from transmission in domestic mails as being in themselves, either from their form or nature, liable to destroy, deface, or otherwise injure the contents of the mail bags, or the persons of those engaged in the postal service; also obscene, lewd, or lascivious books, pamphlets, etc., and letters and circulars concerning lotteries, so-called gift concerts, etc. (also excluded from domestic mails); postal cards or letters addressed to go around the world; letters or packages (except those to Mexico) containing gold or silver substances, jewelry or precious articles; any packet whatever containing articles liable to customs duties in the countries addressed (except Cuba and Mexico); articles other than letters which are not prepaid at least partly; articles other than letters or postal cards containing writing in the nature of personal correspondence, unless fully prepaid at the rate of letter postage; articles of a nature likely to soil or injure the correspondence; packets of commercial papers and prints of all kinds, the weight of which exceeds 2 kilograms (4 pounds 6 ounces), or the size 18 inches in any direction, except *rolls* of prints, which may measure 30 inches in length by 4 inches in diameter; postal cards not of United States origin and United States postal cards of the largest ("C") size (except as letters), and except also the reply halves of double postal cards received from foreign countries.

There is, moreover, reserved to the Government of every country of the Postal Union the right to refuse to convey over its territory, or to deliver, as well, articles liable to the reduced rate in regard to which the laws, ordinances, or decrees which regulate the conditions of their publication or of their circulation in that country have not been complied with.

 Full and complete information relative to all regulations can be obtained from the United States Postal Guide.

MONTHLY BULLETIN

OF THE

INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS,

International Union of American Republics.

VOL. XII.

APRIL, 1902.

No. 4.

REORGANIZATION OF THE BUREAU OF THE AMERICAN REPUBLICS.

RESOLUTION ADOPTED BY THE SECOND INTERNATIONAL CONFERENCE OF AMERICAN STATES FOR THE REORGANIZATION OF THE INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS.

The Governments represented at this Conference, realizing the usefulness of the International Bureau of the American Republics established in Washington, agree that said Bureau shall be governed, for a period of ten years from the date of the adjournment of the present Conference, by the following regulations, which, however, shall be subject to the revision of the next Conference of the American Republics, or to that of the Republics themselves, in accordance with the provisions of paragraph 16 of the resolutions adopted by the First International Conference of the American Republics on April 14, 1890:

ART. 1. The International Bureau of the American Republics shall be under the control of a Governing Board composed of the diplomatic representatives of all the governments of said Republics accredited near the Government of the United States of America, and of the Secretary of State of the latter nation, who shall be the Chairman of said Governing Board. The Governing Board shall hold a regular meeting, monthly, except during the months of June, July, and August, and such special meetings as may be called by the Chairman, either of his own accord or at the request of two members of the Board. The attendance of five members of said Board at any regular or special

meeting shall be sufficient to constitute a quorum, and to enable the Board to transact in due form any business within the scope of its authority, and to appoint such committees as it may deem proper.

ART. 2. All the positions in the Bureau shall be filled after an examination of the applicants by an Examining Board composed of three persons, who shall be appointed by the Governing Board. Said applicants shall make their applications by filling out the blank forms furnished them by the Director of the Bureau, in which applications shall be specified the particular service that it is proposed to render; they shall inscribe their names in a register that the Bureau shall keep for that purpose, and in which shall be recorded all the particulars relating to the examination, and the Examining Board shall only recommend, for the particular position that is required to be filled and which is applied for, those who show their fitness for the same. The appointments shall be made by the Governing Board and shall be signed by the Chairman.

ART. 3. The Governing Board shall, with the cooperation of the Director of the Bureau, prepare annually a detailed estimate of the expenses of the following year. This estimate shall be transmitted to each Government, together with a statement showing the proportion of the amounts that each one of them shall pay, in conformity with the agreement of April 14, 1890, and said Governments are bound to remit their respective quotas to the Secretary of State of the Government of the United States of America six months in advance.

ART. 4. Whenever the Governing Board shall deem advisable, it shall appoint one or two of its members to audit the accounts of the Bureau, and submit to said Board a report thereof.

ART. 5. The Bureau shall have authority, through the diplomatic representatives in Washington, to correspond with the Executive Departments of the different American Republics, and shall furnish to any of said Republics such information as it may possess, or that it can obtain, whenever requested to do so. Said Republics agree to furnish to the Bureau, so far as may be practicable, the reports that it may request, and to send it in due time two copies of each of their official publications, which shall be preserved in the library of the Bureau. They agree, furthermore, to furnish to the Bureau any other information that its Director may request.

ART. 6. The Bureau shall publish a MONTHLY BULLETIN, which shall be printed in the Spanish, English, Portuguese, and French languages, either together or separately, and which shall contain such statistical, commercial, and legislative reports as may be of special interest to the inhabitants of the different Republics. The Bureau shall also publish pamphlets, maps, geographic and topographic charts, and any other matter that the Governing Board may deem advisable and order published.

ART. 7. As soon as the advertising contracts now in force shall have expired, the BULLETIN shall discontinue the publication of advertisements.

ART. 8. All the publications of the Bureau shall be considered as public documents, and shall be carried free in the mails of the several Republics.

ART. 9. The Bureau shall be especially charged with the performance of all the duties imposed upon it by the resolutions adopted by the present International Conference.

ART. 10. The Director of the Bureau may attend the meetings of the Governing Board, and of the committees, as well as those of the International American Conferences, for the purpose of giving information when requested to do so.

ART. 11. The Bureau shall be the custodian of the archives of the International Conferences of the American Republics.

ART. 12. The resolutions of the First International Conference of the American Republics, adopted April 14, 1890, shall remain in force, in so far as they are not in contravention of these regulations; all other resolutions and plans referring to the organization of the Bureau are hereby annulled.

ART. 13. Under the authority of the Governing Board of the International Union of the American Republics, and as a division of the Bureau of said Republics, a Latin-American library to be known as the "Columbus Memorial Library" is hereby established.

FIRST MEETING OF THE BUREAU GOVERNING BOARD.

PROCEEDINGS OF THE GOVERNING BOARD OF THE INTERNATIONAL UNION OF AMERICAN REPUBLICS.

A meeting of the Governing Board of the International Union of American Republics was held in the diplomatic reception room of the Department of State on Wednesday, March 19, 1902.

The meeting was called to order by Hon. JOHN HAY, Secretary of State, as Chairman.

The other members present were:

For Don MANUEL DE AZPIROZ, Ambassador of Mexico, who also represented the Republic of Salvador;

Señor Don MARTÍN GARCIA MEROU, Minister of the Argentine Republic;

Señor Don JOAQUÍN WALKER MARTÍNEZ, Minister of Chile;

Señor Don JOAQUÍN BERNARDO CALVO, Minister of Costa Rica, who also represented the Republic of Honduras;

Señor Don LUIS FELIPE CARBO, Minister of Ecuador;

Señor Don ANTONIO LAZO ARRIAGA, Minister of Guatemala;

Mr. J. N. LÉGER, Minister of Haiti;

Señor Don LUIS F. COREA, Minister of Nicaragua;

Señor Don MANUEL ALVAREZ CALDERÓN, Minister of Peru;

Señor Don ALBERTO GUTIERREZ, Chargé d'Affaires of Bolivia;

Mr. R. REIDNER DE AMARAL, Chargé d'Affaires of Brazil;

Señor Don AUGUSTO F. PULIDO, Chargé d'Affaires of Venezuela;

Hon. JOHN STEWART, Consul-General of Paraguay.

Mr. W. W. ROCKHILL, Director of the Bureau of the American Republics, was also present.

The object of the meeting was stated by the Secretary of State to be the hearing of the annual report of the Director and the consideration of the Resolutions adopted by the Second International Conference of American States.

The Director read the report, which was dated December 1, 1901, and stated that the submission of it had been delayed on account of the absence of most of the Ministers in Mexico, where they were attending the Second International Conference of American States. The report is hereto appended.

The report was found to be entirely satisfactory, and was accepted as made.

The Resolution adopted by the Second International Conference of American States concerning the reorganization of the International Bureau of the American Republics was then considered, and it was agreed that the said Resolution should go into force immediately; that it should be published in the BULLETIN, together with the preamble, as it appears in the minutes of the Conference; that the Examining Board of the employees of the International Bureau should be appointed, resulting in the election of Señores Don MANUEL ALVAREZ CALDERON, Minister of Peru; Don ANTONIO LAZO ARRIAGA, Minister of Guatemala, and Don LUIS F. COREA, Minister of Nicaragua.

The Secretary of State called the attention of the Governing Board to the three Resolutions providing for the calling of certain Conferences: One concerning the convening of a Customs Congress, another concerning an International Sanitary Police, and the third in regard to the production and consumption of coffee.

The Director of the Bureau read these Resolutions, and it was agreed that one of the conferences should be called for the 1st of October, another for the 15th of October, and the third for the 1st of November next.

On motion of Mr. LÉGER, it was agreed to hold the regular monthly meeting of the Governing Board on the first Monday of each month at 3 o'clock p. m., in accordance with the provision of Article 1 of the Resolution concerning the Reorganization of the International Bureau of the American Republics.

The Board then adjourned.

WASHINGTON, D. C., *March 19, 1902.*

ANNUAL REPORT OF THE DIRECTOR.

BUREAU OF THE AMERICAN REPUBLICS,

*Washington, December 1, 1901.**The Secretary of State, Chairman, and Members of the Executive Committee of the International Union of American Republics.*

GENTLEMEN: In submitting my annual report I have the satisfaction to state that the appreciation of the work of this Bureau, manifested at all times by the Governments represented in the International Union of American Republics, of which it is the authorized organ, continues undiminished. This feeling has found expression at the opening of the International Conference of American States, now sitting in Mexico, where the Bureau has been granted representation commensurate with its importance, and the desire to extend the scope of its functions has been strongly advocated.

BRANCH OFFICE IN MEXICO.

In compliance with the wishes of the Executive Committee, fully indorsed and recommended to his Government by His Excellency the Ambassador of Mexico, at this capital, a branch office of the Bureau was established in the City of Mexico in connection with the Conference. This branch was organized and provided with a large set of books of reference and an efficient clerical force, supplied through the courtesy of the Mexican Government.

DEATH OF DR. GUZMÁN.

During the year the Bureau has by the death of Dr. HORACIO GUZMÁN, its Secretary, lost a most valuable coadjutor and one whose interest in the work and whose extensive knowledge of all questions committed to his care were most highly appreciated and fully realized by all.

ACCOUNTS.

The accounts for the Bureau for the fiscal year ended June 30, 1901, are as follows:

Receipts and expenditures for the fiscal year ended June 30, 1901.

RECEIPTS.

Annual appropriation, 1901	\$36,000. 00
Balance from receipts from sales, rents, etc., July 1, 1901	\$1,971. 72
Contributions from Latin-American Republics....	\$15,452. 57
From advertisements	\$3,289. 35
From sale of publications	1,408. 66
	<hr/> 4,698. 01
	<hr/> 20,150. 58
	<hr/> 22,122. 30
Total receipts	58,122. 30

EXPENDITURES.

From annual appropriation, 1901.....	\$36,000. 00
From receipts from sales, rents, etc.....	18,921. 47
	<hr/> 54,921. 47
Balance July 1, 1901.....	3,200. 83

Detailed statement of expenditures for the fiscal year ended June 30, 1901.

	From annual appropria- tion, 1901.	From receipts from sales, rents, etc.	Total.
Compensation	\$32,194.54	\$931.06	\$33,125.54
Stationery		581.35	581.35
Rent	1,833.34	166.66	2,000.00
Library		1,315.71	1,315.71
Postage	42.26	1,287.46	1,329.72
Furniture		218.58	218.58
Printing		12,006.90	12,006.90
Final settlement with Charles E. Locke for advertising	1,929.86		1,929.86
Miscellaneous		2,413.81	2,413.81
Total	36,000.00	18,921.47	54,921.47

As will be seen from the last annual report, there was a balance due the Public Printer, at the commencement of the fiscal year 1901 of \$3,314.71. The following statement shows that the Bureau has been able to discharge this indebtedness and also to settle all obligations for printing incurred during the past fiscal year.

Account of the Public Printer for the fiscal year ended June 30, 1901.

Balance due from fiscal year 1900	\$3,314.71
Total amount of bills rendered for the fiscal year ended June 30, 1901...	10,183.66
	<hr/> 13,498.37
Deduct for amount charged for composition and stereotyping (Handbook of Mexico), credited to the Bureau by an arrangement with the Public Printer	\$1,097.55
Paid from receipts and sales, rents, etc., during fiscal year 1901	\$6,000.00
Paid during current fiscal year	6,400.82
	<hr/> 12,400.82
	<hr/> 13,498.37

The following estimate of receipts and expenditures for the fiscal year ending June 30, 1902, is herewith submitted:

Estimated receipts:

Appropriation	\$36,000.00
Contributions from Latin-American Republics	15,157.73
Advertisements	3,000.00
Sale of publications	1,400.00
Total	<hr/> 55,557.73

Estimated expenditures at present ratio:

Pay roll	\$33,600.00
Rent	2,000.00
Printing	13,000.00
Stationery and furniture	900.00
Library	1,200.00
Postage	1,300.00
Miscellaneous	2,400.00
	<hr/> 54,400.00

Balance	1,157.73
---------------	----------

MONTHLY BULLETIN.

The circulation of the MONTHLY BULLETIN remains, comparatively speaking, about the same as during the past year. The following statement shows the number of copies sent to the various countries for the month of October, 1901:

Distribution of Bulletin during month of October.

Argentine Republic.....	455	Mexico	4,517
Bolivia	99	Nicaragua.....	102
Brazil	359	Paraguay	30
British Honduras.....	29	Peru	137
Canada	169	Porto Rico	180
Chile	228	Salvador	37
Colombia	190	Santo Domingo.....	140
Costa Rica	97	United States	1,686
Cuba	268	Uruguay	157
Ecuador	116	Venezuela	473
Europe	87	West Indies (small islands)	47
Guatemala	497	Miscellaneous	17
Haiti	197		
Honduras.....	209	Total	10,583
Jamaica	60		

The Republics of Bolivia and Paraguay, during the past fiscal year, granted the Bureau the postal franchise for its publications, a privilege which is now enjoyed in thirteen republics, as well as in Canada, Cuba, Porto Rico, and the Philippine Islands.

OTHER PUBLICATIONS.

Since my last report the Bureau has completed and issued a publication entitled "United States of Brazil: A Geographical Sketch, with Special Reference to Economic Conditions and Prospects of Future Development," and as a supplement thereto a bibliography of the country, "A List of Books, Magazine Articles, and Maps Relating to Brazil, 1800-1900." It is to be hoped that this bibliographical work may be followed by others of the different countries of America. A pamphlet entitled "Report on Coffee, with Special Reference to the Costa Rican Product," prepared by Señor Don JOAQUÍN BERNARDO CALVO, Minister of Costa Rica in the United States, was brought out, and has been widely circulated and read with great interest.

The publication of the Handbook of the United States in Spanish has been delayed, among other reasons, because of the desire of the Bureau to avail itself of the returns of the census of 1900. It is thought that this most important work will be published during the coming year. In the preparation of its more technical chapters, the Bureau is receiving the assistance of a number of eminent specialists.

Most of the handbooks of the Bureau are no longer useful, the statistics they contain having been furnished eight or ten years ago.

Owing to this fact the demand for these publications, although steady, is not large. It has therefore become necessary to revise these works. With this idea in view, the assistance of the Honorary Corresponding Members of the International Union in the different countries and of other prominent writers has been requested. It is to be hoped that these revised editions will soon appear and tend to increase the demand for the publications of the Bureau.

One serious cause of delay in the bringing out of the handbooks was the much-to-be-regretted departure of Mr. ARTHUR W. FERGUSON, and later of Mr. FRANCISCO J. YÁNES, both of whom were called to the Philippines, where they now hold positions of importance.

HONORARY CORRESPONDING MEMBERS.

The hope expressed in my last report that the Bureau would be represented by an Honorary Corresponding Member in each of the countries of the Union has been realized, and their contributions to the MONTHLY BULLETIN have greatly added to its value.

MAPS.

The two maps of Mexico, issued by the Bureau during the year, having been favorably received, I was encouraged to undertake the preparation of similar maps of the other countries of the Union. Those of Guatemala and Costa Rica are now well under way and will soon be placed in the hands of the printer. The map of Brazil, sent in an unfinished condition to the Pan-American Exposition at Buffalo, will be completed within the next few months.

LIBRARY.

The library now consists of 8,948 odd volumes. Since the last report there has been an addition of 1,456 volumes and pamphlets, of which 991 were gifts. The number of periodicals, including daily newspapers, regularly received, has been increased by 169. The total number of publications of this class now received by the Bureau is approximately 2,000.

The Bureau continues its endeavors to have the various Central and South American Governments supply it with all the laws, decrees, departmental reports, and other official documents published by them. This request has met with a certain measure of success, but much is still to be done before the Bureau can feel sure that it is receiving all the publications which, under the organic rules of the Union, should be transmitted to it. It is hoped that the Conference now sitting at Mexico will, after the completion of its labors, transfer to the Bureau such works as may have been presented to it, and devise other means for facilitating the work of the library.

The Bureau has published, besides the monthly list of additions to the library, half-yearly accession lists for convenience of reference.

EXHIBIT OF THE BUREAU.

It is gratifying to report that the exhibit of the Bureau at the Pan-American Exposition at Buffalo, under the direction of the Chief Clerk, Mr. WILLIAMS C. FOX, received commendation. The Bureau will be represented at the South Carolina Interstate and West Indian Exposition, to be held in Charleston during a period of six months commencing December 1, 1901. In 1903 an exhibit will be sent to the Louisiana Purchase Exposition at St. Louis, the expense thereof having been provided for in an appropriation made by Congress for the representation of the various branches of the Government.

I have the honor to be, gentlemen, your obedient servant,

W. W. ROCKHILL, *Director*.

CUSTOMS CONGRESS RESOLUTION.

The undersigned, Delegates of the Republics represented at the Second International Conference of American States, duly authorized by their Governments, have approved the following resolution:

The Second International Conference of American States resolves—

I. That within one year from the date of the closing of the sessions of the International Conference of American States there shall meet, in the city of New York, United States of America, a Customs Congress, composed of one or more Delegates appointed by each Government from among its chief customs officers, consuls, presidents, or members of its chambers of commerce, prominent merchants, or other persons known to possess technical and special knowledge in customs matters.

The Governing Board of the International Bureau of the American Republics shall fix the date for the assembling of the Customs Congress, which shall be organized as the Congress determines, with the assistance or cooperation of the officials of said International Bureau, and its purpose and object shall be to consider all propositions that may be presented by the Delegates, or by the committees which may be appointed, in respect to the customs service of each country and the legitimate collection of its dues.

II. The matters which the Customs Congress shall consider are the following:

A. Uniformity of regulations for the entry, dispatch, and clearance of the vessels engaged in international commerce;

B. Uniformity and simplicity of customs formalities relating to the manifests of vessels, wording and form of consular invoices, and custom-house declarations;

C. Simplicity and uniformity of custom-house formalities in the clearance of merchandise and baggage;

D. Adequate means for establishing a common nomenclature of the products and merchandise of the American Republics in English, Spanish, Portuguese, and French—

1. In order that it may serve as a basis for the statistical data of imports and exports in accordance with a uniform system, and without interfering with the regulations which each country may have adopted for the compilation of its own statistics;

2. In order that it may be adopted with greater detail and specification in the tariff schedules and in the other customs laws of said countries, and that it may serve as a basis for the collection of the dues that each Republic may have established—

E. Adoption of a simple and uniform system of declarations and for the custom-house dispatch of samples and merchandise forwarded in postal packages or parcels;

F. Simplicity and uniformity of the custom-house regulations governing merchandise in transit through the territory of one country destined for use or consumption in another or other countries, observing the principle of free commercial transit on the terrestrial or fluvial highways of the nations of America, without collecting duties or charges other than those which represent a just compensation for services rendered;

G. The advisability of designating definite periods for the assembling of future Customs Congresses;

H. To discuss any other matters germane to those herein mentioned, or which may be considered in general by the Customs Congress, as useful or proper to aid or develop mercantile traffic;

I. The organization of a permanent customs commission composed of individuals possessing technical and expert knowledge, and which, as a branch of the International Bureau of the American Republics, or in any other form that the Congress shall deem proper, shall be charged particularly with the execution of the customs and tariff laws of the nations of America, for the purpose of suggesting to the respective Governments the enactment of laws and regulations which, in so far as they relate to custom-house formalities, shall tend to simplify the same and to facilitate mercantile traffic.

III. That in order to render useful and complete the study by the Customs Congress of the question referred to in Paragraph D of the preceding resolution, each one of the Governments of the American Republics shall cause to be studied, by the chief administrative officials of custom-houses, the nomenclature or vocabulary formed by the International Bureau of said Republics, and the Government shall send as soon as possible to the Governing Board of said Bureau such changes or corrections to the nomenclature as they may think proper to suggest.

Said International Bureau shall submit to the Customs Congress, in the simplest and most complete form possible, the suggestions made by the Governments, and, in addition, a French translation of the nomenclature already published.

Fourth. The ratification of the present resolution by the Governments of the American Republics which may think proper to take such action shall be communicated to the Governing Board of the International Bureau of said Republics within six months from the closing of the Conference.

Made and signed at the City of Mexico on January 22, 1902, in triplicate, in the Spanish, English, and French languages, respectively, and deposited in the Department of Foreign Relations of the Government of the United Mexican States, so that certified copies may be made thereof and transmitted through diplomatic channels to each of the signatory States.

SANITARY POLICE RESOLUTION.

The undersigned Delegates of the Republics represented in the Second International Conference of American States, duly authorized thereto by their Governments, do hereby approve the following resolution:

The Second International Conference of American States most earnestly recommends the prompt adoption by the Republics represented in it of the following resolutions:

I. That all measures to be taken on subjects relating to the International Sanitary Police, intended to prevent contagious diseases from invading a country, or to establish and maintain such a system of international detention, for persons and merchandise coming from abroad, whether by land or by sea, by means of sanitary stations, shall be entirely under the control of the national governments.

II. That two classes of detention, one for inspection and examination and the other for disinfection, shall be established in the ports of each country.

III. That prohibitive quarantine shall be discontinued in regard to manufactured articles and all other merchandise; that merchandise proceeding from noninfected ports and places, but coming through an infected district, without stopping longer than required for the transit itself, shall not be subjected to detention, or to any other sanitary precaution, except the indispensable inspection at the point of destination, and that this inspection, and the delay which it implies, shall in no case exceed the time absolutely necessary to make it properly. These rules shall be applicable to merchandise coming by rail; but they shall not be enforced in regard to cattle, rawhides, rags, and the effects belonging to immigrants, which shall be dealt with as before.

IV. That the Governments represented in this Conference shall cooperate with each other, and impart, to the fullest possible extent, their aid to the municipal, provincial, and local authorities of their respective territories in securing the establishment and preservation, in their respective ports and dependencies, of adequate sanitary conditions, according to modern methods, and reducing as much as possible the quarantine restrictions until they can be completely abolished; that every board of health or sanitary institution of each country shall be ordered to report without delay to the diplomatic or consular repre-

representatives of the republics represented in this Conference the presence of the following diseases: Cholera, yellow fever, bubonic plague, small-pox, or any other epidemic of serious character which may have broken out at their respective localities; and the obligation shall be imposed upon the sanitary authorities of each port of stating in the bill of health of each ship previous to their being allowed to sail the contagious diseases existing at the time in said ports.

V. The Second International Conference of American States further recommends, for the benefit of all the American Republics, and in order that they may promptly and efficiently cooperate with each other in everything pertaining to the matters set forth in the foregoing resolutions, that a general convention of representatives of the health offices of each Republic represented in this Conference should be called by the Governing Board of the International Union of American Republics, to meet at Washington, D. C., within one year, to be counted from the date of the adoption by this Conference of the present resolutions; that each Government represented in this Conference should appoint one or more delegates, vested with all the necessary powers, to attend said convention, and enter with the delegates from the other Republics into any sanitary treaties, and make rules and regulations, which, in the judgment of the said convention, may be beneficial to all the countries represented in it; that the votes in the said convention should be taken by Republics, each one having one vote; that the convention should provide also whatever may be conducive to the meeting, at some time, and at the dates and places which may be deemed proper, of further sanitary conventions; and finally that an executive council, consisting of five members at least, should be elected by the convention, said council to have power to act until the meeting of the next convention, when its membership should be changed, by the election by secret ballot, by the convention, of a new president. The executive council shall be known by the name of "The International Sanitary Bureau," and shall sit at Washington, D. C.

VI. That, in order that the International Sanitary Bureau may render practical and real services to the different Republics represented in the convention, the said Republics shall be bound to transmit promptly and regularly to the said Bureau all data of any sort whatsoever which may relate to the sanitary conditions of their respective ports and territories, and to furnish it also every means and assistance within their reach for a complete and careful investigation and study of the epidemic diseases which may happen to appear in their territory, so as to enable the Bureau to aid with its experience to protect, to the fullest possible extent, the public health of the Republics, and thereby facilitate their present commercial relations.

VII. That the salaries and expenses of the delegates to the convention and of the members of the International Sanitary Bureau, as well

as the expenses required for the support of the convention itself, and the Bureau shall be defrayed by the respective Governments; and that the fund out of which all the expenses of the International Sanitary Bureau hereby established, and all others required for the special investigations which may be undertaken, and for the translation, printing, and distribution of reports, are to be paid, shall be formed by annual contributions from the Republics represented in the convention and Bureau, the share of each one to be calculated upon the same basis as has been adopted for the support of the International Bureau of American Republics. It is, in fine, recommended, in the interests of economy, that the International Bureau of American Republics be used by the conventions herein referred to and by the International Sanitary Bureau for keeping their correspondence and accounts, making their payments, and preserving their reports.

RESOLUTION RELATIVE TO THE HOLDING OF A CONGRESS FOR THE PURPOSE OF STUDYING THE PRODUCTION AND CONSUMPTION OF COFFEE.

The Second International Conference of American States resolves:

First. That within a year, dating from the close of the sessions of the International Conference of American States, a commission, composed of one or more delegates from each Government desirous of representation therein, shall meet in the city of New York, United States of America; said delegates to be possessed of technical or expert knowledge concerning the production, distribution, and consumption of coffee.

Second. The Governing Board or the International Bureau of American Republics shall fix the date for the assembling of this commission, which shall be organized with the aid of said Bureau and shall have for its purpose an examination of the causes of the crisis with which this great industry is threatened and to propose practical means to avoid or minimize the same.

SECOND MEETING OF THE BUREAU GOVERNING BOARD.

The second meeting of the Governing Board of the International Union of American Republics was held on the 7th of April, 1902, in the diplomatic room of the Department of State of the United States of America, with the Hon. JOHN HAY, Secretary of State, in the Chair, the following gentlemen being present:

Señor Don MANUEL DE AZPÍROZ, Mexican Ambassador, representing México and Salvador.

Señor Don MARTÍN GARCIA MÉROU, Minister from the Argentine Republic.

Señor Don FERNANDO E. GUACHALLA, Minister from Bolivia.

Señor Don JOAQUÍN BERNARDO CALVO, Minister from Costa Rica, representing also the Republic of Honduras.

Señor Don JOAQUÍN WALKER MARTÍNEZ, Minister from Chile.

Señor Don LUIS FELIPE CARBO, Minister from Ecuador.

Señor Don ANTONIO LAZO ARRIAGA, Minister from Guatemala.

Señor Don J. N. LÉGER, Minister from Haiti.

Señor Don LUIS F. COREA, Minister from Nicaragua.

Señor Don MANUEL ÁLVAREZ CALDERÓN, Minister from Peru.

Señor Don JUAN CUESTAS, Minister from Uruguay.

Señor Don R. REIDNER DE AMARAL, Chargé d'affaires of Brazil.

Señor Don AUGUSTO F. PULIDO, Chargé d'affaires of Venezuela.

Señor Don JOHN STEWART, Consul-General of Paraguay.

Hon. W. W. ROCKHILL, Director of the International Bureau of the American Republics, was also present.

The Examining Board submitted their report, which was approved, and upon their recommendation Señor Don NICOLAS VELOZ GORTICOA was unanimously appointed Secretary of the International Bureau of the American Republics.

At the suggestion of the Director, and also by unanimous vote, Dr. JOSÉ IGNACIO RODRIGUEZ was appointed Chief Translator and Librarian of the Columbus Memorial Library.

The Director then called the attention of the meeting to the advisability of agreeing upon a fixed date on which the estimate of expenses of the Bureau should be forwarded to the respective Governments, and it was resolved unanimously, upon motion of the Argentine Minister, and after proper consideration of the subject, that the said estimate be transmitted to every Government on the 1st day of July of each year.

The suggestion was then made and accepted that each Government should be requested, in compliance with former agreements, to provide the International Bureau of the American Republics with two copies of its official publications, and the Director of the Bureau was authorized to take, through the respective Ministers and with their cooperation, steps necessary to carry this resolution into effect.

The meeting was informed that the honorable Secretary of State, President of the Governing Council, had already communicated with the Postmaster-General for the purpose of securing free admission in the mails of the United States of all the Bureau matter, and a resolution was passed recommending the representatives of those countries in which the said matter is still subject to postage, to request their Governments to remove that restriction.

The subject of Sanitary Police and of the work to be done in connection therewith by the Bureau having been taken into consideration, it was resolved that the Supervising Surgeon-General of the Marine-Hospital Service should be requested to prepare a report expressive of his views on the matter, to be submitted in due time to the Conven-

tion, and that the Governments should be also requested to furnish the International Bureau of the American Republics with copies of all the treaties entered into by them with other countries on sanitary matters, all these papers to be kept on file at the International Bureau of the American Republics, to be used when required.

The Director submitted the set of rules for the government of the International Bureau of the American Republics, which in compliance with the resolution passed at the preceding meeting he had prepared, and upon proper consideration they were unanimously approved. The Director was authorized, furthermore, to put these rules in operation at once.

The subject of the Columbus Memorial Library was then discussed, and it was resolved to make an effort to secure the efficient cooperation of all the Governments in making this institution a success.

The meeting adjourned to meet again on the first Monday of May.

COLUMBUS MEMORIAL LIBRARY.

EXTRACT FROM THE MINUTES OF THE FIRST INTERNATIONAL AMERICAN CONFERENCE, APRIL 18, 1890.

MR. MARTINEZ SILVA. Mr. President, ever since my distinguished colleague, Mr. MENDONÇA, spoke, at a private gathering, of the appropriateness and expedience of erecting a monument to commemorate the assembling of the International Conference of American States, the honorable delegates seem to have been unanimously of the opinion that something of the sort ought to be done. But it has since occurred to me that, among the various embarrassments which would be encountered in the attempt to carry out the suggestion, it would be very difficult to select a model which all would accept, and that discussions and delays would arise—discussions and delays which might at last lead to that worst result, that nothing should be done.

With this fear in my mind, and thinking, furthermore, that the memorial to be erected ought to be something at once useful and made up of various elements, to which each Government might contribute independently, it occurred to me that the only plan which would satisfy all these requirements was the establishment in Washington of a memorial library, to which each Government could send, on its own account, the most complete collection possible of historical, literary, and geographical works, laws, official reports, maps, etc., so that the results of intellectual and scientific labor in all America might be collected together under a single roof.

That would be a monument more lasting and more noble than any in bronze or marble; because, in the first place, such a memorial would redound to our honor and help to make the Spanish-American nations

known, while at the same time it would be very agreeable to the United States to have erected in Washington the library which I propose. It will gradually be enriched and enlarged, day by day, because the several Governments will take care to transmit every new work which may be published in their respective countries, until at last it will become so complete a collection that whoever shall desire to pursue any study concerning America will come to Washington to do it; even from Europe itself students would have to come for any special study concerning these countries. We are so disconnected in America, there are so many difficulties in the way of communication, that it may be said that we do not know each other. It is, for instance, almost impossible in Bogota to procure a book published in the Argentine Republic, and I believe that the same is the case in the Argentine Republic respecting the publications of Bogota. Let us suppose that a person is desirous of writing on America; how could he collect data as correct and complete as the case demands? He would have to go from country to country, spending much money and time to attain his object; but if there be a library such as I propose, then all those dedicating themselves to such research or in need of data can come here and find what they want.

Catalogues of this library would be distributed in all the countries of America and Europe, so that the people of all parts of the world would know what could here be obtained. It would be, moreover, of great usefulness for the permanent Spanish-American legations in Washington. All of the honorable delegates may have had occasion to note that great difficulties have presented themselves each time that information or a book respecting our countries is needed here.

It would also be of great value to the Government of the United States, for it would stimulate the study of those nations in this country. So that my idea reduces itself to the establishment in Washington, in some building or apartment which could be provided by the Government of the United States, of a Portuguese-Spanish-American library, each Government sending a collection, as complete as possible, of geographical charts, historical, statistical, and literary works, etc., enriching this library from year to year with the new publications which may be issued by the American nations. At the outset we might collect here 15,000 or 20,000 volumes, but in the course of twenty years this library will have an importance unrivaled in the world.

I would desire to propose also that each Government should send its share of books in time for the library to be publicly dedicated on the anniversary of the discovery of America.

I had not the time to put this proposition in writing, and I present it in this crude state to the Conference, but if the idea is approved I

shall take the liberty to submit it to the chair in writing in the form in which it should be communicated to the Governments.

* * * * *

Mr. BOLET PERAZA. I hold that this offspring of a noble heart and enlightened mind should not be taken from its originator, consequently I am not going to offer any amendment, but suggest to the honorable delegate who has expressed the idea to baptize this library with the name of "The Columbus Library."

Mr. MARTÍNEZ SILVA. It is unnecessary to state that I accept with much pleasure the happy suggestion of my distinguished colleague from Venezuela.

The FIRST VICE-PRESIDENT. If no other delegate asks the floor the roll will be called.

The roll was called.

The FIRST VICE-PRESIDENT. The resolution has been unanimously approved.

EXTRACT FROM THE MINUTES OF THE SESSION OF THE SECOND INTERNATIONAL CONFERENCE OF AMERICAN STATES, JANUARY 24, 1902.

His Excellency Señor CALVO, delegate of Costa Rica, presented a proposition concerning the creation of a library in connection with the International Bureau of the American Republics. He requested that it might be considered as an additional article to the resolutions previously approved and that all formal procedure might be dispensed with.

His Excellency the Chairman announced that the motion would be considered at the afternoon session, conformably to the following order of the day:

* * * * *

The proposition of Señor CALVO, delegate of Costa Rica, that a Latin-American library, to be known as the Columbus Library, should be founded under the authority of the Governing Board of the International Union of the American Republics and as a section of the Bureau of said Republics, in order to commemorate the assembling of the first and second International Conferences of American States, was read.

The Conference unanimously agreed that it should be given immediate consideration.

Upon discussion, Mr. FOSTER said that his delegation heartily supported the resolution providing for the collection of valuable books and documents relative to the American Republics, which should, in the course of time, form the most important collection in the world, and which should be a noble record of the persons who were no longer living and of those who still lived whose efforts had contributed to the development of the International Bureau of the American Republics. He stated further that the American delegation felt proud that one of

its great statesmen had occupied himself actively and successfully in its organization, and that his efforts had been seconded by other men of high intelligence who represented the sister Republics of this Hemisphere, among whom Don MATÍAS ROMERO figured conspicuously, and who, in this case as in many others requiring tact of a political order, had impressed thereon the seal of a statesman and consummate diplomat as well as of an individual of the finest honor and highest intelligence, and whose ideals had elevated the consideration of matters of small importance. He added that he felt sure that the Conference would find itself disposed to concede the importance of this resolution, which had for its high purpose the establishment of a library as an eternal record to the memory of Don MATÍAS ROMERO; to the great statesman, JAMES G. BLAINE, and to those who had labored so effectively, successfully, patiently, and energetically, Messrs. MENDONÇA, MÉROU, LÉGER, MARTÍNEZ SILVA, GUACHALLA, CARBO, LAZO ARRIAGA, and particularly Señor CALVO, who, in his entire devotion to the work, had distinguished himself among his fellows.

Señor CALVO thanked Mr. FOSTER for his reference to him, and added that, in response to certain observations made to him privately by one of the Mexican delegation, he wished to explain that as the libraries of Congress and of the Department of State in Washington contained all works published in the United States, it seemed unnecessary to include such works in the library annexed to the Bureau of American Republics, and it had, therefore, been limited solely to Latin-American publications.

The proposition was approved unanimously and the chairman ordered it sent to the Commission on Editing.

BRUSSELS SUGAR CONVENTION.

His Majesty the Emperor of Germany, King of Prussia, in the name of the German Empire; His Majesty the Emperor of Austria, King of Bohemia, etc., and Apostolic King of Hungary; His Majesty the King of the Belgians; His Majesty the King of Spain and, in his name, Her Majesty the Queen Regent of the Kingdom; the President of the French Republic; His Majesty the King of the United Kingdom of Great Britain and Ireland and the British Possessions beyond the Seas, Emperor of India; His Majesty the King of Italy; Her Majesty the Queen of the Netherlands; His Majesty the King of Sweden and Norway—

Desiring, on one hand, to equalize the conditions of competition between beet and cane sugars from different sources, and, on the other hand, to promote the development of the consumption of sugar;

Considering that this double result can only be attained by the suppression of bounties as well as by limiting the surtax;

Have resolved to conclude a convention to this end, and have nominated their plenipotentiaries as follows, to wit:

His Majesty the Emperor of Germany, King of Prussia, in the name of the German Empire;

Count de WILWITZ, his Envoy Extraordinary and Minister Plenipotentiary to His Majesty the King of the Belgians, etc.;

ARTICLE 1.

The high contracting parties bind themselves, from the date the present convention comes into force, to suppress the direct and indirect bounties by which the production or export of sugar may benefit, and they agree not to establish bounties of this kind during the whole duration of the said convention. In view of the execution of this provision, sweetmeats, chocolates, biscuits, condensed milk, and all other analogous products, which contain in a notable proportion sugar artificially incorporated, are to be classed as sugar.

The above paragraph applies to all advantages resulting directly or indirectly, for the different categories of producers, from the fiscal legislation of the States, notably:

- (a) The direct bounties granted to exports.
- (b) The direct bounties granted to production.
- (c) The total or partial exemptions from taxation granted for a part of the manufactured output.
- (d) The profits derived from surpluses of output.
- (e) The profits derived from the exaggeration of the drawback.
- (f) The advantages derived from any surtax in excess of the rate fixed by article 3.

ARTICLE 2.

The high contracting parties bind themselves to submit to bond régime the sugar factories and refineries, as well as those factories in which sugar is extracted from the molasses, in order that they shall be under the permanent surveillance, day and night, of the customs employees.

With this object, factories will be arranged in such a way as to prevent the taking away of sugar clandestinely, and the customs employees will have the right to enter every department of the factories.

Books of control in regard to any or several phases of production will be kept, and the manufactured sugars will be deposited in such special buildings as will afford every desirable guaranty of security.

ARTICLE 3.

The high contracting parties bind themselves to limit the surtax to a maximum of 6 francs per 100 kilograms (\$1.15 per 220 pounds) for

the refined sugar and the sugars assimilable thereto, and 5.50 francs (\$1.06) for other sugars—that is to say, the difference between the rate of duty or taxation to which foreign sugars are subjected and that imposed on the home product.

This provision is not to be applied to the rates of import duties in the case of countries that do not produce sugar; nor to the by-products of the manufacturing or refining of sugar.

ARTICLE 4.

The high contracting parties bind themselves to impose a special duty on imports into their respective territories of sugars from countries that grant bounties for production or exports.

This duty shall not be less than the amount of the bounties, direct or indirect, granted in the country of origin. The high contracting parties reserve to themselves the privilege, each as it may affect its own interests, to prohibit the importation of bounty-fed sugars.

For the estimation of the sum of advantages derived eventually from the surtax specified under section (*f*) of article 1, the rate fixed by article 3 is deducted from the amount of this surtax; half of the difference is held to represent the bounty, the permanent commission organized under article 7 being entitled, at the request of one of the contracting States, to alter the rate so provided for.

ARTICLE 5.

The high contracting parties bind themselves reciprocally to admit at the lowest of their respective import rates sugars imported from any of the contracting States or from any colonies or possessions of said States that do not grant bounties and to which the obligations imposed in article 8 apply.

Cane and beet sugars can not be subjected to different rates of duty.

ARTICLE 6.

Spain, Italy, and Sweden are not held to the obligation imposed in articles 1, 2, and 3, so long as they do not export sugar.

These States bind themselves to adapt their sugar legislation to the provisions of the convention—within one year, or earlier if possible—from the time that the permanent commission has verified that the above condition has ceased to exist.

ARTICLE 7.

The high contracting parties agree to create a permanent commission, having charge of the surveillance of the execution of the provisions of the present convention.

This commission shall be composed of delegates of the different contracting States, and to it will be attached a permanent bureau. The

commission elects its president; it will sit at Brussels, and shall meet on the call of the president.

The duties of the delegates will be:

(a) To verify whether, in the contracting States, any direct or indirect bounty for the production or export of sugars is granted.

(b) To verify whether the States named in article 6 continue to conform themselves to the provisions of this article.

(c) To verify the existence of bounties in the nonsignatory States, and to estimate the amount of such bounties with a view to applying the provisions of article 4.

(d) To issue an advice on litigious questions.

(e) To examine the requests for admission to the union from States which have not participated in the present convention.

To the permanent bureau is intrusted the compilation, translation, coordination, and publication of information of all kinds relating to the legislation and statistics of sugars, not only in the contracting States, but also in other States.

To secure the execution of the above provisions, the high contracting parties shall communicate, through the diplomatic channel, to the Belgian Government, which will transmit them to the commission, copies of the laws, decrees, and regulations relating to the taxation on sugars that are or may be in operation in their respective countries, as well as statistical information relating to the object of the present convention.

Each of the high parties is entitled to be represented on the commission by a delegate or by a delegate and associate delegates.

Austria and Hungary shall be considered separately as contracting parties.

The first meeting of the commission shall take place at Brussels, on the call of the Belgian Government, at least three months before the present convention comes into force.

The duties of the commission shall be confined to verification and examination. It will make a report to the Belgian Government on all questions submitted to it. Said report will be communicated to the interested States by the Belgian Government, and the latter shall, if requested so to do by any of the high contracting parties, promote a meeting of a conference which shall decide on the resolutions or the measures necessary under the circumstances.

The verifications and estimations, however, under sections (b) and (c), shall have a binding character for the contracting States; they shall be established by a vote of the majority, each contracting State disposing of one vote, and they shall come into effect, at the farthest, at the expiration of a period of two months.

In case one of the contracting States were to appeal from the decision of the commission, it shall have to promote, within eight days after

the notification of said decision, a new deliberation of the commission; the latter shall meet under urgent call and shall decide definitely within a period of one month from the date of the appeal.

The new decision shall be executory, at the latest, two months after its date. The same proceedings to be followed in regard to the examination of requests for admission under the provisions of section (e).

The expenses arising from the organization of the permanent commission—except the salary and the compensations of the delegates, which are to be paid by their respective countries—shall be borne by all the contracting States and shall be assessed among them according to a method to be decided upon by the commission.

ARTICLE 8.

The high contracting parties bind themselves on their behalf and on behalf of their colonies and possessions, exception being made in the case of the autonomous colonies of Great Britain and British West Indies, to resort to the measures necessary to prevent bounty-fed sugar which has passed through the territory of a contracting State from having the same advantages as those accruing under the convention on the market they are destined for. The permanent commission shall present in this connection the necessary propositions.

ARTICLE 9.

The States that have taken part in the present convention shall be admitted to adhere thereto upon request and after a favorable report of the permanent commission.

The request shall be addressed through the diplomatic channels to the Belgian Government, which will take charge eventually of notifying the adhesion to all the other Governments. The adhesion shall involve, in full right, the accession to all charges and the admission to all advantages enumerated in the present convention, and it shall enter into force from the 1st of September following the transmission of the notification by the Belgian Government to the other contracting States.

ARTICLE 10.

The present convention shall come into force from September 1, 1903.

It shall remain in force during five years from this date, and if none of the high contracting parties shall have notified the Belgian Government twelve months after the expiration of the said period of five years of its intention to have its effects ceased, it shall continue for one year, and so on from year to year.

In case one of the contracting States were to denounce the convention, this denunciation shall take effect only as it may affect its own

interests; the other States would retain, until the 31st of October of the year of the denunciation, the privilege of notifying their intention to also retire on September 1 of the following year. If one of the latter intended to make use of this privilege, the Belgian Government is to promote a meeting at Brussels, within three months, of a conference which would have to determine the measures to be resorted to.

ARTICLE 11.

The provisions of the present convention shall apply to the provinces beyond the seas, colonies, and foreign possessions of the high contracting parties. The colonies and possessions of Great Britain and the Netherlands, however, are not to be included in this regulation, except as far as it is provided in articles 5 and 8.

The status of the colonies and possessions of Great Britain and the Netherlands is, moreover, defined by the declarations inserted in the final protocol.

ARTICLE 12.

The execution of the reciprocal engagements contained in the present convention is subjected, inasmuch as need be, to the performance of the formalities and rules established by the constitutional laws of each of the contracting States.

The present convention shall be ratified and ratifications thereof shall be deposited at Brussels, at the Ministry of Foreign Affairs, on February 1, 1903, or earlier, if possible.

It is understood that the present convention shall only become binding after it has been ratified at least by the contracting States that have not been affected by the exceptional provision of article 6. In case one or several of the said States have not deposited their ratifications within the time provided for, the Belgian Government shall immediately endeavor to obtain a decision from the other signatory States as to the entering into force of the present convention among themselves.

In faith of which the respective plenipotentiaries have signed the present convention.

Done at Brussels, in one single copy, the 5th day of March, 1902.

II.—FINAL PROTOCOL.

At the moment of proceeding to the signature of the convention relating to the régime of sugars, entered into on this date by the Governments of Germany, Austria and Hungary, Belgium, Spain, France, Great Britain, Italy, the Netherlands, and Sweden, the plenipotentiaries have agreed to the following:

To article 3.

Considering that the purpose of a surtax is to protect efficaciously the internal market of producing countries, the high contracting

parties reserve the right, each as it affects its own interests, to propose the increase of the surtax in case that considerable quantities of sugars from one of the contracting States should enter their countries; this increase to affect only the sugars coming from that State.

This proposition shall be addressed to the permanent commission, which will decide within a short delay, by a vote of the majority, upon the true foundation of the proposed measure, upon the duration of its application, and upon the rate of the increased tax; the latter not to exceed 1 franc per 100 kilograms (19 cents per 220 pounds).

The adhesion of the commission can only be given in case the invasion of the market in question should be the result of an economical condition of real inferiority, and not the result of a factitious increase of prices promoted by an understanding among producers.

To article 2.

A. (1) The Government of Great Britain declares that no direct or indirect bounty shall be granted to sugars from colonies of the Crown during the existence of the convention.

(2) It declares also, by exceptional measure and while still reserving in principle its entire free action concerning the fiscal relations between the United Kingdom and its colonies and possessions, that during the existence of the convention no preference shall be granted in the United Kingdom to colonial sugars vis-a-vis the sugars coming from the contracting States.

(3) It declares that they will submit the convention to the autonomous colonies and to the West Indies in order that the latter may have the privilege of giving their adhesion thereto.

It is understood that the Government of His Britannic Majesty shall have the right to adhere to the convention in the name of the Crown colonies.

B. The Government of the Netherlands declares that during the existence of the convention no bounty, either direct or indirect, shall be granted to sugars of the Dutch colonies, and that these sugars shall not be admitted into the Netherlands at a less rate than is applied to sugars coming from the contracting States.

The present final protocol, which shall be ratified at the same time as the convention concluded this date, shall be considered as an integral part of said convention and shall be of the same force, value, and duration.

In faith of which the plenipotentiaries have drafted the present protocol.

Done at Brussels, the 5th day of March, 1902.

NEW MINISTER FROM COLOMBIA TO THE UNITED STATES.

On Wednesday, March 17, 1902, Señor Don JOSÉ VICENTE CONCHA presented to President ROOSEVELT his credentials as Envoy Extraordinary and Minister Plenipotentiary of the Republic of Colombia near the Government of the United States at Washington. The new Minister was accompanied to the White House by Hon. JOHN HAY, Secretary of State of the United States, and by Señor Don CARLOS MARTÍNEZ SILVA, his immediate predecessor.

The address of the Minister from Colombia, on the occasion of the presentation of his credentials, was as follows:

“MR. PRESIDENT: I have the honor to place in your hands the letter addressed to you by the President of the Republic of Colombia by which I am accredited near the Government of the United States of America—over which you worthily preside—in the capacity of Envoy Extraordinary and Minister Plenipotentiary of his country, in which office I am succeeding an eminent fellow-citizen for the only reason that his services in another important post of duty were deemed indispensable by my Government.

“On entering on the mission with which I have been intrusted it gives me great pleasure, Mr. President, to reiterate the sentiments of cordial, long-standing and never-failing friendship that the people and the Government of Colombia have professed, ever since the country was born to an independent life, for the people of the United States, to whom they are bound by gratitude, community of political ideals, and other ties that must be drawn closer, if it be possible, in the event of the two nations uniting in the purpose of accomplishing one of the greatest works of civilization and progress known to the world.

“Colombia, which has always rejoiced in witnessing the admirable aggrandizement of the country, which was the first in America to be born to an independent life, and which has revealed to modern nations the road that leads to the ideal welding of liberty and democracy with justice and order, also recognizes in your Republic one of the best guarantees for the autonomy of the nationalities of the new Continent, and strives to further, as far as lies in her power, the grand advance in progress led by the American Union.

“I offer earnest wishes for the growing prosperity of your Republic, and present them also in the name of Colombia for your own welfare, Mr. President.”

In reply to the address of the Minister from Colombia, President ROOSEVELT said:

“MR. MINISTER: It affords me pleasure to receive from your hands the letter of the President of the Republic of Colombia whereby you

are accredited to me as the Envoy Extraordinary and Minister Plenipotentiary of Colombia, and in welcoming you to the station to which you have been appointed I bespeak for you a reception no less cordial than has been accorded to your distinguished predecessors.

“The Government of the United States, faithful to its constant purpose to maintain and strengthen the good relations which have so long and beneficently existed with the Republics of the American Continents, sees in your friendly assurances a gratifying augury that, through reciprocal efforts, the close intercourse between the United States and Colombia will be continued and advanced, as befits the interests of the States whose institutions rest on a common foundation and whose material association in the paths of mutual advantage can not fail to aid the progress of each. The people of this country bear the kindest feelings toward their neighbors, wishing for them peace and prosperity, and it will ever be the pleasing task of this Government to give those feelings shape in all appropriate ways.”

TREATY OF ARBITRATION BETWEEN THE ARGENTINE REPUBLIC AND THE REPUBLIC OF URUGUAY.

I, JULIO ROCA, Constitutional President of the Argentine Republic,

To all to whom these presents shall come, greeting:

Whereas a general treaty of arbitration between the Argentine Republic and the Republic of Uruguay was negotiated, concluded, and signed in the city of Buenos Ayres on June 8, 1899, and an additional protocol, containing the modifications made by the honorable Congress of the Argentine Nation, was subscribed to on December 21, 1901, the texts of which are as follows:

The Governments of the Argentine Republic and of the Republic of Uruguay, being equally desirous of solving by peaceful methods all questions that may arise between them, have resolved to conclude a general treaty of arbitration, and to that effect name as their respective Plenipotentiaries:

For His Excellency the President of the Argentine Republic, Dr. DON AMANCIO ALCORTA, Secretary of Foreign Relations and Public Worship; and

For His Excellency the President of the Republic of Uruguay, Dr. DON GONZALO RAMÍREZ, Envoy Extraordinary and Minister Plenipotentiary of the Republic of Uruguay near the Government of the Argentine Republic;

Who, after communicating their full powers, which were found to be in good and due form, agreed to the following articles:

ARTICLE 1. The high contracting parties covenant to submit to

arbitration all controversies that may arise between them from whatever nature or cause, provided they are not in contravention of the provisions of the Constitution of either of the countries, and provided always that they can not be solved by means of direct negotiations.

ART. 2. Questions that have already been definitely settled between the parties can not by virtue of this treaty be revived. In such cases the arbitration shall be confined exclusively to the questions that may arise concerning the validity, interpretation, and enforcement of said agreements.

ART. 3. An arbitration tribunal shall be organized for each case, and shall adjudicate the dispute in question.

If no agreement should be reached as to the formation of the tribunal, the same shall consist of three judges. Each State shall name an arbitrator, and these shall designate a third arbitrator or umpire. If they can not agree upon the appointment, it shall be made by the President of a third State who shall be selected by the arbitrators named by the parties to the covenant. If no agreement can be reached as to the last appointment, the President of the Republic of France shall be requested to designate the same. The arbitrator thus selected shall be, of right, the President of the tribunal.

There shall not be named as third arbitrator any person who may, in that capacity, have passed judgment in an arbitration proceeding under this treaty.

ART. 4. None of the arbitrators shall be citizens of the contracting States, nor be domiciled therein, nor interested in the questions that are the objects of the arbitration.

ART. 5. In case of the non-acceptance, renouncement, or other disability to serve on the part of one or more of the arbitrators, his substitute shall be provided for in the same manner as that observed in his appointment.

ART. 6. The points in dispute shall be fixed by the contracting States, who may also determine the extent of the powers of the arbitrators and any other circumstances relating to methods of procedure.

ART. 7. In the absence of the express stipulations of the parties, the tribunal shall designate the time and place for the holding of its sessions outside of the domain of the contracting States, select the language to be used, determine the methods of discussion, the formalities and terms that shall be prescribed for the government of the parties, the procedure to be followed, and, in general, adopt such measures as may be necessary for its own operation, and decide all parliamentary questions that may arise in the course of debate.

The High Contracting Parties agree to place at the disposal of the arbitrators all the means of information that are within their power.

ART. 8. Each of the High Contracting Parties may appoint one or more attorneys to represent it before the Arbitration Tribunal.

ART. 9. The Tribunal is empowered to decide as to the regularity

of its own formation, the validity of the covenant, and the interpretation thereof. It is equally authorized to decide the controversies that may arise between the covenantors with respect to whether certain questions are or are not, according to the provisions of the treaty, subject to arbitration.

ART. 10. The Tribunal shall decide in accordance with the principles of international law, unless the covenant prescribes the application of special rules or authorizes the arbitrators to decide as friendly arbitrators.

ART. 11. The Tribunal shall not be formed without the concurrence of the three arbitrators. In case the minority, after being duly summoned, should not desire to take part in the deliberations or other acts of the proceedings, the Tribunal shall then be formed with a majority of the arbitrators, and a record shall be made of the voluntary and unjustifiable non-attendance of the minority.

The decision of the majority of the arbitrators shall be binding, but if the umpire should not concur in the opinion of either of the arbitrators named by the parties, then his award shall be final.

ART. 12. The judgment shall definitely decide each point in dispute and give the reasons therefor.

It shall be redacted in two originals and signed by all the arbitrators. If any one of them should refuse to sign it, the others shall note this fact in a special record of the proceedings, and the decision shall be binding, provided, always, that it is signed by a majority of the arbitrators. The dissenting arbitrator shall confine himself to an expression of his nonconformity at the time of signing the judgment and without giving his reasons therefor.

ART. 13. Each party shall be notified of the decision by means of his representative before the tribunal.

ART. 14. The finding legally pronounced decides, within the limits of its powers, the dispute between the parties.

ART. 15. The tribunal shall fix in the judgment the period within which the same shall be executed, it having authority to decide the questions that may arise with respect to the enforcement of the same.

ART. 16. The decision is without appeal, and its observance is intrusted to the honor of the nations signatory to this covenant.

Nevertheless, in the following cases, recourse by means of revision may be had before the same tribunal that rendered the judgment, provided it is made before the expiration of the term fixed for its execution:

1. If judgment has been pronounced by reason of a false or fraudulent document;

2. If judgment was given, in whole or in part, on account of an error of fact resulting from the pleadings or documentary evidence in the case.

ART. 17. Each of the parties shall pay its own expenses and one-half of the general expenses of the Arbitration Tribunal.

ART. 18. The present treaty shall remain in force for ten years from the date of the exchange of its ratification, and if it should not be denounced six months before the date of its expiration, it shall be considered renewed for another period of ten years, and so on successively.

The present treaty shall be ratified and the ratifications exchanged in Buenos Ayres within six months from the date thereof.

In testimony of which, the plenipotentiaries of the Argentine Republic and of the Republic of Uruguay signed the present treaty in duplicate and sealed the same with their respective seals in the city of Buenos Ayres on June 8, 1899.

(f) AMANCIO ALCORTA. [SEAL.]

(f) PABLO PÉREZ GOMAR. [SEAL.]

LAW NO. 4044.

The Senate and House of Representatives of the Argentine Nation, in Congress assembled, etc., sanction with the force of law:

ARTICLE 1. The General Treaty of Arbitration, signed in the city of Buenos Ayres on June 8, 1899, by the Plenipotentiaries of the Argentine Republic and of the Republic of Uruguay, duly authorized for the purpose, Article 3 being amended as follows, is hereby approved:

“Article 3. In each case that occurs there shall be constituted an Arbitration Tribunal that shall decide the controversy in question. If there should be a disagreement in the formation of the Arbitration Tribunal, the latter shall be composed of three judges. Each State shall name an arbitrator, and these shall in turn designate a third. If they can not agree upon the appointment, it shall be made by the President of a third State that shall be selected by the arbitrators named by the parties. If the arbitrators can not agree upon the last appointment, each of the parties shall name a different nation, and the selection of the third arbitrator shall be made by the two nations thus designated.

“The arbitrator chosen in this manner shall be, of right, President of the Tribunal. No person shall be named third arbitrator who, in that character, shall have passed judgment upon a judicial proceeding made with respect to this Treaty.”

ART. 2. Let it be communicated to the Executive Power.

Given in the Hall of Sessions of the Argentine Congress at Buenos Ayres on December 18, 1901.

(s) JOSÉ E. URIBURU.

B. OCAMPO,

Secretary of the Senate.

(s) BENITO VILLANUEVA.

ALEJANDRO SORONDO,

Secretary of the House of Representatives.

At a meeting held in the Office of the Department of Foreign Relations of the Argentine Republic, Their Excellencies Señor Dr. Don AMANCIO ALCORTA, Secretary of Foreign Relations of the Argentine Republic, and Señor Dr. Don GONZALO RAMÍREZ, Envoy Extraordinary and Minister Plenipotentiary of the Republic of Uruguay, being conformable to the modification of the General Treaty of Arbitration, in the part that refers to the formation of the Arbitration Tribunal, celebrated between both Governments on June 8, 1899, and for the purpose of securing its establishment without the objections inherent in a permanent Tribunal, have agreed to the following:

Article 3 of the Treaty referred to is modified as follows:

“Art. 3. In each case that occurs there shall be constituted an Arbitration Tribunal that shall decide the controversy in question. If there should be a disagreement in the formation of the Arbitration Tribunal, the latter shall be composed of three judges. Each State shall name an Arbitrator, and these shall in turn designate a third. If they can not agree upon the appointment, it shall be made by the President of a third State that shall be selected by the Arbitrators named by the parties. If the Arbitrators can not agree upon the last appointment, each of the parties shall name a different nation, and the selection of the third Arbitrator shall be made by the two nations thus designated.

“The Arbitrator chosen in this manner shall be, of right, President of the Tribunal.

“No person shall be named third Arbitrator who, in that character, shall have passed judgment upon a judicial proceeding made with respect to this Treaty.”

The present Protocol shall be ratified and exchanged simultaneously with the Treaty of Arbitration, of which it shall form an integral part.

In testimony of which, two copies of same have been signed in the city of Buenos Ayres on December 21, 1901.

(f) AMANCIO ALCORTA. [SEAL.]

(f) GONZALO RAMÍREZ. [SEAL.]

Whereas having seen and examined the foregoing Treaty and Protocol, I accept, confirm, and ratify the same, promising and agreeing in the name of the nation to observe and have them observed truly and faithfully.

In testimony of which I sign the present Ratification, sealed with the Great Seal of the Arms of the Republic, and countersigned by the Secretary of the Department of Foreign Relations and Worship.

Given in Buenos Ayres, Capital of the Argentine Republic, on January 12, 1902.

(s) JULIO ROCA.

AMANCIO ALCORTA.

ACT OF RATIFICATION.

At a meeting held in the Department of Foreign Relations and Worship of the Argentine Republic, the Secretary of that Department, Dr. AMANCIO ALCORTA, and the Chargé d'Affaires *ad interim* of the Republic of Uruguay, Dr. PABLO PÉREZ GOMAR, with the object of effecting the exchange of the Ratifications of the General Treaty of Arbitration and of the Additional Protocol, signed at Buenos Ayres on June 8, 1899, and December 21, 1901, by the Plenipotentiaries of both countries duly authorized for that purpose, and after carefully comparing the texts of the respective Ratifications, which were found to agree, the exchange referred to, upon the presentation of the corresponding full powers, was made.

In testimony of which they signed in duplicate the present Act of Ratification, in the city of Buenos Ayres, on January 18, 1902, and affixed their respective seals.

DEATH OF SEÑOR DON JOSÉ ANDRADE.

It is the sad duty of the MONTHLY BULLETIN to record a notice of the death, in New York, on the 20th of last March, of Señor Don José ANDRADE, who for a long time was Envoy Extraordinary and Minister Plenipotentiary of the Republic of Venezuela near the Government of the United States. The deceased was one of the Venezuelan delegates to the First International Conference of American States, held in Washington in 1889-90, and figured prominently in the deliberations of that important body. He also took part as Arbitrator for Venezuela in the Claims Commission against the latter Republic, established by the treaty of December 5, 1885, between the United States and Venezuela.

Señor ANDRADE was born in Merida, State of the Andes, and devoted a great part of his life to the service of his country in the respective fields of politics, diplomacy, and jurisprudence. He was a member of the Venezuelan Congress for several terms, Governor of the State of Zulia, diplomatic representative of the Republic not only near the Government of the United States, as has already been stated, but also near the Governments of France, Spain, England, and Germany.

He was a man of great literary attainments, and was richly endowed by nature with a keen perception of the beautiful in its most delicate and exquisite forms. A long residence in Italy had familiarized him with the language and inspiring literature of that country. He was a master of the French and English languages, and dedicated all the time at his disposal to the cultivation of the fine arts.

Those who had the good fortune to come into intimate contact with

him in his daily life were fervent admirers of his learning and wisdom. But towering above all his virtues and dominating them all was his extreme modesty, and this trait made him prefer obscurity to fame and silence to ostentation.

The fall of his brother, Gen. IGNACIO ANDRADE, ex-President of the Republic, from power occasioned his retirement to private life. At the time of his death, at the age of 63 years, caused by a severe attack of pneumonia, he was temporarily established in the city of New York.

ARGENTINE REPUBLIC.

AREA AND PRICES OF LANDS IN THE NATIONAL TERRITORIES.

The Minister of Agriculture has supplied the Argentine Consul at Sydney, New South Wales, with information relative to the area, in acres, of the public lands in the National Territories, which prospective colonists can purchase or rent from the Government. From this, it can be seen that the total number of acres of such lands is 237,788,343, divided as follows: Chaco, 32,182,861; Chubut, 55,687,983; Formosa, 21,430,165; Misiones, 1,956,240; Neuquen, 15,249,923; Pampa, 7,718,261; Rio Negro, 37,266,057; Santa Cruz, 61,626,144; and Tierra del Fuego, 4,840,418. At the latest sales of these lands the following prices were obtained, per acre, in the territories named: Chubut, 16 cents; Neuquen, 16 cents; Santa Cruz, 30 cents; Tierra del Fuego, 40 cents.

The locations of the territories named are: Formosa and Chaco, in the northeast, adjoining Paraguay; Chubut, south of the center of the country extending from the Atlantic Ocean to the Chilean frontier; Misiones, in the extreme northeast, adjoining Brazil and Paraguay; Neuquen, in the extreme west; Pampa, immediately adjoining Neuquen on the east; Rio Negro, just south of Neuquen and Pampa; Santa Cruz, immediately south of Chubut; while Tierra del Fuego is at the southeastern extremity of the Continent. Rio Negro, Chubut, Santa Cruz, and Tierra del Fuego (in the order named from north to south) are subdivisions of the Argentine share of the territory formerly known as Patagonia.

Prospective immigrants can obtain further information relative to the inducements offered by the Government to colonists from the Minister of Agriculture at Buenos Ayres. In his communication to the Consul at Sydney, the Minister of Agriculture states that the area of lands now under cultivation in the Republic is 17,174,250 acres, as against only 7,478,700 acres in 1880. The greater part of the land of the Republic is devoted to grazing and the production of live stock.

PORT DUES AT LA PLATA.

According to the "Buenos Ayres Standard," the La Plata authorities have materially reduced the port charges at that point of entry, while the channel of the harbor has been dredged so as to permit the entrance of steamers with a draught of 25 feet. The port charges, as given by the "Standard," are as follows:

Ten cents (currency) per ton register for each ocean-going steamer or sailing vessel entering to load live stock or cereals, or in ballast to secure produce for export.

Twenty cents (currency) per ton register for sailing vessels entering loaded to take produce on the return voyage.

Steamers entering with the sole object of loading are to pay entry and dock dues only on the basis of the quantity of coal they take, without reference to tonnage, fixing 100 tons as a minimum.

All vessels which have paid dues and have cleared for other Argentine ports, on returning to complete cargo will pay no additional charge.

Lighters entering with cargoes for ocean-going vessels pay no dues, nor shall vessels which put into port in distress.

No deposit charge will be collected on domestic produce for thirty days, nor on Argentine lumber for sixty days.

A WONDERFUL SOUTH AMERICAN NEWSPAPER.

The "World's Work" for February, 1902, contains a description from the pen of BERNARD MEIKLEJOHN of what is probably the most remarkable newspaper plant in the world, that of "La Prensa" (The Press), of Buenos Ayres. The office of "La Prensa" is an imposing building of gray marble, five stories in height, surmounted by a tower, and crowned by a colossal figure of golden bronze, typical of the press. This building is situated on the finest boulevard of the city. Upon the ground floor, besides the usual business offices, are: a luxurious consulting room, where a physician, with five assistants, attends to the ailments of an average of 110 patients daily, free of charge; a law office, where the indigent can secure free legal advice; and a museum, where all the products and manufactures of the Argentine Republic may be inspected without charge. On the second floor are the sumptuous offices of the proprietor, the editor, and the editorial writers; also a well-stocked library, particularly rich in legal, medical, and engineering works, which is open at all times to students without payment; in an adjoining room the Spanish language is taught at the expense of the journal; while there is a great hall in which the people of the city are at liberty to hold public meetings. Distinguished foreigners visiting Buenos Ayres find on the third floor the most remarkable feature of the establishment—a palatial suite of apartments for their reception. In addition, there is a "Salon des Fêtes," copied

exactly from the drawing room at Fontainebleau, where literary, charitable, and scientific meetings are held on the invitation of "La Prensa." The proprietor's idea in providing such apartments is to glorify the city. On the top floors are the composing room, the reporters' room, a restaurant, and a fencing salon.

"La Prensa" is an eight-page journal, with the inside pages devoted to news, and the outside sheets to advertisements. It was established in 1869 by J. C. P. PAZ, as editor and sole owner. The present editor is his son EZEQUIEL P. PAZ. The present home of the paper was completed in 1896, at a cost of \$2,000,000 gold. "La Prensa" has a circulation of 100,000 copies, and is sold for about 3 cents per copy (United States currency). For the first six months of 1901 its treasurer's report showed gross receipts amounting to \$1,033,905.47 gold, and expenses aggregating about \$650,000. In the main the equipments for this magnificent establishment were purchased in the United States, where its supply of type and blank paper is also obtained.

CENSUS OF LIVESTOCK, 1900.

The Agricultural Department has published the final results of the general cattle census, made during the year 1900. According to the figures furnished by the Administration, the total number of all kinds of cattle in the Republic was as follows:

Oxen	6, 827, 428	Pigs	93, 923
Sheep	18, 608, 717	Mules	22, 992
Horses	561, 408		
Goats	20, 428	Total	26, 134, 896

According to figures published in 1898 the number of cattle was 20,779,109, so that the increase for the two years was 5,355,787.

IMPORTS OF ELECTRICAL APPLIANCES.

The electrical appliances and material imported by the Argentine Republic in 1901, as compared with like imports in 1900, were as follows:

	1901.	1900.
Telephones	\$8, 700	\$4, 576
Dynamos (184)	39, 247	80, 025
Electrical material	154, 156	236, 155
Electric meters (1,529)	18, 348	18, 948
Fittings (gas included)	99, 004	114, 654
Bells (7,796)	3, 898	3, 048
Phonographs and gramophones (2,014)	8, 294	8, 071
Ventilators (3,043)	30, 430	13, 059
Insulators	13, 566	16, 869
Insulators, glass	6, 906	541
Carbons (218 tons)	32, 637	21, 622
Arc lamps (807)	10, 539	5, 826
Incandescent lamps (37,993)	106, 378	95, 375
Telephone material	8, 330	20, 817
Telegraph material	18, 330	24, 001
Cables	469, 772	375, 225
Total	1, 028, 535	1, 038, 812

ESTIMATE OF THE WHEAT AND LINSEED CROPS.

The following is the official estimate of the crops of the present producing year, 1901-2:

Province.	Wheat.	Linseed.
	<i>Tons.</i>	<i>Tons.</i>
Buenos Ayres.....	1,150,000	154,000
Santa Fé.....	500,000	122,000
Entre Ríos.....	133,000	42,000
Córdoba.....	70,000	9,500
All others.....	70,000
Total.....	1,923,000	327,500

ADVANCE PAYMENT OF INDEBTEDNESS.

On February 21, 1902, the Argentine Government remitted to its financial agent in London the sum of £2,750,000 (\$13,382,875 United States currency) in payment of all debts contracted by the Government up to July 1, 1902. The fact of this large sum being forwarded so much in advance of the date on which it is to be paid is regarded as the highest proof of the splendid financial condition of the Republic.

MISCELLANEOUS NOTES.

The Minister of Agriculture published a decree on February 19, 1902, reopening the Argentine ports to British cattle. For a number of months past such animals have been excluded by the authorities because of the prevalence of tubercular diseases among them.

During 1901, the Argentine Republic imported 928,838 tons of coal, an increase of 154,968 tons over the imports of 1900. The imports of kerosene aggregated 430,828 hectoliters in 1901, as against 40,813 hectoliters in the preceding year. Tea imports in 1901 amounted to 747,591 kilograms, valued at \$448,554, gold. Like imports in 1900 aggregated 970,544 kilograms.

In view of the satisfactory returns obtained from experiments in silkworm culture in the province of Santa Fe, the Rural Society has applied to the Ministry of Agriculture for from 4,000 to 5,000 white-mulberry trees.

The Santa Fe Rural Society is preparing a pamphlet in the English language on the advantages offered agriculturalists by that province. Copies of this publication are to be distributed in Australia, New Zealand, and South Africa, with a view to inducing emigration.

An evaporated-fruit factory, the first in the Argentine Republic, was recently inaugurated at Primera Argentina, in the province of Córdoba.

Frozen hares have become an article of export from the port of Santa Fe.

BOLIVIA.

FOREIGN COMMERCE IN 1901.

Señor Don GERARDO ZALLES, Consul-General of the Republic of Bolivia at New York, has furnished the MONTHLY BULLETIN an interesting statement of the commerce of Bolivia with foreign countries in 1901. The following table shows this commerce in the order of its importance:

Countries.	Packages.	Weight.	Value.
		<i>Kilos.</i>	<i>Francs.</i>
England.....	95,613	4,098,338	7,938,470.94
Germany.....	120,161.	4,275,135	7,443,920.88
France.....	53,649	2,659,940	3,949,266.70
United States.....	86,409	1,440,253	1,706,268.70
Italy.....	12,715	793,444	1,229,472.15
Belgium.....	9,852	536,344	758,173.50
Portugal.....	7,365	230,280	137,064.34
Spain.....	369	23,488	55,604.14
Total.....	386,133	14,057,222	23,218,241.35

CUSTOMS RECEIPTS AT LA PAZ IN 1901.

According to statistics published in the "Industrial and Commercial Review" of Bolivia, the receipts of the custom-house at La Paz in 1901 were as follows:

	Bolivianos.		Bolivianos.
Customs duties.....	1,247,151.91	Gold.....	99.15
Fines on consular invoices.....	103.37	Crude rubber.....	67,725.06
Storage charges.....	36,015.00	Copper bullion.....	31.15
Interest.....	196.20		
Tin.....	13,190.18	Total.....	1,369,380.41
Stamped silver bullion.....	4,868.39		

BRAZIL.

FOREIGN COMMERCE, FIRST NINE MONTHS OF 1901.

According to official statistics, the imports and exports of Brazil during the first nine months of 1901, were as follows:

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
	<i>Milreis.</i>	<i>Milreis.</i>		<i>Milreis.</i>	<i>Milreis.</i>
Germany.....	27,645,178	86,938,719	Italy.....	11,653,458	5,047,130
Argentine Republic.....	38,243,167	13,701,336	Portugal.....	18,129,128	3,423,061
Austria-Hungary.....	5,428,497	15,289,576	Sweden and Norway.....	3,489,682
Belgium.....	6,176,159	10,505,245	Switzerland.....	1,957,962
United States.....	36,454,542	260,253,775	Uruguay.....	18,678,616	7,440,893
France.....	22,048,873	51,223,770	Canal (to order).....	2,696,651
Great Britain and its pos- sessions.....	89,462,328	76,544,337	Africa.....	4,619,428
Spain.....	1,564,428	1,102,290	Other countries.....	2,651,251	7,845,576
Holland.....	1,887,529	25,511,108	Total.....	285,400,792	572,812,865

IMPORTS AND EXPORTS BY STATES.

States.	Imports.	Exports.	States.	Imports.	Exports.
	<i>Milreis.</i>	<i>Milreis.</i>		<i>Milreis.</i>	<i>Milreis.</i>
Amazonas	7,089,907	73,214,094	Bahia	18,822,879	52,961,393

AUTHORIZED EXPENDITURES IN 1902.

The MONTHLY BULLETIN for February contained in detail the estimates of the anticipated revenues of Brazil for the year 1902 as compared with like estimates for the previous year. The authorized expenditures in 1902, as compared with those of 1901, are divided among the following governmental departments:

Ministry.	1902.		1901.	
	Gold.	Paper currency.	Gold.	Paper currency.
	<i>Milreis.</i>	<i>Milreis.</i>	<i>Milreis.</i>	<i>Milreis.</i>
Justice and Interior		16,451,611		16,094,202
Foreign Affairs	926,500	737,920	969,500	527,520
Navy		24,379,297		23,200,337
War		46,295,603		45,580,058
Industry, Railways, and Public Works	10,770,614	66,878,840	12,359,015	61,818,446
Finance	21,895,057	83,178,618	23,681,470	97,293,661
Total	33,592,171	237,592,171	37,609,985	244,514,224

Under the supervision of the different ministries named, the following operations have been authorized by the National Congress:

Ministry of Marine.—To construct on trial a submarine vessel of national design or invention, the plans of which, when submitted to competent authorities, shall be recognized as likely to have good results.

Ministry of War.—The continuation of the surveys for the construction of a railway between Parana and Matto Grosso, which will be constructed under the orders of military engineers by the national troops.

Ministry of Public Works.—To construct telegraph lines from Bom Jardim to Taquaretinga, in the State of Pernambuco; from Cuyaba to Corumba, and from Porto Cachoeira de Santa Leopoldina to Villa Alfonso Claudio, in the State of Espirito Santo; from Itabira to Santa Anna de Ferros e Guanhaes, and from Boquim to Simão Dias, passing through the village Campos and the town of Lagarto, State of Sergipe; from Lavras, State of Ceara, to Souza, State of Parahyba, passing through Cajazeiras and San João de Souza; from Peripery to Itamaraty, State of Piauhý; a branch line to unite Santa Anna and Acarahu

to Sobral, in the State of Ceara; branch lines to Maracana, Marapanim, Odivelas, Vigia, and San Miguel do Guama, State of Para; a line from Oeiras to Paranagua, and a branch line from Oeiras to Valenca, Picos, and Jaicos; a line from Cachoeiro do Itapemirim to Rio Novo and Alfredo Chaves, State of Espiritu Santo; a line to Campos Novos, passing through Corytibanos, State of Santa Catharina; and a line from San Benedicto, State of Ceara, to the most convenient point on the main line.

To supply seeds and plants and pay for the transportation of animals destined for the development of new cultures and for the improvement of native stock. For these purposes 100 contos are appropriated.

To spend not more than 300,000\$000 for propagandas of Brazilian agricultural and mineral products abroad.

To reorganize the maritime service in charge of the Lloyd Brasileiro, obtaining a reduction in freight rates for the transportation of national products. The company that shall undertake this service will be required to furnish, if necessary, with ten days' notice, an extra boat for the transportation of goods.

To renew the contract, without increase of expenditure, with the Companhia Pernambucana de Navegação. The vessels of the company shall ply between Recife and Aracaja, with a bimonthly voyage to Amarração or Cajueiros.

To renew the navigation service established by law No. 351 of December 11, 1895, without increase in expenditure. The terminal points are Grajahn and Floriano.

To come to an agreement with the Companhia Amazonas to establish a maritime service from Arajuary to Oyapoe.

To construct the extension of the railway line from Silva Xavier to Curvello and the conclusion of the substitution of the wide-gauge for the narrow-gauge track to São Paulo. The funds for these purposes—1,500 contos for the former and 1,000 contos for the latter—to be taken from the net revenues of the Central of Brazil Railway, which is Federal property.

To extend the period for the completion of the Mogyana Railway works on the section from Araguary to Catalão. The period for the completion of the first section of the railroad from Catalão to Palmas by the Mogyana Railway Company is to count from the date of the inauguration of the Catalão station, the concessionaire to make arrangements with said company for the completion of the section from Araguary to Catalão.

To extend, without onus, the concession for the construction of the railway from Praça da Republica to the bar of Guaratyba.

To open up a credit of 600 contos for the inspection, renewal, and purchase of material for the drainage and sewerage of the Federal capital.

To open up a credit of 40 contos to meet the expenses of the exhibits of Brazilian products at the Pan-American Exposition at Buffalo.

To enter into an agreement with the railways which enjoy guaranties of interest for the modification of their lines without additional burden to the Government. The new lines to pass through more productive regions.

The port of Santarem, State of Pará, will be included in the itinerary of the Lloyd Brasileiro, whose ships will touch at this port alternately with that of Obidos.

The date for the commencement of the Bahia port works will be extended for another eight months.

Ministry of Finance.—The Government is authorized to settle the debts of banks arising from aid to agriculture.

To lend to the State of Espiritu Santo the sum of 300 contos.

To revise the regulations regarding consular invoices, introducing the improvements indicated by experience.

To grant a premium of 50\$000 per ton on all vessels above 100 tons each built on Brazilian territory.

The fund for the amortization of the internal currency debt will be obtained from the following sources: (a) Annuities (apolicies) purchased with the money renewed from the sale of Government property and the products of leases under the terms of article 3, law 471, of December 26, 1900; (b) annuities acquired with the balance or surplus over receipts and refunds of deposits; (c) annuities already purchased and to be purchased by the Amortization Department (Caixa de Amortização) with the product of unclaimed interest, in accordance with article 48 of the law dated October 28 and regulation No. 9370, article 94, of the law dated February 14, 1885; (d) annuities purchased with the credits specially voted by Congress for that purpose.

All the annuities purchased in accordance with article 2 will be entered under the heading "Amortization fund of the internal currency debt," and the interests on same will be applied to the purchases of new annuities to increase said fund.

COMMERCE WITH CHILE.

In reporting on the commerce between the Republics of Brazil and Chile, the Secretary of the United States Legation at Petropolis, Brazil, states that the Chilean Republic is desirous of Brazilian cooperation in subventioning a line of steamers to serve the traffic between the two countries at reasonable rates, while Brazil is anxious for tariff concessions favoring its sugar and coffee crops. Negotiations in furtherance of these objects are reported as now pending.

The imports into Brazil from Chile are small. Beans form the principal item, amounting to 1,000 tons a year, worth about \$60,000,

before duty is paid. The duty at present rate of exchange is \$18.70 a ton. This article represents about half of Brazil's importation, the other imports from Chile being very insignificant in amount, and consisting of wheat, fruits, forage, and drugs. In 1900 the total invoice value was less than \$200,000, and in 1901 a decrease from this amount was noted.

Brazil's exports to Chile consist almost exclusively of coffee and Paraguay tea (*yerba mate*). In 1901 coffee shipments of 30,000 sacks, valued at \$250,000, were made, while the *yerba mate* exports were worth about \$150,000.

The principal cause of the unsatisfactory condition of interchange between the two countries is believed to be the lack of cheap transportation. Steamship lines to Europe, which have a monopoly of the regular Atlantic traffic to Chile, stop at Brazilian ports, but their rates are arranged so as to discourage shipments between Brazil and Chile. It costs more to send goods from Valparaiso to Rio de Janeiro than from Valparaiso to Liverpool, and similar inequalities exist as to westward-bound freights. The result is that, despite frequent and rapid communication, exchanges are almost nominal in amount. Brazil is able to furnish only 15 per cent of the coffee consumed in Chile, though furnishing to Europe and America more than half their total consumption. Some Brazilian coffee is actually re-exported from Germany and England to Chile. It is believed that Chilean wine might be introduced successfully in the Brazilian market.

RUBBER SHIPMENTS FROM PARÁ.

According to the report of the "Banco do Para," exports of rubber from Pará in 1901 amounted to 30,499,855 kilograms, as compared with 27,400,238 kilograms in 1900. During the month of February, 1902, the rubber exports from the same port amounted to 2,841,109 kilograms. Of this total, the quantity sent to the United States was 1,012,146 kilograms, the remainder, 1,828,963 kilograms, going to European markets.

EXPORTS OF TOBACCO.

The value of tobacco exported from Brazil during the first six months of 1901 amounted to 30,741,713 *milreis*. The countries receiving such exports, with the respective valuations, were as follows:

	Milreis.		Milreis.
Germany	29,325,934	Holland	3,075
France	1,024,476	Italy	15
Argentine Republic	224,722	Other countries	329
Uruguay.....	134,433		
England.....	24,085	Total	30,741,713
Belgium.....	4,647		

PAPER MONEY IN CIRCULATION.

The following table shows the quantity and value of the paper money in circulation in Brazil on January 31, 1902:

Denominations.	Number of notes.	Value.
<i>Reis.</i>		<i>Milreis.</i>
500.....	12, 848, 813	6, 424, 406
1, 000.....	14, 733, 901	14, 733, 901
2, 000.....	10, 124, 811½	20, 249, 623
5, 000.....	6, 175, 877½	30, 879, 387
10, 000.....	5, 166, 604½	51, 666, 045
20, 000.....	2, 763, 523	55, 270, 460
30, 000.....	72, 562	2, 176, 860
50, 000.....	1, 758, 691½	87, 934, 575
100, 000.....	615, 141½	61, 514, 150
200, 000.....	1, 075, 563	215, 112, 600
500, 000.....	268, 978½	134, 489, 250
	55, 604, 464	680, 451, 258

INCREASED STEAMSHIP COMMUNICATION WITH NEW YORK.

The Consul-General of the United States at Rio de Janeiro reports that the Lamport and Holt Line is about to add six steamers to its service between that port and New York. Two of the boats will be of about 5,000 tons dead weight each, with accommodations for 70 cabin and 50 steerage passengers. The others will carry 6,350 tons dead weight, and will be fitted with shade decks, so as to be available for cattle transportation.

The Prince Line has also added a boat to its New York-Rio service. It has a capacity of 4,560 tons and draft of 22 feet, good accommodations for 12 passengers, and electric lighting throughout. This is the first of four steamers specially constructed for this trade. The boats can stow up to 70,000 bags of coffee, and this special vessel is well suited for delicate cargoes. The trip between New York and Rio will consume about eighteen days.

LATEST ESTIMATES OF THE COFFEE CROP.

The Secretary of the United States Legation at Petropolis recently forwarded a report to the Department of State at Washington relative to the coffee crop of Brazil. From this the following information is obtained:

The crop for delivery from the interior at Rio de Janeiro from July 1, 1901, to June 30, 1902, is estimated at 5,466,000 bags; at Santos, 10,483,000 bags. This estimate is based on the deliveries made during the seven months of 1901-2 (July to January, inclusive), and on the assumption that deliveries for the ensuing five months will bear the same proportion to the previous months as in past years.

The best authority on the general situation in Brazil estimates the world's visible supply at 10,813,700 bags on January 1, 1902. Of this, New York held 1,924,000 bags; Havre, 2,212,100 bags; Hamburg,

794,000 bags; and Rio de Janeiro and Santos, 1,681,400 bags. In this connection the following statistics may be interesting as showing the relation between the crops of the ports mentioned and the world's visible supply:

Deliveries of Rio de Janeiro and Santos crops.

	Bags.
During twelve months to June 30, 1900.....	9, 007, 000
July 1 to December 31, 1900.....	6, 832, 000
January 1 to June 30, 1901.....	3, 810, 000
July 1 to December 31, 1901.....	10, 389, 000
Estimated deliveries January 1 to June 30, 1902.....	5, 578, 000

World's visible supply.

June 30, 1900.....	5, 715, 000
December 31, 1900.....	7, 457, 000
June 30, 1901.....	6, 746, 000
December 31, 1901.....	10, 817, 000

As to the crop which will begin to be gathered in May and shipped in the year beginning July 1, 1902, information is yet incomplete. Up to the middle of December, reports were extremely unfavorable, and the opinion was that it would not be more than 40 per cent of the current crop; that is to say, 6,500,000 bags. Rains have been abundant of late, however, and the general impression is that it will be nearly an average one, and will run from 9,000,000 to 11,000,000 bags. The crop is rapidly reaching a stage where an accurate judgment can be formed by experts as to the relative percentage of an average crop likely to be produced, but the extent of new territory coming into bearing, and the quantity of coffee that is being held in first hands are uncertain, and render an exact estimate impossible until in the autumn.

NEW AMAZON STEAMER.

The largest boat ever floated on the Thames and Severn Canal, England, was recently launched by a ship-building firm at Bremscombe, Stroud. This boat was christened the "*Islandia*," and is destined for cargo and passenger service on the Amazon River. The vessel is a steel screw steamer, 72 feet in length, and has two large holds, with a total capacity of 1,400 cubic feet. Two cabins on the main deck will accommodate 12 persons. The vessel is to be steered from the promenade deck by powerful gearing. Special apparatus for ejecting storm water that may find its way into the holds during the hurricanes that are peculiar to the Amazon region has been provided. This vessel, though small, will proceed across the Atlantic under its own steam when completed.

CONSULAR REGULATIONS.

On February 19, 1902, the Minister of Foreign Relations issued a circular to Brazilian Consuls, calling their attention to the consular regulations which require annual and quarterly reports on commerce and navigation between Brazil and foreign countries. The circular

states that many consuls, particularly those of foreign nationality, fail to make these reports, and many who do make them do not prepare them in accordance with the regulations, or fail to send them within the time prescribed.

Quarterly reports must be made not later than the 1st of the second month of the succeeding quarter. In the tables of imports and exports accompanying these reports the values must be expressed in the currency of Brazil and in that of the country of their origin, and must be compared with those for the preceding quarter.

Annual reports must be submitted before the 31st day of May. These must contain a detailed statement of commerce and navigation between Brazil and other countries, and must be prepared in accordance with articles 273 and 275 of the Consolidation of Consular Laws. Consuls must give in their annual reports a *résumé* of the principal official acts relating to commerce and navigation, together with any information relative to immigration and colonization that may be possible.

BREWERY AT PARÁ.

Senhor ANTONIO BEZERRA, the Honorary Corresponding Member of the Bureau of the American Republics at Pará, writes from that point that a French syndicate has acquired the concession which was granted to a company organized in Pará for the establishment of a brewery. Work on the brewery is already far advanced, and the syndicate expects to have it in running order by September, 1902. It is expected that this enterprise will earn large profits within a short time. The shares of stock, which were sold at 10 *milreis* when the company was organized, have advanced to 50 *milreis*, and it is believed that they will reach par (100 *milreis*) as soon as the brewery is in operation.

REPORTED DISCOVERIES OF COAL.

The British Vice-Consul for the State of Santa Catharina, in a recent report to his Government, announces the reported discovery at Fachinal Preto of coal of fair quality about 80 kilometers from the city of Desterro. Another seam is reported at Quebra Dente, only 1 meter below the surface. A sample of the coal found at Fachinal Preto was forwarded to the Imperial Institute (London) and, in the course of a report on its analysis, Professor DUNSTON, director of the scientific and technical department, gives it as his opinion that this coal will prove useful for the raising of steam.

GOLD PRODUCTION IN FEBRUARY, 1902.

The following mines reported the production of gold during the month of February, 1902:

Faria.—Six hundred and forty tons of ore were treated, producing 6,200 grams (200 ounces) of bullion.

Ouro Preto.—The returns show that 5,104 tons of ore produced 1,759 ounces of gold, valued at £7,120 (\$34,650).

St John d' El Rey.—The gold produced was valued at £7,580 (about \$36,890); the yield per ton was 0.6 troy ounces.

OFFICIAL ANALYSIS OF BEVERAGES, FOODSTUFFS, ETC.

Under a clause of the budget law, a translation of which was published in the MONTHLY BULLETIN for February, 1902, all imports into Brazil of beverages and foodstuffs, without exception, must, before clearance through the custom-house, be officially analyzed. All such goods found to contain ingredients likely to be injurious to health—boric or salicylic acid, alcohol of inferior grade, sulphuric or other free mineral acids, in whatever quantity—will be condemned, the consignees being required to reexport the goods or submit to their destruction by the authorities. In addition, when reexportation is not effected, the consignee will be fined. Shippers should not send to the Brazilian markets foodstuffs containing any of the above substances, even though they are present only as preservatives or are inseparable from their production.

MINERAL NOTES.

It is claimed that exceedingly rich veins of gold were recently discovered at Tassaras, in the municipal district of Villa Rica, about 2 kilometers from the Ouro Preto mines, in the State of Minas Geraes. According to an analysis made at the School of Mines at Ouro Preto, 470 grams of gold can be obtained from a ton of quartz. This would be equal to \$235 per ton.

Announcement has been made that the Carahyba copper mine, in the municipal district of Alagoinhas, State of Bahia, has been purchased by an English syndicate for 2,000,000 *milreis* (about \$500,000 United States currency at the present rate of exchange). Of the total amount 1,200,000 *milreis* (\$300,000) represents the amount paid in cash, and 800,000 *milreis* in shares of the new company.

MARITIME MOVEMENT OF THE PORT OF SANTOS.

During the year 1901, 913 vessels entered the port of Santos, 847 of which were steamers and 73 sailing vessels.

The steamers entered, represented a total of 1,225,514 tons, belonging to the following nationalities: Brazilian, 306; English, 193; German, 137; French, 95; Italian, 65; Spanish, 21; Austrian, 18; Belgian, 6; other nationalities, 5.

MISCELLANEOUS NOTES.

The "Minas Geraes" of recent date states that mining operations will shortly be begun in the mercury deposits at Tripuhy, near Ouro

Preto. This property, which was recently acquired by a Belgian company, is said to be very rich in the mineral.

Messrs. B. RYMKIENVIER & Co., the contractors for the improvement works at the port of Manãos, have obtained from the Brazilian Government a six months' extension of the time fixed in decree No. 3725, of August 1, 1900, for commencing the work.

By a decree promulgated, January 18, 1902, the 5 per cent paper bonds of the internal public debt, of the denominations of 800, 600, 500, 400, and 200 milreis, are to be exchanged for bonds of the value of 1 conto.

By a decree of January 6, 1902, the "Companhia Internacional de Docas e Melhoramentos no Brazil" was granted an extension of eight months in the time required for the completion of the improvement works in the port of Bahia.

The "Companhia Geral de Melhoramentos" of Pernambuco has begun the manufacture of a fodder from sugar cane to be used as forage. This product has a high nutritive value and can be preserved in perfect condition for a considerable length of time.

The census of the State of Alagoas, completed in July, 1901, showed a total population of 662,678 inhabitants, compared with 511,440 in 1890, an increase of 151,233 inhabitants.

A representative of the firm of A. FIORITA & Co. has made a contract with agriculturists of the districts of Campinus and São Carlos do Pinhal, State of São Paulo, for the introduction into the State of about 300 Japanese families.

The State of São Paulo has entered into a contract with H. BUCOLINI for the construction of a wagon road between São Paulo and the colony of Imbuy.

By a decree dated February 12, 1902, a concession has been obtained for the construction of a railway to extend from the end of steam navigation on the Rio Branco to some convenient point on the boundary line between the State of Amazonas and British Guiana.

A hose and shirt factory has recently been established at Juiz de Fora.

CHILE.

SUMMARY OF THE FINANCES OF THE REPUBLIC.

An important publication of 750 pages, in Spanish and English, entitled "Summary of the Finances of Chile from the Independence to 1900," has recently been issued by the Chilean Government. This valuable compilation of historical and statistical data is a comprehensive and detailed exposition of Chilean finances from the inception of the Government to the present time.

During the first years of the existence of the Republic the annual receipts of the nation rarely exceeded \$2,000,000. These revenues, however, gradually grew in importance until they reached, in 1896, the enormous sum of \$162,591,304.90, national currency. The following table shows, in detail, in national currency, the receipts and expenditures of the Government, the excess of revenues over expenditures, or of expenditures over revenues, as the case may be, and the budgets of expenditures from 1817 to 1900, inclusive:

Years.	Revenues.			Expenditures.		
	Ordinary.	Extraordinary.	Total.	Ordinary.	Extraordinary.	Total.
1817-1881 ..	\$419,589,037.83	\$133,397,591.45	\$552,986,629.26	\$385,184,234.06	\$85,100,347.46	\$470,284,581.52
1882	41,005,935.45	1,679,406.08	42,685,341.53	18,800,050.62	22,820,086.90	41,620,137.52
1883	44,248,695.26	3,561,613.60	47,810,308.86	38,384,897.50	9,006,098.15	47,390,995.65
1884	38,418,011.81	781,224.78	39,199,236.59	38,154,813.26	6,719,852.48	44,874,665.74
1885	36,078,455.21	3,506,596.93	39,585,052.14	34,101,408.84	6,781,075.48	40,882,484.32
1886	37,360,848.36	23,340,480.84	60,701,329.20	34,089,874.20	20,533,397.65	54,623,271.85
1887	45,888,954.07	22,390,720.67	68,279,683.74	33,097,342.11	25,536,588.26	58,633,930.37
1888	50,181,900.95	2,741,766.08	52,923,667.03	38,738,829.61	7,353,705.89	46,092,535.50
1889	54,803,225.71	7,650,001.23	62,453,226.94	55,628,003.03	3,762,141.54	59,390,144.57
1890	53,202,548.77	5,862,344.12	59,064,892.89	68,250,680.67	6,812,695.50	75,063,376.17
1891	55,723,310.45	49,227,266.20	104,950,576.65	102,295,152.17	102,295,152.17

1896	47,190,189.15	87,023,607.14
1897	824,737.03	82,265,829.78
1898	30,220,031.46	79,931,452.12
1899	20,808,983.34	94,556,192.85
1900	23,675,710.57	110,475,042.20
Total	296,986,195.42	37,606,319.75	1,530,173,528.94

The total expenditure for all branches of the Government from 1833 to 1900, inclusive, was \$1,874,859,782.33 national currency, of which amount \$273,415,252.42 was disbursed for account of the Department of the Interior; \$23,333,366.12 for the Department of Foreign Affairs; \$17,343,396.39 for the Department of Public Worship; \$10,686,957.46 for the Department of Colonization; \$68,645,005.84 for the Department

of Justice; \$107,409,122.42 for the Department of Public Instruction; \$525,187,531.14 for the Department of Finance; \$362,275,572.75 for the War Department; \$204,452,027.18 for the Navy Department; \$9,871,227.85 for the Department of Industry, and \$272,240,322.76 for the Department of Public Works. In 1900 the expenses in national currency of the various branches of the Government were as follows:

Interior.....	\$13,795,925.32	War.....	\$11,919,284.07
Foreign Affairs.....	1,615,818.08	Navy.....	8,888,981.80
Public Worship.....	931,101.76	Industry.....	926,765.97
Colonization.....	869,478.43	Public Works.....	27,981,308.61
Justice.....	5,280,918.10		
Public Instruction.....	7,926,128.90	Total.....	112,708,570.92
Finance.....	32,572,859.88		

The total revenues in 1900 amounted to \$112,002,008.91 currency and \$107,394,480.27 gold *pesos* of the value of 18d. The following table shows the receipts for 1900 in detail:

Sources of revenue.	Currency.	Gold 18d.
Customs:		
Import dues.....	\$829,986.91	\$27,714,956.04
Export dues.....	56.77	50,142,774.43
Post-office receipts.....	928,107.29	
Telegraph receipts and stamps.....	552,145.93	
Stamped paper and stamps.....	584,677.12	
Railways.....	14,486,823.46	
Sale of national estates.....	310,192.93	25,537.07
Land tax.....	81.00	
Interests and discounts.....	384,349.42	71,250.81
Redemption of quitrents.....	236,904.67	
Lease of public property.....	155,398.80	
Reintegrations.....	348,229.49	55,822.87
Deposits transferred to public incomes.....	3,637,465.07	189,559.89
Auction sales of Government lands—debtors.....	620,575.65	
Other sources of revenue.....	111,395.11	40.00
Exploitation of the Talcahuano dock.....	10,432.25	
Successions <i>ab intestate</i>	60.40	
Profit on auction sales of gold.....	2,384,706.42	
Consular dues.....	34.06	173,227.87
Mint receipts.....	2,210.97	8,028.14
Sundry debtors.....	270,342.60	76,066.11
Total.....	25,854,176.32	78,457,263.23
<i>Extraordinary receipts.</i>		
Auction sales of nitrate fields.....		328,698.86
Conversion bills and interest on same.....		1,083,216.41
Loans refunded by the banks.....	20,660,926.67	
Conversion fund.....		10,000,000.00
Grand total of revenue.....	46,515,102.99	89,869,178.50
Sundry creditors.....	196,548.32	182,310.73
Bills payable.....		172,200.65
Auction sales of gold.....	38,529,690.00	
Increase of the deposit account.....	7,269,356.14	
Balance of previous year.....	19,491,331.46	17,170,790.39
Total.....	112,002,008.91	107,394,480.27

The table which follows shows in detail the foreign debt of the Republic from the negotiation of the first loan in 1822 to the beginning of 1899:

Debts.	Origin and object.	Rate of interests.	Amount of issue.	Balance in circulation.
		<i>Per cent.</i>		
Loan of 1822	To create resources for the rising Republic.	6	£1,000,000
Loan of 1842	To liquidate the principal in circulation of the 1822 loan.	6	934,000
Loan of 1843	To capitalize the deferred interests of the 1822 loan.	3	756,500
Loan of 1858	For the construction of the Santiago and Valparaiso and the Santiago and Southern railways.	4½	1,554,800
Loan of 1865	For the purchase of war material to defend the country against Spain's aggression.	6	450,000
Loan of 1866	To attend to the expenses of the war with Spain.	7	1,120,920
Loan of 1867	To attend to expenses originating through the war with Spain and to cancel the loan of 1865.	6	2,000,000
Loan of 1870	For the construction of the Chilean and Talcahuano Railway.	5	1,012,700
Loan of 1873	For the acquisition of men-of-war and for the construction of the railway between Curicó and Angol and the branch line to Los Angeles.	5	2,276,500
Loan of 1875	To fund the loan of 1867 and to convert into foreign debt the issues originating from public works.	5	1,133,000
Loan of 1885	To cancel the 7 per cents of 1866	4½	808,900	£706,900
Loan of 1886	To cancel the debts of 1858, 1867, 1870, 1873, and 1875, and to apply £315,000 for the Peruvian Bank holders.	4½	6,010,000	5,350,000
Loan of 1887	To pay the Peruvian Nitrate certificates...	4½	1,160,200	1,040,100
Loan of 1889	For the construction of railways	4½	1,546,400	1,439,380
Loan of 1892	To pay the floating debt	5	1,800,000	1,704,300
International loan of 1892.	To redeem the paper money	6	149,000	135,060
Loan of 1893	To pay the Peruvian corporations' rights to the sale of guano.	4½	630,000	592,800
Loan of 1895	For amortization extraordinary of the municipal debts and redemption of Government paper money.	4½	2,000,000	1,928,500
Loan of 1896	To pay for the Coquimbo Railway	4½	265,000	257,040
Do.	For public works	5	4,000,000	3,901,800
Loan of 1894	Contracted by the municipality of Valparaíso for the Peñuelas water works, and assumed by the State in the latter half of 1897.	5½	200,000	174,800
Treasury bills, 1898.	For the public service	5	500,000
	Total.....	31,307,920	17,230,680

The foregoing table shows that the aggregate of the foreign loans incurred since the foundation of the Republic was £31,307,920, of which amount £17,230,680 was still outstanding at the beginning of 1899.

The internal debt of the Republic contracted from 1820 to the end of 1898 was \$170,484,020.67, national currency.

ECUADOR.

TRADE-MARK DECISIONS.

The Congress of the Republic of Ecuador decrees:

ARTICLE 1. Article 1 of the Trade-mark Law enacted in 1899, shall read: "There shall be established, in the Department designated by the Executive Power, an office for the registration of trade-marks."

ART. 2. Article 2 shall read: "The application to the proper Department for registration shall be accompanied with two facsimiles of the trade-mark."

ART. 3. Article 4 shall read: "The Department shall examine the application in order to determine if same is in accordance with the provisions of articles 2 and 3, and if such is the case shall order the registration and filing of the application. The registration shall be made according to the provisions of article 2.

"If it be a foreign trade-mark, the payment of 30 *sucres* shall precede the registration of the same, and if a domestic trade-mark by the payment of 10 *sucres*."

ART. 4. Article 5 shall read: "After the registration, the Assistant Secretary, at the request of the interested party, shall furnish him with a copy of the registration made on stamped paper number 9, and shall return to him, after having made the proper indorsement, one of the facsimiles of the trade-mark."

ART. 5. Article 6 shall read: "The copy referred to in the preceding article shall be published in the official newspaper, and if it should not be published within thirty days from the date of issue, the registration shall be forfeited.

"After the publication of the copy, the registration shall be in force from the date of the filing of the application."

ART. 6. Article 9 shall read: "The transfer of the trade-mark shall be recorded in the Register's office.

"If it should occur by means of a private document, the latter shall be acknowledged before the registration is made.

"The registration shall be published in the official newspaper."

ART. 7. Article 10 is hereby abolished.

ART. 8. The law enacted in 1900 modifying the trade-mark law is hereby repealed.

QUITO, *October 9, 1901.*

The President of the Senate,

MANUEL B. CUEVA.

The President of the House of Representatives,

ABELARDO POSSO.

The Secretary of the Senate,

N. A. CORREA.

The Secretary of the House of Representatives,

MANUEL E. RENGEL.

NATIONAL PALACE, *Quito, October 12, 1901.*

The Assistant Secretary of Public Works,

NICOLAS F. LOPEZ.

GUATEMALA.

MESSAGE OF THE PRESIDENT.

The message of the President of the Republic of Guatemala delivered to the National Congress on March 1, 1902, is an interesting document, in which the Chief Executive discusses in a masterful manner the principal events that have occurred in that progressive commonwealth since the meeting of the previous Congress.

The President refers in well chosen and appropriate words to the manifest benefits to be derived from the recent Convention of Peace and Obligatory Arbitration lately celebrated between the Central American Republics, and expresses his faith in and adhesion to the principles advocated in that notable document.

The message also speaks in the most laudatory terms of the opportune visits to the Republic of Guatemala of the Presidents of the Republics of Costa Rica and Salvador, and of the enthusiastic reception accorded the distinguished guests of the nation by the Government and people of Guatemala.

A paragraph is dedicated to the International Conference of American States, in which the President expresses his satisfaction at the results obtained and the recommendations made by that body, and in which he pays a high tribute to the valuable services rendered the Congress by the delegate from Guatemala, Señor Don ANTONIO LAZO ARRIAGA.

The President states that, without having to negotiate new loans or increase the rate of taxation, the Department of Finance has been able, in 1901, to pay for account of the expenses of the Government and in liquidation of the public debt the sum of 10,000,000 *pesos*. It is the policy of the Government to meet promptly all of its financial

obligations, and earnest efforts are being made to strengthen in every way possible the financial condition of the country.

The Departments of Posts, Telegraphs, and Telephones are in a satisfactory condition, and a gradual improvement is noticeable in these important branches of the public service.

Agriculture, the principal industry of the country, has received and is receiving the especial attention and fostering care of the Government, and is being encouraged and promoted by every means possible.

Considerable interest has been manifested in the mining industry during the last year, and conditions are propitious for the rapid development of this branch of the natural resources of the country. Deposits and mines of the precious metals abound in the cordilleras and their ramifications that traverse the Republic, some of which, such as the gold placers of Las Quebradas, are being profitably exploited, and are capable of still further development.

The Northern Railway, at the time of the delivery of the message, was within 3 miles of the town of Sanarate—that is to say, 20 miles of the roadbed had been completed, and, with the exception of the masonry work and the erection of bridges, was ready for the placing of the ties and the laying of the rails. There were on hand 1,760 tons of rails, a quantity sufficient to cover the 20 miles referred to.

On December 17 last, the construction of the railway known as the Los Cacaes line, which is planned to connect the departments of Escuintla and Mazatenango, was initiated. Work on this line is being rapidly pushed forward, and when completed will place the entire southern coast of the Republic in direct rail communication with the central and southern portions of the country.

Work on the railway surveyed to extend from Retalhulen to Quezaltenango, in the western part of Guatemala, is also being carried forward, and will ultimately become one of the most valuable links in the railway system of the Republic.

HONDURAS.

FOREIGN COMMERCE IN 1901.

The "Nouveau Monde" (Paris), of March 8, 1902, states that the commerce of Honduras is constantly increasing, the imports have risen from \$1,131,315 in 1897 to \$4,168,600 in 1901, and the exports, from \$2,647,248 in 1897 to \$6,183,023 in 1901.

The imports for 1901 were distributed as follows from the different ports of the Republic:

Amapala, \$1,857,002; Puerto-Cortes, \$1,521,168; Ceiba, \$454,563; Trujillo, \$264,143; Roatan, \$71,721

The principal countries from which these imports were received were the United States, \$2,792,822; Germany, \$486,373; England, \$471,650; France, \$101,855; British Honduras, \$152,800; Central American States, \$107,402.

The principal exports in 1901 were: Precious metals, \$2,279,115; fruits (bananas), \$1,945,388; cattle, \$557,316; coffee, \$275,193; cabinet woods, \$274,255; tobacco, \$213,423; hides and skins, \$182,345; indigo, \$107,365; sundries (hats, wheat, salt, etc.), \$177,503. The United States receives 70 per cent of the exports, Germany and the Central American States dividing the balance.

Although in 1901 the exports exceeded the imports by \$2,014,000, the value of the products exported from Honduras is relatively insignificant, the great wealth of the country being considered. Quantities of products which are a source of wealth for other countries, such as textile materials, skins of horses, sheep, and wild animals, dividivi (so abundant on the southern coast), rosins, gums, bananas, vanilla, spices, oleaginous grains, etc., are practically still undeveloped.

DEPARTMENT OF ATLANTIDA.

The United States consul at Utila has informed the Department of State at Washington, under date of March 3, 1902, that the National Congress of Honduras has created a new Department (corresponding to a State in the United States) on the north coast of the Republic, which is called Atlantida. This Department extends from Tela on the west of Belfata on the east, a distance of 60 miles, and has an interior extent (north to south) of 50 miles, covering the rich banana plantations along the coast on the Caribbean Sea. The seat of government will be at La Ceiba, on the coast, about halfway between the two ports named. La Ceiba owes its origin as a port of entry to the development of the fruit trade. It is visited regularly by steamers and does a large export trade in bananas and other tropical fruits. The consul states that action is being taken regarding the installation of waterworks and other improvements in this city, and that the change will cause much building, especially as lumber has been put on the free list for one year. The law creating the new Department and establishing its capital will go into effect on September 15, 1902.

MEXICO.

EXPOSITION OF ORES AT TORREÓN.

An exposition of the mining and metallurgical resources of the State of Coahuila, to be held at Torreón under the direction of Señor M. DE CORRELLY, has obtained the support of a number of the prom-

inent citizens and capitalists of the city and the work has been successfully inaugurated. In continuation of the certain benefits of the exposition it has been decided, according to the "Miner and Manufacturer" of El Paso, to establish a paper as the official organ of the "Gran Exposición de Minería y Metalurgia de Torreón," which is to be published in Spanish and English and which will be sent to persons interested, in Mexico, the United States, South America, and Europe.

The city of Torreón is on the Central Railway and on the route of the Coahuila and Pacific line now under construction. When the latter road is finished, Torreón will have direct connection with the port of Tampico. Owing to the mineral development of the mining regions in its vicinity, Torreón has grown within five years from a village to an ambitious city of 30,000 inhabitants. The aim of the people is to make the exposition worthy of the State and city.

THE IRON MOUNTAIN OF DURANGO.

"Modern Mexico," for April, 1902, says that the iron mountain of Durango has long ranked among the wonders of Spanish North America. Early travelers surrounded it with descriptions as fascinating as those told of the seven cities of Cibola. Even Humboldt recorded it as an immense mountain of meteoric iron, while Weidner, some fifty years ago, asserted that it was a vast outburst of molten iron, of volcanic origin, having connection with a still greater subterranean supply. Reclus asserted that the mass of iron contained enough metal above ground to supply the whole of North America for one hundred years. Mr. JOHN BIRKINBINE, president of the American Institute of Mining Engineers, after a visit in 1882, described the mountain as follows:

"Just beyond the limits of the city of Durango and less than 2 miles from its center, rises the Cerro de Mercado, a hill nearly a mile long and a third of a mile wide, and from 400 to 600 feet in height. The surface of the mountain exposing ore, classified as good mining lands, aggregates 10,000,000 square feet, but there are indications that the deposits are not all above ground. I incline to the belief that the Cerro de Mercado is formed of one or more lenses of specular ore, standing nearly vertical, the fragments of which have for ages been thrown down to form the slopes of the mountain as a talus. I am free to say that, after having visited the iron-ore mines of the United States, I have as yet found nothing to compare as to quantity in sight with the Cerro de Mercado of Durango."

The ore, as shown by Professor SILLIMAN, is specular hematite known as martite, a pseudomorph after magnetite, for which it is often mistaken. In composition the pure ore contains 62 per cent of metallic iron, while average specimens selected to show the run of the whole mass yield 52 per cent of iron.

INCREASED CONSUMPTION OF COAL AND COKE.

The importation of coal and coke by Mexico shows a notable increase when the annual statistics covering the five years ending June 30, 1901, are compared. During the fiscal year 1896 (1896-97) the quantity of coal imported was 310,666 tons, worth \$881,557, while the 93,671 tons of coke purchased were valued at \$439,593, making an aggregate of 404,337 tons, worth \$1,321,150. The importations increased each year until 1899-1900, when the coal was represented by 801,618 tons, worth \$1,636,218, and the coke by 196,888 tons, worth \$779,687; a grand total of 998,506 tons, valued at \$2,415,905. During the fiscal year 1901 (1900-1901) the production of coal at the Coahuila mines near Barrateran and Hondo increased very much and partially supplied the domestic demand, hence the coal imports decreased during the year named to 585,546 tons, worth \$1,519,965. The imports of coke, however, increased to 238,313 tons, which were valued at \$1,026,728. This made an aggregate of 823,859 tons, valued at \$2,446,693.

The consumption of coal and coke has increased so rapidly in Mexico as to induce United States prospectors to search for coal in Sonora and Tamaulipas, and an English company is prospecting for the same mineral product in Puebla. The workings of the coal mines at Esperanza, Barrateran, Fuerte, and Hondo have been enlarged and the production greatly increased. Besides this, the Monterey Foundry Company proposes to open mines in the State of Nuevo Leon.

The fuel employed most generally in Mexico is charcoal, it being used almost exclusively for domestic purposes and even in light manufacturing. It is reported, however, that the supply of timber from which charcoal is prepared is rapidly diminishing, and the necessity for a substitute has an important bearing on the mining of coal and the importation of coal and coke.

THE HIDALGO BANK AT PACHUCA.

The charter of the Hidalgo Bank for the city of Pachuca, State of Hidalgo, is reported by the "Mexican Herald" as having been signed on the last day of February, 1902. The concessionaires named are Messrs. MAQUIVAR & Co., C. F. DE LANDERO, MANUEL ARNOZ, and J. O. FERNÁNDEZ. Like all similar instruments this charter was based on the provisions of the general banking law of March 19, 1897. Its main conditions are as follows:

The title of the bank shall be "Banco de Hidalgo;" present capital, \$500,000 Mexican; domicile, the city of Pachuca; guaranty deposit in the Federal Treasury, \$50,000 in bonds of the 3 per cent consolidated debt; exemption from taxation during twenty-five years as granted by the general banking law to the first chartered bank of issue established in any State; payment of \$3,000 per annum into the Federal Treasury

to cover the expenses of the Government *interventor*; duration of the charter, thirty years; transfer of the charter prohibited without the consent of the Secretary of the Treasury; officials or employees of the State prohibited from becoming members of the board of directors or managers of the bank.

Like all other State banks the Banco de Hidalgo has the right to issue bank notes. Its agent and correspondent in the City of Mexico will be the Banco Central.

PROPOSED LINEN MANUFACTORY AT TLAXCALA.

The "Mexican Herald" of March 21, 1902, states that a linen factory is to be established in Tlaxcala, with a capital stock of \$400,000 Mexican. The shares, of \$100 each, have been subscribed for by persons in the City of Mexico, Puebla, and Tlaxcala. The promoter of this enterprise, Señor GERARDO EMILIO HERRERÍAS, is reported to have successfully engaged in the cultivation of flax (the variety known as "Riga") during several years past, and is convinced that this product can become one of importance for the Republic. Most of the linen fabrics now used in Mexico are imported from Great Britain.

INCREASED FACILITIES FOR MAKING FURNITURE.

Late advices state that the American Furniture Manufacturing Company has purchased 35,000 square meters of land in the Nonoalco section of the City of Mexico, adjoining the Central Vera Cruz and National railways, from which side tracks will be run to the new factory, which is to be built at once. Houses will also be constructed for the employees. The company was organized four years ago, and is said to be the only establishment on a large scale that does an Oriental furniture manufacturing business in Mexico. It is stated that the company will shortly be reincorporated with a capital of \$2,500,000.

RAILROAD CONSOLIDATION.

On March 13, 1902, the New York press announced that the final papers in the purchase of the Monterey and Mexican Gulf Railroad by the Mexican Central line had been completed, since which time the reports has been confirmed by the Mexican papers. By this purchase the Central system gains 387 miles of road.

The Monterey and Mexican Gulf Railroad runs from General Trevino to Tampico, and was built in 1889 under a concession by the Mexican Government. On September 3, 1892, the road was placed in charge of a receiver by the Federal court of the State of Nuevo Leon. In December, 1895, the road was turned over to the Belgian Society of Railways in Mexico, Limited, which purchased the property.

By the acquisition of this railroad the Mexican Central secures another entrance into Tampico, the most important harbor on the

eastern coast of Mexico. The company already has a branch line from Chicalote east to Tampico. The Monterey and Mexican Gulf Railroad connects with the Mexican International line at General Trevino.

Large deposits of iron ore and coal beds have recently been discovered along the company's lines, and it is believed its acquisition will prove a valuable feeder to the Mexican Central.

NEW MINING COMPANY.

The United States and Mexico Mining Company was recently incorporated under the laws of Arizona, with a capital stock of \$5,000,000. The properties owned by this company consist of 11 groups of mines, embodying 92 mining claims. They are located in the mineral district of Hostotipaquillo, Jalisco, one of the most ancient mining districts of the Republic. The veins in the various properties are of immense size and are true fissures. The mines are easily drained without the use of pumps, and an abundance of power can be had from the Santiago River, a 150-foot fall being situated only $2\frac{1}{2}$ miles distant. Several assays have been made of ore taken from the different veins at a depth varying from 80 to 250 feet, and values from \$22 to \$600 per ton were obtained. The company has now about 150 men at work.

NEW UNITED STATES BANKING INSTITUTIONS.

The activity of United States capitalists in extending banking facilities in Mexico attracts notice. The new State Bank of Chiapas, on the Guatemalan border, has been opened for business with half a million dollars capital. The new bank of Orizaba, with a paid-up capital of \$150,000, is also a recently established institution, the stock being held by citizens of the United States residing in the City of Mexico. Orizaba is now an important business center, and has hitherto lacked banking accommodations. There is talk of establishing a United States bank in the famous mining city of Pachuca.

All such banks in the country are flourishing, and there is a rumor of the ultimate consolidation of these institutions, making one great corporation with branches, which shall be commensurate with the growing commercial relations between the United States and Mexico.

MINING NOTES.

The Department of Fomento has made public a statement, which shows that during the calendar year 1901 the number of mining title deeds issued in Mexico was 3,287, covering 53,554 hectares.

It is stated that the United States company which recently purchased the Mulatos property in the State of Sonora contemplates the erection of reduction works capable of treating at least 2,000 tons of

ore a day. The existing works comprise a 325-ton stamp mill and a 250-ton cyanide plant. At present, transportation is wholly by mule-back for more than one hundred miles across the mountains to the Sonora Railway. Work has begun, however, on a wagon road, which involves an expenditure of \$300,000 gold. The question of power will be settled by the installation of works on the Mulatos River, whence the electrical energy will be transmitted to the mines.

Iron ore from the Solonduna district, Mexico, where the supplies for the Monterey steel plant are to be secured, is to be shipped to the Maryland Steel Works, at Sparrows Point, Maryland. Arrangements, according to Mexican advices, are now being made and shipments will commence soon. The construction of the Monterey plant is now reported to have reached a point where it can be stated with certainty that the works will be able to turn out steel rails by September, 1902. The company has decided to bid for the orders of the three principal railroads of Mexico by manufacturing rails corresponding in weight to their various standards. The Mexican Central standard is said to be 81 pounds, that of the Mexican International, 75, and of the Mexican National, 70 pounds.

Recent advices state that the Mexican Mining and Smelting Company, organized with a capital of \$10,000,000 (gold), is making active preparations for the construction of a smelter plant in the city of Monterey. The company, it is said, also proposes to develop mines throughout the State of Nuevo Leon and other parts of Mexico.

SHOE FACTORY AT TORREON.

A shoe factory costing \$300,000 for buildings and equipments has been completed at Turreon, and arrangements are being made to open up all the departments, including a well-equipped tannery. A dozen skilled shoemakers from one of the large factories in Massachusetts have been engaged and are now employed in teaching native workmen how to operate the machines for making foot wear of United States types.

THE RUBBER INDUSTRY.

The "Mexican Herald" of February 9, 1902, contains the following item:

"Orders for *caucho* (rubber) aggregating over \$70,000 silver have been lately received, and will be supplied by the rubber plantations of the States of Vera Cruz and Oaxaca. The first crop of rubber will be harvested in the spring, on the Isthmus of Tehautepec, from the plantations stocked five years ago. A great many new plantations will be stocked in the States of Oaxaca and Vera Cruz, and the first rubber factory in the Republic is soon to be built at Coatzacoalcos, the necessary capital having been subscribed by the proprietors of the rubber plantations of the Isthmus."

MISCELLANEOUS NOTES.

In January the Department of Fomento received from Sumatra a consignment of grapevine cuttings and tobacco seed, and from Japan some tea plants, which will be distributed to agriculturists who have lands suitable for their cultivation. Chinese tea plants had previously been planted in the district of Comitán, and the results have induced other planters to entertain the idea of tea culture on a large scale. Lands which produce coffee have been found to be also suitable for the production of tea.

The "Mexican Herald" states that the Commission on Vegetable Parasites, before the Agricultural Department of Mexico, has received from the Institute of Bacteriology in Grahamstown, Cape Colony, Africa, a number of tubes containing fungi for the destruction of locusts, which so frequently devastate the fields of the Republic. The Commission will distribute these tubes to applicants, together with instructions as to the use of their contents.

On March 15, 1902, a postal treaty between Mexico and Bolivia was signed in the City of Mexico. The signatory parties were Señor Don IGNACIO MARISCAL, Minister of Foreign Affairs of Mexico, and Señor Don FERNANDO E. GUACHALLA, Envoy Extraordinary and Minister Plenipotentiary of Bolivia near the Governments of the United States and Mexico.

On February 28, 1902, the 24 chartered banks of Mexico reported funds on hand consisting of \$55,998,043.80 cash and \$7,416,310 in notes on other banks. The notes in circulation from all of these banks amounted to \$86,764,615.25 and the reserved fund to \$15,243,-876.89, on the date named.

Reports from Vera Cruz assert that the cultivation of ramie has been successfully accomplished during the last two years on lands along the Tesechoacan River. The crop is being cut and decorticating machinery has been secured by the planters.

On March 25, 1902, MARCOS DE LA GARZA, of the city of Chihuahua, Mexico, was granted a patent (No. 695,898) in the United States on a "solar heating apparatus."

NICARAGUA.**MESSAGE OF THE PRESIDENT.**

On January 1, 1902, Señor Don JOSÉ SANTOS ZELAYA, President of the Republic of Nicaragua, read an important message to the National Congress.

In this message the President reports that since the convening of the previous Congress in the fall of 1901 but few events of national

importance have occurred; that the country has continued to enjoy the blessings of domestic peace and tranquillity; that the laws of the nation have been impartially administered, and that the Nicaraguan people have diligently followed their industrial pursuits and occupations.

Considerable space is devoted to the subject of the Inter-oceanic Canal, and a clear and concise review of the negotiations carried on between the Government of the United States and that of Nicaragua, as they existed at the time of the delivery of the message, is given.

Reference is made to the premiums awarded Nicaragua upon her exhibits at the Pan-American Exposition, that country occupying the sixth place in importance as compared with the other nations of the Western Hemisphere.

Mention is made of the reception of the Envoy Extraordinary and Minister Plenipotentiary of Chile near the Government of Nicaragua, and a high tribute is paid to the many fine qualities of the distinguished Minister of the Chilean Republic, Señor Don GALO IRARRAZÁBAL Zañartu.

The President states that a treaty of commerce and navigation is now under consideration with Great Britain, but that at the time of the delivery of the message nothing definite regarding the same had been decided upon.

The foreign relations of Nicaragua have continued friendly and cordial with all the world, and the Republic has established a number of new legations at the different courts of Europe.

The internal affairs of the nation have continued their usual satisfactory course, the object of the Government being now, as in the past, to promote and develop the latent resources of the Republic by every means within its power.

COMMERCE WITH SAN FRANCISCO IN 1901.

The MONTHLY BULLETIN has received from Dr. V. M. ROMÁN, Consul of the Republic of Nicaragua at San Francisco, Cal., an itemized statement of the commerce between the port of San Francisco and the ports of Corinto and San Juan del Sur, Nicaragua, in 1901. The total trade, during the year, between the ports mentioned, amounted to \$264,027.20, and consisted of 54,094 packages of merchandise weighing 3,682,903 kilograms. The following table shows the quantity and value of these exports in detail:

TO CORINTO.

Articles.	Number of pack- ages.	Weight.	Value.
		<i>Kilos.</i>

CONTRACT FOR A DOCK AT CORINTO.

A dock is to be constructed at the port of Corinto, Department of Chinandega, on the Pacific coast of the Republic. This dock is to be built under a concession granted to Mr. T. M. SOLOMON by the Government, in May, 1901, and approved by the National Congress in February, 1902. It is to be 500 feet long by 315 feet wide, and is to be constructed of iron. Its cost is to be \$150,000 gold, and one year is the time limit allowed for its completion, the year to date from the approval of the contract. After fifty years the dock is to become Government property. The concessionaire is to be compensated by the collection of certain sums from freight and passengers arriving and departing at that point.

ELECTRICAL INSTALLATIONS.

Press reports state that the steamer *Esther*, specially chartered, left New Orleans on March 18, 1902, for Grey Town (San Juan del Norte), Nicaragua, loaded with electrical equipment valued at \$75,000. This shipment was the first installment for an electrical enterprise entered into by a number of citizens of the United States who have secured

concessions for the lighting of the cities of Managua, Leon, Masaya, and Granada. The plant at Managua will be supplied with power by steam and is to be completed in eight months. The power for the plants in the other cities named will be furnished by the falls of the Tippicata River, 60 miles from the route of the proposed Panama Canal. This river connects lakes Managua and Nicaragua. The power will be supplied at a cost of several hundred thousand dollars and the necessary equipment will be completed in three years. Long-distance transmission of the latest type will be employed in conveying the electrical current. The concessions give to the promoters a monopoly of all forms of electrical lighting, both public and private, in the cities named.

PERU.

AGRICULTURAL AND COMMERCIAL SITUATION.

An article published in a recent issue of "Berichte über Handel und Industrie," of which the following is a translation, contains an account of the agricultural situation and commerce of Peru. Commerce and trade are very flourishing; the United States, Great Britain, Germany, France, Belgium, Italy, and several of the South American Republics having uninterrupted commercial intercourse with Peru.

The principal agricultural products are: Cacao, coffee, sugar cane, rubber, coca, cotton and cotton seed, maize, manioc, potatoes, quinine, rice, tobacco, and wine, as well as wax, animal hair, hides, wool, bones, honey, straw, and feathers.

Cacao.—The yearly production varies from 1,500,000 to 2,000,000 kilograms. Half of this is used in the country itself, the rest being exported to Bolivia. It is interesting to note that a certain amount is shipped to Manãos, the Brazilian port, whence it is again shipped to various countries under the name of Pará cacao. Besides the large exports to France there have been quite a number of consignments sent to Germany. In 1898, cacao, to the amount of 457,145 kilograms, was shipped to Hamburg from Peru. The exportation of cacao to France has increased 15 per cent in the last three years.

Coffee.—Of the 1,215,115 kilograms of coffee exported, about eight-tenths were sent to Hamburg. The exportation to France diminished 120,000 kilograms.

Rubber.—The rubber industry is one of the most important branches of Peruvian commerce. The plantations are on the eastern slopes of the Andes, in the region between the Amazon River and its affluents, and especially in the Department of Loreto. According to report, only one-hundredth part of the trees are used in the extraction of the product. On account of the vast extent of this region it is impossible

to gather any definite figures for the yearly production. It must not be forgotten, however, that a great deal of Peruvian rubber is carried to Manãos by the water route and is there sold as a Brazilian product. Although 1900 was an exceptionally bad year on account of the premature floods, the production increased by 129,554 kilograms. During the last years the price for fine gum was 52 *sols*, for Sernamby 42 *sols*, and for caucho gum 31 *sols* per arroba.

Coca.—Germany leads in the importation of this article from Peru, the cocaine which it contains being greatly valued in that country.

Cotton.—The cotton from Puira fetches the best market price, as it is especially suited for making “half-woolen” articles.

Cotton seed.—Great Britain takes the main part of the cotton seed. The exports of this product amounted to 1,130,432 kilograms in 1900.

Sugar.—Sugar production received an impetus during 1901, the exports now exceeding 100,000 tons yearly. The most important buyers of this article are Chile, the United States, and Great Britain.

Maize, potatoes, rice, tobacco, wine, wax, honey, horns, wool, bones, and hides are all exported, producing returns of more or less commercial importance. To these might be added the following articles: Matico pepper, principally exported to Germany; vegetables and fresh fruit, sent to Ecuador; onions, mostly consumed in the Republic itself; pimento, bought by Bolivia and Chile; olives, exported to all countries, but principally to Bolivia; and ipecacuanha and other medical plants, shipped abroad mostly by way of the port of Iquitos.

The mining industry has become of great importance in Peru. In 1900 the minerals exported amounted to 23,148,279 kilograms, valued at 10,667,013 *sols*. The following is a list of the metals found in Peru: Antimony, silver, bismuth, borax, pit-coal, copper, tin, mercury, gold, salt, sulphur, and petroleum.

Amongst the industries the following are of special interest: Brewing, brickmaking, foundries, tanneries, and furniture factories. All these are prosperous, especially the first. There are also new cotton and wool factories.

CHIEF ARTICLES OF IMPORT.

Among the articles imported are the following:

Stockings made of cotton come from Germany; Great Britain and France send these articles in wool and silk. Shawls are mostly sold in the interior of Peru, where it is colder than in other sections; Germany and Great Britain furnish a fairly good article. Germany and Great Britain send quite a number of cotton blankets and mats, as the domestic production is not sufficient for the demand. Bed ticking, although made in the country, does not meet the demand; Italian goods are used a great deal. Neckties come partly from Germany and partly from France; this latter country furnishes mostly silk articles.

Cloths are mostly provided by Great Britain, but for ladies' dress goods the French stuffs are generally favored. Great Britain furnishes the greatest quantity of flannels, especially cotton flannels. Cuffs come from Germany, Italy, and France.

Steel used for industrial purposes is imported from Great Britain; Germany and the United States also supply part of this market. Agricultural machines and tools come from Great Britain, the United States, and Germany. Electrical implements are imported in great quantities from Great Britain, Germany, and the United States.

Needles for sewing machines are supplied by the United States; sewing needles come mostly from Aachen (Germany) and from Great Britain. Crochet needles come from France. Pins are imported from various countries, Great Britain and Germany sending the greater quantity; the latter country also sends hairpins. Enameled hardware is imported almost exclusively from Germany.

Great Britain and Germany supply the wrought-iron wares. Locks are imported from the United States to an average of 15,000 dozen a year. German pocketknives have taken the place of English wares on the market. For table knives, "Sheffields" are considered the best, as also for butchers' and shoemakers' knives. Spoons come almost entirely from Great Britain; France furnishing a very small amount of plated spoons.

Portable kitchen stoves for gas are very little known, whereas petroleum cooking apparati are extensively used and come from Germany. In copper wares Great Britain alone rivals the United States.

Tools for various trade branches are furnished by Germany, Great Britain, the United States, and France; the latter supplies shoemakers' tools especially.

Iron bedsteads still continue to come from Great Britain; the United States, though, is making great progress in this industry and running England pretty closely.

The United States supplies almost entirely the market for electrical machinery. Many different kinds of machinery are imported from Great Britain.

The ability of the United States to produce such good articles cheaply is killing the German trade in watches. The watch chains are nearly all of German origin.

Notwithstanding the large domestic production of beer, Germany furnishes a quantity of this beverage. France supplies about 25,000 liters of bitter liquors yearly, notwithstanding the domestic product of Peru. Ginger ale, soda water, lemonade, etc., come from Great Britain. Regarding mineral waters, it is noted that the French "Vichy" is universally liked; besides this Apollinaris and Janos waters

are also imported. Brandy comes from France. English whisky is also used to a considerable extent.

The so-called Swedish matches come by way of Hamburg; wax matches come from Italy. Brooms for ship purposes are supplied by Germany; for ordinary use the domestic production is sufficient. Brushes made of fibers come from France; Great Britain supplies washing brushes; France and Chile the better qualities of clothes and toothbrushes; the ordinary kinds come from Italy, England, Germany, and the United States; the latter two countries also furnish shoe brushes.

Corks are sent from Spain, the United States, and France, though Germany supplies a small quantity. Bottles come from Chile, Belgium, and Germany. Metal caps for bottles are being imported in always increasing quantities from Germany.

Buttons come mostly from Germany; France furnishes shoe buttons only. Ladies' straw hats come from France, men's straw hats from Italy, and the ordinary bathing hats from Belgium and Great Britain. The last-named country divides the trade in men's felt hats with Germany.

Cement is supplied by Great Britain and Germany only; Peru's importation is calculated at 3,000,000 kilograms per year. Chalk comes from Germany. It is put up in packages of 12 pieces, each neatly wrapped in colored paper.

The United States and Germany are great rivals in the trade in pencils.

Dynamite pays no duty in Peru; it is imported exclusively from Germany and amounts to about 15,000 kilograms annually.

Glue comes mostly from China.

Nails are imported from Germany, Belgium, and the United States.

Crystal wares are brought from Germany, including the so-called Bohemian glass. The United States occupies the second place and Belgium and France follow.

Italian butter is consumed generally and is superior to the Chilean, German, and French products.

The cheaper kinds of jewels are furnished by Germany; France supplies better articles.

Caoutchouc wares are imported from the United States. Geographical maps come mostly from Great Britain. Toys come mostly from Germany. The domino games come from China. The United States has almost a monopoly in the sale of trunks.

Shoes (ladies') come exclusively from France. Woolen and silk gloves come now almost entirely from Germany. Fans are imported from China. The yearly amount is about 1,000 dozen. France furnishes about 200 dozen.

Jams and preserves are furnished entirely by the United States.

Porcelain is brought from Germany and China. Lamps are supplied exclusively by the United States and Germany.

The Italian cheese is very much favored. Chile furnishes the "*mantecosos*" and Great Britain the Cheshire cheese.

The remaining articles imported are as follows: Wooden wares, boarding, cinnamon, pictures, mathematical instruments, mainly from Germany; shoe strings, leather, knitting cotton, tar and wicks, mostly from Great Britain and Germany; the United States furnishes machine oil, hams, and paper; France, Belgium, and Italy send cardboard, inks, envelopes, sponges, artificial flowers, glass, oil, musical instruments, books, spectacles, medals, pocket mirrors, mustard, olives, perfumes, trimmings, and paints. For building the Italian marble is preferred. Mercury is imported from Germany, Great Britain, and France.

Traffic has improved in every way of late. There are 11 steamship companies, 8 of which are engaged in sea navigation and 3 in river traffic. The most important are: The English Pacific Steam Navigation Company, the German Steamship Company, "*Kosmos*," and the Amazon Steam Navigation Company.

The railways, postal service, and telegraph service have all increased in importance within the last few years.

PROJECTED RAILWAY LINE.

According to the report of the Secretary of the Legation of the United States at Lima, an Executive Decree has been issued granting to Mr. JAMES B. HAGGIN, the concessionaire of the railroad from La Oroya to Cerro de Pasco, a term of one year in order to complete a preliminary survey of the projected line. If the practicability of the undertaking is established the Government will grant the concession. The proposed new railroad will start from Chancay or Huacho, on the coast, about 27 miles north from Callao, and run directly into the interior of the country, about 100 miles, to Cerro de Pasco, in the center of the famous mines.

EXTENSION OF THE RUBBER DISTRICTS.

The British Consul at Iquitos, in his report to the trade of that port in 1901, stated that the general trade conditions were good during the year. The exports consisted almost entirely of rubber. In addition to the ordinary kinds of rubber, a new variety, classed as "*weakfine*," has engaged attention, some small shipments having been made with satisfactory results. The trees producing such rubber are said to exist in large number in many districts of the Republic. The areas furnishing fine rubber are being continually extended, with no diminution of the supply from older producing sources. One of the most important river districts which have been opened during the past year

is the Putumayo or Ica Valley, partly in Peru and partly in Brazil. The districts bordering on the Alta Marañon River and its tributaries are also attracting the attention of rubber gatherers.

The United States Secretary of Legation at Lima, under date of February 19, 1902, informed the Department of State at Washington of the formation of a rubber company in that city with a capital of £26,000 (\$126,529) to operate in the Province of Sandia, Department of Puno. Another company will take possession of 50,000 hectares (123,550 acres) of land near Marcapata, to exploit the rubber thereon. Other rubber lands in the vicinity have been acquired, and about 500 gatherers are already at work, with results amounting to 100 pounds per month. The Secretary adds that the denouncement of the lands costs little, although the measurement of the concessions is expensive. To measure 30,000 hectares (74,130 acres), costs about £1,000 (\$4,870). It is believed that rubber is destined to become a most important source of wealth to Peru.

EXHIBITION OF ALCOHOLS AND ALCOHOL APPARATUS.

The Government of Peru has decided to organize a display of alcohols, including exhibits showing the processes of manufacture and the methods of use, to be opened at Lima on September 1, 1902, and closing on the 30th of the same month. Peru produces large quantities of alcohol, and the object of the proposed exhibition is to display the many uses to which it may be applied—for driving motors and for lighting and heating purposes, in addition to the preparation of beverages of which it may be the chief component. Exhibits of apparatus for manufacture and rectification, as well as appliances for the uses named above, besides books and pamphlets relating thereto, are requested from abroad.

Señores Don JOSÉ BALTA, Director of Fomento of the Republic; Don EDUARDO HABICH, Chief of the Engineering College, and Don ALEJANDRO GARLAND have been appointed as Commissioners to the Exhibition. Interested parties will receive full information by addressing any one of the above-named persons at Lima.

SALVADOR.

COMMERCIAL CONVENTION WITH FRANCE.

The "*Journal Officiel*" of Paris, January 28, 1902, contains a decree promulgating the commercial treaty signed at Paris the 9th of January, 1902, between France and the Republic of Salvador. The following is a translation of this document:

"By a decree dated January 23, 1902, published in the "*Journal Officiel*" of January 29, the President of the Republic of France and

the President of the Republic of Salvador, equally desirous of promoting the development of the commercial relations between the two countries, have decided to conclude a convention for this purpose and have named for their respective plenipotentiaries:

“The President of the French Republic;

“Mr. TH. DELCASSÉ, deputy, Minister of Foreign Affairs of the French Republic;

“And the President of the Republic of Salvador;

“Dr. RAFAEL ZALDIVAR, Envoy Extraordinary and Minister Plenipotentiary of the Republic of Salvador, near the President of the French Republic, great officer of the order of the Legion of Honor;

“Who, after having communicated their full powers and having found them to be in good and due form, have agreed as follows:

“ARTICLE 1. Coffee and other products enumerated in Table A, annexed to the present convention, shall enjoy, on being imported into France, Algeria, the French Colonies and Possessions, and the protectorate countries of Indo China and Tunis, the lowest customs tariff applied to similar products of whatever foreign origin.

“ART. 2. Reciprocally, natural and manufactured products coming from France, Algeria, the French Colonies and Possessions, in the protectorate countries of Indo-China and Tunis, shall enjoy, on being imported into the Republic of Salvador, the lowest customs taxes applied to similar products of whatever foreign origin.

“The valuation tariff (*tarif de aforo*) at present in force in Salvador shall be reduced on the French articles enumerated in Table B, annexed to the present convention, so that these products shall in no case be liable, on entering Salvador, to higher official valuations than those stipulated in Table B.

“ART. 3. The certificates from the place of origin, which may be required for the admission of merchandise subject to a favored customs régime, shall be viséd by the French Consuls and by the Salvadorian Consuls free from consular fees.

ART. 4. The present convention shall be ratified by the Governments as soon as possible, and the ratifications shall be exchanged at Paris. It will enter into effect immediately after the exchange of the ratifications and shall remain in force for a period of one year from the date on which one of the high contracting parties shall have manifested its intention not to be bound by the same.

“By virtue of which the above-mentioned plenipotentiaries have signed the present convention and have affixed their seal.

“Made in duplicate at Paris, January 9, 1902.

“[L. s.]

(Signed) DELCASSÉ,

“[L. s.]

(Signed) RAFAEL ZALDIVAR.”

TABLE A.—*Products coming from the Republic of Salvador which shall enjoy, on being imported into France, the lowest customs taxes.*

Coffee, cacao, chocolate, Cayenne pepper, amomums and cardamoms, cinnamon, cassia bark, nutmegs, mace, cloves, vanilla, tea, indigo, rubber, balsam, palm oil, palmetto oil, cocoa oil, castor oil, sesame oil, and similar other oils.

TABLE B.—*Duties to be collected per kilogram, on the entrance of French merchandise imported into Salvador, according to the following valuations:*

	Pesos.
White table wines.....	0. 05
All kinds of liquors in receptacles of one liter or less than one liter.....	. 40
The same, of more than one liter.....	1. 00
All kinds of sardines.....	. 20

Cigar holders, material not designated.....	. 45
Gold and plated jewelry.....	7. 50
Gold and silver buttons.....	1. 50
Surgical instruments.....	Exempt

MARITIME MOVEMENT IN 1901.

The Bureau of Statistics of the Republic of Salvador has published an interesting table showing that, in 1901, vessels to the number of 515, and carrying 204,157 packages of merchandise and 2,626 passengers

entered the ports of the Republic. During the period mentioned 514 vessels cleared from the same ports, viz, Acajutla, La Libertad, and La Union, carrying 424,304 packages of merchandise and 2,567 passengers. The following tables show the entrances and clearances in detail by ports:

Ports.	United States.	Chile.	England.	Germany.	Total.	Packages.	Passengers.
ENTERED.							
Acajutla.....	79	50	47	35	211	118,895	1,786
La Libertad.....	76	37	36	29	178	50,607	293
La Union.....	46	23	34	23	126	34,655	547
Total.....	201	110	117	87	515	204,157	2,626
CLEARED.							
Acajutla.....	77	50	47	36	210	268,569	1,758

Total.....	199	109	118	88	514	424,304	2,567

POSTAL TRANSACTIONS IN 1901.

In 1901, according to statistical data published in the "Diario del Salvador," the post-offices of the Republic of Salvador handled 1,623,561 pieces of domestic mail matter and 61,893 sacks of mail. The international service consisted of 494,900 pieces of mail matter and 7,390 bags of mail. During this period 6,033 postal packages (5,873 of which were registered), valued at \$44,538.45 silver, as compared with \$22,485.10 silver in 1899, were handled. There were issued in the capital of the Republic in 1901, 125 postal orders, aggregating \$1,728.69 gold, or \$4,054.33 silver. During the same period the payments of money orders in the city of San Salvador amounted to \$478.67 gold, or \$1,080.80 silver. The dead-letter office handled during the year 1,209 pieces of mail matter, of which number 512 pieces were returned to the senders.

CONCESSIONS FOR RAILWAY LINES AND IRON PIER.

The Consul-General of the United States at San Salvador reports that a concession has been granted by the Government of Salvador to Don JOSÉ CABEZAS BONILLA, of Costa Rica, for the construction of a railway from La Unión to San Miguel; also for another line from San Miguel to San Salvador, and for a steel and iron pier at the port of La Unión.

The port named is the capital of the Department of La Unión and is situated on a bay of the same name, which is an extension of the Gulf of Fonseca, forming the eastern boundary of the Republic. San Miguel is the capital of the Department of the same name. The distance from La Unión, via San Miguel, to San Salvador, the capital, is about 140 miles on an air line. The line from La Unión to San Miguel

covers an extension of 655 kilometers. According to a report of Señor Don BALTASAR ESTUPÍNAN, delegate from San Salvador to the Second International Conference of American States, work on the line was begun in 1895 by the Government, and continued until some time in 1897, when labor was suspended, the road at that time being finished as far as Miraflores, about two-thirds of the distance. The projected line from San Miguel to San Salvador is 167.69 kilometers in length.

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

Following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of February, 1902, with a comparative statement for the corresponding month of the previous year; also for the eight months ending February, 1902, as compared with the corresponding period of the fiscal year 1901. It should be explained that the figures from the various custom-houses, showing imports and exports for any one month, are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of February, for example, are not published until some time in April:

FOREIGN COMMERCE, FEBRUARY, 1902.

A summary of the foreign commerce of the United States for the month of February, 1902, shows that, as compared with the same month in 1901, there was an increase in imports of \$3,778,349 and a decrease of \$11,431,282 in exports. The increase in imports was due almost wholly to the entry of articles which enter into the processes of domestic manufacture, as is evidenced by the fact that the increase in manufactured articles was only \$97,611, and in luxuries only \$387,226, while the imports of articles of food decreased by \$3,485,295.

For the month of February, 1902, the imports were generally classified as follows, comparison being made with the month of February, 1901:

Classification.	1902.	1901.
Articles of food and animals.....	\$13,517,533	\$17,002,828
Articles in a crude condition entering into processes of domestic industry....	26,168,648	19,534,322
Articles wholly or partially manufactured for use as materials in manufactures and mechanic arts.....	6,202,131	6,057,652
Articles manufactured ready for consumption.....	11,974,521	11,876,910
Articles of voluntary use, luxuries, etc.....	10,417,215	10,029,987
Total.....	68,280,048	64,501,699

The percentage of imports admitted free of duty in February, 1902, was 45.63 as against 39.84 in February, 1901. The total amount of duties collected from customs was \$20,213,930 in February, 1902, and \$18,719,598 in February, 1901.

For the eight months of the fiscal year 1902 (July–February) the imports show an increase of \$70,857,206, as compared with the same period of the previous fiscal year. The increase in the imports of articles entering into processes of manufacture in the United States was \$57,124,831; of articles of voluntary use and luxuries, \$11,021,290; of manufactured articles, \$9,347,108, while the decrease in articles of food and animals was \$6,636,043. The total imports for the two periods of eight months were: 1902, \$594,397,046; 1901, \$523,539,840. The percentage of free imports in the two periods was 43.66 and 38.79, respectively. The total duties collected at the custom-houses in the eight months of 1902 were \$168,571,246, and \$159,175,618 in 1901.

For the month of February, 1902, the exports were classified under the following general heads, comparison being made with the same month in 1901:

Classification.	1902.	1901.	Decrease.
Products of—			
Agriculture.....	\$60,662,119	\$73,054,202	\$12,392,083
Manufactures.....	31,740,842	30,302,592	* 1,438,250
Mining.....	2,433,704	2,723,794	290,090
Forest.....	3,383,217	3,846,385	463,168
Fisheries.....	518,031	405,482	* 112,549
Miscellaneous.....	939,096	667,230	* 271,866
Foreign.....	1,848,723	1,957,329	108,606
Total.....	101,525,732	112,957,014	11,431,282

* Increase.

For the eight months of the fiscal year 1902, the exports were valued at \$974,185,414, showing a decrease of \$41,009,570 as compared with the corresponding period of 1901. The decrease in exports is due to a decided decline in the exportations of corn and of manufactures of iron and steel as compared with the previous fiscal year. For the eight months' period of 1902 the corn exports were 23,146,599 bushels, while for the corresponding period of the previous fiscal year they were 132,625,656 bushels. At the same time the exports of corn meal were only 261,505 barrels as compared with 653,766 barrels in the eight months of 1901. The money values represented are \$14,580,585 and \$62,122,901 respectively. The decline as to corn exports amounts to \$47,542,324, and is traceable to the short crop of this grain produced in the United States in 1901.

The value of the exportations of the manufactures of iron and steel for the eight months ending with February, 1902, was \$64,668,424, and for the same period of 1901 amounted to \$81,575,685. The decline in these exports was therefore \$16,807,261. This falling off is attributable to a reduced foreign demand, accompanied by a greatly increased demand for the products from the home market.

COMMERCIAL RELATIONS WITH SPAIN.

Commercial relations between the United States and Spain have been resumed with apparently greater cordiality and certainly with greater activity than ever before. The figures of the Treasury Bureau of Statistics show that both the imports into the United States from Spain and exports from the United States to Spain were, with a single exception, greater in the calendar year 1901 than in any preceding year. The imports from Spain during the year ending with December, 1901, amounted to \$7,040,758, and exports thither were represented by \$16,785,711. Comparing 1901 with 1891, it is shown that imports from Spain have grown from \$4,906,475 to \$7,040,758 and that exports to Spain from the United States have increased from \$12,887,477 to \$16,785,711. Comparing the present conditions with those of 1898, it appears that United States imports from Spain have increased from \$3,608,308 to \$7,040,758 and that exports to Spain have advanced from \$8,050,475 to \$16,785,711.

THE MANUFACTURE OF STEEL IN 1901.

In an estimate compiled from complete manufacturing statistics, the American Steel and Iron Association shows that production of Bessemer steel ingots in the United States, during 1901, increased 30½ per cent over 1900, and was much the largest in our history, while the output of steel rails increased 20 per cent. The Association believes that final estimates will show a production of about 2,875,000 tons of all kinds of rails for 1901. It notes that this figure more than doubles the

high record figures of British production of Bessemer steel rails, which was 1,235,785 tons in 1882. Both in ingots and rails the production of the United States in 1901 broke all records. For Bessemer ingots the figures for 1901 compare as follows with the published records of the previous five years :

	Gross tons.		Gross tons.
1901	8, 713, 302	1898	6, 609, 017
1900	6, 684, 770	1897	5, 475, 315
1899	7, 586, 354	1896	3, 919, 906

The number of tons produced by States is thus compared for the three past years:

	1901.	1900.	1899.
Pennsylvania	4, 298, 439	3, 488, 731	3, 968, 779
Ohio	2, 154, 846	1, 888, 124	1, 679, 237
Illinois	1, 324, 217	1, 115, 570	1, 211, 246
Other States	940, 800	692, 344	727, 092
Total	8, 713, 302	6, 684, 770	7, 586, 354

Steel-rail production was divided as follows between Pennsylvania and the other States, the figures given being gross tons:

	1901.	1900.	1899.
Pennsylvania	1, 406, 008	1, 195, 255	1, 224, 807
Other States	1, 430, 265	1, 166, 666	1, 015, 960
Total	2, 836, 273	2, 361, 921	2, 240, 767

In 1898 Pennsylvania produced 1,052,771 tons and the rest of the United States 902,656 tons.

NEW STEAMER FOR THE SAN FRANCISCO-VALPARAISO TRADE.

The first of four 6,000-ton passenger and freight steamships to be added to the San Francisco and Valparaiso route by the Pacific Steam Navigation Company was launched on the Clyde, Scotland, in March, 1902. This vessel, which was built at Govan, has a length of 400 feet, breadth 52 feet, and depth 29 feet. It was designed especially for the Pacific-coast trade, in accordance with American laws and British Board of Trade requirements. The new steamer will accommodate 130 saloon and 200 steerage passengers, while retaining a large capacity for freight. The other three steamships are under construction.

DOMESTIC ANIMALS ON FARMS AND RANGES.

By the courtesy of the Census Bureau the Monthly Bulletin of the Bureau of the American Republics has been enabled to secure information, in advance of the regular bulletin to be issued by that branch of the Government, relative to the live-stock industry of the United

States in the census year 1900. The statistics furnished relate to the number of domestic animals useful in the service of man which were found by the enumerators to be on farms and ranges in June of that year.

The report is as follows:

“The Agricultural Division of the Census Bureau has completed its tabulation of the number of farms and ranges reporting domestic animals and the number of each class of animals, together with the value of the same. The summary of this information is found in the table accompanying this. This table also gives the number of the various kinds of animals not on farms and ranges.

“Since 1890 the number of sheep decreased in all of the five grand divisions of the country with the exception of the Western. The increase on the ranges in the Western States was more than sufficient to balance the loss in the other portions of the country, and the number of wool-bearing sheep for the nation was, therefore, 11.1 per cent greater than in 1890.

“The number of horses on farms increased in all of the five grand divisions of the nation with the exception of the North Atlantic. The gain over the census of 1890 was 20 per cent if the colts are included with the totals of 1900 and 13.2 per cent if they are excluded.

“The mules on farms increased in all of the five grand divisions. The percentage of gain, if mule colts are included in the totals for 1900, is 45.6 per cent, and if the colts are excluded, 35.3.

“The dairy cows on farms and ranges in 1900 numbered 3.8 per cent more than the milch cows reported in 1890. There was a small increase in all of the five grand divisions. Under the term ‘milch cows’ were included in 1890 more cows than those reported in 1900 under the term ‘cows kept for milk,’ or ‘dairy cows.’ Hence the gain in the dairy interest is much greater than is indicated in the percentage given above. The real gain, as shown by the increased production of milk, is approximately 25 per cent.

“Of neat cattle other than dairy cows there was an increase in all of the five grand divisions of the nation. This gain, if calves are included in the figures for 1900, is 46.4 per cent, while if they are excluded it is only 3 per cent.

“The number of swine on farms increased 9.4 per cent. They increased in all of the five grand divisions excepting the North Atlantic.

“The total value of all domestic animals on farms and ranges June 1, 1900, was \$2,981,054,115, as compared with the total value of all live stock reported in 1890 of \$2,208,767,513. The value of all domestic animals in 1890 was therefore 35 per cent greater than that of all live stock ten years before. There was a gain in all of the five grand divisions of the nation with the exception of the North Atlantic. In that division the value decreased from \$313,902,504 to \$305,360,856,

or 2.8 per cent. This decrease was caused by diminution in the number of horses, sheep, and swine, with insufficient increase in the other animals to offset the same.

"In the South Atlantic Division the value of domestic animals increased from \$161,631,801 in 1890 to \$184,152,273 in 1900, a gain of 13.9 per cent. In the North Central Division the value increased from \$1,195,246,262 to \$1,529,306,487, a gain of 27.1 per cent. In the South Central the increase was from \$351,028,828 to \$598,255,687, a gain of 70.4 per cent. In the Western States the increase was from \$186,958,178 to \$361,453,353, a gain of 93.3 per cent.

"Iowa leads all the States in the total value of its live stock, while Texas ranks second. The former has an investment of live stock of \$271,844,034, and the latter has \$236,227,434. Texas has, however, the greatest number of neat cattle, mules, and goats, but the average value of these and other animals being less than in Iowa, the preeminence in value rests with the latter-named State.

"The Census Bureau secured no reports concerning the value of animals not on farms. They probably have an average value somewhat greater than the animals on farms and ranges, since the greater number are located in States having the highest average farm values. Allowing, however, the same average value, the animals not on farms have a value of \$215,192,928. It becomes probable, therefore, that all the domestic animals in the United States have a value of at least \$3,200,000,000, of which the value of animals on farms and ranges constitutes over 93 per cent and those not on farms 7 per cent.

Number of domestic animals on farms June 1, 1900, with total and average values, and number of domestic animals not on farms.

Live stock.	Age in years.	On farms.			Not on farms.

URUGUAY.

MESSAGE OF PRESIDENT CUESTAS.

The message of President CUESTAS delivered at the opening of the National Congress on February 18, 1902, reviewed in detail the various transactions of the Government during the preceding year, most of which related entirely to international affairs.

Among the topics touched upon were the electoral "accord," which was praised as a work of patriotism, resulting in the peaceful conduct of the general elections; the labor strikes, and the part played by the Government in preserving order; the fine crop year of 1901-2, and an anticipated increase of exports for 1902 to \$35,000,000, as against \$25,000,000 in imports; the steady extension of means of transportation in the interior of the country; the punctual payment of all national and foreign obligations and the improvement in foreign quotations for national bonds, etc.; the progress of the port works at Montevideo; the prosperity of the Bank of the Republic; the initiation of the construction of several important public buildings, and the effects of the new nickel coinage upon the currency and business of the country.

With regard to finances it is stated that the public revenues for 1901 had amounted to \$15,440,825, an increase of \$299,271 over the previous year. Despite this increase, however, the revenues were less by \$581,042 than the amount anticipated in the budget for the year (\$16,124,325), the shortage being principally in customs receipts. On December 31, 1901, the National Treasury reported unpaid accounts to the amount of \$1,493,930 and cash and securities on hand to the amount of \$957,053, leaving a shortage of \$536,876. This shortage, however, was more than covered by the State credit on the Bank of the Republic, so upon the whole the financial situation of the country was entirely favorable.

Customs receipts in 1900 and 1901.

[From the President's Message.]

	1901.	1900.	Increase or decrease.
Imports	\$8,237,699.27	\$8,314,471.29	-76,772.02
Exports	1,416,742.59	1,118,797.64	+297,944.95
Total	9,654,441.86	9,433,268.93	+221,172.93

DECREES REGULATING IMPORTATIONS OF CATTLE.

A decree has been issued by the Ministry of Fomento withdrawing the decrees of May 11, 1901, and January 24, 1902, relative to the importation of live stock, and making such importations subject to the

provisions of the decree of October 21, 1899. That decree prohibited the importation of infected or suspected animals and of animals from foreign countries infected with cattle disease, and subjects other animals brought into the country to the national quarantine regulations. An important section of the decree declared Montevideo to be the only port at which cattle would be permitted to be disembarked.

The President of the Republic of Uruguay, under date of January 24, 1902, promulgated the following decree:

“Until the decree of the 11th of May, 1901, is expressly revoked, its provisions relative to the prohibition of the importation of live stock proceeding from foreign countries, and which is not in the condition specified in article 2 of said decree, shall remain in force. Shipments from foreign countries that may have been forwarded prior to the date of the present decree, as well as those made before February 1 next, shall be subject to a minimum quarantine of forty days and to the provisions of the decree of October 21, 1899.”

Article 2 of the decree of May 11, 1901, referred to above, says, in substance, that animals proceeding from foreign countries that are not affected with the foot and mouth disease, and which fact has been duly certified to by the owners of the stock in question, are exempt.

CHANGES IN TARIFF RATES.

The “*Dirección General* of Customs,” on December 9, 1901, issued the following notification relative to the import duties on certain goods:

Article 1 of law dated June 11, 1901, provides that “Colored paper generally (except chrome paper, specially employed for book printing), folded or not, whatever be its size, brown paper, packing paper, straw paper, and bag and other like papers used for wrapping or packing, are to pay a specific duty of \$0.07 per kilogram.”

According to article 2 of the law aforesaid, “Aniline shall be dutiable at the rate of 5 per cent *ad valorem*.”

In regard to birch oils, no recent disposition has been adopted.

In virtue of article 2 of the law dated January 11, 1896, vegetable oils are to be assessed with a uniform specific duty of \$0.10 per kilogram, and by way of surtax, with an additional charge at the rate of 5 per cent on their valuation.

OPERATIONS ON THE STOCK EXCHANGE OF MONTEVIDEO.

The annual report of the Chamber of Commerce of Montevideo for 1901 contains some interesting information respecting operations and quotations on the Stock Exchange (*Bolsa*) during the calendar year. Although 1901 was dull and depressed as regards commerce, owing to a number of causes, the year was one of considerable activity on the

Stock Exchange. As compared with 1900, there was an increase of \$40,872,726 in the nominal value and of \$18,498,588 in the cash value of the operations effected. The figures for the two years under comparison were: 1901, nominal value, \$141,756,887; cash value, \$67,992,870; 1900, nominal value, \$100,884,161; cash value, \$49,494,282.

PRODUCTION OF CEREALS, FISCAL YEAR 1900-1901.

According to statistics published by the Department of Agriculture of the Republic of Uruguay, the production of cereals during the fiscal year 1900-1901 was as follows:

Product.	Quantity sown.	Area in cultivation.	Quantity harvested.
	<i>Kilos.</i>	<i>Hectares.</i>	<i>Kilos.</i>
Wheat.....	19,108,530	276,511	99,719,771
Linseed.....	143,993	4,002	2,313,935
Oats.....	10,267	177	68,334
Barley.....	48,000	763	438,263
Canary seed.....	57,407	1,858	709,485
Rye.....	580	11	2,910
Corn.....	2,277,927	181,558	141,647,916

The following table shows the production of wheat and corn during the same period, by departments, and the average yield per hectare:

Departments.	Wheat.	Corn.	Average yield per hectare.	
			Wheat.	Corn.
	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>	<i>Kilos.</i>
Artigas.....		1,059,132		437

The Consul-General of the Republic of Uruguay at Baltimore, Maryland, advises that the production of wheat in 1901 amounted to 1,200,000 *fanegas*, or 9,331,200 bushels, as compared with 4,000,000 (estimated) *fanegas*, or 31,104,000 bushels, produced in 1902.

TAX ON COMMERCIAL TRAVELERS.

A law taxing professions (*Ley de patentes de giro*), applicable to the capital, Montevideo, for the year 1901-2, and which modifies the

present tax regulations on commercial travelers, was published September 23, 1901. The commercial tax, established on the basis of 100 *pesos* per year (the entire twelve months), remains the same; but formerly the entire tax was only payable if operations were carried on during the first half of the year; from the third quarter, half only, and from the fourth quarter a fourth only of the total amount of the tax were demanded.

Article 16 officially withdraws this privilege from the commercial travelers, and stipulates that they must pay the entire amount of the tax at any time of the year. The receipt of the amount of the tax, serving as a pass in going from one place to another, is not personal, and is valid for anyone presenting it.

Any commercial travelers found without this document must pay a fine or have a new copy made at his own expense.

REPORT OF THE MONTEVIDEO WATERWORKS FOR 1901.

The report of the Montevideo Water Works Company, Limited, for the year 1901 shows that the revenues exceeded those of 1900 by £5,901 (\$28,717), while the expenses were £1,408 (\$6,852) in excess of those of 1900. The net revenues amount to £57,198 (\$278,354) in 1901, as against \$52,705 (\$256,489) in 1900. After paying debenture interest and other charges, providing £3,000 (\$14,600) for depreciation of meters and fittings in use, and placing £3,000 (\$14,600) to the depreciation fund for the repair of buildings, plant, etc., there remained on December 31, 1901, an available balance of £34,807 (\$169,388). An *interim* dividend of 2½ per cent was paid on November 1, 1901, and the directors recommend a further 2½ per cent dividend (making 5 per cent for the year, tax free), payable on April 4, 1902, carrying forward £14,807 (\$72,058).

VENEZUELA.

MESSAGE OF THE PRESIDENT.

In February, 1902, Gen. CIPRIANO CASTRO, President of the Republic of Venezuela, delivered an important message to the National Congress assembled at Caracas, in which he related in clear and concise language and at considerable length the condition of the domestic and foreign affairs of the nation.

Referring to the telegraph system of the country, the President states that its ramifications extend to the farthestmost confines of Venezuela, placing in close and rapid communication with each other all of the principal centers of population. The vast and beneficent work of developing the telegraph system of the nation, in which undertaking the sum of 1,368,300.32 *bolivars* have already been spent,

has the hearty and earnest support of the Chief Magistrate of the Republic.

With respect to the finances of the country, the message mentions the disbursement during the year 1901 of the following amounts:

	Bolivars.
Public debt	2, 859, 721. 23
Coinage of silver	2, 049, 926. 83
Demarkation of the boundary lines between English Guiana and Venezuela, and Venezuela and Colombia, according to awards.....	561, 200. 00
Expenses of Delegates to Pan-American Congress.....	34, 200. 00
Credits to the different States	3, 219, 543. 34
Great Venezuelan Railway, the Puerto Cabello Railway, etc	1, 087, 305. 71
Bank of Venezuela, as per contract	1, 650, 000. 00
War loan of 1900	899, 500. 00
Other expenses.....	189, 400. 00

In 1901 there was expended for account of the Government salt industry in the payment of interest, etc., 1,439,975 *bolivars*. On December 31, 1901, the Government had in its possession 10,503 salt certificates of \$500 each, valued at 5,251,500 *bolivars*. The net profits from the operation of this industry during the fiscal year 1900-1901 were 2,827,579.56 *bolivars*, as compared with 1,077,412.96 *bolivars* produced in the fiscal year 1899-1900.

Considerable improvements were made in the capital of the Republic in 1901, such as the paving of the streets, the construction of a new slaughterhouse, the erection of new barracks, the repair of the Paraiso bridge and of the public highways which enter the City of Caracas from the north, east, south, and west, the repair of public buildings damaged by the elements, and the beautifying of the public parks of the city, etc.

SOURCES OF BALATA GUM SUPPLY.

The gum known as "balata", which is gathered more extensively in Venezuela than in any other American country, is a product of the bullet or bully tree (*Mimusops balata*) of Central and South America, according to "Spon's Encyclopedia." The "Century Dictionary" states that balata is the inspissated juice of a sapotaceae tree (*Mimusops globosa*). It is classified with india rubber and gutta-percha, because, like them, its distinctive features are its elasticity and insolubility in water, alcohol, alkalies, and organic acids.

The bullet tree is very abundant in British Honduras, the Guianas, and Northern Brazil, as well as in Venezuela, and flourishes best along the banks of rivers. As a timber tree it was well known to the earliest colonists, and "its plentifully secreted sweet milk," says "Spon's Encyclopedia" (edition of 1882, vol. 2, pp. 1635-1636), "has been used as food by the natives from time immemorial." Not until 1860 was an attempt made to introduce the concreted juices as a substitute in English industry for india rubber.

In many of its properties balata is said to occupy an intermediate position between india rubber and gutta-percha, "possessing the elasticity of one and the ductility of the other, without the intractibility of the former or the brittleness of the latter, thus becoming, under certain circumstances, more valuable than either for industrial purposes." It vulcanizes readily.

The authority quoted above states that balata was originally introduced into the markets exclusively as a manufacturing article for insulating telegraph wires and such purposes, but that since its use has become familiarized in the United States it is also employed to a certain extent in the processes of chewing-gum manufacture.

"El Guayanés," of Upata, Venezuela, states that over 1,840,000 kilograms of balata were shipped from the Territory of Yuruary, via Ciudad Bolívar, during the twelve months ending with October, 1901.

The supply of balata from Venezuela is put upon the world's markets, principally in London, Hamburg, and Amsterdam in Europe, and in New York in America. The importer has the option of landing his goods at any one of the European ports named, or at Southampton, according as the market appears more favorable. The receipts at London average about 1,000 tons yearly, so that it is regarded as a steady market. Prices have fluctuated there, however, between 1s. 2d. and 2s. 6d. (28 and 61 cents) per pound. In August, 1900, balata sold in London at 2s. 1½d. (about 51 cents) per pound. The prices received in the other two European markets are generally at the rate of ¾d. (1½ cents) greater per pound. The exporter of balata from Venezuela can safely estimate the shrinkage, when shipments are made to Europe, at 4 per cent of the gross weight. A brokerage commission of 1 per cent is paid on sales in the London market.

TRANSFER OF ASPHALT PROPERTY.

On January 30, 1902, the following was published by the Minister of Public Works by order of the National Executive:

The Provisional President of the Republic has approved of the transfer made by Mr. GEORGE W. CRITCHFIELD to the United States and Venezuela Company, domiciled in Maracaibo, of the concession granted to him by the Government on the 20th day of April, 1901, for the establishment of a steam tramway and other works, or the exploitation of the asphalt mine "Inciarte," situated in the parish of Chiquinquirá, district of Maracaibo, State of Zulia, for which purpose, and with the previous consent of this Ministry, he has sent a certified copy of the deed of transfer, which has been annexed to the proceedings in the matter.

THE ORINOCO STEAMSHIP COMPANY.

The Orinoco Steamship Company was incorporated in Trenton, New Jersey, on February 6, 1902, with a capital of \$1,000,000. The certifi-

cate of incorporation specifies that the company will take charge of the business then carried on by the Orinoco Shipping and Trading Company, Limited, of London; will build canals, railroads, and wharves, and raise caoutchouc, gutta-percha, quinine, tonka beans, copaiva oil, and ginger.

PROPOSED ELECTRIC RAILWAY AT MARACAIBO.

The owners of the street railway operating in the city of Maracaibo, Venezuela, are reported by the "New York Journal of Commerce" to be contemplating the conversion of their system from mule to electric power. The existing road is about 5 miles in length and of 2 feet 6 inches gauge. There are said to be but few curves or grades. Power will probably be derived from the local lighting company.

COMMERCE OF LA GUAIRA IN 1901.

The "Venezuelan Herald," of Caracas, has recently published the following interesting statistics concerning the foreign commerce of the port of La Guaira in 1901:

IMPORTS.

RECEIPTS AND EXPENDITURES IN 1901.

From the memorandum presented by the Minister of Finance to the National Congress, which convened on February 20, 1902, it is ascertained that the receipts of the Government during the year 1901 amounted to 35,813,846.93 *bolivars*, while the expenditures aggregated 44,371,875.56 *bolivars*, showing a deficit of 8,558,028.63 *bolivars*. From this last amount must be deducted the deposits of the Government in the Bank of Venezuela, 4,000,000 *bolivars*, and the clearance on the coinage of silver, amounting to 1,950,073.17 *bolivars*, or 5,950,073.17 *bolivars* in all, which leaves 2,607,955.46 *bolivars* as the actual sum expended by the Government in excess of the total amount received. The data for the month of December, 1901, was incomplete at the time this report was submitted to Congress, as the Minister of Finance had not received all the customs returns, nor had the Bank of Venezuela received all the reports from its agents. It is believed, however, that the receipts from the several sources of revenue for the month named are approximately correct.

The sources from which the Government revenues were obtained were as follows:

Customs, 24,267,778.04 *bolivars*; internal taxes, 7,309,434.72 *bolivars*; cattle tax, 405,334 *bolivars*; all other sources, 3,831,300.17 *bolivars*.

The receipts by months were as follows:

	Bolivars.		Bolivars.
January	4, 040, 301. 44	July	3, 197, 610. 78
February	3, 198, 706. 24	August	2, 752, 112. 20
March	3, 058, 067. 37	September	2, 510, 006. 40
April	3, 097, 174. 03	October	2, 188, 546. 33
May	3, 429, 111. 21	November	3, 045, 988. 07
June	2, 747, 009. 61	December	2, 549, 212. 32

TRADE WITH SPANISH AMERICA.

The Consul of Ecuador at San Francisco states that the exports from that port to the ports of Guayaquil, Esmeraldas, Bahía, Puerto Bolívar, and Manta during February, 1902, consisted of 6,154 packages of merchandise, weighing 442,574 kilograms, valued at \$16,695.71. Of this amount, goods to the value of \$13,099.71 were shipped to Guayaquil; \$1,366 to Esmeraldas; \$1,075 to Bahía; \$960 to Puerto Bolívar, and \$195 to Manta. The following table shows the character of these shipments in detail:

Articles.	Weight.	Amount.	Articles.	Weight.	Amount.
	<i>Kilos.</i>			<i>Kilos.</i>	
Brooms	989	\$192. 50	Rice	2, 178	\$150. 00
Flour	219, 467	7, 560. 00	Rope	3, 482	695. 31
Groceries	25, 158	4, 205. 82	Sulphuric acid	1, 634	60. 00
Hops	4, 450	240. 00	Wines and liquors	5, 984	742. 50
Leather	84	247. 53			
Lumber	163, 264	1, 190. 00	Total	442, 574	16, 695. 71
Oils and fats	15, 884	1, 412. 05			

The total of the exports from San Francisco to ports of Ecuador in January, 1902, aggregated a value of \$11,263.76, and was made up of 5,891 packages, weighing 263,266 kilograms, as is shown in the table given below:

Articles.	Packages.	Weight.	Amount.
		<i>Kilos.</i>	
Advertising matter	1	7
Flour	5, 460	245, 756	\$8, 264. 00
Groceries	112	4, 129	604. 50

Wines and liquors	142	5, 012	1, 392. 02
Total	5, 891	263, 266	11, 263. 76

The Mexican Vice-Consul at Pascagoula, Mississippi, announces that the shipments from Pascagoula to the Mexican ports of Veracruz, Progreso, Campeche, and Frontera during the months of February and March, 1902, consisted of lumber, valued at \$9,455 and \$9,329, respectively, or a total of \$18,784.

The Mexican Consul at Galveston, Texas, advises that the exports from Galveston to the Mexican ports of Veracruz, Tuxpan, and Tampico during the months of December, 1901, and January and February, 1902, were as follows:

Date.	Articles.	Quantity.	Weight.	Value.
			<i>Pounds.</i>	
December, 1901	Crude cotton-seed oil	kilos.. 844, 816	\$78, 223. 95
January, 1902	do	do... 841, 578	87, 819. 19
Do	Lumber	pieces.. 1, 803	223, 004	4, 134. 33
February, 1902	Cotton	bales.. 600	314, 055	28, 461. 14
	Total			198, 638. 61

In February and March, 1902, 15 vessels entered the port of Mobile, Alabama, loaded with products proceeding from the Mexican ports of Progreso, Coatzacoalcos, and Frontera. During the same period 11 vessels cleared from Mobile, carrying cargoes of merchandise destined to the ports of Tampico, Veracruz, Progreso, and Coatzacoalcos. The following table shows in detail the movements of these vessels:

ENTERED.

Date.	From—	Number of vessels.	Character of cargo.
1902.			
February	Progreso	5	Henequen and cattle.
March	do	8	Do.
Do	Frontera	1	Mahogany.
Do	Coatzacoalcos	1	Ballast.

CLEARED.

February	Progreso	3	Livestock, merchandise, and pitch pine.
Do	Veracruz	2	Ties.
Do	Coatzacoalcos	1	General merchandise.
Do	Tampico	1	Ballast.
March	Progreso	3	Pitch pine, merchandise, and brick.
Do	Veracruz	1	Pitch pine.

The Consul-General of Venezuela at New York advises that the total shipments from that port to the Republic of Venezuela during the month of February, 1902, consisted of 37,160 packages, weighing 1,822,715 kilograms, valued at \$221,754.19, as compared with 42,079 packages, weighing 2,384,531 kilograms, valued at \$212,349.89, in February, 1901. The following table shows the movement of this merchandise in detail:

Ports.	Articles.	1901.			1902.		
		Number of pack-ages.	Weight.	Value.	Number of pack-ages.	Weight.	Value.

Hides, loose.....	9,344		

During the same month 11 ships, carrying 140,996 packages, cleared from the port of New York bound for Mexican ports, and 8 ships, bringing 109,502 packages from Mexico entered that port.

According to statistics furnished by the Mexican Consul at Nogales, Arizona, merchandise to the value of \$153,232.75 entered the Mexican Republic through that port during the month of January, 1902. These products were classified in the following manner:

Animal substances.....	\$19,700.00	Machinery and apparatus...	\$20,672.00
Vegetable products.....	22,989.00	Vehicles.....	4,443.00
Mineral products.....	24,844.50	Arms and explosives.....	2,949.00
Textile products.....	37,118.75	Sundries.....	7,842.00
Chemical products.....	8,031.00		
Spirituous beverages.....	2,214.50	Total.....	153,232.75
Paper and paper products...	2,429.00		

The foregoing products originated in the following countries:

United States.....	\$116,041.50
Germany.....	6,729.75
England.....	14,900.00
France.....	13,449.50
Switzerland.....	1,750.00
Other countries.....	362.00
Total.....	153,232.75

The duties collected on these goods by the Mexican Government amounted to \$89,223.19, silver.

The exports from Mexico to the United States, through the port of Nogales, during the month of January, 1902, were valued at \$1,267,172, Mexican silver, and were made up of the following items:

Articles.	Quantity.	Value (Mexican silver).
Copper bullion	pounds.. 5,854,294	\$922,181
Fruits	do... 6,289	739

The Mexican Consul at San Francisco, Cal., advises that during the month of February, 1902, the total shipments of American products from San Francisco to Mexican ports aggregated \$151,527. In addition to this amount there were \$5,042 worth of goods of foreign origin reexported from San Francisco to the Republic of Mexico. These articles consisted principally of rice, mineral waters, brandies, beer, spices, tea, silks, etc.

Thirty-four thousand two hundred and thirty-two dollars were shipped to Hongkong during the month.

The shipments were made up of—

Mexican dollars	\$67,799	Gold bullion	\$4,917
Argentiferous ores	129,862	Sundries	63,584
Silver bullion	131,075		
Gold coin	2,455	Total imports	399,692

TRADE OPPORTUNITIES IN LATIN AMERICA.

Mr. EUGENE SEEGER, Consul-General of the United States at Rio de Janeiro, Brazil, reports that there is a demand in Brazil for glassware from the United States which has proved very acceptable to the trade of the Republic. The only complaint registered against this class of wares so far has been in regard to the packing. It is important that great care should be exercised in this matter, as all cargoes in the harbor of Rio de Janeiro have to be discharged by means of lighters, and there is apt to be considerable loss from breakage while it is being handled. Mr. SEEGER also suggests the distribution of catalogues of glassware and china among the merchants of Pernambuco, Pará, and Bahia, in addition to those of Rio de Janeiro.

A British report states that the people of Northern Mexico—States of Chihuahua, Coahuila, and Sonora—are replacing their noted *sombreros* with hats of the “Alpine” and broad-brimmed Texas variety, consequently there is a demand in those markets for the articles named. The colors most in demand are black and gray for the former and black and tan for the latter sort. The principal wholesale hat dealers are named as Ketelsen and Degetau, Chihuahua; Picard *hermanos* and Levy *hermanos* of Ciudad Juarez, State of Chihuahua.

The “Buenos Ayres Herald” states that the contract for the extension of the Central Northern Railway of the Argentine Republic to the Bolivian frontier will be let to private contractors by the Government, that being a line owned by the State. Full particulars may be obtained of the Ministry of Public Works, Buenos Ayres.

The French Chargé d’Affaires at La Paz states that the market for the following drugs and preparations is very good in Bolivia: Peppermint liqueur, kola, neurosine, sulphate of quinine, cocaine, pastilles, valeriate of ammonia, creosote, cascara, medicinal creosote, antidiphtheria serum, Blanchard’s pills, etc. Most of the preparations now used are of French origin.

A concession for two railway lines and an iron and steel pier at the port of La Unión, Salvador, has been granted to Señor JOSÉ CABREZAS BONILLA, of Costa Rica. The contemplated improvements will call for large quantities of iron and steel construction material. La Unión is situated on that part of the Central American coast which is bordered by the Pacific Ocean.

The United States Consul at Managua reports that the Nicaraguan Congress has approved the contract with Mr. T. M. SOLOMON for the construction of a dock at the port of Corinto. Much material, especially of iron, will be required for this improvement.

The South Chilean Syndicate, Limited, of Valdivia, Chile, is reported to be at present placing some fair-sized orders for mining machinery, supplies, etc., in the United States market.

The Brazilian Government has signed a contract with the Victoria and Minas Railway Company for the construction of a railroad between Victoria and Diamantina.

BOOK NOTES.

Books and pamphlets sent to the Bureau of the American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the Monthly Bulletin.

A contribution to the literature of the Isthmian Canal project, which is attracting some attention, has been made by Lieut. J. W. G. WALKER, of the United States Navy, in a book entitled "Ocean to Ocean." The author of this work conducted the western branch of the survey of the Nicaraguan route in 1898, and his experiences on the rivers and in the tropical jungles of Nicaragua are told in pleasing style. To the chapters detailing his personal experiences in the Republic of Nicaragua, Lieutenant WALKER has added others of a historical character. While a complete account of the Nicaraguan canal enterprise, from its earliest inception in the time of Philip II to the present, is given by the writer, and while he describes clearly and briefly the details of the various stages of the United States project, including the results of the latest survey, he does not attempt a partisan argument on behalf of the Nicaraguan route. As a result of the construction of the canal along this route, however, he thinks there are great possibilities for the development of large portions of Costa Rica and Nicaragua, and of increased commercial relations between those republics and the United States. The most entertaining portions of this volume are those which relate to the personal history of the people of Nicaragua, and to the descriptions of the leading physical features and products of the country. The book, which is illustrated by 14 reproductions from photographs and 4 maps, is issued from the press of A. G. McClurg & Co., Chicago, 1902.

As a contribution to Griffin's "New Land" series of books HUGH ROBERT MILL, LL. D., etc., has prepared a volume on "New Lands; Their Resources and Prospective Advantages" (Charles Griffin & Co., Limited, London, 1902). The author states that his object in writing this work was to present a short, simple, and practical account of the conditions of life in those parts of the world where there is still an opening for the energies of English-speaking people desiring to make their homes or invest their capital in a new country. He gives a piece of advice which can not be too emphatically repeated—"that no new-comer in any country should invest money or start any new enterprise on its own account until he has resided some little time in the place and has become familiar with the peculiarities of the climate and resources, and with the mode of life which the experience of earlier

comers has proved to be the best. In almost every case it will be found that the crux of a new land is the water supply. Water, as rain or rivers, is indeed the very life blood of the habitable world, and the phenomena of its circulation are often complicated and require much study to elucidate." In this book chapters are devoted to the following American countries: Canada, Newfoundland, the United States proper, Alaska (with a map), Mexico, Temperate Brazil and Temperate Chile (with a map of the southern half of South America), the Argentine Republic, and the Falkland Islands. The only country concerning which the author speaks from personal knowledge is Canada. With regard to the others he depended less upon official reports than on the writings and personal statements of independent residents or visitors. At the beginning of his chapters on Latin America, Mr. MILL calls attention to the work and aims of the Bureau of the American Republics.

"A Vanished Arcadia," by R. B. CUNNINGHAME GRAHAM, London, William Heinemann, 1901. This book gives an account of the work of the Jesuits in Paraguay from the time of their first advent in the southern part of the American continent, in 1607, to the date of their expulsion by the order of the Spanish Crown, in 1767. The author states that "rightly or wrongly, but according to their best lights," the Jesuits "strove to teach the Indian population all the best part of the European progress of the times in which they lived, shielding them sedulously from all contact with commercialism and standing between them and the Spanish settlers, who would have treated them as slaves." It is also noted that "for a brief period the Guaraní Indians, gathered together in missions, ruled over by their priests, treated like grown-up children yet with a kindness that attached them to their rules, enjoyed a half-Arcadian, half-monastic life, reaching to just so much of what the world calls civilization as they could profit by and use with pleasure to themselves." Incidentally, besides the story of the Jesuits, this book contains considerable information relative to the early political history of that part of South America which is now divided between the Argentine Republic, Brazil, Uruguay, and Paraguay.

"A List of Books, Magazine Articles, and Maps Relating to Central America, 1800-1900," prepared for the Bureau of the American Republics by P. LEE PHILLIPS, F. R. G. S., Chief of Division of Maps and Charts, Library of Congress, Washington, Government Printing Office, 1902. In the language of the compiler, this publication "lays no claim to exhaustiveness, but is simply intended as a guide for those who may desire to extend their researches further than the works bearing on this part of America which are usually found mentioned in

catalogues already published." The pamphlet is divided into six sections, the first being devoted to Central America as a whole, followed, in the order named, by Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador. At the end of each section a list of maps is given, arranged in chronological order. The measurements of these maps are in inches. The name Guatemala was formerly given to a much larger area than that which the Republic now comprises. Owing to this fact the titles of a considerable number of books have been entered under Guatemala which relate more properly to the whole of Central America. Works relating to Belize or British Honduras are included under Honduras proper. Students of the bibliography of Central America or of either one of the five Republics will find this a valuable catalogue for reference. It is the intention of the Bureau of the American Republics to issue revised editions of this work as occasion demands.

To persons contemplating engaging in mining in foreign countries, or who are interested financially in mining undertakings or concessions, it is a matter of importance as well as interest to have the opportunity of inquiring for themselves into the laws regulating the acquisition, holding, and exploitation of such possession. One of the few works prepared for the benefit of this class of persons is the "Guide to the Mining Laws of the World," compiled by OSWALD WALMSLEY, Esq., and published in London in 1894. This book deals in a comprehensive manner with the laws governing mining under nearly all the civilized governments of the earth. Chapter XVI of this work is devoted to the "Mining Laws of the United States of America;" and Chapter XVII, to "Notes on Mining Laws of Spanish America, including Mexico, Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dutch Guiana, Ecuador, Guatemala, Honduras, Nicaragua, Paraguay, Peru, Salvador, San Domingo, Uruguay, and Venezuela."

One of the valuable and entertaining pamphlets issued by the Mexican Government during the recent International Conference of American States was "A Brief Sketch of the Drainage Works of the Valley of Mexico." This publication, a copy of which has been forwarded to the library of the Bureau of the American Republics, traces the efforts that have been made for draining the valley in which the city of Mexico is located from the fifteenth century down to the completion of the modern drainage works on June 30, 1900. The present drainage system has three objects in view, namely, the prevention of inundations, the drainage of the refuse waters of the city of Mexico out of the valley, and the control of the waters of that section of the country.

The works are composed of a canal, a tunnel, and a discharge cutting, each of which is adequately described in the pamphlet in reference. The entire works, from the time the national drainage board took charge, in 1886, to the date of completion, cost \$15,967,778.17. The pamphlet contains three comprehensive maps, which show the location of the works and the plan of drainage.

In its issue for March, 1902, "Chambers's Journal" publishes an interesting article on "Undeveloped Bolivia; or, Between the Andes and the Amazon." This paper contains an account of the resources and possibilities of the country, which, as is well known, are varied and attractive. For persons with capital who are willing to labor hard and live in a primitive manner for a few years, owing to the undeveloped state of the interior of the country, many inducements are offered in this Republic. The principal industries are mining and the production of sugar, coffee, and rubber. The climate is generally healthy and land is cheap, while the Government is earnestly endeavoring to improve the interior Provinces by the building of highways and railroads and by extending aid to navigation.

The "Berichte über Handel und Industrie" (Reports of Trade and Industry), in its issue of March 8, 1902, publishes two short articles, one relating to the steel works of Monterey in Mexico, and the other to the cultivation of bananas in Central America. The first is written by the Belgian Minister in Mexico and the latter is taken from a report of the German consulate at Managua. The same paper, in its issue of March 11, 1902, has an exhaustive article upon the agricultural conditions and the mines and smelting industry in the Province of La Rioja, Argentine Republic. It is written by the commercial expert attached to the German Legation at Buenos Ayres. It reports on the mines and smelting works to a greater extent than agriculture, the author being very careful to give the latest statistics.

The first number of the "Boletim Official da Liga Naval Brasileira" (Official Bulletin of the Brazilian Naval League) has been received at Library of the Bureau of the American Republics. The object of the League, as stated in the Bulletin, is to make known the maritime resources of Brazil and to study the causes which have prevented their development. In addition to the publication in reference, it is also purposed to issue a Yearbook which shall contain information concerning Brazilian navigation companies, shipyards, docks, etc.

The title of the "Pan-American Magazine," which was issued prior to and during the Pan-American Exposition held at Buffalo, was changed with the issue of January, 1902, to "All American Com-

merce." The announced object of this publication is the binding in closer social and trade relations the peoples of North, Central, and South America. Six of the 38 pages of reading matter contain articles in the Spanish language.

"A Gazetteer of Cuba," by HENRY GANNETT, geographer, is the title of Bulletin No. 192, issued by the United States Geological Survey. The Gazetteer proper, which is illustrated by maps and plates, consists of about one hundred pages of names of localities, streams, mountains, civil divisions, etc., with appropriate descriptions and definitions.

The Monthly Summary of Commerce and Finance of the United States for February, 1902, contains a very valuable paper prepared at the Bureau of Statistics of the Treasury Department on the "Great Canals of the World." This paper, besides descriptive matter, shows the commerce, cost, and dimensions of the several canals over which goods of an international character are transported.

Capt. GEORGE P. AHERN, U. S. Army, who is in charge of the Forestry Bureau, Philippine Islands, has compiled a work of the important woods of the Archipelago. There are more than 600 species of trees on the various islands treated.

ADDITIONS TO THE LIBRARY DURING MARCH, 1902.

BOLETÍN MENSUAL

DE LA

OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS,

Unión Internacional de Repúblicas Americanas.

VOL. XII.

ABRIL, 1902.

No. 4.

REORGANIZACIÓN DE LA OFICINA.

RESOLUCIÓN ADOPTADA POR LA SEGUNDA CONFERENCIA INTERNACIONAL AMERICANA, PARA LA REORGANIZACIÓN DE LA OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS.

Los Gobiernos representados en esta Conferencia, convencidos de la utilidad de la Oficina Internacional de las Repúblicas Americanas, establecida en Wáshington, convienen en que dicha Oficina se rija, durante diez años, contados desde la clausura de la actual Conferencia, por el siguiente Reglamento, el cual, sin embargo, quedará sujeto á la revisión de la próxima Conferencia de las Repúblicas Americanas, ó á la de las Repúblicas mismas, según el modo establecido en el párrafo 16 de las resoluciones adoptadas por la Primera Conferencia Internacional de las Repúblicas Americanas en 14 de abril de 1890.

ARTÍCULO 1º. La Oficina Internacional de las Repúblicas Americanas estará bajo la dirección de un Consejo Directivo constituido por los Representantes diplomáticos de todos los Gobiernos de dichas Repúblicas, acreditados cerca del Gobierno de los Estados Unidos de América, y por el Secretario de Estado de esta misma nación, que funcionará como Presidente del expresado Consejo Directivo. Éste celebrará una sesión ordinaria, cada mes, con excepción de los de junio, julio y agosto, y todas las extraordinarias á que convoque el Presidente, por sí, ó á moción de dos miembros del Consejo. Bastará la concurrencia de cinco miembros de dicho Consejo á cualquiera de las sesiones ordinarias ó extraordinarias, para que el Consejo pueda funcionar regularmente en todos los asuntos de su competencia, y nombrará las Comisiones que estime conveniente.

ART. 2°. Todos los empleos de la Oficina se proveerán, previo examen de los aspirantes, que sustentarán ante una Junta Examinadora compuesta de tres personas que nombrará el Consejo. Los dichos aspirantes presentarán sus solicitudes llenando los formularios que les proporcionará el Director de la Oficina, en los que se especificará el servicio especial que se trate de proveer, é inscribirán sus nombres en un Registro que llevará la Dirección, en que se harán constar todos los pormenores relativos á las materias de examen, y la Junta Examinadora sólo podrá recomendar para el empleo especial que se requiera y sea solicitado, á los que acrediten su aptitud para el desempeño de dicho empleo. Los nombramientos serán hechos por el Consejo y firmados por el Presidente.

ART. 3°. El Consejo Directivo preparará todos los años, con la colaboración del Director de la Oficina, un presupuesto detallado de los gastos del año subsecuente. Este presupuesto se transmitirá á cada Gobierno con un informe que demuestre la proporción de las cantidades que debe pagar cada uno de ellos, de conformidad con el Convenio de 14 de abril de 1890, y los Gobiernos quedan en la obligación de remitir sus respectivas asignaciones al Secretario de Estado del Gobierno de los Estados Unidos de América, con seis meses de anticipación.

ART. 4°. Cada vez que el Consejo Directivo lo crea conveniente, designará á uno ó dos de sus miembros con el encargo de practicar la glosa de las cuentas de la Oficina, debiendo rendir al Consejo el informe correspondiente.

ART. 5°. La Oficina estará facultada para mantener correspondencia, por conducto de los representantes diplomáticos en Wáshington, con los Departamentos del Ejecutivo de las diferentes Repúblicas Americanas, y deberá proporcionar los datos que posea ó pueda obtener, á cualesquiera de dichas Repúblicas que lo soliciten. Éstas convienen en facilitar á la Oficina, en cuanto fuere posible, los informes que solicitar, y en remitirle oportunamente dos ejemplares de sus publicaciones oficiales, que se conservarán en la Biblioteca de la Oficina. Así mismo convienen en proporcionar á la propia Oficina cualesquiera informes que les sean pedidos por su Director.

ART. 6°. La Oficina publicará un BOLETÍN MENSUAL que deberá imprimirse en los idiomas castellano, inglés, portugués y francés, conjunta ó separadamente, que contendrá informes estadísticos, comerciales y sobre legislación, que sean de interés especial para los habitantes de las diferentes Repúblicas. Publicará también la Oficina los folletos, mapas, cartas geográficas ó topográficas, y cuanto por juzgarlo conveniente le ordene el Consejo Directivo.

ART. 7°. Tan pronto como terminen los contratos pendientes sobre anuncios cesará la publicación de ellos en el BOLETÍN.

ART. 8°. Todas las publicaciones de la Oficina se considerarán como documentos públicos, y serán porteados gratuitamente por los correos de las Repúblicas.

ART. 9°. La Oficina se encargará especialmente del cumplimiento de todas las obligaciones que le impongan las resoluciones que adopte la presente Conferencia Internacional.

ART. 10°. El Director de la Oficina podrá asistir á las sesiones del Consejo Directivo y á las de las Comisiones, así como á las de las Conferencias Internacionales de las Repúblicas Americanas, para dar los informes que se le pidan.

ART. 11°. La Oficina tendrá bajo su custodia los archivos de las Conferencias Internacionales de las Repúblicas Americanas.

ART. 12°. Las resoluciones de la Primera Conferencia Internacional de las Repúblicas Americanas adoptadas el 14 de abril de 1890 permanecerán vigentes en cuanto no se apongan á estas prescripciones, y se declaren abrogadas las demás resoluciones y planes referentes á la organización de la Oficina.

ART. 13°. Se funda, bajo la autoridad del Consejo Directivo de la Unión Internacional de las Repúblicas Americanas, y como una sección de la Oficina de dichas Repúblicas, una Biblioteca Latino-Americana que se designará con el nombre de "Biblioteca de Colón."

Hecho y firmado en la Ciudad de México, á los veintinueve días del mes de Enero de mil novecientos dos, en tres ejemplares, escritos respectivamente en castellano, inglés y francés, los cuales se depositarán en la Secretaría de Relaciones Exteriores del Gobierno de los Estados Unidos Mexicanos, á fin de que de ellos se saquen copias certificadas para enviarlas por la vía diplomática á cada uno de los Estados signatarios.

PRIMERA SESIÓN DEL CONSEJO DIRECTIVO DE LA OFICINA INTERNACIONAL.

SINOPSIS DEL ACTA DE LA SESIÓN.

El 19 de marzo de 1902 se celebró en el Departamento de Estado de los Estados Unidos de América la primera reunión del Consejo Directivo de la Oficina Internacional de las Repúblicas Americanas. Presidió el Honorable Señor Secretario de Estado de los Estados Unidos de América, y estuvieron presentes los Señores que siguen:

DON MANUEL DE AZPÍROZ, Embajador de México, representando también la República del Salvador.

DON MARTÍN GARCÍA MÉROU, Ministro de la República Argentina.

DON JOAQUÍN BERNARDO CALVO, Ministro de Costa Rica, representando también la República de Honduras.

DON JOAQUÍN WALKER MARTÍNEZ, Ministro de Chile.

DON LUIS FELIPE CARBO, Ministro del Ecuador.

DON ANTONIO LAZO ARRIAGA, Ministro de Guátemala.

DON J. N. LÉGER, Ministro de Haití.

DON LUIS F. COREA, Ministro de Nicaragua.

Don MANUEL ALVAREZ CALDERÓN, Ministro del Perú.

Don ALBERTO GUTIERREZ, Encargado de Negocios de Bolivia.

Don R. REIDNER DE AMARAL, Encargado de Negocios del Brasil.

Don AUGUSTO F. PULIDO, Encargado de Negocios de Venezuela.

Don JOHN STEWART, Cónsul General del Paraguay.

Se dió cuenta en esta sesión con el Informe del Señor Director de la Oficina Internacional de las Repúblicas Americanas, correspondiente al año que terminó el 30 de junio de 1901, cuyo documento no se había presentado antes por razón de la ausencia de la mayor parte de los Señores Representantes, que habían salido para México con el objeto de celebrar allí la Segunda Conferencia Internacional Americana.

Habiéndose encontrado enteramente satisfactorio este Informe fué aprobado por unanimidad.

Se dió cuenta también con la Resolución adoptada por la Segunda Conferencia Internacional Americana sobre reorganización de la Oficina Internacional de las Repúblicas Americanas, y se acordó que la referida Resolución se ponga desde luego en práctica; que al publicarla en el BOLETÍN se le agregue el preámbulo, tal como consta de las actas de la Conferencia; y que se nombre en seguida el personal de la Junta Examinadora de empleados, lo cual se hizo, resultando electos los Señores Don MANUEL ÁLVAREZ CALDERÓN, Ministro del Perú, Don ANTONIO LAZO ARRIAGA, Ministro de Guatemala y Don LUIS F. COREA, Ministro de Nicaragua.

El Señor Secretario de Estado llamó la atención del Consejo Directivo hacia las resoluciones adoptadas por la Conferencia en México relativas á la convocación de un Congreso aduanero, una Convención sanitaria y un Congreso para el estudio de la producción y consumo del café. Leídas que fueron estas resoluciones por el Señor Director de la Oficina, se acordó que el Congreso aduanero sea convocado para el 1° de octubre próximo, la Convención sanitaria para el 15 del mismo mes y el Congreso del café para el 1° de noviembre siguiente.

Á moción del Señor LÉGER, Ministro de Haití, se acordó que el primer lunes de cada mes tengan lugar en lo futuro las sesiones ordinarias del Consejo Directivo, empezando á las tres de la tarde.

INFORME DEL SEÑOR DIRECTOR DE LA OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS SOBRE LAS TAREAS DE LA MISMA EN EL AÑO DE 1900 Á 1901.

OFICINA DE LAS REPÚBLICAS AMERICANAS,

Washington, 1.º de diciembre de 1901.

Al Señor Secretario de Estado, Presidente, y á los Señores Vocales de la Comision Ejecutiva de la Unión Internacional de Repúblicas Americanas.

SEÑORES: Al someter á ustedes mi informe anual, tengo la satisfacción de consignar desde el principio que el aprecio de los trabajos de esta Oficina, manifestado en todo tiempo por los Gobiernos representados

en la Unión Internacional de Repúblicas Americanas, de que es el órgano autorizado, continúa siéndole dispensado sin disminución alguna. Ese sentimiento se hizo patente en la sesión inaugural de la segunda Conferencia panamericana, que se está ahora celebrando en la capital de México, donde se concedió á la Oficina una representación adecuada á su importancia, y se abogó con empeño por el ensanchamiento de sus funciones.

SUCURSAL EN MÉXICO.

Cumpliendo con los deseos de la Comisión Ejecutiva, plenamente favorecidos y apoyados cerca de su Gobierno por Su Excelencia el Embajador de México, se estableció en la capital de aquella República, y en conexión con la Conferencia panamericana, una sucursal de esta Oficina, que fué organizada convenientemente y provista, merced á la cortesía del Gobierno de México, de libros de consulta y del suficiente personal.

FALLECIMIENTO DEL DR. GUZMÁN.

La Oficina tuvo que lamentar, durante el año á que se refiere este informe, el fallecimiento de su inteligente y laborioso Secretario, Señor Doctor Don HORACIO GUZMÁN. Con él perdió la Oficina un cooperador valioso, cuyo interés por el éxito de los trabajos de la misma y cuya familiaridad con todos los asuntos que abraza su programa fueron universalmente reconocidos y apreciados.

CUENTAS.

Las cuentas de la Oficina en el año fiscal que terminó el 30 de junio de 1901 son como sigue:

Ingresos y egresos durante el año económico que terminó el 30 de junio de 1901.

INGRESOS.

Cantidad anual votada por el Congreso de los Estados Unidos para 1900-1901.....		\$36,000.00
Saldo proveniente de ventas, alquileres, etc., en 1º de julio de 1900.....	\$1,971.72	
Cuota de las Repúblicas latino-americanas	\$15,452.57

EL BOLETÍN MENSUAL.

La circulación del BOLETÍN MENSUAL continúa prácticamente la misma que en el año anterior. El siguiente estado pone de manifiesto el número de ejemplares que en el mes de octubre último se distribuyó en cada país:

República Argentina.....	455	Honduras	209
Belize (British Honduras)	29	Jamaica	60
Bolivia	99	México	4, 517
Brasil	359	Nicaragua	102
Canadá	169	Paraguay	30
Colombia	190	Perú.....	137
Costa Rica	97	Puerto Rico	180
Cuba	268	Salvador	37
Chile	228	Santo Domingo.....	140
Ecuador	116	Uruguay	137
Las Antillas menores.....	47	Venezuela	473
Los Estados Unidos.....	1, 686	Otros países	17
Europa (países de)	87	Total	10, 583
Guatemala	497		
Haití	197		

Las Repúblicas de Bolivia y Paraguay han concedido á la Oficina, en el curso del presente año, el privilegio de libre franqueo para sus publicaciones. Son, pues, ya trece las Repúblicas que conceden este favor á la Oficina, del cual también disfruta en el Canadá, Cuba, Puerto Rico, y las Filipinas.

OTRAS PUBLICACIONES.

Además del BOLETÍN MENSUAL, ha dado á luz esta Oficina, en lengua inglesa, y con posterioridad á la fecha del último Informe anual, el libro titulado "United States of Brazil: A Geographical Sketch, with Special Reference to Economic Conditions and Prospects of Future Development" (Estados Unidos del Brasil: Bosquejo geográfico, con referencia especial á las condiciones económicas del país, y á las perspectivas de su desenvolvimiento futuro), y como suplemento al mismo, una Bibliografía de aquel país, bajo el título de "List of

Books, Magazine Articles, and Maps Relating to Brazil, 1800-1900" (Lista de libros, artículos de revista y mapas relativos al Brasil, 1800 á 1900). Es de desear que estas publicaciones sean seguidas por otras del mismo género, relativas á las otras naciones de América.

También se ha dado al público un opúsculo del Señor Don JOAQUÍN BERNARDO CALVO, Ministro de Costa Rica en los Estados Unidos, con el título de "Report on Coffee, with Special Reference to the Costa Rican Product" (Memoria sobre el Café, escrita con especial referencia al de Costa Rica) que se ha leído con particular interés y obtenido una gran circulación.

La publicación, en castellano, del Manual de los Estados Unidos, ha sido demorada, por la razón, entre otras, de haberse deseado aprovechar para esta obra los datos del último censo. Es probable que en el curso del año entrante, quede listo de un todo este importante libro. La redacción de aquellos de sus capítulos, que son de carácter técnico, ha sido encomendada á especialistas eminentes.

Un gran número de los Manuales publicados por la Oficina han perdido en el día, en mucha parte al menos, su utilidad práctica. Los datos estadísticos que en ellos se contienen, recogidos ocho ó diez años hace, carecen ya de importancia. Por eso es sin duda que el pedido de dichos libros, aunque no haya cesado del todo, se encuentre grandemente disminuido. Es, por consiguiente, necesario revisarlos todos, y á fin de hacerlo con el mayor éxito posible se ha solicitado el auxilio de los miembros correspondientes honorarios de la Unión Internacional Americana en los respectivos países, y el de otros escritores notables. Se espera que las nuevas ediciones de estos Manuales, corregidas y aumentadas cual corresponde, saldrán pronto á luz, y tenderán á aumentar la estimación de las publicaciones de la Oficina.

Causa seria de todas estas demoras ha sido la muy sentida ausencia del Señor Don ARTHUR W. FERGUSSON, y más tarde la de Don FRANCISCO J. YÁNEZ, que fueron los dos llamados á desempeñar funciones gubernativas de importancia en las Islas Filipinas.

MIEMBROS CORRESPONDIENTES HONORARIOS.

La esperanza que se expresó en el Informe anterior, de que en cada uno de los países de la Unión hubiese un miembro correspondiente honorario, se encuentra ya realizada. Los trabajos con que estos Señores se han servido favorecer de vez en cuando á nuestro BOLETÍN MENSUAL han acrecido en mucho su valor.

MAPAS.

Los dos mapas de México publicados este año por la Oficina han encontrado favorable acogida. Estimulado por este éxito, me decidí á hacer preparar otros mapas de los demás países de la Unión, y puedo

ya decir que los de Guatemala y Costa Rica se encuentran tan adelantados, que pronto han de entregarse á la imprenta. El mapa del Brasil, que aunque incompleto figuró en la Exposición panamericana en Búffalo, quedará enteramente terminado en cosa de dos meses.

BIBLIOTECA.

La Biblioteca consta ahora de unos 8,948 volúmenes. El aumento que ha habido después de la fecha del Informe anterior consiste en 1,456 volúmenes, entre libros y folletos, de los cuales 991 fueron regalados.

El número de las publicaciones periódicas que se reciben con regularidad, incluyendo diversos diarios, ha aumentado en 169. El número total de las que en el día se reciben es cosa de dos mil.

La Oficina continúa esforzándose en conseguir de los diferentes Gobiernos de Centro y Sud América, que se le remitan prontamente todas las leyes, decretos, informes, memorias, y demás documentos oficiales que se publiquen en sus respectivas capitales. En muchos casos esta solicitud ha dado resultado, pero hay mucho que hacer todavía, para que la Oficina pueda estar cierta de que todas las publicaciones que con arreglo á su ley orgánica deben serle enviadas llegan realmente á sus manos.

Es de esperarse que la Conferencia que actualmente celebra sus sesiones en México pueda, al terminar sus trabajos, transferir á esta Oficina todas las obras que le han sido regaladas, y combinar también algún medio de que se facilite el trabajo de la Biblioteca.

Además de la Lista que se publica mensualmente de las nuevas obras adquiridas por la Oficina, se han dado también á la estampa listas semestrales de las mismas adquisiciones, con lo que se facilita considerablemente el trabajo.

LA OFICINA EN LA EXPOSICIÓN PAN-AMERICANA.

Es grato manifestar que el modo con la Oficina fue representada en la Exposición Pan-Americana de Búffalo, tal como se llevó á efecto bajo la dirección del Señor WILLIAMS C. FOX, su Oficial Mayor, mereció la aprobación de todos.

La Oficina estará también representada en la Exposición de la Carolina del Sud y otros Estados de la Unión y las Antillas, que ha de efectuarse en Charleston, y que durará seis meses, empezados á contar desde el 1° de diciembre de 1901.

Del mismo modo figurará, en 1903, en la Exposición de San Luis, Missouri, en conmemoración de la compra de la Luisiana. El Congreso ha concedido el crédito necesario para cubrir los gastos en que allí se incurra por las diversas ramas del Gobierno.

Tengo, Señores, el honor de suscribirme su muy obediente servidor,
W. W. ROCKHILL, *Director*.

CONGRESO ADUANERO.

RESOLUCIÓN.

Los que subscriben, Delegados de las Repúblicas representadas en la Segunda Conferencia Internacional Americana, debidamente autorizados por sus Gobiernos, han aprobado la siguiente resolución:

La Segunda Conferencia Internacional Americana resuelve:

I. Que dentro de un año, contado desde la clausura de las sesiones de la Conferencia Internacional Americana, se reúna en la Ciudad de Nueva York, Estados Unidos de América, un Congreso Aduanero compuesto de uno ó más Delegados nombrados por cada Gobierno entre sus Directores ó Jefes de aduanas, Cónsules, Presidentes ó individuos de Cámaras de comercio, comerciantes notables ú otras personas á quienes se juzgue dotadas de conocimientos técnicos ó periciales en materia de aduanas.

El Consejo Directivo de la Oficina Internacional de las Repúblicas Americanas fijará la fecha en que haya de reunirse el Congreso Aduanero, el cual se organizará como él mismo lo decida, con el auxilio ó asistencia de los empleados de dicha Oficina Internacional, y tendrá por objeto resolver sobre las proposiciones que se le presenten por los Delegados ó por las Comisiones que se nombren, respetando el sistema aduanero de cada país y la legítima percepción de sus derechos fiscales.

II. Las materias sobre que han de versar las resoluciones del Congreso Aduanero son las siguientes:

A. Uniformidad de las reglas para dar entrada, despacho y salida á los buques que hagan el comercio internacional.

B. Uniformidad y simplificación de las formalidades aduaneras referentes á manifestos de buques, redacción y datos de facturas consulares y declaraciones á las aduanas.

C. Simplificación y uniformidad de las formalidades aduaneras para el despacho de mercaderías y equipajes.

D. Medios adecuados para establecer una nomenclatura común de productos y mercancías de las Repúblicas de América, en castellano, inglés, portugués y francés:

1º. Para que sirva de base á la estadística de importación y exportación, de conformidad con un modelo uniforme y sin perjuicio de las reglas que cada nación tenga adoptadas para su estadística particular; y

2º. Para que, con más amplios detalles y especificaciones, sea adoptada en los Aranceles ó Tarifas y en las demás leyes aduaneras de dichas Repúblicas, y sirva de base á la percepción de los impuestos que cada una de ellas tenga establecidos.

E. Adopción de un sistema uniforme y sencillo para las declaraciones

y el despacho aduanero de las muestras y mercancías que circulen en bultos ó paquetes postales.

F. Simplificación y uniformidad de las formalidades aduaneras á que hayan de sujetarse las mercancías que atraviesen simplemente el territorio de una nación, con destino al consumo de otra ú otras, respetando el principio del libre tránsito mercantil por las vías terrestres ó fluviales de las naciones de América, sin cobro de otros derechos ó impuestos que no sean justa compensación de servicios efectivos.

G. Conveniencia de establecer la periodicidad en la reunión de futuros Congresos aduaneros.

H. Cualesquiera otros asuntos conexos con los que quedan indicados, ó que en general se consideren por el Congreso Aduanero útiles ó convenientes para favorecer ó desarrollar el tráfico mercantil.

I. Organización de una Comisión permanente de Aduanas, compuesta de personas dotadas de conocimientos técnicos ó periciales, y que, como una dependencia de la Oficina Internacional de las Repúblicas Americanas, ó en otra forma que el Congreso mismo juzgue adecuada, se encargue, principalmente, de la ejecución de los acuerdos ó resoluciones que éste hubiere tomado, y de la comparación y estudio de las leyes arancelarias y tarifas de las naciones de América, con el fin de iniciar ante sus Gobiernos la expedición de las leyes y medidas que, en materia de formalidades de Aduana, tiendan á simplificarlas y á facilitar el tráfico mercantil.

III. Que á fin de hacer provechoso y completo el estudio por el Congreso Aduanero de la cuestión á que se refiere el inciso D de la precedente resolución, cada uno de los Gobiernos de las Repúblicas de América haga estudiar por su Dirección ó Administración superior de Aduanas, la nomenclatura ó vocabulario formado por la Oficina Internacional de dichas Repúblicas, y remita á la mayor brevedad posible al Consejo Directivo de la expresada Oficina las observaciones ó correcciones al vocabulario que tuviere por conveniente sugerir.

Dicha Oficina Internacional presentará al Congreso Aduanero, en la forma más concreta y sencilla que fuere posible, las observaciones de los Gobiernos que las hubieren hecho, y además, una traducción al francés de la nomenclatura ya publicada.

IV. La ratificación de la presente resolución por parte de los Gobiernos de las Repúblicas Americanas que tengan á bien otorgarla será comunicada al Consejo Directivo de la Oficina Internacional de dichas Repúblicas, antes de seis meses contados desde la fecha de la clausura de esta Conferencia.

Hecho y firmado en la Ciudad de México, á los veintidós días del mes de Enero de mil novecientos dos, en tres ejemplares, escritos respectivamente en castellano, inglés y francés, los cuales se depositarán en la Secretaría de Relaciones Exteriores del Gobierno de los Estados Unidos

Mexicanos, á fin de que de ellos se saquen copias certificadas para enviarlas por la vía diplomática á cada uno de los Estados signatarios.

POLICÍA SANITARIA.**RESOLUCIÓN.**

Los que suscriben, Delegados de las Repúblicas representadas en la Segunda Conferencia Internacional Americana, debidamente autorizados por sus Gobiernos, han aprobado la Resolución siguiente:

La Segunda Conferencia Internacional Americana recomienda enca-recidamente la pronta adopción por las Repúblicas representadas en ella de las resoluciones siguientes:

I. Que todas las medidas sobre asuntos relacionados con la Policía Sanitaria Internacional, las destinadas á evitar la invasión de enfermedades contagiosas en un país y el establecimiento y vigilancia de las detenciones marítimas y terrestres internacionales, ó sea de las estaciones de salubridad, queden por completo bajo la dependencia de los Gobiernos nacionales.

II. Que se establezcan en los puertos de cada país dos clases de detención: A, la de inspección y observación, y B, la de desinfección.

III. Que se suprima la cuarentena prohibitiva respecto á los artículos manufacturados y demás mercancías; que las mercancías procedentes de puertos ó lugares limpios y que hayan atravesado un territorio infestado, sin haberse detenido en él más del tiempo necesario para el tránsito, no estén sujetas á detención ni otra precaución sanitaria, excepto la inspección indispensable en el lugar de su destino, y que dicha inspección y la demora que ella implique, no excedan del tiempo absolutamente necesario al efecto, aplicándose la misma regla á las comunicaciones internacionales por ferrocarril, exceptuándose únicamente de las disposiciones anteriores, el ganado, las pieles crudas, los trapos y los efectos pertenecientes á los inmigrantes.

IV. Que los Gobiernos representados en esta Conferencia se presten mutua cooperación, impartiendo, hasta donde sea posible, su ayuda á las autoridades municipales, provinciales y locales establecidas en sus respectivos territorios, á fin de conseguir el establecimiento y la conservación de condiciones sanitarias adecuadas, según los modernos adelantos, en sus respectivos puertos y dependencias, para reducir, tanto cuanto sea factible, las restricciones inherentes á la cuarentena, hasta lograr su completa supresión. Que, además, se ordene á todas y cada una de sus respectivas instituciones de salubridad, que á la mayor brevedad comuniquen á los representantes diplomáticos ó consulares de las Repúblicas representadas en esta Conferencia, la existencia de las siguientes enfermedades: Cólera, fiebre amarilla, peste bubónica, viruela y cualquiera otra epidemia de carácter grave, imponiéndose á las autoridades sanitarias de cada uno de los puertos, la obligación de hacer constar en la patente de sanidad de los buques, antes de que éstos partan, las enfermedades contagiosas existentes á la sazón en dichos puertos.

V. La Segunda Conferencia Internacional Americana recomienda igualmente, en beneficio de todas las Repúblicas Americanas, y á fin de que éstas cooperen pronta y eficazmente en todo lo relativo á las materias mencionadas en las anteriores resoluciones, que se convoque por el Consejo Directivo de la Unión de dichas Repúblicas, la reunión en Wáshington, D. C., de una Convención general de representantes de las Oficinas de Salubridad de dichas Repúblicas, dentro de un año contado desde la fecha en que la Conferencia adopte estas resoluciones; que cada uno de los Gobiernos representados en esta Conferencia designe uno ó más Delegados para que asistan á dicha Convención, confiriéndoles las facultades necesarias, á fin de que, en unión de los Delegados de las demás Repúblicas, celebren los convenios sanitarios y formulen los reglamentos que á juicio de la misma Convención fueren más benéficos á los intereses de todos los países que en ella estén representados; que los votos en dicha Convención sean computados por Repúblicas, teniendo cada una de ellas un voto; que la Convención adopte las medidas más convenientes con el objeto de que, en lo sucesivo, se reúnan otras Convenciones sanitarias, en las fechas y en los lugares que se juzgue más adecuados; y por último, que nombre un Consejo Ejecutivo de cinco miembros, por lo menos, que funcione hasta que se congregue la siguiente Convención, renovándose, entonces, el personal del Consejo con un Presidente que será electo en escrutinio secreto por la misma Convención. Dicho Consejo se denominará "Oficina Sanitaria Internacional," y residirá en Wáshington, D. C.

VI. Que con el objeto de que la Oficina Sanitaria Internacional esté en aptitud de prestar servicios positivos á las diferentes Repúblicas representadas en la Convención, ellas transmitan pronta y regularmente á dicha Oficina, todos los datos, sean de la especie que fueren, relativos á las condiciones sanitarias de sus respectivos puertos y territorios, y le suministren todos los medios y auxilios á su alcance para el estudio é investigación completos y cuidadosos, de las enfermedades epidémicas que aparezcan en el territorio de cualquiera de las referidas Repúblicas, á fin de que dicha Oficina, con esos medios, coopere con su experiencia á la protección, tan amplia cuanto fuere posible, de la salubridad de aquellas Republicas, facilitando así las relaciones comerciales entre ellas existentes.

VII. Que los sueldos y gastos de los Delegados á la Convención y los de los miembros de la Oficina Sanitaria Internacional, así como los gastos de la Convención y Oficina referidas, sean pagados por los Gobiernos respectivos, cubriéndose los gastos de oficio de la Oficina Sanitaria Internacional, cuyo establecimiento se recomienda, así como los que se erogaren en las investigaciones especiales que ella emprendiere y los que demanden la traducción, publicación y distribución de informes, con los recursos de un fondo apropiado que se formará con las asignaciones anuales de las Repúblicas representadas en las aludidas Convenciones, adoptando como base para calcular la proporción correspon-

diente á cada una, la que actualmente sirve para el sostenimiento de la Oficina Internacional de las Repúblicas Americanas. Se recomienda, en fin, que, en gracia de la economía, esa misma Oficina sea utilizada por las Convenciones referidas y por la Oficina Sanitaria Internacional, para llevar la correspondencia y la contabilidad, hacer los pagos y conservar los informes provocados por las labores á que se refieren las presentes recomendaciones.

Hecho y firmado en la Ciudad de México, á los vintinueve días del mes de Enero de mil novecientos dos, en tres ejemplares, escritos respectivamente en castellano, inglés y francés, los cuales se depositarán en la Secretaría de Relaciones Exteriores del Gobierno de los Estados Unidos Mexicanos, á fin de que de ellos se saquen copias certificadas para enviarlas por la vía diplomática á cada uno de los Estados signatarios.

RESOLUCIÓN RELATIVA A LA REUNIÓN DE UN CONGRESO PARA EL ESTUDIO DE LA PRODUCCIÓN Y CONSUMO DEL CAFÉ.

Los que subscriben, Delegados de las Repúblicas representadas en la Segunda Conferencia Internacional Americana, debidamente autorizados por sus Gobiernos, han aprobado la resolución siguiente:

La Segunda Conferencia Internacional Americana resuelve:

Primero. Que dentro de un año, contado desde la clausura de las sesiones de la Conferencia Internacional Americana, se reúna en la Ciudad de Nueva York, Estados Unidos de América, una Comisión compuesta de uno ó más Delegados nombrados por cada Gobierno que desee estar representado en ella, los cuales deberán tener conocimientos técnicos ó periciales acerca de la producción, distribución y consumo del café.

Segundo. El Consejo Directivo de la Oficina Internacional de las Repúblicas Americanas fijará la fecha en que ha de reunirse esta Comisión, y se organizará como ella decida, con el auxilio de la Oficina mencionada, y tendrá por objeto el estudio de las causas que producen actualmente la crisis por que esta gran industria atraviesa, y proponer los medios prácticos de evitarla ó disminuirla.

Hecho y firmado en la Ciudad de México, á los veintinueve días del mes de Enero de mil novecientos dos, en tres ejemplares, escritos respectivamente, en castellano, inglés y francés, los cuales se depositarán en la Secretaría de Relaciones Exteriores del Gobierno de los Estados Unidos Mexicanos, á fin de que de ellos se saquen copias certificadas para enviarlas por la vía diplomática á cada uno de los Estados signatarios.

SEGUNDA SESIÓN DEL CONSEJO DIRECTIVO DE LA OFICINA INTERNACIONAL.

SINOPSIS DEL ACTA DE LA SESIÓN.

El 7 de abril de 1902, á las tres de la tarde, según lo acordado, se reunió de nuevo el Consejo Directivo de la Unión Internacional de Repúblicas Americanas, en el Salón diplomático del Departamento de Estado, bajo la presidencia del Honorable Señor JOHN HAY, Secretario de Estado, hallándose presentes los señores siguientes:

El Señor Don MANUEL DE AZPIROZ, Embajador de México representando á su país, y á la República del Salvador.

El Señor Don MARTÍN GARCÍA MÉROU, Ministro de la República Argentina.

El Señor Don FERNANDO E. GUACHALLA, Ministro de Bolivia.

El Señor Don JOAQUÍN BERNARDO CALVO, Ministro de Costa Rica, representando también á la República de Honduras.

El Señor Don JOAQUÍN WALKER MARTÍNEZ, Ministro de Chile.

El Señor Don LUIS FELIPE CARBO, Ministro del Ecuador.

El Señor Don ANTONIO LAZO ARRIAGA, Ministro de Guatemala.

El Señor Don J. N. LÉGER, Ministro de Haití.

El Señor Don LUIS F. COREA, Ministro de Nicaragua.

El Señor Don MANUEL ALVREZ CALDERÓN, Ministro del Perú.

El Señor Don JUAN CUESTAS, Ministro del Uruguay.

El Señor Don R. REIDNER DE AMARAL, Chargé d'affaires del Brasil.

El Señor Don AGUSTO F. PULIDO, Chargé d'Affaires de Venezuela.

El Señor DON JOHN STEWART, Cónsul General de Paraguay.

Se halló también presente el Señor Don W. W. ROCKHILL, Director de la Oficina Internacional.

Se dió cuenta con el Informe de la Comisión Examinadora nombrada en la sesión anterior, y de conformidad con su recomendación, y por unanimidad de votos, fué nombrado Secretario de la Oficina Internacional el Señor D. NICOLÁS VELOZ GOITICOA.

Por indicación del Señor Director, y por el voto unánime de los Señores concurrentes, se nombró al Doctor DON JOSÉ IGNACIO RODRÍGUEZ, traductor en jefe de la Oficina, y bibliotecario de la Biblioteca de Colón.

Indicó el mismo Señor Director la conveniencia de fijar el día en que debe remitirse á los diferentes Gobiernos el presupuesto anual de gastos de la Oficina internacional, y después de considerarse debidamente el punto se acordó por unanimidad que quedase señalado para ese objeto el primero de julio de cada año.

Se acordó también, por unanimidad, llevar á efecto la resolución de que cada Gobierno remita á la Oficina internacional dos ejemplares de todas sus publicaciones oficiales, y que el Señor Director quede autorizado para dar, por conducto y con la cooperación de los respectivos Señores Ministros, los pasos que resultaren necesarios.

El Señor Director dió cuenta de haber escrito al Señor Secretario de Estado, para que tuviese á bien informar al Señor Ministro de Correos, del acuerdo adoptado para que las publicaciones de la Oficina Internacional se admitan y remitan libres de porte, y que el Señor Secretario de Estado había accedido á ello. Solo falta ahora que los Señores Ministros, cuyos Gobiernos no lo hubieren ya determinado, escriban también en el mismo sentido, para que no haya obstáculo en este servicio.

Se acordó igualmente que para llevar á efecto lo acordado respecto á policía sanitaria, además de pedir al Señor Jefe del Servicio de Hospitales de Marina de los Estados Unidos de America, un Informe expresivo de sus miras sobre el particular, se solicite de cada uno de los Señores Ministros la remisión á la Oficina de los Reglamentos sanitarios de sus respectivos países, y de los tratados ó convenciones celebradas sobre el mismo asunto, todo lo cual podrá mantenerse reunido en la Oficina Internacional para usarse debidamente cuando sea necesario.

Dió cuenta el Señor Director con el Reglamento interior que se le

había encargado formular en la sesión antecedente, y fué aprobado por unanimidad, autorizándose al Señor Director para ponerlo desde luego en observancia.

Se tomó en consideración el importante punto de la Biblioteca, y después de luminosas observaciones de los Señores LAZO ARRIAGA, GUACHALLA y otros Señores, se acordó hacer un esfuerzo para que los respectivos Gobiernos contribuyan lo más pronto posible á la realización del pensamiento.

No habiendo más asuntos de que tratar se levantó la sesión.

BIBLIOTECA DE COLÓN.

EXTRACTO DEL ACTA DE LA SESIÓN DE LA PRIMERA CONFERENCIA INTERNACIONAL AMERICANA DE 18 DE ABRIL DE 1890.

El Sr. MARTÍNEZ SILVA. Señor Presidente, desde que mi distinguido colega, el Señor MENDONÇA, habló en una reunión particular, de la justicia y conveniencia de levantar un monumento que conmemorara la reunión de la Conferencia Internacional Americana, parece que la opinión de todos los Señores delegados fué unánime en el sentido de que algo debía hacerse á ese respecto. Pero después, pensando que un monumento presentaría entre otras dificultades para llevarse á cabo, la de que, debiendo ser una obra colectiva, necesitaría, por consiguiente, la contribución de todas las naciones aquí representadas, y sería muy difícil adoptar un modelo que fuese aceptado por todas, lo que daría lugar á discusiones, ó á dilaciones, que al fin podrían dar el resultado de que nada se hiciese; pensando en todo esto, y además en que lo que haya de hacerse debe, á mas de ser de utilidad indiscutible, tener unidad y variedad, de suerte que cada Gobierno concurra separadamente á una obra común, se me ocurrió que la única cosa que reuniría esas condiciones, era la formación en Wáshington de una Biblioteca hispano-lusitana-americana, á la cual cada Gobierno remita por su parte colecciones, las más completas que sea posible, de todas las obras históricas, geográficas, leyes, informes oficiales, mapas, etc., de tal modo que el monumento intelectual y científico de la América quede concentrado en un solo lugar. Éste será un monumento más duradero y más noble que cualquiera otro en bronce, ó mármol, que en primer lugar nos honrará á nosotros mismos, y contribuirá á dar á conocer á los países hispano-americanos, y que en segundo lugar será muy grato para el Gobierno y pueblo de los Estados Unidos á quienes es ventajoso tener esa Biblioteca que propongo.

Ella se irá enriqueciendo de día en día, porque los Gobiernos tendrán cuidado de remitir toda obra nueva que se publique en sus respectivos países, hasta que al fin venga á ser ésta una Biblioteca tan completa, que todo el que quiera estudiar algo relativo á América vendría á Wáshington á hacerlo. De Europa misma tendrían que acudir á esta

fuelle, siempre que se tratase de un estudio especial de estos países. Estamos tan desligados en América, hay tantas dificultades en las comunicaciones, que se puede decir que no nos conocemos los unos á los otros; es por ejemplo casi imposible conseguir en Bogotá un libro de la República Argentina, y creo que sucede lo mismo en la Argentina respecto de Bogotá. Supongamos que hubiese una persona que se propusiera escribir sobre América, ¿cómo podría recoger datos tan exactos y tan completos como los que se necesitan? Evidentemente tendría que ir de país en país, invirtiendo mucho dinero y tiempo para conseguir su objeto; pero si hay una Biblioteca como la que propongo, entonces todos los que se dediquen á este estudio, ó necesiten algunos datos, tendrán aquí á la mano cuanto pueden necesitar.

De esa Biblioteca se formarían catálogos que se repartirían á todos los países de América, de tal modo que en todas partes pueda saberse lo que aquí se encuentre. Sería además de gran utilidad para las Legaciones permanentes de América en Washington. Todos los delegados habrán tenido oportunidad de ver qué dificultades tan grandes se presentan cada vez que se necesita un informe, ó un libro, referente á nuestros países.

También sería de gran utilidad para el Gobierno de los Estados Unidos, y estimularía el estudio de aquellas naciones en este pueblo que empieza á conocernos. De modo que mi pensamiento se reduce á la formación en un local especial, en Washington, que se solicitará del Gobierno de los Estados Unidos, de una Biblioteca lusitana-hispano-americana, debiendo cada Gobierno enviar una colección la más completa posible de sus cartas geográficas, obras históricas, etc., enriqueciendo esta Biblioteca de año en año con las nuevas publicaciones que se hagan en los países americanos.

Por lo pronto, podríamos reunir aquí quince ó veinte mil volúmenes, pero en el curso de veinte años ó más, esta Biblioteca tendría una importancia única en el mundo.

Desearía proponer también que cada Gobierno enviara su contingente de libros para que la Biblioteca se abra publicamente en el día en que los Estados Unidos celebren el centenario del descubrimiento de América.

No tuve tiempo de formular por escrito esta proposición; me atrevo á presentarla así verbalmente á la Conferencia; pero si fuere aprobada la idea, yo me tomaré la libertad de someterla á la Mesa por escrito, en la forma en que debe ir para comunicarla á los Gobiernos.

El Sr. ROMERO. Entiendo, Sr. Presidente, que esta va á ser nuestra última sesión. En este concepto sería conveniente que el Honorable Señor delegado pusiera por escrito lo que propone.

* * * * *

El Sr. PRESIDENTE. Los Secretarios procederán á leer la proposición del Honorable Señor Delegado por Colombia.

Se leyó como sigue:

“Se resuelve: Que se funde en la ciudad de Wáshington, para conmemorar la reunión de la Conferencia Internacional Americana, una Biblioteca latino-americana, en un local especial que se solicite del Gobierno de los Estados Unidos, formada por contribuciones de todos los Gobiernos representados en esta Conferencia, donde se recojan todas las obras históricas, geográficas, literarias, mapas y documentos oficiales de toda especie.

“Esta Biblioteca deberá inaugurarse solemnemente el día en que se celebre en los Estados Unidos el cuarto centenario del descubrimiento de la América.”

* * * * *

El Sr. BOLET PERAZA. Abrigo la idea de que estas cosas que han nacido de un corazón noble y de un pensamiento ilustrado deben permanecer enteramente con su propia paternidad; por consiguiente, no voy á proponer ninguna enmienda, sino á sugerir al Señor Delegado que ha promovido la idea, la de bautizar esta Biblioteca con el nombre de “Biblioteca de Colón.”

El Sr. MARTÍNEZ SILVA. Por demás es decir que acepto con mucho gusto la feliz indicación de mi distinguido colega por Venezuela, y aprovecho esta oportunidad para explicar algo, respecto de una duda que se ha presentado.

En el texto de la proposición se dice que esta Biblioteca se fundará en un local especial, y debo manifestar que mi pensamiento ha sido decir, no en un edificio especial, porque nosotros no tenemos derecho de pedirlo, pero sí en un salón especial; de modo que no se confunda esta Biblioteca con las públicas de aquí, sino que conserve siempre su carácter de “Biblioteca latino-americana de Colón.”

El Sr. PRESIDENTE. Si ningún otro Señor Delegado hace uso de la palabra procederémos á votar. Los Señores que aprueben la proposición responderán afirmativamente; los que sean de parecer contrario responderán negativamente.

Se recogió la votación, que resultó unánime en favor del proyecto, votando las delegaciones de la República Argentina, Bolivia, Brasil, Colombia, Costa Rica, Ecuador, Guatemala, Haití, Honduras, México, Nicaragua, Paraguay, Perú, Salvador, los Estados Unidos y Venezuela.

El Sr. PRESIDENTE. Por unanimidad ha sido aprobada la proposición.

EXTRACTO DEL ACTA DE LA SESIÓN DE LA SEGUNDA CONFERENCIA INTERNACIONAL AMERICANA, DE 24 DE ENERO DE 1902.

S. E. el Sr. CALVO, Delegado de Costa Rica, presentó una proposición sobre la creación de una Biblioteca anexa á la Oficina Internacional de las Repúblicas Americanas; pidió que fuera considerada como artículo adicional á las resoluciones antes aprobadas y que se le dispensara todo trámite.

S. E. el Sr. Presidente anunció que se trataría de dicha moción en la sesión de la tarde, conforme á la siguiente orden del día:

* * * * * *

Se leyó la proposición de S. E. el Sr. CALVO, Delegado de Costa Rica, para que á fin de conmemorar la reunión de las Primera y Segunda Conferencias Internacionales Americanas, de Wáshington y de México, se funde bajo la autoridad del Consejo Directivo de la Unión Internacional de Repúblicas Americanas, y como una sección de la Oficina de dichas Repúblicas, una Biblioteca latino-americana que se designará con el nombre de Biblioteca de Colón. (Anexo núm. 4 de la presente acta.)

Consultada la Conferencia, acordó que fuera tomada en inmediata consideración por unanimidad de votos.

Puesta á discusión, S. E. el Sr. Foster dijo: Que su Delegación apoyaba con gusto la resolución de coleccionar libros y documentos valiosos relativos á las Repúblicas Americanas, los que con el tiempo formarían la colección de mayor importancia que hubiera en el mundo, y que de hecho sería recuerdo cariñoso de las personas que ya no existen y de las que aun viven, que con sus labores contribuyeron al buen éxito de la Oficina de las Repúblicas Americanas. Dijo, además, que la Delegación Americana se sentía orgullosa de que uno de sus grandes hombres de Estado se hubiera ocupado con actividad y provecho en su organización y que sus trabajos hubieran sido secundados por otros hombres de elevada inteligencia, que representaban á las Repúblicas hermanas de este hemisferio, entre los que figuró en conspicuo lugar D. MATÍAS ROMERO, quien en este caso, como en muchos otros que exigían tacto político, dejó impreso su sello tanto de hombre de Estado y de diplomático consumado, como de persona sumamente honorable y de alta inteligencia, cuyos propósitos se sobrepusieron siempre á toda consideración de pequeña importancia. Agregó que estaba seguro de que la Conferencia se hallaba dispuesta á conceder algunos momentos á esta resolución, que tenía el honroso objeto de establecer esta Biblioteca como eterno recuerdo á la memoria de D. MATÍAS ROMERO, á la del gran hombre de Estado JAMES G. BLAINE, y á la de otros que en esta labor han sido tan altamente eficaces, útiles, pacientes y enérgicos, como los Sres. MENDONÇA, MÉROU, LÉGER, MARTÍNEZ SILVA, GUACHALLA, CARBO, LAZO ARRIAGA, y en particular el Sr. CALVO, quien, en su consagración afectuosa á este trabajo, se ha distinguido entre sus compañeros.

S. E. el Sr. CALVO dió las gracias al Excmo. Sr. FOSTER por la parte que á él se refería, y agregó que, contestando á las observaciones que alguno de los Señores Delegados de México le había hecho privadamente, debía explicar que, como las Bibliotecas del Congreso y del Departamento de Estado, en Wáshington, tienen todas las obras publicadas en los Estados Unidos, parecía innecesario extender la iniciativa

de la Biblioteca anexa á la Oficina de las Repúblicas á dichas obras, y que por tal motivo la había limitado á sólo las latino-americanas.

La proposición fué aprobada por unanimidad de votos, y la Presidencia mandó pasarla á la Comisión de Redacción.

PROPOSICION DE S. E. EL SR. D. JOAQUIN BERNARDO CALVO, DELEGADO DE COSTA RICA, SOBRE CREACIÓN DE LA BIBLIOTECA DE COLÓN, ANEXA Á LA OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS.

En la última sesión de la Primera Conferencia Internacional Americana, el Sr. Dr. D. CARLOS MARTÍNEZ SILVA, entonces, como en esta Segunda Conferencia, Delegado de Colombia, presentó, un proyecto de resolución para que se fundara en Washington una Biblioteca latino-americana, que conmemorase la reunión de aquella primera Asamblea de las Repúblicas de este Continente. El proyecto, aunque fué aceptado por unanimidad de votos, no llegó á realizarse, como todos sabemos; pero el pensamiento no por eso ha dejado de tener la misma importancia, ni muchas de las razones en que el distinguido Delegado Colombiano fundó su acertada iniciativa han dejado de existir.

Cierto es que no se avienen en el todo, en la fecha presente, algunas de las indicaciones contenidas en la exposición del Dr. MARTÍNEZ SILVA, la cual se acompaña aquí, mas no por estas variaciones introducidas por el tiempo es menos simpática y aceptable hoy la idea fundamental de su proyecto.

No se fundaría ahora la Biblioteca con le objeto de celebrar con su inauguración el cuarto centenario del descubrimiento de América, según sugería el autor de la proposición; pero sí sería en todo caso oportuno que existiera dicha Biblioteca en conmemoración de la Primera y Segunda Conferencias: en cuanto á aquella Conferencia, por haber nacido en su seno el pensamiento; y en cuanto á la presente, porque sería durante sus sesiones que ese pensamiento tomara forma práctica, si esta proposición fuere aceptada.

Habiendo sido unánimemente reconocida la utilidad de la Oficina Internacional de las Repúblicas Americanas, y adoptado el plan para su reorganización y ensanche presentado por la Comisión respectiva, á la cual tengo la honra de pertenecer, me parece el presente el momento más oportuno para llevar adelante el proyecto á que vengo refiriéndome.

La Oficina, principalmente desde el tiempo en que estuvo bajo la dirección del Sr. D. FEDERICO EMORY, ha mejorado de un modo notable y su librería ha prosperado mucho, encontrándose ésta en la actualidad á cargo de persona muy respetable, competente y laboriosa, que la ha ordenado de un modo perfecto, y lográndose así que el número de sus volúmenes exceda ya de 6,000, además de una colección de mapas, fotografías, etc., hecho que por sí solo demuestra que, dándole

toda la atención que merece, podrá llegar en pocos años á ser un centro de grandísima importancia.

Hemos acordado que la Oficina continúe por diez años más, y no hay razón para suponer que á la expiración de ese plazo no hubieren de tomarse iguales acuerdos para lo futuro, haciendo por fin la Unión por tiempo indefinido.

Fundada en todas las consideraciones que preceden, la Delegación de Costa Rica hace suya en lo principal, la iniciativa de la Delegación de Colombia, relacionada, y en consecuencia propone respetuosamente á la Conferencia el siguiente proyecto de

RESOLUCION.

Que para conmemorar la reunión de la Primera y Segunda Conferencias Internacionales Americanas de Washington y de México, se funde, bajo la autoridad del Consejo Directivo de la Unión Internacional de las Repúblicas Americanas, y como una sección de la Oficina de dichas Repúblicas, una Biblioteca Latino Americana que se designará con el nombre de Biblioteca de Colón.

La Delegación que subscribe se permite suplicar á la Conferencia que se dispensen, si á bien lo tuviere, los trámites reglamentarios, y que esta proposición sea considerada inmediatamente.

MÉXICO, *Enero 24 de 1902.* (Firmado.) J. B. CALVO.

CONVENCIÓN PARA SUPRIMIR LAS PRIMAS AZUCARERAS.

Su Majestad, el Emperador de Alemania, Rey de Prusia, en nombre del Imperio alemán; Su Majestad, el Emperador de Austria, Rey de Bohemia, etc., y Rey Apostólico de Hungría; Su Majestad el Rey de los Belgas; Su Majestad el Rey de España y en su nombre Su Majestad la Reina Regente del Reino; el Presidente de la República francesa; Su Majestad el Rey del Reino Unido de la Gran Bretaña é Irlanda y de las posesiones británicas de ultramar, Emperador de la India; Su Majestad el Rey de Italia; Su Majestad la Reina de los Países Bajos; Su Majestad el Rey de Suecia y de Noruega,

Deseando por una parte igualar las condiciones de la competencia entre las azúcares de remolacha y caña procedentes de diversas fuentes, y por la otra fomentar el desarrollo del consumo de azúcar:

Considerando que este doble resultado sólo puede obtenerse suprimiendo las primas y limitando los recargos de impuestos,

Han resuelto celebrar á ese efecto una convención, y nombrado sus plenipotenciarios como sigue:

Su Majestad el Emperador de Alemania, Rey de Prusia, en nombre del Imperio alemán al Señor Conde de WILWITZ, su Enviado Extraordi-

nario y Ministro Plenipotenciario cerca del Gobierno de S. M. el Rey de los Belgas.

Su Magestad, etc.

Quienes después de haberse comunicado sus respectivos poderes, etc., han acordado y convenido lo siguiente:

ARTÍCULO 1.

Las altas partes contratantes se obligan á suprimir tan pronto como se ponga en vigor el presente convenio, las primas directas é indirectas con que pudieran beneficiarse la producción ó la exportación del azúcar, y á no establecer nuevas concesiones de este género mientras se halle en vigor el citado convenio. Para la aplicación de estas disposiciones quedan asimilados á los azúcares los productos azucarados, como chocolate, confites, bizcochos, leche condensada y demás análogos que contengan en notable proporción azúcar incorporado artificialmente.

Quedan comprendidas en la prescripción del párrafo anterior cuantas ventajas directas é indirectas resulten de la liquidación fiscal de las naciones comprendidas en este convenio, para las diversas clases de productores y señaladamente:

A. Las bonificaciones directas acordadas para la exportación.

B. Las otorgadas á la producción.

C. Las exenciones de impuestos, totales ó parciales, concedidas para una parte de los productos de la fabricación.

D. Las bonificaciones resultantes del exceso de rendimiento.

E. Las que resulten por exceso en la rebaja ó descuento en los derechos de aduana por embarque (*drawback*).

F. Las ventajas que produzca todo impuesto cuyo tipo excediera del fijado en el artículo 3.

ARTÍCULO 2.

Las altas partes contratantes se obligan á someter al régimen del depósito bajo la vigilancia permanente, día y noche, de los empleados del Fisco, las fábricas y las refinerías de azúcar, así como las otras fábricas en que se extrae azúcar de las mieles.

A este fin la distribución interior de las fábricas deberá ofrecer toda clase de garantías contra la sustracción clandestina del azúcar, y los empleados estarán facultados para penetrar en todas sus dependencias.

Se llevarán libros de registro sobre una ó varias fases de la fabricación, y los azúcares elaborados se depositarán en almacenes especiales que ofrezcan las mayores seguridades.

ARTÍCULO 3.

Las altas partes contratantes se obligan á limitar á la cifra máxima de 6 francos por cada 100 kilos á los azúcares refinados y sus simila-

res, y á 5.50 francos para los demás, la sobretasa, es decir, la diferencia entre la tasa de los derechos y las que puedan aplicarse á los azúcares extranjeros, y la de los derechos y tasas á que estén sometidos los azúcares nacionales.

Esta disposición no se refiere á la tasa de los derechos de importación en los países no productores de azúcar; tampoco es aplicable á los productos indirectos de la fabricación ó refinación del azúcar.

ARTÍCULO 4.

Las altas partes contratantes se obligan á imponer un derecho especial de importación en su respectivo territorio á los azúcares procedentes de países que concedan primas á la producción ó á la exportación.

Este derecho no podrá ser inferior al importe de las primas directas ó indirectas concedidas en el país de origen. Las altas partes contratantes se reservan el derecho, en la parte que á cada uno concierne, de prohibir la importación de azúcares favorecidos con primas.

Para la valuación de las ventajas que eventualmente resulten del impuesto indicado en la letra F del artículo 2º, la cifra que fija el artículo 4º se deducirá de la ascendencia de este impuesto; la mitad de la diferencia se considera representar la prima, teniendo derecho la Comisión Internacional mencionada en el artículo 8º á exigir del respectivo país contratante, la revisión de la cifra así establecida.

ARTÍCULO 5.

Las altas partes contratantes se obligan recíprocamente á admitir con la tasa más reducida de su tarifa de importación los azúcares que procedan de países convenidos ó de aquellas de sus respectivas colonias ó posesiones que no concedan primas y se sometan á la obligación del artículo 6º.

Los azúcares de caña y los de remolacha no podrán ser objeto de derechos diferenciales.

ARTÍCULO 6.

España, Italia, Rumania y Suecia, quedan dispensadas de la obligación señalada en el artículo 1º en lo que se refiere á las primas de producción, así como de los compromisos señalados en los artículos 3º y 4º, mientras dichas naciones no sean exportadoras de azúcar, pero se obligan á adaptar su legislación sobre el régimen azucarero á las disposiciones del convenio en el plazo de un año ó antes si es posible, á partir del día en que la Comisión permanente haya comprobado y ruesuelto por mayoría de votos haber cesado en ellas las condiciones arriba indicadas.

ARTÍCULO 7.

Las altas partes contratantes convienen en crear una Comisión permanente internacional encargada de vigilar el exacto cumplimiento de cuanto dispone el presente convenio.

Esta Comisión la compondrán los delegados de las naciones contratantes, debiendo agregársele una Oficina permanente.

La Comisión elegirá un Presidente, residirá en Bruselas y se reunirá previa convocatoria firmada por aquél.

Los delegados tendrán el encargo:

A. De comprobar si en los Estados contratantes no se ha otorgado ninguna prima directa ó indirecta á la producción ó exportación de azúcares.

B. De comprobar asimismo si los Estados citados en el artículo 6º continúan dentro de la condición especial prevista en dicho artículo.

C. De comprobar la existencia de las primas en los países no convenidos y evaluar su ascendencia en la forma señalada en el artículo 4º.

D. De emitir su opinión en cuantos asuntos sean motivo de litigio.

E. De dar curso á las solicitudes de admisión á este convenio á los Estados que no han tomado parte en él.

La Oficina permanente estará encargada de reunir, traducir, coordinar y publicar los informes de todo género que se relacionen con la liquidación y la estadística de los azúcares, no sólo en los países convenidos, sino en los demás.

Para asegurar el cumplimiento de las disposiciones que preceden, las altas partes contratantes comunicarán por la vía diplomática al Gobierno belga, que las remitirá á su vez á la Comisión, las leyes, decretos y reglamentos relativos á la tributación de los azúcares que estén ó en lo sucesivo se pongan en vigor en los respectivos países, así como los informes estadísticos relativos al objeto del presente convenio.

Cada una de las altas partes contratantes podrá estar representada en la Comisión por un delegado y un adjunto.

La primera reunión de la Comisión permanente tendrá efecto en Bruselas tres meses antes, por lo menos, de que empiece á regir el presente convenio.

La Comisión no tendrá otro encargo que el de comprobación y examen; sobre todos los asuntos que le sean sometidos hará un informe dirigido al Gobierno belga, el cual lo comunicará á las potencias interesadas, y convocará una conferencia si así lo exige una de las partes contratantes, la cual acordará las medidas que reclamen las circunstancias. De todos modos, las comprobaciones y valuaciones señaladas en las letras A. y B. tendrán carácter obligatorio mientras no resuelva lo contrario una nueva conferencia. Serán válidas cuando se acuerden con un voto de mayoría, tomando parte en su discusión un solo delegado por cada nación representada, y comenzarán á surtir efecto al término de— meses.

Los gastos que originen la organización y funcionamiento de la Oficina permanente y de la Comisión, salvo los sueldos é indemnizaciones de los delegados, que serán pagados por sus respectivos países, serán de cargo de todos los países contratantes y repartidos entre sí en la forma que acuerde la Comisión.

Austria y Hungría serán consideradas como dos países distintos para los efectos de este convenio.

ARTÍCULO 8.

Las altas partes contratantes se obligan por sí y por sus colonias y posesiones, excepción hecha de las colonias autónomas de la Gran Bretaña, á tomar las medidas necesarias para impedir que los azúcares favorecidos con primas que hayan atravesado de tránsito un país contratante, gocen de las ventajas del convenio en el mercado de destino.

La Comisión Internacional permanente tomará á este respecto las medidas necesarias.

ARTÍCULO 9.

Los Estados que no han tomado parte en el presente convenio serán admitidos á adherirse á él á petición propia y previa conformidad de la Comisión Internacional permanente. La adhesión será notificada por la vía diplomática al Gobierno belga y por éste á todos los demás. Por ella se adquieren todos los derechos y obligaciones estipuladas en el presente convenio, y producirá sus efectos á partir del primero de septiembre posterior al envío de la notificación hecha por el Gobierno belga á los Estados contratantes.

ARTÍCULO 10.

El presente convenio será puesto en vigor á partir del 1° de Septiembre de 1903, y así continuará durante cinco años contados desde esta fecha; y caso de que ninguna de las altas partes contratantes hubieran notificado un año antes de expirar este plazo su intención de hacer cesar sus efectos, quedará en vigor durante otro año, y así sucesivamente.

En el caso de que una de las potencias contratantes denunciase este convenio, la denuncia sólo surtirá efecto para ella, conservando las demás hasta el 31 de octubre del año en que se haya hecho la denuncia la facultad de notificar la intención de retirarse en 1° de septiembre del año siguiente. Cuando dos ó más potencias quisieran retirarse, se reunirá en Bruselas á los tres meses una Conferencia de las altas partes contratantes para acordar las medidas que procedan.

ARTÍCULO 11.

Las disposiciones del presente convenio serán aplicadas á las provincias de Ultramar, colonias ó posesiones extranjeras de las altas partes contratantes, siendo no obstante exceptuadas de ellas las colonias ó posesiones británicas ó neerlandesas, acerca de las cuales se hacen algunas declaraciones en el protocolo, salvo en lo que concierne á lo prescrito en los artículos 5° y 8°.

ARTÍCULO 12.

El cumplimiento de las obligaciones recíprocas contenidas en el presente convenio está subordinado, mientras sea necesario, al de las formalidades y reglas establecidas por las leyes constitucionales de cada uno de los países contratantes.

El presente convenio será ratificado, y sus ratificaciones serán depositadas en Bruselas en el Ministerio de Estado el 1° de Febrero de 1903, ó antes si fuese posible.

Queda entendido que el presente convenio no llegará á ser legalmente obligatorio, mientras no sea ratificado por las potencias no comprendidas en la disposición excepcional del artículo 6°.

En el caso de que una ó varias potencias no hubieran depositado sus ratificaciones en el plazo prefijado, el Gobierno belga propondrá inmediatamente á los demás países signatarios, que decidan si ha de ponerse en vigor y sólo entre ellos el presente convenio.

En fe de lo cual los respectivos Plenipotenciarios han firmado la presente convención.

Hecho en Bruselas, en un solo ejemplar, hoy 5 de Marzo de 1902.

PROTOCOLO ADICIONAL.

Artículo 1°.

Considerando que el objeto del recargo es proteger eficazmente el mercado de cada país productor; las altas partes contratantes se reservan la facultad de proponer un aumento á dicho recargo en el caso de que penetren en sus respectivas naciones cantidades considerables de azúcar procedente de una de ellas. Este aumento sólo afectará á los azúcares del referido Estado.

La proposición deberá dirigirse á la Comisión de que habla el artículo 7, la cual acordará lo que proceda sobre el fundamento de la medida propuesta, el tiempo durante el cual debe regir y el impuesto que ha de recargarse. Este recargo no excederá de un franco por cada cien kilos.

La Comisión no podrá tomar este acuerdo sino en el caso de que la invasión del mercado de que se trate sea la consecuencia de una inferioridad real económica, y no el resultado de una elevación ficticia de precios convenida entre los productores.

Artículo 2°.

A. 1°. El Gobierno de la Gran Bretaña declara que no concederá prima alguna, directa ó indirecta, á los acúcares de las colonias de la Corona, mientras dure el presente convenio.

2°. Declara asimismo, como medida excepcional, aunque conservando en principio su entera libertad de acción en lo que concierne á las

relaciones fiscales entre el Reino Unido y sus colonias y posesiones, que mientras dure aquel no dará preferencia alguna á los azúcares coloniales sobre los extranjeros.

3°. Declara por último que someterá el convenio á las colonias autónomas, así como á las Indias Orientales, por si creen conveniente prestarle su adhesión.

Queda entendido que el Gobierno de S. M. Británica tiene la facultad de adherirse al convenio en nombre de las colonias de la Corona.

B. El Gobierno de Holanda declara que mientras dure el convenio no concederá prima alguna á los azúcares de las colonias neerlandesas y que no los admitirá en su territorio con un derecho inferior al que aplique á los azúcares procedentes de los demás países contratantes.

El presente protocolo adicional, que será ratificado al mismo tiempo que el convenio concluido en esta fecha, se considerará como parte integrante del mismo y tendrá la misma fuerza, valor y duración.

En fe de lo cual los Plenipotenciarios, etc.

Hecho en Bruselas, hoy 5 de Marzo de 1902.

NUEVO MINISTRO DE COLOMBIA.

El miércoles 17 de Marzo de 1902 fué recibido por el Señor Presidente de los Estados Unidos de América el Señor Don JOSÉ VICENTE CONCHA con el carácter de Enviado Extraordinario y Ministro Plenipotenciario de Colombia.

Los discursos que se cambiaron en esta ocasión solemne fueron como sigue:

El Señor CONCHA dijo:

“SEÑOR PRESIDENTE: Tengo el honor de poner en vuestras manos la carta que os dirige el Presidente de la República de Colombia por la cual se me acredita ante el Gobierno de los Estados Unidos de América, que dignamente presidís, como Enviado Extraordinario y Ministro Plenipotenciario de aquella nación, cargo en que vengo á reemplazar á un eminente conciudadano, tan sólo porque mi Gobierno ha creído indispensables sus servicios en otro importante empleo.

“Al iniciar la misión que se me ha confiado, es muy grato para mí, Señor Presidente, renovar la expresión de los sentimientos de cordial, antigua y nunca desmentida amistad que el pueblo y el Gobierno de Colombia han profesado desde que el país nació á la vida independiente, al pueblo de los Estados Unidos al cual le unen gratitud, comunidad de ideales políticos y otros vínculos que habrán de estrecharse, si cabe, cuando las dos naciones puedan unirse con el fin de coronar una de las mayores obras de la civilización y el progreso que haya conocido el mundo.

“Colombia que ha mirado siempre con regocijo el engrandecimiento

admirable del país que en América nació el primero á la vida independiente, y que ha mostrado á los pueblos modernos el camino por donde se ha de llegar á formar la ideal alianza de la libertad y la democracia, con la justicia y el orden, mira también en esta República una de las mejores garantías de la autonomía de las nacionalidades del nuevo continente, y anhela secundar en cuanto esté en su poder, el magno movimiento de progreso que dirige la Unión americana.

“Al hacer votos vehementes por la prosperidad creciente de esta República, hágolos en nombre de Colombia también por vuestro propio bienestar, Señor Presidente.”

El Señor Presidente dijo:

“Señor MINISTRO: Me es grato recibir de vuestras manos la carta del Presidente de la República de Colombia en que se os acredita cerca de mí con el carácter de Enviado Extraordinario y Ministro Plenipotenciario de Colombia, y al daros la bienvenida al puesto para que habeis sido nombrado, os aseguro que disfrutais una recepción no menos cordial que la que fué dispensada á vuestros distinguidos predecesores.

“El Gobierno de los Estados Unidos, fiel á su constante propósito de mantener y fortalecer las buenas relaciones que por tan largo tiempo y con tan grande beneficio han existido entre ellos y las Repúblicas de los continentes americanos, ve en vuestras amistosas manifestaciones un grato augurio de que por medio de esfuerzos recíprocos se continúe y estreche la intimidad de relaciones entre los Estados Unidos y Colombia, cual corresponde á Estados cuyas instituciones descansan sobre un fundamento común, y cuya asociación material en las vías del provecho mutuo ha de ayudar necesariamente al progreso de cada una.

“El pueblo de este país cultiva con respecto á sus vecinos los sentimientos más amistosos, desea que todos gocen paz y prosperidad, y el Gobierno tendrá siempre un deber grato que cumplir en dar forma y expresión á esos sentimientos como quiera que sea propio efectuarlo.”

TRATADO DE ARBITRAJE ENTRE LA REPÚBLICA ARGENTINA Y LA REPÚBLICA ORIENTAL DEL URUGUAY.

JULIO A. ROCA, Presidente Constitucional de la República Argentina.

A todos los que el presente vieren, salud:

Por cuanto, entre la República Argentina y la República oriental del Uruguay se negoció, concluyó y firmó, en la ciudad de Buenos Aires, el día ocho de junio del año del mil ochocientos noventa y nueve, un tratado general de arbitraje, así como un protocolo adicional suscrito el 21 de diciembre de mil novecientos uno, que contiene las

modificaciones introducidas por el honorable Congreso de la nación Argentina, cuyos textos son los siguientes:

Los Gobiernos de la República Argentina y de la República oriental del Uruguay, animados del común deseo de solucionar por medios amistosos cualquiera cuestión que pudiera suscitarse entre ambos países, han resuelto celebrar un tratado general de arbitraje, á cuyo efecto nombran como sus Plenipotenciarios, á saber:

El Excmo. señor Presidente de la República Argentina á su Ministro Secretario en el Departamento de Relaciones Exteriores y Culto, Doctor Don AMANCIO ALCORTA; y

El Excmo. señor Presidente de la República Oriental del Uruguay á su Enviado Extraordinario y Ministro Plenipotenciario en la República Argentina, Doctor Don GONZALO RAMÍREZ.

Quienes, una vez comunicados sus plenos poderes que fueron hallados en buena y debida forma, convinieron en los artículos siguientes:

ARTÍCULO 1°. Las Altas Partes Contratantes se obligan á someter á juicio arbitral todas las controversias, de cualquiera naturaleza, que por cualquiera causa surgieren entre ellas, en cuanto no afecten á los preceptos de la Constitución de uno ú otro país y siempre que no puedan ser solucionadas mediante negociaciones directas.

ART. 2°. No pueden renovarse, en virtud de este tratado, las cuestiones que hayan sido objeto de arreglos definitivos entre las partes. En tales casos, el arbitraje se limitará exclusivamente á las cuestiones que se susciten sobre validez, interpretación y cumplimiento de dichos arreglos.

ART. 3°. En cada caso ocurrente se constituirá el Tribunal arbitral que deba resolver la controversia suscitada.

Si no hubiera conformidad en la constitución del Tribunal, éste se compondrá de tres jueces. Cada Estado nombrará un árbitro y éstos designarán el tercero. Si no pudiesen ponerse de acuerdo sobre esa designación, la hará el Jefe de un tercer Estado que indicarán los árbitros nombrados por las partes. No poniéndose de acuerdo para este último nombramiento, se solicitará su designación del Presidente de la República Francesa. El árbitro así elegido será de derecho Presidente del Tribunal.

No podrá nombrarse árbitro tercero á la persona que en ese carácter haya sentenciado ya en un juicio arbitral, con arreglo á este tratado.

ART. 4°. Ninguno de los árbitros podrá ser ciudadano de los Estados contratantes, ni domiciliado en su territorio. Tampoco podrá tener interés en las cuestiones que sean objeto del arbitraje.

ART. 5°. En caso de no aceptación, renuncia ó impedimento sobreveniente de uno ó más de los árbitros, se proveerá á su substitución por el mismo procedimiento adoptado para su nombramiento.

ART. 6°. Los puntos comprometidos se fijarán por los Estados contratantes que podrán también determinar la amplitud de los poderes de los árbitros y cualquiera otra circunstancia relativa al procedimiento.

ART. 7°. En defecto de estipulaciones especiales entre las partes, corresponde al Tribunal designar la época y el lugar de sus sesiones fuera del territorio de los Estados contratantes, elegir el idioma que deberá emplearse, determinar los métodos de substanciación, las formalidades y términos que se prescribirán á las partes, los procedimientos á seguirse, y en general, tomar todas las medidas que sean necesarias para su propio funcionamiento y resolver todas las dificultades procesales que pudiesen surgir en el curso del debate.

Los comprometentes se obligan á poner á disposición de los árbitros todos los medios de información que de ellos dependan.

ART. 8°. Cada una de las partes podrá constituir uno ó más mandatarios que la representen ante el Tribunal arbitral.

ART. 9°. El Tribunal es competente para decidir sobre la regularidad de su propia constitución. Lo es igualmente para resolver las controversias que surjan entre los comprometentes sobre si determinadas cuestiones han sido ó no puntos sometidos á la jurisdicción arbitral en la escritura de compromiso.

ART. 10°. El Tribunal deberá decidir de acuerdo con los principios del Derecho Internacional, á menos que el compromiso imponga la aplicación de reglas especiales ó autorice á los árbitros á decidir como amigables compondores.

ART. 11°. No podrá formarse Tribunal sin la concurrencia de los tres árbitros. En el caso que la minoría, debidamente citada, no quisiese asistir á las deliberaciones ó á otros actos del proceso, se formará Tribunal con sólo la mayoría de los árbitros, haciéndose constar la inasistencia voluntaria é injustificada de la minoría.

Se tendrá como sentencia lo que resuelva la mayoría de los árbitros, pero si el árbitro tercero no aceptase el parecer de ninguno de los árbitros nombrados por las partes, su dictamen será cosa juzgada.

ART. 12°. La sentencia deberá decidir definitivamente cada punto en litigio y con expresión de sus fundamentos.

Será redactada en doble original y firmada por todos los árbitros. Si alguno de ellos se negase á suscribirla, los otros deberán hacer mención en acta especial de esta circunstancia y la sentencia producirá efecto siempre que esté firmada por la mayoría de los árbitros. El árbitro en disidencia se limitará á hacer constar su discordia en el acto de firmar la sentencia y sin expresión de sus fundamentos.

ART. 13°. La sentencia deberá ser notificada á cada una de las partes por medio de su representante ante el Tribunal.

ART. 14°. La sentencia legalmente pronunciada decide dentro de los límites de su alcance la contienda entre las partes.

ART. 15°. El Tribunal establecerá en la sentencia el plazo dentro del cual debe ser ejecutada, siendo competente para decidir las cuestiones que pueden surgir con motivo de la ejecución de la misma.

ART. 16°. La sentencia es inapelable y su cumplimiento está confiado al honor de las naciones signatarias de este pacto.

Sin embargo, se admitirá el recurso de revisión ante el mismo Tribunal que la pronunció, siempre que se deduzca antes de vencido el plazo señalado para su ejecución, en los siguientes casos:

1°. Si se ha dictado sentencia en virtud de un documento falso ó adulterado.

2°. Si la sentencia ha sido en todo ó en parte la consecuencia de un error de hecho, que resulte de las actuaciones ó documentos de la causa.

ART. 17°. Cada una de las partes pagará los gastos propios y la mitad de los gastos generales del Tribunal arbitral.

ART. 18°. El presente tratado estará en vigor durante diez años, á contar desde el canje de las ratificaciones. Si no fuese denunciado seis meses antes de su vencimiento, se tendrá por renovado por otro periodo de diez años y así sucesivamente.

El presente tratado será ratificado y canjeadas sus ratificaciones en Buenos Aires, dentro de seis meses de su fecha.

En fe de lo cual los Plenipotenciarios de la República Argentina y de la República Oriental del Uruguay firmaron y sellaron con sus respectivos sellos, y por duplicado, el presente Tratado, en la Ciudad de Buenos Aires, á los ocho días del mes de junio del año de mil ochocientos noventa y nueve.

LEY NÚM. 4044.

El Senado y Cámara de Diputados de la Nación Argentina, reunidos en Congreso, etc., sancionan con fuerza de ley:

ARTÍCULO 1°. Apruébase el tratado general de arbitraje, firmado en la Ciudad de Buenos Aires, el ocho de junio de mil ochocientos noventa y nueve por los Plenipotenciarios de la República Argentina y de la República Oriental del Uruguay, debidamente autorizados al efecto, modificándose el artículo tercero como sigue:

“Artículo tercero. En cada caso ocurrente se constituirá el Tribunal arbitral que deba resolver la controversia suscitada. Sino hubiera conformidad en la constitución del Tribunal, éste se compondrá de tres jueces. Cada Estado nombrará un árbitro y éstos designarán el tercero. Si no pudiesen ponerse de acuerdo sobre esta designación, la hará el Jefe de un tercer Estado, que indicarán los árbitros nombrados por las partes. No poniéndose de acuerdo para este último nombramiento, cada parte designará una Potencia diferente y la elección del tercer árbitro, será hecha por las dos Potencias así designadas.

“El árbitro así elegido, será de derecho Presidente del Tribunal. No podrá nombrarse árbitro tercero á la persona que en ese carácter haya sentenciado ya en un juicio arbitral con arreglo á este tratado.”

ART. 2°. Comuníquese al Poder Ejecutivo.

Dada en la sala de sesiones del Congreso Argentino, en Buenos Aires, á diez y ocho de diciembre de mil novecientos uno.

JOSÉ E. URIBURU.

B. OCAMPO,

Secretario del Senado.

BENITO VILLANUEVA.

ALEJANDRO SORONDO,

Secretario de la C. de D. D.

Reunidos en el Despacho del Ministerio de Relaciones Exteriores de la República Argentina SS. EE. el Señor Doctor Don AMANCIO ALCORTA, Ministro de Relaciones Exteriores de la República Argentina, y el Señor Doctor Don GONZALO RAMÍREZ, Enviado Extraordinario y Ministro Plenipotenciario de la República Oriental del Uruguay, conformes en el propósito de modificar el tratado general de arbitraje celebrado entre ambos gobiernos en 8 de junio de 1899, en la parte que trata de la formación del tribunal arbitral, y con el objeto de asegurar su constitución sin los inconvenientes propios de un tribunal permanente, han convenido en lo siguiente:

El artículo 3º del tratado referido queda modificado como sigue:

“Art. 3º. En cada caso ocurrente se constituirá el Tribunal arbitral que deba resolver la controversia suscitada. Si no hubiera conformidad en la constitución del Tribunal, éste se compondrá de tres jueces.

“Cada Estado nombrará un árbitro y éstos designarán el tercero.

“Si no pudiesen ponerse de acuerdo sobre esta designación, lo hará el Jefe de un tercer Estado que indicarán los árbitros nombrados por las partes. No poniéndose de acuerdo para este último nombramiento, cada parte designará una Potencia diferente, y la elección del tercer árbitro será hecha por las dos Potencias así designadas.

“El árbitro así elegido será de derecho Presidente del Tribunal.

“No podrá nombrarse árbitro tercero á la persona que en ese carácter haya sentenciado ya en un juicio arbitral con arreglo á este tratado.”

El presente protocolo será ratificado y canjeado simultáneamente con el tratado de arbitraje del que formará parte integrante.

En fe de lo cual lo firman en dos ejemplares en la Ciudad de Buenos Aires, á los veintiun días del mes de diciembre del año mil novecientos uno.

[L. s.]

AMANCIO ALCORTA.

[L. s.]

GONZALO RAMÍREZ.

Por tanto vistos y examinados el tratado y protocolo preinsertos, los acepto, confirmo y ratifico, comprometiendo y obligándome á nombre de la nación, á cumplirlos y hacerlos cumplir fiel é inviolablemente.

En fe de lo cual, firmo con mi mano el presente instrumento de

ratificación, sellado con el gran sello de las armas de la República, y refrendado por el Ministro Secretario en el Departamento de Relaciones Exteriores y Culto.

Dado en Buenos Aires, capital de la República Argentina, á los doce días del mes de enero de mil novecientos dos.

JULIO A. ROCA.

AMANCIO ALCORTA.

ACTA DE CANJE.

Reunidos en el Ministerio de Relaciones Exteriores y Culto de la República Argentina el Señor Ministro del ramo, Doctor Amancio Alcorta y el señor Encargado de negocios interino de la República Oriental del Uruguay, Doctor PABLO PÉREZ GOMAR, con el objeto de efectuar el canje de las ratificaciones del tratado general de arbitraje y del protocolo adicional, firmados en Buenos Aires, el 8 de junio de 1899 y 21 de diciembre de 1901, por los Plenipotenciarios de ambos países, debidamente autorizados al efecto, y después de comparados cuidadosamente los textos de las respectivas ratificaciones que fueron encontrados conformes, practicaron, previa presentación de los correspondientes plenos poderes, el canje referido.

En fe de lo cual, firmaron por duplicado la presente Acta de canje, en la ciudad de Buenos Aires, el 18 de enero de 1902, y la sellaron con sus sellos respectivos.

AMANCIO ALCORTA.

[L. S.]

PABLO PÉREZ GOMAR.

FALLECIMIENTO DEL SEÑOR DON JOSÉ ANDRADE.

El BOLETÍN cumple con el triste deber de consignar en sus páginas la noticia del fallecimiento en New York, el 20 de marzo ultimo, del Señor Don JOSÉ ANDRADE, que fué por mucho tiempo Enviado Extraordinario y Ministro Plenipotenciario de los Estados Unidos de Venezuela en este país—que figuró muy dignamente en la delegación de Venezuela en la Primera Conferencia Internacional que se celebró en Wáshington de 1889 á 1890—y que también tomó parte como Arbitrador por Venezuela, en la Comisión Mixta de Reclamaciones Americanas contra la mencionada República establecida por el tratado de diciembre 25 de 1895 entre los Estados Unidos y Venezuela.

El Señor ANDRADE había nacido en Mérida, en el Estado de los Andes, y consagrado gran parte de su vida al servicio de su patria, en la política, la diplomacia y la magistratura. Fué miembro del Congreso venezolano en varias legislaturas, Gobernador del Estado de Zulia, Representante diplomático de Venezuela, no sólo en los Estados

Unidos, como ya se ha dicho, sino en Francia, España, Inglaterra y Alemania.

Fué persona de grandes conocimientos literarios é inclinado por naturaleza á la admiración de lo bello bajo formas suaves y exquisitas. Había vivido largo tiempo en Italia, y estaba familiarizado con la lengua y la literatura portentosa de aquel país. Dominaba igualmente el francés y el inglés, y consagraba cuanto tiempo podía al cultivo y estudio de las bellas letras.

Los que tuvieron la fortuna de tratarlo de cerca admiraron frecuentemente su erudición y gran saber. Pero por encima de todas sus virtudes dominó siempre su inconquistable modestia que le hacía preferir la oscuridad al brillo, y el silencio á la ostentación.

La caída de su hermano, el General Don IGNACIO ANDRADE, Presidente que fué de la República, ocasionó su retiro á la vida privada. Estaba temporalmente establecido en Nueva York cuando á la edad de 63 años una grave pulmonía le arrebató la existencia.

REPÚBLICA ARGENTINA.

EL ÁREA Y LOS PRECIOS DE LAS TIERRAS PÚBLICAS EN LOS TERRITORIOS NACIONALES.

El Ministro argentino de Agricultura envió al Cónsul argentino en Sydney, Nueva Gales del Sur, un informe relativo al área, en acres, de los terrenos baldíos que hay en los Territorios Nacionales, y que los que deseen ir á la República Argentina como colonos pueden comprar ó tomar en arrendamiento al Gobierno. Por dicho informe se ve que el número total de acres de los expresados terrenos asciende á 237,788,-343, distribuidos como sigue: En el Chaco, 32,182,861; en Chubut, 55,687,983; en Formosa, 21,430,165; en Misiones, 1,956,240; en Neuquén, 15,249,923; en Pampa, 7,718,261; en Río Negro, 37,266,057; en Santa Cruz, 61,626,144, y en Tierra del Fuego, 4,840,418. En las últimas ventas de estos terrenos, se obtuvieron los siguientes precios por acre, á saber; en Chubut, 16 centavos; en Neuquén, 16 centavos; en Santa Cruz, 30 centavos, y en Tierra del Fuego, 40 centavos.

Las situaciones de los territorios mencionados son como sigue: Formosa y Chaco, en el nordeste, adyacente al Paraguay; Chubut, al sur del centro del país, extendiéndose desde el Océano Atlántico hasta la frontera chilena; Misiones, en la extremidad nordeste, adyacente al Brasil y al Paraguay; Neuquén, en la extremidad occidental; Pampa, inmediatamente adyacente á Neuquén por el este; Río Negro, precisamente al sur de Neuquén y de Pampa; Santa Cruz, precisamente al sur de Chubut; y Tierra del Fuego en la extremidad sudoeste del Continente. Río Negro, Chubut, Santa Cruz y Tierra del Fuego (en el

orden mencionado de norte á sur) son subdivisiones de la parte que la Argentina tiene del territorio que antes se conocía con el nombre de Patagonia.

Los futuros inmigrantes pueden obtener del Ministro de Agricultura, en Buenos Aires, más informes acerca de los alicientes que el Gobierno ofrece á los colonos. En su comunicación al Cónsul en Sydney, el Ministro de Agricultura hace constar que el área de terrenos que en la actualidad está cultivada en la República asciende á 17,174,250, contra 7,478,700 acres en 1880. La mayor parte de los terrenos de la República está destinada á la crianza de ganado.

DERECHOS DE PUERTO EN LA PLATA.

Según el “Buenos Ayres Standard,” las autoridades de La Plata han disminuido considerablemente los derechos de puerto y mejorado de tal modo el canal de la bahía que permite la entrada de vapores que tienen un calado de 25 pies. Según el “Standard,” los derechos de puerto son como sigue:

Diez centavos (en papel moneda) por tonelada registrada, para cada vapor ó buque de vela que entre para cargar ganado vivo ó cereales ó que entre en lastre para obtener efectos para la exportación.

Veinte centavos (en papel moneda) por tonelada registrada, para cada buque de vela que entre cargado para tomar efectos en la travesía ó viaje de regreso.

Los vapores que entren con el solo objeto de cargar, deberán pagar derechos de entrada y de dique únicamente sobre la base de la cantidad de carbón de piedra que tomen, sin tener en cuenta su tonelaje, debiendo fijarse 100 toneladas como la cantidad mínima de carbón.

Todos los buques que hayan pagado derechos y que hayan salido para otros puertos argentinos, al regresar para completar su cargamento no pagarán ningún derecho adicional.

Los alijadores que entren con cargamentos para buques marítimos no pagan derechos ni tampoco los buques que entren de arribada.

No se cobrarán derechos por depósito de productos domésticos durante treinta días, ni por la madera argentina durante sesenta días.

UN GRAN PERIÓDICO SUDAMERICANO.

El “World’s Work” correspondiente al mes de febrero de 1902, contiene una descripción hecha por el Señor BERNARD MEIKLEJOHN, del periódico acaso más notable y excepcional del mundo, á saber, “La Prensa,” de Buenos Aires. Dicho periódico tiene sus oficinas en un hermoso edificio de mármol gris, de cinco pisos, con una torre sobre la cual se destaca una figura colosal de bronce dorado que representa la prensa. Este edificio está situado en el boulevard más hermoso de

la ciudad. Además de las oficinas de costumbre, en todo periódico, hay en el piso principal un lujoso salón de consultas, en el cual un médico y cuatro practicantes atienden gratuitamente á las dolencias de un promedio de 110 pacientes diarios; otro salón de abogados, en el cual los pobres pueden consultar gratuitamente un letrado, y un museo, en el cual pueden inspeccionarse, también de balde, todos los productos y manufacturas de la República Argentina. En el segundo piso están las suntuosas oficinas del propietario, del director del periódico, y del cuerpo de redacción. También hay una magnífica biblioteca con colecciones completas de obras de Derecho, Medicina é Ingeniatura, á la cual tienen libre acceso los estudiantes á todas horas. En un cuarto contiguo se enseña gratis el castellano, en tanto que hay un gran salón en el cual el pueblo de la ciudad puede celebrar reuniones.

Los extranjeros distinguidos que van á Buenos Aires encuentran, en el tercer piso de dicho edificio, la particularidad más admirable de este establecimiento, á saber, un juego regio de habitaciones, para recibirlos. Además de esto, hay un "Salon des Fêtes" que es una copia fiel del salón de recibo de Fontainebleau, en el cual se celebran reuniones literarias, de beneficencia y científicas, por invitación de "La Prensa." El objeto del dueño al suministrar estos suntuosos salones es engrandecer la importancia de la ciudad. En los pisos altos están la imprenta, el cuarto de los noticieros ó *reporters*, un *restaurant* y un salón de esgrima.

"La Prensa" es un diario de ocho páginas interiores consagradas á la publicación de noticias, y de varias páginas exteriores consagradas á la publicación de anuncios.

Este periódico lo fundó el Señor J. C. P. PAZ, en 1869, como único director y dueño. El director actual lo es su hijo, el Señor Don EZEQUIEL P. PAZ. El edificio del periódico se concluyó en 1896, y costó \$2,000,000 oro. "La Prensa" tiene una circulación de 100,000 ejemplares y se vende á 3 centavos el ejemplar (moneda americana). Durante los seis primeros meses de 1901, el Informe del tesorero mostró un total de ingresos que ascendió á \$1,033,905.47 oro, y un total de gastos como de \$650,000. La mayor parte del equipo de este magnífico periódico se compró en los Estados Unidos, donde también se surte de los tipos que necesita.

BOLIVIA.

COMERCIO EXTRANJERO EN 1901.

El Señor Don GERARDO ZALLES, Cónsul General de la República de Bolivia en Nueva York, ha suministrado al BOLETÍN MENSUAL un estado interesante que muestra el comercio extranjero de Bolivia en 1901.

La tabla siguiente indica dichas transacciones comerciales en el orden de su importancia:

Países.	Bultos.	Peso.	Valor.
		<i>Kilos.</i>	<i>Francos.</i>
Inglaterra	95,613	4,098,338	7,936,470.94
Alemania	120,161	4,275,135	7,443,920.88
Francia	53,649	2,659,940	3,949,266.70
Estados Unidos	86,409	1,440,253	1,706,268.70
Italia	12,715	793,444	1,229,472.15
Bélgica	9,852	536,344	758,173.50
Portugal	7,365	230,280	137,064.34
España	369	23,488	55,604.14
Total	386,133	14,057,222	23,218,241.35

INGRESOS DE LA ADUANA DE LA PAZ DURANTE EL AÑO DE 1901.

Según datos estadísticos publicados en la Revista Comercial é Industrial de Bolivia, los ingresos de la aduana de La Paz en 1901 ascendieron á 1,369,380.41 bolivianos, distribuidos de la manera siguiente:

	Bolivianos.
Aduanas	1,247,151.91
Multas por facturas consulares	103.37
Recargo de almacenaje	36,015.00
Intereses	196.20
Estañó	13,190.18
Plata sellada	4,868.39
Oro	99.15
Goma elástica	67,725.06
Barrilla de cobre	31.15
Totales	1,369,380.41

BRASIL.

IMPORTACIÓN Y EXPORTACIÓN DURANTE LOS PRIMEROS NUEVE MESES DE 1901.

Según estadísticas oficiales que acaban de publicarse las importaciones y exportaciones del Brasil en los primeros nueve meses de 1901 fueron como sigue:

Países.	Importaciones.	Exportaciones.
	<i>Milreis.</i>	<i>Milreis.</i>
Alemania	27,645,178	86,938,719
República Argentina	38,243,167	13,701,336
Austria-Hungría	5,428,497	15,289,576
Bélgica	6,176,159	10,505,245
Los Estados Unidos	36,654,542	260,253,775
Francia	22,048,873	51,223,770
La Gran Bretaña y sus posesiones	89,462,328	76,544,337
España	1,564,428	1,102,290
Holanda	1,887,529	25,511,108
Italia	11,653,458	5,047,130
Portugal	18,129,128	3,423,061
Suecia y Noruega	3,489,682	-----
Suiza	1,957,962	-----
Uruguay	18,678,616	7,440,893
África	-----	4,619,428
Otros países	2,651,257	7,845,576

Importaciones y exportaciones por Estados.

Estados.	Importaciones.	Exportaciones.

PRESUPUESTO DE GASTOS AUTORIZADOS PARA 1902.

En el BOLETÍN MENSUAL correspondiente al mes de febrero se publicó detalladamente el cálculo aproximado de las rentas del Brasil en 1902, comparado con el cálculo análogo que se hizo el año anterior. Los gastos autorizados en 1902, comparados con los de 1901, se dividen entre los siguientes departamentos gubernamentales:

	1902.		1901.	
	<i>Oro.</i>	<i>Papel moneda.</i>	<i>Oro.</i>	<i>Papel moneda.</i>
Ministerio de Justicia y del Interior		16,451,611\$000		16,094,202\$000
Ministerio de Relaciones Exteriores	926,500\$000	737,920\$000	969,500\$000	527,520\$000
Ministerio de Marina		24,379,297\$000		23,200,337\$000
Ministerio de la Guerra		46,295,602\$000		45,580,058\$000
Ministerio de Fomento, Ferrocarriles y Obras Públicas	10,770,614\$000	66,878,840\$000	12,859,015\$000	61,818,446\$000
Ministerio de Hacienda	21,895,057\$000	83,178,618\$000	23,681,470\$000	97,293,661\$000
Total	33,592,171\$000	237,921,888\$000	37,509,985\$000	244,514,224\$000

Bajo la inspección de los diferentes Ministerios que se acaban de mencionar, el Congreso nacional ha autorizado las siguientes obras:

Ministerio de Marina.—La construcción de un buque submarino sometién dose á la prueba debida de un diseño ó invento nacional, cuyos planos, al someterse al criterio de peritos ó autoridades competentes, se reconozca que pueden dar buenos resultados.

Ministerio de la Guerra.—La continuación de las mediciones de terrenos con el fin de que las tropas nacionales construyan un ferrocarril entre Paraná y Matto Grosso bajo la inmediata inspección de ingenieros militares.

Ministerio de Obras Públicas.—La construcción de líneas telegráficas de Bomjardim á Taquaretinga en el Estado de Pernambuco; de Cuyaba á Corumba y de Puerto Cachoeira de Santa Leopoldina á Villa Alfonso Claudio en el Estado de Espírito Santo; de Itabira á Santa Ana de Ferros e Guanhaes, y de Boquim á Simao Dias (que pase por la

aldea de Campos y la población de Lagarto), en el Estado de Sergipe; de Lavras, en el Estado de Ceará, á Souza, en el Estado de Parahyba, que pase por Cajazeiras y San João de Souza; de Peripery á Itamaraty, en el Estado de Piauhý; una línea ramal para unir á Santa Ana y Acarahu con Sobral, en el Estado de Ceará; líneas ramales á Maracana, Marapanim, Odivelas, Vigía y San Miguel do Guama, Estado de Pará; una línea de Oeiras á Paranagua, y una línea ramal de Oeiras á Valenca, Picos y Jaicos; una línea de Cachoeiro do Itapemirim á Rio Novo, y Alfredo Chaves, en el Estado de Espírito Santo; una línea á Campos Novos, que pase por Corytibanos, Estado de Santa Catharina, y una línea de San Benedicto, Estado de Ceará, que se extienda hasta el punto más conveniente de la línea principal.

Proveer semillas y plantas y pagar el transporte de animales que se destinen á estimular el desarrollo de nuevos cultivos y el mejoramiento de las razas nativas existentes. Con este fin se ha hecho una asignación de 100 contos, ó sean como \$60,000.

Gastar una suma que no exceda de 300,000\$000 en hacer propaganda en el extranjero á favor de los productos agrícolas y minerales del Brasil.

Reorganizar el servicio marítimo que tiene á su cargo la compañía denominada Lloyd Brasileiro, mediante la obtención de una rebaja en el flete del transporte de productos nacionales. A la compañía que se haga cargo de desempeñar este servicio se le ha de exigir que, si es necesario, al pedírsele con 10 días de anticipación, facilite un vapor extraordinario para el transporte de mercancías.

Renovar el contrato con la Companhia Pernambucana de Navegação sin ocasionar aumento de gastos. Los buques de dicha Compañía harán la travesía entre Recife y Aracaja, y un viaje bimestral á Amarração ó á Cajueiros.

Renovar el servicio de navegación establecida con arreglo á la ley núm. 351 del 11 diciembre de 1895, sin aumentar los gastos. Los puntos terminales son Grajahn y Floriano.

Celebrar un convenio con la Companhia Amazonas para establecer un servicio marítimo de Arajuary á Oyapoe.

Construir la prolongación de la vía férrea de Silva Xavier á Curvello, y concluir la vía ancha para sustituir la vía estrecha hasta São Paulo. Los fondos para estas obras, es decir, 1,500 contos para la primera, y 1,000 contos para la segunda, se han de tomar de las rentas netas del Ferrocarril Central del Brasil que es propiedad del Gobierno Federal.

Obtener una prórroga del plazo para terminar los trabajos del ferrocarril de Mogyana en la sección que se extiende desde Araguary hasta Catalao. El período en el cual la Compañía del Ferrocarril de Mogyana ha de concluir la primera sección del ferrocarril de Catalao á Palmas, empieza á contarse desde la fecha de la inauguración de la estación de Catalao, y los concesionarios deben hacer arreglos con dicha Compañía á fin de que se concluya la sección de Araguary á Catalao.

Extender, sin hacer gastos, la concesión otorgada para construir el ferrocarril de Praca da República hasta la barra de Guaratyba.

Abrir un crédito de 600 contos para efectuar la inspección, renovación y compra de material para el desagüe y sistema de cloacas de la Capital Federal.

Abrir un crédito de 40 contos para sufragar los gastos de la Exhibición de productos brasileños en la Exposición Pan-Americana de Buffalo.

Celebrar un convenio con las Compañías de ferrocarril que tienen garantizado el interés de su capital, para que modifiquen sus líneas sin causarle gastos adicionales al Gobierno, debiendo dichas líneas pasar por regiones más productivas.

Que el puerto de Santarem, Estado de Pará, se ha de incluir en el itinerario de la Compañía Lloyd Brasileiro, cuyos buques harán escala alternativamente en este último puerto y en el de Obidos.

Que se conceda una prórroga de ocho meses al plazo fijado para comenzar los trabajos en el puerto de la ciudad de Bahía.

Ministerio de Hacienda.—El Gobierno está autorizado para liquidar las deudas de los bancos ocasionadas por la ayuda prestada á la agricultura.

Para prestar la suma de 300 contos al Estado de Espíritu Santo.

Para revisar el Reglamento relativo á las facturas consulares, é introducir las mejoras que la experiencia indique.

Para conceder un premio de 50\$000 por tonelada á todos los buques de más de 100 toneladas construidos en el Brasil.

Los fondos para efectuar la amortización de la deuda interior en papel moneda se han de obtener de las fuentes siguientes: (a) De los bonos comprados con el producto de la venta de las propiedades del gobierno y el producto de los arrendamientos con arreglo á los términos del artículo 3, ley 471, del 26 de diciembre de 1900; (b) De los bonos adquiridos con el sobrante de los ingresos y reembolsos de depósitos; (c) De los bonos que ya haya comprado y que compre el Departamento de Amortización (Caixa de Amortisação) con el producto del interés que no se ha reclamado, de acuerdo con el artículo 48 de la ley que lleva la fecha de 28 de octubre de dicho año, y el reglamento núm. 9370, artículo 94, de la ley que lleva la fecha de 14 de febrero de 1885; (d) De los bonos comprados con los fondos que el Congreso ha asignado especialmente con ese fin.

Todos los bonos que se compren en conformidad con el artículo 2, se asentarán bajo el encabezamiento de “Fondo de Amortización de la Deuda Interior en Papel Moneda,” y los intereses provenientes de aquéllos se destinarán á la compra de nuevos bonos para aumentar dicho fondo.

COMERCIO CON CHILE.

El Secretario de la Legación de los Estados Unidos en Petrópolis, Brasil, al enviar un informe á su Gobierno sobre el comercio entre las

Repúblicas del Brasil y Chile, dice que la República chilena desea la cooperación brasileña para subvencionar una línea de vapores que preste servicios de transporte á precios módicos entre los dos países, en tanto que el Brasil está deseoso de obtener concesiones arancelarias que favorezcan su azúcar y café. Dícese que en la actualidad se están efectuando negociaciones cuyo objeto es activar la obtención de estos resultados.

El Brasil importa muy poco de Chile. Los frijoles son el artículo principal y su importación asciende á 1,000 toneladas por año, que representan un valor como de \$60,000, antes de pagarse el derecho. Al tipo actual del cambio, este derecho es \$18.70 por tonelada. Las demás importaciones procedentes de Chile, consisten en trigo, frutas, forraje y drogas. En 1900 el valor total de factura no llegó á \$200,000, y en 1901 esta cantidad sufrió una disminución.

Las exportaciones del Brasil á Chile consisten casi exclusivamente en café y yerba mate. En 1901 se embarcaron 30,000 sacos de café, valuados en \$250,000. La yerba mate exportada representó un valor como de \$150,000.

Se cree que la falta de un medio de transporte barato es la causa del estado poco satisfactorio del canje de productos entre los dos países. Las líneas de vapores á Europa, que tienen el monopolio del transporte regular por el Atlántico á Chile, hacen escala en los puertos brasileños, pero sus tipos de flete son tan altos que reprimen y desaniman los embarques entre el Brasil y Chile. Cuesta más enviar mercancías de Valparaíso á Río de Janeiro que de Valparaíso á Liverpool, y existe la misma desproporción en los fletes de retorno á América. El resultado de esto es que, á pesar de haber una comunicación rápida y frecuente, los canjes son casi nominales. El Brasil no puede suministrar más que un 15 por ciento del café que se consume en Chile, mientras que suministra á Europa y á los Estados Unidos la mitad de su consumo total. Sabido es que cierta cantidad del café brasileño se reexporta de Alemania y de Inglaterra para Chile. Se cree, por ejemplo, que los vinos chilenos podrían introducirse con éxito en el mercado brasileño.

LOS EMBARQUES DE GOMA DEL PUERTO DE PARÁ.

Según el Informe del "Banco de Pará," para 1901, las exportaciones de goma del puerto de Pará ascendieron á 30,499,855, kilogramos, comparados con 27,400,238 que se exportaron en 1900. Durante el mes de febrero de 1902, las exportaciones de goma del mismo puerto ascendieron á 2,841,109 kilogramos. De esta cantidad total se enviaron 1,012,146 kilogramos á los Estados Unidos, y 1,828,963 kilogramos á los mercados europeos.

EXPORTACIÓN DE TABACO.

El valor del tabaco exportado del Brasil durante los seis primeros meses de 1901, ascendió á 30,641,713 *milreis*. Dicho tabaco se exportó

á los siguientes países, expresándose en *milreis* el valor de las respectivas exportaciones:

	Milreis.		Milreis.
Alemania	29, 325, 934	Holanda	3, 075
Francia	1, 024, 476	Italia	15
República Argentina.....	224, 722	Otros países.....	329
Uruguay	134, 433		
Inglaterra.....	24, 085	Total	30, 741, 713
Bélgica	4, 647		

PAPEL MONEDA EN CIRCULACIÓN.

El siguiente cuadro muestra la cantidad de papel moneda en circulación en el Brasil el 31 de enero de 1902.

Clase de los billetes.	Número de billetes.	Valor.

AUMENTO DE COMUNICACIÓN CON NUEVA YORK.

El Cónsul General de los Estados Unidos en Río de Janeiro anuncia que la Compañía de Vapores de LAMPORT y HOLT está á punto de aumentar su flota con seis vapores que han de hacer la travesía entre el expresado puerto y Nueva York. Dos de los expresados vapores tendrán una capacidad como de 5,000 toneladas de carga y podrán conducir 70 pasajeros de popa y 50 de proa. Los demás vapores serán de 6,350 toneladas y estarán provistos de cubiertas con techos á propósito para el transporte de ganado.

La línea de Prince también ha agregado un vapor á su servicio entre Nueva York y Río de Janeiro. Dicho vapor tiene 4,560 toneladas y un calado de 22 pies; capacidad para 12 pasajeros y está provisto de alumbrado eléctrico. Éste es el primero de los cuatro vapores que se ha determinado construir para esta línea. Dichos vapores pueden cargar 70,000 sacos de café, y son á propósito para cargamentos frágiles. Harán la travesía de Nueva York á Río de Janeiro en diez y ocho días.

ÚLTIMO CÁLCULO DE LA COSECHA DE CAFÉ.

El Secretario de la Legación de los Estados Unidos en Petrópolis, últimamente envió un Informe al Departamento de Estado en Wáshington relativo á la cosecha de café del Brasil. De dicho Informe se han tomado los siguientes datos:

La cosecha entregada en Río de Janeiro, desde el 1° de julio de 1901 hasta el 30 de junio de 1902, se calcula en 5,466,000 de sacos; en Santos se entregaron 10,483,000 de sacos. Este cálculo está basado en las entregas hechas durante los siete meses de 1901-2 (es decir, desde julio hasta enero, inclusive) y en la suposición de que las entregas que se han de hacer en los cinco meses siguientes han de guardar la misma proporción que en otros años.

Entregas de las cosechas de Río de Janeiro y Santos.

	Sacos.
Durante doce meses hasta el 30 de junio de 1900.....	9,007,000
Del 1° de julio al 31 de diciembre de 1900	6,832,000
Del 1° de enero al 30 de junio de 1901.....	3,810,000
Del 1° de julio hasta el 31 de diciembre de 1901.....	10,389,000
Entregas calculadas del 1° de enero al 30 de junio de 1902	5,578,000

Abastecimiento conocido del mundo.

El 30 de junio de 1900.....	5,715,000
El 31 de diciembre de 1900.....	7,457,000
El 30 de junio de 1901	6,746,000
El 31 de diciembre de 1901	10,817,000

En cuanto á la cosecha que se ha de empezar á recoger en mayo y que se embarcará en el año que comienza el 1° de julio de 1902, los datos que hasta ahora se han podido obtener son incompletos. Hasta mediados de diciembre, los informes recibidos eran sumamente desfavorables, y prevalecía el temor de que no pasaría de un 40 por ciento de la cosecha regular, es decir, 6,500,000 sacos. Sin embargo, las lluvias han sido abundantes, recientemente y se cree que la cosecha casi llegará al promedio regular, y que puede calcularse de 9,000,000 á 11,000,000 de sacos. La cosecha está llegando rápidamente á un estado que permite á los peritos hacer un cálculo exacto en cuanto á la proporción relativa de una cosecha regular, pero la extensión del nuevo territorio que empieza á producir y la cantidad de café que aun permanece en primeras manos, son inciertas y hace que sea imposible un cálculo exacto hasta que llegue el otoño.

CHILE.

RESUMEN DE LA HACIENDA PÚBLICA.

El Gobierno chileno ha publicado un importante libro en castellano y en inglés, que consta de 750 páginas, titulado “Resumen de la Hacienda Pública de Chile desde la Independencia hasta 1900.” Esta valiosa recopilación de datos históricos y estadísticos constituye una exposición lúcida y detallada de la Hacienda chilena, desde la inauguración del Gobierno hasta la época presente.

Durante los primeros años de la existencia de la República, los ingresos anuales de la nación rara vez excedieron de \$2,000,000,

moneda nacional. Sin embargo, estos ingresos se aumentaron gradualmente, hasta que en 1896 ascendieron á la enorme suma de \$162,591,304.90, en moneda nacional. La siguiente tabla muestra detalladamente en moneda nacional los ingresos y egresos del Gobierno, el excedente de ingresos respecto á los egresos, ó de los egresos respecto á los ingresos, según sea el caso, así como los presupuestos de gastos desde 1817 hasta 1900, inclusive:

Años.	Entradas.			Gastos.		
	Ordinarias.	Extraordinarias.	Total.	Ordinarios.	Extraordinarios.	Total.

Empréstito de Peñuelas 1894.	Agua potable de Valparaiso.....	5½	200,000	174,800
Total.....	31,307,920	17,230,680

La tabla que antecede muestra que el total general de las deudas extranjeras contraídas desde la fundación de la República, fué £31,307,920, de las cuales á principios de 1899 todavía estaba pendiente la suma de £17,230,680.

La deuda interior de la República contraída desde 1820 hasta fines de 1898, ascendió á \$170,484,020.67, moneda nacional.

ECUADOR.

MARCAS DE FÁBRICA.

El Congreso de la República del Ecuador decreta:

ARTÍCULO 1º. El artículo 1º de la Ley sobre Marcas de Fábrica, expedida en 1899, dirá: “Establécese un registro de marcas de fábrica, en el Ministerio que designe el Poder Ejecutivo.”

ART. 2º. El artículo 2º: “La solicitud sobre inscripción se presentará con dos ejemplares de la marca al respectivo Ministerio.”

ART. 3º. El artículo 4º: “El Ministro examinará si la solicitud es conforme á lo prescrito en los artículos 2º y 3º.”

Si lo es, ordenará la inscripción y que se archive el proceso.

La inscripción comprenderá las designaciones enumeradas en el artículo 2º.

“Si la marca fuere extranjera, á la inscripción precederá el pago de treinta sucres; y el de diez, si la marca fuere nacional.”

ART. 4°. El artículo 5°: “Hecha la inscripción, el Subsecretario, á solicitud verbal del interesado, le dará, en papel del sello 9°, copia de la inscripción y le devolverá, anotado, uno de los ejemplares de la marca.”

ART. 5°. El artículo 6°: “La copia puntualizada en el artículo precedente se publicará en el Periódico Oficial; y si dentro de los treinta días de conferida no se publicare, caducará la inscripción.

“Publicada la copia, los efectos de la inscripción se retrotraen á la fecha en que ha sido solicitada.”

ART. 6°. El artículo 9°: “La cesión del derecho de marca, se inscribirá en el Registro.

“Si constare de instrumento privado, se reconocerá éste antes de la inscripción.

“La inscripción se publicará en el Periódico Oficial.”

ART. 7°. Suprímase el artículo 10.

ART. 8°. Derógase la ley reformatoria de la de Marcas de Fábrica, expedida en 1900.

Dado en Quito, á nueve de octubre de mil novecientos uno.

El Presidente de la Cámara del Senado,

MANUEL B. CUEVA.

El Presidente de la Cámara de Diputados,

ABELARDO POSSO.

El Secretario de la Cámara del Senado,

N. A. CORREA.

El Diputado Secretario de la Cámara de Diputados,

MANUEL E. RENGEL.

Palacio Nacional, en Quito, á doce de octubre de mil novecientos uno.
Ejecútese.

LEONIDAS PLAZA G.

El Ministro de Relaciones Exteriores, Encargado del Despacho de Fomento,

JULIO ARIAS.

Es copia.

El Subsecretario de Fomento,

NICOLÁS F. LÓPEZ.

ESTADOS UNIDOS

COMERCIO CON LA AMÉRICA LATINA.

IMPORTACIONES Y EXPORTACIONES.

En la página 934 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los Estados Unidos. Estos datos se refieren al valor del comercio arriba mencionado. La estadística corresponde al mes de febrero de 1902, comparada con la del mes correspondiente del año anterior, y también comprende los datos referentes á los ocho meses que terminaron en febrero de 1902, comparados con igual período de 1901. Debe explicarse que la estadística de las importaciones y exportaciones de las diversas aduanas referente á un mes cualquiera, no se recibe en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de febrero, por ejemplo, no se publican sino en abril.

COMERCIO EXTRANJERO EN FEBRERO DE 1902.

Un resumen del comercio extranjero de los Estados Unidos durante el mes de febrero de 1902, muestra que, comparado con el mismo mes en 1901, hubo un aumento de \$3,778,349 en las importaciones, y una disminución de \$11,431,282 en las exportaciones. El aumento en las importaciones fué debido casi enteramente á la introducción de artículos que se emplean en los procedimientos de fabricación doméstica, según lo comprueba el hecho de que el aumento en los artículos manufacturados sólo ascendió á \$97,611, y en los artículos de lujo sólo llegó á \$387,226, en tanto que las importaciones de comestibles sufrieron una disminución de \$3,485,295.

En el mes de febrero de 1902 las importaciones se clasificaron generalmente como sigue, estableciéndose una comparación con el mes de febrero de 1901:

Clasificación.	1902.	1901.
Comestibles y animales.....	13, 517, 553	\$17, 002, 828
Artículos en bruto que se emplean en los procedimientos de fabricación doméstica.....	26, 168, 648	19, 534, 322
Artículos entera ó parcialmente manufacturados que se emplean en los procedimientos de fabricación y en los artes mecánicos.....	6, 202, 131	6, 057, 652
Artículos manufacturados ya listos para el consumo.....	11, 974, 521	11, 876, 910
Artículos de lujo, etc.....	10, 417, 215	10, 029, 987
Total.....	68, 280, 048	64, 501, 699

El promedio de las importaciones libres de derechos, en el mes de febrero de 1902, fué 45.63 por ciento, contra 39.84 en febrero de 1901. La cantidad total de derechos cobrados en las aduanas, ascendió á \$20,213,930 en el mes de febrero de 1902, y á \$18,719,598 en el mes de febrero de 1901. En los ocho meses del año económico (es decir, de julio hasta febrero inclusive), las importaciones muestran un aumento de \$70,857,206, comparadas con las del mismo período del año económico anterior. El aumento en las importaciones de materia prima que se emplea en los procedimientos de fabricación en los Estados Unidos, ascendió á \$57,124,831; el de los artículos de lujo, ascendió á \$11,021,290; el de los artículos manufacturados, ascendió á \$9,347,108, al paso que la disminución en los comestibles fué de \$6,636,043. Las importaciones totales correspondientes á los dos períodos de ocho meses fueron las siguientes: En 1902, \$594,397,046; en 1901, \$523,539,840. El promedio de las importaciones libres de derechos en los dos períodos mencionados fué de 43.66 y 38.79 por ciento respectivamente. El total de derechos recaudados en las aduanas en los ocho meses de 1902, ascendió á \$168,571,246, y á \$159,175,618 en 1901.

Durante el mes de febrero de 1902 las exportaciones se clasificaron bajo los títulos generales siguientes, estableciéndose una comparación con las del mismo mes en 1901:

Clasificación.	1902.	1901.	Disminución.
Productos agrícolas.....	\$60,662,119	\$73,054,202	\$12,392,083
Productos de las manufacturas.....	31,740,842	30,302,592	* 1,438,250
Productos de las minas.....	2,433,704	2,723,794	290,090
Productos de los bosques.....	3,383,217	3,846,385	453,168
Productos de la pesca.....	518,031	405,482	* 112,549
Productos diversos.....	939,096	667,230	* 271,866
Productos extranjeros.....	1,848,723	1,957,329	108,606
Total.....	101,525,732	112,957,014	11,431,282

* Aumento.

Las exportaciones correspondientes á los ocho meses del año económico de 1902, se valoraron en \$974,185,414, lo cual muestra una disminución de \$41,009,570, comparadas con las exportaciones en el mismo período en 1901. La disminución en las exportaciones se debe á una baja muy marcada en las exportaciones de maíz y de artículos manufacturados de hierro y de acero, comparadas con las exportaciones del año económico anterior. En los ocho meses de 1902, las exportaciones de maíz ascendieron á 23,146,599 de bushels, al paso que durante el período correspondiente en el año económico anterior ascendieron á 132,625,656 de bushels. Además, las exportaciones de harina de maíz sólo llegaron á 251,505 barriles, comparadas con los 653,766 barriles que se exportaron en los ocho meses de 1901. Estas exportaciones representaban un valor de \$14,580,585 y \$62,122,901, respectivamente. La disminución en las exportaciones de maíz asciende á \$47,542,324, y

puede atribuirse á la escasa cosecha de este grano en los Estados Unidos en 1901.

El valor de las exportaciones de artículos de hierro y acero durante los ocho meses que terminaron en febrero de 1902, fué \$64,668,424 y en el mismo período en 1901 ascendió á \$81,575,685. Por consiguiente, la disminución en estas exportaciones fué \$16,807,261. Esta merma se atribuye á la poca demanda del extranjero, unida á la demanda considerablemente mayor que estos productos han tenido en el mercado doméstico.

RELACIONES COMERCIALES CON ESPAÑA.

Las relaciones comerciales entre los Estados Unidos y España se han reanudado con mayor cordialidad, á lo que parece, y ciertamente con mayor actividad, que nunca. Las cifras de la Oficina de Estadística muestran que tanto las importaciones en los Estados Unidos de artículos procedentes de España, como las exportaciones de artículos de los Estados Unidos para España, fueron mayores durante el año de 1901, con una sola excepción, que en ningún otro año anterior. Las importaciones de España durante el año que terminó en diciembre de 1901, ascendieron á \$7,040,758 y las exportaciones para dicho país representaron un valor de \$16,785,711. Comparando el año de 1901 con el de 1891, resulta que las importaciones de España han aumentado de \$4,906,475 á \$7,040,758, y que las exportaciones de los Estados Unidos para España han aumentado de \$12,887,477 á \$16,785,711. Comparando las condiciones actuales con las de 1898, aparece que las importaciones para los Estados Unidos de artículos de España han aumentado de \$3,608,308 á \$7,040,758, y que las exportaciones para España han aumentado de \$8,059,475 hasta \$16,785,711.

GUATEMALA.

MENSAJE DEL PRESIDENTE DE LA REPÚBLICA DE GUATEMALA Á LA ASAMBLEA NACIONAL LEGISLATIVA EN LAS SESIONES ORDINARIAS DE 1902.

* * * * *

Es muy grato al Jefe del Ejecutivo manifestaros, ante todo, Señores Representantes, que la paz y la tranquilidad se han mantenido inalterables en toda la República, y que para ello, sin duda, ha sido elemento eficacísimo el imperio de la libertad en todas sus manifestaciones, desde que el Gobierno ha querido hacer del goce de ella la verdadera pauta de su política interior.

* * * * *

Á grandes rasgos me permitiré describir la marcha general de la administración pública, y en cuanto á cada uno de sus ramos, los

Señores Secretarios de Estado informarán en detalle en sus respectivas Memorias.

* * * * *

Por lo que respecta á la América Central, cabe decir que las relaciones fraternales se hacen más íntimas por el sentimiento común de nacionalidad y por las convenciones celebradas para ello últimamente, las cuales han venido con la expresión franca y explícita de ese mismo sentimiento á disipar las nubes que amenazaban obscurecer su cielo. Guatemala tomó parte directa en esas convenciones por la excitativa de los demás países de Centro América, expresando su voto de adhesión con la única reserva de todo aquello que pudiéra ser contrario á las resoluciones tomadas en el Congreso Pan-Americano celebrado en México.

También es un acontecimiento que viene á corroborar lo dicho, la visita que sucesivamente se han servido hacer á la República de Guatemala los Excelentísimos Señores Presidentes de Costa Rica y El Salvador, visita que será fecunda en resultados prácticos para la paz y tranquilidad de Centro América, y que dice, á voz en cuello, que no puede haber motivo ya para temer que se perturben.

Merced al decidido apoyo que la Delegación de Guatemala al Congreso Pan-Americano recibió de parte de las Delegaciones de los Estados Unidos del Norte y de México, pudo en esa Ilustre Asamblea obtenerse, con satisfacción general, una solución digna y sabia en el difícil problema del arbitraje, que fué uno de los principales asuntos en que se ocupó el Congreso.

El importante trabajo que á este respecto presentó nuestro Delegado, Licenciado LAZO ARRIAGA, que fué aceptado y aprobado, merece especial elogio, no sólo porque entraña la solución de un problema general, sino especialmente porque vino á robustecer, de una manera real y efectiva, las relaciones cordiales que felizmente cultivamos con nuestra vecina del Norte, la heroica Nación Mexicana.

* * * * *

Ardua y penosa por cierto es la labor de la Hacienda Pública por el estado de crisis en que se halla la Nación; pero en medio de todo esto, me complace hacer presente que, con las prudentes economías introducidas en el Presupuesto general y con la pureza en el manejo de los fondos públicos, se han venido á mejorar en mucho las rentas para atender á los servicios ordinarios, y para satisfacer en una gran parte la enorme deuda que, por diferentes servicios, recibí como legado al encargarme del poder.

Se ha pagado por esas causas la suma de cerca de 10,000,000 de pesos, sin tener para ello que exigir ni aumento de contribuciones, ni préstamos onerosos, sino solamente, como he dicho, cuidando en lo posible de la cabal recaudación de las rentas y economizando en muchos de los servicios que se estimaron superfluos; pero estos medios por sí

solos no pueden ser suficientes para llenar los deseos del Gobierno de salvar el crédito nacional, y por esa circunstancia para el arreglo de la deuda flotante en favor de nacionales y extranjeros, se estudia en la actualidad la manera de pagarlas sin grandes sacrificios para la Nación y con la mayor ventaja posible para los acreedores; descargando así, al Estado, aun cuando sea paulatinamente, pero de manera segura, de una buena parte de ese cuantioso pasivo que pesa sobre él desde hace ya muchos años.

Por lo que atañe á los intereses y amortización de las deudas externa é interna, bien es que exprese aquí que van muy adelantadas las gestiones que se hacen para lograr satisfactoria solución en ese difícil como delicado asunto que, llegando á feliz término, sostendrá el buen nombre del país al llenar las atendibles solicitudes de los acreedores; de lo cual inmediatamente daré cuenta á la Representación nacional.

* * * * *

Los servicios de comunicaciones para el interior y el exterior, así por correo como por telégrafo y teléfono, han conseguido una regularización tan notable que ya muy poco dejan que desear, consiguiéndose que los productos de esos servicios alcancen á sufragar las erogaciones causadas por el personal que los desempeña, con excepción del material que necesitan.

La agricultura, como fuente única de nuestra riqueza, ha merecido, como es muy justo, toda la protección que necesita, ya impulsando para mayor escala otros cultivos fuera del café, ya auxiliando de una manera decidida á todos los agricultores, facilitándoles la manera de adquirir brazos y haciendo que se mejore la remuneración de éstos, para su más pronta adquisición; distribuyendo la propiedad, aun baldía, entre gran número de personas que han pasado á la condición de propietarios; y, en fin, mejorando las vías de comunicación existentes y abriendo nuevas para establecer el comercio entre las diferentes secciones de la República.

* * * * *

La industria minera, en que tan poco se había fijado la atención, ha despertado en estos últimos tiempos singular interés, porque ha venido á probarse por estudios de profesores de competencia, y ha sido bien conocido de nuestros antepasados, que todo el subsuelo de Guatemala contiene, en las mejores condiciones para la explotación, toda clase de metales preciosos, que algunos pocos han conseguido aprovechar en grande escala, pero sin ostentación, como sucede con los lavaderos de oro y placeres de Las Quebradas y otros que podrán dar muchísimas riquezas, si la mano del hombre se aplica á esos inagotables y escondidos tesoros que se hallan distribuidos, por fortuna, en toda la cordillera y ramales que atraviesan nuestro país.

En este día, hace un año, exactamente, se daba el primer picazo con que se reanudaban los trabajos de la importante y grandiosa obra del

Ferrocarril del Norte, en cumplimiento del contrato que, con vuestra aprobación, celebró el Ejecutivo; y sin duda que habrá de complaceros, Señores Diputados, la noticia de que esos trabajos, seguidos con perseverancia por la Compañía constructora, alcanzan hasta tres millas más del pueblo de Sanarate; es decir, están concluidas veinte millas de terraplén y dispuestas por la construcción de las obras de mampostería, de arte, arcos de desagüe, muros de los puentes grandes, etc., para recibir los durmientes, rieles y lastre que están ya preparados.

En los almacenes existen en la actualidad mil setecientas sesenta toneladas de rieles, que serán suficientes para cubrir esas veinte millas.

La carretera también está próxima á llegar al pueblo de Sanarate, donde se unirá á la línea férrea tal vez á fines de julio próximo, quedando entonces, esto es, á principios de agosto siguiente, como lo establece el contrato celebrado con los constructores del ferrocarril, abierta la comunicación del norte, provisionalmente, con la parte de carretera construida y las ciento cincuenta y cinco millas de vía férrea.

Muy digno de mención es también el hecho de haberse iniciado el 17 de diciembre último los trabajos para la construcción del ferrocarril que unirá á los departamentos de Escuintla y Mazatenango, y que se llama línea de Los Cocales. Con verdadera actividad se prosiguen tales trabajos que avanzan con rapidez y prometen, por estas circunstancias, que antes del término fijado en el contrato que se celebró con la Compañía del Sur, que es la constructora, esté concluido este importante ramal, que dejará en comunicación completa á toda la costa del sur de la República con el centro y norte de ella.

En lo que toca al ferrocarril que se construirá de Retalhuleu á Quetzaltenango, hay trabajos ya muy adelantados en el replanteo de esa línea, y todo augura un éxito feliz para la existencia de tal vía, que tan valiosos servicios habrá de prestar á la sección de occidente.

HONDURAS.

EL DEPARTAMENTO DE ATLÁNTIDA.

El Cónsul de los Estados Unidos en Utila, con fecha 3 de marzo, informó al Departamento de Estado en Wáshington, que el Congreso Nacional de Honduras ha creado un nuevo departamento ó provincia en la costa del norte de la República, que se denomina Atlántida. Este departamento se extiende desde Tela, por el oeste, hasta Belfata, por el este, ó sea una distancia de 60 millas, y por el este, en un trayecto de 50 millas de norte á sud, que comprende las grandes fincas de plátanos en la costa del Mar Caribe. La cabecera ó capital se establecerá en La Ceiba, situada en la costa, como á la mitad de la distancia entre los dos puertos mencionados.

La Ceiba debe su origen como puerto de entrada al desarrollo del comercio de frutas. En dicho puerto entran vapores con regularidad y se hace un gran comercio de exportación de plátanos y frutas tropicales. El Cónsul manifiesta que se están dando los pasos necesarios para efectuar allí la instalación de obras hidráulicas é introducir otras mejoras, y que este cambio dará por resultado que se construyan muchos edificios, sobre todo por el hecho de haberse incluido la madera en la lista de los artículos declarados libres de derechos durante un año. La ley por virtud de la cual se crea el nuevo departamento y se establece su capital empezará á regir el día 15 de septiembre de 1902.

MÉXICO.

EXPOSICION DE MINERALES EN TORREÓN.

La exposición de los recursos minerales y metalúrgicos del Estado de Coahuila, que ha de tener lugar en Torreón bajo la dirección del Señor M. DE CORRELLY, ha obtenido el apoyo de un número de capitalistas y vecinos distinguidos de dicha ciudad, y ya los trabajos se han inaugurado con éxito. Á fin de que se perpetúen los beneficios de la exposición, se ha resuelto, según anuncia el "Miner and Manufacturer" de El Paso, fundar un periódico que sea el órgano oficial de la "Gran Exposición de Minería y Metalurgia de Torreón," el cual se ha de publicar en castellano y en inglés, y se le enviará á todas las personas interesadas en México, los Estados Unidos y Europa.

La ciudad de Torreón está situada en la línea del Ferrocarril Central y también en la ruta de la vía férrea de Coahuila y el Pacífico que en la actualidad se está construyendo. Cuando esta vía se concluya, Torreón tendrá comunicación directa con el puerto de Tampico. Debido á la creciente explotación de minas en sus cercanías, Torreón, que hace cinco años era una pequeña aldea, se ha convertido en una ciudad floreciente de 30,000 habitantes. La loable ambición del pueblo es hacer que la proyectada Exposición resulte digna del Estado y de la ciudad.

DATOS RELATIVOS Á LA EXPLOTACIÓN DE MINAS EN MONTEREY.

El mineral de hierro del distrito de Solonduna, México, donde se obtiene el abastecimiento para la fábrica de acero de Monterey, se ha de remitir en lo sucesivo á las fábricas de acero de Maryland (Maryland Steel Works), establecidas en Sparrows Point, Maryland. Según anuncian de México, ya se están haciendo los preparativos necesarios para empezar pronto el envío de dicho mineral. Dícese que la construcción de la fábrica de Monterey ha llegado ya á un estado de ade-

lanto tal que puede vaticinarse con certeza que comenzará á entregar rieles de acero en septiembre del corriente año. Esta Compañía ha resuelto hacer propuestas á fin de conseguir órdenes de las tres principales líneas de ferrocarril de México, prometiendo hacer los rieles de modo que correspondan en peso á los varios modelos que dichas líneas usan. Dícese que el riel que usa el Ferrocarril Central Mexicano pesa 81 libras, y el que usan respectivamente el Ferrocarril Nacional Mexicano, y el Ferrocarril Nacional Mexicano 75 y 70 libras.

Se ha anunciado recientemente que la "Mexican Mining and Smelting Company," que hace poco se organizó con un capital de \$10,000,000 en oro, está haciendo los preparativos debidos para instalar una fundición en la ciudad de Monterey. Se dice que esta Compañía también se propone explotar minas en el Estado de Nuevo León y en otros puntos de México.

NICARAGUA.

**EL MENSAJE QUE EL PRESIDENTE, SEÑOR DON JOSÉ SANTOS ZELAYA, ENVIÓ Á LA ASAMBLEA NACIONAL CON
FECHA 1º DE ENERO DE 1902.**

SEÑORES DIPUTADOS: En el corto período de cuatro meses que han transcurrido desde vuestra última reunión á la fecha, son pocos los acontecimientos de importancia con que puedo daros cuenta en cumplimiento del precepto constitucional.

También ahora, como en épocas anteriores, concurre gustoso al recinto de la Asamblea á informaros de los actos del Gobierno verificados desde aquella fecha á la presente, y mi satisfacción crece de punto porque al hacerlo puedo aseguraros que nos hallamos bajo la influencia bienhechora de una paz estable, alcanzada tan sólo con haber llevado al ánimo de los ciudadanos nicaragüenses, por la aplicación imparcial y serena de la ley, el vehemente deseo por el trabajo. Mi confianza en el porvenir es todavía mayor porque no dudo que en vuestras deliberaciones tendréis por única guía el bien de la nación y que las resoluciones que dictéis serán altamente beneficiosas para ésta.

Es indudable que han pasado entre nosotros los tiempos de las revueltas y las turbulencias. Cada día se afianza más el amor al orden y el apego al trabajo; y hoy que se descubren nuevos horizontes para todas las actividades y para todo género de empresas con la perspectiva halagadora de la próxima apertura de un canal interoceánico á través de nuestro suelo, debemos tener fe en que los que todavía pudieran pensar en conspiraciones, asonadas y desórdenes, dedicarán sus energías á toda clase de industrias.

*

*

La obra del Canal por tanto tiempo codiciada y que tantos esfuerzos nos cuesta, parece que se convertirá en no lejano día en un hecho tangible y práctico, pues ya hemos suscrito con el Gobierno americano, por medio de su representante diplomático el Excelentísimo Señor Ministro Mr. WM. LAWRENCE MERRY, un protocolo en el cual se estipulan las concesiones que hace Nicaragua al Gobierno de los Estados Unidos para su construcción y las obligaciones que este último contrae en compensación de lo que se le cede. Debo agregaros, que en ese convenio el Gobierno no omitió medio para garantizar de una manera formal y completa la soberanía é integridad de la Nación; y cuando el Señor Secretario de Estado en el Despacho de Relaciones Exteriores os dé cuenta con el protocolo aludido, podréis convenceros de que el celo del Gobierno no fué ineficaz y de que ni la magnitud ni la importancia de la empresa fueron motivos bastantes para que cediéramos nada más que lo necesario á facilitar la realización de la obra.

La vigencia del tratado Clayton-Bulwer entre los Estados Unidos é Inglaterra, que fué durante mucho tiempo uno de los mayores obstáculos para que el Canal pudiera ser construido por los Estados Unidos con fondos del Estado, ha sido últimamente sustituido por el conocido con la denominación de Hay-Pauncefote; que ha recibido ya la sanción del Senado americano; y como la nueva estipulación allana los obstáculos anteriores y permite al Gobierno de los Estados Unidos entrar de lleno en la ejecución de la obra, debemos creer que se ha salvado la primera dificultad y que la apertura del Canal que hasta aquí ha sido siempre la más halagüeña esperanza de todo nicaragüense honrado y patriota, está próxima á ser la más lisongera realidad.

* * * * *

Atendiendo á la cortés invitación que recibimos para que concurriésemos á la Exposición Pan-Americana de Búffalo, el Gobierno se hizo representar en aquel certamen continental por medio de su comisionado especial, el Ingeniero Don ALEJANDRO BERMÚDEZ, bajo la dependencia de nuestro Ministro en Wáshington, y envió una colección de productos naturales é industriales.

La representación de Nicaragua cumplió digna y brillantemente con su cometido, y el éxito que obtuvo fué más que satisfactorio, pues el número de premios otorgados á nuestro país colocan á Nicaragua en el sexto lugar entre todas las naciones de América que concurrieron á aquel certamen.

* * * * *

El Gobierno de Chile, como una demostración de exquisita cortesía, mandó el crucero *Ministro Zenteno* en visita al puerto de Corinto, trayendo á su bordo al excelentísimo Señor Don GALO IRRARRAZÁBAL ZAÑARTU, quien fué recibido como Enviado Extraordinario y Ministro Plenipotenciario de Chile ante nuestro Gobierno.

Tanto el Señor IRRARRAZÁBAL ZAÑARTU como los distinguidos marinos del *Zenteno*, fueron objeto de las atenciones oficiales á que eran acreedores, aparte de las manifestaciones de regocijo público que recibieron de los ciudadanos nicaragüenses.

El Señor Ministro IRRARRAZÁBAL ZAÑARTU y los oficiales del *Zenteno*, por su distinción y cultura, dejaron grata impresión en el Gobierno y han contribuido á despertar más la simpatía especial que en Nicaragua existía ya por Chile.

* * * * *

El Gobierno de Su Majestad Británica por medio de su Encargado de Negocios, Mr. RALPH PAGET, ha presentado un tratado de navegación y comercio; pero como pareció conveniente pasarle un contraproyecto, todavía no se ha llegado á nada definitivo.

* * * * *

Las relaciones de amistad que ligan á Nicaragua con los países civilizados se han mantenido firmes y cordiales, y cuando algo nuevo se ha hecho, sólo ha sido para robustecerlas. Con tal motivo se ha restablecido la legación de Nicaragua en varias Cortes de Europa, designando para que la sirva al distinguido ciudadano Señor Don CRISTIANO MEDINA.

La administración pública, en sus demás ramos, ha seguido su marcha regular sin mayores tropiezos, impulsada únicamente por las ideas de adelanto y progreso que son la mira constante del Gobierno.

Los Secretarios de Estado en las respectivas carteras os darán cuenta detallada de los actos del Gobierno. Podréis de esa manera ver que mi sola aspiración ha sido obtener el bienestar de los Nicaragüenses.

Nada tendría que agregar á lo que dejo dicho, porque en estos pocos meses de administración, son los hechos relacionados con los acontecimientos más salientes que se han realizado, sino fuera que debo repetirlos que abrigo profunda confianza en el buen resultado de vuestras discusiones, y que al esperar tranquilo vuestro fallo, es porque he cumplido mi deber y porque sé que solo tenéis por guía la justicia.

COMERCIO ENTRE SAN FRANCISCO DE CALIFORNIA Y NICARAGUA EN 1901.

El Doctor V. M. ROMÁN, Cónsul de la República de Nicaragua en San Francisco de California, ha proporcionado al BOLETÍN MENSUAL un estado detallado que muestra el comercio habido en 1901 entre el puerto de San Francisco y los puertos nicaragüenses de Corinto y San Juan del Sur. El comercio total entre dichos puertos durante el año mencionado representó un valor de \$264,027.20, y consistió de 54,094 bultos de mercancías que pesaron 3,682,903 de kilogramos. La tabla que se copia á continuación indica detalladamente la cantidad, peso y valor de las mercancías exportadas:

PARAGUAY.

ESTUDIO SOBRE LA POBLACIÓN DE LA REPÚBLICA.

[Extractado de un artículo publicado por el Doctor Don Manuel Benítez en la *Revue Mensuelle du Paraguay*, é impreso luego en castellano en forma de folleto en La Asunción, en 1901, con el título de *El Paraguay*.]

El gran enemigo del Paraguay es el poco conocimiento que de él se tiene en el extranjero.

A nadie debe inculparse por esto. Un concurso de circunstancias, al parecer fortuitas, han producido este resultado; y para combatirlo, hay que llevar la verdad á los centros donde ahora es desconocida.

Acaso ningún remedio convenga tanto á los intereses paraguayos como el gran remedio de la publicidad. Hacer conocer la verdad continua y sistemáticamente, si es posible en el lenguaje de los números, porque éste no admite controversia, es volver al terreno perdido, despertar la confianza y reintegrar el crédito.

Cuando se discute el saldo que los países dan en beneficio de la civilización desde el punto de vista social, económico y político, no tiene porque esquivar la luz el Paraguay ni temer la crítica. Como país nuevo, recién organizado, de escasa población, ha hecho tanto, cuando menos en ciertos respectos, como muchos otros juzgados de muy diferente manera. Así lo dice la estadística comparada. Por eso se exponen en este trabajo datos estadísticos comparados, sin entrar en comentarios, y dejando á los lectores en la libertad de formular juicios, en el sentido que crean más conveniente.

La población del Paraguay, exceptuando á la Asunción, es de 583,852 habitantes, y como según el censo de 1899 la población de la capital es de 51,719, resulta un total de 635,571.

La superficie del territorio, que aun no es posible fijar con precisión, por que no está trazada la línea divisoria con Bolivia, es aproximativamente de 315,994 kilómetros cuadrados.

Hecha la clasificación, tenemos para el Paraguay la siguiente sinópsis:

Densidad de la población por kilómetro cuadrado	1, 839
Paraguayos	por mil.. 968. 92
Extranjeros	do.... 31. 08
Varones	do.... 471. 29
Mujeres	do.... 528. 71
Solteros	do.... 444. 20
Casados	do.... 528. 40
Viudos	do.... 27. 40
Alfabetos	do.... 369. 50
Analfabetos	do.... 630. 50

Consígnase aquí la proporción por mil, que es la base común adoptada.

El observador no averigua cuántos casados hay, por ejemplo, para juzgar de la organización y la moral social del Paraguay. Lo que busca es la proporción en que están los casados con el total de la población. Así tiene el mérito absoluto y relativo de la sociedad paraguaya, desde este punto de vista.

Si no debieran tenerse en cuenta sino cifras absolutas, sería de todo punto imposible una comparación racional. El mayor número produciría siempre un espejismo que llevaría á un examen superficial y conclusiones completamente erróneas.

Así no se dirá que la República Argentina está más poblada que el Paraguay, aún cuando el último censo haya dado á aquella 4,044,911 habitantes y á éste 583,852 (excluyendo la capital), porque la primera tiene una población específica de 1.4 por kilómetro cuadrado, y el segundo 1,839. La diferencia es de 0.439 á favor del Paraguay.

Háse dicho por esto con fundamento que sólo la estadística rutinaria se concreta á la tabulación de las cifras absolutas, porque el cálculo de las relativas le es demasiado penoso.

Es sensible que en la sinópsis no aparezcan ni la natalidad ni la mortalidad. Estos datos demográficos son importantísimos, no solamente para hacer constar una vez más las excelentes condiciones climatéricas del país y el porvenir que desde este punto de vista espera á su población, sino también para demostrar al extranjero cómo el Paraguay ofrece fácil aclimatación y completa garantía á los hombres de todas las latitudes.

No debe consentirse con el silencio la desgraciada especie que se ha dejado correr, acaso inconcientemente, de que la mortalidad en el

Paraguay es más elevada que la natalidad. El incesante crecimiento vegetativo de la población, acusado en todos los censos anteriores, lo mismo que en el presente, es una refutación categórica de semejante aserto.

En el año 1872 tuvo el Paraguay 231,000 habitantes. En 1899, que es el del último censo, 583,852, con exclusión de la capital. Y si se asignan á ésta 60,000 almas, que no es exagerado, resulta un total de 643,852 habitantes.

Se ve que en 27 años ha triplicado próximamente la población, lo que es ciertamente un aumento extraordinario.

Y no se diga que este fenómeno se deba á la inmigración, que tiene muy escaso coeficiente en el movimiento que se está estudiando. Según la sinopsis formada del censo de 1899, apenas hay un 31.08 por ciento. Esta proporción es una de las más bajas de la América.

La población distribuida por nacionalidades es como sigue:

	Número total.	Por ciento.
<i>Población nacional.</i>		
Civilizada	517, 285	80.93
Indígena (calculada)	100, 000	16.20
	617, 285	97.13
<i>Población extranjera.</i>		
Europeos	6, 855	1.07
Americanos	11, 431	1.80
	18, 286	2.87

La proporción por nacionalidad en la capital y campaña, es respectivamente como sigue:

	Nacionales.	Extranjeros.	Total.
Capital	47, 075	4, 644	51, 719
Campaña	570, 210	13, 642	583, 852
Suma	617, 285	18, 286	635, 571

Así, pues, la proporción total del elemento extranjero de 28.70 por mil en vez del 31.08, esto es, más á favor de la conclusión que se sostiene.

El siguiente cuadro demuestra el lugar que corresponde el Paraguay en cuanto á la extensión de su territorio.

1. Egipto	994	9. Japón	382
2. Marruecos	812	10. Noruega	325
3. Siam	800	11. Paraguay	315
4. Chile	753	12. Beluchistan	315
5. Afghanistan	550	13. Reino Unido (sin sus posesiones)	314
6. Francia (sin sus posesiones)	536	14. Ecuador	307
7. Abisinia	508	15. Transval	294
8. Suecia	450	16. Italia (sin sus posesiones)	286

17. Dinamarca	232	28. Grecia	65
18. Corea	218	29. Costa Rica	54
19. Uruguay	178	30. Liberia	49
20. Turquía Europea	175	31. Santo Domingo	48
21. Rumania	131	32. Servia	48
22. Orange	130	33. Suiza	41
23. Guatemala	125	34. Bélgica	29
24. Nicaragua	123	35. Haití	28
25. Honduras	119	36. San Salvador	21
26. Bulgaria	96	37. Hawai	16
27. Portugal	92	38. Montenegro	9

No se mencionan Andorra, San Marino y Mónaco, porque tienen menos de mil kilómetros cuadrados—507, 86 y 22 respectivamente.

El cuadro demuestra que el Paraguay se aproxima mucho á Francia y Japón por su extensión territorial, y está sobre el Reino Unido, Italia, Dinamarca, Uruguay, Portugal, Suiza y Bélgica, para no citar sino los países de mayor nombradía.

Una extensión superficial casi equivalente ocupan Francia y el Japón y una menor el Reino Unido y la Italia.

Hay mucha distancia entre la población actual y la que puede caber en el Paraguay.

La proporción, desde este punto de vista, pone al Paraguay en los grados inferiores de la densidad en todos los países de la tierra.

Hé aquí la comparación:

1. Bélgica	218.0	28. Marruecos	9.8
2. Países Bajos	148.4	29. Abisinia	8.8
3. Reino Unido	126.0	30. Suecia y Noruega	8.8
4. Italia	109.4	31. Egipto	7.7
5. Japón	107.4	32. Estados Unidos	7.5
6. Alemania	91.4	33. Congo	6.3
7. Francia	71.8	34. México	6.0
8. Suíza	70.9	35. Hawai	5.9
9. Austria-Hungría	66.3	36. Persia	5.4
10. Dinamarca	56.6	37. Costa Rica	4.7
11. Portugal	55.0	38. Uruguay	4.6
12. Servia	48.1	39. Ecuador	4.5
13. Rumania	41.2	40. Chile	4.4
14. Salvador	38.0	41. Honduras	3.3
15. España	35.0	42. Colombia	3.2
16. Turquía en Europa	34.4	43. Perú	2.6
17. Corea	34.2	44. Transval	2.5
18. Grecia	33.6	45. Nicaragua	2.5
19. Haití	33.0	46. Venezuela	2.2
20. Bulgaria	32.6	47. Paraguay	1.8
21. China	32.2	48. Brasil	1.8
22. Montenegro	28.0	49. Bolivia	1.7
23. Liberia	23.4	50. Orange	1.6
24. Rusia europea	19.7	51. Argentina	1.4
25. Guatemala	11.0	52. Beluchistan	1.3
26. Santo Domingo	10.4	53. Trípoli	1.0
27. Afghanistan	10.0		

Este cuadro muestra que el país más poblado es actualmente Bélgica, que tiene 218 habitantes por cada kilómetro cuadrado, y el menos poblado es Trípoli, que no tiene más que uno por la misma unidad superficial.

La población del Paraguay es una de las más escasas con relación al territorio; apenas llega á 1.8 por kilómetro cuadrado.

¿Cuál debe ser el principal deber del Gobierno del Paraguay en presencia de este hecho?

Así como al que tiene hambre es necesario darle de comer, así también es preciso fomentar y atraer la inmigración; tal es el único medio de reponer el equilibrio roto en el cataclismo del 65.

Es excusado esperar de la fuerza vegetativa el enorme contingente que hace falta. Como extraordinaria fué la pérdida, extraordinario debe ser también el remedio. La política del Paraguay debe propender tenaz y sistemáticamente á abrir una gran corriente de inmigración, que reponga las energías del país y arranque á sus extensas zonas los tesoros reservados á la inteligencia y el trabajo.

La República Argentina da el ejemplo. Con 1.4 de población específica, es naturalmente llevada á buscar en el exterior los elementos que tanta prosperidad le han conquistado. Pocos estadistas americanos se preocupan más de la inmigración que los gobernantes argentinos. El tiempo ha dicho ya si era ó no la política que más convenía á los intereses de la República.

En la sinopsis aparecen los siguientes datos: Paraguayos, 968.92 por mil; extranjeros, 31.08 por mil.

La escasa cifra que se obtiene para los extranjeros es altamente elocuente.

La emigración europea se halla solicitada por el Africa, la Oceanía y la América. Y en la América hay muchos centros de atracción, no mejores sin duda que los que el Paraguay ofrece, pero más conocidos, que desvían la corriente de nuestras playas.

El extranjero dirige su vista donde la perspectiva sea más halagadora. Esto es natural y legítimo.

Por eso mismo hay necesidad de fomentarla y ayudarla por todos los medios posibles.

La inmigración es como una dama á quien hay que atraerla á costa de cualquier sacrificio. El predominio de la población indígena no es el mejor síntoma para los países americanos. Es necesario infiltrar nueva sangre en un organismo constantemente combatido por la prodigalidad de la naturaleza.

La experiencia no necesita de comentarios. Los Estados Unidos han asombrado al mundo con su portentoso desarrollo. La República Argentina entra resueltamente en la vía de positivos progresos. La Australia pesa ahora de una manera decisiva en el mercado universal.

Los grandes ejemplos de la historia contemporánea demuestran, pues, que los países nuevos, como el Paraguay, extensos y poco pobla-

dos, deben buscar la prosperidad por el camino de la inmigración. La exuberancia de la naturaleza no puede ser combatida con las exclusivas fuerzas de la diezmada población nativa. Por eso el Paraguay tiene que ser ante todo y sobre todo partidario decidido de la inmigración y de la inmigración en gran escala. Sólo grandes masas pueden formar núcleos de resistencia. Sin el auxilio europeo, no es posible pensar seriamente en explotar el seno virgen de los desiertos.

No han faltado quienes atribuyeran desventajas al Paraguay en la lucha por la vida, á causa del señalado predominio de las mujeres sobre los varones.

La sinopsis dice: Varones, 471.29 por mil; mujeres, 528.71 por mil.

La proporción total de los sexos en la parte censada de la campaña y la capital, es á saber:

	Campaña.	Capital.	Total.
Varones	206, 991	23, 174	230, 165
Mujeres	232, 009	28, 545	260, 554
Total	439, 000	51, 719	490, 719

La proporción por 1,000 es por consiguiente:

	Campaña.	Capital.	Total.
Varones	471.29	443.07	469.03
Mujeres	528.71	551.93	530.97

Sostienen algunos que la prosperidad de las naciones está en razón directa del exceso de la población masculina sobre la femenina.

Los pueblos atrasados—agregan—faltos de industria, pobres de comercio y vías de comunicación, tienen por lo general menor número de hombres, porque éstos, naturalmente más emprendedores, emigran á los países que ofrecen ocupación más lucrativa á su actividad.

Pero los hechos no autorizan un principio tan absoluto.

En el cuadro siguiente se encuentran países de prosperidad indiscutible, de industria desarrollada, gran comercio y buenas vías de comunicación en cuya población hay un exceso de mujeres sobre hombres.

Hé aquí el cuadro:

	Por mil.		Por mil.
1. Bélgica	499	10. España	490
2. Estados Unidos (N. y S.)	499	11. Austria	489
3. Francia	496	12. Dinamarca	488
4. Hungría	496	13. Suiza	486
5. Guatemala	496	14. Gran Bretaña	485
6. Holanda	494	15. Suecia	484
7. Irlanda	493	16. Escocia	483
8. Honduras	493	17. Noruega	482
9. Alemania	490	18. Paraguay	471.29

Otros creen que el predominio de los varones es peculiar de los países que tienen exceso de territorio respecto á la población. Y aducen, en abono de esta tesis, que las migraciones se dirigen de los centros poblados á los despoblados. Las migraciones se componen en su inmensa mayoría de varones.

Este argumento es atendible; pero no parece decisivo. No todos los países extensos y poco poblados reciben el contingente extraordinario de varones que supone la inmigración. El solo hecho de tener mucho territorio y poca población no explica satisfactoriamente el desequilibrio.

La Italia, por ejemplo, que tiene 109.4 de habitantes por kilómetro cuadrado, es uno de los países más poblados con relación á su territorio; y sin embargo, el censo arroja mayor número de varones que mujeres. Lo mismo puede decirse del Japón.

Si de la República Argentina se descarta la población extranjera, resulta también un exceso de mujeres. Solamente seis provincias, las que han recibido mayor contingente extranjero, tienen exceso de varones. Las demás se encuentran con el predominio de la población femenina, que es la característica de la actual población indígena americana.

El análisis lleva á afirmar que el desnivel de los sexos, predominio de uno ú otro, no determina ninguna diferencia sensible, que dé base á juicio alguno, lanzado á priori, respecto á las condiciones de una sociedad ó su mayor ó menor aptitud para la vida.

Si el Paraguay tiene 471.29 por mil de varones en la totalidad de su población, esto no puede autorizar presunción alguna de inferioridad respecto á los otros países.

En primer lugar nada dice en cuanto á las condiciones físicas del medio: territorio, clima, etc. Después nada dice tampoco respecto á la aptitud de la población, su cultura, riqueza, etc.

Nada más interesante que el estudio de los sexos en la población de la República.

Si en vez de tomar en cuenta únicamente el conjunto de la población se considera ésta dividida en grandes grupos por edades se descubre que existe una proporción rigurosamente progresiva hacia la nivelación de los sexos á medida que se va llegando al año 1900, y que la diferencia desaparece en los últimos nacimientos.

La proporción por 1,000 en los nacimientos más recientes es en efecto la siguiente:

	Capital.	Campaña.	Total.
Varones	506.40	484.80	485.12
Mujeres	493.60	515.20	514.88

El exceso del sexo femenino en el total censado correspondiente á los nacimientos del 1870 al 1890, es de 5.58 por ciento y solo de 2.97 por ciento en los últimos años.

En cambio dicho exceso es de 15.20 por ciento en los correspondientes al período de 1850 al 1870 y de 54.26 por ciento, diez veces mayor, en los correspondientes á los años anteriores.

La proporción de los varones que es sólo de 17.23 por 1,000 en los octogenarios sobrevivientes y que se reduce á cero por ciento en las edades más avanzadas, sube en escala siempre ascendente hasta nivelarse en los últimos años, como queda expuesto.

Un dato más suministrado por las confirmaciones hechas por la Curia, es el siguiente:

	Varones.	Mujeres.
1879-1891	49.10	50.90
1895-1901	49.28	50.72
Promedio	49.19	50.81

Sobre un total de 264,786 confirmaciones anotadas (1879 á 1901), sólo existe una diferencia de sexos de 1.62 por ciento por exceso de mujeres.

Respecto al alcance del exceso de mujeres, milita un dato decisivo que de propósito se deja para cerrar esta parte del presente estudio.

La guerra del 1865, sostenida por el Paraguay durante cinco largos años, exterminó casi por completo su población masculina. En 1872, dos años después de concluida la guerra, el país no tenía más que 231,000 habitantes, mujeres en su inmensa mayoría, ó niños, ó viejos, ó inválidos.

Librado después el equilibrio al crecimiento vegetativo, claro es que no puede restablecerse aún en plazo relativamente corto. Y la escasa inmigración ha ejercido influencia principalmente en la Asunción, cuya estadística no aparece en el censo.

Descúbrese así cuán injusta es la acusación que al pueblo paraguayo se dirige por el predominio del sexo femenino. La causa es esencialmente histórica. No cabe, pues, invocarla, para despertar aprehensión en el extranjero que pone su vista en el Paraguay.

Hallábase en Madrid el año 1896 el Doctor Don RAMÓN DE OLASCOAGA, profesor de Economía en la Universidad Nacional del Paraguay, y uno de los que con todo desinterés han hecho conocer el nombre del Paraguay en el mundo científico europeo.

En el deseo de rectificar los numerosos errores y desvanecer las especies que pasaban como moneda de ley, aun entre los más autorizados representantes de la ciencia en Europa, publicó una obra así titulada: "Capítulos entresacados de la geografía universal, por ELISEO RECLUS;

prólogo, traducción y notas por RAMÓN DE OLASCOAGA, profesor de la Universidad del Paraguay.”

Por supuesto, el traductor, con el conocimiento personal que tenía del Paraguay, abonado con muchos y muy serios estudios, llenó de rectificaciones y notas la obra del eminente profesor de la Universidad de Bruselas.

Causa en verdad admiración, así la cantidad de inexactitudes que se dicen del Paraguay, en la citada obra de RECLUS, como el tono poco caritativo con que le trata la culta Europa, por el órgano de sus más dignos representantes.

En el capítulo III de su libro, dice el Sr. RECLUS lo siguiente: “Es ella quien manda”—se refiere el autor á la mujer paraguaya en el seno de la familia—“y cuando las uniones, en su mayor parte desprovistas de sanción legal, llegan á romperse, los hijos siguen siempre á la madre.”

Añade el escritor que los paraguayos, que tomaron la parte que tomaron en una guerra sin cuartel, se dejan sin embargo arrebatarse hoy sus tierras sin protestar. El Doctor DE OLASCOAGA rectificó estos asertos que carecen de fundamento.

El viejo mundo no siempre se muestra muy nervioso por conocer á detalle la organización social de los países lejanos. Y este desconocimiento parece que da una autorización tácita para que se lancen especies más ó menos amenas, casi siempre injustas, contra pueblos situados en lugares remotos, de contacto menos frecuente con los grandes centros europeos.

El censo publicado tiene, sin embargo, abundante material para destruir la acusación de que se trata.

Según la sinopsis que sirve de base á este estudio, existen en el Paraguay: Solteros, 442.20 por mil; casados, 528.40 por mil; viudos, 27.40 por mil.

Sobre el total censado, las cifras del estado civil son las siguientes:

	Campaña.	Capital.	Total.
Solteros.....	113, 939	18, 167	132, 106
Casados.....	135, 566	6, 101	141, 667
Viudos.....	7, 050	1, 682	8, 732
Impúberes.....	256, 555	25, 950	282, 505
	182, 445	25, 769	208, 214
	439, 000	51, 719	490, 719

La proporción por mil es:

	Capital.	Campaña.	Total.
Solteros.....	700. 06	444. 20	467. 62
Casados.....	235. 13	528. 40	501. 47
Viudos.....	64. 81	27. 40	30. 91

Si se compara esta proporción de 528.40 por mil con el número de casados en los países cuya estadística se ha podido encontrar, se halla el sitio que corresponde al Paraguay desde este punto de vista.

Hé aquí la comparación:

	Por mil.		Por mil.
1. Francia	549	8. Argentina	511
2. Italia	537	9. Suiza	479
3. Inglaterra y Gales.....	534	10. Bélgica.....	477
4. Paraguay.....	528. 40	11. Estado de Rio Janeiro.....	320. 26
5. Alemania	528	12. Departamento y ciudad de	
6. Austria	528	Montevideo	310. 10
7. Holanda	517		

Este cuadro demuestra que el Paraguay no tiene por qué ceder en punto á uniones legítimas. Solamente Francia, Italia, Inglaterra y Gales, de los países nombrados, están sobre el Paraguay. Los otros están debajo: Alemania, Austria, Holanda, etc.

No es posible sostener la acusación de Sr. RECLUS en presencia de esta terminante conclusión de la Estadística. No hay argumento capaz de eclipsar la verdad asentada sobre los números.

La última parte de la sinopsis se refiere á los alfabetos y analfabetos del Paraguay.

Felizmente es un punto en que no se ha tratado tan mal al Paraguay.

Sólo la prensa política ha dicho alguna vez, en las ardientes luchas partidistas, que los analfabetos abundan en proporción poco menos que desesperante.

Hé aquí lo que dice la estadística: Alfabetos, 369.50 por mil; analfabetos, 630.50 por mil.

Están excluidos de este resultado los que aun no han llegado á la edad legal para concurrir á las escuelas.

Las cifras correspondientes á este punto, en el total censado, son estas:

	Campaña.	Capital.	Total.
Alfabetos.....	135, 219	26, 899	162, 118
Analfabetos	230, 836	15, 916	246, 752
Menores de 5 años.....	366, 055	42, 815	408, 870
Flotante.....	72, 945	6, 562	79, 507
		2, 342	2, 342
	439, 000	51, 719	490, 719

La proporción total por mil es así:

	Campaña.	Capital.	Total.
Alfabetos.....	369. 40	628. 26	396. 52
Analfabetos	630. 60	371. 74	608. 48

El Paraguay, celebrado en épocas no lejanas por la gran difusión de la enseñanza primaria en la masa de la población, no ha descendido en lo más mínimo, en el sentido de desandar el trecho recorrido. Lo que hay es que el último cuarto del siglo próximo pasado, que el Paraguay ha tenido que consagrar á la reconstitución del organismo nacional, ha sido útilmente empleado por los demás países del Plata, en esparcir por todos los ámbitos de su territorio la luz de la civilización.

Con todo, no hay por qué estar cohibido cuando se habla de la llamada educación común. La estadística demuestra que el puesto que ocupa el Paraguay no está muy lejos del de los países más adelantados, ó es igual ó superior á algunos centros que dignamente figuran al frente del movimiento intelectual sudamericano.

PERÚ.

EL ORO EN EL PERÚ.

De magnífica puede calificarse la mina de oro que explota la Compañía Inca Mining, en la provincia de Carvaya, con el nombre de Santo Domingo.

En sólo dos meses ha remitido á uno de los bancos de Lima 8,200 libras de oro, que representa un valor de 36,000 libras esterlinas.

Este valioso yacimiento minero fué vendido ha dos años por sus propietarios Sres. VELASCO y ESTRADA, en 53,000 libras á Mr. HARDISON, quien formó en los Estados Unidos un sindicato que hasta hoy lo ha explotado, conocido con el nombre de Inca Mining Compañía, el que á su vez lo ha vendido recientemente á una Compañía inglesa en la enorme suma de 600,000 libras.

Según datos recientes, produce á sus felices poseedores 4,100 libras de oro mensualmente, ó sea 18,000 libras con indicios de aumento. La empresa ha gastado más de 70,000 libras tan sólo en abrir camino para llevar la maquinaria.

Esta mina posee una línea telegráfica que la pone en comunicación con las principales ciudades vecinas y con el mundo entero.

El alza en los precios del cobre ha dado un gran impulso á la industria minera.

SALVADOR.

CONVENCIÓN DE DERECHOS DE ADUANA CON LA REPÚBLICA FRANCESA.

El Presidente de la República de El Salvador y el Presidente de la República Francesa, igualmente animados por el deseo de favorecer el desarrollo de las relaciones comerciales entre los dos países, han

decidido llevar á cabo una convención para tal fin y han nombrado para que sean sus Plenipotenciarios respectivos:

El Presidente de la República de El Salvador, al Doctor Don RAFAEL ZALDÍVAR, Enviado Extraordinario y Ministro Plenipotenciario de la República de El Salvador ante el Presidente de la República Francesa, Gran Oficial de la Orden de la Legión de Honor, y el Presidente de la República Francesa, á M. TH. DELCASSÉ, Diputado, Ministro de Relaciones Exteriores de la República Francesa; quienes, después de haberse comunicado sus plenos poderes, hallados en buena y debida forma, han convenido en lo que sigue:

ARTÍCULO I. Los cafés y otros géneros enumerados en la Tabla A adjunta á la presente Convención, originarios de la República de El Salvador, gozarán, al ser importados en Francia, en Argelia, en las colonias y posesiones francesas, en los países de protectorado de la Indo-China y de Túnez, de los derechos de aduana más bajos aplicables á los productos similares de cualquier otro origen extranjero.

ART. II. Recíprocamente, los productos naturales y fabriles, originarios de Francia, de Argelia, de las colonias y posesiones francesas, de países de protectorado de la Indo-China y de Túnez, gozarán, al ser importados en la República de El Salvador, de los derechos de aduana más bajos, aplicables á los productos similares de cualquier otro origen extranjero.

La tarifa de aforo vigente en El Salvador será, en lo que atañe á los productos franceses enumerados en la Tabla B adjunta á la presente Convención, rebajada de modo que esos productos no sean, en ningún caso, susceptibles, á su entrada á El Salvador, de aforos más elevados que los estipulados en la dicha Tabla B.

ART. III. Los certificados de origen que fueren exigidos para la admisión de las mercancías á un régimen de favor aduanero, serán visados por los Cónsules salvadoreños y por los Cónsules franceses, libres de todo derecho consular de Cancillería.

ART. IV. La presente Convención será ratificada por los dos Gobiernos tan pronto como pueda hacerse, y las ratificaciones serán cambiadas en París. La dicha Convención entrará en vigor inmediatamente después del cambio de las ratificaciones y permanecerá ejecutiva hasta la expiración de un año, contado desde el día en que una de las altas partes contratantes hubiere notificado su intención de hacer cesar sus efectos.

En fe de lo cual, los Plenipotenciarios arriba mencionados han firmado la presente Convención y le han puesto sus sellos.

Hecho en doble ejemplar en París, el 9 de enero de 1901.

(F.) RAFAEL ZALDÍVAR.

(F.) DELCASSÉ.

TABLA A.—*Productos originarios de la República de El Salvador que gozarán, al ser importados en Francia, de los derechos de la tarifa mínima.*

Café, cacao, chocolate, pimienta, pimientos, anomos y cardamomos, canela, cassia lignea, nuez moscada, macís, clavo, vainilla, té, añil, caucho, bálsamo; aceites de palma, de coco, de palmiche, de ricino, de sésame, y otros análogos.

TABLA B.—*Derechos que deben cobrarse (el kilogramo) á la entrada de las mercancías francesas importadas á El Salvador, de acuerdo con los siguientes aforos.*

Vinos blancos de mesa.....	\$0. 05
Licores de todas clases en envases de litro ó menos de 1 litro.....	. 40
Los mismos en envases de 1 litro	1. 00
Sardinas de todas clases.....	. 20
Aguas minerales.....	. 01
Sulfato de quinina y alcaloides de todas especies.....	. 40
Bebidas embreadas, como el "Goudron de Guyot," y otras no mencionadas..	. 10
Libros impresos.....	. 01
Aguas de olor de toda clase alcoholizadas, tales como Agua de Colonia, de Florida, Agua divina, de Kananga, de Lavanda, de Melisa, y otras análogas..	. 30
Aceitunas.....	. 22
Alcaparras.....	. 22
Conservas en vinagre 22
Mostaza preparada 22
Cari.....	. 22
Salsas de todas especies.....	. 22
Legumbres, trufas, mantequillas, pescados y carnes de todas clases, preparadas en cajas de lata, en envases de vidrio, de tierra y otros.....	. 22
Frutas secas sin cáscara, pasas, higos, ciruelas, dátiles.....	. 20
Frutas conservadas en aguardiente y en almíbar.....	. 22

DELCASSÉ.

MOVIMIENTO DE BUQUES EN 1901.

La Oficina de Estadística de la República de El Salvador ha publicado una interesante tabla que muestra que en 1901 entraron en los puertos de la República 515 buques, que condujeron 204,157 bultos de mercancías y 2,626 pasajeros. Durante el período mencionado de los mismos puertos salieron 514 buques, que condujeron 424,304 bultos de mercancías y 2,567 pasajeros. La siguiente tabla muestra detalladamente las entradas y salidas por los puertos:

Puertos.	Estados Unidos.	Chile.	Inglaterra.	Alemania.	Total.	Bultos.	Pasajeros.
ENTRADAS.							
Acajutla.....	79	50	47	35	211	118,895	1,786
La Libertad.....	76	37	36	29	178	50,607	293
La Unión.....	46	23	34	23	126	34,655	547
Total.....	201	110	117	87	515	204,157	2,626
SALIDAS.							
Acajutla.....	77	50	47	36	210	268,569	1,758
La Libertad.....	76	37	36	29	178	64,455	373
La Unión.....	46	22	35	23	126	91,280	436
Total.....	199	109	118	88	514	424,304	2,567

MOVIMIENTO POSTAL.

En 1901, según datos estadísticos publicados en el “Diario del Salvador,” circularon en el interior de la República 1,623,561 piezas de correspondencia y 61,893 balijas. El servicio exterior consistió de 494,900 piezas de correspondencia y 7,390 balijas. El movimiento de paquetes postales ascendió á un total de 6,033, de los cuales se certificaron 5,873.

En la cuenta de paquetes postales es donde se nota el mayor aumento de entradas en efectivo, habiendo sido en el año de 1899 de \$22,485.10; en 1900 de \$29,205.20, y en el que acaba de transcurrir (1901) de \$44,538.45.

Servicio de giros postales.—El movimiento de giros postales expedidos en San Salvador durante el año de 1901 fué de 125, por valor de \$1,728.69 oro, equivalentes á \$4,054.33 plata.

El número de los giros pagados por dicha oficina fué de 23, por valor de \$478.67 oro, ó sean \$1,080.80 plata.

Rezagos y posta restante.—Cartas rezagadas, 1,209; cartas devueltas, 512.

URUGUAY.

MENSAJE QUE EL PRESIDENTE CUESTAS ENVIÓ Á LA ASAMBLEA GENERAL EL 15 DE FEBRERO DE 1902.

Honorable ASAMBLEA GENERAL: Finalizado el año 1901 cúmpleme presentar á Vuestra Honorabilidad la exposición y resumen de los trabajos administrativos llevados á cabo.

* * * * *

LA PRODUCCIÓN NACIONAL.

Las cosechas en general han sobrepasado todo cálculo, y se espera que los productos exportables representen una suma de 35,000,000 de pesos, cifra á que no había llegado el país hasta ahora.

El consumo del exterior ha sido en el año alrededor de 25,000,000 de pesos, de modo que la fortuna pública del país habrá sido aumentada en 10,000,000 de pesos, resultado que supera al de cualquier otro país, en relación con sus habitantes.

El valor superior de la propiedad rural justifica la producción en las proporciones que se ofrece.

* * * * *

EL CRÉDITO PÚBLICO.

Las obligaciones de la Nación han sido atendidas con toda regularidad. El servicio de la Deuda Pública, así como los presupuestos en general, han recibido el cumplimiento debido á sus vencimientos, y en cuanto á la Deuda que se cotiza en Londres, en previsión de los servicios futuros que le corresponden, hay allá fondos bastantes para toda eventualidad.

* * * * *

EL PUERTO DE MONTEVIDEO.

Es de notoriedad que el 18 de julio del año fenecido tuvo lugar la colocación de la piedra fundamental del Puerto de Montevideo, verdadera aspiración nacional.

* * * * *

EL BANCO DE LA REPÚBLICA.

Los beneficios líquidos bien saneados del Banco exceden, según cálculos, de \$360,000, los cuales permitirán distribuir para el Estado un dividendo de más de \$270,000, quedando la diferencia como aumento de las reservas. Todas estas sumas representan un considerable aumento sobre el ejercicio precedente.

* * * * *

RELACIONES EXTERIORES.

El Poder Ejecutivo ha prestado siempre preferente atención á todo lo que se relaciona con la política y comercio en el exterior, propendiendo á vincular á la República con los demás Estados, muy especialmente en lo que se relaciona con su intercambio comercial, sus fuentes de producción y nacientes industrias, favoreciendo el desarrollo de los capitales, protegiendo la inmigración laboriosa y dando impulso á toda empresa que se considere benéfica para los intereses económicos y financieros del país.

* * * * *

CORREOS Y TELÉGRAFOS.

En el año 1901 se ha notado un progreso considerable en los servicios de Correos y Telégrafos, como lo pone de manifiesto el cuadro siguiente:

	Piezas de correspondencia.	Número de giros.	Valor girado.	Telegramas.
1900	44, 751, 916	31, 445	3, 416, 771	144, 613
1901	53, 503, 389	34, 642	3, 671, 743	180, 302
Á favor de 1901.....	8, 751, 973	3, 197	254, 972	35, 689

La renta ha seguido también un movimiento ascendente, que demuestra la vigorosa vitalidad de la institución. El importe de lo recaudado asciende en 1901 á \$390,027.55, representando, por consiguiente, un crecimiento de \$28,454, con respecto al año anterior, debiendo consignarse que en el segundo semestre el aumento de la renta fué de \$18,000, debido, en gran parte, á la organización que se ha implantado por la nueva Dirección.

* * * * *

HACIENDA.

La situación de la hacienda ha mejorado sensiblemente. Los cuadros que á continuación se expresan ponen de manifiesto lo que se afirma, á pesar de que la renta de Aduana ha ofrecido una diferencia en contra de lo que se había establecido en el cálculo de recursos.

Cuadro comparativo de rentas calculadas y de su producido.

Rubros.	Calculado en la Ley de Presupuesto vigente hasta el 30 de noviembre de 1901.	Producido en el año civil de 1901.
Aduana y receptorías	\$10,200,000.00	\$9,639,653.12
Contribución inmobiliaria	1,850,000.00	1,820,192.36
Patentes de giro	940,000.00	945,890.27
Patente adicional, 2½ por ciento	258,866.00	86.00
Banco de la República, utilidades	270,000.00	203,764.43
Impuesto y productos de fabricación nacional	530,000.00	774,248.29
Impuestos internos á tabacos y cigarrillos	420,000.00	422,710.34
Dirección general de instrucción pública (incluso impuesto sobre herencias y donaciones)	500,000.00	569,793.16
Papel sellado	370,000.00	355,319.17

Producido en el año civil de 1901	15,543,282.92
Menos en el año civil de 1901	581,041.94

CAMBIOS EN EL ARANCEL DE ADUANAS.

El día 9 de diciembre de 1901 la Dirección General de Aduanas expidió el siguiente aviso relativo á los derechos de importación sobre ciertas mercancías:

El artículo 1º de la ley de 11 de junio de 1901 determina que: “El papel de color en general (con excepción del de cromó especial para obras) plegado ó abierto, cualquiera que sea su tamaño, el de estraza, estracilla, de paja y para bolsas y similares para envolver ó embalaje, pagará un derecho específico de peso 0.07 por kilogramo.”

El artículo 2º de la misma preceptúa que: “La anilina pagará el 5 por ciento ad valorem.”

Por lo que respecta á los aceites de abedul, no ha habido recientemente ninguna modificación.

Por el artículo 2º de la ley de 11 de enero de 1896, los aceites vegetales pagarán el derecho uniforme y específico de \$0.10 por kilogramo, más el 5 por ciento adicional sobre su avaluación.

IMPORTACIÓN DE GANADO.

El Presidente de la República Oriental del Uruguay, con fecha 24 enero de 1902, promulgó el siguiente decreto:

“Mientras no se pronuncie expresamente la declaración de caducidad del decreto fecha 11 de mayo de 1901, continuarán rigiendo sus dispo-

siciones á efecto de prohibir la introducción de ganado procedentes de países de ultramar, que no se encuentren en las condiciones establecidas por el artículo 2º del expresado decreto. Las expediciones que hubieran sido embarcadas con anterioridad á la fecha del actual decreto y las que se embarquen antes del 1º de febrero entrante, procedentes de países de ultramar, sufrirán una cuarentena de cuarenta días como minimum, quedando en lo demás sujetas á las disposiciones del decreto fecha 21 de octubre de 1899.”

El artículo 2º del decreto de mayo 11 de 1901, á que se refiere el decreto que precede, dice lo siguiente: “Quedan exceptuados de lo que se dispone en el artículo anterior, los animales procedentes de países de ultramar, cuyos representantes certifiquen en forma, que la afta epizootica no existe en ellos y que toman las medidas de precaución indispensables para evitar el contagio.”

PRODUCCIÓN DE CEREALES EN 1900-1901.

Segun muestra la estadística publicada por el Departamento de Ganadería y Agricultura de la República Oriental del Uruguay, la producción de cereales durante el año económico de 1900-1901 fué como sigue:

	Kilogramos sembrados.	Hectáreas cultivadas.	Kilogramos cosechados.
Trigo.....	19, 108, 530	276, 511	99, 719, 771
Lino.....	143, 993	4, 002	2, 313, 935
Avena.....	10, 267	177	68, 334
Cebada.....	48, 000	763	438, 263
Alpiste.....	57, 407	1, 858	709, 485
Centeno.....	580	11	2, 910
Maíz.....	2, 277, 927	181, 558	141, 647, 916

La tabla siguiente indica, por Departamentos, la producción de trigo y maíz durante el período mencionado, así como el promedio de rendimiento por hectárea:

Departamentos.	Trigo.	Maíz.	Promedio por hectárea.	
			Trigo.	Maíz.
	Kilos.	Kilos.	Kilos.	Kilos.
Artigas.....	1, 059, 132	437
Salto.....	42, 056	328, 865	253	390

Montevideo.....	76, 489	884, 310	449	708
Total.....	99, 719, 771	141, 647, 916	357	780

El Cónsul General de la República Oriental del Uruguay en Baltimore, Maryland, anuncia que la producción de trigo en dicha República en 1901 fué 1,200,000 fanegas, ó sean 9,331,200 bushels, comparada con 4,000,000 fanegas (calculadas), ó sean 31,103,000 bushels producidos en 1902.

CONTRIBUCIÓN Á LOS AGENTES VIAJEROS.

El día 23 de septiembre de 1901 se publicó una ley de patentes de giro aplicable á la capital, Montevideo, durante el año de 1901-2, que modifica el actual Reglamento de contribuciones que se imponen á los agentes viajeros. La contribución comercial establecida sobre la base de 100 pesos anuales (es decir, los doce meses completos) queda vigente. Pero anteriormente se pagaba todo el impuesto sólo en el caso de que las operaciones cubriesen la primera mitad del año; del tercer trimestre se exigía sólo la mitad, y del cuarto trimestre sólo se exigía el pago de la cuarta parte de la cantidad total de la contribución.

El artículo 16 priva oficialmente de esta prerrogativa á los agentes viajeros y dispone que tienen que pagar la cantidad total en cualquier época del año. El recibo que se expide de la cantidad de la contribución y que sirve de pase para ir de un punto á otro, no es personal, y es válido para quienquiera que lo presente. Cualquiera agente viajero que se encuentre sin este documento, pagará una multa ó estará obligado á obtener una nueva copia á su costo.

RENTAS DE ADUANA.

VENEZUELA.

MENSAJE QUE PRESENTA AL CONGRESO DE LOS ESTADOS UNIDOS DE VENEZUELA EL PRESIDENTE PROVISIONAL DE LA REPÚBLICA, GENERAL CIPRIANO CASTRO, EN FEBRERO DE 1902.

Ciudadanos SENADORES Y DIPUTADOS:

Inclínome respetuosamente ante los augustos poderes que os han confiado los pueblos.

Vuestra reunión en Congreso es hoy más que nunca oportuna, porque de las decisiones de vuestra superior autoridad, están pendientes importantes asuntos relacionados con la vida normal de la República.

* * * * *

Paso á informaros en resumen sintético de la sorprendente labor administrativa de estos diez meses últimos, en la cual se ha atendido á los principales gastos, sin gravar el crédito del Gobierno ni un céntimo.

Para reparaciones, aumento y material de guerra de la armada nacional que se encuentra inservible, mi Gobierno ha erogado la cantidad de B. 1,363,837.39, y para equipo, armamento y vestuario de nuestro ejército B. 1,810,708.48.

* * * * *

Del mismo modo el telégrafo nacional ha sido objeto de la preferente atención del Gobierno, pudiendo deciros hoy que las ramificaciones de su inmensa red, unen entre sí en estrecha y rápida comunicación á todas las poblaciones de los cuatro extremos del país, y apenas si á estas horas hay en la República pueblo alguno que no goce de sus beneficios, no obstante de que aun no he terminado mi labor en ese sentido. En esta obra tan vasta como benéfica se ha empleado la suma de B. 1,368,300.32.

Se han erogado asimismo B. 2,859,721.23 para el servicio de la deuda; B. 2,049,926.83 para gastos de la acuñación de la plata; B. 561,200 para el pago de las comisiones que demarcaron nuestros límites con la Guayana Inglesa y con la República de Colombia de conformidad con los laudos que ya conocéis; B. 34,200 para gastos de nuestra representación en el Congreso Panamericano; B. 3,219,543.34 en el situado de los Estados; B. 1,087,305.71 para cancelar los arreglos especiales con MALLET PREVOST, el Gran Ferrocarril de Venezuela, VAN DISSEL Y CA., STEINWORTH Y CA. de San Cristóbal, BRENER MOLBER Y CA. de la misma plaza, A. ERMEN Y CA. de Puerto Cabello, GENARO MAICA y el Ferrocarril de Puerto Cabello á Valencia; B. 1,650,000 para el Banco de Venezuela destinados á ser abonados á la cuenta de excesos, según convenio que se hizo con aquel instituto; B. 899,500 para pagar el empréstito de guerra de 1900, y B. 189,400 en el fomento de otros ramos.

* * * * *

A la cuenta de Salinas se han aplicado por el Banco de Venezuela el año de 1901 B. 1,439,975 en remates, intereses y premios; y las existencias de títulos de Salinas para 31 de diciembre último es de 10,503 de á B. 500, cada uno, que forman en conjunto la cantidad de B. 5,251,500.

El producto líquido de este ramo sobre una venta de K. 13,457,423 es, en el año económico de 1900 á 1901, de B. 2,827,579.56, que, comparado con el producto líquido de B. 1,077,412.96 del año económico anterior, da un resultado favorable de B. 1,750,166.10.

Efectuados tres remates de títulos del uno por ciento mensual, en virtud del decreto ejecutivo de 5 de diciembre de 1900, fué ofrecida en dinero efectivo, la cantidad de B. 59,442.60 por dichos títulos, alcanzándose la amortización de B. 119,000 en billetes, más la suma de B. 35,800 por intereses vencidos, lo que da un resultado de B. 154,800 en total. También se efectuaron tres remates de deuda nacional interna consolidada del 6 por ciento anual, en que se ofrecieron B. 531,163.88 en dinero efectivo, alcanzándose rematar en billetes de dicha deuda la cantidad de B. 1,769,500, más B. 290,857.50 en cupones vencidos, lo que da un total de B. 2,060,357.50. Sensible es que el Gobierno no hubiera podido continuar dichos remates, debido á la disminución de la renta y á la perturbación del orden público, pues con ellos no sólo se beneficiaba el país como queda demostrado, sino que estos valores tuvieron una alza considerable en el mercado.

Constituida una junta de examen y calificación de créditos por decreto ejecutivo fecha 24 de enero de 1901 para el estudio y examen de los créditos que hubiera contra el Tesoro Nacional, provenientes de la guerra iniciada el “23 de mayo de 1899,” y fenecido el lapso acordado por el mismo decreto, para la presentación de solicitudes, dicha junta rindió su informe, calificando de entre 725 solicitudes por la cantidad de B. 16,438,034.73—tan sólo el número de 212, que aunque alcanzaban á B. 3,676,202.12, juzgó la junta calificadora equitativo reconocerles en conjunto B. 1,223,200, dictando el Ejecutivo nacional con fecha 4 de julio de 1901 el decreto, por el cual se mandó expedir á los interesados un certificado por el monto de la suma reconocida, hasta la reunión del actual Congreso Constitucional, á quien tocará determinar la manera y forma de pago del capital é intereses respectivos.

* * * * *

Así y todo, se ha atendido á la conservación de empedrados, adoquinados y aceras de la ciudad; se hizo la instalación y equipo de maquinarias en el nuevo Matadero y las obras complementarias para la terminación del edificio; se reconstruyó el piso de madera y se le hicieron reparaciones accesorias al Puente del Paraíso en esta capital; se demolió el antiguo Cuartel Miranda, y sobre su área se ha levantado ya la armadura de hierro para el nuevo edificio de la Comandancia de Armas; se ha engranzonado la primera sección de la espaciosa calzada

que constituye el hermoso paseo del Paraíso y se le han construido á uno y otro lado aceras de cemento en todo su trayecto; se han hecho importantes reparaciones en las cuatro carreteras que parten de la capital hacia el este, norte, sur y occidente; se atiende á la reparación general que se le está haciendo al edificio de la Universidad Central en todas sus obras y departamentos deteriorados por el terremoto; se hace igualmente la total reparación de la Casa del Registro Público que amenazaba ruinas; se atendió á la conclusión de las reparaciones generales que se hacían en el edificio del Ministerio de Fomento, techos, muros, entresuelos y desagües; se hizo lo mismo con el vasto edificio del Cuartel San Carlos, el cual fué reformado en sus dependencias para facilidad y comodidad del servicio; se completó la refacción de los techos y muros del Panteón Nacional, Hospital Vargas, Hospital Militar y edificio del Ministerio de Hacienda, todo lo cual reclamó serias erogaciones; y en fin, se hizo el Acueducto de Independencia y se han empezado los trabajos del nuevo lazareto de Michelena, así como se ha construido el gran edificio de la casa de Gobierno en San Cristóbal, que no existía, se contribuyó á la erección de los monumentos de Falcón y Dallacosta en Ciudad Bolívar, se reconstruyó la casa del Resguardo y Cárcel Pública de La Guaira, se atendió con B. 30,000 á la refacción del edificio de la Universidad de Maracaibo, se erogaron B. 10,000 para obras públicas en el Guarico, B. 19,743 para los muelles de Puerto Cabello, B. 16,000 para el Lazareto de Maracaibo, B. 4,000 para limpias de las bocas del Neverí, B. 6,000 para los muelles de la Vela de Coro, B. 5,376 para la alameda Castro en La Victoria; B. 28,890 para el acueducto de Asunción á Pampatar y B. 80,000 para Isiro en Coro.

COMERCIO DE LA GUAIRA EN 1901.

El “Venezuelan Herald” de Caracas ha publicado recientemente los siguientes datos estadísticos relativos al comercio del puerto de La Guaira en 1901:

IMPORTACIONES.

Nacionalidades.	Buques.	Cantidad.
		<i>Kilos.</i>
Alemán.....	25	8,417,500
Norteamericano.....	43	24,562,855
Dinamarqués.....	3	1,161,575
Español.....	12	358,609
Francés.....	37	2,117,845
Holandés.....	31	3,452,658
Inglés.....	64	5,471,935
Italiano.....	10	1,134,163
Noruego.....	3	1,883,688
Ruso.....	7	3,853,143
Sueco.....	1	414,765
Venezolano.....	4	139,226
Totales.....	240	53,967,962

EXPORTACIONES.

Exportaciones hechas en 182 buques, que condujeron 12,523,824 kilogramos de las siguientes mercancías:

Artículos.	Cantidad.
	<i>Kilos.</i>
Café	7,290,600
Cacao	3,744,220
Cueros	782,023
Varios	676,981

Clasificación de las importaciones.

Artículos.	Cantidad.
	<i>Kilos.</i>
Mercancías	8,609,296
Ferretería	2,250,033
Viveres y licores	17,146,417
Aceites excepto el petróleo	538,600
Petróleo	1,940,650
Maderas	1,696,271
Cemento	3,419,920
Carbón de piedra	16,674,163
Maquinaria	129,311
Material de ferrocarril	562,631
Totales	52,967,962

La siguiente tabla muestra las importaciones extranjeras correspondientes al año de 1901, así como la procedencia de las mercancías:

	Cantidad.
	<i>Kilos.</i>
Alemania	7,666,138
España	1,539,330
Estados Unidos	24,613,870
Francia	1,567,759
Holanda	3,680,502
Inglaterra	13,077,393
Italia	812,643
Bélgica	167
Colombia	1,435
Dinamarca	8,725
Totales	52,967,962

INGRESOS Y EGRESOS EN 1901.

Por la memoria que el Ministro de Hacienda presentó al Congreso Nacional que se reunió el 20 de febrero de 1902, aparece que los ingresos del Gobierno durante el año de 1901 ascendieron á 35,813,846.93 bolívares, en tanto que el total de egresos ascendió á 44,371,875.56 bolívares, mostrándose así un déficit de 8,558,028.63 bolívares. De esta última suma deberán rebajarse los depósitos que el Gobierno ha hecho en el Banco de Venezuela, ó sean 4,000,000 de bolívares y la

ganancia obtenida en la acuñación de la plata que ascendió á 1,950,073.17 bolívares ó sean un total de 5,950,073.17 bolívares, que dejan 2,607,955.46 bolívares, cantidad que el Gobierno ha gastado realmente además de la cantidad total referida. Los datos correspondientes al mes de diciembre de 1901 eran incompletos en la fecha en que se presentó este Informe al Congreso, porque el Ministro de Hacienda todavía no había recibido todas las relaciones de las aduanas, ni el Banco de Venezuela había recibido todos los informes de sus agentes. Sin embargo, se cree que los ingresos procedentes de las distintas fuentes de renta correspondientes al mencionado mes, son aproximadamente exactos.

Las fuentes de las cuales el Gobierno obtuvo dichas rentas fueron las siguientes:

De las aduanas, 24,267,778.04 bolívares; de contribuciones internas, 7,309,434.72 bolívares; de la contribución sobre el ganado, 405,334 bolívares; de las demás fuentes 3,831,300.17 bolívares.

Los ingresos por meses fueron como sigue:

	Bolívares.		Bolívares.
Enero	4,040,301.44	Julio	3,197,610.78
Febrero	3,198,706.24	Agosto	2,752,112.20
Marzo	3,058,067.37	Septiembre	2,510,006.40
Abril	3,097,174.03	Octubre	2,188,546.33
Mayo	3,429,111.21	Noviembre	3,045,988.07
Junio	2,747,009.61	Diciembre	2,549,212.32

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina Internacional de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

La Universidad de Chicago ha enviado á la Biblioteca de la Oficina de las Repúblicas Americanas varios folletos y publicaciones, entre los cuales se cuentan los siguientes: "Consideraciones sobre la Arqueología Mexicana," por FREDERICK STARR (la Imprenta de la Universidad, 1894), que contiene una descripción de la "Casa pintada" de San Juan de Teotihuacan, de Mitla y de Monte Alban, con un número de láminas; "Los Pequeños Artículos Cerámicos del Lago Chapala," que es el lago más grande que hay en México, y está situado en el Estado de Jalisco, á una distancia de 250 millas al norte de la capital nacional, cuyo folleto es obra del mismo autor y está impresa en la misma Imprenta; y el "Mapa de Cuauhtlantzinco ó Códice de CAMPOS,"

también del mismo autor (Imprenta de la Universidad, 1898), que contiene una descripción de varios cuadros que comprenden escenas de la conquista y retratos de los aborígenes, teniendo cada retrato un lema escrito en el idioma nahuatl, que el Padre CAMPOS ha traducido al castellano. Los indios dicen que estos cuadros pertenecen al siglo diez y seis y que los hizo un tal Tepoztecatl. El pueblo de San Juan de Cuauhtlantzinco está situado entre Puebla y Cholula, en el Estado de Puebla, México. “Estudio Reciente de los Idiomas Nativos de México,” es otro trabajo del mismo Señor FREDERICK STARR (Imprenta de la Universidad, 1900), enviado á la Biblioteca y muy interesante desde el punto de vista bibliográfico y etnográfico, puesto que contiene una lista de los escritores mexicanos cuyo número total asciende á 75, y los nombres de los libros publicados en los idiomas nativos mexicanos, sin contar los publicados en el idioma maya.

El Dr. W. GOLDEN MORTIMER, ha dado á la stampa un grueso tomo en octavo, de 576 páginas, adornado con 178 grabados, que contiene la historia de la coca. Este libro (publicado en 1901 por la casa editora de J. H. VAIL y Cía., de Nueva York) lleva el título de “El Perú: Historia de la Coca, la Divina Planta de los Incas.” Á pesar de su índole científica, es evidente que la obra no se ha escrito exclusivamente para los hombres de ciencia. Á la historia que hace de la expresada planta, precede una descripción de los Incas, sus ritos y ceremonias, su conquista por los españoles y un estudio sobre los indios de la época presente. Uno de los capítulos trata del aspecto físico del Perú y otro capítulo está consagrado á la región del país donde crece la coca. El autor presenta amplias pruebas de que la coca no sólo es una sustancia inocente, como lo es el té ó el café, sino que es infinitamente superior á estas sustancias y más digna de usarse generalmente, por la acción depurativa que ejerce en la sangre, así como por la propiedad que posee de provocar un cambio químico-fisiológico en los tejidos, por virtud del cual los nervios y músculos se hacen más capaces de desempeñar sus funciones. El libro contiene un extenso índice en el que se halla comprendido un glosario de términos incas ó quichuanos.

La biblioteca de la Oficina Internacional de las Repúblicas Americanas ha recibido un tomo de 472 páginas, primorosamente ilustrado, escrito por Señora ALEC TWEEDIE, viajera inglesa de alguna nombradía. Esta obra, publicada en 1901 por la casa editora de MACMILLAN, de Nueva York, se titula “Mexico, as I saw it” (México, tal como lo ví), y se consagra principalmente á relatar escenas comunes en la vida mexicana y las impresiones que hicieron en la escritora. Hay un capítulo consagrado á Don PORFIRIO DÍAZ y su administración, otro trata de la historia del país y otro del Emperador MAXIMILIANO y de

la Emperatriz CARLOTA. Entre los numerosos restos de la antigua civilización, que tanto abundan dentro de los confines de la República, los que más entusiasmaron á la escritora fueron las minas aztecas de Xochicalco y las antiguas ruínas de Mitla. Dicha obra va acompañada por dos apéndices, á saber: el apéndice A, que trata de la estadística minera y comercial hasta el año de 1899, y el apéndice B, que contiene algunos informes muy útiles para los que viajen en la República. Los grabados que embellecen el libro, son fotografías tomadas por la misma autora, y además, un magnífico mapa.

“A Summer Journey to Brazil” (Un viaje de verano al Brasil) es el título de un tomo de 150 páginas, escrito por ALICE R. HUMPHREY, y publicado por los Sres. BROWNELL, SILVER Y CÍA., en Londres, en 1900. Además de la ciudad de Río de Janeiro, esta escritora estuvo en Petrópolis, Pernambuco, Santos y São Paulo, cuyas ciudades describe á grandes rasgos. En un capítulo que trata de “hechos sobre el Brasil,” se hace constar que la República “comprende como la décima-quinta parte del planeta habitable, una quinta parte de ambas Américas y tres séptimas partes de Sud-América;” que tiene cerca de 5,000 millas de costa y que posee 52 puertos de mar, entre los cuales se cuentan los más grandes y mejores del mundo, que sus recursos naturales son casi incalculables, pues comprenden tanto los productos de la zona templada como los de la tórrida, en tanto que el clima es variado y—considerado en conjunto—muy benigno. El libro contiene varios grabados que lo embellecen.

“The Jewelers’ Circular,” de Nueva York, como un suplemento á su número correspondiente al 5 de febrero de 1902, contiene una interesante “tabla de los rasgos característicos y las localidades donde se encuentran las piedras preciosas,” preparada por el Señor LEOPOLDO CLAREMONT. Según ella las diamantes se hallan en el Brasil; los safiros comunes y de fantasía, en Montana, Estados Unidos; las topacios, granates, crisoberilos, alejandrinas, ojos de gato y trifanos, en el Brasil; las esmeraldas y aguas marinas, en Sud-América; las fenaquitas, en el Perú; las enclasias, en el Brasil y el Perú; las hiddenitas, en la Carolina del Sur, Estados Unidos; las cristal amarillo, en todas las Repúblicas; la titanita, en los Estados Unidos; las turquesas, en toda la América del Norte, y los ópalos finos, en México.

El Departamento de Agricultura de los Estados Unidos ha publicado un Boletín preparado por Mr. EDWIN S. HOLMES, hijo, que contiene un artículo titulado “Datos Estadísticos Relativos á la Industria de Frutas en California.” Esta industria comenzó de hecho durante el establecimiento de las misiones de los frailes franciscanos, y ya en 1792 tenían como 5,000 árboles frutales. Sin embargo, la era del

comercio de frutas no empezó hasta el descubrimiento de las grandes minas de oro en 1849, cuya explotación trajo al Estado millares de personas en busca del precioso metal. Tanto el clima como el suelo de California se prestan admirablemente para esta industria y la inmensa diversidad de frutas que allí se produce comprende las manzanas, los albaricoques, las cerezas, los higos, las uvas de todas clases, los melocotones, las peras, las ciruelas, las aceitunas, los membrillos, y toda clase de frutas ácidas. En 1900 el número de árboles frutales que ya daban frutas ascendió á 16,192,876, en tanto que el número de árboles que todavía no estaban en estado de producción, ascendió á 13,209,411, ó sea un total de 29,402,287 árboles frutales. Estos árboles cubrían un área de 409,557 acres, á las cuales deben agregarse los viñedos que comprendían 157,000 acres y las huertas consagradas al cultivo de las almendras que comprendían 22,852 acres, y las dedicadas al de nueces, que comprendían 19,843 acres, todas las cuales hacen un total general de 609,252 acres.

El “*Berichte über Handel und Industrie*” (Informes del Comercio y la Industria), en su edición correspondiente al 8 de marzo de 1902, publica dos artículos cortos, uno de ellos relativo á las fábricas de acero de Monterey, México, y el otro al cultivo de plátanos en Centro América. El primero de estos artículos lo ha escrito el Ministro belga en México, y el segundo se ha tomado de un Informe del Consulado alemán en Managua. El mismo periódico, en su edición del 11 de marzo de 1902, publica un extenso artículo sobre las condiciones agrícolas y la industria de minas y de fundición en la provincia de La Rioja, República Argentina. Dicho artículo lo ha escrito el perito comercial agregado á la Legación alemana en Buenos Aires. Da un informe más extenso de las minas y fundiciones que de la agricultura, habiéndose esmerado el autor en dar los últimos datos estadísticos sobre la materia.

La Imprenta de la Universidad de Princeton, Estado de New Jersey, publicó (en 1901) una monografía que consta de 43 páginas y 10 láminas que representan “*Los Invertebrados Cretáceos Marinos*,” recogidos por la expedición que la expresada Universidad envió á Patagonia en 1899. Los fósiles que en dicha época se consiguieron han resultado ser sumamente interesantes por el hecho de que representan una especie de la fauna cretácea de Sud-América que hasta ahora no se había descrito. En la colección patagónica que posee la Universidad de Princeton, hay como 40 especies de moluscos, 31 de las cuales están representadas lo bastante para poder nombrarse y describirse. Ellas indican el período cretáceo inferior de los lechos ó capas, de que procedieron.

El Departamento de Agricultura ha publicado un folleto de 30 páginas, embellecido con 10 láminas que representan "Los Productos de las Lecherías en la Exposición de París de 1900." Este folleto es una reimpresión de una parte del informe anual de la Oficina de Industria pecuaria del Departamento. Sólo dos países americanos, á saber, los Estados Unidos que exhibieron 152 artículos de esta industria, y México que exhibió 9 artículos, estaban representados en dicha Exposición. Hubo dos países que sobrepusieron á los Estados Unidos en el número de artículos de esta industria, á saber, Francia, que exhibió 800, y Suiza, que exhibió 160.

"La Etno-Botánica de los Indios de Coahuila del Sur de California," por DAVID PRESCOTT BARROWS, Imprenta de la Universidad, 1900. Esta monografía constituye un estudio de la cultura de una de las tribus indias que habita en los áridos llanos y montañas del desierto de California. Los asuntos estudiados comprenden las afinidades lingüísticas y de tribu de los indios de Coahuila, sus hábitos, hogares y la construcción de sus casas, sus cestos ó canastas y la fabricación de éstos; los materiales que usan en la manufactura de artículos y en las artes, la recogida, preparación y depósito de los alimentos, plantas alimenticias y bebidas, narcóticos y medicinas.

La Sección de Ciencia Política de la Universidad de Chicago ha publicado, en un tomo, la traducción al inglés de las Constituciones de la República Argentina y de los Estados Unidos del Brasil. Este trabajo consta de dos partes, precediendo á la Constitución de cada país, en el orden mencionado, una introducción histórica y las notas de la traductora, ELIZABETH WALLACE. Las traducciones se hicieron en 1894 de los textos castellano y portugués, respectivamente, tales como los publicó la Oficina de las Repúblicas Americanas.

"Los Aztecas, su Historia, Maneras y Costumbres" es el título de un libro escrito originalmente en francés, por LUCIEN BIART, traducido al inglés por J. L. GARNER, y publicado en 1900 por los Sres. A. C. McCLURG y Cía., de Chicago. Si bien es verdad que el México moderno es muy conocido, no es menos cierto que los escritores del día casi pasan por alto el México antiguo, es decir, el México de los Aztecas. En esta obra se consagran capítulos al culto, la educación, las instituciones militares, las faenas agrícolas, el comercio, el idioma, la poesía y el arte de los Aztecas.

El Señor DON FERNANDO E. GUACHALLA, Ministro de Bolivia, ha regalado á la Biblioteca de Colón, anexa á la Oficina Internacional de las Repúblicas Americanas las obras siguientes: Constitución Política de la República de Bolivia; Diccionario de la Constitución Política de Bolivia; Leyes Administrativas: Ley de Organización Política, Ley

Reglamentaria de Policía, Ley y Reglamento de papel de multas; Leyes y Disposiciones Administrativas: Acta de la Independencia, Constitución Política, Elecciones, Régimen Interior, Policía, Municipalidades, Correos, Caminos, Ingenieros, Colonización; Código Civil; Procedimiento Civil y Organización Judicial; Procedimiento Criminal; Procedimiento Legislativo para hacer efectivas las responsabilidades de los altos funcionarios del Estado; Procedimiento que debe observarse para imponer responsabilidad á los Magistrados de la Corte Suprema; Legislación Minera.

Gracias á la cortesía de la Compañía del Ferrocarril de Buenos Aires al Pacífico, la Oficina Internacional de las Repúblicas Americanas ha recibido un mapa de los ferrocarriles existentes en la República Argentina en 1901. Dicho mapa no sólo muestra la localidad de las líneas que están en operación en la actualidad, sino también las rutas de las líneas que se intenta construir. La escala es de $2\frac{2}{3}$ pulgadas por cada 100 kilómetros ó $3\frac{2}{3}$ pulgadas por cada 100 millas inglesas. Un mapa de Buenos Aires (en una escala de 1 en cada 300,000) aparece como una adición al mapa de los ferrocarriles propiamente dicho.

BOLETIM MENSAL

DA

SECRETARIA INTERNACIONAL DAS REPUBLICAS AMERICANAS,

União Internacional das Republicas Americanas.

VOL. XII.

ABRIL DE 1902.

Nº. 4.

REORGANIZAÇÃO DA SECRETARIA INTERNACIONAL DAS REPUBLICAS AMERICANAS.

RESOLUÇÃO ADOPTADA PELA SEGUNDA CONFERENCIA INTERNACIONAL AMERICANA PARA A REORGANIZAÇÃO DA SECRETARIA INTERNACIONAL DAS REPUBLICAS AMERICANAS.

Os Governos representados nesta Conferencia, convencidos da utilidade da Secretaria Internacional das Republicas Americanas, estabelecida em Washington, convem em que a dita Secretaria se governe durante dez annos contados desde o encerramento da actual Conferencia, pelo seguinte Regulamento, o qual, sem embargo, ficará sujeito á revisão da proxima Conferencia das Republicas Americanas, ou á das Republicas mesmas, segundo o modo estabelecido no paragrapho 16 das resoluções adoptadas pela Primeira Conferencia Internacional das Republicas Americanas em 14 de Abril de 1890.

Artigo 1º. A Secretaria Internacional das Republicas Americanas estará sob a direcção de um Conselho Directivo constituido pelos representantes diplomaticos de todos os Governos das ditas Republicas, acreditados junto do Governo dos Estados Unidos de America, e pelo Secretario de Estado desta mesma nação, que funcionará como Presidente do dito Conselho. Este Conselho deverá reunir-se em sessão ordinaria uma vez por mez, e extraordinariamente, sempre que fôr convocado pelo Presidente, por si ou á moção dos membros do Conselho. Bastará o comparecimento de cinco membros do dito Conselho á qualquer das sessões ordinarias ou extraordinarias, para que o Conselho possa funcionar regularmente em todos os assumptos de sua competencia, e nomeará as commissões que julgar conveniente.

ART. 2º. Todos os cargos da Secretaria serão preenchidos, depois de exame dos candidatos por uma junta examinadora composta de tres membros nomeados pelo Conselho. Os pretendentes deverão fazer seus pedidos em guias que lhes serão fornecidas pelo Director da Secretaria, nas quaes será especificado o serviço especial que se trate de prover, e inscreverão seus nomes em um registro que o director tera para esse fim, em que serão mencionados todos os pormenores relativos ás materias do exame; e a junta examinadora só poderá recommendar para o cargo especial que pretende preencher os que se mostrarem habilitados para o desempenho do mesmo. As nomeações serão feitas pelo conselho e assignadas pelo presidente.

ART. 3º. O Conselho Directivo preparará todos os annos, com a collaboração do Director da Secretaria um orçamento detalhado das despesas do anno subsequente. Este orçamento deverá ser remettido a cada Governo com um relatorio indicando a proporção das quotas que deve pagar cada um delles, de conformidade com o convenio de 14 de Abril de 1890; e os Governos ficam na obrigação de remetter suas respectivas quotas ao Secretario de Estado dos Estados Unidos, com seis mezes de antecipação.

ART. 4º. Quando o Conselho Directivo o julgar conveniente, poderá designar um ou dous de seus membros para examinarem as contas da Secretaria, devendo submeter ao Conselho o relatorio correspondente.

ART. 5º. A Secretaria fica auctorizada para manter correspondencia, por intermedio dos representantes diplomaticos em Washington, com os departamentos do Executivo das differentes Republicas Americanas, e deverá proporcionar os dados que possua ou possa obter, a qualquer das ditas Republicas que o solicitar. Estas convêm em facilitar á Secretaria, quanto fôr possivel, as informações que solicitar, e em remetter-lhe opportunamente dous exemplares de suas publicações officiaes, que se conservarão na bibliotheca da Secretaria, e bem assim subministrar quaesquer informações que lhes pedir o Director da Secretaria.

ART. 6º. A Secretaria publicará um **BOLETIM MENSAL** que deverá ser impresso nos idiomas hespanhol, inglez, portuguez e francez, conjuncta ou separadamente, que conterà informações estatisticas, commerciaes e sobre legislação, que sejam de interesse especial para os habitantes das differentes Republicas. Tambem publicará os folhetos, mappas, cartas geographicas ou topographicas, e qualquer outra publicação que o Conselho Directivo julgar conveniente.

ART. 7º. Logo que terminem os contractos pendentes para annuncios, cessará a publicação delles no **BOLETIM**.

ART. 8º. Todas as publicações da Secretaria serão consideradas como documentos publicos e serão transportadas gratuitamente pelos correios das Republicas.

ART. 9º. A Secretaria será encarregada especialmente do cumprimento de todas as obrigações que lhe imponham as resoluções adoptadas pela presente Conferencia Internacional.

ART. 10°. O Director da Secretaria poderá assistir ás sessões do Conselho Directivo e ás das Commissões, assim como ás das Conferencias Internacionais das Republicas Americanas, para dar as informações que se lhe peçam.

ART. 11°. A Secretaria terá sob sua custodia os archivros das Conferencias Internacionais das Republicas Americanas.

ART. 12°. As resoluções da Primeira Conferencia Internacional das Republicas Americanas, adoptadas no dia 14 de Abril de 1890, permanecerão vigentes uma vez que não sejam oppostas á estas disposições, e ficam revogadas as demais resoluções e planos referentes á organização da Secretaria.

ART. 13°. Fica creada, sob a autoridade do Conselho Directivo da União Internacional das Republicas Americanas, e como uma secção da Secretaria das ditas Republicas, uma Bibliotheca latino-americana que será designada com o nome de “Bibliotheca de Colombo.”

Feito e assignado na cidade de Mexico, aos vinte e nove dias do mez de Janeiro de mil novecentos e dous, em tres exemplares escriptos, respectivamente, em hespanhol, inglez e francez, os quaes serão depositados na Secretaria das Relações Exteriores dos Estados Unidos de Mexico, afim de que sejam tiradas copias delles para envial-as por via diplomatica a cada um dos Estados signatarios.

PRIMEIRA REUNIÃO DO CONSELHO DIRECTIVO DA SECRETARIA.

SYNOPSIS DA PRIMEIRA SESSÃO DO CONSELHO DIRECTIVO DA UNIÃO INTERNACIONAL DAS REPUBLICAS AMERICANAS.

A primeira reunião do Conselho Directivo da Secretaria Internacional das Republicas Americanas realizou-se no Departamento de Estado dos Estados Unidos no dia 19 de Março de 1902. Presidiu a sessão o Honrado Senhor Secretario de Estado dos Estados Unidos, e estiveram presentes os seguintes senhores:

O Senhor MANUEL DE AZPÍROZ, Embaixador do Mexico, representando tambem a Republica do Salvador.

O Senhor MARTÍN GARCÍA MÉROU, Ministro da Republica Argentina.

O Senhor JOAQUIM WALKER MARTÍNEZ, Ministro do Chile.

O Senhor JOAQUIM BERNARDO CALVO, Ministro de Costa Rica, representando tambem a Republica de Honduras.

O Senhor LUIS FELIPE CARBO, Ministro do Equador.

O Senhor ANTONIO LAZO ARRIAGA, Ministro de Guatemala.

O Senhor J. N. LÉGER, Ministro de Haiti.

O Senhor LUIS F. COREA, Ministro de Nicaragua.

O Senhor MANUEL ÁLVAREZ CALDERÓN, Ministro de Peru.

O Senhor ALBERTO GUTIÉRREZ, Encarregado de Negocios de Bolivia.

O Senhor R. REIDNER DE AMARAL, Encarregado de Negocios do Brazil.

O Senhor AUGUSTO F. PULIDO, Encarregado de Negocios de Venezuela.

O Senhor JOHN STEWART, Consul geral do Paraguay.

O Senhor W. W. ROCKHILL, Director da Secretaria Internacional das Republicas Americanas, tambem esteve presente na reunião.

Manifestou o Senhor Secretario de Estado que o objecto da reunião era apresentar o relatorio annual da Secretaria correspondente ao anno que terminou em 30 de Junho de 1901, cujo documento não tinha sido apresentado antes por razão da ausencia da maioria dos senhores representantes, que haviam sahido para o Mexico com o objecto de celebrar alli a Segunda Conferencia Internacional Americana.

O relatorio foi declarado inteiramente satisfactorio e foi approved por unanimidade.

Em seguida, se considerou a resolução adoptada pela Segunda Conferencia Internacional Americana sobre a reorganização da Secretaria Internacional das Republicas Americanas, e se resolveu que a referida Resolução se puzesse desde logo em pratica; que ao publicar-a no BOLETIM se lhe accrescentasse o preambulo, tal como consta da acta da conferencia; que se nomeasse o pessoal da Junta Examinadora dos empregados da Secretaria, resultando eleitos os Senhores MANUEL ÁLVAREZ CALDERÓN, Ministro do Perú, ANTONIO LAZO ARRIAGA, Ministro de Guatemala, e LUIS F. COREA, Ministro de Nicaragua.

O Senhor Secretario de Estado chamou a attenção do Conselho Directivo para as resoluções adoptadas pela Conferencia em Mexico relativos á convocação de um Congresso Aduaneiro, uma Convenção Sanitaria e um Congresso para o estudo da producção e consumo do café. Estas resoluções foram lidas pelo Director da Secretaria, e se resolveu que o Congresso Aduaneiro fosse convocado para o dia 10 de Outubro proximo, a Convenção Sanitaria para o dia 15 do mesmo mez e o Congresso do café para o dia 1º de Novembro seguinte.

A moção do Senhor LÉGER, Ministro de Haítí, se concordou que a primeira segunda-feira de cada mez tenham lugar no futuro as sessões ordinarias do Conselho Directivo, começando ás tres horas da tarde.

RELATORIO ANNUAL DO DIRECTOR.

SECRETARIA DAS REPUBLICAS AMERICANAS,

Washington, 1º de Dezembro de 1901.

Ao Senhor Secretario de Estado, Presidente da Commissão Executiva da União Internacional das Republicas Americanas, e aos membros da mesma.

SENHORES: Ao submetter-vos meu relatorio annual, tenho a satisfação de declarar-vos que os Governos representados na União Inter-

nacional das Republicas Americanas, continuam a mostrar a mesma apreciação dos trabalhos desta Secretaria que sempre tem manifestado. Essa apreciação foi manifestada na Conferência Internacional das Republicas Americanas, actualmente em sessão na cidade de Mexico, em que foi concedida á Secretaria representação de accordo com sua importancia e em que o proposito de ampliar o escopo de suas funcções foi francamente apoiado.

AGENCIA NO MEXICO.

Em cumprimento das resoluções da Commissão Executiva, as quaes foram approvadas por Sua Excellencia o Embaixador do Mexico nesta capital e por elle submittidas ao seu Governo, foi estabelecida na cidade de Mexico, em connexão com a Conferencia uma agencia da Secretaria. Esta repartição foi organizada e provida de grande collecção de livros de consulta e de um pessoal habilitado, suppridos pela cortezia do Governo Mexicano.

FALLECIMENTO DO DOUTOR GUZMÁN.

Durante o anno a Secretaria perdeu com o fallecimento do Doutor HORACIO GUZMÁN seu Secretario, um valioso coadjutor cujo interesse nos trabalhos da Secretaria e perfeito conhecimento de todas as questões a seu cargo foram sempre apreciados.

CONTAS.

As contas da Secretaria durante o exercicio que terminou em 30 de Junho de 1901, são como segue:

Receitas e despesas durante o exercicio que terminou em 30 de Junho de 1901

RECEITAS.

Quantia annual votada pelo Congresso dos Estados Unidos, 1901	\$36, 000. 00
Saldo proveniente de vendas, aluguel, etc., 1º de Julho de 1901	1, 971. 72
Quotas das Republicas Latino-Americanas.....	15, 452. 57
Entradas por annuncios.....	\$3, 289. 35
Entradas por venda de publicações	1, 408. 66
	<hr/>
	4, 698. 01
Entradas totaes.....	<hr/>
	58, 122. 30

DESPEZAS.

Da quantia annual votada pelo Congresso dos Estados Unidos,	
1901	\$36, 000. 00
Da receita proveniente de vendas, aluguel, etc.....	18, 921. 47
	<hr/>
	54, 921. 47
Saldo o 1º de Julho de 1901	<hr/>
	3, 200. 83

Quadro detalhado das despesas durante o exercicio que terminou em 30 de Junho de 1901.

	Da quantia annual vota- da pelo Con- gresso dos Es- tados Unidos, 1901.	Da receita provenien- te de ven- das, alu- guel, etc.	Total.
Vencimentos	\$32, 194. 54	\$931. 00	\$33, 125. 54
Artigos de escriptorio		581. 35	581. 35
Aluguel	1, 833. 34	166. 66	2, 000. 00
Bibliotheca		1, 315. 71	1, 315. 71
Sellos de correio	42. 26	1, 287. 46	1, 329. 72
Mobilia		218. 58	218. 58
Impressões		12, 006. 90	12, 006. 90
Liquidação do contracto feito com o Sr. Charles E. Locke para fazer annuncios	1, 929. 86		1, 929. 86
Despesas miscellaneas		2, 413. 81	2, 413. 81
Total	36, 000. 00	18, 921. 47	54, 921. 47

Ao começar o anno financeiro de 1901, como se vê do relatorio annual anterior, havia um saldo a favor da Typographia Nacional de \$3,314.71. O quadro que se publica em seguida mostra que a Secretaria tem podido liquidar esta divida, assim como todas as obrigações que assumiu por trabalhos typographicos durante o exercicio proximo passado.

Conta apresentada pelo director da Typographia Nacional para o exercicio que terminou no dia 30 de Junho de 1901.

Saldo do exercicio de 1900	\$3, 314. 71
Somma total das contas apresentadas para o exercicio que terminou em 30 de Junho de 1901	10, 183. 66
	<u>13, 498. 37</u>
Quantia a deduzir da somma cobrada por composição e trabalho typo- graphico (Manual do Mexico), segundo arranjos feitos com o director da Typographia Nacional e acreditada á Secretaria	1, 097. 55
Somma paga da receita proveniente de vendas, aluguel, etc., durante o exercicio do 1901	\$6, 000. 00
Quantia paga durante o actual exercicio	6, 400. 82
	<u>12, 400. 82</u>
	<u>13, 498. 37</u>

Apresento-vos em seguida o orçamento da receita e despesa para o exercicio que terminará no dia 30 de Junho de 1902:

Orçamento da receita:

Quantia votada pelo Congresso dos Estados Unidos	\$36, 000. 00
Quotas das Republicas Americanas	15, 157. 73
Annuncios	3, 000. 00
Venda de publicações	1, 400. 00
Total	<u>55, 557. 73</u>
Calculo das despesas na proporção actual:	
Vencimentos	\$33, 600. 00
Aluguel	2, 000. 00
Impressões	13, 000. 00
Artigos de escriptorio e mobilia	900. 00
Bibliotheca	1, 200. 00
Sellos de correio	1, 300. 00
Despesas miscellaneas	2, 400. 00
	<u>54, 400. 00</u>
Saldo	1, 157. 73

O BOLETIM MENSAL.

A circulação do BOLETIM foi igual a do anno passado. O quadro que se publica em seguida mostra o numero de exemplares do BOLETIM que foram remittidos a diversos paizes no mez de Outubro de 1901.

Distribuição do Boletim no mez de Outubro.

Republica Argentina.....	455	Europa	87
Bolivia	99	Guatemala.....	497
Brazil	359	Haiti	197
Honduras Britannica	29	Honduras.....	209
Canada	169	Jamaica	60
Mexico	4,517	Salvador.....	37
Nicaragua.....	102	Santo Domingo.....	140
Paraguay	30	Estados Unidos.....	1,686
Peru.....	137	Uruguay	157
Porto Rico	180	Venezuela	473
Chile	228	As Pequenas Antilhas.....	47
Colombia	190	Diversos paizes	17
Costa Rica	97		
Cuba	268	Total	10,583
Equador	116		

Durante o ultimo anno economico as Republicas de Bolivia e do Paraguay concederam á Secretaria a franquia postal para suas publicações. Deste privilegio goza já a Secretaria em treze Republicas, assim como no Canadá, Cuba, Porto Rico e Ilhas Philippinas.

OUTRAS PUBLICAÇÕES.

Desde que apresentei meu ultimo relatorio, a Secretaria preparou e publicou uma obra intitulada “United States of Brazil: A Geographical Sketch, with Special Reference to Economic Conditions and Prospects of Future Development,” e como um supplemento a esta uma bibliographia do paiz (“A List of Books, Magazine Articles, and Maps relating to Brazil, 1800–1900”). É de esperar que esta obra bibliographica seja seguida por outras relativas aos differentes paizes da America. Um pamphleto intitulado “Report on Coffee, with Special Reference to the Costa Rica Product,” preparado pelo Sr. Dr. JOAQUIM BERNARDO CALVO, Ministro de Costa Rica nos Estados Unidos, foi publicado durante o anno e tem tido grande circulação.

A publicação do Manual dos Estados Unidos em hespanhol tem sido retardada, entre outros motivos, por causa do desejo da Secretaria de aproveitar das estatisticas do recenseamento de 1900. Espero que esta importante obra sahira á luz durante o proximo anno. Na preparação dos capitulos que tratam de assumptos technicos, a Secretaria tem a collaboração de homens de reconhecida competencia.

A maior parte dos manuaes publicados pela Secretaria deixam de ser de utilidade devido ao facto de que as estatisticas que contêm foram organizadas ha oito ou dez annos. Por conseguinte, a procura dessas

publicações não é tão grande como devia ser, e torna-se necessario revisal-as. Com este objecto em vista, foi solicitada a collaboração dos membros correspondentes honorarios da União Internacional nos differentes paizes, assim como a de outros escriptores de reputação. É de esperar que essas edições revisadas saiam á luz antes de muito tempo.

Um motivo serio que impediu a publicação dos manuaes foi a retirada muito sentida, dos Senhores ARTHUR W. FERGUSON e FRANCISCO J. JÁNES, os quaes foram nomeados para occupar importantes cargos nas Philippinas.

MEMBROS CORRESPONDENTES HONORARIOS.

A esperanza que manifestei em meu ultimo relatorio annual de que a Secretaria seria representada por um membro correspondente honorario em cada um dos paizes da União Internacional, tem sido realizada e as informações por elles subministradas tem sido de grande valor ao BOLETIM.

MAPPAS.

Tendo recebido bom acolhimento os dous mappas do Mexico que a Secretaria publicou durante o anno, fui animado a emprehender a preparação de mappas similares dos outros paizes da União. Os de Guatemala e Costa Rica estão muito adiantados e em breve estarão em mão-do impressor. O mappa do Brazil, que foi enviado á Exposição Pan-Americana em Buffalo, ainda que não terminado, será concluido dentro de poucos mezes.

BIBLIOTHECA.

Conta actualmente a bibliotheca 8,948 volumes. A collecção que constituia a bibliotheca quando apresentei meu ultimo relatorio, tem sido augmentada com o acrescimo de 1,456 volumes e pamphletos, dos quaes 991 foram offerecidos gratuitamente. O numero de periodicos, incluindo os diarios que se recebem com regularidade na bibliotheca tem sido augmentado de 169. O numero total dessas publicações que actualmente se recebem, é de 2,000.

A Secretaria continúa a fazer esforços no sentido de obter dos Governos dos diversos paizes da America Central e do Sul uma collecção completa de todas as leis, decretos, relatorios ministeriaes e outros documentos officiaes por elles publicados. Estes esforços têm tido certo gráo de exito, mas ainda ha muito a fazer antes que a Secretaria receba todas as publicações que, de conformidade com as regras estabelecidas pela União, lhe deverão ser remettidas. Espera-se que a Conferencia que está actualmente em sessão no Mexico, depois de concluidos seus trabalhos, transferirá á Secretaria as obras que lhe forem offerecidos e apresentará meios para facilitar os trabalhos da bibliotheca.

A Secretaria tem publicado, além de listas mensaes de entradas da bibliotheca, listas semi-annuaes para a conveniencia dos leitores.

EXHIBIÇÃO FEITA PELA SECRETARIA NA EXPOSIÇÃO PAN-AMERICANA DE
BUFFALO.

Tenho a satisfação de informar-vos que a exhibição da Secretaria, na Exposição Pan-Americana de Buffalo, sob a direcção do 1º official da Secretaria, o Sr. WILLIAMS C. FOX, foi muito apreciada. A Secretaria será representada na “South Carolina Interstate and West Indian Exposition” que se celebrará em Charleston por um periodo de seis mezes, desde o dia 1º de Dezembro de 1901. Em 1903 uma exhibição será enviada á “Louisiana Purchase Exposition,” de St. Louis, as despezas com essa exhibição serão comprehendidas na verba que o Congresso votou para a representação dos diversos Departamentos do Governo.

Tenho a honra de ser, Senhores, vosso obediente servidor.

W. W. ROCKHILL, *Director*.

CONGRESSO ADUANEIRO.

RESOLUÇÃO.

Os abaixo assignados, Delegados das Republicas representadas na Segunda Conferencia Internacional Americana, devidamente auctorizados por seus Governos, approvaram a seguinte resolução:

A Segunda Conferencia Internacional Americana resolve:

I. Que dentro de um anno, contado desde o encerramento das sessões da Conferencia Internacional Americana, se reuna na cidade de Nova York, Estados Unidos de America, um Congresso Aduaneiro composto de um ou mais Delegados nomeados por cada Governo entre seus directores ou chefes de alfandegas, consules, presidentes ou empregados de camaras de commercio, commerciantes notaveis ou outras pessoas que se julgarem dotadas de conhecimentos technicos em materia de alfandegas.

O Conselho Directivo da Secretaria Internacional das Republicas Americanas fixará a data em que tera de reunir-se o Congresso Aduaneiro, o qual será organizado como se decidir, com o auxilio dos empregados da dita Secretaria Internacional, e terá por objecto resolver sobre as proposições que lhe apresentarem os Delegados ou as commissões que se nomeiem, respeitando o systema aduaneiro de cada paiz e a legitima percepção de seus direitos fiscaes.

II. As materias sobre que hão de versar as resoluções do Congresso Aduaneiro são as seguintes:

(a) Uniformidade das regras para dar entrada, despacho e sahida ás embarcações que se empregam no commercio internacional.

(b) Uniformidade e simplificação das formalidades aduaneiras referentes a manifestos de navios, sua redacção e dados de facturas consulares e declarações feitas ás alfandegas.

(c) Simplificação e uniformidade das formalidades aduaneiras para o despacho de mercadorias e bagagens.

(d) Meios adequados para estabelecer uma nomenclatura commum dos productos e mercadorias das Republicas da America, em hespanhol, inglez, portuguez e francez;

1º. Para que sirva de base á estatistica de importação e exportação, de conformidade com um modelo uniforme e sem prejuizo das regras que cada nação tenha adoptado para sua estatistica particular; e

2º. Para que, com mais amplos detalhes e especificações, seja adoptada nas tarifas e nas demais leis aduaneiras de ditas Republicas, e sirva de base á percepção dos direitos que cada uma dellas tenha estabelecido.

(e) Adopção de um systema uniforme e simples para as declarações e o despacho aduaneiro das amostras e mercadorias que circulem em volumes ou pacotes postaes.

(f) Simplificação e uniformidade das formalidades aduaneiras a que tenham de sujeitar-se as mercadorias que atravessem simplesmente o territorio de uma nação, com destino ao consumo de outra ou outras, respeitando o principio do livre transito mercantil pelas vias terrestres ou fluviaes das nações de America, sem cobrança de outros direitos ou impostos que não sejam justa compensação de serviços effectivos.

(g) Conveniencia de estabelecer a periodicidade na reunião de futuros Congressos aduaneiros.

(h) Quaesquer outros assumptos que se relacionam com os que ficam indicados, ou que o Congresso Aduaneiro considerar uteis ou convenientes para favorecer ou desenvolver o trafico mercantil.

(i) Organização de uma Commissão permanente de Alfandegas, composta de pessoas dotadas de conhecimentos technicos, e que, como uma dependencia da Secretaria Internacional das Republicas Americanas, ou em outra forma que o proprio Congresso julgar adequado, se encarregue, principalmente, da execução dos accordos ou resoluções que este houver tomado, e da comparação e estudo das leis aduaneiras e tarifas das nações de America, com o fim de iniciar perante seus Governos a expedição de leis e medidas que, em relação a formalidades de Alfandega, possam simplificar-as e facilitar o commercio.

III. Que afim de fazer proveitoso e completo o estudo pelo Congresso Aduaneiro da questão a que se refere a lettra *D* da presente resolução, cada um dos Governos das Republicas de America faça estudar pela administração superior de Alfandegas, a nomenclatura ou vocabulario formado pela Secretaria Internacional de ditas Republicas, e remetta com a maior brevidade possivel ao Conselho Directivo da dita Secretaria as observações ou correções ao vocabulario que julgar conveniente suggerir.

A dita Secretaria Internacional apresentará ao Congresso Aduaneiro, na forma mais concreta e simples que fôr possivel, as observações que

os Governos tiverem feito, e além disto, uma traducção em francez da nomenclatura já publicada.

IV. A ratificação da presente resolução por parte dos Governos das Republicas Americanas que a approvarem, será communicada ao Conselho Directivo da Secretaria Internacional das ditas Republicas antes de seis mezes contados da data em que se encerrar esta conferencia.

Feito e firmado na cidade de Mexico, aos vinte dous dias do mez de Janeiro de mil novecentos e dous, em tres exemplares escriptos respectivamente em hespanhol, inglez e francez, os quaes serão depositados na Secretaria de Relações Exteriores do Governo dos Estados Unidos do Mexico, afim de que delles se tirem copias certificadas para serem enviadas por via diplomatica a cada um dos Estados signatarios.

POLICIA SANITARIA.

Os abaixo assignados, Delegados das Republicas representadas na Segunda Conferencia Internacional Americana, devidamente auctorizados por seus Governos, approvaram a Resolução seguinte:

A Segunda Conferencia Internacional Americana recommenda com urgencia a adopção pelas Republicas representadas nella das resoluções seguintes:

I. Que todas as medidas sobre assumptos relacionados com a Policia Sanitaria Internacional, as destinadas a evitar a invasão de enfermidades contagiosas em um paiz e o estabelecimento e vigilancia das detenções maritimas e terrestres internacionaes, ou seja das estações de saude, fiquem por completo sob a dependencia dos Governos nacionaes.

II. Que se estabeleçam nos portos de cada paiz duas classes de detenção: A, a de inspecção e observação, e B, a de desinfecção.

III. Que se supprima a quarentena prohibitiva respeito aos artigos manufacturados e demais mercadorias; que as mercadorias procedentes de portos ou lugares limpos e que tenham atravessado um territorio infestado, sem terem sido detidas nelle mais tempo do que o necessario para o transito, não estejam sujeitas á detenção nem outra precaução sanitaria, senão a inspecção indispensavel no lugar de seu destino, e que a dita inspecção e a demora que ella implique, não excedam do tempo absolutamente necessario ao effeito, applicando-se a mesma regra ás communicações internacionaes por estrada de ferro, exceptuando-se unicamente das disposições anteriores, o gado, as pelles crúas, os trapos e effectos dos immigrants.

IV. Que os Governos representados nesta Conferencia se prestem mutua cooperação, auxiliando, tanto quanto fôr possivel, as auctoridades municipaes, provinciaes e locaes estabelecidas em seus respectivos territorios, afim de conseguir o estabelecimento e a conservação de

condições sanitarias adequadas em seus respectivos portos e dependencias, para reduzir, tanto quanto fôr possível, as restricções inherentes á quarentena, até lograr sua completa suppressão. Que, além disto, seja ordenado a todas e cada uma de suas respectivas instituições de sande, que á maior brevidade communicuem aos representantes diplomaticos ou consulares das Republicas representadas nesta Conferencia, a existencia das seguintes enfermidades: cholera, febre amarella, peste bubonica, variola e qualquer outra epidemia de caracter grave, impondo-se ás auctoridades sanitarias de cada um dos portos, a obrigação de fazer constar na carta de sande dos navios, antes que estes partirem, as molestias contagiosas existentes em ditos portos.

V. A Segunda Conferencia Internacional Americana recommenda igualmente, em beneficio de todas as Republicas Americanas, e afim de que estas cooperem prompta e efficazmente em tudo relativo ás materias mencionadas nas anteriores resoluções, que se convoque pelo Conselho Directivo da União de ditas Republicas, a reunião em Washington, D. C., de uma convenção geral de representantes das Repartições de Saude de ditas Republicas, dentro de um anno contado desde a data em que a conferencia adoptar estas resoluções; que cada um dos Governos representados nesta Conferencia designe um ou mais Delegados para que assistam á dita Convenção, conferindo-lhes os poderes necessarios, afim de que, em união dos Delegados das demais Republicas, celebrem os convenios sanitarios e formulem os regulamentos que a juizo da mesma Convenção forem mais beneficos aos interesses de todos os paizes que nella estejam representados; que os votos em dita Convenção sejam computados por Republicas, tendo cada uma dellas um voto; que a Convenção adopte as medidas mais convenientes com o objecto de que se reünam outras Convenções sanitarias, nas datas e nos lugares que se julgar mais adequados, e por ultimo, que nomeie um Conselho Executivo de cinco membros, pelo menos, que funcione até que se reunir a seguinte Convenção, renovando-se, então, o pessoal do Conselho com um Presidente que será eleito em escrutinio secreto pela mesma Convenção. O dito conselho se denominará “Repartição Sanitaria Internacional,” e residirá em Washington, D. C.

VI. Que afim de que a Repartição Sanitaria Internacional possa prestar serviços positivos ás diferentes Republicas representadas na Convenção, ellas transmittam prompta e regularmente á dita Repartição, os dados de toda natureza relativos ás condições sanitarias de seus respectivos portos e territorios, e lhe subministrem todos os meios e auxilios a seu alcance para o estudo e investigação completos e cuidadosos, das molestias epidemicas que apparecerem no territorio de qualquer das ditas Republicas, afim de que a dita Repartição, com esses meios, coopere com sua experiencia á protecção, tão ampla quanto fôr possível, da saude daquellas Republicas, facilitando assim as relações commerciaes entre ellas existentes.

VII. Que os vencimentos e despezas dos Delegados á Convenção e os dos membros da Repartição Sanitaria Internacional, assim como os gastos da Convenção e Repartição referidas, sejam pagos pelos Governos respectivos, cobrindo-se os gastos de funcionamento da Repartição Sanitaria Internacional, cujo estabelecimento se recommenda, assim como os que resultarem de investigações especiaes e da tradueção, publicação e distribuição de informações, com os recursos de em fundo formado das quotas annuaes das Republicas representadas nas alludidas convenções, adoptando como base para calcular a proporção correspondente a cada uma, a que actualmente serve para a manutenção da Secretaria Internacional das Republicas Americanas. Recommenda-se, emfim, que, em virtude da economia, essa mesma Secretaria seja utilizada pelas Convenções referidas e pela Repartição Sanitaria Internacional para levar a correspondencia e a contabilidade, fazer os pagamentos e fazer o archivo dos trabalhos a que se referem as presentes recommendações.

Feito e assignado na Cidade de Mexico, aos vinte-e-nove dias do mez de Janeiro de mil novecentos e dous, em tres exemplares escriptos, respectivamente, em hespanhol, inglez e francez, os quaes serão depositados na Secretaria das Relações Exteriores do Governo dos Estados Unidos do Mexico, afim de que delles sejam tiradas copias certificadas para envial-as por via diplomatica a cada um dos Estados signatarios.

RESOLUÇÃO RELATIVA Á REUNIÃO DE UM CONGRESSO ENCARREGADO DE ESTUDAR A PRODUÇÃO E O CONSUMO DO CAFÉ.

Os abaixo assignados, Delegados das Republicas representadas na Segunda Conferencia Internacional Americana, devidamente auctorizados por seus Governos, approvaram a resolução seguinte:

A Segunda Conferencia Internacional Americana resolve:

Primeiro. Que dentro de um anno, contado da data do encerramento das sessões da Conferencia Internacional Americana, se reuna na cidade de Nova York, Estados Unidos de America, uma commissão composta de um ou mais delegados nomeados por cada Governo que desejar estar representado nella, os quaes deverão ter conhecimentos technicos acerca da producção, distribuição e consumo do café.

Segundo. O Conselho Directivo da Secretaria Internacional das Republicas Americanas fixará a data em que ha de reunir-se esta commissão. A dita commissão será organizada como ella decidir, com o auxilio da Secretaria mencionada, e terá por objecto o estudo das causas que produzem actualmente a crise por que esta grande industria atravessa, e propor os meios praticos de evital-a ou diminuil-a.

Feito e firmado na cidade de Mexico, aos vinte-e-nove dias do mez de Janeiro de mil novecentos e dous, em tres exemplares escriptos, respectivamente, em hespanhol, inglez e frances, os quaes serão depositados na Secretaria das Relações Exteriores do Governo dos Estados Unidos de Mexico, afim de que delles sejam tiradas copias certificadas para envial-as por via diplomatica a cada um dos Estados signatarios.

SEGUNDA SESSÃO DO CONSELHO DIRECTIVO DA SECRETARIA.

No dia 7 de Abril de 1902, ás tres horas da tarde, reuniu-se de novo o Conselho Directivo da União Internacional das Republicas Americanas, no salão diplomatico do Departamento de Estado, sob a presidencia do Honrado. Senhor JOHN HAY, Secretario de Estado, estando presentes os Senhores seguintes:

O Senhor MANOEL DE ASPÍROZ, Embaixador do Mexico, representando seu paiz e a Republica do Salvador;

O Senhor MARTÍN GARCÍA MEROU, Ministro da Republica Argentina;

O Senhor JOAQUIM WALKER MARTÍNEZ, Ministro do Chile;

O Senhor JOAQUÍN BERNARDO CALVO, Ministro de Costa Rica, representando tambem a Republica de Honduras;

O Senhor LUIS FELIPE CARBO, Ministro do Equador;

O Senhor ANTONIO LAZO ARRIAGA, Ministro de Guatemala;

O Senhor J. N. LÉGER, Ministro de Haiti;

O Senhor LUIS F. COREA, Ministro de Nicaragua;

O Senhor MANOEL ÁLVAREZ CALDERÓN, Ministro do Perú;

O Senhor JUAN CUESTAS, Ministro do Uruguay;

O Senhor FERNANDO E. GUACHALLA, Ministro de Bolivia;

O Senhor R. REIDNER DE AMARAL, Encarregado de Negocios do Brazil;

O Senhor AUGUSTO F. PULIDO, Encarregado de Negocios de Venezuela, e

O Senhor JOHN STEWART, Consul Geral do Paraguay.

Tambem esteve presente o Senhor W. W. ROCKHILL, Director da Secretaria Internacional.

Foi apresentado o Relatorio da commissão examinadora, nomeada na sessão anterior, e de conformidade com sua recommendação, e por unanimidade de votos, foi nomeado Secretario da Secretaria Internacional o Senhor NICOLÁS VELOZ GOITICOA.

Por indicação do Senhor Director e pelo voto unanime dos Senhores concorrentes, o Doutor JOSÉ IGNACIO RODRÍGUEZ foi nomeado traductor em chefe da Secretaria e Bibliothecario da Bibliotheca de Colombo.

Indicou o mesmo Senhor Director a conveniencia de fixar o dia em que deva ser remetido aos differentes Governos o orçamento annual de despesas da Secretaria Internacional, e á moção do Sr. Ministro Argentino, depois de ser considerado devidamente o ponto, se accordou por unanimidade que ficasse assignalado para este objecto o primeiro de Julho de cada anno.

Tambem se resolveu por unanimidade levar a effeito o disposto relativamente a que cada Governo remetta á Secretaria Internacional dous exemplares de todas suas publicações officiaes, e que o Senhor Director fique auctorizado para dar, por intermedio e com a cooperação dos respectivos Senhores Ministros os passos que forem necessarios neste sentido.

O Senhor Director disse que tinha escripto ao Senhor Secretario de Estado, pedindo-lhe que tivesse a bondade de informar o Senhor Ministro de Correios do accordo adoptado para que as publicações da Secretaria Internacional se admittam e remetam livres de porte; e que o Senhor Secretario de Estado tinha tido a bondade de acceder a isto. Só faltava agora que os Senhores Ministros, cujos Governos não o houvessem já determinado, escrevessem tambem no mesmo sentido, para que não houvesse obstaculo neste serviço.

Resolveu-se igualmente que para levar a effeito o accordado respeito á Policia Sanitaria, além de pedir ao Senhor Chefe do Serviço de Hos-

pitaes de Marinha dos Estados Unidos de America, um relatorio sobre a materia, se solicitasse de cada um dos Senhores Ministros a remessa á Secretaria dos regulamentos sanitarios de seus respectivos paizes, e dos tratados ou convenções sanitarias celebradas sobre o mesmo assumpto, quaes poderiam ser conservados na Secretaria Internacional para serem usados devidamente quando for necessario.

Em seguida, o Director deu leitura ao regulamento interior da Secretaria, de que fora encarregado de formular na sessão anterior, o qual foi approved por unanimidade, auctorizando-se ao Senhor Director para pol-o em observancia desde o dia 1º de Maio.

Tomou-se em consideração o importante ponto da Bibliotheca, e depois de numerosas observações dos Senhores LAZO, GUACHALLA e outros senhores, se resolveu fazer um esforço para que os respectivos Governos contribuam o mais prompto possivel para a realização do pensamento.

Não havendo mais assumptos de que tratar, levantou-se a sessão para reunir-se de novo a primeira segunda-feira de Maio proximo.

REPUBLICA ARGENTINA.

TRATADO DE ARBITRAMENTO ENTRE A REPUBLICA ARGENTINA E A REPUBLICA ORIENTAL DO URUGUAY.

JULIO A. ROCA, Presidente Constitucional da Republica Argentina.

A todos os que o presente virem, saude:

Considerando que entre a Republica Argentina e a Republica Oriental do Uruguay se negociou, concluiu e firmou na cidade de Buenos Aires no dia 8 de Junho de 1899, um tratado geral de arbitramento, assim como um Protocollo adicional, subscripto no dia 21 de Dezembro de 1901, que contem as modificações introduzidas pelo honrado Congresso da nação Argentina, cujos textos são os seguintes:

Os Governos da Republica Argentina e da Republica Oriental do Uruguay, animados do commum desejo de resolver por meios amistosos qualquer questão que se suscitar entre os dous paizes, resolveram celebrar um tratado geral de arbitramento, e com esse objecto nomeam como seus Plenipotenciarios, a saber: Sua Excellencia o Presidente da Republica Argentina, o Senhor Dr. AMANCIO ALCORTA, Ministro das Relações Exteriores e Culto, e Sua Excellencia o Presidente da Republica oriental do Uruguay, o Senhor Dr. GONZALO RAMÍREZ, Enviado Extraordinario e Ministro Plenipotenciario do Uruguay junto ao Governo da Republica Argentina; os quaes, depois de se terem communicado os seus respectivos plenos poderes, que foram achados em boa e devida forma, concordaram nos artigos que se seguem:

ARTIGO 1º. As Altas Partes Contractantes obrigam-se a submeter a arbitramento, todas as controversias, de qualquer natureza, que por qualquer causa surgirem entre ellas, com tanto que não affectem os

preceitos da constituição de um ou outro paiz e sempre que não possam ser resolvidas mediante negociações directas.

ART. 2º. Não podem ser renovadas, em virtude deste tratado, as questões que tenham sido objecto de arranjos definitivos entre as partes. Em taes casos, o arbitramento limitar-se-há exclusivamente ás questões que se suscitarem sobre a validade, interpretação e cumprimento de ditos arranjos.

ART. 3º. Em cada caso occorrente será constituido o Tribunal arbitral que deva resolver a controversia suscitada.

Si não houver conformidade na constituição do tribunal, este será composto de tres juizes. Cada Estado nomeará um Arbitro e estes designarão o terceiro. Si não conseguirem pôr-se de accordo sobre essa designação, a fará o Chefe de um terceiro Estado que indicarão os Arbitros nomeados pelas partes. Não pondo-se de accordo para esta ultima nomeação, se solicitará sua designação do Presidente da Republica Franceza. O arbitro assim eleito será de direito presidente do tribunal.

Não poderá ser nomeado Arbitro terceiro a pessoa que nesse caracter ja tenha sentenciado em um juizo arbitral, de conformidade com este tratado.

ART. 4º. Nenhum dos Arbitros poderá ser cidadão dos Estados Contractantes, nem domiciliado em seu territorio. Tão pouco poderá ter interesse nas questões que sejam objecto do arbitramento.

No caso de não acceitação, renuncia ou impedimento de um ou mais dos Arbitros, se procederá do mesmo modo á sua substituição.

ART. 6. Os pontos compromettidos serão fixados pelos Estados Contractantes que poderão tambem determinar a amplitude dos poderes dos Arbitros e qualquer outra circumstancia relativa ao modo de proceder.

ART. 7. Em defeito de estipulações especiaes entre as Partes, corresponde ao Tribunal designar a data e o lugar de suas sessões fóra do territorio dos Estados Contractantes, escolher o idioma que deverá ser empregado, determinar os methodos de debate, as formalidades e termos que se prescreverão ás Partes, os procedimentos a seguir-se, e em geral, tomar todas as medidas que sejam necessarias para seu proprio funccionamento e resolver todas as difficuldades que surgirem no curso do debate.

As Altas Partes Contractantes obrigam-se a pôr á disposição dos Arbitros todos os meios de informação que delles dependam.

ART. 8º. Cada uma das Partes poderá constituir um ou mais mandatarios que a representem perante o Tribunal Arbitral.

ART. 9º. O Tribunal é competente para decidir sobre a regularidade de sua propria constituição, validade do compromisso e sua interpretação, e bem assim para resolver as controversias que surgirem entre

as Partes sobre si determinadas questões têm sido ou não pontos submettidos á jurisdicção arbitral, na escriptura de compromisso.

ART. 10°. O Tribunal deverá decidir de accordo com os principios do Direito Internacional, a menos que o compromisso imponha a applicação de regras especiaes ou auctorize os arbitros a decidir como arbitros amigos.

ART. 11°. Não poderá ser formado o Tribunal sem a concurrencia dos tres arbitros. No caso de que a minoria, devidamente citada, não quizesse assistir ás deliberações ou a outros actos do processo, se formará Tribunal com sómente a maioria dos arbitros, fazendo-se constar o não comparecimento voluntario e injustificado da minoria.

Será obrigatoria a sentença que pronunciará a maioria dos arbitros, mas si o arbitro terceiro não acceitasse o parecer de nenhum dos arbitros nomeados pelas partes, seu dictame será definitivo.

ART. 12°. A sentença deverá decidir definitivamente cada ponto em litigio e com expressão de seus fundamentos.

Será redactada em duplicata e firmada por todos os arbitros. Si algum delles recusar-se a subscrevel-a, os outros deverão fazer menção em acta especial desta circumstancia e a sentença será obrigatoria sempre que fôr firmada pela maioria dos arbitros. O arbitro em dissidencia se limitará a fazer constar sua discordia no acto de firmar a sentença e sem expor seus fundamentos.

ART. 13°. A sentença deverá ser communicada a cada uma das partes por meio de seu representante perante o Tribunal.

ART. 14°. A sentença legalmente pronunciada decide dentro dos limites de seu alcance a controversia entre as partes.

ART. 15°. O Tribunal estabelecerá na sentença o prazo dentro do qual deve ser executada, sendo competente para decidir as questões que surgirem com motivo da execução da mesma.

ART. 16°. A decisão é inappellavel e seu cumprimento está confiado á honra das nações signatarias desta convenção.

Sem embargo, se admittirá o recurso de revisão perante o mesmo Tribunal, que a pronunciou, sempre que se interponha antes de vencido o prazo estipulado para sua execução, nos seguintes casos:

1°. Si tem sido pronunciada sentença em virtude de um documento falso ou adulterado.

2°. Si a sentença tem sido em todo ou em parte a consequencia de um error de facto, que resulte das actuações ou documentos da causa.

ART. 17°. Cada uma das partes pagará os gastos proprios e a metade dos gastos geraes do Tribunal Arbitral.

ART. 18°. O presente tratado estará em vigor durante dez annos, a contar da troca das ratificações. Si não fôr denunciado seis mezes antes de seu vencimento, continuará por outro periodo de dez annos e assim successivamente.

O presente tratado será ratificado e a troca de suas ratificações effectuada em Buenos Aires dentro de seis mezes contados de sua data.

Em fé do que, os plenipotenciarios da Republica Argentina e da Republica Oriental do Uruguay, firmaram o mesmo Tratado e lhe puzeram os seus sellos.

Feito em duplicata na cidade de Buenos Aires, aos oito dias do mez de Junho de mil oitocentos noventa e nove.

GONZALO RAMÍREZ.

LEI No. 4044.

O Senado e Camara dos Deputados da Nação Argentina, reunidos em Congresso, etc., sancionam com força de lei:

ARTIGO 1º. Approva-se o tratado geral de arbitramento, firmado na cidade de Buenos Aires, o dia 8 de Junho de 1899, pelos Plenipotenciarios da Republica Argentina e da Republica Oriental do Uruguay, devidamente auctorizados para este fim, modificando-se o artigo terceiro como segue:

“ART. 3º. Em cada caso occorrente será constituido o Tribunal Arbitral que deva resolver a controversia suscitada. Si não houver conformidade na constituição do Tribunal, este será composto de tres juizes. Cada Estado nomeará um Arbitro e estes designarão o terceiro. Si não conseguirem pôr-se de accordo sobre esta designação, a fará o Chefe de um terceiro Estado que indicarão os Arbitros nomeados pelas partes. Não pondo-se de accordo para esta ultima nomeação, cada parte designará uma Potencia differente e a eleição do terceiro Arbitro será feita pelas duas Potencias assim designadas.

“O Arbitro assim eleito será de direito Presidente do Tribunal. Não poderá ser nomeada Arbitro terceiro a pessoa que nesse character já tenha sentenciado em um juizo arbitral de conformidade com este tratado.”

ART. 2º. Communique-se ao Poder Executivo. Dada na Sala das Sessões do Congresso Argentino, em Buenos Aires, aos dez e oito dias de Dezembro de mil novecentos e um.

JOSÉ E. URIBURU.

B. OCAMPO,

Secretario do Senado.

BENITO VILLANUEVA.

ALEJANDRO SORONDO,

Secretario da Camara dos Deputados.

Reunidos no Despacho do Ministerio das Relações Exteriores da Republica Argentina, Suas Excellencias o Senhor Doutor AMANCIO ALCORTA, Ministro das Relações Exteriores da Republica Argentina, e

o Senhor Doutor GONZALO RAMÍREZ, Enviado Extraordinario e Ministro Plenipotenciario da Republica Oriental do Uruguay, conformes no proposito de modificar o Tratado Geral de Arbitramento celebrado entre os dous Governos o día 8 de Junho de 1899, na parte que trata da constituição do Tribunal arbitral, e com o objecto de assegurar sua constituição sem os inconvenientes proprios de um Tribunal permanente, convieram no seguinte:

O artigo 3º do Tratado referido fica modificado como segue:

“Art. 3º. Em cada caso occorrente será constituido o Tribunal arbitral que deva resolver a controversia suscitada. Si não houver conformidade na constituição do Tribunal, este será composto de tres juizes.

“Cada Estado nomeará um arbitro e estes designarão o terceiro. Si não puderem pôr-se de accordo sobre esta designação, a fará o chefe de um terceiro Estado que indicarão os arbitros nomeados pelas partes. Não pondo-se de accordo para esta ultima nomeação, cada parte designará uma potencia diferente, e a eleição do terceiro arbitro será feita pelas duas potencias assim designadas.

“O arbitro assim eleito será de direito Presidente do Tribunal.

“Não poderá ser nomeada arbitro terceiro a pessoa que nesse character tenha sentenciado já em um juizo arbitral de accordo com este tratado.”

O presente Protocollo será ratificado e suas ratificações trocadas simultaneamente com o Tratado de Arbitramento, do qual formará parte integrante.

Em fé do que o firmam em duplicata na cidade de Buenos Aires, aos vinte e um dias do mez de Dezembro de mil novecentos e um.

[L. S.]

AMANCIO ALCORTA.

[L. S.]

GONZALO RAMÍREZ.

Portanto, vistos e examinados o tratado e protocollo preinsertos, os acceito, confirmo e ratifico, comprometendo e obrigando-me, em nome da nação, a cumpril-os e fazel-os cumprir fiel e inviolavelmente.

Em fé do que, firmo o presente instrumento de ratificação, sellado com o grande sello das armas da republica, e assignado pelo Ministro do Departamento das Relações Exteriores e Culto.

Dado em Buenos Aires, capital da Republica Argentina, aos doze dias do mez de Janeiro de mil novecentos e dous.

JULIO A. ROCA,

AMANCIO ALCORTA.

ACTA DE TROCA DAS RATIFICAÇÕES.

Reunidos no Ministerio das Relações Exteriores e Culto da Republica Argentina o Senhor Ministro do ramo, Doutor AMANCIO ALCORTA e o Senhor Encarregado de Negocios Interino da Republica Oriental do

Uruguay, Doutor PABLO PÉREZ GOMAR, com o objecto de effectuar a troca das ratificações do tratado geral de arbitramento e do protocollo addicional, firmados em Buenos Aires no dia 8 de Junho de 1899 e 21 de Dezembro de 1901 pelos Plenipotenciarios dos dous paizes, devidamente auctorizados para este fim, e depois de comparados cuidadosamente os textos das respectivas ratificações que foram achados conformes, effectuaram, previa apresentação dos correspondentes plenos poderes, a troca referida.

Em fé do que, firmaram em duplicata a presente acta de troca, na cidade de Buenos Aires, o dia 18 de Janeiro de 1902, e lhe puzeram seus sellos respectivos.

PABLO PÉREZ GOMAR.

AREA E PREÇOS DAS TERRAS PUBLICAS.

O Ministro da Agricultura enviou ao Consul Argentino em Sydney, Novo Galles do Sul, informações relativas á area das terras publicas nos territorios nacionaes consagrada á colonização. Segundo estas informações, a area das ditas terras é de 237,788,343 geiras, discriminadas assim: Chaco, 32,182,861 geiras; Chubut, 55,687,983 geiras; Formosa, 21,430,165 geiras; Misiones, 1,956,240 geiras; Neuquen, 15,249,923 geiras; Pampa, 7,718,261 geiras; Rio Negro, 37,266,057 geiras; Santa Cruz, 61,626,144 geiras, e Tierra del Fuego, 4,840,418 geiras. Os preços obtidos por geira de terras publicas nos territorios mencionados, segundo as ultimas vendas realizadas, foram os seguintes: Chubut, 16 centavos; Neuquen, 16 centavos; Santa Cruz, 30 centavos; Tierra del Fuego, 40 centavos.

Os territorios mencionados acham se situados assim: os territorios do Chaco e de Formosa, na parte nordeste confinando com o Paraguay; Chubut ao sul da parte central do paiz e desde o Atlantico até a fronteira do Chile; Misiones, no extremo nordeste limitando-se com o Brazil e o Paraguay; Neuquen, no extremo oeste; Pampa, immediatamente a leste do territorio do Neuquen; Rio Negro, ao sul do Neuquen e Pampa; Santa Cruz, immediatamente ao sul de Chubut, e Tierra del Fuego, no extremo sudeste do continente. Rio Negro, Chubut, Santa Cruz e Tierra del Fuego são subdivisões da porção do territorio outr'ora conhecido com o nome de Patagonia que foi concedida á Argentina.

Os que desejam immigrar no paiz podem obter mais informações relativas aos favores offerecidos pelo Governo aos colonos, dirigindo-se ao Ministro da Agricultura em Buenos Aires. O Ministro da Agricultura em sua communicação ao Consul argentino em Sydney, diz que a area dos terrenos actualmente em cultivo na Republica é de 17,174,250 geiras, contra 7,478,700 geiras em 1880. A maior parte das terras da Republica estão consagradas á industria pastoril e á criação de gado.

DIREITOS DE PORTO EM LA PLATA.

Diz o “Buenos Ayres Standard” que as auctoridades do porto de La Plata resolveram fazer importante redução dos direitos a cobrar sobre os navios que entrarem naquelle porto. O canal do porto tem sido dragado de modo a permittir a entrada de navios de 25 pés de calado. Os direitos de porto, segundo o “Standard,” são os seguintes:

Dez centavos (Papel-moeda) por tonelada de registro de navio á vela ou a vapor que entrar no porto para receber carregamentos de animaes ou cereaes ou que entrar em lastro para obter productos para exportação.

Vinte centavos (papel-moeda) por tonelada de arqueação de navios de vela que entrarem com carga e que de novo carregarem ao regressarem.

Os vapores que entrarem com o objecto unico de receber carvão, deverão pagar os direitos de porto e de doca de accordo com a quantidade de carvão que receberem, a qual não deve ser inferior a 100 toneladas, e não sob a base de sua tonelagem.

Os navios que já tiverem pago os direitos de porto e tiverem sahido para outros portos argéntinos, ao entrarem no porto de regresso de suas viagens, para completar seu carregamento, serão isentos de direitos.

Os barcos que entrarem com carregamentos para navios de alto mar serão isentos de taxas, assim como os navios naufragados.

Serão isentas da taxa de armazenagem, até 30 dias, as mercadorias nacionaes, e até 60 dias, as madeiras de construcção argentinas.

BRAZIL.

COMMERCIO DE IMPORTAÇÃO E EXPORTAÇÃO.

Segundo estatisticas officiaes, o movimento do commercio de importação e exportação do Brazil nos nove mezes findos em Setembro de 1901, foi o seguinte:

NOVAS FACILIDADES DE TRANSPORTE COM NOVA YORK.

Informa o Consul Geral dos Estados Unidos em Rio de Janeiro que a linha Lamport and Holt vai empregar mais seis vapores no serviço de navegação entre aquelle porto e Nova York. Dous d'esses paquetes terão cerca de 5,000 toneladas de registro cada um, com accommodações para 70 passageiros de 1ª classe e alojamento para 50 passageiros de 3ª classe. Os outros paquetes terão 6,350 toneladas de deslocamento e serão providos com accommodações para o transporte de gado.

A Prince Line tambem adquiriu um novo paquete para o seu serviço entre Nova York e Rio. Tem uma capacidade de 4,560 toneladas e 22 pés de calado, com accommodações para 12 passageiros e installação completa de luz electrica. Este é um dos quatro paquetes que se estão construindo para este serviço. Estes vapores poderão carregar até 70,000 saccas de café. Este paquete de que se trata é especialmente adoptado para o transporte de productos sujeitos a deterioração, e fará a viagem entre Nova York e Rio em cerca de dezoito dias.

ESTADOS UNIDOS.

COMMERCIO COM A AMERICA LATINA.

IMPORTAÇÕES E EXPORTAÇÕES.

Na pagina 934 apparece a ultima relação do commercio entre os Estados Unidos e os paizes latino-americanos, tomada da compilação feita pela Secção de Estatistica do Departamento do Thesouro dos Estados Unidos. A relação corresponde ao mez de Fevereiro de 1902, com uma relação comparativa para o mez correspondente do anno anterior, assim como para os oito mezes findos em Fevereiro de 1902, comparados com os correspondentes de 1901. Deve-se explicar que os algarismos das diversas alfandegas, mostrando as importações e exportações de um só mez não são recebidos no Departamento do Thesouro até quasi o dia 20 do mez seguinte, e perde-se algum tempo

necessariamente em sua compilação e impressão. Por conseguinte, as estatísticas para o mez de Fevereiro, por exemplo, não são publicadas até os primeiros dias de Abril.

COMMERCIO ESTRANGEIRO EM FEVEREIRO DE 1902.

O resumo official do commercio estrangeiro dos Estados Unidos no mez de Fevereiro 1902, mostra que houve um augmento nas importações de \$3,778,349, e uma diminuição nas exportações de \$11,431,282, comparadas respectivamente com as importações e exportações do mesmo mez de 1901. O augmento nas importações foi devido principalmente á entrada de artigos que se empregam nas industrias manufactureras nacionaes, como se evidencia pelo facto de que o augmento havido nas importações de artigos manufacturados foi de só \$97,611 e os artigos de luxo mostram um augmento de só \$387,226, ao passo que as importações de productos alimenticios accusam uma diminuição de \$3,485,295.

As importações durante o mez de Fevereiro de 1902, comparadas com as do mesmo mez do anno anterior classificaram-se do modo seguinte:

Classificação.	1902.	1901.
Substancias alimenticias e animaes	\$13,517,553	\$17,002,828
Materia prima que se emprega nas industrias nacionaes	26,168,648	19,534,322
Artigos em todo ou em parte manufacturados que se usam como material nas fabricas.....	6,202,131	6,057,652
Artigos manufacturados promptos para o consumo.....	11,974,521	11,876,910
Artigos de luxo, etc.....	10,417,215	10,029,987
Total.....	68,280,048	64,501,699

As importações que entraram livres de direitos em Fevereiro de 1902, representaram 45.63 por cento do total, contra 39.84 por cento no mesmo mez do anno anterior. A quantia total de direitos cobrados nas alfandegas no mez de Fevereiro de 1902 foi de \$20,213,930, contra \$18,719,598 no mesmo mez de 1901.

As importações feitas nos oito mezes do anno financeiro (Julho-Fevereiro) mostram um augmento de \$70,857,206 sobre as do mesmo periodo do exercicio anterior. As importações de artigos que se usam nas fabricas nacionaes, feitas durante esse periodo, mostram um augmento de \$57,124,831; artigos de luxo, um augmento de \$11,021,290, e artigos manufacturados, um augmento de \$9,347,108, ao passo que as importações de substancias alimenticias e animaes accusam uma diminuição de \$6.636,043.

As importações totaes feitas durante os oito mezes de 1902 e 1901, foram avaliadas em \$594,397,046 e \$523,539,840, respectivamente. As importações que entraram livres de direitos durante os dous periodos

em comparação representaram 43.66 por cento e 38.79 por cento, respectivamente, das importações totaes. A quantia total de direitos cobrados nas alfândegas durante esse periodo em 1902 ascendeu a \$168,571,246, contra \$159,175,618 no mesmo periodo de 1901.

As exportações feitas durante o mez de Fevereiro de 1902, comparadas com as do mesmo mez de 1901, foram classificadas da maneira seguinte:

Classificação.	1902.	1901.	Diminuição.
Productos:			
De agricultura	\$60,662,119	\$73,054,202	\$12,392,083
De fabricas	31,740,842	30,302,592	*1,438,250
De minas	2,433,704	2,723,794	290,390
De florestas	3,383,217	3,346,385	453,168
De pesca	518,031	405,482	*112,549
Productos miscellaneos	939,996	667,230	*271,866
Productos estrangeiros reexportados	1,848,723	1,957,329	108,606
Total	101,525,732	112,957,014	11,431,282

*Augmento.

As exportações feitas durante os oito mezes do exercicio de 1902 foram avaliadas em \$974,185,414, que, comparadas com as do mesmo periodo de 1901, mostram uma diminuição de \$41,009,570. A diminuição no valor das exportações deve-se a uma redução consideravel havida nas exportações de milho e de ferro e aço manufacturado, comparadas com as do exercicio anterior. Durante os oito mezes do anno financeiro de 1902, foram exportados 23,146,599 alqueires de milho, comparados com 132,625,656 alqueires no mesmo periodo do anno anterior. As exportações de farinha de milho que se fizeram durante o periodo de que se trata, foram de só 261,505 barricas, comparadas com 653,766 barricas no periodo correspondente de 1901. Essas exportações de milho foram avaliadas em \$14,580,585 em 1902, contra \$62,122,901 em 1901, o que mostra uma diminuição de \$47,542,324, que é devido á reduzida colheita de milho nos Estados Unidos em 1901.

As exportações de manufacturas de ferro e de aço feitas durante os oito mezes que terminaram em Fevereiro de 1902, foram avaliadas em \$64,668,424, que, comparadas com as do mesmo periodo de 1901, que se avaliaram em \$81,575,685, mostram uma diminuição de \$16,807,261. Atribue-se essa diminuição á reduzida procura no estrangeiro e o augmento havido no consumo nacional destes productos.

CONDIÇÃO DAS COLHEITAS EM 1º DE ABRIL DE 1902.

Segundo o relatorio mensal sobre as colheitas publicado pelo Departamento de Agricultura dos Estados Unidos, a condição média do trigo de inverno em 1º de Abril de 1902, era 78.7 por cento, contra 91.7 por cento na mesma data do anno anterior, e 82.7 por cento, que

representa a média para Abril durante os ultimos dez annos. O chefe de Estatistica da Bolsa de Nova York calcula a producção de trigo de inverno este anno em 416,000,000 alqueires, ou em 13 alqueires por geira. No dia 1° de Dezembro se calculou a producção total de trigo de inverno em 457,600,000 alqueires, ou em 14.3 alqueires por geira. A area semeada foi calculada em 32,000,000 geiras. O calculo da producção de trigo de inverno em 1° de Abril de 1901, foi de 457,000,258 alqueires, ao passo que a colheita realizada attingiu a 413,000,000 alqueires.

A condição média do centeio de inverno em 1° de Abril era 85.4 por cento, comparada com 93.1 por cento na mesma data de 1901, e com 88.1 por cento, que representa a condição média para o mez de Abril durante os ultimos dez annos.

BIBLIOGRAPHIA.

Nesta secção do Boletim Mensal se tratará dos livros e folhetos enviados á Secretaria Internacional das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

“A Vanished Arcadia” (Uma Arcadia Desapparecida), por R. B. CUNNINGHAME-GRAHAM, publicado por WILLIAM HEINEMANN, de Londres, 1901. Este livro dá conta dos trabalhos dos Jesuitas no Paraguay desde o tempo de sua introdução na America do Sul em 1607. até a data de sua expulsão por ordem da Coroa da Hespanha em 1767. Diz o auctor que “por bem ou por mal, mas no seu entender,” os Jesuitas esforçaram-se por ensinar aos indios o que havia de melhor no progresso da civilização europea, protegendo-os assiduamente de todo o contacto com o commercialismo, e oppondo-se a que os colonos hespanhoes os reduzissem á escravidão. Faz tambem notar que “durante um curto periodo os indios da tribu Guaraní, reunidos nas missões e sob a auctoridade dos padres que os trataram como meninos, ainda que com benevolencia, gozaram de uma vida meio-arcade, meio-monastica, recebendo tanto do que o mundo chama civilização quanto seria vantajoso para elles. Além da historia dos Jesuitas, o livro contem informações relativas á primeira historia politica daquella parte da America do Sul que está hoje dividida entre a Republica Argentina, Brazil, Uruguay e Paraguay.

“A List of Books, Magazine Articles, and Maps relating to Central America, 1800-1900” (Uma Lista de Livros, Artigos publicados em

Revistas, e Mappas relativos á America Central, 1800-1900), preparado para a Secretaria das Republicas Americanas pelo Sr. P. LEE PHILLIPS, Membro da Real Sociedade Geographica e Chefe da Divisão de Mappas e Cartas, Bibliotheca do Congresso, Washington (typographia da Imprensa Nacional, 1902). Na linguagem do compilador, essa lista “não pretende ser completa, mas foi publicada com o objecto unico de servir como guia aos que desejam consultar livros sobre esta parte da America, que ordinariamente não figuram nos catalogos já publicados.” O pamphleto divide-se em seis secções, sendo a primeira consagrada á America Central, considerada em seu conjuncto, seguindo-se-lhe Costa Rica, Guatemala, Honduras, Nicaragua, e Salvador na ordem dada. No fim de cada secção ha uma lista de mappas, organizada em ordem chronologica.

Uma contribuição ás publicações sobre o projecto do canal do Isthmo, que attrahe consideravel attenção foi feita pelo Tenente J. W. G. WALKER, da Marinha dos Estados Unidos, em um livro intitulado “Ocean to Ocean” (Oceano a Oceano). O auctor deste livro fez o estudo do lado occidental do Canal de Nicaragua em 1898 e descreve com summa amenidade os episodios da viagem pelos rios e mattas tropicaes de Nicaragua. Além dos capitulos em que o Sr. WALKER descreve os acontecimentos de sua viagem na Republica de Nicaragua ha outros de character historico. O auctor faz o historico do Canal de Nicaragua desde o tempo de Philippe II, quando a idea do canal foi concebida, até o presente, e descreve resumidamente as diversas phases do projecto dos Estados Unidos, incluindo os resultados dos ultimos estudos; não faz porem uma argumentação partidaria em favor do Canal de Nicaragua. É de opinião que da construcção deste canal resultarão o desenvolvimento de grandes porções de Costa Rica e Nicaragua e relações commerciaes mais estreitas entre estas Republicas e os Estados Unidos. A parte mais interessante deste volume é a relativa á historia do povo de Nicaragua e a que descreve as principaes feições physicas do paiz e os productos do mesmo. O livro contem 14 reproducções photographicas e 4 mappas, e foi publicado por A. C. McCLURG & Co., de Chicago, 1902.

O Sr. HUGH ROBERT MILL, LL. D., enriqueceu a “New Land Series” com um volume intitulado “New Lands, their Resources and Prospective Advantages” (Novas Terras, seus Recursos e Opportunidades para seu Desenvolvimento), publicado por CHARLES GRIFFIN & Co., Limited, Londres, 1902. No prefacio deste livro diz o auctor que foi seu proposito dar conta simples e resumidamente das condições de vida naquellas partes do mundo em que ha vantagens

para os que desejam empregar seus capitaes em um novo paiz. Aos recém-chegados aconselha que não devam empregar seus capitaes ou explorar novas empresas por conta propria até que tenham residido por algum tempo no lugar e se tenham familiarizado com os costumes do paiz. Neste livro ha capitulos consagrados aos seguintes paizes americanos: Canadá, Terra Nova, Estados Unidos, Alaska, Mexico, Brazil do Sul e Chile do Sul (com um mappa da parte meridional da America do Sul), a Republica Argentina e as Ilhas Maluinhas. O Canadá é o unico paiz dos que se occupa o livro em que o auctor fez observações pessoaes. Quanto aos outros dependeu menos de relatorios officiaes do que das observações pessoaes de residentes ou visitantes. Na primeira parte do capitulo consagrado á America latina, o Sr. MILL chama a attenção para os importantes serviços prestados pela Secretaria das Republicas Americanas.

A revista "Chambers' Journal." em sua edição correspondente ao mez de Março de 1902, publica um artigo interessante intitulado "Undeveloped Bolivia; or, Between the Andes and the Amazon" (Bolivia Inexplorado, ou Entre os Andes e o Amazonas). Este artigo trata dos recursos do paiz, os quaes, como se sabe, são de grande diversidade, e das possibilidades do seu desenvolvimento. A Republica offerece boas oportunidades a pessoas com capital e que estejam dispostas a trabalhar e a viver de um modo primitivo durante alguns annos, posto que o estado inexplorado do interior do paiz assim o exige. As principaes industrias são a exploração de minas e o cultivo de assucar, o café e a borracha. O clima em geral é saudavel e as terras são baratas. O Governo, com o fim de desenvolver as provincias do interior, está construindo estradas publicas e vias ferreas e concedendo subvenções á navegação.

Outr'ora se attribuiu á Guatemala uma area muito maior que a que a Republica actualmente comprehende; devido a isto muitos livros que figuram nos catalogos como referentes á Guatemala referem-se mais propriamente a toda a America Central. Obras relativas a Honduras Britannica estão comprehendidas na lista de Honduras. Os estudantes da bibliographia da America Central ou de qualquer das cinco Republicas nella comprehendidas, acharão este um valioso catalogo de consulta. É a intenção da Secretaria das Republicas Americanas publicar edições revisadas desta obra quando lhe parecer necessario.

A revista "Pan-American Magazine," que foi publicada anteriormente e enquanto durou a Exposição Pan-Americana de Buffalo, mudou de titulo no seu numero de Janeiro de 1902, sendo hoje denominada

“All American Commerce.” Esta publicação tem por objecto estreitar as relações sociaes e commerciaes dos povos da America do Norte, America Central e do Sul. Seis das 38 paginas da revista contem artigos na lingua hespanhola.

“A Gazetteer of Cuba” (Um Diccionario Geographico de Cuba), por HENRY GANNETT, geographo, é o titulo do Boletim No. 192, publicado pela Repartição de Estudos Geologicos dos Estados Unidos. O diccionario é illustrado com mappas e gravuras e consta de cerca de 100 paginas.

BULLETIN MENSUEL

DU

BUREAU INTERNATIONAL DES RÉPUBLIQUES AMÉRICAINES,
Union Internationale des Républiques Américaines.

VOL. XII.

AVRIL 1902.

No. 4.

RAPPORT ANNUEL DU DIRECTEUR DU BUREAU DES RÉPUBLIQUES AMÉRICAINES.

WASHINGTON, le 1^{er} décembre 1901.

Monsieur le Secrétaire d'Etat, Ministre des Affaires Etrangères, Monsieur le Président et Messieurs les Membres du Comité Exécutif de l'Union Internationale des Républiques Américaines.

MESSIEURS: En vous soumettant mon rapport annuel, je suis heureux de constater que les Gouvernements faisant partie de l'Union Internationale des Républiques Américaines continuent à apprécier les travaux de ce Bureau, leur organe autorisé. Ce sentiment a été exprimé dès le début des sessions de la Conférence des Etats Américains qui se tient actuellement à Mexico, le Bureau ayant été autorisé à s'y faire représenter suivant son importance et dans laquelle le désir d'étendre le champ de ses travaux a été recommandé avec urgence.

SUCCURSALE À MEXICO.

Pour satisfaire au désir exprimé par le Comité Exécutif, appuyé chaleureusement près de son Gouvernement par Son Excellence l'Ambassadeur du Mexique à Washington, une succursale fut établie dans la ville de Mexico, en connexion avec la Conférence Pan-Américaine. Cette succursale fut organisée grâce à la courtoisie du Gouvernement Mexicain et pourvue de tous les livres de renseignements nécessaires et d'un personnel suffisant.

MORT DU DOCTEUR GUZMÁN.

Pendant l'année, le Bureau a perdu, par la mort lamentable de Señor Docteur HORACIO GUZMÁN, son Secrétaire, un de ses plus distin-

gués et intelligents collaborateurs dont les connaissances approfondies de toutes les questions intéressant le Bureau, dont il était l'ami et le partisan, étaient hautement appréciées.

FINANCES.

Compte rendu des Finances du Bureau pour l'année fiscale finissant le 30 juin 1901.

Recettes et dépenses pour l'année fiscale finissant le 30 juin 1901.

RECETTE.

Allocation annuelle des Etats-Unis 1901.....	\$36,000.00
Balance provenant des recettes des ventes, loyers, etc., 1 ^{er} juillet 1900.....	\$1,971.72
Des allocations des Républiques latines-américaines	\$15,452.57
Des annonces	\$3,289.35
Des ventes de publications	1,408.66
	4,698.01
	20,150.58
	22,122.30
Total des recettes.....	58,122.30

DÉPENSES.

Allocation annuelle 1901	\$36,000.00
Recettes provenant des ventes, loyers, etc.....	18,921.47
	54,921.47
Balance au 1 ^{er} juillet 1901	3,200.83

Bordereau détaillé des dépenses pendant l'année fiscale finissant le 30 juin 1901.

	Provenant de l'allocation annuelle de 1901.	Provenant des recettes des ventes, loyers, etc.	Totaux.
Compensation	\$32,194.54	\$931.00	\$33,125.54
Fourniture de bureaux.....		581.35	581.35
Loyer.....	1,833.34	166.66	2,000.00
Bibliothèque		1,315.71	1,315.71
Affranchissement	42.26	1,287.46	1,329.72
Ameublement		218.58	218.58
Frais d'impression.....		12,006.90	12,006.90
Règlement final avec Charles E. Locke pour les annonces.....	1,929.86		1,929.86
Dépenses diverses		2,413.81	2,413.81
Totaux	36,000.00	18,921.47	54,921.47

Comme on le verra, d'après le dernier rapport annuel il restait à payer à l'Imprimeur Public, au commencement de l'année fiscale 1901, un solde de \$3,314.71. Le mémoire suivant montre qu'il a été possible au Bureau de liquider non seulement toutes les sommes dues, mais aussi de payer toutes les obligations pour travaux d'impression exécutés pour ce Bureau pendant l'année fiscale antérieure.

Mémoire de l'Imprimeur Public pour l'année fiscale finissant le 30 juin 1901.

Balance de l'année fiscale 1900, restant à payer.....	\$3, 314. 71
Total des mémoires remis pour l'année fiscale finissant le 30 juin 1901....	10, 183. 66
Somme totale à payer.....	13, 498. 37
Réduction faite pour travaux de composition et de stéréotypage du Manuel du Mexique, qui d'après l'arrangement fait avec l'Imprimeur Public, sont portés au crédit du Bureau.....	\$1, 097. 55
Paiements provenant des recettes des ventes, loyers, etc., pendant l'année fiscale 1901	\$6, 000. 00
Paiements faits pendant l'année fiscale courante.....	6, 400. 82
	<u>12, 400. 82</u>
	13, 498. 37

J'ai l'honneur de vous soumettre ci-dessous, un aperçu des recettes et des dépenses pour l'année fiscale finissant le 30 juin, 1902:

Aperçu des recettes:

Allocation des Etats-Unis	\$36, 000. 00
Allocation des Républiques latines-américaines.....	15, 157. 73
Annonces.....	3, 000. 00
Vente des publications.....	1, 400. 00
Total	<u>55, 557. 73</u>

Aperçu des dépenses sur la base actuelle:

Feuille d'émargement	\$33, 600. 00
Loyer	2, 000. 00
Imprimerie	13, 000. 00
Fourniture de bureaux et ameublement.....	900. 00
Bibliothèque.....	1, 200. 00
Affranchissement	1, 300. 00
Dépenses diverses	2, 400. 00
	<u>54, 400. 00</u>
Balance	1, 157. 73

BULLETIN MENSUEL.

La circulation du BULLETIN MENSUEL est, comparativement parlant, à peu près la même que pendant la dernière année fiscale. Le tableau suivant montre le nombre de copies envoyées dans les différents pays pendant le mois d'octobre 1901:

Distribution du Bulletin pendant le mois d'octobre 1901.

République Argentine	455	Mexique	4, 517
Bolivie	99	Nicaragua	102
Brésil	359	Paraguay	30
Honduras Britannique	29	Pérou	137
Canada	169	Porto-Rico	180
Chili	228	Salvador	37
Colombie	190	Saint-Domingue	140
Costa-Rica	97	Etats-Unis	1, 686
Cuba	268	Uruguay	157
Equateur	116	Vénézuéla	473
Europe	87	Antilles (Petites-Antilles).....	47
Guatémala	497	Divers envois	17
Haïti	197		
Honduras.....	209	Total	<u>10, 583</u>
Jamaïque	60		

Pendant la dernière année fiscale, les Républiques de Bolivie et du Paraguay ont accordé au Bureau la franchise postale pour ses publications, privilège dont il jouit aujourd'hui dans treize Républiques aussi bien qu'au Canada, Cuba, Porto-Rico et les Iles Philippines.

AUTRES PUBLICATIONS.

Depuis mon dernier rapport, le Bureau a complété et publié un ouvrage intitulé: "United States of Brazil: A geographical sketch, with special reference to economic conditions and prospects of future development" (Etats-Unis du Brésil: Esquisse géographique contenant des renseignements spéciaux relatifs aux conditions économiques et les perspectives d'un développement futur), et comme supplément à cet ouvrage une bibliographie du pays "A list of books, magazines, articles, and maps relating to Brazil, 1800-1900" (Une liste des livres, revues, articles et cartes relatifs au Brésil, 1800-1900).

Il faut espérer que ces bibliographies seront suivies par celles des différents pays de l'Amérique. Une brochure qui a pour titre "Rapport sur le café" (Report on coffee) ayant particulièrement trait au produit de la République de Costa Rica, préparée par Señor Don JOAQUÍN BERNARDO CALVO, Ministre Plénipotentiaire de cette République près du Gouvernement des Etats-Unis, a été publiée, mise en circulation et lue avec grand intérêt.

La publication du manuel des Etats-Unis en espagnol a été retardée pour plusieurs raisons et surtout afin de permettre au Bureau de se servir des statistiques du recensement de 1900. On pense que ce très important travail sera terminé et livré au public dans le courant de l'année prochaine. Un grand nombre de spécialistes éminents collaborent à la préparation de ses chapitres techniques.

La plupart des manuels du Bureau ne sont plus utiles, les statistiques qu'ils contiennent remontant à huit ou dix ans. C'est pourquoi les demandes de ces publications, quoique constantes, ne sont pas aussi grandes. Il est devenu cependant nécessaire de les modifier et corriger. En conséquence les membres correspondants honoraires de l'Union Internationale des Républiques Américaines et autres écrivains de talent, ont été priés de vouloir bien prêter leurs concours. Il faut espérer que ces éditions revues et corrigées paraîtront bientôt et tendront à augmenter la demande des publications du Bureau.

Une des causes sérieuses du retard apporté dans la publication des manuels a été le départ très regretté de M. ARTHUR W. FERGUSON et plus tard de celui de M. FRANCISCO J. YÁNEZ, envoyés tous deux aux Iles Philippines, où ils remplissent actuellement des fonctions importantes.

MEMBRES CORRESPONDANTS HONORAIRES.

L'espoir exprimé dans mon dernier rapport d'avoir, dans chacun des pays faisant partie de l'Union, un Membre Correspondant Hono-

raire représentant le Bureau s'est réalisé, et leurs contributions au BULLETIN a grandement augmenté sa valeur.

CARTES.

Les deux cartes du Mexique publiées par le Bureau pendant l'année, ayant reçu l'approbation générale, m'ont encouragé à entreprendre la préparation de cartes semblables des autres pays de l'Union. Celles du Guatémala et de Costa Rica sont en voie de préparation et seront bientôt entre les mains de l'Imprimeur. La carte du Brésil, envoyée inachevée à l'Exposition Pan-Américaine de Buffalo, sera terminée dans quelques mois.

BIBLIOTHÈQUE.

La Bibliothèque du Bureau contient actuellement 8,948 volumes. Depuis mon dernier rapport le nombre a augmenté de 1,456 volumes et brochures dont 991 proviennent de présents. Le nombre d'ouvrages périodiques, revues, magasins, journaux ou autres publications paraissant à des époques déterminées et reçus régulièrement, a augmenté de 169. Le nombre de publications de cette classe reçues actuellement par le Bureau se monte approximativement à 2,000. Le Bureau continue ses efforts pour que les gouvernements de l'Amérique Centrale et de l'Amérique du Sud lui fournissent toutes les lois, décrets, les rapports des départements et autres documents officiels publiés dans leurs pays. Cette requête a déjà été, dans une certaine mesure, couronnée de succès; mais il y a encore beaucoup à faire avant que le Bureau soit certain qu'il reçoit toutes les publications qui, d'après les lois organiques de l'Union, devraient lui être transmises. Il faut espérer que la conférence qui a lieu en ce moment à Mexico, une fois terminée, transmettra au Bureau les résultats de ses travaux et trouvera les moyens pour faciliter le travail de la Bibliothèque.

Le Bureau a publié, à titre de renseignements, en dehors des listes mensuelles des ouvrages qui parviennent à la Bibliothèque, des catalogues semestriels.

EXPOSITION DU BUREAU.

Il m'est agréable de dire que l'Exposition du Bureau à l'Exposition Pan-Américaine de Buffalo, sous la direction du Chef de Division, M. WILLIAMS C. FOX, a reçu des éloges. Le Bureau sera représenté à la "South Carolina Interstate and West Indian Exposition," qui aura lieu à Charleston, capitale de la Caroline du Sud, pendant une période de six mois à partir du 1^{er} décembre 1901. En 1903 ses travaux seront exposés à la "Louisiana Purchase Exposition" à St. Louis, le Congrès ayant voté les fonds nécessaires pour que toutes les différentes branches du Gouvernement y soient représentées.

J'ai l'honneur d'être, Messieurs, votre obéissant serviteur,

Le Directeur,

W. W. ROCKHILL.

SECONDE SÉANCE DU CONSEIL D'ADMINISTRATION DU BUREAU INTERNATIONAL DES RÉPUBLIQUES AMÉRICAINES.

Le Conseil d'Administration a tenu sa seconde séance le 7 avril 1902, dans la Salle Diplomatique du Ministère des Affaires Etrangères des Etats-Unis d'Amérique, sous la présidence de l'Honorable JOHN HAY, Ministre des Affaires Etrangères.

Les membres suivants étaient présents:

Monsieur MANUEL DE AZPÍROZ, Ambassadeur du Mexique, représentant le Mexique et le Salvador.

Monsieur MARTÍN GARCÍA MÉROU, Ministre de la République Argentine.

Monsieur FERNANDO E. GUACHALLA, Ministre de Bolivie.

Monsieur JOAQUÍN BERNARDO CALVO, Ministre de Costa Rica, représentant aussi la République de Honduras.

Monsieur JOAQUÍN WALKER MARTÍNEZ, Ministre de Chile.

Monsieur LUIS FELIPE CARBO, Ministre de l'Equateur.

Monsieur ANTONIO LAZO ARRIAGA, Ministre du Guatémala.

Monsieur J. N. LÉGER, Ministre d'Haïti.

Monsieur LUIS F. COREA, Ministre de Nicaragua.

Monsieur MANUEL ÁLVAREZ CALDERÓN, Ministre du Pérou.

Monsieur JUAN CUESTAS, Ministre de l'Uruguay.

Monsieur R. REIDNER DE AMARAL, Chargé d'Affaires du Brésil.

Monsieur AUGUSTO F. PULIDO, Chargé d'Affaires de Vénézuéla.

Monsieur JOHN STEWART, Consul-Général du Paraguay.

L'Honorable W. W. ROCKHILL, Directeur du Bureau International des Républiques Américaines, assistait aussi à cette réunion.

Le jury d'examen a présenté son rapport qui a été approuvé et sur sa recommandation Señor Don NICOLÁS VELOZ GORTICOA a été nommé, à l'unanimité, Secrétaire du Bureau International.

Sur la proposition du Directeur, ainsi qu'à l'unanimité des voix, le Docteur JOSÉ IGNACIO RODRÍGUEZ a été nommé traducteur en chef et Directeur de la Bibliothèque Colomb.

Le Directeur a ensuite appelé l'attention du Comité sur la nécessité de s'entendre pour fixer une date à laquelle on enverrait le budget approximatif des dépenses du Bureau aux Gouvernements respectifs. Sur la proposition du Ministre de la République Argentine, et après avoir mûrement considéré la matière, on a décidé de faire parvenir ledit budget à tous les Gouvernements intéressés le 1^{er} juillet de chaque année.

On a ensuite adopté la proposition suivante, savoir: que chaque

gouvernement sera requis, d'après ce qui a été convenu précédemment, de fournir au Bureau International deux exemplaires de ses publications officielles, le Directeur du Bureau étant autorisé à faire toutes les démarches nécessaires auprès des Ministres respectifs pour faire mettre ce projet à exécution.

On a fait connaître à la réunion que le Président du Conseil d'Administration, l'Honorable Ministre des Affaires Etrangères, s'était déjà adressé au Directeur Général des Postes afin d'obtenir le transport franco par la poste des Etats-Unis de toutes les publications destinées au Bureau; on a aussi voté la proposition de recommander aux représentants des pays où ces publications sont encore soumises aux droits de poste, de prier leurs gouvernements respectifs d'en obtenir la franchise postale.

Après avoir agité la question du Service de la Santé et du travail qui en résulte pour le Bureau, on a décidé de demander au Chirurgien Général du Service de l'Hôpital de la Marine de présenter un rapport y donnant son opinion à ce sujet. Ce rapport devra être soumis en temps opportun à la Convention et l'on priera les gouvernements de fournir au Bureau International des copies de tous les traités conclus par eux avec d'autres pays au sujet de règlements sanitaires. Un dossier composé de toutes ces pièces sera conservé dans le Bureau pour le consulter au besoin.

Le Directeur a soumis à la direction du Bureau International plusieurs règlements qu'il avait préparés d'après le vœu émis à la réunion précédente, et qui ont été, après due considération, approuvés à l'unanimité.

De plus, on a autorisé le Directeur à mettre dès maintenant ces règlements en vigueur.

On a ensuite discuté le sujet de la Bibliothèque Colomb, et on a décidé de faire des démarches pour obtenir la coopération efficace de tous les gouvernements afin de réussir dans cette entreprise.

Le Conseil s'est ensuite adjourné pour se réunir de nouveau le premier lundi du mois de mai.

RÉPUBLIQUE ARGENTINE.

TRAITÉ D'ARBITRAGE ENTRE LA RÉPUBLIQUE ARGENTINE ET LA RÉPUBLIQUE DE L'URUGUAY.

I. JULIO ROCA, Président Constitutionnel de la République Argentine.

A tous ceux que le présent concerne, salut:

Attendu que, Un traité général d'arbitrage entre la République Argentine et la République de l'Uruguay a été négocié, conclus et signé dans la ville de Buénos-Ayres, le 8 juin 1899 et un Protocole

additionnel souscrit le 21 décembre 1901, contenant les modifications faites par l'Honorable Congrès de la Nation Argentine, dont voici les textes:

Les gouvernements de la République Argentine et de la République de l'Uruguay étant également désireux de résoudre par des méthodes pacifiques tous les différends qui pourraient s'élever entre eux, ont décidé de conclure un Traité Général d'Arbitrage et, à cet effet, ont nommé leurs Plénipotentiaires respectifs:

Son Excellence le Président de la République Argentine, le docteur Don AMANCIO ALCORTA, Secrétaire des Relations Extérieures et des Cultes, et Son Excellence le Président de la République de l'Uruguay, le docteur Don GONZALO RAMÍREZ, Envoyé Extraordinaire et Ministre Plenipotentiaire de la République de l'Uruguay près le Gouvernement de la République Argentine.

Lesquels, après s'être communiqués leurs pleins pouvoirs qui ont été trouvés en bonne et due forme, ont convenu de ce qui suit:

ARTICLE 1^{er}. Les deux gouvernements sont d'accord pour soumettre à l'arbitrage tous les différends, quels qu'ils soient, qui pourraient s'élever entre eux, pourvu qu'ils ne soient pas en contravention aux lois constitutionnelles de l'un ou l'autre pays et pourvu qu'ils soient toujours réglés par le moyen de négociations directes.

ART. 2. Les questions qui ont déjà été définitivement résolues entre les parties, ne peuvent pas, en vertu de ce traité, être soulevées de nouveau. Dans de tels cas, l'arbitrage se bornera exclusivement à celles qui pourront être soulevées au sujet de la validité, de l'interprétation et de l'application desdites conventions.

ART. 3. Un Tribunal d'Arbitrage sera organisé pour chaque affaire et devra décider sur la dispute en question.

Dans le cas où l'on n'arrivera à aucun accord dans la constitution de ce tribunal, il devra être composé de trois juges. Chaque Etat devra nommer un arbitre et ces derniers devront en désigner un troisième ou tiers-arbitre. S'ils ne peuvent arriver à aucune entente dans le choix de cet arbitre, ce dernier sera désigné par le Président d'un troisième Etat qui devra être choisi par les arbitres nommés par les deux Républiques. Si aucune décision n'est prise quant au choix de ce troisième arbitre, le Président de la République Française sera prié de le désigner. L'arbitre ainsi nommé sera, de droit, Président du Tribunal.

Ne devra pas être nommée comme troisième arbitre aucune personne qui, en cette qualité, a prononcé un jugement arbitral en vertu de ce Traité.

ART. 4. Aucun des arbitres ne devra être un citoyen des Etats contractants ni y être domicilié ou intéressé dans les questions qui font l'objet de l'arbitrage.

ART. 5. En cas de non-acceptation, de renoncement ou d'autre

incapacité de la part de l'un ou plusieurs des arbitres, de remplir ses fonctions, il sera pourvu à son remplaçant en procédant de la même manière que pour sa nomination.

ART. 6. Les points contestés devront être déterminés par les Etats contractants qui pourront aussi déterminer l'étendue des pouvoirs des arbitres et n'importe quelles autres circonstances relatives à la façon de procéder.

ART. 7. En l'absence de stipulations spéciales entre les parties, le Tribunal devra choisir l'époque et la place où il devra siéger, en dehors du territoire des Etats contractants; désigner la langue qui devra être parlée; déterminer la manière dont devront avoir lieu les débats; les formalités et termes et les délais accordés aux parties; la manière de procéder, et en général adopter telles mesures nécessaires pour son fonctionnement, et décider enfin sur toutes les difficultés qui pourraient surgir dans le cours des débats.

Les Hautes Parties Contractantes s'engagent à mettre à la disposition des arbitres tous les moyens d'information qui sont en leur pouvoir.

ART. 8. Chacune des Hautes Parties Contractantes pourra désigner un mandataire qui la représentera devant le Tribunal d'arbitrage.

ART. 9. Le Tribunal a le droit de décider quant à la régularité de sa propre formation, la validité du Traité et de son interprétation. Il est également autorisé à trancher toutes les difficultés qui pourront surgir entre les deux Républiques et de décider si oui ou non, d'après les stipulations du Traité, certaines questions sont ou ne sont pas sujettes à l'arbitration.

ART. 10. Le Tribunal devra décider, en se conformant toutefois aux principes de la loi internationale, à moins que les parties contractantes aient convenu de prescrire l'application de règles spéciales, ou autorisé les arbitres à régler la question amicalement.

ART. 11. Le Tribunal ne pourra pas siéger sans le consentement des trois arbitres. Si la minorité, après avoir été régulièrement convoquée, ne désire pas prendre part aux délibérations ou autres actes de la procédure, le Tribunal devra alors être composé avec une majorité des arbitres et mention sera faite dans le procès-verbal de l'absence volontaire ou injustifiable de la minorité.

La décision de la majorité des arbitres devra être finale, mais s'il arrivait que le tiers-arbitre ne partageât pas l'opinion des deux autres arbitres nommés par les parties, alors ce serait son jugement qui serait décisif.

ART. 12. Le jugement arbitral devra décider définitivement sur chaque point contesté et dire pourquoi. Il devra être rédigé en deux originaux signés par tous les arbitres. Si l'un d'eux refuse d'y apposer sa signature, les autres devront constater le fait dans un rapport spécial de la procédure et la décision sera finale pourvu qu'elle soit toutefois signée par la majorité des arbitres.

L'arbitre dissident se bornera à exprimer son dissentiment au moment de la signature du jugement sans toutefois donner ses raisons.

ART. 13. Chaque partie devra être notifiée de la décision par son représentant devant le Tribunal.

ART. 14. La sentence, prononcée légalement, décidera dans les limites de ses pouvoirs, du différend qui s'est élevé entre les parties.

ART. 15. Le Tribunal devra fixer, dans le jugement, la période pendant laquelle ce dernier devra être exécuté, ayant aussi le droit de trancher les difficultés qui pourront surgir de son exécution.

ART. 16. Le jugement est sans appel et les nations signataires devront s'y conformer sur l'honneur.

Néanmoins, dans les cas suivants, on pourra en demander la révision devant le même Tribunal qui a prononcé la sentence, pourvu que cette demande soit faite avant l'expiration de l'époque fixée pour son exécution:

1°. Si le jugement a été rendu à la suite de documents faux et frauduleux.

2°. Si la décision a été prise, en totalité ou en partie, à cause d'une erreur de fait provenant de plaidoiries ou de preuves par écrit.

ART. 17. Chacune des parties devra payer ses dépenses personnelles et une moitié des frais généraux du Tribunal d'arbitrage.

ART. 18. Le présent Traité sera en vigueur pendant dix ans à partir de la date de l'échange de ses ratifications et s'il n'est pas dénoncé six mois avant la date de son expiration, il sera renouvelé pour une autre période de dix années et ainsi successivement.

Le présent Traité devra être ratifié et les ratifications échangées à Buenos-Ayres durant les six mois qui suivront sa date.

En foi de quoi, les Plénipotentiaires de la République Argentine et de la République de l'Uruguay ont signé, en duplicata, le présent Traité et y ont apposé leur sceau dans la ville de Buenos-Ayres, le 8 juin 1899.

[Signé.]

AMANCIO ALCORTA. [SCEAU.]

[Signé.]

PABLO PÉREZ GOMAR. [SCEAU.]

LOI No. 4044.

Le Sénat et la Chambre des Députés de la République Argentine, réunis en Congrès, etc., sanctionne avec force de loi:

ARTICLE 1^{er}. Le Traité Général d'Arbitrage signé dans la ville de Buenos-Ayres, le 8 juin 1899, par les Plénipotentiaires de la République Argentine et de la République de l'Uruguay, dûment autorisé dans ce but, l'art. 3 étant amendé comme suit: "Art. 3. Dans chaque contestation qui se présentera, un Tribunal d'Arbitrage sera constitué qui devra résoudre les questions soulevées. Si un désaccord existe dans la formation du Tribunal d'Arbitrage, ce dernier devra être composé de trois juges. Chaque Etat devra nommer un arbitre et

ces derniers devront à leur tour en choisir un troisième. S'ils ne peuvent pas s'entendre sur sa nomination, il sera désigné par le Président d'un troisième Etat qui sera choisi par les arbitres nommés par les parties intéressées. Si les arbitres ne sont pas d'accord sur le choix de la dernière nomination, chacune des parties devra désigner une nation différente et le troisième arbitre devra être nommé par les deux nations ainsi requises.

“L'arbitre choisi de cette manière sera, de droit, Président du Tribunal. Ne pourra être nommée troisième arbitre une personne qui, en cette qualité, aura prononcé un jugement dans une affaire judiciaire ayant rapport à ce Traité.”

ART. 2. Ce Traité sera communiqué au Pouvoir Exécutif.

Fait dans la chambre des sessions du Congrès Argentin à Buenos-Ayres, le 18 décembre 1901.

(Signé)

JOSÉ E. URIBURU,

B. OCAMPO,

Secrétaire du Sénat.

(Signé)

BENITO VILLANUEVA,

ALEJANDRO SORANDO,

Secrétaire de la Chambre des Députés.

A une réunion qui a eu lieu au Ministère des Affaires Etrangères de la République Argentine, Leurs Excellences, Señor Doctor Don AMANCIO ALCORTA, Secrétaire des Relations Extérieures de la République Argentine, et Señor Doctor Don GONZALO RAMÍREZ, Envoyé Extraordinaire et Ministre Plénipotentiaire de la République de l'Uruguay, étant d'accord sur les modifications apportées au Traité Général d'Arbitrage, dans la partie qui réfère à la formation du Tribunal d'arbitrage, passé entre les deux Gouvernements le 8 juin 1899, et dans le but de pouvoir l'instituer sans les objections que pourrait soulever l'établissement d'un Tribunal permanent, ont convenu de ce qui suit:

L'article 3 du Traité en question est ainsi modifié:

“Art. 3. Dans chaque affaire qui se présentera, un Tribunal d'Arbitrage devra être constitué qui devra régler les différends. Si un désaccord a lieu dans la formation du Tribunal d'Arbitrage, ce dernier sera composé de trois juges. Chaque Etat devra nommer un arbitre et ces derniers devront, à leur tour, en désigner un troisième. S'ils ne peuvent pas arriver à une entente quant au choix de ce troisième arbitre, cette nomination devra être faite par le Président d'un troisième Etat qui sera choisi par les arbitres déjà choisis par les parties. Si le choix de ce troisième arbitre ne convient pas aux autres arbitres, chacune des parties devra désigner une nation différente et le troisième arbitre sera choisi par ces deux nations.

“L'arbitre nommé de cette manière, sera, de droit, Président du Tribunal.

“Aucune personne ne pourra être troisième arbitre si elle a, en cette qualité, prononcé une sentence dans un procès ayant rapport à ce Traité.”

Le présent Protocole devra être ratifié et échangé simultanément avec le Traité d'Arbitrage dont il formera une partie intégrale.

En foi de quoi, deux copies de ce Traité ont été signées dans la ville de Buenos-Ayres, le 21 décembre 1901.

(Signé) AMANCIO ALCORTA. [SCEAU.]

(Signé) GONZALO RAMÍREZ. [SCEAU.]

Attendu que, ayant vu et examiné le Traité et Protocole précités, je les accepte, approuve et ratifie, promettant et acceptant au nom de la nation de les faire observer fidèlement.

En foi de quoi, je signe la présente ratification sur laquelle j'applique le Grand Sceau des Armes de la République et qui a été contresignée par le Ministre des Affaires Etrangères et des Cultes.

Fait à Buenos-Ayres, capitale de la République Argentine, le 12 janvier 1902.

JULIO ROCA.

AMANCIO ALCORTA.

ACTE DE RATIFICATION.

Réunis dans les bureaux du Ministère des Affaires Etrangères et des Cultes de la République Argentine, le Secrétaire d'Etat de ce Département, le Docteur AMANCIO ALCORTA et le Chargé d'Affaires par intérim de la République de l'Uruguay, le Docteur PABLO PÉREZ GOMAR, dans le but d'effectuer l'échange des Ratifications du Traité Général d'Arbitrage et du Protocole additionnel, signé à Buenos-Ayres le 8 juin 1899 et 21 décembre 1901, par les Plénipotentiaires des deux pays dûment autorisés dans ce but, et après avoir comparé avec soin les textes des Ratifications respectives qui ont été trouvées en bonne et due forme, ont fait l'échange dont il s'agit, après la présentation de leurs Pleins Pouvoirs.

En foi de quoi, ils ont signé, en duplicata, le présent acte de ratification, dans la ville de Buenos-Ayres, le 18 janvier 1902, et y ont affixé leurs sceaux respectifs.

SUPERFICIE ET PRIX DES TERRAINS DANS LES TERRITOIRES NATIONAUX.

Le Ministre de l'Agriculture vient d'adresser au consul argentin à Sydney, capitale de la Nouvelle-Galles du Sud (Australie), des renseignements relatifs à la superficie, en acres, des terrains publics situés dans les territoires que les colons prévoyants peuvent acheter ou louer de leur Gouvernement. D'après ceci, on peut voir que le nombre total d'acres de ces terrains est de 237,788,343, divisés comme suit: Chaco, 32,182,861 acres; Chubut, 55,687,983 acres; Formosa, 21,430,165 acres; Misiones, 1,956,240 acres; Neuquen, 15,249,923 acres; Pampas,

7,718,261 acres; Rio-Negro, 37,266,057 acres; Santa-Cruz, 61,626,144 acres; Terre de Feu, 4,840,418 acres. Aux dernières ventes de ces terrains, voici les prix que l'on a obtenus, par acre, dans les territoires en question: Chubut, 16 cents; Neuquen, 16 cents; Santa-Cruz, 30 cents; Terre de Feu, 40 cents.

Les territoires en question sont situés ainsi: Formosa et Chaco, au nord-est sur la frontière du Paraguay; Chubut, au sud du centre du pays qui s'étend depuis l'Océan Atlantique jusqu'à la frontière chilienne; Misiones, à l'extrême nord-est adjacent du Brésil et du Paraguay; Neuquen, à l'extrême ouest; Pampa, immédiatement à l'est de la frontière de Neuquen; Rio-Negro, juste au sud de Neuquen et Pampa; Santa-Cruz, directement au sud de Chubut et Terre de Feu, se trouve à l'extrémité sud-est du continent. Rio-Negro, Chubut, Santa-Cruz et Terre de Feu (dans l'ordre cité, du nord au sud) sont des subdivisions des portions du territoire de l'Argentine, jadis connues sous le nom de Patagonie.

Les immigrants peuvent obtenir de plus amples renseignements relatifs aux avantages offerts par le Gouvernement aux colons, en s'adressant au Ministre de l'Agriculture à Buénos-Ayres. Dans sa communication au consul à Sydney, le Ministre de l'Agriculture dit que la superficie des terrains actuellement en culture dans la République est de 17,174,250 acres, contre seulement 7,478,700 acres en 1880. La plus grande partie des terres de la République est consacrée au pâturage et à l'élevage du bétail.

TRAFFIC DANS LE PORT DE LA PLATA EN 1901.

Le tableau suivant montre le nombre de bateaux à vapeur qui sont entrés dans le port de La Plata pendant l'année 1901: anglais, 192; allemands, 5; italiens, 8; français, 32; danois, 3; russes, 2; norvégiens, 1; espagnols, 8; argentins, 1; autrichiens, 4; hollandais, 2; total, 258.

Les navires à voile arrivés dans ce port pendant l'année appartenaient aux nations suivantes: Angleterre, 1; Italie, 1; Espagne, 2; Uruguay, 1; République Argentine, 1; total, 6.

Le même nombre de bateaux quittèrent aussi le port en emportant les articles suivants:

UN BUREAU DE JOURNAL GRANDIOSE DANS L'AMÉRIQUE DU SUD.

Dans le "World's Work" du mois de février 1902, M. BERNARD MEIKLEJOHN fait la description d'un bureau de journal qui est probablement le plus remarquable du monde; il parle de celui de "La Prensa" de Buenos-Ayres. Situé sur le plus joli boulevard de la ville, cet édifice imposant par sa grandeur et sa beauté est construit de marbre blanc, a cinq étages et est surmonté d'une tour couronnée d'une figure en bronze doré, symbole de la presse. Au rez-de-chaussée, outre les bureaux des affaires courantes, se trouvent un cabinet de consultation luxueux, où un docteur en médecine et cinq aides donnent journellement, gratis, des soins à environ 100 clients; une étude d'avocat où les indigents peuvent consulter, sans payer d'honoraires, l'homme de loi et un musée dans lequel sont rassemblés et exposés à la vue du public, sans frais, les produits naturels et manufacturés de la République Argentine. Au second étage sont situés les bureaux somptueux du propriétaire, du rédacteur-en-chef et de la rédaction. Au même étage se trouve aussi une bibliothèque immense renfermant une riche collection d'ouvrages, particulièrement tous ceux ayant trait aux lois, à la médecine et au génie. Cette bibliothèque est continuellement ouverte aux étudiants qui peuvent venir s'y instruire, sans aucun paiement. Dans une salle contigue l'espagnol est enseigné, aux frais du journal, à toutes les personnes désireuses d'acquérir une connaissance de cette langue. Il y a aussi une salle immense où les habitants de la ville peuvent, s'ils le désirent, réunir en séance une assemblée. Les étrangers de distinction qui visitent Buenos-Ayres trouvent au troisième étage la chose la plus remarquable de l'établissement, un appartement splendide pour leur réception. Il y a, en outre, une "Salle des Fêtes" qui est une copie exacte de celle de Fontainebleau, où des réunions scientifiques, littéraires et de charité sont tenues sur l'invitation de "La Prensa." L'idée du propriétaire, en mettant à la disposition des étrangers de tels appartements est de glorifier la ville. Au dernier étage sont les salles où se trouvent les compositeurs, les machines à composer, les bureaux des journalistes, un restaurant et une salle d'escrime. "La Prensa" est un journal de huit pages, celles intérieures étant consacrées aux nouvelles et celles extérieures aux annonces. Il fut fondé en 1869, par M. J. C. P. PAZ, rédacteur-en-chef et propriétaire. Le rédacteur-en-chef actuel est son fils, M. EZEQUIEL P. PAZ. L'édifice fut terminé en 1896 et coûte \$2,000,000 en or. "La Prensa" a une circulation de 100,000 copies, se vendant, chacune, trois cents en monnaie courante des Etats-Unis. Les rapports de son trésorier montrent que, pendant les six premiers mois de 1901, les recettes générales se sont montées à \$1,033,905.17 or et les dépenses à environ \$650,000. Presque tout le matériel d'exploitation de cet établissement magnifique a été

acheté aux Etats-Unis, qui continuent à l'approvisionner de tout le papier dont il a besoin.

ESTIMATION DES RÉCOLTES DU BLÉ ET DE LA GRAINE DE LIN.

Le tableau suivant donne, en tonnes, les quantités de blé et de graine de lin produites dans la République pendant l'année 1901-2:

Provinces.	Blé.	Graine de lin.
	<i>Tonnes.</i>	<i>Tonnes.</i>
Buenos-Ayres	1,150,000	154,000
Santa-Fé	500,000	122,000
Entre-Ríos	133,000	42,000
Cordoba	70,000	9,500
Toutes les autres	70,000
Total	1,923,000	327,500

RECENSEMENT DU BÉTAIL.

La Direction de l'Agriculture a publié les résultats définitifs du recensement général du bétail effectué par ses soins au cours de l'année 1900. D'après ces chiffres fournis par l'Administration l'existence en bétail de toutes sortes serait la suivante:

Race bovine, 6,827,428 têtes; race ovine, 18,608,717 têtes; race chevaline, 561,408; race caprine, 20,428; race porcine, 22,992; total, 26,134,896 têtes.

D'après les chiffres publiés en 1898 l'existence à cette époque était de 20,779,109 têtes, de sorte que l'augmentation pour les deux années écoulées serait de 5,355,787 têtes, dont 2,006,753 correspondant à la race bovine et 2,071,828 à la race ovine.

RECETTES DES DOUANES EN 1901.

Le bureau de douane de Buenos-Ayres a perçu pendant l'année 1901, pour divers impôts aux marchandises importées ou exportées la somme de 34,509,546 piastres or, et 201,629 piastres papier ce qui constitue une augmentation de 734,546 piastres or et de 81,629 piastres papier sur les prévisions budgétaires, mais une diminution de 972,822.74 piastres or sur la recette de l'année antérieure.

BRÉSIL.

EXTRAIT DE LA LOI BUDGÉTAIRE.

Le "Diario Official" du 27 décembre 1901, publie un extrait de la loi budgétaire N° 813 du 23 décembre 1901, dont voici la teneur:

ART. 6. Seront exempts à l'entrée les instruments agricoles et les appareils pour la fabrication ou le traitement des produits agricoles lorsque ces articles seront directement importés par des agriculteurs; bénéficieront du même régime les appareils destinés à l'industrie laitière.

PARAGRAPHE UNIQUE. A cet effet, le dédouanement des articles dont il s'agit sera ordonné par le Ministre des Finances sur la présentation de la nomenclature des objets importés, et après qu'il aura été établi qu'ils seront introduits directement par des agriculteurs.

ART. 7. Ne seront assujettis qu'à un simple droit fixe de £2 les bâtiments à vapeur ou à voiles de toute sorte, quels que soient leur tonnage ou leur cargaison, qui se présenteront dans un port quelconque de l'Union dans le seul but de recevoir des ordres et de se rendre ensuite à leur port de destination. Ces navires pourront rester pendant dix jours sous la garde de l'administration douanière, mais ils devront se conformer aux règlements sanitaires ou de police des ports, et ils pourront recevoir des vivres, de l'eau, ou du combustible.

§1. Le droit dont il s'agit comprend tous impôts douaniers, ainsi que toutes autres taxes, auxquels pourraient être assujettis ces bâtiments.

§2. Le délai de dix jours pourra être prorogé de cinq jours par l'inspecteur de la douane, sous réserve des cas de force majeure qui devront être justifiés.

Après le délai de cinq jours, le navire ou navire à vapeur sera assujetti au même régime que les bâtiments qui font à la douane la déclaration régulière des marchandises tant à l'entrée qu'à la sortie.

ART. 8. Le prélèvement des 25 pour cent en or des droits d'importation, dont 5 pour cent continueront à être affectés au fonds de garantie, s'effectuera comme par le passé, conformément à la loi N° 741 du 26 décembre 1900.

ART. 15. Par modification à la loi N° 641, du 14 novembre 1899, l'article 3, §1 de ladite loi aura la teneur suivante:

ART. 3, §1. Cigares ne valant pas plus de 30 milreis, 5 reis pièce.

COMMERCE AVEC LA FRANCE.

D'après des renseignements publiés par le "Bulletin Commercial Français" de Rio de Janeiro, l'importation en France des produits brésiliens, pendant les dix premiers mois de 1901, s'est élevée à 58,574,000 francs ou 5,921,000 francs de moins que pendant la même période en 1900;

l'exportation des produits français au Brésil n'a été que de 26,415,000 francs ou 3,289,000 francs de moins qu'en 1900.

Le stock de café dans les divers entrepôts de la France était au 31 octobre 1901 de 1,301,159 tonnes contre 1,158,563 tonnes en 1900 et 1,149,301 tonnes en 1899.

MOUVEMENT MARITIME DU PORT DE SANTOS.

Pendant l'année 1901, il est entré dans le port de Santos 913 navires, dont 847 à vapeur et 73 à voile.

Les navires à vapeur entrés ont représenté un tonnage total de 1,225,514 tonnes. Ils appartiennent aux nationalités suivantes: brésilienne, 316 navires; anglaise, 193; allemande, 137; française, 95; italienne, 65; espagnole, 21; autrichienne, 18; belge, 6; autres nationalités, 5.

COSTA RICA.

CONVENTION COMMERCIALE AVEC LA FRANCE.

La "Revue du Commerce Extérieur" du 22 mars 1902, fait connaître qu'une loi du 5 février courant a autorisé le Président de la République à ratifier et à faire exécuter la convention commerciale signée le 7 juin 1901 entre la France et la République de Costa Rica. Cette convention a paru dans le BULLETIN MENSUEL du Bureau pour le mois de septembre 1901.

Les ratifications ayant été échangées le 10 février, cet arrangement a été rendu exécutoire par un décret du 20 du même mois, inséré au "Journal Officiel" du 22. Il stipule l'admission au tarif minimum en France, en Algérie, dans les colonies et possessions françaises, y compris l'Indo-Chine, et en Tunisie, des denrées coloniales (autres que le sucre et ses dérivés, et que les tabacs) originaires de Costa-Rica.

En échange de cette concession, les produits naturels et fabriqués, originaires de France, d'Algérie, des colonies et possessions françaises, de l'Indo-Chine et de la Tunisie bénéficieront du régime prévu par l'article 2 de la convention.

Aux termes de l'article 3, les certificats d'origine qui pourront être exigés pour l'application du régime de faveur seront visés par les Consuls des deux pays en gratuité des taxes de chancellerie.

EQUATEUR.

EXPORTATIONS DE CAOUTCHOUC.

D'après le rapport de la Chambre de Commerce de Guayaquil, on aurait exporté de l'Equateur, pendant l'année 1900, 1,103,511 livres de caoutchouc, contre 1,441,823 livres en 1899; 1,588,660 livres en

1898 et 1,121,288 livres en 1897. La diminution est due, dit-on, au fait que les "caucheros" (cueilleurs de caoutchouc) qui ont commencé à travailler dans les forêts sauvages de l'intérieur et des provinces orientales, n'ont, pour les seconder, aucune facilité et retournent épuisés de fatigue. La consommation de cette gomme a pris de telle proportion que le président de la chambre de commerce a pensé que l'époque était arrivée pour demander au Gouvernement d'encourager, par tous les moyens possibles, les explorateurs, son appui devant commencer par la construction de nouvelles routes conduisant aux sections productrices.

Le droit d'exportation imposé sur le caoutchouc de l'Equateur a été réduit de 20 centavos à 15 centavos, argent, par kilogramme (8.07 centavos à 6.80 centavos par livre, le taux actuel étant égal à 3.40 cents or par livre.

ETATS-UNIS.

COMMERCE EXTÉRIEUR, FÉVRIER 1902.

Un exposé sommaire du commerce extérieur des Etats-Unis montre, que pendant le mois de février 1902, les importations ont augmenté de \$3,778,349 et les exportations diminué de \$11,431,282. L'augmentation constatée dans les importations est due presque entièrement à l'entrée d'articles employés dans les différents procédés de l'industrie du pays, comme le prouve le fait que l'augmentation des articles manufacturés n'était seulement que de \$97,611 et celle des articles de luxe seulement de \$387,226, pendant que les importations des denrées alimentaires ont diminué de \$3,485,295.

Voici quelles étaient, pendant le mois de février 1902, les importations des Etats-Unis comparées avec celles du même mois de 1901:

Classification.	1902.	1901.
Denrées alimentaires et animaux.....	\$13,517,533	\$17,002,828
Articles bruts entrant dans les différents procédés de l'industrie du pays.	26,168,648	19,534,322
Articles entièrement ou partiellement manufacturés, destinés à être employés comme matériaux dans les manufactures et les arts mécaniques.	6,202,131	6,057,652
Articles manufacturés pour la consommation	11,974,521	11,876,910
Articles de luxe	10,417,215	10,029,987
Total.....	68,280,048	64,501,699

Le pourcentage des importations exemptes de droits de douane était, en février 1902, de 45.63, contre 39.84 en février 1901. Pendant le mois de février 1902, le total des droits de douane perçus se montait à \$20,213,930, contre \$18,719,598 en février 1901.

Pendant les huit mois de l'année fiscale (juillet-février) les importations ont, en comparaison de la même période de l'année fiscale antérieure, augmenté de \$70,857,206. L'augmentation constatée dans

les importations des articles bruts entrant dans les différents procédés de l'industrie du pays, était de \$57,124,831; celle des articles de luxe, de \$11,021,290; celle des articles manufacturés, \$9,347,108, pendant que la diminution des importations des denrées alimentaires et animaux était de \$6,636,043.

Pendant les deux périodes de huit mois, les totaux des importations étaient: 1902, \$594,397,046; 1901, \$523,539,840. Les pourcentages des importations exemptes de droits, pendant les deux périodes en question, étaient respectivement 43.66 et 38.79. Le total des droits de douane perçus pendant les huit mois de 1902 était de \$168,571,246, contre \$159,175,618 en 1901.

D'après les statistiques officielles, voici quelles étaient les exportations des Etats-Unis pendant le mois de février 1902, comparées avec celles du même mois de l'année précédente:

Classification.	1902.	1901.	Diminution.
Produits agricoles.....	\$60,662,119	\$73,054,202	\$12,392,083
Produits manufacturiers.....	31,740,842	30,302,592	*1,438,250
Produits miniers.....	2,433,704	2,723,794	290,090
Produits forestiers.....	3,383,217	3,846,385	463,168
Produits des pêches.....	518,031	405,482	*112,549
Produits divers.....	939,096	667,230	*271,866
Produits étrangers réexportés.....	1,848,723	1,957,329	108,606
Total général.....	101,525,732	112,957,014	11,431,282

* Augmentation.

Pendant les huit mois de l'année fiscale 1902, la valeur des exportations se montait à \$974,185,414, soit \$41,009,570 de moins que pendant la période correspondante de 1901. La diminution qui s'est produite dans les exportations est due aux exportations de maïs et à celles des manufactures de fer et d'acier qui ont été moins grandes en 1902 que pendant la même période de l'année fiscale antérieure. Pendant les huit mois de l'année fiscale 1902, les Etats-Unis ont exporté 23,146,599 boisseaux de maïs tandis que pendant la période correspondante de l'année fiscale précédente ils en avaient exporté 132,625,656 boisseaux. Durant la même période les exportations de farine de maïs n'étaient seulement que de 261,505 barils, contre 653,766 barils pendant les huit mois de 1901, valant respectivement \$14,580,585 et \$62,122,901. La diminution qui s'est produite dans les exportations de maïs se monte à \$47,542,324 et est due à la récolte peu abondante de cette céréale produite aux Etats-Unis pendant l'année 1901. La valeur des exportations des manufactures de fer et d'acier, pendant les huit mois finissant avec le mois de février 1902, était de \$64,668,424 et se montait à \$81,575,685, pendant la même période de 1901 soit une diminution de \$16,807,261, attribuable aux demandes moins nombreuses des pays étrangers et à une plus grande consommation de ces produits aux Etats-Unis.

LOCOMOTIVES AMÉRICAINES EXPORTÉES EN FRANCE ET À LA NOUVELLE-ZÉLANDE.

Deux fortes commandes de locomotives ont été récemment exécutées par des constructeurs américains pour des compagnies françaises et nouvelle-zélandaises. La Baldwin Locomotive Works, de Philadelphie, a envoyé en France un de ses meilleurs modèles des fameuses locomotives Atlantic, pour être employé dans le service des grands trains express de la Compagnie Paris-Lyon-Méditerranée, et la Richmond Works de l'American Locomotive Company, de New York, a construit une machine monstre à dix roues qui sera mise sous peu en service sur la ligne du Gouvernement de la Nouvelle-Zélande. La locomotive du genre Atlantic de la Baldwin Works est principalement destinée au service des trains rapides là où une vitesse soutenue est désirée. Celle à laquelle il est fait allusion ci-dessus a été construite dans ce but, et a suffisamment de puissance pour tirer un train lourd à une grande vitesse. Sa force de traction est de 16,621 livres au départ, et a une vitesse de 55 milles à l'heure, on peut se fier à une force de traction de 4,500 livres. La machine pour la Nouvelle-Zélande a été construite à titre d'échantillon et elle est considérée comme un excellent spécimen des dernières constructions américaines. D'après la "Locomotive Engineering," la tendance actuelle aux Etats-Unis de la construction des locomotives pour l'exportation est "de faire la locomotive américaine pur et simple, au lieu de l'hybride qu'on demandait d'habitude il ya quelques années." Ceci est dû principalement, dit-on, à la disposition qu'a maintenant l'acheteur étranger de demander le genre américain pur.

LE CHARBON AMÉRICAIN DANS LA MÉDITERRANÉE.

Le "Colliery Guardian," qui est le principal organe en Angleterre pour le commerce du charbon, discute tout au long, dans un numéro récent, la question de savoir si les Etats-Unis peuvent faire concurrence à l'Angleterre pour le charbon dans la Méditerranée. L'article termine en disant qu'à présent, avec la concurrence américaine qui a été constamment perdue de vue par ceux qui la repousse, il n'est plus question de savoir si les américains peuvent faire concurrence aux anglais pour le charbon, mais bien s'ils le veulent. L'article dit en outre: "Au cas où l'activité présente des Etats-Unis viendrait à diminuer, nous ne doutons pas que de grands chargements de charbon de Pocahontas et de Fairmont soient expédiés en Europe en tenant peu compte des bénéfices ou des pertes. Telle est l'alternative américaine que laisse sa restriction au rendement afin de maintenir les prix. Nous avons jusqu'à présent parlé du charbon bitumineux, mais tout récemment encore une grande agitation a été causée par la déclaration que les marchés européens ont été inondés de charbon anthracite des

régions du Wyoming et de Schuylkill. Par suite d'une reprise du commerce intérieur des Etats-Unis, toutes les exportations ont été soudainement arrêtées. Si nous mentionnons le fait que le meilleur charbon anthracite de Pennsylvanie revient à 23s. à New-York et que l'on calcule qu'avec un rendement régulier de 60,000,000 de tonnes par an, les mines entières seront épuisées en quatre-vingts ans environ (le rendement l'année dernière a dépassé 53,000,000 tonnes), on comprendra donc que le charbon anthracite est seulement exporté pour empêcher que le marché américain ne soit surchargé."

DROITS ADDITIONNELS APPLICABLES À L'IMPORTATION DES SUCRES PROVENANT DES PAYS-BAS ET DE L'AUTRICHE-HONGRIE.

Conformément aux circulaires du Ministère des Finances, No. 106 de 1901 et No. 2 de 1902, des droits additionnels seront applicables à l'importation des sucres provenant des Pays-Bas et de l'Autriche-Hongrie.

Aux termes de l'article 5 de l'Acte du 24 juillet 1897, notification est faite des primes nettes actuellement accordées par les Gouvernements des Pays-Bas et de l'Autriche-Hongrie à l'exportation des sucres. Pour la perception aux Etats-Unis des droits additionnels applicables aux sucres de production de ces pays, le montant de ces primes est désigné respectivement ci-après:

PAYS-BAS.

Florins.

- | | |
|---|-------|
| 1°. Sucre de betteraves, brut, les 100 kilos. de sucre dur, raffiné..... | 1. 38 |
| (Le rendement du sucre raffiné provenant du sucre brut sera déterminé en déduisant du degré de polarisation du sucre brut, le coefficient 2 pour le glucose, 4 pour les cendres et 1½ pour cent à titre de déchet de fabrication au raffinage.) | |
| 2°. Sucre raffiné provenant de sucre de betteraves, brut, de production hollandaise, les 100 kilos..... | 1. 57 |
| 3°. Sucre raffiné provenant de sucre brut importé, les 100 kilos, en plus de la prime accordée, le cas échéant, pour le sucre brut dans le pays de production.. | . 19 |

Jusqu'à la prochaine constatation et notification de primes, ainsi que cela est stipulé à l'article 5 dudit acte de 1897, on pourra, à la demande des importateurs, surseoir au dédouanement définitif des expéditions de sucres d'origine hollandaise, produits à partir du 1^{er} septembre 1901. Les droits seront alors calculés d'après les primes ci-dessus.

AUTRICHE-HONGRIE.

Couronnes.

- | | |
|---|-----------------------|
| 1°. Sucre ayant moins de 99.3 pour cent et pas moins de 90 pour cent de degré de polarisation | les 100 kilos.. 2. 47 |
| 2°. Sucre ayant au moins 99.3 pour cent de degré de polarisation..... | id.... 3. 55 |

Jusqu'à la prochaine constatation et notification de primes, ainsi que cela est stipulé à l'article 5 susmentionné, on pourra surseoir au

dédouanement définitif des expéditions de sucre d'origine austro-hongroise produit à partir du 1^{er} août 1901.

Les droits seront donc calculés d'après les primes indiquées ci-dessus, sous réserve de procéder aux liquidations définitives suivant les primes qui seront ultérieurement notifiées.

L'INDUSTRIE DE LA VOLAILLE ET DES ŒUFS.

Le rapport du Bureau de Recensement, publié le 22 mars 1902, montre que 5,096,252 des 5,739,637 fermes des Etats-Unis élèvent de la volaille. Le nombre total des volailles âgées de trois mois et plus, se divise comme suit: poulets, y compris les poules de Guinée, 233,598,085; dindons, 6,599,367; oies, 5,676,863; canards, 4,807,358. Les nombres de presque toutes ces classes de volailles sont plus petits en 1900, disent les rapports, qu'en 1890, et cela, parce que en 1890 les rapports comprenaient toutes les volailles de tous âges, tandis qu'en 1900 ils ne donnaient que celles âgées de trois mois et plus.

En 1899 le nombre de douzaines d'œufs pondus se montait à 1,293,819,186, contre 819,722,916 douzaines en 1889. Une augmentation dans le nombre d'œufs pondus plutôt que dans le nombre des espèces différentes de volailles, montre les progrès faits dans cette branche de l'industrie. La valeur des volailles qui se trouvaient dans les fermes au 1^{er} juin 1900 était de \$85,794,996; celle des volailles élevées en 1899 se montait à \$136,891,877, et celle des œufs pondus en 1899 était de \$144,286,158. En 1899 les revenus que les fermiers ont tiré de cette industrie, représentant aussi bien la valeur totale des œufs pondus que celle produite par l'élevage des volailles, se montaient à \$281,178,035. D'après ce dernier total, on voit que l'élevage des volailles est une des plus grandes industries qui se rattachent à l'agriculture. Les chiffres précédents ne comprennent aucune statistique relative aux volailles et aux œufs, élevées ou pondus, en dehors des fermes ou des "ranches."

STATISTIQUES RELATIVES AUX MOUTONS, AUX CHÈVRES ET À LA LAINE.

D'après les rapports du Bureau de Recensement, il existait aux Etats-Unis, à la date du 1^{er} juin 1900, 39,937,573 moutons âgés de un an et plus qui ont produit, pendant l'automne de 1899 et le printemps de 1900, 44,092,948 toisons, pesant 276,991,812 livres de laine non lavée.

Le fait que le nombre de toisons surpasse celui des moutons est dû à ce que dans certaines sections du pays, le même mouton donne deux toisons, une pendant la tondaison d'automne et l'autre pendant celle du printemps. Les Etats occidentaux, disent les rapports, fournissent plus d'une moitié des moutons et de la laine; l'Etat de Montana produisant le plus grand nombre de ces animaux et la plus large quantité de laine et l'Etat de Wyoming vient après.

En ce qui concerne les chèvres, les rapports du Bureau de Recense-

ment donnent à 1,871,252 le nombre total de chèvres de tous âges, le plus grand nombre se trouvant au Texas, le total dans ce dernier Etat excédant de un tiers toutes les chèvres des Etats Unis; le Mexique contient après le plus grand nombre.

LE FER ET L'ACIER.

Le fer et l'acier, dit le "Export Implement Age" du mois de mars 1902, sont les principaux articles de la production américaine. La demande intérieure est si considérable que l'exportation de ces métaux n'est qu'une bagatelle si on la compare aux énormes quantités employées dans les fabriques américaines. La construction des chemins de fer absorbe évidemment une grande quantité d'acier, mais les fabriques de leur côté n'en exigent pas moins. C'est surtout grâce à la provision intérieure de fer, d'acier et charbon que les fabricants américains sont à même de vendre à meilleur marché que ceux de quelques autres pays. Si les américains excellent dans le commerce, il faut dire qu'ils sont favorisés par les dons de matières premières que leur prodigue leur pays, et s'ils s'ouvrent des voies de tous côtés les avantages naturels qu'ils possèdent ne les y aident pas médiocrement.

LA CONSTRUCTION DES NAVIRES.

Durant les six mois prenant fin au 31 décembre 1901, 717 vaisseaux à voiles, de 154,073 tonnes, ont été construits aux Etats-Unis et officiellement enregistrés par le Bureau de Navigation, tandis que dans la dernière moitié de 1900, il y avait 568 vaisseaux dont le tonnage s'élevait à 179,229 tonnes. Cette diminution dans le tonnage (19,752 tonnes) s'est produite sur la côte de l'Atlantique et peut être attribuée au travail fait sur plusieurs grands steamers de haute mer qui seront complétés dans les six mois à venir. Inclus dans les chiffres des six mois se trouvent 38 vaisseaux, de plus de 1,000 tonnes chacun et formant un total de 103,832 tonnes. Parmi ceux-ci, 14 steamers d'acier, formant un total de 52,310 tonnes, ont été construits sur les grands lacs. Quatre sont pour la côte. Sur la côte on a construit 15 schooners en bois d'un total de 24,864 tonnes, 5 steamers d'acier pour le cabotage et 1 bac d'acier, formant un total de 20,964 tonnes. La cause de cet accroissement rapide se trouve dans le développement de la puissance commerciale des Etats-Unis et dans les produits de l'activité mécanique et agricole. L'activité agricole américaine est ce qu'elle est, à cause des machines, et les machines qui n'utilisent pas les perfectionnements mécaniques ne tarderont pas à souffrir de la concurrence.

UN MOTEUR POUR LA FERME.

La revue mensuelle "Export Implement Age" du mois de mars 1902, publie un article très intéressant, extrait de la "Agricultural Engineer," dont voici la teneur:

Un des perfectionnements agricoles les plus merveilleux et qui verra

sans doute sa réalisation dans le cours du vingtième siècle, sera l'invention d'un bon moteur de six chevaux pour la ferme.

Il n'y a pas un instrument de ferme fonctionnant à l'aide de deux chevaux ou plus qui ne fût de meilleur travail s'il était actionné par un moteur.

Un fermier, avec un moteur convenable, pourrait employer une charrue qui lui permettrait de labourer à 4 pouces des pieux d'une clôture sans les toucher, et n'aurait pas besoin de tourner aux bouts du champ, il lui suffirait de faire machine en arrière.

Il ne serait pas plus arrêté par les pierres que lorsqu'il fait usage d'un cultivateur à dents élastiques; il pourrait, quand le travail presserait, travailler autant d'heures qu'il y en a dans un jour; il serait en tous temps à l'abri du soleil, du vent, de la pluie ou du froid, s'il le désirait; il pourrait employer une fancheuse ou une moissonneuse avec le couteau immédiatement en avant, ce qui supprimerait l'ennuyeuse nécessité de faucher à la main les bordures du champ ou de fouler aux pieds le foin ou le grain.

Il pourrait s'asseoir ou se tenir debout à son choix pendant qu'il labourerait ou sèmerait, moissonnerait ou faucherait, arroserait ou sarclerait. Il pourrait ainsi faire son travail plus vite et mieux qu'avec les machines tirées par les chevaux.

Avec un moteur, le fermier n'aurait pas besoin de nourrir nombre de chevaux inutiles pendant la morte saison comme il doit le faire aujourd'hui pour en avoir assez pour faire son travail pendant la saison d'activité; il lui suffirait de n'en garder que le nombre strictement nécessaire et pouvant être employé en tous temps, et quand son moteur ne travaillerait pas il ne mangerait pas non plus. Il pourrait promptement détacher son moteur d'un instrument et le fixer à un autre. Il pourrait, avec son moteur fixé à une charrette aux roues à larges jantes ayant une charge de deux bons chevaux, partir sur un champ cultivé et au sol tendre à une vitesse d'un mille à l'heure, augmenter cette vitesse jusqu'à deux ou trois milles à l'heure sur un sol ferme et enfin jusqu'à cinq, huit ou dix milles à l'heure sur une route plane et dure.

RELATIONS COMMERCIALES AVEC L'ESPAGNE.

Les relations commerciales entre les Etats-Unis et l'Espagne ont été renouées évidemment avec bien plus de cordialité et certainement avec une activité plus grande que jamais. Les chiffres du Bureau des Statistiques du Ministère des Finances montrent que pendant l'année civile 1901, les Etats-Unis ont importé, à part une seule exception, une plus grande quantité de marchandises que pendant n'importe quelle année précédente. Pendant l'année finissant le 31 décembre 1901, le total des marchandises importées d'Espagne, se montait à \$7,040,758 et les exportations dans ce dernier pays à \$16,785,711. Si l'on compare l'année 1901 avec celle de 1891, on constatera que le total des marchandises importées d'Espagne, a augmenté de \$4,906,475 à \$7,040,758

et que celui des marchandises que les Etats-Unis ont exporté dans ce pays, a augmenté de \$12,887,477 à \$16,785,711. En comparant la situation actuelle avec les conditions de 1898, on constate que le total des marchandises importées d'Espagne par les Etats-Unis a augmenté de \$3,608,308 à \$7,040,758 et que le total des marchandises exportées des Etats-Unis en Espagne, a augmenté de \$8,050,475 à \$16,785,711.

MINOTERIES EN 1900.

Les statistiques préliminaires relatives aux établissements où les farines destinées au commerce sont préparées, montrent qu'il existait aux Etats-Unis, pendant l'année 1900, 25,258 minoteries au capital total de \$218,714,104; nombre d'ouvriers et employés, 37,073; salaires, \$17,703,418; dépenses diverses, \$10,325,588; coût des céréales employées, \$475,826,345. Etaient compris dans ces céréales, 488,914,004 boisseaux de blé, évalués à \$317,933,257; 241,029,249 boisseaux de maïs, évalués à \$93,882,609, pendant que tous les autres grains coûtaient \$64,010,479.

En 1900, la valeur totale des produits de ces minoteries se montait à \$560,719,063 comprenant 102,524,094 barils de farine de blé évalués à \$348,183,800; 40,035,977 barils de farine de maïs évalués à \$73,177,402, et d'autres produits pour une valeur de \$139,357,861.

MEXIQUE.

NOUVELLE COMPAGNIE MINIÈRE.

La Compagnie Minière des Etats-Unis et du Mexique (The United States and Mexico Mining Company), vient d'être constituée en société commerciale, conformément aux lois d'Arizona, au capital de \$5,000,000. Les propriétés que possède cette compagnie consistent en 11 groupes miniers, formant quatre-vingt douze concessions, situées dans le district minier de Hostotipaquillo, Jalisco, un des plus anciens de la République. Les veines qui se trouvent dans les différentes propriétés sont de très grandes dimensions et ressemblent à de véritables crevasses. Les mines sont facilement asséchées sans que l'on soit obligé d'employer des pompes et on peut obtenir une grande force hydraulique de la rivière Santiago, une chute de 150 pieds étant seulement située à une distance de 2 milles et demi. Les minerais, extraits des différents filons à une profondeur variant de 80 à 250 pieds, ont été plusieurs fois soumis à l'essai et ont rapporté de \$22 à \$600 la tonne.

TOILERIE PROJÉTÉE À TLAXCALA.

Le "Mexican Herald" du 21 mars, 1902, dit que l'on va établir à Tlaxcala une toilerie au capital de \$400,000 (argent). Les actions qui sont de \$100 chacune ont été achetées dans la ville de Mexico, à Puebla

et à Tlaxcala. On dit que le promoteur de l'entreprise, le Colonel GERARDO EMILIO HERRERIAS a, pendant plusieurs années, expérimenté avec succès la culture du lin, la variété connue sous le nom de "Riga." La plupart des toiles de lin en usage au Mexique sont importées d'Angleterre.

LA POPULATION ÉTRANGÈRE.

D'après un rapport adressé dernièrement par un consul étranger à son Gouvernement, Mexico compte 4,000 américains du nord, 10,000 espagnols, 3,000 français, 1,500 anglais, 1,000 allemands et 400 italiens.

Le chiffre total des américains du nord résidant au Mexique est de 10,000, environ.

L'INDUSTRIE DU TABAC.

Les diverses manufactures de tabac établies au Mexique, ont élaboré du 1^{er} janvier au 30 juin 1901, les quantités suivantes:

	Quantité.	Poids.
		<i>Kilos.</i>
Cigarettes.....paquets..	181, 799, 036	3, 055, 131
Cigares ordinaires (recortados).....cigares..	26, 990, 064	249, 912
Cigares fins.....paquets..	30, 553, 342	208, 414
Tabac à priser.....		8
Tabac brisé.....paquets..	10, 206	8, 865
Tabac haché.....do....	793	253

Le Distriet Fédéral vient en première ligne, comme centre de fabrication, avec 1,183,848 kilogrammes de cigarettes (60,061,335 paquets), 9,656,019 cigares ordinaires et 2,349,910 cigares fins.

PÉROU.

PROTOCOLE D'ARBITRAGE AVEC LA BOLIVIE,

A la date du 18 février 1902, M. RICHARD R. NEILL, Secrétaire de la Légation des Etats-Unis à Lima, a fait parvenir au Ministère des Affaires Etrangères à Washington, une copie du Procès-Verbal des conférences tenues entre les Ministres Plénipotentiaires du Pérou et de la Bolivie, soumettant à l'arbitrage les différends qui pourront s'élever entre les deux Républiques. Voici quelles sont les stipulations de ce document:

Les parties contractantes s'engagent à soumettre à l'arbitrage tous les différends qui n'ont pas encore été réglés et tous ceux, quels qu'ils soient, qui pourraient s'élever pendant que le traité sera en vigueur. Le Traité restera en vigueur durant une période de dix ans, à partir de la date des ratifications, et continuera de même pendant une autre période de huit ans et ainsi successivement, à moins qu'il soit dénoncé six mois avant son expiration. Il est entendu que le Gouvernement qui sera choisi comme arbitre, sera le tribunal d'arbitrage établi en vertu

des résolutions adoptées par le Congrès Pan-Américain. En cas (a) que le Tribunal ne puisse pas être constitué conformément aux résolutions précitées, et (b) qu'il soit nécessaire de soumettre à son arbitrage quelques questions avant qu'il soit établi, les Gouvernements de la République Argentine, de l'Espagne ou des Etats-Unis du Mexique, seront désignés comme arbitre dans l'ordre indiqué ci-dessus.

L'arbitre est compétent, 1° pour décider sur la régularité de sa constitution, la validité du compromis et son interprétation; 2° pour adopter les mesures nécessaires et trancher toutes les difficultés qui pourraient surgir dans le cours des débats (les questions d'un caractère technique ou scientifique qui pourraient être soulevées devront être soumises à la décision de la Société Royale de Géographie de Londres ou à l'Institut Géodésique International de Berlin); 3° pour désigner la période pendant laquelle il siègera. L'arbitre devra décider en se conformant strictement aux préceptes du droit international et, dans les questions de délimitation, suivant les principes américains *uti possidetis* de 1810.

EXPLOITATION DES FORÊTS DE CAOUTCHOUC.

Le 19 février 1902, le Secrétaire de la Légation des Etats-Unis à Lima a informé le Ministère des Affaires Etrangères à Washington qu'une compagnie de ladite ville, au capital de £26,000 (\$126,529), allait exploiter les forêts de caoutchouc qui se trouvent dans la province de Santia, Département de Puno. Une autre compagnie prendra possession de 50,000 hectares (123,550 acres) de terre près de Marcapata pour exploiter les caoutchoucs qui s'y trouvent. On dit aussi qu'un particulier est devenu possesseur de très bonnes forêts d'arbres à caoutchouc dans le même voisinage et que près de 500 cueilleurs y travaillent déjà et extraient environ 100 livres de gomme par mois. L'acquisition de ces terres, ajoute le Secrétaire, coûte peu quoique l'arpentage des concessions soit cher. Il coûte environ £1,000 (\$4,870) pour mesurer 30,000 hectares (74,130 acres). On croit que le caoutchouc est destiné à devenir une des sources de richesses les plus importantes du Pérou.

LE SALVADOR.

CONVENTION COMMERCIALE AVEC LA FRANCE.

Le "Journal Officiel," de Paris, du 28 janvier contient un décret portant la promulgation de la convention commerciale signée à Paris, le 9 janvier 1902, entre la France et la République du Salvador. Cette convention est ainsi conçue:

"Par un décret en date du 23 janvier 1902, publié au 'Journal Officiel' du 29 janvier, le Président de la République Française, le

Président de la République du Salvador, également animés du désir de favoriser le développement des relations commerciales entre les deux pays, ont décidé de conclure une convention à cet effet et ont nommé pour leurs plénipotentiaires respectifs:

“Le Président de la République Française, M. TH. DELCASSÉ, Député, Ministre des Affaires Etrangères de la République Française;

“Et le Président de la République du Salvador, M. le Docteur RAFAEL ZALDÍVAR, Envoyé Extraordinaire et Ministre Plénipotentiaire de la République du Salvador, près le Président de la République Française, grand officier de l'ordre de la Légion d'Honneur.

“Lesquels, après s'être communiqués leurs pleins pouvoirs trouvés en bonne et due forme, sont convenus de ce qui suit:

“ARTICLE PREMIER. Les cafés et autres denrées énumérées dans le tableau A annexé à la présente convention bénéficieront à leur importation en France, en Algérie, dans les colonies et possessions françaises, dans les pays de protectorat de l'Indo-Chine et de la Tunisie, des taxes de douane les plus réduites applicables aux produits similaires de toute autre origine étrangère.

“ART. 2. Réciproquement, les produits naturels et fabriqués originaires de France, d'Algérie, des colonies et possessions françaises, des pays de protectorat de l'Indo-Chine et de la Tunisie, bénéficieront, à leur importation dans la République du Salvador, des taxes de douane les plus réduites applicables aux produits similaires de toute autre origine étrangère.

“Le tarif d'évaluation actuellement en vigueur au Salvador sera, en ce qui concerne les produits français énumérés au tableau B annexé à la présente convention, abaissé de façon que ces produits ne soient, dans aucun cas, passibles, à leur entrée au Salvador, d'évaluations officielles plus élevées que celles stipulées au tableau B.

“ART. 3. Les certificats d'origine, qui seraient exigés pour l'admission des marchandises à un régime douanier de faveur, seront visés par les consuls français et par les consuls salvadoriens en gratuité des taxes consulaires de chancellerie.

“ART. 4. La présente convention sera ratifiée par les deux Gouvernements aussitôt que faire se pourra et les ratifications en seront échangées à Paris. Elle entrera en vigueur immédiatement après l'échange des ratifications et demeurera exécutoire jusqu'à l'expiration d'une année, à partir du jour où une des Hautes Parties Contractantes aura notifié son intention d'en faire cesser les effets.

“En foi de quoi, les plénipotentiaires mentionnés ci-dessus ont signé la présente convention et y ont apposé leurs cachets.

“Fait en double exemplaire à Paris, le 9 janvier 1902.

“[L. S.]

(Signé) DELCASSÉ,

“[L. S.]

(Signé) RAFAEL ZALDÍVAR.”

TABLEAU A.—*Produits originaires de la République du Salvador qui bénéficieront, à leur importation en France, des taxes du tarif minimum.*

Café, cacao, chocolat, poivre, piment, amomes et cardamomes, cannelles, cassia lignea, muscades, macis, giroflé, vanille, thé, indigo, caoutchouc, baume; huiles de palme, de coco, de palmiste, de ricin, de sésame et autres analogues.

TABLEAU B.—*Droits à percevoir par kilogramme à l'entrée des marchandises françaises importées au Salvador, d'après les évaluations suivantes:*

	Piastres.
Vins blancs de table.....	0. 05
Liqueurs de toutes sortes, en récipients d'un litre ou de moins d'un litre 40
Les mêmes récipients de plus d'un litre	1. 00
Sardines de toutes sortes.....	. 20
Eaux minérales 01
Sulfate de quinine et alcaloïdes de toutes espèces 40
Boissons goudronnées, comme le "Goudron de Guyot" et autres non mentionnées 01
Eaux de senteur de tout genre, alcoolisées, telles que l'eau de Cologne, de Floride, l'Eau Divine de Cananga, de lavande, de mélisse et autres analogues. 30
Olives 22
Câpres.....	. 22
Conserves au vinaigre.....	. 22
Moutarde préparée 22
Cari 22
Sauces de toutes espèces.....	. 22
Légumes, truffes, beurres, poissons et viandes de toutes sortes, préparées en boîtes de fer blanc, et contenance de verre, de terre ou autres 22
Fruits secs, sans coque, raisins secs, figues, prunes, dattes.....	. 20
Fruits conservés à l'eau-de-vie et au sirop 22
Biscuits de toutes sortes, secs et sucrés.....	. 20
Fromages de toutes sortes.....	. 22
Sucre.....	. 20
Bonbons, pastilles, chocolats et sucreries autres.....	. 22
Fruits à l'eau-de-vie 22
Parfumerie de toute espèce, non dénommée 30
Cannes, avec manches en ivoire, nacre, argent ou or, avec ou sans épée.....	3. 00
Cannes ordinaires	1. 50
Brosses pour peintres de toute espèce 45
Portefeuilles en matières non dénommées 45
Portefeuilles en carton.....	. 22
Articles non dénommés en caoutchouc 45
Brosses à habits, à cheveux, à dents, à ongles et usages analogues.....	. 45
Brosses à chaussures, à chevaux et similaires ordinaires 11
Porte-cigares en matière non dénommée 45
Bijouterie en or et en doublé.....	7. 50
Boutons dorés et argentés	1. 50
Instruments de chirurgie.....	Exempts.

URUGUAY.

OPÉRATIONS DE LA BOURSE DE MONTÉVIDÉO.

Le rapport annuel de la Chambre de Commerce de Montévidéo contient quelques renseignements intéressants au sujet des opérations et du cours de la Bourse pendant l'année civile. Quoique, pour de nombreuses raisons, le commerce de 1901 ait été languissant, une grande activité a régné, pendant l'année, à la Bourse.

Dans les opérations qui ont eu lieu, les valeurs nominales de 1901, comparées avec celles de 1900, ont augmenté de \$40,872,726 et les valeurs en espèces de \$18,498,588. Les chiffres pour les deux années en comparaison étaient: 1901, valeurs nominales, \$141,756,887; valeurs en espèces, \$67,992,870; 1900, valeurs nominales, \$100,884,161; valeurs en espèces, \$49,494,282.

DROITS D'IMPORTATION APPLICABLES À CERTAINES MARCHANDISES.

La Direction générale des douanes, le 9 décembre 1901, a fait circuler l'avis suivant, relatif aux droits d'importation applicables à certaines marchandises:

L'article 1^{er} de la loi du 11 juin 1901 stipule que: "Le papier de couleur en général (à l'exception du papier chrome spécialement employé pour l'impression des ouvrages), plié ou non, quelles que soient ses dimensions, le papier gris, le papier brouillard, le papier de paille et le papier pour sacs et autres analogues, servant à envelopper ou à emballer, acquitteront le droit spécifique de \$0.07 par kilogramme."

Aux termes de l'article 2 de la dite loi: "L'aniline acquittera 5 pour cent ad valorem."

Pour ce qui concerne les huiles de bouleau, aucune disposition récente n'a été adoptée.

En vertu de l'article 2 de la loi du 11 janvier 1896, les huiles végétales acquitteront uniformément le droit spécifique de \$0.10 le kilogramme et en plus comme surtaxe un droit additionnel de 5 pour cent sur leur évaluation.

TAXE SUR LES VOYAGEURS DE COMMERCE.

Une loi d'impôt sur les professions (Ley de patentes de giro) applicable à la capitale de Montevideo pour l'exercice 1901-2, et qui apporte une modification dans le régime actuel des taxes sur les voyageurs de commerce, a été publiée le 23 septembre 1901. La taxe commerciale établie sur le pied de 100 pesos par an est restée la même. Mais antérieurement, la taxe entière n'était payable que si l'activité commerciale s'était exercée dans la première moitié de l'année; à partir

du 3^e trimestre la moitié seulement et à partir du 4^e, le quart seulement du montant annuel de la taxe devenaient exigibles.

L'article 16 de la nouvelle loi retire formellement ce privilège aux commis voyageurs et stipule que, à toute époque de l'année, ils devront verser en entier le montant de la taxe. Le récépissé du montant de la taxe servant de laisser-passer dans les déplacements professionnels n'est pas personnel et est valable pour toute personne qui peut le présenter.

Tout commis voyageur trouvé sans ce document devra acquitter une amende ou s'en faire délivrer à ses frais un nouvel exemplaire.

VÉNÉZUÉLA.

RECETTES ET DÉPENSES EN 1901.

D'après le rapport que le Ministre des Finances a soumis au Congrès national réuni en assemblée le 20 février 1902, les recettes du Gouvernement, pendant l'année 1901, se montaient à 35,813,846.93 *bolivars* et les dépenses à 44,371,875.56 *bolivars*, soit un déficit de 8,558,028.63 *bolivars*. Il faut déduire de ce dernier chiffre les fonds déposés par le Gouvernement dans la banque de Vénézuéla, 4,000,000 de *bolivars*, et le profit provenant du monnayage de l'argent, se montant à 1,950,073.17 *bolivars* ou 5,950,073.17 *bolivars* en tout, réduisant à 2,607,955.46 l'excédant des dépenses sur les recettes. Les données pour le mois de décembre 1901 étaient incomplètes à l'époque où ce memorandum fut soumis au Congrès, le Ministre des Finances n'ayant pas encore reçu tous les rapports des douanes et la banque de Vénézuéla n'ayant pas tous ceux de ses agents. On croit cependant que les recettes provenant des différentes sources de revenus sont, pour le mois en question, approximativement correctes.

Voici les diverses sources d'où furent obtenus les différents revenus du Gouvernement.

Recettes douanières, 24,267,778.04 *bolivars*; impôts de l'intérieur, 7,309,434.72 *bolivars*; impôts sur le bétail, 405,334 *bolivars* et autres sources, 3,831,300.17 *bolivars*.

Les recettes mensuelles étaient les suivantes:

	Bolivars.		Bolivars.
Janvier	4,040,301.44	Juillet	3,197,610.78
Février	3,198,706.24	Août	2,752,112.20
Mars	3,058,067.37	Septembre	2,510,006.40
Avril	3,097,174.03	Octobre	2,188,546.33
Mai	3,429,111.21	Novembre	3,045,988.07
Juin	2,747,009.61	Décembre	2,549,212.32

RÉGIME DOUANIER DES DENRÉES COLONIALES.

Le journal officiel français du 23 février, publie la loi suivante en date du 22 février 1902.

ARTICLE PREMIER. Le Gouvernement est autorisé à conférer provisoirement, par décret, le tarif minimum des denrées coloniales de consommation:

1°. A la Chine, à la Corée, à l’Ethiopie, au Siam, à la République de Libéria, à Mascate, aux établissements britanniques des Détroits, aux Etats fédérés malais et à la colonie de Hong-Kong, aussi longtemps que, dans ces Etats ou territoires, les marchandises françaises bénéficieront d’avantages équivalents et qu’il leur sera appliqué le traitement de la nation la plus favorisée;

2°. Pendant un an, à partir du 24 février 1902, aux Etats-Unis de l’Amérique du Nord, à l’île de Porto-Rico, au Pérou, aux Républiques du Guatemala, de Nicaragua et de Honduras, aux Indes britanniques, à la colonie de Ceylon, à la colonie de Maurice, à la colonie des Seychelles, à la colonie de la Jamaïque, aux Indes néerlandaises, aux possessions allemandes d’Afrique, aux possessions espagnoles de Fernando-Po, d’Annobon, de Corisco, d’Elobey et de la côte occidentale d’Afrique.

ART. 2. Les denrées coloniales prises en charge dans les entrepôts comme originaires d’un pays jouissant du tarif minimum au moment de leur entrée en entrepôt, bénéficieront dudit tarif à leur sortie, alors même qu’à cette époque le pays dont elles sont originaires serait soumis au tarif général.

En exécution de la loi ci-dessus, des décrets en date du même jour décident:

1°. Que les taxes inscrites au tarif minimum continueront à être applicables, à titre provisoire, aux denrées visées à l’art. 1^{er} des lois des 24 février et 17 juillet 1900, originaires de la Chine, de la Corée, de l’Ethiopie, du Siam, de la République de Libéria, de Mascate, des établissements britanniques des Détroits, des Etats fédérés malais et de la colonie de Hong-Kong;

2°. Pendant six mois, à partir du 24 février 1902, aux Etats-Unis de l’Amérique du Nord, à l’île de Porto-Rico, au Pérou, aux Républiques du Guatemala, de Nicaragua et de Honduras, aux Indes britanniques, à la colonie de Ceylan, à la colonie de Maurice, à la colonie des Seychelles, à la colonie de la Jamaïque, aux Indes néerlandaises, aux possessions allemandes d’Afrique, aux possessions espagnoles de Fernando-Po, d’Annobon, de Corisco, d’Elobey, et de la côte orientale d’Afrique.

CONCOURS POUR L'ÉTABLISSEMENT D'INDUSTRIES NOUVELLES EN ESPAGNE.

La Société Espagnole des Mines, à Bilbao, a chargé la Ligue biscayenne des producteurs de rédiger le programme d'un concours que la dite Société projette d'ouvrir entre les ingénieurs espagnols et étrangers. Ce concours a pour but de récompenser les meilleures études qui pourraient servir de base à la création, en Espagne, d'industries nouvelles, utilisant des matières premières du pays, et à l'établissement d'industries employant des produits venant de l'étranger.

D'après le journal "El Eco de Navarra," la Société Espagnole des Mines destinerait une somme de 15,000 pesetas au travail qui sera jugé le meilleur.

CONGRÈS ET EXPOSITIONS.

Le "Moniteur Officiel du Commerce" a fait connaître, à la date du 19 décembre dernier, qu'une exposition internationale d'automobiles était projetée à Copenhague pour le mois d'avril prochain. Il résulte de communications plus récentes du Chargé d'Affaires de la République Française en Danemark, qu'une exposition appelée à comprendre, outre les automobiles, les bicyclettes et les accessoires (pneumatiques, vêtements) s'y rapportant, et organisée par un autre groupe d'industriels danois, serait ouverte à Copenhague du 9 au 16 mars.

Le "Bulletin de la Chambre de Commerce" du 1^{er} mars, 1902, dit qu'une exposition agricole régionale, à laquelle sera annexée une exposition internationale de machines agricoles et de produits chimiques utiles à l'agriculture, sera ouverte à Palerme-Marsala (Sicile), de mars à mai 1902, sous les auspices de l'association de la presse sicilienne.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau International des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

Dans son numéro du mois de mars 1902, le "Chambers' Journal" publie un article intéressant sur la "Undeveloped Bolivia, or Between the Andes and the Amazon." Cet article donne une idée exacte des ressources et des possibilités du pays qui, comme on le sait, sont nombreuses et attractives. Pour les personnes qui possèdent quelques capitaux et qui sont décidées à travailler dur et à vivre d'une manière primitive pendant peu d'années, étant donné l'état inculte de l'inté-

rieur du pays, cette République offre de sérieux avantages. Les industries principales sont: l'exploitation des mines, la culture du sucre, du café et du caoutchouc. Le climat est généralement sain; les terrains sont bon marché et le Gouvernement fait de continuel et sérieux efforts pour améliorer les provinces de l'intérieur en construisant des grandes routes et des chemins de fer et en favorisant la navigation.

“L'élevage des Abeilles.” Cette industrie intéressante forme l'objet d'un ouvrage publié par la A. I. ROOT COMPANY, de Medina, Ohio. Le livre en question traite entièrement de l'élevage des abeilles à miel, et il a été en si grande circulation pendant ces dernières années qu'il est devenu une autorité en la matière. Cette même compagnie vient de faire paraître une brochure supplémentaire donnant une longue liste des fournitures nécessaires aux éleveurs d'abeilles, et elle l'envoie franco sur demande. Les accessoires de toutes sortes qu'on emploie dans cette industrie y sont entièrement décrits et illustrés.

La Bibliothèque du Bureau International des Républiques Américaines vient de recevoir le premier numéro du “Boletim Oficial da Liga Naval Brasileira” (Bulletin Officiel de l'Association Navale Brésilienne). Le but de cette association, dit le bulletin, est de faire connaître les ressources de la marine brésilienne et d'étudier les causes qui ont été un obstacle à son développement. Cette association se propose aussi de publier, comme supplément à ce bulletin, un annuaire qui contiendra des renseignements relatifs aux compagnies de navigation brési-liennes, aux chantiers de construction navale, docks, etc.

Le titre du “Pan-American Magazine,” publié avant et pendant la durée de l'Exposition Pan-Américaine de Buffalo, a été changé dans le numéro de janvier 1902. Il a maintenant pour titre: “All American Commerce” (Tout le Commerce Américain). Le but que poursuit cette publication est de cimenter l'amitié et d'étendre davantage les relations commerciales entre les peuples de l'Amérique du Nord, de l'Amérique Centrale et de l'Amérique du Sud. Six des 38 pages de cette publication contiennent des articles écrits en espagnol.

Le Compte-Rendu sommaire mensuel du commerce et des finances des Etats-Unis du mois de février 1902, contient une monographie très intéressante, préparée par la service de la statistique du Ministère des Finances, des “Great Canals of the World” (Grands Canaux du Monde). Ce document montre, en dehors des sujets descriptifs, le commerce, le coût et les dimensions des différents canaux sur lesquels sont transportés les marchandises d'un caractère international.

M. le capitaine GEORGE P. AHERN, U. S. A., chargé de la sylviculture dans les Iles Philippines, vient de publier un ouvrage ayant trait aux bois importants qui se trouvent dans cet archipel. Il existe dans ces diverses îles en question plus de 600 espèces d'arbres.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES.

The rates of postage from the United States to all foreign countries and colonies (except Canada, Mexico and Cuba) are as follows:

	Cents.
Letters, per 15 grams ($\frac{1}{2}$ ounce)	5
Single postal cards, each	2
Double postal cards, each	4
Newspapers and other printed matter, per 2 ounces	1
Commercial papers {	
Packets not in excess of 10 ounces	5
Packets in excess of 10 ounces, for each 2 ounces or fraction thereof	1
Samples of merchandise {	
Packets not in excess of 4 ounces	2
Packets in excess of 4 ounces, for each 2 ounces or fraction thereof	1
Registration fee on letters and other articles	8

Ordinary letters for any foreign country (except Canada, Mexico, and Cuba) must be forwarded, whether any postage is prepaid on them or not. All other mailable matter must be prepaid, at least partially.

Matter mailed in the United States addressed to Mexico is subject to the same postage rates and conditions as it would be if it were addressed for delivery in the United States, except that articles of miscellaneous merchandise (fourth-class matter), not sent as *bona fide* trade samples, should be sent by "Parcels Post;" and that the following articles are *absolutely excluded* from the mails without regard to the amount of postage prepaid or the manner in which they are wrapped:

All sealed packages, other than letters in their usual and ordinary form; *all* packages (including packages of second-class matter) which weigh more than 4 pounds 6 ounces, except such as are sent by "Parcels Post;" publications which violate any copyright law of Mexico.

Single volumes of printed books in *unsealed packages* are transmissible to Mexico in the regular mails without limit as to weight.

Unsealed packages of mailable merchandise may be sent by "Parcels Post" to Bolivia, British Guiana, British Honduras, Chile, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Salvador, and Venezuela, at the rates named on page xv.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES—Continued.

(See page IX.)

PROHIBITED ARTICLES TO ALL FOREIGN COUNTRIES.

Poisons, explosives, and inflammable articles, live or dead animals, insects (especially the Colorado beetle), reptiles, fruits or vegetable matter liable to decomposition, and substances exhaling a bad odor, excluded from transmission in domestic mails as being in themselves, either from their form or nature, liable to destroy, deface, or otherwise injure the contents of the mail bags, or the persons of those engaged in the postal service; also obscene, lewd, or lascivious books, pamphlets, etc., and letters and circulars concerning lotteries, so-called gift concerts, etc. (also excluded from domestic mails); postal cards or letters addressed to go around the world; letters or packages (except those to Mexico) containing gold or silver substances, jewelry or precious articles; any packet whatever containing articles liable to customs duties in the countries addressed (except Cuba and Mexico); articles other than letters which are not prepaid at least partly; articles other than letters or postal cards containing writing in the nature of personal correspondence, unless fully prepaid at the rate of letter postage; articles of a nature likely to soil or injure the correspondence; packets of commercial papers and prints of all kinds, the weight of which exceeds 2 kilograms (4 pounds 6 ounces), or the size 18 inches in any direction, except *rolls* of prints, which may measure 30 inches in length by 4 inches in diameter; postal cards not of United States origin and United States postal cards of the largest ("C") size (except as letters), and except also the reply halves of double postal cards received from foreign countries.

There is, moreover, reserved to the Government of every country of the Postal Union the right to refuse to convey over its territory, or to deliver, as well, articles liable to the reduced rate in regard to which the laws, ordinances, or decrees which regulate the conditions of their publication or of their circulation in that country have not been complied with.

 Full and complete information relative to all regulations can be obtained from the United States Postal Guide.

THE INTERCONTINENTAL RAILWAY.

**REPORT OF THE COMMITTEE ON THE PAN-AMERICAN RAILWAY,
SUBMITTED ON THE 29TH OF NOVEMBER, 1901, TO THE
SECOND INTERNATIONAL CONFERENCE OF AMERICAN STATES.**

The Pan-American Railway Committee of the Second International Conference of American States begs to report as follows:

At the First Conference, held in Washington during the winter of 1889-90, the Committee on Railway Communications, upon which were delegates representing eighteen Governments of America, in submitting their report, which was unanimously approved and adopted by the Conference, expressed these opinions:

“First. That a railroad connecting all or a majority of the nations represented in this Conference will contribute greatly to the development of cordial relations between said nations and the growth of their material interests.

“Second. That the best method of facilitating its execution is the appointment of an international commission of engineers to ascertain the possible routes, to determine their true length, to estimate the cost of each, and to compare their respective advantages.

“Third. That the said commission should consist of a corps of engineers, of whom each nation should appoint three and which should have authority to divide into subcommissions and appoint as many other engineers and employees as may be considered necessary for the more rapid execution of the work.

"Fourth. That each of the Governments accepting may appoint, at its own expense, commissioners or engineers to serve as auxiliaries to the subcommissions charged with the sectional surveys of the line.

"Fifth. That the railroad, in so far as the common interests will permit, should connect the principal cities lying in the vicinity of its route.

"Sixth. That if the general direction of the line can not be altered without great inconvenience, for the purpose mentioned in the preceding article, branch lines should be surveyed to connect those cities with the main line.

"Seventh. That for the purpose of reducing the cost of the enterprise the existing railways should be utilized as far as it is practicable and compatible with the route and conditions of the continental railroad.

"Eighth. That in case the results of the survey demonstrate the practicability and advisability of the railroad, proposals for the construction either of the whole line or of sections thereof should be solicited.

"Ninth. That the construction, management, and operation of the line should be at the expense of the concessionaires, or of the persons to whom they sublet the work, or transfer their rights, with all due formalities, the consent of the respective Governments being first obtained.

"Tenth. That all materials necessary for the construction and operation of the railroad should be exempt from import duties, subject to such regulations as may be necessary to prevent the abuse of this privilege.

"Eleventh. That all personal and real property of the railroad employed in its construction and operation should be exempt from all taxation, either national, provincial, state, or municipal.

"Twelfth. That the execution of a work of such magnitude deserves to be further encouraged by subsidies, grants of land, or guaranties of a minimum interest.

"Thirteenth. That the salaries of the commission, as well as the expense incident to the preliminaries and final surveys, should be assumed by all the nations accepting, in proportion to the population according to the latest official census, or, in the absence of a census, by agreement between their several Governments.

"Fourteenth. That the railroad should be declared forever neutral for the purpose of securing freedom of traffic.

"Fifteenth. That the approval of the surveys, the terms of the proposals, the protection of the concessionaires, inspection of the work, the legislation affecting it, the neutrality of the road, and the free passage of merchandise in transit should be (in the event contemplated by article 8) the subject of special agreement between all the nations interested.

"Sixteenth. That as soon as the Government of the United States shall receive notice of the acceptance of these recommendations by the other Governments it shall invite them to appoint the commission of engineers referred to in the second article in order that it may meet in the city of Washington at the earliest possible day."

Mr. BLAINE, then Secretary of State of the United States, in presenting to President HARRISON the above report of the Railway Committee, said:

"No more important recommendation has come from the International American Conference, and I earnestly commend it to your attention, with full confidence that prompt action will be taken by Congress to enable this Government to participate in the promotion of the enterprise. In no other way could the Government and people of the United States contribute so much to the development and prosperity of our sister Republics and at the same time to the expansion of our commerce."

The President of the United States, in transmitting the report to Congress, thus expressed his views on the importance of the project:

"To the Senate and House of Representatives:

"I transmit herewith a report of the International American Conference, recently in session at this capital, recommending a survey of a route for an intercontinental line of railroad to connect the systems of North America with those of the Southern Continent, and to be conducted under the direction of a Board of Commissioners representing the several American Republics.

"Public attention has chiefly been attracted to the subject of improved water communication between the ports of the United States and those of Central and South America. The creation of new and improved steamship lines undoubtedly furnishes the readiest means of developing an increased trade with the Latin-American nations. But it should not be forgotten that it is possible to travel by land from Washington to the southernmost capital of South America, and that the opening of railroad communication with these friendly States will give to them and to us facilities for intercourse and the exchanges of trade that are of special value. The work contemplated is vast but entirely practicable. It will be interesting to all and perhaps surprising to most of us to notice how much has already been done in the way of railroad construction in Mexico and South America that can be utilized as part of an international line. I do not hesitate to recommend that Congress make the very moderate appropriation for surveys suggested by the Conference, and authorize the appointment of commissioners and the detail of engineer officers to direct and conduct the necessary preliminary surveys.

“BENJ. HARRISON.

“EXECUTIVE MANSION, *May 19, 1890.*

The appropriation asked as the share of the United States toward a preliminary survey for information regarding the Continental Railway was made, together with contributions from some of the other countries interested. Soon thereafter the Interecontinental Railway Commission began its work with eleven of the Governments of America represented thereon.

Mr. A. J. CASSATT, now President of the Pennsylvania Railroad, one of the greatest and most successful railway systems in the world, was unanimously elected Chairman of the Commission, and Mr. H. G. DAVIS, Chairman of the Finance Committee. About \$360,000 were spent by the Commission for surveys, maps, printing, etc. Three corps of engineers were put in the field and the results of their work, covering a period of several years, and completed in 1895, showed that the approximate distance from New York to Buenos Ayres, according to their surveys and using existing roads, would be 10,471 miles, about one-half of which was then completed and is in operation. The following official letter, written in 1896 by Capt. E. Z. STEEVER, Secretary of the Interecontinental Railway Commission, gives the most reliable information obtainable regarding the railways that could then be used as a part of a continental line and how much yet remained to be completed.

•
"INTERNATIONAL RAILWAY COMMISSION,

" *Washington, D. C., January 16, 1896.*

"Hon. HENRY G. DAVIS,

" *Washington, D. C.*

"DEAR SIR: In accordance with your verbal request, left at this office on the 14th instant, I herewith furnish an estimate of the length of line required for an all-rail route from New York City to Buenos Ayres, Argentina, according to countries.

"There is now through railroad connection as far as Oaxaca, Republic of Mexico, and surveys have been made, and according to press reports concessions have been granted to connect Oaxaca with some point on the Mexican-Guatemalan boundary. Puebla is 129 miles southeast of the City of Mexico by the Ferrocarril Interoceánico, and 115.6 by the Ferrocarril Mexicano, the former being a narrow and the latter a standard gauge railroad. Oaxaca is 227.6 miles southeast of Puebla by the Ferrocarril Mexicano del Sur and, therefore, 356.6 miles from the City of Mexico by one line, and 343.2 by the other. Oaxaca is at present the most southern town that has railroad connection with the City of Mexico, and is distant from the Guatemalan frontier by the space which would require a railroad some 400 miles in length.

"The surveys and examinations of the Interecontinental Railway Commission commenced at the northwestern frontier of Guatemala and extended to the western boundary of Bolivia. The approximate

length of the railroad to connect the southeastern boundary of Mexico with the capital of the Argentine Republic would be as follows:

	Miles.
Guatemala.....	230
Salvador.....	220
Honduras.....	70
Nicaragua.....	224
Costa Rica.....	363
Colombia.....	1,372
Ecuador.....	635
Peru.....	1,671
Bolivia.....	774
Argentina.....	1,143
Total.....	6,702

“The distance from New York to Laredo is 2,187 miles; thence to the City of Mexico 839 miles; thence to Oaxaca 343 miles; to the Gautemalan frontier 400 miles; a total of 3,769 miles; making the entire distance from New York to Buenos Ayres 10,471 miles.

“Of the above 6,702 miles there are in operation the following links:

	Miles.
Guatemala, from Escuintla to Patulul.....	30
Salvador, from Sonsonate to Atos.....	20
Nicaragua, from Chinandega to La Paz.....	31
Total in Central America.....	81
Peru, from Sicuani to Puno.....	151
Bolivia, from Oruro to Huanchaco.....	192
Argentina, from Jujuy to Buenos Ayres.....	993
Total in South America.....	1,336

“A grand total for Central and South America of 1,417 miles, already built and in operation.

“Deducting these 1,417 miles from the 6,702 gives us 5,285 miles of railway to be built in order to secure an all-rail route from the southern boundary of Mexico to the capital of the Argentine. In other words, half of the distance between New York City and Buenos Ayres is already covered by existing railroads.

“It is believed that additional surveys, especially in Peru, will shorten the length of lines required, but the facts given above are the best obtainable at date of writing.

“Hoping this statement will meet your requirements, I am,

“Very respectfully,

“E. Z. STEEVER, *Secretary*.

The table below gives a summary of the report of the engineers of the Intercontinental Railway Commission as to the number of miles

of the proposed continental line already built between New York and Buenos Ayres, the location of the portions that will be needed to make a through line, and the estimated cost of same:

Across.	Built or proposed.		Built.		To be constructed.		Cost of grading, masonry, and bridges.
	<i>Miles.</i>	<i>Kilometers.</i>	<i>Miles.</i>	<i>Kilometers.</i>	<i>Miles.</i>	<i>Kilometers.</i>	
Central America.....	1,043.00	1,678.53	211.30	340.05	831.70	1,338.48	\$17,154,517.00
Colombia.....	1,354.04	2,179.10	1,354.04	2,179.10	33,738,424.84
Ecuador.....	2,397.04	3,857.63	211.30	340.05	2,185.74	3,517.58	50,892,941.84
	656.00	1,058.94	658.00	1,058.94	26,863,855.00
Peru.....	3,053.04	4,916.57	211.30	340.05	2,843.74	4,576.52	77,756,796.84
	1,738.51	2,873.48	151.61	244.00	1,623.90	2,629.48	65,758,146.00
Bolivia.....	4,840.55	7,790.05	362.91	584.05	4,477.64	7,206.00	143,514,942.84
	587.55	945.56	195.06	313.91	392.49	631.65	12,023,329.00
Argentina.....	5,428.10	8,735.61	557.97	897.96	4,870.13	7,837.65	155,538,271.84
	1,061.66	1,708.56	936.66	1,507.40	125.00	201.16	4,000,000.00
United States.....	6,489.76	10,444.17	1,494.63	2,405.36	4,995.13	8,038.81	159,538,271.84
	2,094.00	3,369.93	2,094.00	3,369.93
Mexico.....	8,583.76	13,814.10	3,588.63	5,775.29	4,995.13	8,038.81	159,538,271.84
	1,644.30	2,646.22	1,183.30	1,904.32	461.00	741.90	14,752,000.00
Total.....	10,228.06	16,460.32	4,771.93	7,679.61	5,456.13	8,780.71	174,290,271.84

From this it will be seen that it was estimated by the engineers of the Commission, at the time their report was made in 1895, that \$175,000,000 will construct the railroad necessary to join existing lines and give through rail communication. Since then some additional railroad has been built that could be utilized as a part of a continental system, and it is the opinion of this committee that now not more than 5,000 miles of road would have to be constructed to establish railway communication between the systems of North America and South America. Basing the cost at \$40,000 per mile, which we believe would be ample, \$200,000,000 would be required for this great work. The surveys made by the engineers of the Commission demonstrate the practicability of constructing the needed lines, and there should be no great difficulty in financing such a project, when the results to be obtained are considered. Such railway systems in the United States as the Pennsylvania, New York Central, Atchison, Northern Pacific, Union Pacific, Southern Pacific, Southern, and others, operate more miles of road than are needed to make the Continental Railway a reality, and each of these systems has bonds and stocks outstanding aggregating more than the sum estimated as the cost for this enterprise. The Russian Government has just completed a long railroad for the purpose of developing Siberia, at a cost considerably exceeding the estimated cost of the Intercontinental Railway, and more difficult to construct.

The Republic of Mexico furnishes a recent example of what has been accomplished by increased railroad advantages.

In the report of the Mexican delegation to this conference, speaking of the intercontinental railway, they say:

"In so far as Mexico is concerned, it has not ceased to make efforts and even sacrifices to build its railway system, extending it toward the south and in a manner that will enable it to connect with the lines which the Central American Republics may build, as it is already connected at several points on its northern frontier with important railroads of the United States of America. There is under consideration at the present moment a line which will be connected with the existing Interoceanic Railway now in operation across the Isthmus of Tehuantepec; and quite lately a concession, with ample subsidies, has been granted for the construction of a railway which, branching from that of Tehuantepec, will extend toward the frontier of Guatemala."

They also say that "it has been the constant desire of the Government and people of Mexico to extend every facility for better interior communications, increasing thereby the exploitation of its natural elements and the mercantile traffic with other nations."

While the building of the continental line is a great undertaking, the benefits to be gained are not as problematical nor the obstacles to be overcome as great as those encountered by the builders of the railroads across the Alleghenies and the Rockies when these lines were constructed.

Experience the world over has proved that the development of the natural resources of a country follows the establishment of railway communications, and a railway system bringing all the Republics of this hemisphere into touch with each other would lead more than anything else to the development of the Southern Republics, especially in the interior. It is possible now to bring to markets from points not reached by railroads only such products as can be hauled on pack mules, or otherwise, to the seaports for export, and the points at which vessels can touch are often hundreds of miles apart. Shipments can be made to and from places every few miles on a railroad. Great areas of mineral deposits and of rich timber and agricultural lands, in Central and South America, lie practically untouched because of the lack of transportation facilities. The statistics of most of these countries show that so far only the sections contiguous to the sea have been developed. Not only would such a railway line aid in developing territory now practically inaccessible, and thus add to the general wealth of the countries traversed, but the increased facilities afforded would result in competition between rail and steamship transportation in the regions now depending entirely on the latter. Competition is the life of trade, and while more direct and increased water-transportation facilities between the Republics of America are needed and should be encouraged, both rail and water communication are required for full growth and development.

In the event of war between some of the European powers commerce might be seriously interfered with by the interruption of water communication, but the danger from this cause would be minimized if the Republics of America could communicate with each other by rail, without recourse to the seas.

A country or section of country without railroads is behind the times, and can not successfully compete with regions possessing these advantages. When the first railroad from the Mississippi River to the Pacific was built, many doubted whether it would pay, as the country to be crossed was, to a great extent, uninhabited. Now there are several lines, all paying, and the rapid development of the great West of the Northern Republic, largely owing to railroad facilities, has been the wonder of the age. The interior of the United States, especially the West and Southwest, like the interior points of the Southern Republics, would be most benefited by the establishment of a Continental Railway, because these sections would then have closer and more direct communication with each other. The trade possibilities, when the 195,000 miles of railroad in the United States and the 10,000 miles in Mexico are connected with the 10,600 miles in Argentine and the systems in the other Republics of America, can hardly be estimated.

Since the establishment of railroad communication between Mexico and the United States, the trade of these countries with each other has largely increased, until now Mexico sends over 70 per cent of her total exports to the United States and the latter country sells in Mexico goods amounting to about the same value. In the year ended June 30, 1901, the United States bought merchandise to the value of \$121,000,000 from the countries of Central and South America, which was about 14 per cent of its total imports; and during the same period the United States sold to these countries merchandise to the value of \$52,000,000, or only about 10 per cent of the total imports of Central and South America.

As showing the lack of proper transportation facilities now existing between the Republics of America, some of the delegates to this Conference, in order to reach the City of Mexico, had to go by way of Europe and New York, and others via San Francisco. A letter or express package from Mexico or the United States intended for some of the South American Republics would go first to Europe and from there to its destination.

This committee has reports on the railways of their countries from some of the Central and South American delegates, and when the others are received we ask that all be printed as an appendix to this report.

Summary.—Whereas the three corps of engineers employed by the Intercontinental Railway Commission made experimental surveys, accompanied by maps, between the northern border of Guatemala and

the northern border of Argentine, during the years 1892, 1893, and 1894, and reported it practical to complete a standard-gauge Continental Railway, passing through the Republics of North, Central, and South America, and that by using the roads now in operation the distance to be built would be 5,456 miles, and the estimated cost \$174,290,271, or about \$32,000 per mile; and,

Whereas it is a well-known fact that railroads develop the natural resources, increase the commerce and wealth, and add to the general prosperity of countries traversed by them:

Therefore, estimating the distance to be built at 5,000 miles, and believing that the cost will not exceed \$200,000,000 (or \$40,000 per mile), your committee unanimously recommends: First, the construction of an Intercontinental line, with branches where necessary to connect with the principal cities, passing through the different Republics and connecting the systems of the United States and Mexico with those of the Argentine Republic.

The recommendations of the last Conference at Washington regarding the preliminary surveys having been complied with, we unanimously indorse the following, taken from the proceedings of the Pan-American Railway Committee and adopted by the Washington Conference:

“First. That a railroad connecting all or a majority of the nations represented in this Conference will contribute greatly to the development of cordial relations between said nations and the growth of their material interests.

“Second. That the railroad, in so far as the common interests will permit, should connect the principal cities lying in the vicinity of its route.

“Third. That if the general direction of the line can not be altered without great inconvenience, for the purpose mentioned in the preceding article, branch lines should be surveyed to connect those cities with the main line.

“Fourth. That for the purpose of reducing the cost of the enterprise, existing railways should be utilized as far as is practicable and compatible with the route and conditions of the continental railroad.

“Fifth. That all materials necessary for the construction and operation of the railroad should be exempt from import duties, subject to such regulations as may be necessary to prevent the abuse of this privilege.

“Sixth. That all personal and real property of the railroad, employed in its construction and operation, should be exempt from all taxation, either national, provincial, state, or municipal.

“Seventh. That the execution of a work of such magnitude deserves to be further encouraged by subsidies, grants of land, or guaranties of a minimum of interest.

“Eighth. That the traffic in transit through the different Republics shall not pay custom dues nor taxes of any other kind.”

We also recommend:

Ninth. That the delegates to this Conference and others favoring the railway urge their Governments, as strongly as they consistently can, to grant liberal concessions to the enterprise, of whatever kind seems best to each country.

Tenth. That the United States of America be invited to initiate, with the ministers of the other Republics, at Washington, the adoption of such measures as may be deemed most fitting to result in sending within one year to said Republics competent and reliable persons whose duty it shall be to accurately determine the resources of the different countries and the condition of commerce, and the prospects for business for an intercontinental line, in case said line can be constructed, and also to ascertain what concessions or assistance each of the respective Governments is willing to grant to the enterprise.

Eleventh. That the president of the Conference shall appoint a committee of five members, residing in the United States of America, said committee to commence its work after the adjournment of this Conference; and that said committee shall have the right to increase the number of its members or to replace, when necessary, any member; to appoint such subcommittees as may be deemed proper to report to the next Conference on the result of its labors; to furnish all possible information as to the work of the intercontinental railway, and to aid and stimulate the carrying into effect of said project as much as possible; this, however, shall not prevent the members of the present committee from continuing their efforts to attain the desired end; and finally that the committee, in unison with the Secretary of State of the United States of America, and with the ministers of the interested countries, resident in Washington, may cause to be convoked, within the period of one year, an assembly composed of representatives of all the Republics of this continent with proper credentials, for the purpose of arranging for the construction of the proposed continental railway.

ACTION OF SECOND INTERNATIONAL CONFERENCE OF AMERICAN STATES ON ABOVE REPORT, JANUARY 21, 1902.

RESOLUTION.

The undersigned, Delegates of the Republics represented at the Second International American Conference, duly authorized by their Governments, have approved the following resolution:

The Second International American Conference:

Considering that the three corps of engineers employed by the former Committee on Intercontinental Railway have made explorations from the northern limit of Guatemala to the northern limit of the Argentine Republic during the years 1893 and 1894 and have presented their report on the work, accompanied by the respective maps; and,

Considering that the said report shows that it is practicable to construct a railway which will traverse the Republics of the continent from north to south, and that in case the railways in actual operation are utilized, the length of the lines to be constructed would be 5,456 miles, and the estimated cost of the entire work would be \$174,290,271 gold, or \$32,000 gold per mile; and,

Considering that it is a well-known fact that railroads develop the natural resources, increase the commerce and wealth, and add to the general prosperity of the countries traversed by them; and,

Considering that international railways consolidate the friendly relations among States, unite them by common interest, and assure peace between them:

Resolves: First. That it ratifies the resolution of the Washington Conference which recommended the construction of the complementary lines of the International Railway which is to traverse the different Republics, uniting the railway systems of the United States with those of the Argentine Republic and connecting the principal cities situated on the line of said railroad as much as the common interests may permit, or, in case this should be impracticable, the construction of branch lines to connect said cities with the main trunk line, and, finally, the utilizing of the lines already in operation wherever such may be possible and compatible with the surveys and conditions of international railways.

Second. That the Republics interested in the execution of this work assist it in every way that may be in their power, and especially that they exempt from import duties the materials necessary for the construction and operation of the railway, but with the necessary provisions to prevent abuses of such privilege; and that the real and personal properties of the enterprise be exempted from all national, state, provincial, and municipal taxes; exempting them from

all custom-house and other duties in transit through the different Republics, and that they assist the enterprise as much as possible by subsidies, grants of lands, or by the guaranteeing of a minimum interest on the capital invested in each country.

For that purpose it is hereby recommended that all persons who favor the construction of the said railway earnestly endeavor to procure from the respective Governments the granting, in favor of this enterprise, of these or other liberal subsidies, such as may be found most convenient and feasible in each country.

Third. That the United States of America be invited to initiate, with the representatives and diplomatic officers of the other Republics accredited in Washington, the adoption of such measures as may be deemed best calculated to result in sending to the said Republics, within one year, competent and reliable persons, whose duty it shall be to accurately determine the resources of each country, and the location and condition of the railway lines now in operation, the existing condition of their commerce, and the prospects for business for an intercontinental line, in case said line be constructed, and also to ascertain what concessions each of the respective Governments is willing to grant to the enterprise.

Fourth. That the President of the Conference shall appoint a committee of five members, resident in the United States of America, which shall enter upon its functions after the adjournment of this Conference, with power to increase the number of its members and to substitute them whenever necessary; to appoint such subcommittees as may be deemed proper, and to report to the next Conference on the result of its labors; to furnish all possible information on the work of the Intercontinental Railway, and to aid and stimulate the successful execution of said project as much as possible, all of which, however, shall not prevent members of the present committee from continuing their efforts to attain the same end; and finally that the Commission, in conjunction with the Secretary of State of the United States of America, and with the ministers of the interested countries, resident in Washington, shall cause to be convoked, within the period of one year, an Assembly composed of duly authorized representatives of all the Republics of this Continent, for the purpose of perfecting a convention to arrange for the construction of the proposed Intercontinental Railway.

Made and signed at the city of Mexico on the 21st day of the month of January, 1902, in 3 copies, written in the Spanish, English, and French languages, respectively, and deposited in the Department of Foreign Relations of the Government of the Mexican United States, so that certified copies thereof may be made in order to transmit them, through the diplomatic channel, to each of the Signatory Powers.

APPOINTMENT OF A PERMANENT COMMITTEE.

The President of the Conference, pursuant to the fourth article of the resolution, appointed the following gentlemen as a permanent Committee on Pan-American Railway to further the project after the adjournment of the Conference:

H. G. DAVIS, of West Virginia, United States.

ANDREW CARNEGIE, of New York, United States.

MANUEL DE AZPÍROZ, Ambassador of Mexico to the United States.

MANUEL ALVAREZ CALDERÓN, Minister of Peru to the United States.

ANTONIO LAZO ARRIAGA, Minister of Guatemala to the United States.

MESSAGE OF PRESIDENT ROOSEVELT.

On April 22, 1902, the President of the United States transmitted to the Senate a report made by the Secretary of State of the United

States concerning the action of the International Conference of the American States at its second session, held in the City of Mexico, on the subject of the proposed Pan-American Railway connecting the American continents.

The message accompanying the report reads as follows:

"To the Senate and House of Representatives:

"I transmit herewith a report of the Secretary of State, with the accompanying papers, with respect to the resolution concerning a pan-American railway adopted by the delegates of the Republics represented at the Second International Conference of the American States, recently held at the City of Mexico.

"I recommend an appropriation by Congress of the sum of \$20,000, or so much thereof as may be necessary, to enable the President to appoint two commissioners to visit Central and South America to carry the purpose of the resolution into effect, and to investigate and report upon the means of extending the commerce of the United States with those regions.

"THEODORE ROOSEVELT."

REPORT OF THE SECRETARY OF STATE.

"The PRESIDENT:

"I have the honor to submit herewith a copy of the report made by the Pan-American Railway Committee to the Second International Conference of the American States, held in Mexico during the winter of 1901-2, and a copy of the resolution adopted by the delegates of the Republics represented at that congress concerning a pan-American railway. The third section of the resolution provides:

"That the United States of America be invited to initiate, with the representatives and diplomatic officers of the other Republics accredited in Washington, the adoption of such measures as may be deemed best calculated to result in sending to the said Republics within one year competent and reliable persons, whose duty it shall be to accurately determine the resources of each country, and the location and condition of the railway lines now in operation, the existing condition of their commerce, and the prospects for business for an intercontinental line in case said line be constructed, and also to ascertain what concessions each of the respective Governments is willing to grant the enterprise."

"The project is of such great public utility, and the trade of Central and South America, of which the share of the United States is not so large as it should be, is of such growing importance that I have no hesitation in recommending that Congress be asked to appropriate the sum of \$20,000, or so much thereof as may be necessary, to enable the President to appoint two commissioners to carry the purpose of

the resolution into effect and incidentally to investigate and report upon the means of extending the commerce of the United States with those regions.

“ Respectfully submitted.

“ JOHN HAY.

“ DEPARTMENT OF STATE,

“ *Washington, April 19, 1902.*”

THE INTERCONTINENTAL RAILWAY.

By J. B. CALVO.

When we consider the great influence which the means of communication exercise, not only in the development of the natural resources and other fountains of national production, but also in the moral and intellectual advancement which the widening of the sphere of action affords to man, the great benefits that would result to the American Republics from the construction of a continental railroad become evident.

The enterprise is certainly a colossal one, though it does not in reality present any insurmountable obstacles, and in order to become an accomplished fact it only requires that the project should be taken up with a resolute purpose and properly started.

It is evident that the development of local traffic alone would pay, in the immediate future, the cost of the road, and that the increase of the commercial relations between the neighboring countries would be very rapid, promoting in this manner the general, political, and social welfare of all the nations of this continent, as well as securing a closer union among them, all of which would tend to daily increase the value of capital and the profits thereof.

The progress which Mexico has made in the last few years has naturally attracted the attention of the whole world, and the great impulse given to all her industries demands, for that prosperous Republic, easy means of communication with the contiguous States, where excellent markets are to be found for many of her varied products, which competition on the North carries to said States in the South, as is the case at present, particularly with regard to cotton fabrics and all kinds of leather goods.

It is a fact that the Central American States are constantly progressing; and while the moral advancement is also evidenced by the peaceful condition which they at present enjoy, the development of their manifold and rich sources of production increases daily, thus encouraging new enterprises, the improvement of the existing means of communication, and the construction of other new and important ones.

In the far south, the Argentine Republic rises up as an agricultural

rival of the United States of America, while Chile initiates a competition on the Pacific with the steamship companies of the great American nation.

These practical examples of the advancement of the Latin-American countries indicate the activity and progress which they have already reached, and show clearly the great importance of the field which they afford to business and enterprise.

Brazil, with her extensive territory; Uruguay, with her favored geographical position; Peru, Bolivia, Ecuador, Venezuela, and Colombia, by the exuberant richness of their soil, all enjoy, in an equal degree, the benefits of progress and civilization.

Therefore the construction of a railway through all these countries will find abundant elements of support already existing and many others which it will of itself create, either owing to the influence of the facilities for local traffic or as a consequence of rapid communication between the different States.

At the First International Conference held in Washington in 1889-90 resolutions were passed for the purpose of carrying out this great enterprise, and as a practical result of the preliminary steps then taken the proper studies of the matter were made by several corps of engineers, who presented an exhaustive report, which is printed with maps and illustrations in seven large volumes.

From these studies it appears that the length of a railroad from New York to Buenos Ayres would be 10,471 miles and that half of this enormous distance is already covered by existing railroad lines.

Referring especially to the first part of this great continental enterprise, it would be an easy task to show that it only requires a slight impulse for its realization in all that portion of the hemisphere lying north of Panama. In fact, the distance of 2,187 miles from New York to Laredo on the Mexican frontier, that of 839 miles from Laredo to the City of Mexico, and that of 343 miles from the latter city to Oaxaca is covered by railroad lines now in actual operation.

There are at the present time two Mexican railways that approach the Guatemala frontier, one of which runs from Puebla to Oaxaca on the Pacific slope, and which would require an extension of 400 miles in order to reach said frontier, and the other which extends from Cordoba, a town situated on the line of the Veracruz Railway on the mountain range that slopes toward the Gulf of Mexico. In addition to the lines mentioned there are other railroads in course of construction that will connect with the Interoceanic Railroad of the Isthmus of Tehuantepec, and what seems to be of still greater importance in this connection, the Mexican Government has granted a concession carrying with it liberal subsidies for the construction, within a period of two years, of a railway which, starting from the Isthmus as a branch of the Interoceanic Railway referred to, will extend to the boundary line of Guatemala.

This new development of railways in Mexican territory having been accomplished, the greatest of the difficulties in extending the Intercontinental Railroad will have been overcome by connecting the railway lines of the Central American States, several sections of which can be utilized for the main line.

It will be sufficient to observe in this connection that of the 1,107 miles that a route on the Pacific side will have to cover in Central America from the Mexican to the Colombian frontier there are now constructed and in operation 211.3 miles of track, particularly in Salvador and Nicaragua, where the longest railroad lines follow in the greater part of their course a direction generally parallel to that of the coast.

In Guatemala there is a railroad extending from the port of Ocos to the village of Ayutla near the Mexican frontier, and the lines constructed in this and the other Central American Republics aggregate a little less than 1,000 miles, viz:

Guatemala.....	342
Salvador.....	132
Honduras	50
Nicaragua	176
Costa Rica.....	222

But in Costa Rica, Guatemala, and Honduras the principal railway lines follow a transverse direction, because they run from the interior to the ports. Nevertheless, branch lines are being constructed in the three countries mentioned which, within a short time, will not only be able to add considerable length to the part of the system already completed, but will also insure in this manner the guaranty of success for an Intercontinental Railway by the consequent increase of traffic that will always result from the greater number of their connections.

Such favorable conditions did not exist in Mexico when the construction of the first railway between the United States and that Republic was projected. The undertaking was not favored by the public, because it was thought that it would not be profitable, and to-day—twenty years having scarcely elapsed—there are three railway lines in constant operation, fed by the growing commerce between the two nations. These iron highways, as a natural consequence, promote the mutual development of interests, and encourage at the same time the construction of other railways with which they will connect. There is, then, no reason to doubt, in view of these premises, which are palpable facts, that the extension of railways to the south will produce equally as good, if not better, results to capital, exclusive of the beneficent moral influence they will exert on the future of the nations of this continent.

The realization of the plan for uniting the two great oceans by a canal across the Central American isthmus between Costa Rica and

Nicaragua seems near at hand, and if, as it is reasonable to hope, the execution of the same is speedily decided upon, the northern section of the Intercontinental Railway will thereby greatly increase in importance.

At the second international conference held in Mexico from October, 1901, to January, 1902, it was resolved to ratify the resolutions of the first conference, held in Washington, and to recommend, among other things, that the Government of the United States of America initiate, by means of the diplomatic representatives of the American Republics accredited in Washington, the measures most appropriate for the sending, within a year, of commissioners to report upon the railways already completed, and the concessions that the respective Governments will grant for the construction of a continental railway.

At the present time this idea is greatly favored, and it can be expected that with a new impulse it will soon become an accomplished fact.

May it be so for the welfare of the American Republics.

Washington, D. C., April, 1902.

ARBITRATION AGREEMENT BETWEEN BRAZIL AND GREAT BRITAIN.

**ARBITRATION TREATY TO DETERMINE THE LIMITS BETWEEN
BRAZIL AND BRITISH GUIANA, CONCLUDED IN LONDON
NOVEMBER 6, 1901, AND PROCLAIMED JANUARY 28, 1902.**

The President of the United States of Brazil and His Majesty the King of the United Kingdom of Great Britain and Ireland, Emperor of India, being desirous to provide for an amicable settlement of the question which has arisen between their respective Governments concerning the boundary between the United States of Brazil and the Colony of British Guiana, have resolved to submit to arbitration the question involved, and to the end of concluding a treaty for that purpose have appointed as their respective Plenipotentiaries:

The President of the United States of Brazil, Senhor JOAQUIM AURELIO NABUCO DE ARAÚJO, Envoy Extraordinary and Minister Plenipotentiary of Brazil to His Britannic Majesty;

And His Majesty the King of the United Kingdom of Great Britain and Ireland, Emperor of India, the Most Honorable HENRY CHARLES KEITH PETTY FITZ MAURICE, Marquis of Lansdowne, Earl Wycombe, Viscount Caln and Calnstone and Lord Wycombe, Baron of Chipping Wycombe, Baron Nairne, Earl of Kerry and Earl of Shelburne, Viscount Clanmaurice and Fitzmaurice, Baron of Kerry, Lixnaw, and

Dunkerron, a Peer of the United Kingdom of Great Britain and Ireland, a Member of His Britannic Majesty's Most Honorable Privy Council, Knight of the Most Noble Order of the Garter, etc., His Majesty's Principal Secretary of State for Foreign Affairs;

Who, having communicated to each other their respective full powers, which were found to be in due and proper form, have agreed to and concluded the following articles:

ARTICLE I.

The President of the United States of Brazil and His Majesty the King of the United Kingdom of Great Britain and Ireland, Emperor of India, agree to invite His Majesty the King of Italy to decide as Arbitrator the question as to the above-mentioned boundary.

ARTICLE II.

The territory in dispute between the United States of Brazil and the Colony of British Guiana shall be taken to be the territory lying between the Takutú and the Cotinga and a line drawn from the source of the Cotinga eastward, following the watershed to a point near Mount Ayangcanna; thence in a southeasterly direction, still following the general direction of the watershed, as far as the hill called Annay; thence by the nearest tributary to the Rupununi, up that river to its source, and from that point crossing to the source of the Takutú.

ARTICLE III.

The Arbitrator shall be requested to investigate and ascertain the extent of the territory which, whether the whole or a part of the zone described in the preceding article, may lawfully be claimed by either of the high contracting parties, and to determine the boundary line between the United States of Brazil and the Colony of British Guiana.

ARTICLE IV.

In deciding the question submitted, the Arbitrator shall ascertain all facts which he deems necessary to a decision of the controversy, and shall be governed by such principles of international law as he shall determine to be applicable to the case.

ARTICLE V.

The printed case of each of the two parties, accompanied by the documents, the official correspondence, and other evidence on which each relies, shall be delivered in duplicate to the arbitrator and to the Government of the other party within a period not exceeding twelve months from the date of the exchange of the ratifications of this treaty.

ARTICLE VI.

Within six months after the cases shall have been delivered in the manner provided in the preceding article either party may, in like manner, deliver in duplicate to the arbitrator and to the Government of the other party a counter case and additional documents, correspondence, and evidence in reply to the case, documents, correspondence, and evidence as presented by the other party.

If in the case or counter case submitted to the arbitrator either party shall have specified or alluded to any report or document in its own exclusive possession without annexing a copy, such party shall be bound, if the other party thinks proper to apply for it, to furnish that party with a copy thereof, and either party may call upon the other, through the Arbitrator, to produce the originals or certified copies of any papers adduced as evidence, giving in each instance notice thereof within forty days after the delivery of the case or counter case, and the original or copy so requested shall be delivered as soon as may be, within a period not exceeding forty days after the receipt of notice.

ARTICLE VII.

Within four months after the expiration of the time fixed for the delivery of the counter case on both sides, each party shall deliver in duplicate to the arbitrator and to the Government of the other party, a printed argument showing the points and referring to the evidence upon which each Government relies, and the arbitrator may, if he desires any further elucidation with regard to any point in the argument of either party, require a further written or printed statement or argument upon it, but in such case the other party shall be entitled to reply by means of a similar written or printed statement or argument.

ARTICLE VIII.

The arbitrator may, for any cause deemed by him sufficient, extend the periods fixed by Articles V, VI, and VII, or any of them, by the allowance of thirty days additional.

ARTICLE IX.

The high contracting parties agree to request that the decision of the arbitrator may, if possible, be made within six months of the delivery of the argument on both sides.

They further agree to request that the decision be made in writing, dated and signed, and that it be in duplicate; one copy to be handed to the representative of the United States of Brazil for his Government and the other copy to be handed to the representative of Great Britain for his Government.

ARTICLE X.

The high contracting parties engage to accept the decision pronounced by the arbitrator as a full, perfect, and final settlement of the question referred to him.

ARTICLE XI.

The high contracting parties agree that the Indians and other persons living in any portion of the disputed territory, which may, by the award of the arbitrator, be assigned either to the United States of Brazil or to the colony of British Guiana, shall, within eighteen months of the date of the award, have the option of removing into the territory of the colony of Brazil, as the case may be, themselves, their families, and their movable property, and of freely disposing of their immovable property, the said high contracting parties reciprocally undertaking to grant every facility for the exercise of such option.

ARTICLE XII.

Each Government shall provide for the expense of preparing and submitting its case. Any expenses connected with the arbitral proceedings shall be defrayed by the two parties in equal moieties.

ARTICLE XIII.

The present treaty, when duly ratified, shall come into force immediately after the exchange of ratifications, which shall take place in the city of Rio de Janeiro within four months from this date, or sooner if possible.

In faith whereof we, the respective plenipotentiaries, have signed this treaty and have hereunto affixed our seals.

Done in duplicate at London the 6th day of November, 1901.

JOAQUIM NABUCO.

[L. s.]

LANSDOWNE.

DECLARATION.

The plenipotentiaries, on signing the foregoing treaty, declare, as part and complement of it and subject to the ratification of the same, that the high contracting parties adopt as the frontier between the United States of Brazil and the colony of British Guiana the watershed line between the Amazon basin and the basins of the Corentyne and the Essequibo from the source of the Corentyne to that of the Rupununi, or of the Takutú, or to a point between them, according to the decision of the arbitrator.

JOAQUIM NABUCO.

[L. s.]

LANSDOWNE.

GEOGRAPHICAL CONGRESS AT RIO DE JANEIRO.

One of the important and far-reaching measures considered at the Second International Conference of American States, held in the city of Mexico, was for the establishment of a system of intercommunication between the hydrographic basins of South America. For the furtherance of this purpose it was agreed that the nations of the Orinoco, Amazon, and La Plata systems should assemble for an exhaustive examination of the best means of executing the project. A convention was accordingly celebrated between the delegations of the Argentine Republic and those of Bolivia, Colombia, Ecuador, Paraguay, Peru, and Uruguay for the assembling of a Geographical Congress at Rio de Janeiro within the course of a year from the date of the convention, January 28, 1902.

The following is the text of the convention referred to, as published in the minutes of the Second International Conference of American States:

Whereas, in accordance with the purposes hereinafter set forth and the Memorial of Explorations presented to the International Conference of American States by Gen. RAFAEL REYES, the project of establishing communication between the three great hydrographic basins of South America is shown to be practicable, thus affording a navigable route from the Orinoco to the Plata, through the interior of the continent;

Whereas, the present lack of communication cuts off an immense territory endowed with inexhaustible natural resources from the industry and commerce of the world;

Whereas, among the problems studied by the International Conference of American States assembled at Mexico that of the internal communication of South America is of great moment to civilization;

Whereas, in order to prepare for the execution of the project, it is advisable that the nations of the Orinoco, Amazon, and Plata rivers and of their affluents should assemble to consider the best methods for carrying out the proposition;

Whereas, the Republics of Brazil and Venezuela, in whose territories the Amazon and Orinoco rivers have their sources, are not now represented at this Conference, and it therefore becomes necessary to determine the manner of securing their cooperation:

Therefore, the Nations Signatory have agreed upon the following:

1. The holding of a Geographic Fluvial Conference of the riparian nations which shall meet in the city of Rio de Janeiro within the course of a year.

2. The Government of the Argentine Republic is intrusted with the

mission of securing from the Government of Brazil the adhesion and assent necessary to the holding of said Conference.

3. Both Governments are solicited to secure the adhesion of the other riparian nations and to issue the necessary invitations.

4. The Conference shall proceed in accordance with the annexed programme, except in so far as it may be modified by the decisions of the Governments of Brazil, the Argentine Republic, and Venezuela:

(a) To organize geographical exploration commissions.

(b) To formulate rules for the various commissions.

(c) To make estimates of expenditure for the work to be done.

(d) To determine the proportionate quota for each of the Governments interested.

(e) To organize an International Bureau for the compilation of data of exploration, and to present to the Governments interested a general plan of communication between the hydrographic basins.

(f) To study all matters connected with the foregoing project which may have bearing upon the more rapid execution of the work and the measures which the Governments interested should take, individually or collectively, to promote the welfare of those regions.

INTERNATIONAL CONGRESS OF AMERICANISTS.

The thirteenth session of the International Congress of Americanists has been convoked to meet in the halls of the American Museum of Natural History in the city of New York on October 20, 1902, continuing in session until and including October 25. The object of this Congress is to bring together students of the archæology, ethnology, and early history of North and South America, and by the reading of papers as well as by discussions to advance knowledge of these subjects.

Communications may be oral or written in any of the following languages: English, Spanish, French, German, or Italian. All debates are expected to be brief and no paper must exceed thirty minutes in delivery. The papers presented to this Congress will be printed in the volume of proceedings, if approved. Members of the Congress of Americanists are expected to send in advance of the meeting the titles, and, if possible, abstracts of their papers to the General Secretary.

The subjects to be discussed by this Congress relate to (1) the native races of America, their origin, distribution, history, physical characteristics, languages, inventions, customs, and religions; (2) the history of the early contact between America and the Old World.

All persons interested in the study of the archæology, ethnology, and early history of America—North and South—may become members of the Congress of Americanists by signifying their desire to Mr. MARSHALL H. SAVILLE, General Secretary of the Commission of

Organization, American Museum of Natural History, New York City. Mr. MORRIS K. JESUP is President and the DUKE OF LOUBAT Vice-President of the Commission of Organization.

FREE POSTAL SERVICE FOR BUREAU PUBLICATIONS.

On April 9, 1902, the Postmaster-General of the United States transmitted to the Department of State of the United States an order signed on that date admitting the correspondence and publications of the International Bureau of the American Republics to the mails free of postage, when addressed to the countries forming the International Union of American Republics.

This order was issued in pursuance of the action taken by the Secretary of State of the United States, who, on April 4, 1902, informed the Postmaster-General of the provisions embodied in article 8 of the resolution concerning the reorganization of the International Bureau of the American Republics as adopted by the Second International Conference of American States, held in the City of Mexico, which provides as follows:

“The publications of the Bureau shall be considered public documents, and shall be carried free in the mails of all the Republics.”

The official text of the Post-Office order is as follows:

“In execution of the eighth article of the resolutions concerning the reorganization of the International Bureau of the American Republics adopted by the Second International Conference of the American States, recently held at the City of Mexico, which provides as follows:

“The publications of the Bureau shall be considered public documents and shall be carried free in the mails of all the Republics,”

“It is hereby ordered, That correspondence and publications originating at the Bureau of American Republics, bearing the card of that Bureau, and weighing not over 4 pounds 6 ounces (2 kilograms), the limit of weight prescribed for packages of ‘prints’ by the Universal Postal Convention of Washington, shall be admitted to the mails free of postage when addressed to the countries forming the International Union of American Republics, viz:

Argentine Republic.	Guatemala.	Salvador.
Bolivia.	Haiti.	San Domingo.
Brazil.	Honduras.	United States.
Chile.	Mexico.	Uruguay.
Colombia.	Nicaragua.	Venezuela.
Costa Rica.	Paraguay.	
Ecuador.	Peru.	

“H. C. PAYNE,
“Postmaster-General.”

TRADE OF AMERICA AND GREAT BRITAIN, FIRST QUARTER OF 1902.

The "Accounts Relating to Trade and Navigation of the United Kingdom," published in March, 1902, contain a detailed statement of the commercial intercourse between Great Britain and the various countries of America during the first quarter of the calendar year 1902 as compared with the corresponding period in the two preceding years.

The classification of imports is as follows:

Articles and countries.	Value, three months ending Mar. 31—		
	1900.	1901.	1902.
<i>Animals, living (for food).</i>			
Cattle:			
Argentine Republic	£521, 756		
United States	1, 339, 664	£1, 815, 386	£1, 554, 378
Sheep and lambs:			
Argentine Republic	200, 267		
United States	56, 370	125, 846	148, 728
<i>Articles of food and drink.</i>			
Wheat:			
Argentine Republic	1, 020, 581	885, 491	246, 034
Chile			13, 754
United States	1, 999, 504	3, 247, 839	2, 848, 383
Wheat flour:			
United States	1, 743, 601	2, 299, 033	1, 752, 544
Barley:			
United States	594, 127	342, 098	340, 825
Oats:			
United States	315, 192	339, 210	10, 418
Maize:			
Argentine Republic	425, 590	64, 800	351, 507
United States	2, 036, 428	2, 916, 006	214, 230
Beef, fresh:			
United States	1, 378, 093	1, 549, 721	1, 315, 381
Mutton, fresh:

SPAIN AND SPANISH AMERICA.

A dispatch to the "London Times" dated Madrid, March 11, 1902, states that the Minister of Foreign Affairs announced that on the date mentioned, the Spanish Government, profiting by the presence in Mexico of delegates from all the countries of Spanish America, gave instructions to its representative in that capital to arrange for the conclusion of treaties of arbitration between Spain and the countries in question. In obedience to these instructions, the Marquis DE PRAT, Spanish Minister in Mexico, has signed conventions with the Argentine Republic, Bolivia, Colombia, Guatemala, Mexico, Paraguay, Salvador, Santo Domingo, and Uruguay.

By these conventions it is agreed that all differences which may arise between Spain and those countries shall be submitted to arbitration, and that the arbitrator shall be either the chief of a Spanish American State or a tribunal composed of Spaniards and Spanish Americans, "in order to give greater emphasis (dar mayor relieve) to all solidarity of interests which exists between all branches of the Spanish race." Only in cases of failure to agree upon such an arbitrator are questions to be submitted to The Hague.

The Minister adds that similar conventions will shortly be arranged with Costa Rica, Honduras, Peru, and Venezuela.

ARGENTINE REPUBLIC.

TARIFF CHANGES.

According to the Budget Law No. 4069 for the year 1902, as published in the "Boletin Oficial" of January 31, 1902, the following changes are effected in the customs duties of the Republic:

ART. 5. Such goods and products as are dutiable under the customs law, on importation into the Republic, and pay a rate of 10 per cent or upward, shall, in addition, be subject to a surcharge of 2 per cent *ad valorem*.

ART. 7. Over and above the additional charge of 2 per cent referred to in foregoing Article 5, all goods and products liable to import duty, according to the customs law, shall be chargeable with a surtax of 5 per cent.

ART. 12. Payments to be made in gold and referred to in Article 2 shall be actually effected in gold, or in money of legal tender at the current rate of the day; all contrary provisions are repealed.

Supplementary to the above articles the following decree of January 30, 1902, was issued relating to the execution of Articles 7 and 12.

ART. 1. The 5 per cent surtax shall be payable on and after February 1, proximo.

ART. 2. The rate for payment, in money of legal tender, of duties payable in gold shall be 235 per cent from the 1st of February, proximo, and until otherwise ordered by the Minister of Finance.

The "Boletin Oficial" for February 1, 1902, contains the text of a Presidential decree fixing the import duty on jute and aloë-fiber yarns for weaving at 5 per cent *ad valorem*.

COMMERCE WITH THE UNITED STATES IN 1901.

The Consul-General of the Argentine Republic at New York has compiled a detailed statement showing the trade between the United States and the Argentine Republic in 1901. These statistics show that during the year referred to 70 steamships and 192 sailing vessels, of a total carrying capacity of 129,060 and 172,238 tons, respectively, loaded with American merchandise, cleared from United States ports bound for Buenos Ayres and other maritime cities of the Argentine Republic.

The following table shows the movement of these vessels in detail:

Ports.	Steamships.		Sailing vessels.	
	Number.	Tonnage.	Number.	Tonnage.
New York.....	54	106,569	21	15,642
Apalachicola.....			6	3,722
Baltimore.....	2	3,801	1	698
Boston.....			21	19,209
Brunswick.....	1	1,395	4	2,262
Mobile.....	3	3,604	36	32,554
Norfolk.....	4	5,537		
Pascagoula.....	4	5,696	43	39,258
Pensacola.....			42	43,345
Philadelphia.....	2	2,458	2	2,157
Portland.....			10	7,182
Savannah.....			6	6,209
Total.....	70	129,060	192	172,238

The increase in the exports from the United States to the Argentine Republic since 1893 is shown by the following table:

Years.	Number of vessels.	Tonnage.	Years.	Number of vessels.	Tonnage.
1893.....	188	150,524	1898.....	244	237,672
1891.....	191	176,956	1899.....	258	280,881
1895.....	179	181,582	1900.....	249	252,988
1896.....	235	213,078	1901.....	262	301,298
1897.....	190	184,155			

The exports from the Argentine Republic to the United States in 1901 were carried in 22 steamships and 60 sailing vessels, of a capacity of 40,010 and 40,223 tons, respectively. The annexed table indicates the movement of these vessels in detail:

Vessels proceeding from the Argentine Republic.

Destination.	Steamships.		Sailing vessels.	
	Number.	Tonnage.	Number.	Tonnage.
Boston.....	1	1,600	25	17,197
New York.....	20	36,548	26	16,985
Philadelphia.....	1	1,862	9	6,041
Total.....	22	40,010	60	40,223

A comparison of the tonnage composing this commerce, from 1893 to 1901, gives the following result:

Years.	Number of vessels.	Tonnage.	Years.	Number of vessels.	Tonnage.
1893.....	72	53,002	1898.....	70	59,572
1894.....	77	74,220	1899.....	64	58,879
1895.....	108	95,483	1900.....	75	57,972
1896.....	68	54,986	1901.....	82	80,233
1897.....	65	88,280			

A recapitulation of the foregoing data shows that during the year 1901, 262 vessels, of a carrying capacity of 301,290 tons, cleared from United States ports destined to Argentine ports, while 82 vessels, of a total carrying capacity of 80,233 tons, entered United States ports pro-

ceeding from the Argentine Republic; that is to say, the total commerce between the two nations during the period mentioned consisted of 381,531 tons, the movement of which required the use of 344 vessels. The following table shows the commerce between the two countries, from 1893 to 1901, inclusive:

Year.	Number of vessels.	Tonnage.	Year.	Number of vessels.	Tonnage.
1893.....	311	212, 048	1898.....	314	297, 244
1894.....	268	251, 276	1899.....	322	339, 760
1895.....	287	276, 565	1900.....	324	310, 960
1896.....	303	268, 064	1901.....	344	381, 531
1897.....	275	272, 435			

The total value of the exports from the United States to the Argentine Republic in 1901 rose to \$13,174,140. The following table shows the ports from which these exports were made and the destination and value of same:

Port.	Destination.	Value.	Port.	Destination.	Value.
Apalachicola.....	Buenos Ayres.....	\$16, 293	Norfolk.....	Buenos Ayres....	\$19, 382
	Rosario.....	4, 712		La Plata.....	7, 029
Baltimore.....	Buenos Ayres.....	19, 027	Pascagoula.....	Buenos Ayres....	245, 181
	La Plata.....	11, 687		Rosario.....	100, 333
	Ensenada.....	467, 129		Bahia Blanca....	49, 709
Boston.....	Buenos Ayres.....	382, 608	Pensacola.....	Buenos Ayres....	335, 687
	Rosario.....	112, 528		Rosario.....	30, 775
Brunswick.....	Buenos Ayres.....	29, 490	Philadelphia.....	Buenos Ayres....	48, 812
	Rosario.....	6, 971	Portland.....	do.....	45, 974
	Bahia Blanca....	17, 500		Rosario.....	21, 039
Mobile.....	Buenos Ayres.....	222, 682		Bahia Blanca....	38, 609
	Rosario.....	99, 732	Savannah.....	Buenos Ayres....	91, 541
New York.....	Buenos Ayres.....	9, 141, 620			
	Rosario.....	1, 603, 867	Total.....		13, 174, 140
	Ensenada.....	6, 223			

A comparison of the exports from the United States to the Argentine Republic from 1896 to 1901, inclusive, gives the following result:

1896.....	\$8, 361, 195	1899.....	\$12, 378, 866
1897.....	5, 942, 912	1900.....	14, 852, 813
1898.....	8, 066, 573	1901.....	13, 174, 140

The exports from the Argentine Republic to the United States in 1901 amounted to \$9,950,862, and were made up of the following products:

Articles.	Quantity.	Value.	Destination.
Wool:			
First class.....pounds..	1, 532, 358	\$151, 810	New York.

The following table gives the value of the exports from the Argentine Republic to the United States from 1894 to 1901, inclusive:

1894	\$4,170,986	1898	\$5,723,969
1895	11,206,865	1899	6,164,961
1896	7,072,825	1900	8,441,495
1897	14,759,730	1901	9,950,862

STATISTICS OF IMMIGRATION AND POPULATION, 1901.

As stated in the MONTHLY BULLETIN for March, 1902, the number of immigrants arriving in the Argentine Republic in 1901 was 125,951. The Director of the Department of Immigration of the Republic has issued some additional information in advance of his annual report which states that the greatest number of the arrivals were landed during the months of October, November, and December. The nationalities represented were as follows: Italians, 58,314; Spaniards, 18,066; French, 21,788; Austrians, 2,742; Syrians, 2,159; Russians (mostly Poles), 2,086. The number for other nationalities in no case exceeded 1,000, Great Britain being represented by 439 and North America by 151.

The adult males numbered 56,811 and the adult females 18,672. Unmarried immigrants numbered 59,110 and widowed, 1,317. There were 1,485 children less than 1 year old, 8,161 between 1 and 7 years of age, 4,988 between 8 and 12, and 11,738 between 13 and 20. Of the adults 30,793 were between the ages of 20 and 30 and 974 were above the age of 60 years.

The agricultural laborers numbered 33,992; day laborers, 12,021; domestic servants, 4,932; shopkeepers and assistants, 4,685; dress-makers, 3,727; laundresses, 1,536; office clerks, 1,422; cooks, 1,403; shoemakers, 1,056; carpenters, 948; stone masons and bricklayers, 910; weavers, 890; milliners, 725; tailors, 697; blacksmiths, 535; bakers, 386, and barbers, 242.

The immigrants for whom employment was furnished by the Immigration Department and who were sent at public expense to their respective destinations numbered 42,747. They were settled in the following Provinces: In Buenos Ayres, 12,982; Santa Fé, 12,628; Mendoza, 4,160; Córdoba, 4,002; Tucumán, 1,576; Entre Rios, 1,151; the Federal capital, 2,739, and Misiones (Territory), 1,738, the remainder being scattered among other Provinces and Territories.

According to the report above quoted the total population of the Republic on December 31, 1901, was estimated at 4,794,149. The city of Buenos Ayres was credited with 821,291 inhabitants and the several Provinces were estimated as follows: Buenos Ayres, 1,140,067; Santa Fé, 523,236; Córdoba, 419,072; Entre Rios, 343,684; Corrientes, 277,041; Tucumán, 249,433; Santiago, 180,612; Mendoza, 141,431; Salta, 131,938; Catamarca, 99,827; San Juan, 94,911; San Luis, 91,403; Rioja, 77,783; Jujuy, 54,405.

OPENING OF PORTS TO LIVE STOCK.

United States Minister LORD, on February 21, 1902, transmitted from Buenos Ayres to his home Government, a copy of a note relative to the importation of United States live stock into the Argentine Republic. A decree, issued on February 17, 1902, it is stated, rescinds the prohibition of the importation of live stock from Great Britain or from countries which have their ports open to importations from the United Kingdom. The United States is included among the countries to which the decree in question refers. As the ports of Great Britain have also been reopened to Argentine stock, full commercial intercourse is reestablished between the various countries interested.

Owing to the restrictions placed on exports of Argentine live cattle during 1901, there was an enormous increase during the year in the number of heads slaughtered in the River Plate districts. A total of 278,800 is reported, as against 150,000 in 1900 and 117,300 in 1899. The Province of Buenos Ayres, which experienced the heaviest increase, exported 73,300 head in 1901, as compared with 39,000 in 1900 and 19,500 in 1899.

WOOL SHIPMENTS, FEBRUARY, 1902.

The shipments of wool from the River Plate ports during February, 1902, destined for United States ports were as follows: From Buenos Ayres 3,705 bales were shipped to Boston, 719 bales to New York, and 203 bales to Philadelphia. From Rosario 2,044 bales were shipped to Boston and 160 bales to New York. Only 5 bales were shipped from Montevideo during the month, destined for New York. The total shipments of South American wools to the United States for the month aggregated 6,836 bales.

RAILWAY COMMUNICATION WITH BOLIVIA.

The Commission of engineers sent by the National Government to report on the respective merits of the rival routes via Humahuaca and Via del Toro for the construction of an Argentine-Bolivian railway line have reported in favor of the Humahuaca route. The principal objection to this course lay in the difficulties of the Volcan region, but the Commission has urged the Government to overcome these obstacles by piercing the Volcan and building a tunnel.

The question of traction is yet undecided, but the chief engineer is of the opinion that electricity might easily be employed, the power to be obtained from the Humahuaco River, which, consisting of a chain of waterfalls, could furnish 10,000 horsepower at each cataract.

ARGENTINE PRODUCTS IN SOUTH AFRICA.

The Argentine Consul at Cape Town reports that as regards a market in South Africa for Argentine produce the prospects are very bright, especially in the matter of frozen meats. Other articles which promise well are Argentine horses, steers, wethers, and grains, including maize. He also referred to the necessity of chartering entire vessels, which is an incident to overcome at present; but it is already being minimized by arrangements between grain and cattle shippers to charter boats conjointly. He states that the journey back from South Africa, which is practically a lost one, as South Africa can send nothing which the Argentine Republic does not export herself, is a matter of larger cost for the consumer and does not materially affect the volume of business. The Argentine Republic can, in the opinion of the Consul, supply the needs of South Africa more cheaply and quite as efficiently as Australia can, consequently the business between the two countries will be of large proportions for many years to come.

MISCELLANEOUS NOTES.

It is the purpose of the Argentine Government to establish near the capital or principal city of each province a practical school for the instruction of laborers in rural industries and forestry. For the accomplishment of this design the Ministry of Agriculture has addressed a circular letter to the governor of each province requesting a cession to the National Argentine Government of a tract of land not less than 100 hectares in area by the provincial authorities.

The Argentine Consul-General in Belgium has suggested to the Ministry of Agriculture that Argentine horses might be introduced into Belgium to the mutual advantage of both countries. During 1901 35,592 horses were imported by Belgium, and as there is a public market for the sale of horseflesh, 16,000 of these animals were slaughtered in the *saladeros*. Belgium collects an import tax on bullocks, but horses are admitted free of duty.

A record shipment of butter was made in March by the *Unión Argentina Limitada*, when 9,500 cases, being the largest consignment at one time from the Plate district, was forwarded to London. During the month of February the *Unión* produced 294½ tons of butter and 7,654,000 liters of milk.

The import duty on Brazilian coffees introduced into the Argentine Republic has been reduced from 20 to 12 centavos, a reduction of 40 per cent.

BOLIVIA.

COMMERCE DURING THE FIRST HALF OF 1901.

THE BULLETIN of the National Bureau of Immigration and Statistics (*"Boletín de la Oficina Nacional de Inmigración, Estadística y Propaganda Geográfica"*) for the month of February, 1902, publishes some interesting data relating to the imports and exports of the Republic during the first six months of 1901. The imports corresponding to the period in question consisted of 22,714,351 kilograms of merchandise, invoiced at 7,167,472.84 bolivianos (\$2,960,166.28), while the exports rose to 53,614,446 kilograms, valued at 18,037,644.04 bolivianos (\$7,449,546.99), or an excess of exports over imports of \$4,489,380.71 during the six months referred to. The total of the imports and exports for the first six months of 1901 amounted to 76,328,797 kilograms of merchandise, valued at 25,205,116.88 bolivianos (\$10,409,713.27). The following table shows the imports and exports by countries:

Countries.	Imports.		Exports.		Grand total.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	<i>Kilos.</i>	<i>Bolivianos.</i>	<i>Kilos.</i>	<i>Bolivianos.</i>	<i>Kilos.</i>	<i>Bolivianos.</i>

United States	1,505,965	627,202.28	410,478	403,188.55	1,916,443	1,030,390.83
Uruguay	26,318	9,032.64	56,350	600.00	82,668	9,632.64
Venezuela			610	558.00	610	558.00
Littoral			8,782,323	1,142,048.89	8,782,323	1,142,048.89
Unknown	780,999	391,545.80	2,309,765	882,828.34	3,090,764	1,273,874.14
Total	22,714,351	7,167,472.84	53,614,446	18,037,644.04	76,328,797	25,205,116.88

A general classification of the imports indicates that they consisted of:

Articles.	Quantity.	Values.
	<i>Kilos.</i>	<i>Bolivianos.</i>
Merchandise.....	20, 035, 529	5, 970, 886. 00
Beverages.....	2, 460, 710	751, 457. 49
Drugs.....	133, 995	139, 054. 12
Sundries.....	83, 117	4, 290. 35
Live stock.....		301, 835. 00
Total.....	22, 714, 351	7, 167, 472. 84

A résumé of the exports shows them to have been composed of the following products in the order of their importance:

	<i>Bolivianos.</i>
Mineral products.....	11, 556, 593. 52
Agricultural products.....	6, 073, 309. 14
Manufactures and manufactured products.....	222, 965. 35
Stock and stock products.....	154, 736. 70
Sundry products.....	30, 039. 03
Total.....	18, 037, 644. 03

A further analysis of these products indicates that their origin was as follows:

	<i>Bolivianos.</i>
National Territory of Colonias.....	5, 303, 703. 27
Department of Potosi.....	5, 489, 708. 02
Department of Oruro.....	5, 230, 720. 84
Department of La Paz.....	1, 724, 955. 94
Department of Chuquisaca.....	112, 324. 10
Department of Cochabamba.....	77, 083. 63
Department of Santa Cruz.....	87, 544. 80
Department of Tarija.....	11, 603. 44
Total.....	18, 037, 644. 04

The exports during the six months in question consisted of the following products:

Articles.	Values.	Articles.	Values.
	<i>Bolivianos.</i>		<i>Bolivianos.</i>
Silver.....	6, 419, 868. 06	Toothpicks.....	1, 383. 00
Tin.....	3, 998, 033. 10	Cacao.....	645. 00
Copper.....	650, 103. 30	Corn.....	499. 60

BRAZIL.

CUSTOMS REVENUES, 1901.

The following table shows the value of the customs revenue of Brazil in the year 1901, compared with the preceding year, as published in the Brazilian Review of February 25, 1902:

[Value in contos of reis.]

	1900.	1901.
Import duties collected in gold	22,878	34,256
Maritime dues	408	412
Total collected in gold	23,286	34,682
Equivalent at average exchange in currency	71,894	83,824
Import duties collected in currency	137,081	111,848
Maritime dues	16	9
Total	208,991	195,682
Surcharges	162	161
Inland revenue	7,217	7,713
Excise or consumption dues	14,363	12,066
Extraordinary	837	776
Total	231,573	216,400
Deposits	3,429	3,686
Grand total in currency	235,002	220,086

COMMERCE AND FINANCES OF RIO GRANDE DO SUL.

An interesting report dealing with the commercial and financial conditions prevailing throughout the State of Rio Grande do Sul was forwarded to the Department of State of the United States under date of February 25, 1902, by Consul-General SEEGER at Rio de Janeiro. The report, from which the following data was obtained, was prepared at the request of the Consul-General by a prominent citizen of Rio Grande do Sul, and contains information of interest to financiers and merchants doing business in Brazil.

With an extent of 236,553 kilometers and a population of 1,200,000 inhabitants, the State of Rio Grande do Sul is adapted to the most diversified agricultural production, cattle raising, dairy farming, etc. These industries are, however, hampered by the scarcity of labor and the lack of necessary capital. The State government is anxious to facilitate the investment of foreign capital, which would find advantageous employment in the exploitation of tramways and other electric installations, railroads, banks, seaports, bridges, etc. Notwithstanding the drawbacks noted, the value of merchandise exported from the State during the five years 1896-1900 amounted to more than 53,000,000\$000 (\$28,620,000) annually. The most important articles of export are ox and cow hides, dry and salted; beef, salt and dried; manioca meal, lard, beans, tobacco, wool, tallow, hair, and leather. Other articles of exportation are sugar-cane brandy, canary seed, oils, potatoes, pork and sausages, onions, wax, eggs, tongues, Paraguay tea, vegetables of various kinds, salted fish, wine, cigars, maize, conserved meats, hats, oranges, bone ash, and lumber.

The railways of the State are: Porto Alegre-Novo Hamburgo, with an extent of 43 kilometers, in operation since 1876; Porto Alegre-Uruguayana, total extent 912 kilometers, of which 627 kilometers are in operation and the remainder under construction; Santa Maria-Uruguay, projected under concession to a Belgian syndicate and which is to run from the Santa Maria River to the Uruguay, an extent of 355 kilometers being already in operation; Rio Grande-Bage, with an extent of 283 kilometers, in operation since December, 1884; and Quarahy-Itaqui (part of the Brazilian Great Southern), with an extent of 175 kilometers, in operation since 1887. The coal-mining interests of São Jeronymo also operate a railway for the delivery of their product. The tramways of the State are operated with lucrative results, and are advancing steadily in extent and equipment.

Many improvements were made by the State government in the year 1900 (which is the year statistically considered in the report mentioned), and at the end of the year there still remained a balance of 1,268,271\$340 (\$684,467) in the treasury. The total expenses during the period amounted to 1,335,938\$588 (\$721,407) the principal item being for public instruction. During the year a total of 343 vessels entered the ports of the State, with a tonnage of 215,072, while the number cleared was 337, with a total tonnage of 215,251.

The State abounds in fine cabinet and construction woods, while medicinal plants exist in great variety. Mines of nickel and copper ore have been discovered recently in various parts of the State, and Belgian capitalists have formed syndicates for their extended exploitation. The coal mined, though of a grade inferior to anthracite and Cardiff coals, is steadily increasing in value and consumption. The company operating the mines of São Jeronymo has recently received

from the United States a number of diamond drills and intends to operate to a depth of 500 meters, where it is hoped to find coal of the first quality. The present depth of operations is but 87 meters.

MINERAL RESOURCES OF THE STATE OF MINAS.

An article written by COSTA SENNA, a mining engineer of Brazil, and published in the "Minas Geraes" contains the following information concerning the mineral wealth of the State of Minas:

"While examining, three or four years ago, gravel taken from the rivers of the municipal district of Montes Charos, I found many cubes of a mineral in which I recognized galena. Recently I received from this same district some splendid specimens of lead ore, rich in silver. The largest specimen weighed 1,500 grams, consisting of pure galena without traces of gangue. An analysis of this sample, made at the Mining School of Ouro Preto, showed a yield of 35 grams of lead per 100 grams of ore—silver per 100 kilos of lead, 49 grams. These results show the necessity of ascertaining the importance of the deposit, which probably is not the only one in that vast region. Thus, in addition to the large auriferous deposits of the municipal district of Minas Novas, the diamond beds of Grão Mogol, the tin and phosphatic lime deposits in the municipal district of Salinas, and the graphite bed near S. Pedro do Jequitinhonha, another mineral has been found in this section which, as soon as it is traversed by railways, will become one of the richest and most important of the State of Minas Geraes."

CULTIVATION OF CACAO.

The Commercial and Financial Review ("Revista Commercial e Financeira") publishes an article in which attention is called to the opportunities offered in Brazil for the cultivation of cacao. The article states that this culture is one of the most remunerative in Brazil, at the present time. The conditions of soil and climate in the State of Bahia are especially favorable to the industry. There are already extensive cacao plantations in this State, the most flourishing of which are in the vicinity of Ilhéos, Cannavieiras, and Belmonte. The exports of cacao from Brazil from January to August, 1901, were as follows:

States.	Quantity.	Value.
	<i>Kilos.</i>	<i>Milreis.*</i>
Bahia.....	7,099,783	8,636,698
Pará.....	1,974,765	2,574,098
Amazonas.....	129,534	155,065
Pernambuco.....	19,119	19,569
Ceará.....	369	336
Total.....	9,223,570	11,355,766

* The value of the milreis in United States gold is \$0.546.

MISCELLANEOUS NOTES.

A recent issue of the "A Provincia do Pará" states that Lieut. Commander AUGUSTO FRUCTUOSO MONTEIRO, of the Brazilian navy, sailed from the port of Belém on the 30th of March ultimo, for the Amapá region, for the purpose of making soundings in the Oyapoc River. He will endeavor to find a channel which will permit the free navigation of that river. He will also determine the exact geographical position of Cape Orange and select a site near the mouth of the Oyapoc for the establishment of a future seaport town.

The contract for the improvements at the port of Pará has been signed by the Brazilian Government, and includes the building of a wall in the river, somewhat beyond the end of the present piers, parallel with the shore, for about 1½ miles, the space inshore to be occupied by warehouses and all facilities for loading and unloading vessels, wharves, etc. The channel is to be dredged, so as to admit the dockage of the largest vessels. The amount of the contract is about \$4,250,000 and the time limit ten years.

United States Consul-General RICHARD GUENTHER, of Frankfort, reports, April 7, 1902, that the Brazilian Government has recently granted to a German citizen, the exclusive right during ten years, to develop the monazite-sand deposits along the coast of Brazil, and that a company is being organized at Berlin for the purpose of acquiring control of this privilege and for exploiting similar deposits elsewhere.

A new steamship service has been established between Pará and the United States, which will doubtless create competition in freight rates and thus promote trade. The new line is a branch of the Prince Line, and at present consists of four new ships of about 6,000 tons cargo capacity. They will have every modern convenience and will ply regularly between New York, the River Plata, and Brazilian ports, visiting Pará every twenty-one days.

Consular Agent SANFORD, at Manãos, reports that in the first quarter of 1901 the exports of rubber from that port to New York were 24,601 cases, valued at \$6,640,224. In the first quarter of 1902, just ended, there were exported to New York from Manaos only 15,542 cases of rubber, valued at \$3,357,763; the price, as well as the quantity, being much lower.

CHILE.
DEVELOPMENT OF JUAN FERNANDEZ.

In a report to the State Department at Washington, Consul R. E. MANSFIELD, stationed at Valparaiso, says:

"The island of Juan Fernandez, lying 600 miles west of Valparaiso (made famous by the story of Robinson Crusoe), promises soon to develop industrial interests. The island belongs to Chile, and the

Government is now arranging to make it a part of one of the provinces and establish a local civil government. The island is about 15 miles long and 8 miles in width. There is a good harbor on one side, where large ships can anchor with safety. A large canning factory has been established on Juan Fernandez, and the fishing industries are attracting the attention of capitalists. There are quantities of lobsters, crabs, and excellent food fishes in the waters. The lobsters are large, of excellent flavor, and especially suited for canning. They are easily caught, the supply seems inexhaustible, and the cost of securing them is nominal. There are also large numbers of fur seals on Fernandez and other islands near by, the taking of which might be profitably included in the lobster and fish business. The laws of Chile permit the killing of seals from March 1 to November 1. There is a ready market for the seal skins in this port, whence they are shipped to Europe. There is plenty of fresh water on the island; land can be acquired by settlers without cost; fruit and vegetables grow wild and are easily cultivated, which makes the cost of living comparatively low. The company now engaged in business is enlarging its plant and increasing its output. From investigations I have made I am of the opinion that an American company could engage in this trade with reasonable assurance of securing large profits on the investment."

MISCELLANEOUS NOTES.

The harvest prospects of the Republic for 1901-2 are very favorable, but the actual acreage under wheat culture is reported as smaller than usual. It is therefore anticipated that the importations of this cereal will be somewhat above the normal, though not so great as in 1900, when 20,000 tons of foreign wheat were used in the country.

The "Engineering News" notes that the Chilean Government has approved the plan submitted by the manager of the Southern Railway of Buenos Ayres, Argentine Republic, for connecting the Southern with the Chile-Victoria Railway by way of Las Lajas and Victoria. This will necessitate the construction of a tunnel 500 meters (about 547 yards) in length.

Valuable phosphate beds, whose product is similar to the Chilean article, have been discovered on a little island in the Pacific lying 200 miles west of the Gilbert group and 1,600 miles in a straight line from Brisbane, Queensland. The island is a colonial possession of Great Britain.

The circular of the Permanent Nitrate Committee for April is as follows: Total exports of nitrate of soda to Europe, March, 2,975,300 quintals; loading for Europe, April 1, 1,379,000 quintals. European imports, March, 127,640 tons; European deliveries, March, 190,410 tons. Visible supply, Europe, April 1 (stocks and afloat), 519,370 tons.

The "Bulletin Commercial" of Brussels, in its issue for March 8, 1902, states that an international exhibition of school requisites (furniture, apparatus and scientific instruments, books and other appurtenances) will be held in Santiago in September, 1902, during the holding of the General Congress of Public Learning in that city.

COLOMBIA.

INCREASE IN POSTAGE RATES.

In accordance with decree No. 157, dated January 29, 1902, a new postal tariff, governing the postage on mail matter in Colombia, went into effect on March 1, 1902. The new rates are as follows:

To countries belonging to the Universal Postal Union.—Letters, 20 cents for each 15 grams or fraction thereof. Letters addressed to Ecuador and Venezuela, via Ipsiales or Cúcuta, or any other place that is not a maritime port, 10 cents for each 15 grams or fraction thereof; postal cards, single, 5 cents each; double postal cards, or with answer paid, 10 cents each; printed matter, 4 cents for each 50 grams or fraction thereof (packages that weigh 2,000 grams, or which measure on any of their sides 45 centimeters, or that are not in a condition to be examined without breaking the boxes or cutting the strings, are unmailable); samples, 6 cents for each package weighing from 1 to 50 grams, and in excess of the latter weight, 4 cents for each additional 50 grams or fraction thereof (objects are not mailable which have any commercial value and which weigh more than 350 grams, or that are more than 20 centimeters long and 10 centimeters wide or thick); commercial papers, 12 cents for each package weighing from 1 to 50 grams, and in excess of the latter weight, 4 cents for each 50 grams or fraction thereof; documents containing the proceedings in civil and criminal cases are classified as commercial papers, and packages weighing more than 2,000 grams and whose dimensions exceed 45 centimeters are unmailable; parcels post, including the right to a receipt of deposit, whatever the class, weight, or size, 20 cents for each parcel; for return receipts, 10 cents for each parcel.

To countries not in the Universal Postal Union.—Letters, for each 15 grams or fraction thereof, 50 cents; postal cards are not mailable; printed matter, 10 cents for each 50 grams or fraction thereof; samples, 10 cents for parcels weighing from 1 to 50 grams, and when in excess of the latter weight, 4 cents additional for each 1 to 50 grams (articles that have a commercial value, or that weigh more than 350 grams, or that are more than 20 centimeters long and 10 thick or wide are not mailable); commercial papers, 15 cents for each 1 to 50 grams, and in excess of the latter weight at the rate of 4 cents; proceedings

in civil and criminal cases are classified as commercial papers (packages weighing more than 2,000 grams, or whose dimensions are greater than 45 centimeters, are unmailable); parcels post, including a receipt of deposit, whatever the class, weight, or size, 20 cents for each parcel (no class of correspondence is mailable the postage on which is not entirely paid).

Domestic postage.—Letters, 10 cents for each 15 grams or fraction thereof; postal cards, single, 5 cents; postal cards, double or with answer paid, 10 cents; newspapers, 2 cents for each 50 grams or fraction thereof; other printed matter, not newspapers, 4 cents for each 50 grams or fraction thereof; commercial papers, 10 cents up to 50 grams, and in excess of that weight, 4 cents; samples, 5 cents up to 100 grams, and above that weight, 4 cents; parcels post, 20 cents for each package, whatever may be its weight, contents, or destination; fees for advice of receipt, 10 cents for each object; proceedings in civil cases, 10 cents for each 15 grams or fraction thereof; declared values, 20 cents from \$10 to \$100; railway postal service, 5 cents for each letter, whatever may be its weight, to the respective station; river postal service, 10 cents for each letter, whatever may be its destination, to the ports touched by steamships.

Urban service.—Letters, 5 cents for each 15 grams or fraction thereof; printed matter of all kinds, 2 cents for each 50 grams or fraction thereof.

For the use of post-office boxes, \$15 shall be deposited on receipt of the keys to the box, and a monthly charge of \$1 shall be made thereafter for the use of lock boxes, and 50 cents monthly for the use of boxes without locks. These charges must be paid in advance.

GENERAL TRADE CONDITIONS.

A very excellent and useful report on the trade of Colombia was recently forwarded to the British Government by Vice-Consul DICKSON, the report being specially designed for the guidance of the manufacturers of Great Britain who desired a market for their goods in the Republic. As many of the items concern matters of interest to dealers in the United States, the report is reproduced, as follows:

“For the better class of mantillas, made generally of cashmere, the trade is almost entirely in French hands. Among the poorer classes a mantilla is used made of black mixed cloth. This is invariably ordered from England. Travelers have endeavored to sell good black and woolen cashmeres for mantillas, but rarely with any success. The trade in light woolen shawls has been almost entirely monopolized by Germany. The Paisley article, which found a ready market a few years ago, is now extremely difficult to sell. Paisley shawls are as cheap or cheaper than German shawls, but the coloring and designs are not suited to the Colombian taste. British travelers rarely have a

good collection of shawls. A German traveler makes German shawls a specialty, having whole shawls in his collection, and in some instances as many as 200 distinct makes. British travelers prefer to push cheaper piece goods, which are easier to sell.

"For the last two years the high rate of exchange has driven foreign-made shoes out of the market. British shoes were very popular, but British travelers rarely carry samples of shoes, while French and German travelers make a specialty of this. French and German travelers do a fair trade in the shoes of two well-known British makers. The same restriction applies to ready-made clothes, and though the demand for hats has fallen off, there is, nevertheless, a sale for British hats, principally soft and hard felt, silk, and straw hats. There would be a much larger trade if travelers would carry samples.

"It would not be profitable for a house to send a traveler to sell machinery. Any machinery required from the United Kingdom is generally bought direct by each separate customer.

"Swedish and American wooden, and French, Belgian, and Italian wax matches have the largest sale. British wax matches formerly had a good sale. Umbrellas, pins, needles, and various classes of silk handkerchiefs and neckties enjoy a steady demand. More attention should be given to Sheffield knives and machetes. They have a good reputation both for price and quality. A good trade could also be done in such minor articles as various classes of buttons, leather for saddlery, Dundee jute carpets and Halifax carpets, coffee bags, etc.

"The textile trade of Colombia may be divided into two classes—for the hot climates and for the cold climates. The difference in the weights of cloths for these two climates is marked, especially in woolen goods. In white and gray shirtings the difference is not so marked. In printed goods, printed batistes have practically a monopoly. The trade is practically in the hands of Manchester houses, though American prints have certainly done some harm to British trade. There are practically only three lengths needed in Colombia—10 yards, 12 yards, and 30 to 33 yards. I have seen in the office of an English commercial traveler over 100,000 distinct designs of printed goods from Manchester, and each design can be ordered from 20 up to 30 inches wide and the pieces cut into any length the customer needed. He had 60 qualities, each in 5 or 6 distinct finishes. He has never been asked for a quality or style of design that he could not at once offer. The monopoly of white calicoes is in the hands of Manchester manufacturers. There are a few foreign houses which, from patriotic motives, introduce French, German, and Italian white goods, but never with success. I am told by British commercial travelers that it would be impossible to sell white goods if they were not well stiffened and finished.

“In cotton trouserings there has been of recent years a severe competition from Italy, and Italian trouserings are forcing the British article out of the market. Most of the British commercial travelers have sent home samples of these drills, but until lately the matter has not been taken up seriously. The Italian article has got into the market and is likely to remain some time. It is not a question of price, but of designs. Woven shirtings have a good chance and makers ought to devote all their energy to the production of the prettiest designs possible for dressings, as they are cheaper than calico prints. The principal demand is for cheap qualities and now is a splendid chance for makers of zephyrs. They should have the best designs possible consistent with a low quality. Manufacturers ought especially to study very pretty designs in ‘split’ zephyrs, and as wide as possible—say, 26 to 27 inches. The ‘split’ zephyrs, running from about 20 to 22 inches, have been a success, but a width of from 26 to 27 inches would in all probability have a still greater sale.

“In cheap union suitings and good woolen suitings Yorkshire goods hold their own. There has always been a fair demand for German and French goods. A large trade is done through Hamburg and Paris, but in British suitings. In linen and jute Belfast and Dundee control the market. These districts now send their own travelers, and outside competition in their productions is almost nil. It is principally a coast business, but it would pay for a house to send a traveler to the interior with only linen and jute samples.”

TARIFF CHANGES.

Consul OSCAR MALMROS writes from Colon, under date of March 25, 1902, to the Department of State of the United States, to the effect that by a recent decree the import duties on all merchandise, except alcohol and rum, have been increased 50 per cent over those previously in force. In other words, the *ad valorem* duty has been raised from 20 per cent to 30 per cent.

The import duty on rum and alcohol has been reduced as follows:

	Centavos.
For each liter of alcohol containing up to 42° of the areometer of Cartier	50
For each liter of alcohol of more than 42° of the same areometer	100
For each liter of rum up to 21° of the same areometer	50

The duty is payable in silver coin. The Consul further adds that gold is at present sold for silver at a premium of 150 per cent.

ASPHALT DEPOSITS.

A concession for the exploitation of the asphalt deposits of the Republic of Colombia has recently been obtained by a citizen of the United States, according to a report forwarded to the Department of State by the United States Chargé d’Affaires at Bogota. The conces-

sion carries with it the exclusive right of working the asphalt beds and the right of export as well during a period of ten years. Further privileges are guaranteed, viz: obtaining lands which contain asphalt under condemnation proceedings, the use of public lands, necessary waterway privileges, the right to construct roads and to introduce the necessary machinery, tools, and building materials free of duty, with the proviso that at the expiration of the ten years' period the improvements shall become the property of the Colombian Government.

The asphalt deposits of Colombia are said to be very large and to embrace varieties known as glass pitch, gilsonite, and soft and liquid asphalt.

RIVER NAVIGATION CONCESSION.

A contract has been secured from the Government of the Republic of Colombia for the navigation of the Caqueta and Putumar rivers with their tributaries. The concessionnaire, Mr. JOHN BIDLAKE, is permitted the free introduction of boats and such machinery as he may require. He is to receive 1,250 acres of land for each vessel he puts upon the rivers. He has also the right to build wharves and necessary buildings on public domains. The contract is to continue in force for ten years. The territory covered embraces the larger portion of southern Colombia and includes a vast rubber forest, the extraction of the product being the main object of the enterprise.

SURTAX ON IMPORTS.

According to the "Diario Oficial" of August 23, 1901, a surtax of 10 per cent is to be paid upon every import duty account unpaid within eight days. The law governing the application of the tax is as follows:

"DECREE NO. 1016, OF AUGUST 16, 1901, TO LEVY A SURCHARGE OF 10 PER CENT UPON EVERY IMPORT DUTY ACCOUNT UNPAID WITHIN EIGHT DAYS.

"SOLE ARTICLE. Every import duty account amount of which shall not be paid within eight days, being the term fixed by Article 146 of the Fiscal Code, shall be subject to a surcharge of 10 per cent, to be levied as a war contribution, without prejudice to any interest due both on the principal sum and amount of such surtax."

MISCELLANEOUS NOTES.

Consul-General H. A. GUDGER, of Panama, under date of April 7, 1902, says that the civil and military chief of the Department of Panama has issued a decree in which it is ordered that all hides of cattle killed must be immediately turned over to the Government.

Of the orders recently obtained by the United States in the Colombian market, one of particular importance consists of placer dredges for the gold fields of the Republic.

The demand for cotton prints of United States makes is reported as steadily on the increase in Colombia. Gray drills have also obtained a footing.

CUBA.

COMMERCE IN 1900 AND 1901.

The Insular Division of the War Department of the United States on April 17, 1902, issued a bulletin showing the commerce of the island of Cuba during the calendar year 1901 as compared with the preceding year, as follows:

The total value of merchandise imported during the year 1901 was \$66,583,973, as against \$66,658,589 for 1900, and the exports of merchandise during the year ended December 31, 1901, amounted to \$63,278,380, as against \$48,904,684 for 1900. These figures show a very slight decrease in the imports and an increase of 29 per cent in the exports.

Gold and silver was imported during the year 1901 to the value of \$1,169,135; in 1900, \$3,420,625; exported, during 1901, \$3,223,739; in 1900, \$2,437,652.

The value of merchandise coming from the United States for the calendar year 1901 was \$28,078,633, a decrease of \$1,097,369 as compared with 1900, while the exports for 1901 amounted to \$48,066,579, an increase of \$14,819,970.

In the comparison by classes for these periods the import figures show an increase of about \$1,000,000 in articles of food and animals, this class of merchandise amounting to \$32,281,588 for the twelve months of 1901; manufactured articles during 1901 were imported to the value of \$26,262,227, a gain of about \$2,250,000; raw materials show an approximate increase of \$1,350,000, or 60 per cent; a slight decrease is shown in the importation of articles of voluntary use, luxuries, etc.

Agricultural exports for the periods mentioned show an increase of about \$13,700,000 over 1900, the exportation during the year 1901 amounting to \$46,811,088; manufactures increased from \$12,719,046 in 1900, to \$13,207,789 in 1901, while the products of mines and forests show an increase in favor of the twelve months of 1901.

The following comparative statement of the exportation of sugar during the calendar years 1901, 1900, and 1899 may prove of interest to the commercial reader:

Destination.	1901.		1900.		1899.	
	<i>Pounds.</i>		<i>Pounds.</i>		<i>Pounds.</i>	
United States	1, 319, 620, 751	\$30, 814, 196	642, 558, 435	\$16, 768, 852	710, 410, 891	\$18, 634, 001
Other countries	95, 344	2, 168	135, 844	5, 508	142, 255	4, 434
Total.....	1, 319, 716, 095	30, 816, 364	642, 694, 279	16, 774, 360	710, 553, 146	18, 638, 435

COMMERCE IN 1902.

The commerce of the island, according to the report issued by the Division of Insular Affairs of the War Department of the United States, for seven months ending January 31, of the fiscal year 1902, as compared with the corresponding period of the preceding fiscal year, was as follows:

The total value of merchandise imported during the seven months ended January 31, 1902, was \$40,043,986, as against \$38,033,930 for the corresponding period of 1901, and the exports of merchandise during the seven months ended January 31, 1902, amounted to \$24,113,419, as against \$26,970,220 for the same period of 1901. These figures show an increase of 5 per cent in the imports and a decrease of 11 per cent in the exports.

Gold and silver were imported during the seven months of 1902 to the value of \$69,048; same period of 1901, \$58,399; exported during the 1902 period, \$3,170,496; corresponding period of 1901, \$992,836.

The value of merchandise coming from the United States for the seven months ended January 31, 1902, was \$17,118,839, a slight increase over the corresponding period of 1901, while the exports for 1902 amounted to \$15,174,488, a decrease of \$349,742.

In the comparison by classes for these periods, the import figures show an increase of about \$1,100,000 in articles of food and animals, this class of merchandise amounting to \$19,142,794 for the seven months of 1902. Manufactured articles during the period of 1902 were imported to the value of \$16,225,575, a gain of about \$1,600,000. Raw materials show a very slight increase over 1901, and a decrease is shown in the importation of articles of voluntary use, luxuries, etc.

Agricultural exports for the periods mentioned show a decrease of about \$3,000,000 as compared with 1901, the exportation during the seven months of 1902 amounting to \$14,217,344. This marked difference is accounted for to a great extent by the falling off in shipments of leaf tobacco to Germany, beginning August, 1901; exports of manufactured articles amounted to \$8,063,485 in 1902, a slight increase over the previous year; products of forests show a decrease, while products of mines show an increase of \$260,304, or 75 per cent, in favor of the seven months of 1902.

The total value of merchandise imported during the eight months ended February 28, 1902, was \$44,659,314, as against \$42,920,814 for the corresponding period of 1901, and the exports of merchandise during the eight months ended February 28, 1902, amounted to \$28,487,236, as against \$34,008,270 for the same period of 1901. These figures show an increase of 4 per cent in the imports and a decrease of 16 per cent in the exports.

Gold and silver was imported during the eight months of 1902 to

the value of \$71,908, same period of 1901, \$127,067; exported during the 1902 period, \$3,172,938, corresponding period of 1901, \$902,836.

The value of merchandise coming from the United States for the eight months ended February 28, 1902, was \$19,140,549, a slight increase over the corresponding period of 1901, while the exports for 1902 amounted to \$18,158,540, a decrease of about \$3,000,000.

The value of sugar shipments to the United States during the month of February, 1901, was \$4,320,033, as compared with \$1,385,487 for the corresponding month of the present year.

In the comparison by classes for these periods the import figures show an increase of about \$623,000 in articles of food and animals, this class of merchandise amounting to \$21,070,701 for the eight months of 1902; manufactured articles during the period of 1902 were imported to the value of \$18,275,233, a gain of about \$1,800,000; raw materials show a very slight increase over 1901, and a decrease is shown in the importation of articles of voluntary use, luxuries, etc.

Agricultural exports for the periods mentioned show a decrease of nearly \$6,000,000, due to the falling off in sugar and tobacco trade, as compared with 1901, the exportation during the eight months of 1902 amounting to \$17,271,349. Exports of manufactured articles amounted to \$9,132,221, a slight increase over the previous year. Products of the forest show an increase, and products of mines show an increase of \$296,739, or 78 per cent, in favor of the eight months of 1902.

The customs revenues for the three months ended March 31, 1902, were \$3,672,590.65; for the three months ended March 31, 1899, \$2,253,339; for the three months ended March 31, 1900, \$4,139,780.91, and for the three months ended March 31, 1901, \$3,980,783.70.

The export duty was abolished on April 1, 1901. These duties amounted, in the three months ended March 31, 1899, to \$224,478.26; in the three months ended March 31, 1900, \$215,119.14, and in the three months ended March 31, 1901, \$267,432.32, from which it appears that the customs revenues in the three months ended March 31, 1902, show an increase over the same period of 1899, exclusive of export duties, of \$1,643,729.91, a decrease as compared with 1900 of \$252,071.12, and a decrease compared with 1901 of \$40,760.73.

VITAL STATISTICS OF HAVANA FOR 1901.

An interesting statement concerning the vital statistics of Havana for the calendar year 1901 has been compiled from official reports on file in the Insular Division of the War Department of the United States, from which the appended facts have been obtained.

A steady and general improvement is shown in the sanitary conditions, but the great work of the Sanitary Department has been the

extirpation of yellow fever from Havana, and it is believed that this has been due to measures, based upon certain scientific facts established by the Army Board, for the first time adopted and carried out.

If the belief is correct that by measures taken for killing infected mosquitoes Havana has been rid of yellow fever in a few months, when definite data is in existence warranting the belief that the disease has been epidemic in the city since the English occupation in 1762, it is of vast importance that these facts should be made known to the world. It is possible that during the coming summer yellow fever might be introduced into the southern part of the United States, and if it could be controlled there as it has been in Havana during the past year it would save many lives and prevent inconvenience and financial loss to the States so affected.

To make clear the claim that Havana has been purged from yellow fever during the past year by the destruction of infected mosquitoes, the history of Havana with regard to yellow fever during the past one hundred years should be considered. During that period yellow fever has always been epidemic in Havana, up to 1901. Sanitary measures, which had reduced the excessive death rate of Havana to that of healthy cities of civilized countries, had had little or no effect upon yellow fever. General disinfection as carried out for other infectious and contagious diseases had been most extensively and faithfully tried. Yellow fever had suddenly and sharply disappeared upon the introduction of a system whose object was killing infected mosquitoes, based upon the theory that the *Stegomyia* mosquito is the only means of transmitting yellow fever. From September 28, 1901, to February 15, 1902, there has not been a single case of yellow fever in Havana, a condition of affairs so unusual that all questions of chance can be dropped from consideration. During the past forty-five years, with scarcely an exception, some deaths have occurred from yellow fever in every month of the year—the maximum number, 2,058 deaths, in 1857; the minimum, 51 deaths, in 1866; annual average, 751.44. For the year 1901, in which the new system was adopted, there were only 18 deaths, and 12 of these occurred before the new system was put into effect.

The general sanitary methods adopted by the United States administration upon its occupation in January, 1899, had a rapid effect in reducing the general mortality. In 1898, the last year of Spanish occupation, Havana had 21,252 deaths; in 1899, the first year of United States occupation, 8,153 deaths; the next year, 1900, 6,102 deaths, and 1901, 5,780 deaths, which would be a small number of deaths for cities of similar size in any civilized country. This is a much smaller number of deaths than had ever occurred for a year in Havana before. During the past thirty-one years the maximum death rate was 91.03 in 1898 and the minimum 29.30 in 1885, or an average rate of 41.55. In 1901 the rate was 22.11.

This data would indicate that the hygienic conditions of Havana at the end of 1899 were better by far than had ever been before, but when the facts as to yellow fever are considered the conclusions will be very different as to that disease. There has always been a considerable annual number of deaths from yellow fever in Havana.

In 1898, on account of the war, there was very little immigration to the city, and, therefore, there were few nonimmunes to contract the disease, consequently there were only 136 deaths from yellow fever. The same conditions prevailed during the first six months of 1899, and there were only five deaths. During the last half of that year, over 12,000 immigrants arrived, and 98 deaths from yellow fever occurred. The next year, 1900, there were 310 deaths from yellow fever. This demonstrates that the general sanitary measures had had a marked effect upon the general death rate, but very little upon that for yellow fever. Neither labor nor expense was spared, and by the end of 1900, the authorities were convinced that general sanitary methods could not in a short time eradicate yellow fever from Havana. In the smaller cities and military camps, entire success had resulted from the deportation of the nonimmune population, together with general sanitary methods; but in a city the size of Havana, with a nonimmune population of between 30,000 and 40,000, such a measure was entirely impracticable.

At the beginning of 1901 the prospects as far as yellow fever in Havana was concerned were very unfavorable. There was a large nonimmune population; probably larger than it had ever been before. The city was thoroughly infected. During the preceding year there had been 1,244 cases and 210 deaths, and all classes of nonimmunes had suffered severely. January commenced with an unusually large number of deaths from this disease, the records showing 24 cases and 7 deaths. February was equally severe, 8 cases and 5 deaths occurring during that month.

The military governor, being determined that no precautions should be omitted, directed that in addition to former measures, work be started on the line that the mosquito was the cause of the transmission of this disease. This work went into effect about March 1, with the result that during the remainder of the year only 12 additional deaths were from yellow fever.

Estimating the yellow-fever year as commencing April 1, it is shown that for the past eleven years the maximum, 1,385 deaths, occurred in 1896-97; the minimum, 122 deaths, in 1899-1900, the average being 467. For the year 1901-2, up to February 15, there were 5 deaths. This difference is too marked to be any matter of chance. That the yellow-fever year of 1901-2 had only one twenty-fifth the number of deaths that had occurred in the minimum twelve months of the preceding eleven years must be due to some cause that did not act during those years. Still more marked is the fact that since September 28,

1901, no cases at all have occurred, particularly when it is considered that October and November rank among the worst months for yellow fever.

Not only was this result obtained with the city full of nonimmunes, but there were half a dozen infected towns in railroad communication with Havana. Constant intercourse was kept up and no interference with commerce occurred. Goods of all kinds were allowed to come into the city freely. No restriction was put upon the bringing in of clothing, bedding, etc., from those infected points. The only infected material from the towns looked after was the sick man, who was carefully sought out and screened from mosquitos.

The number of other infectious and contagious diseases have been smaller during the year. There has been very little diphtheria and typhoid fever, and the tuberculosis rate is about that of most cities of civilized countries. A rapid decrease has taken place since American occupation. A marked decrease in malaria has also occurred since the mosquito work began.

GUATEMALA.

DUTY ON SUGAR.

Under date of February 26, 1902, the President of the Republic of Guatemala has promulgated the following decree:

“That in accordance with the provisions of the customs tariff, and in the manner prescribed for the collection of import duties, sugar imported into the country from abroad through the maritime or frontier custom-houses shall pay, on and after the 1st of March next, the following duties, except in those cases where sugar, according to the terms of reciprocity treaties, is declared free of duty:

Sugar:	Per kilo, gross weight.
Muscovado or raw.....	\$0. 05
Not refined, all classes.....	. 10
Refined 20

CONCESSIONS FOR THE NAVIGATION OF LAKE ATITLAN.

The Government of Guatemala on March 8, 1902, granted to Señor DON ANTONIO FORTUNY, with power of transferring to a third party, an important concession for the navigation of Lake Atitlan. According to the terms of this concession Señor FORTUNY covenants to place a steamboat of 25 tons capacity upon the waters of Lake Atitlan, and maintain the same in operation and open to the service of the public for a period of ten years. The design of the vessel in question must be submitted to and approved by the Department of Public Works. This steamboat will make daily trips, Sundays excepted, between San Lucas Toliman, Tzanjuyú, and Atitlan, and may extend the service to other towns on the lake when the exigencies of traffic so demand. The

concessionaire is exempt from Federal and municipal taxes for a period of ten years, and has the privilege of importing into the Republic, free of duty, the articles that may be required for the establishing of the enterprise. Lake Atitlan is a beautiful sheet of water situated between lofty mountains, and in a rich and productive mining and agricultural portion of the Republic. The waters of Atitlan are of great depth, and the lake is 24 miles long by 10 miles wide.

HONDURAS.

BUDGET 1902-3.

The budget of the Republic of Honduras for the fiscal year 1902-3, as fixed by the National Congress and duly approved by the President, amounts to \$2,269,050, made up as follows:

RECEIPTS.	
Customs duties.....	\$1, 100, 000. 00
Tax on alcohol.....	80, 000. 00
Tax on liquors.....	800, 000. 00
Tax on powder.....	25, 000. 00
Sealed paper and stamps.....	80, 000. 00
Tax on live stock.....	31, 000. 00
Postal revenues.....	24, 000. 00
Receipts from telegraph and cable line.....	64, 000. 00
Custom-house paper.....	16, 000. 00
Printed matter.....	1, 000. 00
Export tax on cattle.....	60, 000. 00
Export tax on products.....	20, 000. 00
Lottery and wharfage.....	223, 500. 00
Receipts from lands.....	5, 000. 00
Printing and binding.....	4, 000. 00
Pawnshops.....	3, 500. 00
Mint.....	1, 000. 00
School of Arts.....	3, 000. 00
Lithographing.....	1, 000. 00
Receipts from steamships.....	2, 000. 00
Incidental receipts.....	85, 050. 00
Total.....	2, 629, 050. 00

DISBURSEMENTS.	
Executive Department.....	\$432, 622. 00
Department of Justice.....	142, 420. 00
Department of Finance.....	240, 128. 30
Department of Public Credit.....	120, 027. 10
Department of Foreign Relations.....	58, 520. 00
Department of Public Works.....	433, 990. 00
Department of Public Instruction.....	247, 870. 00
Department of War.....	953, 472. 80
Total.....	2, 629 050. 00

MINING IN THE REPUBLIC.

A recent report of the Secretary of State and of Public Works to the National Congress shows that in the fiscal year 1900-1901 mining was one of the most important industries of the Republic, and while some development occurred in this branch during the period mentioned, the growth was not as rapid as was to be desired.

The report calls attention to some of the foreign mining companies that are actively and prosperously engaged in the exploitation of mines in Honduras, among which may be mentioned The New York and Honduras Rosario Mining Company, at San Juancito, which has an annual output of gold and silver bullion valued at about \$1,000,000, American gold. Another important mining concern is The Aramecina Gold and Silver Mining Company, Limited, which has constantly increased the value of its output for a number of years. In addition to the mining companies already mentioned there are numerous other concerns that under proper management would be equally productive. There are splendid opportunities for the profitable investment of foreign capital in the rich mining districts of Tegucigalpa, Olancho, El Paraiso, Choluteca, Valle, Comayagua, Gracias, Copan, and Santa Barbara.

In the fiscal year 1900-1901 nine mining zones were granted by the Government to individuals and companies. During the same period seven surveys of mining zones were approved, twenty-three denouncements were made, and three concessions of water rights were granted. Two American companies have recently commenced preliminary work in the rich placer deposits of the department of Olancho, and there is every reason to believe that their operations will be highly successful and profitable. Another American company, that owns the valuable silver and copper mines known as "Los Diamantes" and "Santa Lucia," in the mining district of Lucerna, will put in new machinery that will enable the production of these mines to be considerably increased. The large deposits of magnetic iron at Agalteca remain as yet undeveloped. The report states that this would be an ideal location for the establishment of a smelter, and the Government would probably be disposed to grant a liberal concession to capitalists having sufficient funds to operate the same on a large scale.

DEVELOPMENT OF FRUIT GROWING.

A large concession has been secured in the Republic by United States citizens who will devote themselves to fruit culture. The concession embraces 13,000 acres of land on the Omoa coast, about 15 miles from Puerto Cortez. Honduras bananas and other tropical fruits find a ready market in the United States markets, and it is stated that 1 acre of ground will produce nearly 1,000 pounds of bananas, the cost of cultivation being \$12.

The value of the banana as food staple has greatly advanced in the world's markets, it being affirmed that it is twenty-five times as nutritious as an equivalent weight of wheat, and that its ratio to rice and potatoes is as 1 to 30 and 44, respectively.

MEXICO.

MESSAGE OF PRESIDENT DIAZ.

On April 1, 1902, Gen. PORFIRIO DIAZ, President of the Republic of Mexico, delivered an important message to the National Congress, an extract of which, taken from the "Mexican Herald," is as follows:

FOREIGN RELATIONS.

"With respect to our foreign relations, unusual events, of which the effect has been to extend the friendly relations between Mexico and the other Republics of the New World and to establish firmly the good name of our country, have occurred during the period to which this report refers.

PAN AMERICAN CONFERENCE.

"As had been announced, the International Conference of American States met in this city on October 22 last, and immediately entered upon its important labors, which continued until January 31 last. An active part was taken in those labors by the Mexican delegation, which consisted of nine members, who distinguished themselves by their intelligence, their industry, and the tact with which in every case they carried out the instructions which were duly communicated to them. As to the detail of those labors you will have been informed by the published collection of resolutions, recommendations, and treaties, which in most cases were signed partially and in others, unanimously, by the delegates to the conference. The reports of the sessions of the assembly and the records of the debates in the three official languages spoken in America are also in course of publication. What undoubtedly will chiefly arrest your attention among those decisions, none of which is lacking in serious interest, is the treaty of compulsory arbitration signed by the delegates of nine Republics, or, in other words, by the majority of the delegates present at the close of the conference; the acceptance of the principles proclaimed by the assembly which has justly been called the peace conference and which met at The Hague in 1899, and the convention signed by all the delegates to submit to arbitration the questions of pecuniary claims between governments based on damages to their respective citizens. This last convention, which will be sent to the Senate, together with all the others that involve international obligations, will produce noteworthy

results, provided it be ratified by the principal governments by whose representatives it was signed.

“The general effect, as regards Mexico, of the Second International Conference of American States can not be otherwise than favorable to the relations between this country and the other nations of America and to the good name of the Republic. The efforts made by the General Government to offer a suitable welcome to the delegates, aided by the Governments of some of the States to which well-organized excursions for the delegates were arranged, produced the desired effect of gratifying our distinguished guests and enabling them to become acquainted with our country.

WEIL AND LA ABRA CLAIMS.

“The United States Congress having ordered the restoration to Mexico of the balance of the fraudulent Weil and La Abra claims which had been distributed by the Government of that country, the sum in question was paid to our Ambassador at Washington from the United States Treasury, in the same form as had been followed in the return of the sum that had been on deposit in the State Department since the payment by us of both claims.

A NEW LEGATION.

“It has been thought highly desirable, and in consequence a bill for the purpose in question will be introduced, that another legation be created in South America, in order that there may be two—one for the Republics on the Atlantic and another for those on the Pacific, the latter making its headquarters alternately in Chile and Peru.

TREATIES WITH SOUTH AMERICA.

“Two treaties of friendship and commerce, one with Paraguay and the other with Peru, and two postal conventions, one with Bolivia and the other with Chile, have been concluded, and are being sent for constitutional purposes to the Senate.

COMPULSORY ARBITRATION WITH SPAIN.

“At the suggestion of the legation of Spain a very comprehensive compulsory arbitration treaty has been entered into with that nation, according to which the arbitrator in each case will be either the permanent court of The Hague or one of the Presidents of the Spanish-American Republics. This treaty and another convention entered into with Spain to facilitate the execution of judicial requisitions from one country to another, dispensing with the formality of legalization for documents forwarded through the diplomatic channel, will be at once sent to the Senate for constitutional revision.

* * * * *

AFFAIRS OF THE CAPITAL.

"The City Council of Mexico zealously continues the works which it has undertaken for the embellishment of the city and improvement of its different services. It has lately executed a new contract for the paving of 25 more blocks with sheet asphalt; also it has carried out the reconstruction and enlargement of several market houses, and has acquired several buildings for the construction of the new ones that have become necessary through the constant increase of the population.

"The sanitation works of the capital, at least as regards the contracted work, may be considered as completed, as there are only a few minor details wanting, which will be completed within a few days.

* * * * *

"The notarial law was promulgated in December last, after a careful study of its provisions, which was necessary owing to the many and grave problems connected with the reorganization of this important service in accordance with the principles by which it should be governed. In the practical application of the provisions which required the registry of mortgages to be incorporated with the public registry of property, serious difficulties arose, owing to the necessity of carrying out this operation without suspending the work of those offices or injuring the interests of the public. These difficulties have now been overcome and both the notarial institution as well as the registry of mortgages are in good working order.

* * * * *

SCIENTIFIC CONGRESSES.

"The Executive has received a formal invitation to have Mexico represented in the coming International Congress of Americanists, which is to meet in New York during the month of October, as well as the Fourteenth Medical Congress, which is to be held in Madrid in April of next year. Both of these invitations have been accepted and the delegates will in due time be appointed, so as still further to strengthen the intellectual bonds which Mexico has with other countries.

* * * * *

MINING MATTERS.

"The continued development of the mining industry is shown by the increased number of mining titles that are issued and by the opening of new metallurgical establishments.

"During the first six months of the present financial year 1,837 titles were issued, covering an area of 29,095 hectares, which is an increase of 100 per cent over the same period in 1900-1901.

"Contracts have been executed for the erection of metallurgical

establishments in the district of Zimapan, State of Hidalgo, and in that of Fuerte, State of Sinaloa.

* * * * *

WATER CONCESSIONS.

“Contracts have been executed for the utilization, for irrigation and motive power purposes, of the waters of the rivers Sabinas, in Coahuila; Pesqueria Chica, in Nuevo Leon, Blanco, in Veracruz; Moeztzuma, in Hidalgo; Turbio in Guanajuato, and Soto la Marina, in Tamaulipas.

NATIONAL LANDS LEASED.

“Contracts were let for the exploitation of national lands on the island of Santa Margarita and in a zone of the State of Tabasco, as well as for the extraction of mother-of-pearl on the islands of Espirtu Santo and on the coasts of Lower California, and for fisheries in the Vazquez and Ostiones lagoons on the Pacific coast.

* * * * *

PROSPECTING FOR OIL.

“Permits are now being issued for the exploration of the subsoil in search of petroleum.

* * * * *

RAILWAY PROGRESS.

“During the period that has elapsed between September last the railroad system of the country has increased by 344 kilometers, of which 118 are to be credited to the Coahuila and Pacific Railroad, 78 to the Veracruz and Pacific, 55 to the Central, and 19 to the Merida and Peto Railroad, while the rest appertain to other lines. The lines that now form the Federal system of railroads have a total length of 15,936 kilometers. The local lines that have been constructed under state concessions have a length of 966 kilometers and the private branch lines aggregate 306 kilometers.

“On the Tehuantepec National Railroad the following works have been executed: Renewal of ties on 160 kilometers, ballasting on 100, renewal of rails on 52, and 280 permanent bridges completed. The bridges at Jumuapa, Sarabia, and Tehuantepec, as well as the station at Salina Cruz and the buildings for the workshops, are now under construction. In Rincon Antonio workshops, engine house, and dwellings for employees and laborers are now being built.

“Fourteen locomotives, 60 box cars, 75 gondolas, and 25 platform cars have been purchased.

* * * * *

POSTAL MATTERS.

“During the first six months of the present financial year the following movement took place in the postal service:

“Four local offices, 2 branch offices, and 45 agencies were opened, thus raising the number of post-offices to 2,133.

“The correspondence of all classes has considerably increased. During the first six months of the present financial year 74,000,000 pieces have been handled, against 72,000,000 in the corresponding period of the previous year.

“The interior money orders amounted to \$16,000,000, against \$12,000,000 for the corresponding period of the previous year.

“The money orders between Mexico and the United States increased 37 per cent over those issued during the first six months of the previous financial year, amounting altogether to \$352,000. Of this amount \$252,000 were for orders issued in Mexico and \$102,000 for orders issued in the United States.

“The general receipts from the postal service amounted to \$1,156,000, against \$1,039,000 for the corresponding period of the previous year, making an increase of 11½ per cent.

THE TELEGRAPH SYSTEM.

“As regards the telegraph service, I have to report that 218 kilometers of line have been constructed; that 185 kilometers of iron wire have been replaced by bronze wire, and that the installation of Federal wires in the streets of the capital has been renewed, besides which the entire system is now under repair, for which purpose, during the period I refer to, about 27 tons of iron wire and over 10 tons of bronze wire have been employed.

* * * * *

FINANCE DEPARTMENT.

“The financial situation of the country continues visibly improving, and it will not be long before the last traces of the depression that made itself felt during last year in certain branches of the national industry disappear.

* * * * *

NEW BANKS.

“Fresh concessions for the establishment of banking institutions have been granted during the period under review. The State of Chiapas now has its first bank of issue, which has commenced operations, and the State of Hidalgo will shortly have the services of a similar institution. With these two States the number of those that possess banks of issue is eighteen.

NEW BONDED WAREHOUSE.

"The Merida and Valladolid Railway Company, with a branch to Progreso, obtained a concession from the Government for the establishment of general bonded warehouses at the port of Progreso.

* * * * *

CONCLUSION.

"The principal facts which I have just related prove that the country continues in a state of progress, although at times she may meet, as happens with all mankind, difficulties that for the moment delay her advance. You will have noted that the Executive does not for a moment neglect any effort to foment this progress in civilization by procuring improvements in all the different branches of the public administration. The impulse should come, as it undoubtedly has come, from the people themselves, encouraged by the confidence that is inspired by the reign of peace and the law; but it is the duty of the Government to sustain and assist the people within the limits of its authority and with all its resources, among which the principal and most efficient are found in the sound and beneficent influence of its legislators."

FOREIGN COMMERCE FIRST HALF OF FISCAL YEAR 1901-2.

According to statistics compiled by the Mexican Government corresponding to the first half of the fiscal year 1901-2, the total imports were 29,196,226.80 *pesos*, as compared with 32,157,966.98 *pesos* for the first six months of the fiscal year 1900-1901. The classification of the imports with the value of each class for the period referred to, and the gain or loss for each, is as follows:

Classification.	First half of fiscal year.		
	1901-2.	1900-1901.	Gain (+) or loss (-).
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Animal products	2,434,339.79	2,562,899.13	- 128,469.34
Arms and explosives	609,170.98	666,860.74	- 57,689.76
Chemical and pharmaceutical products	1,217,768.77	1,263,007.66	- 45,238.89
Machinery and apparatus	3,608,560.44	4,876,881.27	-1,268,320.83
Mineral products	8,195,447.81	8,203,160.86	- 7,713.05
Paper and paper products	981,235.60	1,174,529.59	- 193,293.99
Spirits and beverages	1,257,071.50	1,376,595.41	- 119,523.91
Textile products	4,197,317.03	5,311,290.78	-1,113,973.75
Vegetable products	5,228,504.93	5,123,654.36	+ 104,850.57
Vehicles	554,423.23	799,673.33	- 245,244.10
Miscellaneous	912,380.72	799,503.85	+ 112,876.87
Total	29,196,226.80	32,157,966.98	- 2,961,740.18

The totals for the grand divisions, severally and collectively, were as follows:

Divisions.	First half of fiscal year—		Gain (+) or loss (—).
	1901-2.	1900-1901.	
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Africa	8,576.00	11,505.62	— 2,929.62
Asia	253,904.30	312,456.46	— 58,552.16
Central America	15,227.43	46,904.37	— 31,676.94
Europe	12,728,659.49	14,931,407.36	— 2,202,747.87
North America	16,075,134.90	16,737,747.29	— 662,612.39
Oceania	9,552.00	28,077.13	— 18,525.13
South America	79,853.68	67,104.75	+ 12,748.93
West Indies	25,319.00	22,764.00	+ 2,555.00
Total	29,196,226.80	32,157,966.98	— 2,961,740.18

The imports from the European countries are shown in the following table:

Countries.	First half of fiscal year—		Gain (+) or loss (—).
	1901-2.	1900-1901.	
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Austria-Hungary	178,240.18	215,128.20	— 36,888.02
Belgium	452,595.45	451,433.67	+ 1,161.78
France	3,017,338.87	3,416,270.86	— 398,931.99
Germany	3,160,580.71	3,783,635.51	— 623,054.80
Great Britain	4,060,026.18	4,840,459.65	— 780,433.47
Holland	108,064.00	141,213.94	— 33,149.94
Italy	200,733.89	303,436.60	— 102,702.71
Norway	41,880.25	63,452.91	— 21,572.66
Portugal	24,318.95	20,125.00	+ 4,193.95
Russia	2,690.00	823.00	+ 1,867.00
Spain	1,272,083.59	1,506,328.91	— 234,245.32
Sweden	24,361.32	15,821.06	+ 8,540.26
Switzerland	180,108.85	167,257.20	+ 12,851.65
Other European countries	5,637.25	6,020.85	— 383.60
Total	12,728,659.49	14,931,407.36	— 2,202,747.87

The trade with Asia was principally with Hindoostan, China, and Japan; that with Africa was with Egypt; that with the West Indies was with Cuba, and that with Oceania was with Australia.

The imports from North, Central, and South America are shown in the following table:

	First half of fiscal year—		Gain (+) or loss (−).
	1901-2.	1900-1901.	
NORTH AMERICA.			
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Canada	9,230.55	4,577.00	+ 4,653.55

Chile	7,820.00	4,796.00	+ 3,024.00
Colombia	10,319.00	10,819.80	− 500.80
Ecuador	30,676.93	35,991.70	− 5,314.77
Peru	4,879.00	615.00	+ 4,264.00
Venezuela.....	11,492.75	13,662.25	− 2,169.50
Other South American countries.....	414.00	624.00	− 210.00
Total	16,205,087.01	16,902,597.54	−697,510.53

The entrance by ports was as follows:

	First half of fiscal year—		Gain (+) or loss (-).
	1901-2.	1900-1901.	
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Gulf	16,815,162.96	19,092,879.25	-2,277,716.29
Pacific	2,118,741.98	2,137,776.28	- 19,034.30
Northern frontier	10,201,871.55	10,802,085.65	- 600,214.10
Southern frontier	60,450.31	125,225.80	- 64,775.49
Total	29,196,226.80	32,157,966.98	-2,961,740.18

The following were the classes of exports and the valuation of each during the period mentioned:

Classification.	First half of fiscal year—		Gain (+) or loss (-).
	1901-2.	1900-1901.	
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Animal products	5,071,945.89	5,082,938.98	- 11,038.09
Manufactured products	1,897,775.74	940,741.99	- 957,033.75
Mineral products	45,779,162.54	56,386,102.35	-10,606,939.81
Vegetable products	18,793,758.93	14,659,804.72	+ 4,133,954.21
Miscellaneous	223,854.08	398,306.35	- 174,452.27
Total	71,766,497.18	77,467,939.39	- 5,701,442.21

The following table shows the exports by grand divisions:

Division.	First half of fiscal year—		Gain (+) or loss (-).
	1901-2.	1900-1901.	
	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>
Europe	12,093,458.52	15,809,487.14	-3,116,028.62
North America	56,264,080.88	58,407,293.67	-2,143,212.79
Central America	913,529.01	333,326.18	+ 244,202.83
South America	25,568.77	36,168.40	- 10,599.63
West Indies	2,205,860.00	2,881,664.00	- 675,804.00
Total	71,766,497.18	77,467,939.39	-5,701,442.21

The following figures give the exports to the different countries embraced in the five grand divisions already mentioned:

ENACTMENT OF PURE-FOOD LAWS.

The provisions of the pure-food law recently enacted by the Mexican Government, as forwarded to the Department of State at Washington by Consul W. W. CANADA, are as follows:

“ARTICLE 1. Milk, of whatever animal it may be, must always be sold without the addition of water or any other substance, and when it is not from the cow the animal from which it has been drawn must be mentioned.

“ART. 2. Milk from which the butter-producing component has been removed, wholly or in part, will be sold under the name of skimmed milk and must be dispensed at special stands at which no other kind of milk is sold. The sale of the product in question must take place according to the rules laid down in the sanitary code.

“ART. 3. For the purposes of the foregoing article, milk shall be considered as skimmed when it contains less than 30 grams (15.4 grains) of butter-making components per liter (1.05 quarts).

“ART. 4. Under the name of milk cream, the cream of milk, without the addition of any other substance, shall be sold.

“ART. 5. Under the name of sterilized milk shall be sold milk for

the preservation of which provision has been made by the action of heat, and in no case by the addition of an antiseptic substance.

“ART. 6. The product known as condensed milk shall never contain antiseptics or any other substance that might be prejudicial to health, and shall always be sold in closed receptacles.

“ART. 7. The sale of milk from animals attacked by contagious or infectious diseases is prohibited, special precaution being taken against the following: Tuberculosis, aphthous fever, carbonic fever, symptomatic carbon, pyæmia, septicæmia, diphtheria, acute and chronic mammitis, and in particular tuberculous and icteritious maladies.

“ART. 8. The only substance sold under the name of butter shall be the fat extracted from pure milk drawn from healthy animals and prepared in such a manner that it shall not contain more than 5 per cent of water and at the most 2.5 per cent of the other components of milk. Nevertheless, the addition of salt (chloride of sodium), when the article is sold as salted butter, and of some inoffensive coloring matter shall be permitted.

“ART. 9. Other alimentary fats which, owing to their resemblance to butter, have been palmed off in its stead, must be sold under the name of margarin or some other name indicating their source and composition, and subject to the rules laid down in the sanitary code for their manufacture and sale.

“ART. 10. The receptacles containing these products and the wrappings in which they are delivered to the purchaser shall be inscribed with the name under which they are sold, in legible characters of at least 1 centimeter (0.39 inch) in height.

“ART. 11. Cheese, which is the product of the precipitation of casein from the milk of various animals and of subsequent maturation, shall always be sold in a good state of preservation and shall answer in character to the name under which it is sold; and only the addition of the substances that are tolerated in the case of butter shall be allowed.

“ART. 12. In the preparation of bread and buns from wheat, only the pure flour of that cereal, possessing, in addition, the following qualifications, shall be employed:

“I. That the flour shall have been prepared from grain from which earthy matter, the grains of other plants, and the grains of the wheat itself when damaged or spoilt have been removed.

“II. That it shall not contain excessive moisture, so that at a temperature of 100° C. it shall not lose more than 18 per cent of its weight.

“III. That it shall not contain foreign mineral substances, the maximum of ashes to be contained being 1 per cent.

“IV. That it contain at least 8.5 per cent of dry gluten.

“ART. 13. The use of any other mineral substance except salt (sodium chloride) in the making of bread and buns is forbidden.

“ART. 14. In the preparation of provisions containing lard the pure lard of hogs shall be employed.

“ART. 15. Bread and buns shall never be colored yellow with any other matter except the egg, and if advertised to contain that article of food they must really contain same.”

ELECTRIC-POWER PLANT AT CEMORA.

The Guanajuato Power and Electric Company, which was recently incorporated with a capital of \$3,000,000, principally furnished by New York, Boston, and Denver parties, is to construct a 12,000 horse-power plant to be operated by water in Mexico for the purpose of furnishing electric energy for traction lines, manufacturing plants, and lighting use in two important cities, and supplying power for general utilization in six other Mexican towns and their vicinities. The originally granted franchises, etc., have been acquired from FRANCISCO GARCIA and CARLOS M. REIBIO, both of the city of Guanajuato. Mr. C. A. COFFIN, president of the General Electric Company; Messrs. CURTIS & PECK, of Colorado Springs; Mr. BONWRIGHT, a prominent Denver banker, and Mr. ADAMS, a Boston capitalist, are said to be largely interested in the enterprise. The main plant is to be built in Cemora and power will be conveyed to the city of Guanajuato by means of a transmission line no less than 125 miles in length. This line will be the second longest line ever constructed, the record length so far having been made by the Bay Counties Power Company, of California, whose line is 222 miles long. While it has not yet been determined what the exact voltage will be of the proposed Mexican line, it is estimated that it will not be less than 40,000 volts.

The city of Guanajuato is in the center of one of the largest mining districts in Mexico, and several of the mines will be operated by electrical power to be derived from the Cemora plant. The Compañía de Tranvías de Guanajuato (the Guanajuato Tramways Company), a horse road somewhat over 2 miles long, will be converted into electric motive power and considerably extended, and the city will be lighted electrically. In the first instance, the city and its immediate neighborhood will utilize 2,000 horse-power. The flourishing city of Leon is also to be furnished at the outset with the same number of units. The Tranvías de Leon (the Leon Tramways), a mule road about 7 miles in length, will be turned into an electric system, and several of the large factories in and around the city are to be supplied with power and light. Penjamo, Irapuato, and four other towns in the State of Guanajuato will also be furnished with power by the company. Construction work has already begun, and the entire system is expected to be completed inside of two years. It is estimated that nearly \$2,500,000 will be expended in material, equipment, etc., all of which will be purchased in the United States.

PUBLIC WORKS AT TAMPICO.

A report forwarded to the Department of State of the United States by SAMUEL E. MAGILL, Consul at Tampico, Mexico, contains the following interesting data concerning the various improvements under construction in the Tampico district on April 14, 1902:

“With the addition of a shipment of structural iron, soon to arrive, the fiscal or Government dock will be completed at Tampico. This dock was begun in October, 1901, to replace a pile and timber dock which was destroyed by fire in February, 1898, and will be the first dock in the world of this special construction. It is 2,800 feet long and 80 feet wide, a steel and cement structure resting on cylinders of steel sunk to depths of from 20 to 60 feet, filled with cement, which rests on 50-foot piles driven through to the bottom of the sunken cylinders. One thousand feet of the dock alongside of the custom-house is covered by a steel shed, roofed with galvanized iron. The dock is located at the foot of one of the principal streets of Tampico and will be able to accommodate at one time eight large steamers. With the exception of the cement and the galvanized iron, the machinery and the material used came from the United States. The work has been in charge of a Kansas company. When completed the dock will be a splendid example of American engineering ability and constructive capacity, as well as of the quality of the public works desired by the Mexican Government at this port.

“Another improvement of interest to this district is the contract made by the Government with two United States citizens to deepen and straighten the channels in the Panuco River and some of its most important branches—Tamuin, Tempoal, and Coy. Two corps of engineers are out now, and one special river dredge is at work. This enterprise will greatly facilitate the exchange of business between Tampico and that portion of the fertile Huasteca not reached by railroads, and will bring to this port for shipment many natural products that would otherwise be unmarketable. The cost to the Mexican Government of these improvements can only be roughly estimated, but the value of the investment is unquestioned.

“Another public work is the construction of a canal between this port and Tuxpan, a port about 100 miles south of Tampico, to which a very rich country is tributary, which has never been adequately developed because boats drawing over 7 feet of water could not cross the bar of the Tuxpan River.

“The plans of United States engineers for this work have been accepted. A large dredge and suitable boats have been ordered from Chicago manufacturers, a force of American skilled labor has been secured, and work will be under full headway by next fall. The cost of this work will approach \$2,000,000, but its value to Tampico will far exceed that figure.

"The Federal Government is considering bids for the construction of sewerage, waterworks, drainage, and pavement for the city of Tampico.

"The system by which public works have been carried on in this city and harbor is worthy of note, as it differs from that in use in the United States and offers some striking advantages.

"A public improvement being decided upon, plans are selected and approved, a competent engineer appointed, surveys made, and the work proceeds under the sole charge of the superintendent. All bills for material, machinery, wages, and supplies of all kinds, after approval by the Government inspector, are presented to the Department of Public Works, and, after approval there, a voucher is issued for the amount of the monthly statement, plus 10 per cent, which percentage is the pay of the superintendent in lieu of profit or loss. By this means the Government gets the best material, for there is no advantage to the superintendent if poor quality is selected; the best of labor is employed at good wages, so there is no such thing as a strike to impede the work; and there are no subsequent official investigations to locate the responsibility for poor work or material.

"Under such an arrangement as the above the splendid jetty works at the mouth of the river and the modern custom-house were finished, the Mexican Central Railway having the work in charge."

THE HEMP-GROWING INDUSTRY.

The "Statistical Bulletin" (Boletín de Estadística) of Mérida has recently published statistics concerning the exportation of hemp (*henequén*) in the period covered by the years 1897-1901, inclusive. The data reported is as follows:

	Kilograms.
1897.....	70,545,153
1898.....	68,834,268
1899.....	73,190,896
1900.....	81,093,418
1901.....	83,191,007

The advancing ratio of these exports is shown from the fact that in 1901 the excess of exports over 1897 was 12,645,854 kilograms; over 1898, 14,356,739; over 1899, 10,000,111, and over 1900, 2,097,589. The outlook for 1902 indicates even greater activity in the development of hemp growing in the Republic, and it is stated that in the district of Mutul, Yucatan, several establishments have combined for the purchase of large quantities of machinery of the most improved kinds for cleaning the fiber of the plant rapidly without breaking or cutting it.

The value realized for the henequen exported from Yucatan during the five months of 1901 from July to November, inclusive, was \$9,352,911, against \$5,909,888 in the same period of 1900, an increase of \$3,443,023. The henequen manufactured into rope, sacks, etc., and

distinguished from the crude fiber as jarcia and exported as such, in the same months of 1901, amounted to a valuation of \$714,500, as against \$76,391 in the corresponding period of the preceding year, an increase of \$638,199. It is estimated that there are now in use on the various heniquen plantations in Yucatan fully 1,400 machines for cleaning the fiber, and that there are at least 1,200 distinct plantations in the State devoted to its culture. One of the largest produces annually from 375,000 to 400,000 pounds of clean fiber ready for shipment.

CLOTH FACTORIES OF THE REPUBLIC.

An evidence of the material prosperity of the Mexican Republic as well as of its rapid development is found in the number of cloth factories operating within the country. These factories are 125 in number, the State of Puebla leading with 26, and followed closely by Coahuila, the Federal District, Vera Cruz, and Tlaxcala. The number of establishments located in the different States and Territories is as follows: Puebla, 26; Coahuila, 11; Federal District, 10; Vera Cruz, 10; Tlaxcala, 10; Durango, 8; Guanajuato, 7; Mexico, 7; Michoacán, 4; Nuevo Leon, 4; Querétaro, 4; Sinaloa, 4; Jalisco, 4; Chihuahua, 3; Oaxaca, 3; Tepic, 3; Colima, 2; Hidalgo, 1; Chiapas, ; Guerrero, 1; San Luis Potosi, 1; Sonora, 1. The Vera Cruz district contains the four largest and most important factories of the Republic, as follows: The Vera Cruz Industrial Company, paying an occupation tax of \$53,811 semi-annually; the Nogales, Cerrito, and Rio Blanco factories in Orizaba, owned by the Orizaba Industrial Company and paying \$111,727. Next in order is the San Antonio factory, situated in the City of Mexico and owned by the San Antonio Industrial Company, which is taxed \$22,019. The Miraflores factory, situated at Tlamanalco in the State of Mexico, also owned by the San Antonio Industrial Company and which is taxed \$18,270, is another large establishment, while others of importance are the Santa Teresa and Magdalena and the Estrella at Parras, Coahuila.

RICE CULTURE IN COLIMA.

A recent article published in "El Economista Mexicano" states that the cultivation of rice in the State of Colima has increased considerably during the last few years. The total production of this important article in the State referred to, amounted, in 1901 to 2,484 tons of 1,000 kilograms each, the value of which, at the rate of 10 pesos per 1,000 kilograms, was \$180,000 Mexican silver. The various rice fields in operation in the State employ about 3,000 laborers, whose average wages vary from 25 to 35 cents Mexican silver per day. The greater part of the rice grown in Colima is exported through the port of Manzanillo to San Francisco and other cities on the Pacific coast.

EXPORTATION OF RAWHIDES.

The exportation of rawhides from Mexico to the United States and France has caused the stock of leather on hand for local consumption to diminish to such an extent that dealers in leather in the Republic have experienced great difficulty in supplying a sufficient quantity to meet the home consumption. The price of this article has, therefore, rapidly risen in the markets of Mexico, Guadalajara, Mazatlan, Chihuahua, and Tampico. The manufacturers of harness and other leather goods are complaining of the scarcity and high price of hides, which they claim is caused by the increased exportation to the United States and Europe of this useful product.

MARITIME POSTAL SERVICE WITH ENGLAND.

A contract has been signed between the Mexican Government and the Charente Steamships, Limited, to establish maritime postal service between England and Mexico. The steamers are to sail twice a month from Liverpool, making bimonthly stops at Tampico and Vera Cruz. Calls must also be made, either going or coming, at the other Mexican ports of Tuxpán, Coatzacoalcas, Frontera, Laguna, Campeche, and Progreso. The vessels will land at Barbados, St. Thomas, Trinidad, La Guaira, Puerto Cabello, Curaçao, Santa Marta, Savannah, Cartagena, Port au Prince, Kingston, Colon, and New Orleans. Ten metric tons of merchandise will be carried for the Mexican Government free of charge, the compensation being fixed at a 40 per cent reduction on the tonnage dues established in 1898.

OFFICES FOR PARCELS-POST PACKAGES FROM THE UNITED STATES.

Pursuant to the request of the Postal Administration of Mexico, it has been ordered that until otherwise directed the weight of parcels-post packages dispatched from the United States to Mexico be limited to 4 pounds 6 ounces (2 kilograms); except that packages weighing not more than 11 pounds (5 kilograms) may be dispatched when addressed for delivery at one of the following Mexican post-offices:

PACKING HOUSE AT CHIHUAHUA.

A recent development in the live-stock industry of the Republic of Mexico is the establishment at Chihuahua of a large packing establishment where meats and beef extracts will be prepared for the market. The packing houses of Chicago and Kansas City draw large supplies of their cattle from Mexico, but with the successful initiation of this new industry cattle owners will find a home market for their supplies. The freight and tariff conditions of the country operate so as to give the native packing house a practical monopoly within the limits of the Republic, and an agency is also being established in London for the purpose of doing a foreign business.

ADDITIONAL IMPORT DUTIES AT VERA CRUZ.

Consul W. W. CANADA, of Vera Cruz, reports under date of March 24, 1902, that by an Executive Decree an additional tax of 2 per cent (instead of $1\frac{1}{2}$ per cent, as heretofore) of the total amount of customs duties is now collected from all foreign merchandise imported into Mexico through the port of Vera Cruz. The proceeds are to be applied to the sewerage and waterworks now under construction in the city.

IRRIGATION IN THE STATE OF SONORA.

The Department of Public Works has entered into a contract with Mr. ANGEL ALMADA by which the latter is allowed to use the waters

of the Mayo River, in the State of Sonora, for irrigation purposes. The irrigation canal which the concessionaire agrees to construct will tap the Mayo River at a place at or near the point known as "Tierra Colorada," and will have a flow of water not exceeding 10,000 liters per second.

MISCELLANEOUS NOTES.

Consul-General P. C. HANNA reports to the Department of State, Washington, from Monterey, April 16, 1902, that a company, known as the Mexican White Lead Company, was formed a short time since at Gomez Palacio, Coahuila, with a capital of \$100,000. The lead found at that place is said to be pure and of an excellent quality. The duty on white lead is high, says Mr. HANNA, and the company expects to be able to supply the product much more cheaply than it can be imported from the United States.

The mining industry in all parts of Mexico, it is said, has never in the history of the Republic been so active as at present. The exportations of United States machinery and supplies to that country have been extremely large. It is stated that the shipments of mining machinery from America to the Southern Republic are fully 100 per cent over those of last season, and it is estimated, on very conservative calculation, that fully \$15,000,000 have been invested in Mexican mining properties within the past few months.

The Development Company of America is reported to have purchased from H. C. SMITH, of San Francisco, and I. R. DAVIS, of Wisconsin, a large tract of timber land, located about 50 miles south of Casas Grandes, the terminus of the Rio Grande, Sierra Madre and Pacific Railway, in the State of Chihuahua, Mexico. The purchase price is said to have been \$1,000,000 gold.

Mexican advices state that a concession has been applied for by ALEJANDO EIGUEZABAL for the construction of a railway between the flourishing city of Torreon to Gomez Pallacio, Ciudad-Lerdo, Mapimi, Inde, El Oro, and Parral, a total distance of about 150 miles. The principal traffic, it is said, would be ores, mostly from the copper mines in that region.

A charter has been granted by the Mexcan Government to VICENTE SILVA and ALBERTO CARDENA, permitting of the use of power, not exceeding 3,000 liters per second, to be derived from the waters of the river Lerma that pass through the dam of the Hacienda de Molinos de Caballero, district of Maravatio, State of Michoacan.

The "Mexican Herald" states that applications for a charter and concession are being drawn up for a savings bank to be established in Monterey. German capitalists are behind the scheme. The new institution will be operated on the line followed by similar banks in the United States.

Demand in the United States for Mexican bananas is such that the crop is insufficient. Purchasing agents in the States of Veracruz, Morelos, Nuevo Leon, and Jalisco are buying entire crops and contracting for future productions.

The fact that a locomotive of Mexican construction has just been exported to the United States is a significant fact, one of the many signs of Mexican industrial and manufacturing progress.

NICARAGUA.

THE DISINFECTION OF HIDES.

On April 29, 1902, O. L. SPAULDING, Assistant Secretary of the Treasury of the United States, dispatched a Department order to the collector of customs of New York touching the disinfection of hides of neat cattle invoiced for shipment to the United States from Nicaragua. The text of the communication is as follows:

“Information having been received through the Secretary of State and Secretary of Agriculture that contagious cattle diseases do not exist at present in Nicaragua, the Department’s instructions of December 7, 1901 (T. D. 23392), requiring the disinfection of the hides of neat cattle invoiced for shipment to the United States from the consular district of San Juan del Norte, are hereby withdrawn.

“O. L. SPAULDING,
“*Assistant Secretary.*”

PARAGUAY.

COMMERCE WITH URUGUAY, 1896-1900.

A recent number of the “Commercial Bulletin” of Asuncion contains some interesting statistics concerning the commerce between Paraguay and Uruguay from 1896 to 1900, inclusive. During the period mentioned the exports from Uruguay to Paraguay consisted of only \$558 in 1896, there having been no shipments of Uruguayan goods to Paraguay during the other years referred to. The exports from Paraguay to Uruguay have, however, constantly increased since 1896, as will be seen from the following table:

1896.....	\$77,343
1897.....	93,376
1898.....	107,434
1899.....	132,529
1900.....	168,846

TEXTILE PLANTS AND DYEWOODS.

According to Dr. DE BOURGRADE LA DARDYE, a well-known writer on Paraguayan matters, the forests of Paraguay abound in textile plants, many of which are capable of being utilized for industrial purposes, and as they have long been known to the inhabitants a good deal of practical information can be obtained about them. Since the introduction of European fabrics there has been much less weaving than formerly. The people have found it much more convenient to buy their goods ready-made than, with their meager appliances, to manufacture for themselves. This has had the effect of letting certain of the qualities of the textile plants be forgotten, and even the names of some of those mentioned by writers of former times have faded from the memory of the present inhabitants.

Three kinds of cotton are grown in Paraguay—the *Gossypium herbaceum*, the *Gossypium vitifolium*, and the *Gossypium arboreum*. There is another variety called in Guarani “mandypyta” (red cotton), which yields a fiber that is woven into the pretty brown *ponchos* that are still worn by some of the natives of the country. All these varieties are known in Guarani by the general name of “mandyú.” The fiber of all is white, more or less pure, the longest of them being that of the *Gossypium herbaceum*. No higher testimony need be sought for it beyond what was given in its favor, in 1860, to Colonel DU GRATY by some of the leading merchants in Antwerp, who said that “Paraguay cotton is an excellent product, being both long and fine, and similar in quality to the best Brazilian sorts.” At present its culture is reduced to a minimum, the official statements for 1889 showing only 12 acres planted with it, as compared with 23,300 acres in 1863. The enormous difference is of course to be readily explained by the different circumstances of the country, which at the earlier date had to provide the cotton fabrics for its own requirements and which are now met by the importation of foreign manufactures, the land being for the most part devoted to the production of food. Cotton growing consequently appears to promise satisfactory results. The quality that can be grown is of such superior character as to insure an increasing demand.

Ramie grows wild in Paraguay, sometimes attaining a height of 4 or 5 feet in the damp soil of the virgin forest. Two varieties are found in the vicinity of the rivers, viz, *Urtica utilis* and *Urtica nivea*. M. ARTECONA, of Asunción, who has made experiments upon this native plant, has found that without any cultivation at all eight gatherings may be made in the course of one year. Such a number may appear excessive, and it is more than likely it could never be maintained in the open country outside the forests; the warm, moist atmosphere of the underwood in South America is very different from the air of the fields;

but even allowing that four gatherings a year could be got in, this would be a yield greater than is obtained in any other country.

Ibyra and caraguata grow wild and in a profusion that would insure an unbounded supply for a long time without any cultivation at all. These two members of the family of the *Bromeliaceæ* are well worth the attention of settlers in the vicinity of Asunción. They are both of a kindred species to the pineapple, bearing a wild fruit that has a flavor which is by no means disagreeable. Of the two the ibyra is the more valuable. Its flexible leaves grow in clusters, and are often 12 feet in length. There are two varieties, one with a white edge, growing on the skirts of the forests; the other of a reddish hue, to be found in the forest itself. In some parts of the country the ground may be said to be literally covered with ibyra, especially around Arroyos y Esteros and Caraguata; in fact, the latter town has derived its name from the *Bromeliaceæ* its neighborhood. One man with a machete can cut several loads a day, and the plants grow up again in six months, so that two gatherings may be made every year from the same spot. The fiber runs along the entire length of the leaf, and is altogether a unique product. It does not rot, and has an unexampled power of resistance. Strength, fineness, and durability are the principal characteristics. The paper that is produced from this material is at once strong and supple, and of a quality superior to that which is usually employed for bank notes. After lying for six hours in a vessel exposed to the action of steam all the pulpy part disappears from the leaf, leaving only a thin pellicle, inside which the fibers are left, in their natural position, separate and distinct. Before the fiber could be rendered fit for weaving this pellicle would have to be removed, but for paper it presents no difficulty. For a time, then, it may be necessary to confine the manipulation of ibyra to the less costly and laborious process, which, including gathering and packing, can all be got over in three days.

Very much the same may be said with respect to caraguata, except that, the fiber being coarser, it is better adapted for ropes and twine. Unquestionably there must be a fine opportunity for an energetic manufacturer to start a business in this line, if it were only to meet the local demand.

The two kinds of palms that supply the most serviceable material for spinning are the mbocaya and the yatahy. The former (*Cocos sclerocarpa*) has leaves of a considerable length, containing a fine strong fiber that in some respects resembles the caraguata. It is very easily peeled, and all over the country a great variety of uses is found for it. The Indians apply it to many domestic purposes; they likewise make it into nets, which are capable of any amount of wear, and fabrics are woven out of it that are very soft in texture and take an excellent dye.

Yatahy can not be said to be so generally useful. It is used for

making string, and for hats and fans; but it is a plant that has its own special value on account of a farinaceous pith that is extracted from the stem, and a spirit that is made from the fermented fruit.

Samuhú is the plant that produces what is known as "vegetable silk." It is closely allied to the cotton tree, inasmuch as the *bombacææ*, to which it belongs, and the *gossypium* are both genera of the *Malvaceæ* tribe. As the down is very short it has not the industrial value of cotton, but it has a luster and flexibility which make it very similar to floss silk.

There are several varieties of Samuhú belonging to different genera of the *Malvaceæ*. One of these is known in the Argentine Republic as "polo barracho;" it has a straggling growth by which it can be distinguished at a great distance along the river banks, and from which it derives its Brazilian name of "barrigudo" and its botanical definition of *bombax ventricosa*. One variety is native to the Ygatini valley, the unripe fruit of which is remarkable for the great diversity of colors it presents. The trunk, which is straight and perfectly cylindrical, is sometimes 70 feet high, and is covered with long thorns. The Indians do not utilize the down; they use only the strong fibrous substance that is found underneath the bark. Out of the trunk itself they make their light canoes. Another variety is found on the Jejuy and Upper Paraná; it is a creeper, growing to a great height, and known among the natives as "ysipo-samuhú." In Matto Grosso the down is much in request for stuffing pillows and cushions.

Guembepi belongs to the *Aroideæ* family (*polhos pinnatifida*); it is a creeper, known in certain districts as "mbegueqi." It is most frequently found hanging down from the tops of the tallest trees in the forest. The filaments that are taken from the bark are of unrivaled length and durability. They are so black that all the ropes into which they are twisted have a marked character of their own. It was because they can be kept so long in water without rotting that Lopez used them for his ships. It has been proved that in heavy work, where hemp ropes have given way, those made of guembepi have often been able to bear the strain. This material seems destined to be of great importance in the rope-making industry.

Caaporopy, which is another of the *Urticææ* family, produces a thread which may be woven like flax. It grows near inhabited places in the same way as the common nettle, and with comparatively little outlay might be made a source of profit.

Other native plants from which textile material may be obtained are: Banana; the *pino-guazu*, or great wild nettle; the *pyta*, or American aloe; the *cururu-iby*; the *chaguara*; the *guembe*; the *igan*; the *icipo curuzu-y caatpeba*; the *mbocaya-saite*; the *payagua rembiú*; the *yucarínina*; the *yatai*, and the *caa-pigui*.

In regard to dyewoods in Paraguay, their value is evidenced by the fact that at the Paris Exhibition, in 1855, the Government of Para-

guay, having sent samples of fourteen dyes, received a first-class medal, and again, in 1889, it was awarded a gold medal as the result of competition in the same class.

It is necessary that these plants should be manipulated with modern appliances and by trained workmen; otherwise they will fail to be of proper service to commerce. A very insignificant outlay would suffice for this, and then the country would be in command of all the requirements for prosecuting the dyeing industry. A well-organized establishment for developing this design would have no lack of material, and could scarcely fail of success.

Following is a list of 26 of the plants that are utilized in the country in connection with the dyeing trade:

Black, 8 plants:

1. Araehi-chu (*Solanum nigrum*), nightshade.
2. Coca (*Erythroxylan tortuosum*). This must not be confounded with *E. Coca*, though it also contains a certain quantity of cocaine.
3. Timbo (*Enterolobium timbowa*). It is the fruit of this which yields a jet-black tint.
4. Ibopé, or Algarrobo (*Prosopis dulcis*). The bark of this, which is very full of tannic matter, produces, when mixed with salts of iron, a fine black dye, which does not injure the tissue of fabrics submitted to it.
5. Mureci (*Byrsonima verbascifolia*). The coloring matter of this and the 3 following kinds is extracted from the bark.
6. Mechoacan (*Convolvulus giganteus*).
7. Urundey-mi (*Astronium urundeiba*).
8. Tubicha moroti (*Cassia occidentalis*).

Violet, 1 plant:

9. Yuqueri pehy. From this plant either a violet or yellow dye may be obtained, according to the chemical base that is used as mordant.

Indigo, 2 plants:

10. Caa-hoby (*Indigofera tinctoria*). This is the true indigo, the extract of which is as fine as any in the market. All that has ever been sent to Europe has been bought up at a good price, but hitherto the manipulation has only been carried on in the most primitive fashion by the Indians and half-breeds.
11. Uruburetyma (*Eupatorium indigofera*). This plant, having the brilliancy of the true indigo, is often used to adulterate it.

Blue, 3 plants:

12. Caa-chira (*Oldenlandia carimbosa*). A very small plant, with a quadrangular stem, which produces a bright blue dye. According to Parodi, the same name is often given to one of the *indigofera*.
13. Nandy-pa (*Genipa americana*); the fruit of which yields a most effective blue dye.
14. Caa-hu-guazu (*Solanum verbacifolium*). This is used in two different ways. It is soaked in urine to produce a blue dye, so dark as to be almost black, or it is mixed with indigo to hasten fermentation.

Green, 1 plant:

15. Caa-hoby (*Cessus tinctoria*). The green dye extracted from this is not very durable and is liable in course of time to change into blue.

Yellow, 5 plants:

16. Chilea (*Baccharis calliprinos*). The blossom yields a tint of bright ocher.
17. Isypo-yu, of the family of the *Escitamineæ*. According to Parodi, this plant contains curcumine.

Yellow, 5 plants—Continued.

18. Mbuy-Ibotey-Sainba. The coloring matter in this is slightly resinous.
19. Caa-pa (*Machura xanthoxyrum*).
20. Tata-y-iba (*Broussonetia tinctoria*).

Red, 6 plants:

21. Taiy-Picho-y (*Lapacho cresso*). The coloring matter of this, which is originally yellow, when treated with alkalies becomes first orange, then a bright red.
22. Caa-Tigua (*Trychilia catigua*).
23. Caa-acy (*Malpighia rossa*). The dye is a pale rose.
24. Caa-canga (*Gallicum cangay*). This is very abundant in Paraguay; this root produces a very brilliant red, little inferior to madder. Du Graty says that the country people mix it with cochineal.
25. Urucu (*Bixa orellana*). Of the various tinctorial plants of South America, this is one of the most common; it gives the bright vermilion with which the Indians paint their bodies. The quantity of tannin it contains makes it a good dye; its properties are slightly astringent, but the quantity that has to be used is so minute that no ill effects can be entailed. To some extent it is used in coloring wine, and it would be interesting to know whether it could not be adopted as a substitute for some of those materials which are so deleterious. The urucu seeds could always be most easily procured, as the plant grows so abundantly.
26. Yerba de la piedra, a Lichen (*Usnea*). When treated with an alkali this plant yields a fine claret-colored dye, due to the development of usnic acid.

PERU.

EXPORTS OF SUGAR IN 1901.

The review entitled "El Auxilar del Comercio," of Lima, publishes, in a recent number, some interesting statistics giving the exportation of sugar through the port of Salaverry in 1901. The total number of sacks exported during the period referred to was 560,938, containing 58,057,082 kilograms of sugar, the destination of which is shown in the following table:

	Sacks.		Sacks.
New York	201, 872	London.....	3, 414
Chile	250, 399	Pacific coast of South America..	6, 271
Australia	36, 280	Panama	50
Vancouver	24, 039		
San Francisco	4, 843	Total	560, 938
Liverpool	33, 820		

The following table indicates the principal places in the Republic in which this sugar was produced:

	Sacks.	Kilos.		Sacks.	Kilos.
Casa Grande	98, 356	10, 179, 846	Viñita	8, 965	927, 877
Roma	120, 258	12, 446, 703	Barraza	3, 625	375, 187
Sausal	84, 946	8, 791, 911	San Antonio	1, 186	122, 751
Cartavio	83, 760	8, 669, 160	Socachique	1, 000	103, 500
Laredo	33, 582	3, 475, 737	Chiquitoy	9, 943	10, 295, 455
Chicamita	19, 063	1, 972, 917			

The exportation of sugar from the port of Salaverry in 1901 exceeds the exports of 1900 by 99,473 sacks, weighing 10,295,456 kilograms.

THE MINT AT LIMA.

According to an article prepared by Mr. ALEJANDRO GARLAND, and which was published in the February number of the "Bulletin of the National Society of Agriculture," the mint at Lima, in 1901, recoined 300,000 two-cent pieces into 600,000 one-cent pieces in order to meet the demands of commerce for the smaller coins. During the same period 330,000 silver *soles* were remelted into bar silver, which was shipped to London and sold as bullion, the proceeds being converted into pounds sterling in the form of gold coin and sent to Peru to be placed in circulation. This was done for the purpose of diminishing the number of silver *soles* in circulation, and in order to assure their valuation at the rate of 24d. each, or one-tenth of a pound sterling, maintaining in this manner the parity between 10 *soles* and £1 sterling. In order to further meet the demand for fractional coin, 152,000 pieces of silver of the value of 1 *sol* each have been melted and made into coins of the value of one-fourth and one-eighth of a *sol*, respectively.

The principal work of the mint, however, has been the coining of gold bullion into Peruvian pounds. During 1901 231 gold bars, weighing $642\frac{2}{10}\frac{6}{100}$ kilograms and containing $589\frac{6}{10}\frac{2}{100}$ kilograms of fine gold, were sent to the mint to be coined into Peruvian pounds. This quantity of gold, added to the stock on hand uncoined at the close of 1900, produced 81,255 Peruvian pounds, or £17,722 more than the total coinage in 1900. While some of the gold that was coined was imported, it is a notable fact that more than 95 per cent of the gold coined in 1901 was extracted from the gold mines of the Republic. In 1898, when the coinage of gold was first initiated in Peru, the Peruvian pound was at a premium, and this fact naturally attracted to the mint a considerable portion of the old gold remaining in the country in the form of trinkets, foreign coins, etc., which was melted into bars and coined into Peruvian pounds. Within the last three years, however, but little gold of this kind has been sent to the mint, so that the gold coined during that period came almost entirely from the output of the mines of the Republic. The following table shows the coinage of Peruvian pounds from 1898 to 1901:

1898	£40, 103
1899	33, 835
1900	63, 533
1901	81, 255
Total	218, 726

The exports of gold from Peru in 1901 have not yet been compiled, but the data obtainable up to the present time indicate that they will exceed those of 1900 by about 2,500 kilograms. The gold production

in 1901 of the Inca Mining Company at Carabaya was 1,500 kilograms, 900 of which were exported, and it is believed that the output of this company in 1902 will greatly exceed that of 1901. The Chuquitambo Gold Mining Company, of London, has a number of mines in the auriferous district of Quinua, near the famous Cerro de Paseo mines, and is making improvements in its reduction works that will enable it to treat more than 100 tons of gold ore daily. The gold mines of Angaray are also in a position to produce more gold bullion than heretofore, so that the probabilities are that the mines of Peru will furnish in 1902 more gold bullion for coinage than will be required to meet the demands of commerce.

SALVADOR.

TARIFF MODIFICATIONS.

The following modifications of the tariff law of the Republic of Salvador, as published in the "Diario Oficial," have become operative according to Executive Decree:

"I. Ordinance of October 18, 1901, in reference to the exemption from duty on bags containing export coffee.

"It has been ordered that in applying the law of May 17, 1901, granting exemption from duty on bags containing coffee intended for exportation, the export duty on coffee is to be charged according to net weight, $2\frac{1}{2}$ pounds per bag being deducted from the total gross weight.

"II. Ordinance of October 19, 1901, respecting the régime applicable to shoemakers' non-twisted linen or hempen thread.

"In virtue of this ordinance, shoemakers' non-twisted linen or hempen thread is to be dutiable under tariff No. 21, at the rate of 30 *centavos* per kilogram.

"III. Ordinance dated October 23, 1901, providing for the customs treatment of rye flour.

"This ordinance provides that rye flour, not being specified in the tariff in force, shall be dutiable according to No. 57 at the rate of 2 *centavos* per kilogram.

"IV. Ordinance dated October 23, 1901, providing for the customs treatment of socks of Scotch yarn and imitations.

"This ordinance provides that socks of Scotch yarn and imitations thereof are to be taxed under No. 14, at the rate of 1 *peso* 50 *centavos* per kilogram.

"V. Ordinance of November 23, 1901, establishing the régime applicable to electric ventilating fans.

"In pursuance of above-named ordinance, electric ventilating fans not specially mentioned in the tariff shall be classed in No. 315, subject to a duty of 30 *centavos* per kilogram.

“VI. Ordinance of January 1, 1902, temporarily authorizing free entry of maize and beans.

“By virtue of this ordinance maize and beans necessary for consumption may, during one year, be imported duty free. These commodities shall likewise be exempt from warehouse charges.

“VII. Ordinance of January 8, 1902, assessing the duty payable on small round ointment boxes of wood.

“Under this ordinance small round ointment boxes of wood, common, turned on the lathe and unvarnished, shall be dutiable at the rate of 15 *centavos*.”

TELEGRAPH AND TELEPHONE SYSTEMS OF THE REPUBLIC.

A recent report of the Director-General of the Department of Telegraph and Telephones of the Republic shows that there were 138 telegraph and 61 telephone offices in operation in Salvador in 1901, as compared with 117 telegraph and 49 telephone offices, in 1900. The number of employees in 1901 in the two branches of the Government service referred to was 433. The telegraph system of the country in 1901 consisted of 2,098 miles of telegraph lines, as compared with 2,029 miles in 1900. There were 1,032 miles of telephone lines in operation in 1901, as compared with 959 miles in 1900. The total length of the telegraph and telephone systems of the nation in 1901 aggregated 3,130 miles. In the 61 telephone offices in operation in 1901 there were 282 instruments employed in the Government service and 202 for private individuals. The number of official messages sent over the wires in 1901 amounted to 232,819, while the number of private telegrams rose to 397,310. The charges for transmitting these telegrams were \$197,573.55. The receipts in 1901 for the forwarding of cablegrams over the Government wires were \$66,797.28, of which amount the cable company received \$62,782.04, leaving \$4,015.24 as the part corresponding to the Government for this service. The total receipts in 1901 from telegraphs and telephones aggregated \$344,406.74. The expenses of operation for the year, in both departments, were \$325,444.99, which amount deducted from the gross receipts leaves a net profit to the Government during the period referred to of \$18,961.75.

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

Following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of March, 1902, with a comparative

statement for the corresponding month of the previous year; also for the nine months ending March, 1902, as compared with the corresponding period of the fiscal year 1901. It should be explained that the figures from the various custom-houses, showing imports and exports for any one month, are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of March, for example, are not published until some time in May.

The exports of Mexican dollars to Hongkong during the month amounted to 15,319, and to Mexico, 15,000.

The Vice-Consul of Mexico at Mobile, Alabama, reports that during the month of April, 1902, five vessels of a capacity of 3,566 tons entered the port of Mobile, proceeding from the Mexican ports of Progreso and Vera Cruz, bringing 9,478 bales of henequen. During the same period four steamships cleared from Mobile destined to the Mexican ports of Vera Cruz and Progreso, carrying 14,446 railway ties and 630 packages of merchandise consigned to Vera Cruz, and 19,067 packages of merchandise billed to Progreso.

According to statistics furnished by the Mexican consul at Nogales, Arizona, merchandise to the value of \$177,493 entered the Mexican Republic through that port during the month of February, 1902. These products were classified in the following manner:

Animal products.....	\$18, 087	Textile products.....	\$41, 311
Arms and explosives.....	6, 333	Vegetable products.....	20, 027
Beverages.....	2, 332	Vehicles.....	3, 241
Chemical products.....	44, 378	Miscellaneous.....	4, 180
Machinery, and parts thereof...	16, 398		
Mineral products.....	20, 028	Total.....	177, 493
Paper, and paper products.....	1, 178		

The foregoing merchandise originated in the following countries:

Austria	\$180	Switzerland	\$5,780
England	22,993	United States	96,522
France	9,762		
Germany	41,956	Total	177,493
Japan	300		

The duties collected on these goods by the Mexican Government amounted to \$88,629.38, Mexican silver.

The exports from Mexico to the United States through the port of Nogales during February, 1902, amounted to \$1,123,945, Mexican silver, and consisted of the following products:

Articles.	Quantity.	Value, Mexican silver.
Copper bullion	pounds.. 5,281,820	\$845,412
Fruits	do.. 13,245	179
Gold bullion and dust	ounces.. 6,071	121,424
Guano	tons.. 44	224
Hides	pounds.. 111,597	8,589
Lead bullion	do.. 167,541	6,701
Leaf tobacco	do.. 2,341	1,442
Mescal	gallons.. 74	70
Ores		96,537
Silver bullion	ounces.. 76,082	43,367
Total		1,123,945

The following table shows the articles shipped from Galveston, Tex., to the Mexican ports of Vera Cruz and Coatzacoalcas during the month of March, 1902, according to the information furnished by the Mexican consul at Galveston:

Articles.	Quantity.	Weight.	Value.
		<i>Kilos.</i>	
Cotton	bales.. 1,700	422,914	\$84,150.74
Cotton-seed oil	do.. tank..	442,607	46,186.21
Creosoted lumber		190,830	3,200.00
Mineral oil, unrefined	barrels.. 185	37,356	580.50
Total		1,093,707	134,117.45

The Consul-General of Mexico at New York City announces that the imports through the port of New York from the Republic of Mexico during the month of March, 1902, were made up of the following articles:

Alligator skins	bales.. 69	Hides	loose.. 5,823
Bones	packages.. 350	Honey	barrels.. 609
Broom root	bales.. 2,970	Ixtle	bales.. 1,819
Chicle gum	do.. 3,039	Jalap	sacks.. 222
Cigars	boxes.. 155	Lead bullion	bars.. 58,890
Coffee	sacks.. 22,872	Lumber	pieces.. 2,373
Copper bullion	bars.. 1,011	Mahogany	logs.. 1,183
Deerskins	bales.. 198	Metals	boxes.. 12

The Consul-General of Venezuela at New York advises that the total shipments from that port to the Republic of Venezuela during the month of March, 1902, consisted of 49,706 packages of merchandise, weighing 2,581,753 kilograms, valued at \$445,263.65, as compared with 63,979 packages, weighing 3,501,280 kilograms, valued at \$283,038.10, shipped from New York to Venezuelan ports in March, 1901.

The following table shows the movement of this merchandise during the month of March of the years referred to:

Ports.	Products.	March, 1901.		March, 1902.

FOREIGN COMMERCE, FIRST NINE MONTHS OF 1902.

The statistics of the foreign trade of the United States for the first three quarters of the fiscal year 1902, as compiled by the Bureau of Statistics of the Treasury Department, show an increase over the corresponding period of the preceding year of \$79,261,442 in imports and a decrease in exports of \$59,551,963, the totals being \$678,698,016 and \$599,426,674 for imports, and \$1,080,986,664 and \$1,139,668,627 for exports, respectively, in the two periods under comparison. More than half of the decrease noted in exports is in the value of products of agriculture, for which the figures are \$693,837,455 in 1902 and \$736,565,745 in 1901. This decline is in the main attributable to the destruction of the corn crop of the United States, which in average years figures on the export list for 200,000,000 bushels. In the present fiscal year, however, it will not amount to one-fifth of that quantity. In the nine months ending March, 1902, the exportation of corn amounted to only 24,369,964 bushels, against 146,130,059 in the corresponding months of 1901, the valuations being \$14,637,186 and \$66,936,873, respectively. A sympathetic decline was inevitable not only in the by-products of corn culture, but also in the surplus of oats available for export purposes. In this latter item a falling off from 24,843,967 bushels to 8,559,353 bushels is noted for the two years 1902 and 1901, the decline in valuation being \$7,755,362 and \$3,484,438, respectively. Thus, out of a total decrease in exports of \$59,551,963, it is seen that the two items, corn and oats, account for \$56,470,621. Another item which shows a material reduction in export valuation for the first nine months of 1902 as compared with 1901, is cotton. This, however, is due not to a diminution in the

quantity exported in 1902, but to a fall in the market value. On the contrary, the exports have increased notably. The total exportation of cotton in the nine months ending March, 1902, was 3,085,509,868 pounds against 2,741,310,363 in the corresponding period of 1901, an increase in quantity of 344,199,505 pounds, whereas the valuations for the two years were \$252,136,904 and \$264,340,605, respectively, a decrease in value of \$12,204,701.

In the exports of manufactured articles, while a slight decrease is marked in the total for the first nine months of 1902 as compared with the same period of 1901, yet the majority of the items are practically stationary, while increases are noted in some. Under the latter heading may be mentioned agricultural implements, books and maps, cycles, cotton cloths (both colored and uncolored), gunpowder and explosives, india-rubber goods, steel wire, typewriting machines, iron pipes and fittings, boots and shoes, musical instruments, mineral oils, tobacco manufactures, household furniture, and woolen goods. Such items as copper ingots, electrical and scientific apparatus, steel rails, and some others show a decrease. A comparison of the relative part taken by manufactured exports as a class and the total exports cited for the first nine months of the two years, respectively, shows that whereas manufactured exports were but 27.21 per cent of the total for the first nine months of 1901, they were 27.75 per cent for the same period in 1902. The aggregate of manufactured exports for 1902 is \$294,859,812, as against \$304,891,344 in 1901.

An examination of the import statistics for the first nine months of 1902 and 1901 demonstrate the fact that while the increase in 1902 aggregated \$79,261,442, of this sum \$63,008,968 were included in the items covering raw materials and partially crude materials for use in processes of domestic manufacture.

Ten articles form the bulk of the manufacturers' materials imported. These are fibers, hides and skins, india rubber, raw silk, tin, unmanufactured wood, wool, copper, raw cotton (chiefly Egyptian), and a large proportion of the articles classed under the head of "chemicals." The following table shows the total valuations of these imports during the nine months ending March 31, 1902, as compared with the same period of 1901. It will be noted that there is a marked increase in all cases, except india rubber and tin, in the present fiscal year. In the case of tin, in which a slight decrease in value is shown, the figures of quantity exceed those of the corresponding months of the previous year, while in india rubber the slight reduction in total value is also due in part to a reduction in price.

Articles.	1901.	1902.
Chemicals, etc	\$39,281,736	\$43,339,560
Copper	14,016,009	19,762,870
Cotton (raw)	5,163,487	9,145,333
Fibers	16,128,152	22,955,194
Hides and skins	33,165,417	44,187,774
India rubber	20,033,924	18,855,769
Raw silk	19,531,319	33,188,523
Tin in pigs	14,486,223	13,414,046
Wood (unmanufactured)	11,132,727	13,959,732
Wool (raw)	8,743,510	12,615,874
Total	247,783,462	310,792,429

Notwithstanding the decrease noted in exports in 1902 for the two periods of nine months under comparison, the grand total for the United States is still greater than that of any other exporting country. In only 10 other countries, viz; Argentine Republic, Brazil, Bulgaria, Canada, Chile, Egypt, British India, Mexico, Russia, and Uruguay, is there an annual excess of exports over imports. An analysis of the average monthly exportations of domestic merchandise from the various countries supplying the markets of the world shows that, among the export nations, the United States stands first, followed by the United Kingdom, Germany, France, the Netherlands, and British India, in the order named. On the list of importing nations, the United Kingdom stands first, followed by Germany, France, the United States, the Netherlands, and Belgium.

The following tables give the figures and classifications of the general foreign commerce of the United States for the two periods under comparison, the statistics for Latin America being published in detail elsewhere in the BULLETIN:

	Nine months ending March—	
	1901.	1902.
IMPORTS.		
Articles of food and animals	\$163,177,213	\$152,735,465
Articles in a crude condition, which enter into processes of domestic industry	189,319,425	243,161,020
Articles wholly or partially manufactured for use as materials in manufactures, etc	58,464,036	67,631,409
Articles manufactured ready for consumption	100,630,891	113,563,778
Articles of voluntary use, luxuries, etc	87,835,109	101,606,344
Total	599,426,674	678,698,016
EXPORTS.		
Products of—		
Agriculture	736,565,745	693,837,455
Manufactures	304,891,344	294,859,812
Mining	28,542,043	29,385,530
Forest	39,807,879	34,014,298
Fisheries	6,861,844	6,398,583
Miscellaneous	3,814,807	3,936,480
Total domestic	1,120,483,662	1,062,432,158
Total foreign	19,184,965	18,554,506
Total exports	1,139,668,627	1,080,986,664

The value of gold imports in the first three quarters of 1902 is represented by \$44,572,977, as compared with \$58,768,572 in the same

period of 1901, while the exports for the two periods were \$43,364,814 and \$32,822,191, respectively. In silver, the imports were represented by \$22,431,339 in 1902, and \$29,336,428 in 1901, while the exports were \$38,956,242 and \$50,370,852, respectively.

THE DEVELOPMENT OF TRADE WITH LATIN AMERICA.

The "Report on the Commercial Relations of the United States," issued by the Bureau of Foreign Commerce of the Department of State of the United States, contains a valuable and interesting study of the conditions governing the development of trade between the United States and the Latin-American sections of the continent.

In regard to Mexico it is stated that United States goods are well and favorably known in the Republic, but that in certain lines, such as dry goods, hats, shoes, notions, and men's and women's furnishings, practically no attempt has been made by United States exporters to gain the trade. In general lines, however, trade is growing, and many United States houses have adopted the expedient of sending out young Mexicans or Cubans as traveling salesmen. These men are acquainted with the necessities of this branch of commercial activity, and excellent results have been achieved. Business failures are reported as rare in Mexico, and commercial travelers in the Republic find a conservative class of merchants, who take pride in conducting their affairs on the basis of prompt payments. United States enterprise has figured conspicuously in the development of the large city of Monterey, its water works, sewerage, gas plants, railways, and foundries being for the most part of American furnishing.

In Guatemala United States machinery is highly appreciated, though the delicacy of its construction will not admit of the handling by Indian labor, which is universal in that country. Its superiority to the other machinery imported in the matter of economizing fuel is generally granted, and this fact has a decided influence on the demand for it.

Three-fourths of the imports of Honduras are reported as of United States origin, and in the West Indian Islands an increasing quantity of United States articles is in demand. With Haiti the trade in machinery is gaining ground, and Santo Domingo imports 85 per cent of her foreign food stuffs from the United States, as well as large quantities of hats and shoes. All the imported lumber of the island and a large portion of other building materials are of United States origin.

The floating sample store, which is a United States experiment for the development of trade with Latin America and the West Indian Islands, is regarded as of great possible benefit. A vessel is to leave the United States for the western coast of Mexico, Central America, and South America, having for sale samples of merchandise of all kinds suitable for tropical trade, each line of goods being in charge of an expert salesman.

In regard to the countries of South America, the report states that United States coal is finding a steady and ever-increasing market in Brazil, and that typewriting machines, sewing machines, clocks, watches, and electric goods are holding the position already gained for them, while new openings are being made for bicycles, locks, firearms, cutlery, and picture frames. The establishment of a line of modern steamers is urged, it being pointed out that a line operating between New York and Brazil would be of incalculable benefit, and the return freights of coffee, rubber, and like products would render the benefits of mutual importance. Hardware from the United States stands without a rival in the Brazilian markets.

In the Argentine Republic the United States articles making the greatest headway are tools and implements, cottons, hats, shoes, and specialties. As an indication of the value of the commercial transactions carried on between the two Republics it is stated that in one of the banks of Rosario the increase in business with United States firms for the half year ended June 30, 1901, as compared with the preceding half year, had been 131 per cent.

Milling machinery forms the staple of Chilean importations from the United States, and as lumbering is the chief industry of the southern provinces of Chile, the amount of yearly shipments is not inconsiderable. All of the machinery used in the production of flour is also of United States origin.

In Colombia there is a rising demand for negligé shirts, collars, and cuffs of United States makes.

United States trade with Ecuador shows a gratifying increase, due in great measure to purchases for the Guayaquil and Quito Railroad, as well as to better and quicker communication, lower freight rates, and the efforts of the commercial travelers.

In Uruguay United States manufactures are appearing in increasing quantities, steady effort alone being necessary for a complete conquest of this market.

The mutual benefits to be obtained by a closer commercial intercourse between the nations of the Western Hemisphere formed the central idea of an address delivered at a meeting of the Bankers' Club in Chicago on April 19, when President INGALLS affirmed that the United States had not as yet evolved methods by which to secure the trade of the countries lying to the south. "The very first thing to do," he said, "to promote commerce and trade with the West Indian Islands and the South American States is to build up a system of transportation and communication between our country and the several ports and cities. Trade always follows facility and cheapness of communication." It remains, therefore, to be demonstrated that the nations of Latin America can visit the United States more easily and more cheaply than Europe; that their freight can be shipped with

greater dispatch and at a cheaper rate; that machinery of the highest grades is available on this side of the Atlantic, and that there is money enough in the country to furnish long credits upon good security and at a good rate of interest.

STATISTICS OF LIVE-STOCK CONDITIONS.

The report published in the MONTHLY BULLETIN for April, 1902, of the live-stock conditions of the United States, contained the data collected for the census year 1900, without reference to the present aspect of the industry. Following is a table compiled so far as possible from official reports and supplemented by the averaged estimates of cattlemen and live-stock statistics, which shows with nearly absolute accuracy the available cattle supply of the West on April 15, 1902:

States and Territories.	Steers 1 and under 2 years.	Steers 2 and under 3 years.	Steers 3 and under 4 years.
Arizona	70,500	55,304	40,100
Arkansas	70,139	41,403	17,900
Colorado	170,303	131,415	75,540
Idaho	41,330	29,726	14,532
Illinois	315,101	233,350	65,200
Indiana	165,703	115,305	39,403
Iowa	630,530	520,301	152,013
Kansas	415,130	375,400	265,605
Louisiana	61,872	35,832	29,589
Michigan	148,371	50,350	4,387
Minnesota	163,302	46,205	8,700
Mississippi	71,927	40,332	53,908
Missouri	365,304	351,230	117,203
Montana	230,345	210,432	153,207
Nebraska	298,301	207,320	87,607
Nevada	43,201	30,504	14,333
New Mexico	92,340	47,300	21,342
North Dakota	102,400	77,863	33,252
Ohio	222,403	143,303	35,443
Oklahoma	145,307	143,143	156,773
Oregon	71,317	45,629	25,344
South Dakota	235,872	193,641	78,932
Tennessee	135,368	78,301	30,783
Texas	767,823	630,989	505,098
Utah	37,923	22,872	8,113
Wisconsin	203,678	75,918	8,640
Wyoming	108,350	119,350	67,982
Total	5,383,959	4,127,581	1,902,058

These figures show a considerable depletion of the supply since the census of 1900 was taken, at which time there were, in the states and territories included in the estimate, 6,065,470 steers one year and under two years old, 4,532,144 two years and under three years old, and 2,569,962 three years and under four years old; showing a falling off, in less than two years, of 683,511 steers of the first class, 404,563 of the second class, and 354,904 of the third class.

In certain sections of the country the number of cattle on feed is unquestionably smaller than in many years. On the other hand, however, there are sections in which the number is not far below the normal, and there are still others where the number of cattle is greater than it has ever been before. The section of country which feeds the Kansas City live stock market suffered greatly from the drought of

last year; as a consequence of which the farmers shipped their stock to market prematurely in order to avoid the expense of keeping them throughout the winter, but that the number of cattle being fed in this district is being generally underestimated is proved by the fact that the commission banks of Kansas City have fully \$22,500,000 loaned on cattle paper as against \$25,000,000, the record for the best years.

Texas, which is also tributary to the Kansas City market, has shipped more than 130,000 head in spring shipments as against 90,000 to 100,000, which was the limit of the forecast of railway agents. This shows that the present high price of live stock has caused the farmers to put on feed between 30,000 and 40,000 more Texas cattle alone than they would have done under normal conditions.

In the territory directly tributary to the Chicago and St. Louis markets the situation is much more favorable. The number of cattle out of full feed in this section is about 70 per cent of what it was last year. It is stated that the receipts in the Chicago and St. Louis markets have been so heavy since January 1 as to more than offset the decline at Kansas City. The aggregate reports of cattle at Chicago, Kansas City, Omaha, and St. Louis since the first of the year have been 1,539,100 head, as against an aggregate of 1,451,600 during the same period of 1901, an increase of 77,500. In the Western markets other than Kansas City the increase up to March 1 over last year was 149,309 head.

In Mississippi, Louisiana, and Tennessee there are more cattle on feed than ever before, while in the extreme West the number being fed is also extraordinarily large. In view of these facts the situation is much more encouraging than the present high prices of live stock would indicate. The March summary of internal commerce by the Treasury Bureau of Statistics shows that for the first quarter of 1900 the receipts of live stock at the five leading markets of the interior were 7,412,703 head; for the first quarter of 1901, 7,646,572 head, and for 1902, 7,831,882 head.

DIRECT SHIPMENTS OF PHILIPPINE HEMP.

On April 8, 1902, the Secretary of War of the United States issued an important order for the carrying out of the provisions of that part of the Philippines tariff act which exempts from import and export duties all merchandise shipped directly from the archipelago to the United States.

The order directs that export duties be collected on all such goods with the understanding that the amounts collected shall be refunded when evidence is produced that the goods were delivered at ports in the United States. This evidence must be produced within eighteen months.

The hemp market of the world is greatly affected by this order, as London, the center for hemp distribution, will no longer be

the direct port for shipments of this product from the Philippine Islands. At present nearly all the Manila hemp goes to London, and rope makers of the United States have been obliged to secure their supplies from England. It was feared by the War Department authorities that vessels might clear from the Philippines for the United States, thus saving the export duty on hemp, and then deliver their cargoes at English ports en route. This would enable the London hemp market to dispose of supplies from the Philippines at lower prices than would be possible in the United States. The order in reference will, however, prevent vessels bound for the United States from landing hemp and other cargoes at foreign ports without a forfeit of the export duties paid to collectors of customs in the Philippines.

The imports of Manila hemp by the United States for March, as reported by the Treasury Bureau of Statistics, show an important gain over last year, the larger portion of the increase being in that imported from the United Kingdom. The figures by countries from which shipped are as follows:

Countries.	1901.	1902.
	<i>Tons.</i>	<i>Tons.</i>
United Kingdom.....	1,182	1,809
Philippine Islands.....	4,611	4,777
Other countries.....		75
Total.....	5,793	6,661

It is shown that for the nine months ending with March, 1902, the total shipments reaching the United States, either direct from the Philippines or through other countries, reached the total of 47,685 tons, against 28,288 tons in the corresponding period of the previous year. This gain of 18,397 tons really is larger than appears, owing to the custom in many places of reckoning binder twine in tons of 2,000 pounds, while the imports are entered on the basis of 2,240 pounds to the ton.

In this connection a comparison with a number of the more recent years may assist in determining the relative quantity imported in the nine months of the present fiscal year.

Imports of Manila hemp in the nine months ending March were as follows for the years named:

	Tons.		Tons.
1897.....	29,511	1900.....	29,104
1898.....	39,599	1901.....	28,288
1899.....	36,069	1902.....	47,685

"Farm Machinery," in commenting on the above statistics, states that the principal gain over 1901 occurred in February, 1902, when the hemp imports amounted to 12,035 tons, against 1,411 tons in the same month of the preceding year.

It might also be noted that in the eight months ending with February, 1902, there were almost 10,000 more tons of sisal imported than in the same period a year previous, the amounts being 45,903 tons of sisal entered from July 1, 1900, to the end of February, 1901, as against 55,384 in the same months of the present fiscal year.

INCREASED USE OF OIL AS FUEL.

It is stated by a San Francisco correspondent to the "New York Commercial," under date of April 25, 1902, that since May, 1899, 150 permits had been granted in that city for the burning of oil instead of coal as fuel. All classes of consumers except householders are covered by these permits. For the most part they concern those who have been in the habit of using large quantities of coal, such as manufacturers, street-railway companies, railways, hotels, and office buildings. Every manufacturing establishment in the city that formerly used 10 tons of coal daily, as well as some that used considerably less than that quantity, is now using California oil for fuel.

There has been a steady increase in the use of fuel oil on the steam roads of the State. It is also being used on the ferryboats and on some of the coast steam schooners, and will eventually come into use on steamers for long voyages. It is reported that Japan is at present using crude oil on some of the railroad locomotives of the country. A study of the geologic formations and general conditions governing the oil fields of the United States is being made by experts from Japan, for the purpose of discovering whether or not similar formations may be productive in the latter country. If, however, productive oil fields are not found within the Japanese territories, there is no doubt that California will find a good customer for the surplus production of the State.

A steamer employed by a United States fruit company recently returned from Puerto Barrios, Guatemala, to New Orleans, having made the round trip using Beaumont fuel oil instead of coal. It was the first test of the oil made in the use of this oil for fuel, and was watched with great interest. The steamer made the fastest trip on record from Central America—two days and nineteen hours. The engineer reports that the use of oil enabled the steamship to dispense with six firemen, that the trip used 850 barrels of oil, as against 218 tons of coal usually required, the oil costing only half as much as the coal, and proving steadier and more reliable.

The huge steamships owned by the American-Hawaiian Steamship Company are to be converted into oil-burners, the company having, after a thorough investigation, come to the conclusion that oil as fuel would be equally as good as coal and half as expensive. The fleet of steamers owned by this company will be the largest of their kind in the world burning oil, and since they make the voyage around Cape

Horn their success as users of the new fuel will leave no room for doubt as to its efficacy as a substitute for coal. It would be impossible, with a large cargo of freight, for any of the Cape Horn fleet to carry oil enough to last on the trip to or from New York and San Francisco, and for this reason a tank steamer is to be stationed by the American-Hawaiian Company in the Straits of Magellan, from which a supply may be obtained by passing steamers of the line. The oil for this supply ship will be taken from the Texas oil fields, in which stockholders of the steamship company are interested.

In a report made before the Institution of Naval Architects (British), the following practical advantages were urged of oil over coal as a sea fuel:

“The practical figures of comparison between coal and oil fuel realized in recent practice were that 2 tons weight of oil were equivalent to 3 tons weight of coal, and 36 cubic feet of oil to 67 feet of coal, as usually stored in a ship’s bunkers; hence if the change of fuel were effected in an existing war vessel or applied to any design without changing any other of the data than those affecting the range of action, the latter would be increased by 50 per cent upon the bunker weight allotted and nearly 90 per cent upon the bunker space allotted. The coal protection for cruisers, whatever its real advantages, would disappear with the use of liquid fuel, because it would be for the most part stowed below the water line, if not wholly in the double bottom. The ship’s complement would be reduced by the almost complete abolition of the stoker element and the substitution of a limited number of men of the leading stoker class to attend to the fuel burners. Rebunkering at sea—so anxious a problem with coal—would be made easy, there being no difficulty in pumping from a storeship to a warship in midocean in ordinary weather; 300 tons an hour was quite a common rate of delivery in the discharge of a tank steamer’s cargo under ordinary conditions of pumping. Liquid fuel, if burned in suitable furnaces with reasonable skill and experience on the part of the men in charge, was smokeless. The cost of fuel in the East was less than that of Welsh coal when the cost of transport and Suez canal dues were added to the original price of the coal as delivered in a Welsh port.

* . * . “The greatest commercial gain, however, was the increase of weight and space available for freight. If 3 tons of coal were taken as equal to 2 tons of oil fuel, there was a gain in weight of about 1,000 tons in the freight of a first-class Atlantic steamer and a gain of nearly the whole of the bunker space, which, subject to drawbacks of nonstowage in the hot parts, would be available for freight. Allowing for these and assuming the storage of the whole of the fuel in the double bottom and peaks, there would be a gain approaching 100,000 cubic feet of measurement made available for freight in such

a vessel. The gain from substituting the new fuel in vessels of less steam power proportionate to the size would be correspondingly reduced, but it might be fairly estimated for most ships that 25 per cent of the space now occupied by coal-bunker storage could be utilized for cargo by the transfer of the fuel in a liquid form to the double bottom and other parts not now of direct use. The cleanliness of oiling instead of coaling passenger ships and the saving of detention at ports of call were obvious.

* * * "Oil fires did not require cleaning, and thus a prolific source of lost speed in ordinary voyage routine was avoided. Parts of the vessel hitherto useless except for water ballast or fresh water were most suitable for oil bunkers, both because of the freeing of other spaces for cargo and because of the immediate adaptability of the water-ballast structure for holding liquid fuel."

Lloyd's Register has published a set of rules for existing vessels desirous of adopting oil as fuel in long voyages.

PACIFIC STEAMSHIP SERVICE WITH LATIN AMERICA.

Increased facilities for steamship communication between San Francisco and the ports of the various countries lying to the south of the United States have resulted in a fourfold development of the trade of the Pacific coast within the past two years. Previous to 1901 San Francisco's exports to South America averaged less than \$500,000 yearly, whereas in the year mentioned they amounted to \$2,000,000. These new conditions have stimulated the navigation companies to greater activity, and at present, including the Pacific Mail Company, there are five lines of steamers engaged in this coastwise business. The Kosmos is a German corporation, with a fleet of 25 steamships of large tonnage, plying between the principal ports of South America and Mexico, in this hemisphere, and Italy and Hamburg. The Pacific Steam Navigation Company, which with its 38 steamers controls the bulk of the South American carrying trade, has recently extended its lines to San Francisco. The "Compañía Sud Americana de Vapores" has a service between San Francisco and Valparaiso, and a new British-American line has put on steamers between San Francisco and Callao, Peru, stopping at the ports en route.

COAL ON THE PACIFIC COAST.

Of the three Pacific coal States Washington ranks first, with California second, though in 1896 and 1897 Oregon's output exceeded that of California. The coal fields of Washington are confined to the western and central parts of the State and comprise four large fields, the product ranging from lignite to bituminous coking coal. Since 1894 the output of the State has shown a steady increase, and in 1900 one county alone produced 1,000,000 tons. The prospect is for steady

development, though at present the total supply mined is consumed within the limits of the Pacific coast States, the San Francisco market being the chief purchaser. California's product is limited, and the consumption is chiefly local.

Oregon's productive coal field (known as the Coos Bay field) is situated about 200 miles south of the mouth of the Columbia River, and covers an extent 30 miles in length and 11 in breadth. Other fields exist, the commercial value of which has not been fully ascertained, though the prospects for enlargement are good. The Coos Bay coal is lignite and is preferred to other coals for domestic fuel, but does not generally coke and is not a good steam coal. In 1880 the Pacific field produced about 425,000 tons of coal; in 1890 over 1,435,000, and in 1900 over 2,704,000 tons.

PRODUCTION OF OPEN-HEARTH STEEL IN 1901.

The total production of open-hearth steel in the United States in 1901, including direct steel castings, was 4,656,309 gross tons, according to the report of the American Iron and Steel Association. These figures show an increase over the previous year of 1,258,174 tons, or over 37 per cent. The production of open-hearth steel has more than doubled in the last four years, having increased from 2,230,292 in 1898 to the figures given above.

In 1900 the open-hearth steel production of the United States exceeded that of Great Britain for the first time. In the year mentioned Great Britain's output was 3,156,050 tons, the largest in her history. In 1900 basic-process steel was produced to the amount of 2,545,091 tons, and the acid-process product was 853,044 tons. In 1901 these quantities had increased to 3,618,993 tons for basic and 1,037,316 tons for acid process. The total production of open-hearth steel castings in 1901 included in the above statement amounted to 301,622 gross tons, of which 94,941 were made by the basic process and 206,681 tons by the acid process.

The statistics above given show that not only was the output of open-hearth steel in 1901 the greatest ever made in the United States, but it is by far the largest ever made in any country in the world, and was nearly as great as that of Great Britain and Germany combined.

COPPER PRODUCTION IN MARCH, 1902.

The copper of the United States showed a decided gain in production in March, 1902, as compared with the two preceding months and also with the corresponding month of the year 1901. The total for the first quarter of the current year (January-March) did not, however, equal that of the same quarter in the previous year. A remarkable feature of this statement is in the fact that the exports in the quarter of 1902 in reference exceeded those of the same quarter of

1901 by 27,958 tons, the quantities being 51,232 tons and 23,274 tons, respectively. The March production is given as 24,035 long tons as compared with 20,331 in February, 1902, and 23,384 in March, 1901. For the quarter ending March 31 the total output—63,321 long tons—was less than that of last year by 3,482 tons, or 5.7 per cent, owing to the large decreases in January and February. Last year the copper exports were only 34.7 per cent of the production, while this year they were 80.9 per cent of the total during the first quarter.

According to statements compiled by the Metal Exchange, exports of copper for April were 16,275 tons, as compared with 19,826 tons in March, 16,931 in February, and 15,021 in January. In April, 1901, the exports were 4,929 tons, in 1900, 12,475, and in 1899, 7,760.

RECOGNITION OF LATIN-AMERICAN CONSULAR OFFICERS.

The Department of State of the United States has informed the International Bureau of the American Republics, under date of May 8, 1902, that the following foreign consular officers accredited to Latin-American countries have been recognized by the Government:

HARVEY COALE, Consul of the Argentine Republic at Baltimore, Md.

J. HARRIS PIERPONT, Consul of the Argentine Republic at Pensacola, Fla.

CARLOS CONDE, Honorary Consul of Venezuela at San Juan, Porto Rico.

IMMIGRATION AT THE PORT OF NEW YORK.

Some 178,600 immigrants have arrived at the port of New York during the four months ending with April. This is at the rate of 535,800 a year for New York alone, which would indicate a total present volume of immigration exceeding any known since 1882, when the arrivals numbered about 789,000. The present immigration is principally from Austria-Hungary, Germany, Italy, and Russia—the first-named country contributing the largest number. Most of the Italian immigrants remain near the place of landing—that is, in New York State, New Jersey, and Pennsylvania. This is true of the Hebrew immigrants. New York and Pennsylvania are also getting the bulk of the incoming Germans, while the Poles move out in the direction of Massachusetts. Considerable numbers of all classes take trains for the central West and the Northwest, while the South is still a neglected spot in this movement.

So far the year 1902 has broken the record of the past decade for immigrants landing at this port. January and February showed a large increase on the figures for the same months last year, and March showed 23,000 more than March, 1901, and during the first two weeks of April there entered 40,000 souls, as against 28,000 in the same fortnight a year ago. For the rest of April the proportions are as large.

WHEAT STATISTICS, MAY 1, 1902.

The total available world's stock of wheat held on May 1, 1902, as reported by telegraph and cable to "Bradstreet's," was 134,400,000 bushels, as against 163,300,000 bushels on April 1; 157,500,000 bushels on May 1 a year ago; 159,200,000 bushels on May 1, 1900; 130,500,000 bushels on May 1, 1899, and 102,500,000 bushels on May 1, 1898. The following table shows the stocks held in leading producing and consuming countries of the world on May 1 for a period of years past :

	May 1, 1902.	Apr. 1, 1902.	May 1—			
			1901.	1900.	1899.	1898.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
United States and Canada	58,300,000	81,000,000	65,400,000	77,800,000	51,700,000	34,100,000
Europe and afloat	68,100,000	72,000,000	78,100,000	70,200,000	65,500,000	61,500,000
Australia	4,900,000	5,300,000	10,800,000	7,500,000	7,800,000	4,900,000
Argentine Republic	3,100,000	5,000,000	3,200,000	3,700,000	5,500,000	2,000,000
Total	134,400,000	163,300,000	157,500,000	159,200,000	130,500,000	102,500,000

The world's stock decreased 29,000,000 bushels in April, the largest decrease reported in that month for at least five years past, and present stocks are 23,000,000 and 25,000,000 bushels, respectively, smaller than one or two years ago, only 4,000,000 bushels larger than in 1899, and only 32,000,000 bushels larger than in 1898. Another point to be noted is that most of the excess shown over 1898 is in the American stock, as the European supplies are only about 6,600,000 bushels larger than five years ago. This excess, however, can not be regarded as a very great one, in view of the fact that the United States and Canada are conceded to have produced last year the largest wheat crops in their history. In this connection the following table, showing the United States and Canadian supplies on the first of each month for three years past, will be of interest:

	1902.	1901.	1900.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
January 1	102,086,000	96,597,000	99,287,000
February 1	95,321,000	95,041,000	96,396,000
March 1	89,857,000	87,676,000	93,384,000
April 1	81,026,000	81,826,000	86,897,009
May 1	58,295,000	65,382,000	77,814,000
June 1		51,781,000	64,483,000
July 1		42,545,000	64,426,000
August 1		44,859,000	66,168,000
September 1		43,614,000	73,723,000
October 1		60,025,000	86,279,006
November 1		71,878,000	92,221,000
December 1		93,009,000	96,648,000

United States supplies, it will be seen, fell off 22,700,000 bushels in April, as against only 16,400,000 bushels a year ago, while since the first of the present year the decrease has been 43,801,000 bushels, against 31,215,000 bushels a year ago and 21,473,000 bushels in 1900.

The position of United States and Canadian stocks on May 1 for a period of years past is shown in the following table:

May 1—	East of Rockies.	Pacific coast.	Total United States and Canada.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
1902.....	54,610,000	3,685,000	58,295,000
1901.....	60,298,000	5,084,000	65,382,000
1900.....	70,764,000	7,050,000	77,814,000
1899.....	47,258,000	4,455,000	51,713,000
1898.....	31,039,000	3,051,000	34,090,000
1897.....	49,684,000	1,614,000	51,298,000
1896.....	80,390,000	3,182,000	83,572,000
1895.....	80,454,000	10,150,000	90,604,000
1894.....	82,085,000	9,378,000	91,463,000
1893.....	95,710,000	3,537,000	99,247,000
1892.....	49,382,000	2,488,000	51,870,000
1891.....	33,662,000	4,211,000	37,873,000
1890.....	33,327,000	3,828,000	37,155,000

The European supplies on the 1st day of May, compared with preceding months and years, are as follows:

Month.	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
January	78,500,000	89,800,000	79,200,000	71,600,000	61,900,000	68,200,000	71,400,000	70,000,000
February	84,100,000	73,800,000	77,500,000	71,300,000	61,700,000	66,100,000	72,700,000	73,100,000
March	83,200,000	73,300,000	70,200,000	69,000,000	68,200,000	66,300,000	74,800,000	72,400,000
April	79,700,000	69,000,000	64,700,000	69,900,000	67,700,000	74,700,000	78,200,000	72,000,000
May	81,500,000	63,100,000	55,900,000	61,500,000	65,500,000	70,200,000	78,100,000	68,100,000
June	85,500,000	62,000,000	55,500,000	67,200,000	70,500,000	68,100,000	76,300,000
July	88,400,000	61,400,000	50,300,000	59,300,000	69,400,000	64,400,000	74,100,000
August	86,800,000	48,000,000	38,000,000	44,800,000	63,500,000	61,900,000	70,100,000
September	78,900,000	46,200,000	43,100,000	37,000,000	63,600,000	62,200,000	74,800,000
October	89,000,000	58,500,000	67,300,000	39,700,000	66,000,000	67,900,000	75,200,000
November	93,200,000	78,800,000	61,600,000	48,900,000	71,600,000	74,400,000	67,500,000
December	89,400,000	89,200,000	70,500,000	54,400,000	71,100,000	72,400,000	74,400,000

The combined American and European supplies compare as follows:

	1902.	1901.	1900.	1899.	1898.	1897.	1896.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
January 1	165,000,000	169,000,000	167,000,000	117,000,000	132,000,000	156,000,000	194,000,000
February 1	168,000,000	167,000,000	162,000,000	118,000,000	127,000,000	148,000,000	177,000,000
March 1	162,000,000	162,000,000	159,000,000	124,000,000	118,000,000	133,000,000	172,000,000
April 1	153,000,000	160,000,000	161,000,000	123,000,000	114,000,000	122,000,000	163,000,000
May 1	126,000,000	143,000,000	148,000,000	117,000,000	95,000,000	107,000,000	146,000,000
June 1	128,000,000	132,000,000	116,000,000	99,000,000	94,000,000	133,000,000
July 1	116,000,000	128,000,000	119,000,000	80,000,000	78,000,000	124,000,000
August 1	115,000,000	128,000,000	116,000,000	58,000,000	64,000,000	108,000,000
September 1	118,000,000	135,000,000	117,000,000	53,000,000	68,000,000	107,000,000
October 1	135,000,000	154,000,000	134,000,000	67,000,000	95,000,000	127,000,000
November 1	139,000,000	166,000,000	159,000,000	88,000,000	111,000,000	162,000,000
December 1	167,000,000	170,000,000	166,000,000	106,000,000	127,000,000	172,000,000

This combined supply, it will be seen, is 17,000,000 bushels smaller than a year ago, 22,000,000 bushels smaller than in 1900, but 9,000,000 bushels larger than in 1899 and 31,000,000 bushels larger than in 1898.

URUGUAY.

TRADE-MARKS AND PATENTS OF INVENTION.

The President, in his message to Congress of February 15, 1902, makes the following remarks concerning the patent laws of the Republic:

“The revenue of 1900 amounted to \$7,835 derived from the granting of 86 trade-marks, 12 patents, and 17 transfers.

“The revenue of 1901, which amounted to \$8,200, shows an excess of \$365 over that of the previous year, derived from 101 trade-marks, 13 patents, and 18 transfers.

“As will be seen, this increase is not important. Until the present law is modified and the rate of these taxes is reduced, there will always be hesitation on the part of trade and of the industries, especially with respect to persons of limited capital, in designing and registering trade-marks in their respective lines.

“It is now two years since a special committee appointed by the Government began studying a plan for the modification of the law at present in force, in which it is proposed, among other things, to take the following important questions into consideration, namely, the granting of patents in order to stimulate the efforts of the smaller manufacturers and merchants; the adoption of a provision whereby the registration of foreign trade-marks is rendered obligatory within a reasonable time, and the adoption of more summary proceedings in order to prevent counterfeiters or imitators from taking advantage of the slow course of ordinary justice, which, under the present mode of procedure, does not sufficiently suppress skillful counterfeiting.

“It is earnestly to be hoped that the committee should not delay its work, since it is urgently desired to put into practice said modifications, as well as others of a similar nature which are of great public utility.

“The erroneous interpretation of the law of 1877, which is often made by solicitors or agents, concerning the registration of foreign trade-marks, has given rise to more than one decree of the Executive Power intended, like that of June 14, 1901, to secure a strict construction of the law and a clear application of its provisions for the purpose of protecting rights legitimately acquired, and which must not be violated by reason of machinations or schemes put into practice by those who invent foreign trade-marks at will or fraudulently enjoy those belonging to others.

“According to the above decree, which it is to be regretted is not more widely known, it is provided, in a broad sense, that a foreign trade-mark can only be registered in this country as such by present-

ing the proper certificate of having been registered in the country of its origin.

"In fact, the law of 1877 classifies trade-marks as domestic and foreign. In order to determine the former the occupation of the applicant suffices, inasmuch as the registration of a trade-mark is a commercial act that devolves solely upon persons recognized as merchants; but, in order to prove the class of the latter, as these (the foreign trade-marks) are regarded as existing in the country of their origin, and it is with this understanding that they are brought here to be registered, the necessity of proving their legal existence by means of the only document that can constitute a satisfactory proof of that fact arises, and said proof is none other than the certificate of inscription issued by the proper department of the country in which it originates.

"Any other construction of the law would only serve to protect the commission of fraud, which, in the present case, consists in the creation of foreign trade-marks *ad libitum*, which many unscrupulous persons would devise for the purpose of speculation.

"The requisite demanded necessarily originates in the law itself, and will serve to prevent premeditated plans, such as those already known to the Executive Power, based on collusion and the unlawful act condemned by law, and the practice of any person appropriating to himself a title belonging to another with possible injury to third parties.

"There are other important provisions which complete the work of the foregoing—that is to say, those that have introduced the proper order and method concerning the manner of proving the ownership claimed by attorneys of the alleged proprietors of foreign trade-marks and patents. In order to secure a proper observance of the law and to act in good faith, it has been decided several times that the powers of attorney should be presented in due form with all the formalities usually required in order to be filed at the office of the general registration of powers of attorney."

After the publication of President CUESTAS's message an interesting correspondence took place between the President and the Attorney-General of the Republic concerning patents of invention which it is desired to register as trade-marks, a translation of which is as follows:

"OFFICE OF THE ATTORNEY-GENERAL,
"Montevideo, February 3, 1902.

"The law of March 1, 1877, on permitting that parcels or packages may, among other things, be registered as trade-marks, undoubtedly intended that said parcels or packages should be of such a nature that their origin or form would serve as a distinguishing mark for the articles contained therein, since, otherwise, they would not properly con-

stitute a special design, and would not therefore serve the purpose for which they were intended. Nevertheless, nothing was provided respecting those parcels or packages in which the novelty consists not only of the circumstances indicated, but also, as in the present instance, in the application of ingenious designs whose classification seems to fall more properly within the sphere of industrial privileges.

"This Department is of the opinion that the registration of parcels as trade-marks, the distinguishing characteristics of which consist solely in such new application of useful devices, should not be granted, for the simple reason that the registration implies a guaranty of the absolute ownership of the property by the proprietor—that is to say, the latter by the mere act of the registration of such a package would actually enjoy the benefits of a real trade-mark, inasmuch as no one could prepare and sell packages of the same class without being subject to the penalties prescribed by law. In order to obtain this broad right, our laws prescribe something more than the simple formalities of registration—they demand a privilege obtained in due form after taking into consideration all the guaranties that may be required. Otherwise, the provisions of the law would be easily evaded, since the same results would be obtained by soliciting the registration of trade-marks in packages or parcels, although as a matter of fact these might, by their nature, be real inventions in the broadest sense of the term.

"Consequently, as the Chamber of Commerce observes, when the trade-mark, the registration of which is sought, consists of a parce composed of a series of substances of common commercial use, and which can not be considered as the exclusive property of any one person, this Department is of the opinion that Your Excellency should not entertain the acceptance of an application unless the applicant had previously obtained the proper privilege as to the feature that distinguishes it, and that, as has already been stated, can only be guarantied in that form.

"However, Your Excellency will decide as may be deemed most proper.

JOSÉ M. REYES."

"DEPARTMENT OF PUBLIC WORKS,
"Montevideo, February 28, 1902.

"In view of the opinion of the Attorney-General, let the interpretation rendered by him be enforced, and let the Office of Trade-Marks and Patents be advised in order that the same may be duly observed.

"CUESTAS.

"Alfonso Pacheco."

SOURCES OF REVENUE, 1901.

Accompanying the message of the President of Uruguay as addressed to the National Congress on February 18, 1902, was a table setting forth the sources of revenue for the civil year ending November 30, 1901. For the purposes of comparison, both the estimated revenues and the collections actually made during the period named are given, as follows:

Sources.	Estimated values.	Collections.
Customs duties	\$10,200,000.00	\$9,639,653.12
Taxes on realty	1,850,000.00	1,820,192.36
Trade and professional licenses	940,000.00	945,890.27
Additional licenses, 2½ per cent	258,866.00	86.00
Bank of the Republic, profits	270,000.00	203,764.43
Taxes on products of national manufacture	530,000.00	774,248.29
Internal-revenue taxes on tobacco	420,000.00	422,710.34
Department of Public Instruction (including taxes on inheritances and legacies)	500,000.00	569,793.16
Stamped paper	370,000.00	355,319.17
Posts and telegraphs	340,000.00	387,719.61
Revenue stamps	200,000.00	222,411.33
Tax on inheritances previous to the law of 1893, of signatures, etc.	90,000.00	53,172.57
Patents and trade-marks	10,000.00	6,343.36
National Board of Health	6,287.95	6,287.95
Sanitary licenses	10,512.05	10,512.05
Light-houses	16,900.00	16,900.00
Consular fees	11,398.86	11,398.86
Civil and military pawnshops	50,000.00	44,321.02
Marks and brands for cattle	10,000.00	5,604.17
Court of Admiralty	360.00	521.00
Law of Oct. 18, 1898, income tax of 5 per cent	40,000.00	46,433.86
Total	16,124,324.86	15,543,282.92

GOLD MINING IN THE REPUBLIC.

The Department of Interior of Uruguay has furnished the United States Consulate at Montevideo with statistics regarding gold mining in the Republic for the years 1899, 1900, and 1901. From his report forwarded to the Department of State at Washington the following data is obtained:

The mines in Rivera produced 5,119 tons in 1899, yielding in gold 61,336 kilograms (139.2 pounds), the total value being \$7,500.26. In 1900, 7,345 tons of mineral quartz were worked, producing 71,234 kilograms (157.04 pounds) of gold. In 1901, 1,183 tons were worked, with a yield of 71,946 kilograms (158.6 pounds) gold. The cyanide process is now in use and better results are obtained than formerly. The mines are all small—the workings being mostly on the surface—and assays made from twelve workings range from 6.75 grams (104.15 grains) to 30.79 grams (475 grains) per ton. During 1901, 25 new applications for mining privileges were filed. It is found that the work is greatly retarded by a deficiency in the water supply. A percentage on all the gold produced is the property of the Government. In the development of this industry French appliances are used exclusively.

PUBLIC DEBT STATEMENT FOR 1901.

The total of the public debt of the Republic of Uruguay on December 31, 1901, was \$124,803,287, as against \$125,506,953 on December 31, 1900. These figures indicate a decrease for the year of \$703,666. The annual service of the public debt in 1901 was as follows: Interest, \$4,911,271; amortizations, \$1,184,331; railway guarantees, \$791,848; commissions, \$14,605; other expenses, \$502; total, \$6,902,557. From this total the profits on exchange are subtracted, leaving a net total of \$6,900,586, or an amount which is \$15,778 less than that representing the service of 1900. There was a decrease for the year of about \$45,000 in the interest paid, an increase of about \$46,000 in the amortization account, a decrease of \$866 in the railway guarantees, and an increase of \$16,500 in the exchange account.

The detailed statement of the debt as it appeared on December 31, 1901, is as follows:

Internal guarantee debt.....	\$3, 519, 000
Unified interior debt	5, 146, 950
Liquidation debt (including \$226,275 not emitted).....	763, 332
Treasury certificates	4, 756, 000
Extraordinary loan:	
First series.....	3, 306, 800
Second series (including \$384,469 not emitted)	2, 384, 100
Third series.....	1, 328, 400
Issue of 1901	988, 800
Foreign consolidated debt.....	92, 286, 280
Uruguayan 5 per cent loan of 1896	6, 909, 000
International Italian debt.....	4, 000
French debt	134, 725
Spanish debt.....	128, 400
Brazilian loan.....	3, 147, 500
Total	124, 803, 287

MISCELLANEOUS NOTES.

Uruguayan cotton has received a very favorable opinion from the English experts to whom samples have been submitted for examination. Cotton with seed was judged as of very little commercial value on account of the difficulty of separation, but a second sample clean from seed was estimated as worth about 10 cents per pound at the current market rate. The seed, free from thread, was valued at about \$25 a ton, the high price being obtainable on account of the scarcity of the seed.

The "South American Journal" of March 22, 1902, states that a new sugar factory, which is expected to supply the Republic with this article, is shortly to be put in operation. The plant is valued at \$300,000, and has under culture 2,500 hectares (6,177.5 acres) in beet root.

The inland revenue tax on matches has produced the following sums during the years named: 1896, \$162,600; 1897, \$159,800; 1898, \$179,900; 1899, \$201,300; 1900, \$258,000; 1901, \$130,342.

VENEZUELA.

DUTIES ON PAPER.

Regarding Venezuelan duties on paper, United States Consul PLUMACHER sends from Maracaibo, under date of March 15, 1902, translations of recent Executive Decrees, the first providing that white silk paper imported in sheets of the dimensions of 49 by 36 centimeters (14.17 by 19.29 inches)—used for the manufacture of copy books—shall be placed in class 3 of the tariff. This class of merchandise pays an import duty of 0.25 *bolivar* per kilogram (4.8 cents per 2.2 pounds). The other decree provides that the paper comprised in class 3 of the tariff, “not specified,” when introduced through the custom-houses and having some name or heading printed or lithographed, even if for private use, shall be included in class 5 of the tariff, in the same manner as office supplies. The fifth class is liable to a duty of 1.25 *bolivars* per kilogram (24 cents per 2.2 pounds).

Mr. PLUMACHER adds:

“It should be kept in mind that sample boxes (*muestras sin valor*) to a gross weight of 25 kilograms (55 pounds) will always pass the custom-houses without paying duty. This ought to be of interest to manufacturers of patent medicines and drugs, who send them for distribution among physicians and druggists. Up to the present most of the patent medicines are of French origin.”

RECEIPTS AT CARÚPANO, LAST HALF OF 1901.

The receipts of the custom-house at Carúpano, according to statistics published in “El Tiempo” of Caracas, for the six months from July to December, 1901, inclusive, amounted to 535,445.24 *bolivars* (\$103,340.93), collected from the following sources:

	Bolivars.
Imports	344,562.71
Parcels post.....	1,715.05
Fines.....	1,592.10
Auction sales.....	2,349.60
Interest.....	127.04
Stamped paper.....	2,470.05
Tax on mines	3,117.74
	<hr/> 355,934.29
Merchandise for the Azufrales Mining Company and the municipal council.	172,007.60
	<hr/> 527,941.89
Duties on exports	7,503.35
	<hr/> 535,445.24

TAX ON CACAO, FLOUR, AND ALCOHOL IN THE STATE OF SUCRE.

“El Tiempo,” of Caracas, states that the State of Sucre has imposed, commencing with March 23, 1902, the following taxes on cacao, flour, and alcohol:

	Bolivars.
On every 50 kilos of cacao shipped abroad through the ports of the States..	2=\$0.386
On every 50 kilos of flour imported from the United States or Europe....	3= .579
On every 300 pounds of cane alcohol (80 bottles) produced by the distilleries of the State, or that may be offered for sale.....	5= .965

THE WORLD'S FLAX CROP.

According to the Department of Agriculture of the United States the flaxseed crop of the world for 1900, the latest year for which comprehensive figures are available, amounted to 64,466,500 bushels, against 61,726,600 bushels in 1899 and 72,938,500 bushels in 1898. Upward of 95 per cent of the 1900 crop was produced in four countries, namely, the United States, Russia, India, and the Argentine Republic, less than 5 per cent of the total crop being produced in all the other countries of the world combined. In 1900 Russia produced 32.06 per cent of the world's crop; the United States, 31.02 per cent; India, 18.61 per cent; the Argentine Republic, 13.75 per cent; and all the other countries combined, 4.56 per cent.

The world's commercial crop of flax fiber is practically all produced in Europe, none of the great flaxseed-producing countries outside of Europe being engaged in this phase of the industry. The flax-fiber crop of the world in 1900 amounted to 1,312,709,000 pounds, against 1,139,077,000 pounds in 1899 and 1,780,693,000 pounds in 1898. Upward of 77 per cent of the total in 1900 was the product of Russia, the remaining 23 per cent being the combined production of the rest of Europe.

The prices made upon flaxseed in the United States in the crop year 1900-1901 were the highest in twenty years, the highest Chicago quotation having been in July, 1901, when the price of seed reached \$1.90 per bushel.

The exports of flaxseed in the fiscal year ended June 30, 1901, from the United States were 2,755,683 bushels, valued at \$4,319,102; imports during the same year were 1,631,726 bushels, valued at \$2,098,207, leaving an excess of exports over imports of 1,123,957 bushels.

Under average conditions the quantity of oil that may be manufactured from a crop of seed like that of 1900 (20,000,000 bushels) is about 50,000,000 gallons; the quantity of oil cake or oil-cake meal from such a crop would be about 760,000,000 pounds. As is well known, the linseed oil manufactured in the United States is practically

all for home consumption, the average annual exports not exceeding 100,000 gallons. The greater part of the oil cake and of the oil-cake meal, on the other hand, is exported, the exports of this product in the fiscal year ended June 30, 1901, having been 455,154,866 pounds, which may be accepted as approximately representing the exports of the oil cake and meal made out of the 1900 crop. The principal customers for linseed-oil cake and meal are Germany and the United Kingdom—Germany, in the fiscal year ended June 30, 1900, taking about 33 per cent and the United Kingdom 28 per cent of the total exports of the United States.

It is notable that of the four countries which produce annually 90 to 95 per cent of the flaxseed crop of the world the United States is by far the most important as a manufacturer of oil and oil cake. The great bulk of the flaxseed produced in Russia and India appears upon the markets of the world as raw material, and is converted into manufactured products in the oil mills of Europe. The Argentine Republic usually manufactures from 10 to 15 per cent of her annual crop, chiefly for home consumption, and the surplus is consigned to Europe for manufacture in European mills. The Russian crop of flax fiber, also, which constitutes such a heavy proportion of the entire world's crop, is exported to France, Germany, England, and other European countries to the extent of three-fourths of the entire quantity raised for textile uses.

TRADE OPPORTUNITIES IN LATIN AMERICA.

According to United States Consul RUFFIN, there is a large consumption of Portland cement in Asuncion, Paraguay, as most of the houses are built of brick. One house alone sells about 48,000 barrels per year. Frame houses are not liked in the country, because they afford hiding places for all manner of insects. People build their walls exceedingly thick, on the principle that both heat and cold are thus excluded; they also cover the houses on the outside with cement. The chief brands coming to this market are: Aguila, which comes in barrels of 120 kilograms (264 pounds), and costs \$1.50 and \$1.60 laid down in Buenos Ayres; Cardinal, which comes in barrels of 100 kilograms (220 pounds), and costs \$1.70 gold; Leon, which comes in barrels of 100 kilograms, at \$1.65 gold; Pato, in barrels of 100 kilograms, at \$1.50 to \$1.60. This last class is quite inferior, and does not seem to be popular. It is advisable to send heavy material like this to Buenos Ayres, sending shipping documents to a transshipping company and notifying it by previous letter (in Spanish) of the steamer on which the shipment is made so that the lighters may be ready. These lighters remain in the port of Buenos Ayres perhaps six or eight days await-

ing a steamer for Asuncion. The freight on such a cargo boat is \$2 less than if the goods are shipped on one of the passenger boats. Some of the New York lines have arrangements with the Mihanovich Steamboat Company to transship their cargo on a river steamboat, which is as cheap as obtaining a through bill of lading from New York. The usual term of credit here is six months.

There is an opening for American sugar machinery in Brazil, according to United States Consul-General EUGENE SEEGER, at Rio de Janeiro, who reports to the State Department that a syndicate of Dutch capitalists is organizing large sugar plants in Rio and Sergipe, and the installation of United States machinery for these plants is recommended. "The syndicate," the Consul says, "will adopt it, if they receive favorable offer from American houses. It wants, among other things, electrical sugar machines of every kind, including cane crushers—not cutters—and dynamos and motors, variously described as of 220 kilowatts, 330 effective horsepower, 220 and 440 volts—in short, everything requisite for the installation of large sugar refineries. The same interests are also concerned in sugar refining in Java, and they are desirous of securing the sole agency for United States rails for narrow-gauge roads of from 75 to 100 centimeters (29.5 to 39.37 inches) in width, and for locomotives and other rolling stock, to be used in the transportation of sugar over such roads. United States houses desiring to enter into negotiations for supplying the machinery required should address STORK FRÈRES, Hengelo, Holland."

Mexican advices state that the Consul of the Republic in Christiania, Norway, has informed the Mexican Secretary of Foreign Relations that a company has been organized in that northern city for the purpose of trading with Mexico, beginning with the shipment of certain Norwegian merchandise calculated to suit the southern market in quality and price. Among the many such articles the Consul mentions codfish, which has always had a very large consumption in Mexico, and at present is imported mostly from Spain. Other articles mentioned are telephone apparatus, wood pulp for paper, shoeing nails, and copper paints for the bottoms of vessels. The company starts with a capital of 40,000 crowns (a little over \$10,000), which, it is said, will be increased as business grows. CHRISTIAN SCHJITJEN, who resided in the city of Mexico for three years as commercial agent in the service of the Norwegian Government, is the manager and Mexican representative of the new enterprise. The demand for United States telephone apparatus for Mexico has been particularly heavy of late.

It is reported from Mexico that a Monterey promoter has interested Pennsylvania capitalists in a proposition to establish a modern shoe factory in the northeastern part of the Republic. The plant, it is said,

will be located either at Linares or Montemorelos. It is further said that \$500,000 will be invested in the enterprise. All the machinery will be imported from the United States and the skilled workmen will also be Americans.

Mexican advices state that a concession has been obtained from the State of Zacatecas by A. H. NORWOOD and JOHN ERIKSON for the construction of metallurgical works and smelters in the district of Sombrerete, at a point between the city of that name and the town of Chalchihuites. The concessionaires own mines in the district, but will reduce the ores of other mines as well as their own. The minimum capital to be invested in the works and mines is \$1,000,000.

G. F. MEEHAN, Vice-President and Manager of the Monterey Iron and Steel Foundry, Monterey, and President of the Coahuila Mining and Smelting Company, Mexico, is now in the United States for the purpose of placing considerable contracts for equipment to be installed in the plants of these concerns. The capacity of the Monterey plant is to be doubled and it is proposed to build gasoline engines there. Fully \$200,000, it is said, will be expended.

In a report to the State Department, United States Consul-General HANNA, at Monterey, says that a concession has been granted for the establishment of a dynamite explosive plant at Monterey convenient to the many mining properties of that district. He is informed that the Société Financière pour l'Industrie de Mexique and the Société Centrale de Dynamite, represented by H. TRON, of Mexico City, are large stockholders in this new organization.

United States Consul-General P. C. HANNA reports to the State Department, from Monterey, that a company, known as the Mexican White Lead Company, was formed a short time since at Gomez Palacio, Coahuila, with a capital of \$100,000. The lead found at that place is said to be pure and of an excellent quality. The duty on white lead is high, says Mr. HANNA, and the company expects to be able to supply the product much more cheaply than it can be imported from the United States.

PEDRO DEL OSPINO, representing a large transportation company of the United States of Colombia, is reported to have placed a contract with the Triumph Electric Company, of Cincinnati, Ohio, for a large number of motors, to be utilized for the electric lighting of steamboats which are to be built in United States for the Magdalena River trade.

Mexican advices state that Monterey business men propose to erect a large department store in that city. The building, it is said, will cost about \$1,000,000 gold. The only important establishment of that description in the Southern Republic is one operated in the City of Mexico. United States material was used largely in its construction, and the store is run largely on United States lines.

The Minister of Finance is reported to have granted the Buenos Ayres and Rosario and Central Argentine Railway the right of way to import, duty free, 21,390 tons of sand and 10,695 tons of Portland cement for use in constructing a grain elevator at Dock No. 2. The building will be constructed of steel and cement, according to the system followed in United States structures.

Congress has definitely voted, and the Argentine Government has promulgated the law authorizing the call for proposals for the building of a special basin for coaling vessels or those loaded with inflammable materials. This work, which will also include the building of warehouses, is valued in the said law at 6,000,000 *pesos*, or 30,000,000 *francs*.

Heavy shipments of machinery intended for the equipment of the large smelting plant about to be constructed at Guaymas, Mexico, are now being made. The smelter will have a daily capacity, it is said, of 1,000 tons of ore and will entail an expenditure of \$600,000.

The municipal council of São Luiz, capital of the State of Maranhão, Brazil, is calling for proposals for the construction of a market and slaughterhouse in that city. The market which it is proposed to build will cover an area of 1,200 square meters and will be divided into 98 compartments.

The Nicaragua Electric Company has been incorporated in the United States, with a capital of \$100,000, by GUSTAV LEHMAN, Sr., WILLIAM ADLER, and T. M. SOLOMON, of Managua. The object of this company is the erection of a light and power plant in the capital city.

According to a decree issued on February 14, 1902, carriages, harness, and accessories have been exempted from customs duty on importation into Paraguay until February 14, 1903.

BOOK NOTES.

Books and pamphlets sent to the International Bureau of American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the Monthly Bulletin.

The Bureau of Statistics of the United States Treasury Department has recently issued a monograph on "Modern Tariff Systems," which is of especial interest at this time in view of the tariff discussions and pending tariff legislation in various countries of the world. The classification of the tariff systems in use throughout the world is given as: (1) The general tariff system; (2) the general and conventional tariff system;

(3) the maximum and minimum tariff system. The system of general tariffs is the simplest of those enumerated and consists in having a single schedule of import duties which is applied to the goods of all countries without distinction. This tariff system is framed with the acknowledged purpose of being the basis for the negotiations of commercial treaties. A conventional schedule is drawn up in these treaties; and, by the action of the most-favored-nation clause, the conventional tariff becomes so extended in application that, as a rule, it is the exception to apply the general tariff. For this reason the general tariff is regarded mainly in the light of a preliminary sketch of the real tariff, and, consequently, the rates in the general tariff are made sufficiently high as to admit of being reduced and concessions demanded in return. The most prominent country using the general and conventional system is Germany. The conventional tariff is made up of the schedules contained in the commercial treaties with Austria, Italy, Belgium, Switzerland, Russia, Roumania, Greece, and Servia. The maximum and minimum tariff system is distinguished from the others, first of all in its form. Instead of having two rates for a few articles it extends this rule to most of the articles on which duties are imposed, and for this reason is frequently called the double tariff system. In the application of these rates, the maximum schedule corresponds to the general schedule and the minimum schedule to the conventional schedule, since the minimum rates are accorded only to countries receiving the most-favored-nation treatment. The countries at present using a multiple, or maximum and minimum system are Spain, France, Russia, Brazil, Greece, and Norway.

An article of more than passing interest is published in the "Journal of Political Economy" for March, 1902 (University of Chicago Press, Chicago), by ROBERT RENÉ KUCZYNSKI, concerning "Wheat Growing in Argentine." The subject-matter is based upon extended and numerous reports collected by Prof. KARL KAERGER in his capacity of agricultural expert of the German Government at the legations of Buenos Ayres and Mexico. The acreage which might be advantageously devoted to wheat culture in the Republic is estimated by the author at 120,000,000 acres. The greatest extent officially reported as under culture was in 1895, when about 5,000,000 acres were productive. Santa Fe, Entre Rios, Buenos Ayres, and Córdoba are the four great wheat-growing provinces, containing 96.80 per cent of the total acreage. The relative fertility of Argentine soils is treated, as also atmospheric conditions, difficulties and advantages encountered, methods of seed-ing, harvesting, and shipping, labor conditions, cost of production, and the relative production of the Argentine and other world wheat crops. The authorities cited include: The Kaerger reports; "*La Producción Agrícola y Ganadera de la República Argentina en el año*

1891," by ALOIS E. FLEISS; "*Boletín de Agricultura y Ganadería del Ministerio de Agricultura*;" "Wheat Growing in the Argentine Republic" by WILLIAM GOODWIN; and other statistical compilations of the United States and the Argentine Republic.

"The Operation of the Modern Grain Elevator," as treated by DAY ALLEN WILLEY, in the "Engineering Magazine" for May, 1902, is valuable as a demonstration of the fact that the evils of overproduction are no longer to be feared, storing facilities having been developed to an unprecedented extent. The immense production of grain in the western sections of the United States has rendered it impossible to sell the crops immediately on harvesting, except at a loss; therefore the "grain elevators," so called, hold the grain at the convenience of the owner. These elevators are divided into two classes, receiving houses and transfer houses. The methods for receiving, storing, and shipping the grain have been carried to the highest state of perfection and speed. So rapidly does one of the elevators transfer its contents that the first carload of wheat may be deposited in the hold of the vessel on the water side of the structure before the last bushel has left the car on the other side. The tendency in modern storage-house construction is to increase capacity. Ten years ago a million-bushel elevator was considered large, but the structures which have recently been erected at railway terminals and at important harbors range from 1,500,000 to 3,000,000 bushels capacity, and some of them have facilities for loading at one time three steamships of 7,000 tons carrying capacity each. Such structures are necessarily erected with special provisions for the enormous pressures to which they will be subjected, steel having been employed in many of the Great Lakes elevators. Electricity is depended upon for power entirely in the modern elevators, the system of individual motors being utilized for greater economy in power distribution. Receiving, cleaning, weighing, storing, and loading operations can be carried on simultaneously without interfering with each other, and during the entire operation the only manual labor required is in adjusting the spouts and starting and stopping the machinery.

"The Coal Resources of the Pacific" are exhaustively discussed by HARRINGTON EMERSON in the "Engineering Magazine" for May, 1902, from the standpoint that the development of the Pacific and the determination of its naval and commercial control must depend largely upon the existence of sufficient and available coal supplies. Coal mines and coal fields occur along the Pacific shores northwest from Chile to Alaska, and thence southwest to Australia and New Zealand. There are now important coal mines at Lota and Coronel in Chile, and the next commercial outcropping of the mineral occurs at Coos Bay,

Oregon. North of Coos Bay are very extensive coal beds of various qualities. They are at present the most important on the Pacific Ocean and are easily mined. This Puget Sound coal basin, exclusive of Vancouver Island, covers an area of 750 square miles, and to the north and west of this section extend seams of varying thickness and commercial value. The greatest and most extensive coal field of Alaska is to the westward of Kenai in latitude $55^{\circ} 30'$ to $56^{\circ} 30'$ and longitude 158° to 161° . The North Pacific coal mines on the American side produced, in 1901, 2,504,190 tons, and in British Columbia about 1,712,715 tons, a total of 4,216,905. The consumption of fuel along the Pacific coast from Mexico and Central America northward, in California, the Hawaiian Islands, in Alaska, and locally in Oregon, Washington, and British Columbia, including steamers and railroads, is estimated at 4,667,000 tons, so the conclusion is drawn by Mr. EMERSON, inferentially, that the Pacific coast need not obtain its coal supplies from other sections.

The industrial position of the United States among the countries of the world is the subject of a paper published in the "Forum" for May, 1902, by Mr. HENRY GANNETT, of the United States Geological Survey. Under the title "Our Industrial Position in the World," the author calls attention to the following facts: The United States has 5 per cent of the world's population and 7 per cent of the land area; there are 400,000,000 acres of land under cultivation within the Republic, or about one-quarter of the cultivated land of the earth; 21 per cent of the total wheat crop of the world is produced in the United States, of which from one-quarter to one-third is for export purposes; the maize output is 76 per cent of the total, and that of oats is 25 per cent, while cotton is supplied to the amount of three-fourths of the entire crop of the world; in wool, the United States expends \$20,000,000 annually, the native production being only about 11 per cent of the world's crop; the potato crop is less than one-tenth, and the sugar production less than 8 per cent of the total; tobacco is represented by 37 per cent of the total; hops, by 18 per cent; wine, 1 per cent; spirits, 10 per cent; beer, 19 per cent; one-fourth of the horses, and nearly one-fourth of the cattle, 7 per cent of the sheep, 40 per cent of the hogs, and about 25 per cent of the dairy products of the world originate in the United States. Of the entire agricultural output of the world, the United States gives 23 per cent; Russia, 15 per cent; Germany and France each 12 per cent, while in manufactured goods, 34 per cent is of United States origin. The relative rank of the leading producing countries in iron ore, coal, and petroleum is also considered, and railway and shipping statistics are summed up, showing 40 per cent of the world's mileage in the former case and 20 per cent of the total tonnage of the world in the latter as among the assets of the United States.

"Landwirtschaft und Kolonization im Spanischen Amerika" (Agriculture and Colonization in Spanish America), by Prof. Dr. KARL KRAEGER (in two volumes), has been received by the Bureau of the American Republics. Dr. KRAEGER, who is an expert agriculturist attached to the German Legation at Buenos Ayres, has collected in two volumes a vast amount of information and statistics, embracing the official reports sent from the Legation at Buenos Ayres and Mexico to the German Foreign Office, during the years 1895-1900. They are the result of personal investigations and are published by permission of the German Government. The author states that while he has endeavored to touch upon politico-economic as well as agricultural conditions, yet the major part of the work is taken up with plain facts. A detailed index makes the work one of value as a book of speedy reference. The first volume is devoted almost entirely to the Argentine Republic, treating the agricultural conditions in the Provinces of Santa Fé, Córdoba, Entre Rios, and Buenos Ayres, and especially wheat, sugar, wine culture, and stock raising. Chapters in volume 1 are devoted to Uruguay, Paraguay, the Territory of Pampa Central and Patagonia, and also to quebracho wood, importation of maté into Germany, and census statistics. Volume 2 contains chapters on Chile, Bolivia, Peru, Ecuador, and Mexico. A graphic chart showing the variation in the prices of wheat and flour forms part of the first volume of the work.

The Mexican Sugar Report, 1900-1, published by "El Hacendado Mexicano," and recently received by the Library of the Bureau of the American Republics, is a most valuable reference book concerning the sugar industry of Mexico, Central America, Porto Rico, and Cuba. A complete list of the sugar planters of the countries in reference, their post-office addresses, names of plantation, amount of product, etc., and other valuable data are included in the publication. Among the various matters treated, the sugar factories of the Republic receive special attention, it being stated that the large central factory will produce next year about 20,000,000 pounds of sugar, extensive machinery having been added, so that at present the plant ranks as the largest in the Republic. According to present indications, it is estimated that the year 1901-2 will show a sugar output far in excess of any previous season.

The "Crop Reporter," published by authority of the Secretary of Agriculture of the United States, in its April number contains a very interesting article concerning the "Production and Exports of Argentina," with special reference to the cereal crops of the country. The development of cold storage has rendered the meats of the Republic as marketable as its wool and hides, whereas the steady inpouring of immigration, principally of an agricultural class, has made its wheat, maize, flaxseed, hay, and other agricultural products factors in the

world's markets. The statistics presented in the article are compiled from official and other reliable sources, and embrace the following classifications: Areas under crops in 1890 and 1900; production and distribution of wheat; production, consumption, seed, and surplus; wheat crops of 1899-1902; the maize crop; crops of chief agricultural provinces; agricultural and pastoral exports; exports of wheat, maize, flaxseed, and exports of hay and certain pastoral products since 1891.

The United States Department of Agriculture has issued as No. 24 of its publications of the Section of Foreign Markets a bulletin of the agricultural imports and exports of the United States for the five years 1897-1901. From this it is seen that in an annual average of imports, for the five years in reference, of \$750,208,381, agricultural imports figure for \$376,549,697, or 50.2 per cent. The annual average of exports for the five years is given as \$1,255,491,423, in which exports of domestic agricultural products are represented by \$827,566,147, or 65.9 per cent of the total. The bulletin includes a detailed statement of the agricultural imports and exports of the United States during each of the five years 1897-1901, embracing all commodities that seem properly to belong to the agricultural category.

The Library of the International Bureau of the American Republics has received a copy of the report transmitted to the Minister of Foreign Relations of Guatemala by Señor Don ANTONIO LAZO ARRIAGA, Envoy Extraordinary and Minister Plenipotentiary of Guatemala in the United States and Mexico, in his capacity as Delegate to the Second International Conference of American States held in Mexico from October 22, 1901, to January 31, 1902. Under the title "*Guatemala en la Segunda Conferencia Internacional Americana*" (Guatemala in the Second International Conference of American States), Señor LAZO deals not only with the treaties, conventions, resolutions, and recommendations of the Conference in question, but also considers the historical antecedents of the congress which, in his opinion, is destined to have important bearing upon the pacific development of the republics of the Western Hemisphere.

Two volumes entitled "*Histoire de la Découverte et de la Conquête du Pérou*" (History of the Discovery and Conquest of Peru) are recent additions to the Americana of the Library of the International Bureau of the American Republics. This history of the discovery and conquest of the Peruvian Republic is a French translation from the Spanish of AUGUSTIN DE ZARATE, and was published in 1774. Not less interesting than the subject-matter are the quaint woodcuts and maps with which the books are embellished, while the curious letterpress and phraseology will delight the student. In the translator's preface the discov-

ery of America is classed among such other questionable benefits to mankind as the discovery of gunpowder and of printing, but it is admitted that the conquest of Peru had an important bearing on the personal affairs and expenditures of the courts of Europe.

The International Bureau of the American Republics has received the first installment of the revised edition of "Stielers Atlas," published by JUSTUS PERTHES, Gotha, Germany, consisting of four parts, as follows: Part I, No. 15, The Eastern Alps, scale 1:925,000, by C. SCHERRER and H. HABENICHT; No. 64, China, scale 1:750,000, by C. BARUCH. Part II, No. 57, Western Siberia, scale 1:750,000, by H. HABENICHT; No. 92, Mexico, scale 1:750,000, by H. HABENICHT. Part III, No. 14, Switzerland, scale 1:925,000, by C. SCHERRER and H. HABENICHT; No. 40, The Netherlands, Belgium, and Luxemburg, scale 1:1,110,000, by C. SCHERRER. Part IV, No. 81, South Sea Islands, by Dr. H. HAACK; No. 93, The West Indies, scale 1:750,000, by H. HABENICHT.

The principal article in "Petermann's Mitteilungen," No. 3, is a review by Prof. W. SIEVERS of the published documents relating to the Franco-Brazilian boundary question. These are contained in 14 volumes, of which 10 are contributed by Brazil and 3 by France, and in 5 atlases of 250 maps, besides those in the text. He regards the Brazilian presentment as far superior to that of France, which has "little substance, consists largely of hypothesis, is not convincing, and is often very superficial." The volume containing the arbitrators' summing up of the evidence, the work mainly of an unnamed Swiss engineer, he characterizes as "a scientific work of the first order," which has enriched our general cartographical knowledge.

"Histoire du Pérou," a French translation by M. H. TERNAUX COMPANS of the work of EL PADRE ANELLO OLIVA, is an accession to the Library of the International Bureau of the American Republics. It was published in Paris in 1857. This little volume gives only the introduction to the voluminous work of OLIVA, who was a member of the famous "Company of Jesus." The date of the original work was 1631. The translation touches briefly on the records of the Incas and their wonderful civilization, and gives an account of the various Spanish conquests, with their results, in Peru.

The "Manufacturers' Record" for April 24, 1902, contains an interesting résumé of industrial, commercial, and financial conditions in Mexico, under the title "A Few Facts About Mexico." The development of business interests and the opportunities for investment of capital are specially treated.

ADDITIONS TO THE LIBRARY DURING APRIL, 1901.

REFERENCE BOOKS.

VOL. XII.

MAYO, 1902.

No. 5.

FERROCARRIL INTERCONTINENTAL.

SEGUNDA CONFERENCIA PAN-AMERICANA—DICTAMEN DE LA COMISIÓN DE FERROCARRIL PAN-AMERICANO.

La Comisión de Ferrocarril Pan-Americano, de la Segunda Conferencia Internacional de los Estados Americanos, se permite formular el siguiente informe:

En la Primera Conferencia celebrada en Wáshington durante el invierno de 1889-90, la Comisión de Comunicaciones por ferrocarril, en la que figuraban Delegados que representaban á diez y ocho Gobiernos de América, al presentar su informe, que fué unánimemente aprobado y adoptado por la Conferencia, manifestó las siguientes opiniones:

“Primero. Que un ferrocarril que ligue á todas las naciones representadas en esta Conferencia, ó á la mayoría de ellas, contribuirá grandemente al desarrollo de relaciones cordiales entre dichas naciones y al incremento de sus intereses materiales.

“Segundo. Que el mejor método para facilitar su ejecución es el nombramiento de una Comisión Internacional de Ingenieros, la cual se encargará de establecer los trazos posibles, de determinar su verdadera longitud, de calcular el costo de cada uno de ellos, y de comparar sus ventajas respectivas.

“Tercero. Que dicha Comisión deberá estar constituida por un cuerpo de ingenieros de los que cada nación nombrará tres, y que estarán facultados para distribuirse en subcomisiones y para nombrar todos los demás ingenieros y empleados que se consideren necesarios para ejecutar con mayor rapidez el trabajo.

“Cuarto. Que cada uno de los Gobiernos que acepten podrá nombrar á sus propias expensas, comisionados ó ingenieros que sirvan como auxiliares de las subcomisiones que tengan á su cargo los trabajos topográficos de cada una de las secciones de la línea.

“Quinto. Que el ferrocarril, en cuanto lo permitan los intereses comunes, deberá ligar á las principales ciudades situadas en las cercanías de su trayecto.

“Sexto. Qui si no puede alterarse sin grandes inconvenientes la dirección general de la línea, con los fines mencionados en el artículo anterior, deberán trazarse ramales que tengan por objeto ligar á dichas ciudades con la línea troncal.

“Séptimo. Que con el fin de reducir el costo de la empresa, podrían utilizarse los ferrocarriles existentes en cuanto esto sea practicable y compatible con el trayecto y demás condiciones del ferrocarril continental.

“Octavo. Que en caso de que los resultados de los trabajos topográficos demuestren la practicabilidad y conveniencia del ferrocarril, se soliciten proposiciones para la construcción, ya sea de toda la línea ó ya de sus secciones.

“Noveno. Que la construcción, administración y trabajos de la línea deberán hacerse á expensas de los concesionarios, ó de las personas con quienes éstos á su vez, contraten las obras, ó á quienes transfieran sus derechos con todas las formalidades debidas y previo consentimiento de los gobiernos respectivos.

“Décimo. Que todos los materiales necesarios para la construcción y los trabajos del ferrocarril deberán quedar exentos de derechos de importación, con sujeción á los reglamentos que se juzguen necesarios para evitar el abuso de este privilegio.

“Undécimo. Que todas las propiedades muebles y raices del ferrocarril, empleadas en su construcción y en sus trabajos, deberán quedar exentas de todo impuesto, ya sea nacional, provincial, de Estado ó municipal.

“Duodécimo. Que la ejecución de una obra de tal magnitud merece ser alentada por medio de subsidios, concesiones de terrenos, ó garantías de un determinado minimum de interés.

“Décimotercero. Que los sueldos de la Comisión, así como los gastos que se eroguen en los trabajos topográficos preliminares y definitivos, deberán sufragarse por todas las naciones que acepten, proporcionalmente á su población, conforme al último censo oficial, ó, á falta de censo, según convenio celebrado entre sus respectivos Gobiernos.

“Décimocuarto. Que el ferrocarril deberá declararse perpetuamente neutral, á fin de asegurar la libertad del tráfico.

“Décimoquinto. Que la aprobación de los trazos, los términos en que deban hacerse las propuestas, la protección á los concesionarios, la inspección de los trabajos y las leyes que los afecten, la neutralidad de

la vía y el libre paso de las mercancías de tránsito (en el caso previsto por el artículo 8º) deberá ser objeto de convenios especiales, entre todas las naciones interesadas.

“Décimosexto. Que tan pronto como el Gobierno de los Estados Unidos reciba la noticia de que estas recomendaciones han sido aceptadas por los demás Gobiernos, los invite para que nombren la Comisión de ingenieros, á que se refiere el artículo 2º, á fin de que dicha Comisión pueda reunirse en la ciudad de Wáshington, á la mayor brevedad posible.”

Mr. BLAINE, que entonces era Secretario de Estado de los Estados Unidos, al presentar el anterior Informe de la Comisión de ferrocarril al Presidente HARRISON, dijo lo siguiente:

“Ninguna de las recomendaciones formuladas por la Conferencia Internacional Americana es tan importante como ésta, y la recomiendo encarecidamente á la atención de usted, con absoluta confianza en que el Congreso dará muy pronto los pasos necesarios á fin de poner á este Gobierno en aptitud de participar debidamente en la promoción de la empresa. Por ningún otro camino pueden el Gobierno y el pueblo de los Estados Unidos contribuir en tan alto grado al desarrollo y á la prosperidad de las Repúblicas hermanas y al mismo tiempo á la expansión de nuestro comercio.”

El Presidente de los Estados Unidos, al transmitir el Informe al Congreso, expresó así su opinión sobre la importancia del proyecto:

“Al Senado y á la Cámara de Representantes:

“Acompaño un Informe de la Conferencia Internacional Americana que hace poco celebró sus sesiones en esta Capital, en el cual se recomienda el trazo de una línea de ferrocarril intercontinental, que ligue los sistemas de la América del Norte con los del Continente meridional, y que ese trazo se haga bajo la dirección de una Junta de Comisionados que representen á las diferentes Repúblicas americanas.

“La atención pública se ha fijado de preferencia en lo relativo al mejoramiento de las comunicaciones por mar entre los Estados Unidos y Centro y Sud-América. La creación de nuevas y mejores líneas de vapores, indudablemente proporciona el medio más fácil para desarrollar un creciente comercio con las naciones latino-americanas. Pero es preciso no olvidar la posibilidad de viajar por tierra desde Wáshington hasta la capital más meridional de Sud-América, y que el establecimiento de comunicaciones por ferrocarril con aquellos Estados amigos, suministrará, tanto á ellos como á nosotros, gran número de facilidades de valor especial, para el comercio y cambios mercantiles. La obra que se proyecta es vasta pero perfectamente practicable. Será de interés para todos y acaso sorprendente para muchos de nosotros saber cuánto se ha hecho ya en México y en Sud-América, en lo relativo á la construcción de ferrocarriles que pueden utilizarse como parte de una

línea intercontinental. No vacilo en recomendar la conveniencia de que el Congreso autorice el gasto de las pequeñas sumas necesarias para los trabajos topográficos aconsejados por la Conferencia, y al mismo tiempo el nombramiento de los Comisionados y auxiliares que han de dirigir y efectuar los trabajos topográficos preliminares que se necesiten.

“BENJAMÍN HARRISON.

MANSIÓN EJECUTIVA, 19 de mayo de 1890.”

Fué concedida la autorización para el pago de la cuota correspondiente á los Estados Unidos en los trabajos topográficos preliminares, y se recibieron también las de algunos otros de los países interesados. Poco después comenzó sus labores la Comisión del Ferrocarril Intercontinental, con la representación de once de los Gobiernos de América.

Mr. A. J. CASSATT, actual Presidente del Ferrocarril de Pennsylvania, que es uno de los sistemas ferroviarios más grandes y que más éxito han alcanzado en el mundo, fué elegido por unanimidad para que desempeñase el cargo de Presidente de la Comisión, y Mr. H. G. DAVIS, fué á su vez designado para el puesto de Presidente de la Comisión de Hacienda. La Comisión gastó cerca de \$360,000 en trabajos topográficos sobre el terreno, en mapas, impresiones, etc. Se pusieron en movimiento tres cuerpos de ingenieros, y los resultados de sus trabajos, correspondientes á un período de varios años, y que fueron terminados en 1895, demostraron que la distancia aproximada entre Nueva York y Buenos Aires, de acuerdo con sus investigaciones topográficas, y haciendo uso de los caminos existentes, sería de 10,471 millas, de las cuales cerca de la mitad estaban ya terminadas y en explotación. La siguiente carta oficial, escrita en 1896 por el Capitán E. Z. STEEVER, Secretario de la Comisión del Ferrocarril Intercontinental, proporcione los informes más auténticos que pueden obtenerse acerca de los ferrocarriles que podrían usarse como parte de una línea continental y de lo que quedaría aún por construir.

“COMISIÓN DEL FERROCARRIL INTERNACIONAL,

“Washington, D. C., 16 de enero de 1896.

“Al Honorable HENRY G. DAVIS,

“Washington, D. C.

“ESTIMADO SEÑOR: En obsequio de la orden verbal de Ud., que se recibió en esta Oficina el 14 del actual, acompaño un cálculo aproximado de la longitud de la vía que se necesita para un ferrocarril desde Nueva York hasta Buenos Aires, República Argentina, según los diferentes países.

“Actualmente existen comunicaciones por ferrocarril hasta Oaxaca, República Mexicana, y se han hecho trazos y, según los informes de la prensa, se han otorgado concesiones, para ligar á Oaxaca con algún punto de la línea divisoria entre México y Guatemala. Puebla se

halla á 129 millas al sudeste de la ciudad de México por la vía del Ferrocarril Interoceánico, y á 115.6 por la del Ferrocarril Mexicano, siendo el primero de vía angosta y el último de vía ancha. Oaxaca se encuentra á 227.6 millas al sudeste de Puebla, por el Ferrocarril Mexicano del Sur y, por consiguiente, á 356.6 millas de la ciudad de México por una línea y á 343.3 por la otra. Oaxaca es actualmente la ciudad más meridional que está ligada por ferrocarril con la ciudad de México, y se halla separada de la frontera de Guatemala por una distancia que requeriría un ferrocarril de 400 millas de longitud, poco más ó menos.

“Los trabajos topográficos y las exploraciones de la Comisión del Ferrocarril Intercontinental comenzaron en el Noroeste de la frontera de Guatemala, y se extendieron hasta la región occidental de la frontera de Bolivia. La longitud aproximada del ferrocarril que deberá ligar la frontera Sud-oriental de México con la capital de la República Argentina, es la que á continuación se expresa:

	Millas.
Guatemala	230
El Salvador	220
Honduras	70
Nicaragua	224
Costa Rica	363
Colombia	1, 372
El Ecuador	635
El Perú	1, 671
Bolivia	774
La Argentina	1, 143
Total	6, 702

“La distancia de Nueva York á Laredo es de 2,187 millas; la de este último punto á la ciudad de México, de 839 millas; de allí á Oaxaca, 343 millas; hasta la frontera de Guatemala, 400 millas; 3,769 millas como suma total, ascendiendo la distancia completa desde Nueva York hasta Buenos Aires á 10,471 millas.

“De las 6,702 millas anteriores se encuentran en explotación los siguientes trozos:

	Millas.
Guatemala, desde Escuintla hasta Patulul	30
El Salvador, desde Sonsonate hasta Atos	20
Nicaragua, desde Chinandega hasta La Paz	31
Total en Centro América	81
El Perú, desde Sicuani hasta Puno	151
Bolivia, desde Oruro hasta Huanchaco	192
La Argentina, desde Jujuy hasta Buenos Aires	993
Total en Sud América	1, 336

“Un considerable total, para Centro y Sud América, de 1,453 millas, ya construidas y en explotación.

“Deduciendo esas 1,453 millas de las 6,702, resulta que quedan por construirse 5,249 millas de ferrocarril, á fin de que quede terminada una

línea completa desde la frontera meridional de México hasta la Capital de la Argentina. En otros términos, la mitad de la distancia entre la ciudad de Nueva York y Buenos Aires está ya cubierta por ferrocarriles en explotación activa.

“Es de creerse que por medio de trabajos topográficos posteriores, especialmente en el Perú, se acorte la longitud de las líneas que se necesitan, pero hasta la fecha, los datos anteriores son los mejores que se han podido obtener.

“Esperando que estos informes respondan satisfactoriamente á lo que Ud. solicita, quedo de Ud. muy respetuosamente.

“E. Z. STEEVER, *Secretario.*”

El cuadro que á continuación se inserta, muestra un resumen del Informe presentado por los ingenieros de la Comisión del Ferrocarril Intercontinental, acerca del número de millas ya construidas de la línea continental propuesta, entre Nueva York y Buenos Aires, de la situación de las secciones que serán necesarias para formar una línea completa, y del costo que se calcula para cada una de ellas.

Regiones.	Construido y proyectado.		Construido.		Tendrán que construirse.		Costo de los terraplenes, de las obras de albañilería y de los puentes.
	<i>Millas.</i>	<i>Kilómetros.</i>	<i>Millas.</i>	<i>Kilómetros.</i>	<i>Millas.</i>	<i>Kilómetros.</i>

	1,061.66	1,708.56	936.66	1,507.40	125.00	201.16	4,000,000.00
Estados Unidos.....	6,489.76	10,444.17	1,494.63	2,405.36	4,995.13	8,038.81	159,538,271.84
	2,094.00	3,369.93	2,094.00	3,369.93
México.....	8,583.76	13,814.10	3,588.63	5,775.29
	1,644.30	2,646.22	1,183.30	1,904.32	461.00	741.90	14,752,000.00
Total.....	10,228.06	16,460.32	4,771.92	7,679.61	5,456.13	8,780.71	174,290,371.84

Por lo anterior se verá que los ingenieros de la Comisión, en la época en que formularon su Informe, en 1895, pensaban que con \$175,000,000 se construirían los ferrocarriles necesarios para unir las líneas existentes y conseguir de este modo una comunicación completa. Con posterioridad se han construido algunos otros ferrocarriles que podrían utilizarse como parte de un sistema continental, y la Comisión es de parecer que actualmente no tendrían que construirse sino 5,000 millas para establecer comunicación completa entre los sistemas de Norte y Sud América. Calculando el costo á razón de \$40,000 la milla, cálculo que nos parece amplio, se necesitarían \$200,000,000 para esa gran obra.

Los trabajos topográficos efectuados por los ingenieros de la Comisión, demuestran que la construcción de las líneas que hacen falta es practicable y que no habría gran dificultad para realizar tal proyecto, desde el punto de vista económico, si se consideran los resultados que se obtendrían con él.

Los sistemas de ferrocarriles de los Estados Unidos, tales como los de Pennsylvania, New York Central, Atchison, Northern Pacific, Union Pacific, Southern Pacific, Southern y otros, explotan líneas de un número mayor de millas que el que se necesita para realizar el Ferrocarril Intercontinental, y cada uno de esos sistemas tiene bonos y acciones por un valor que excede al calculado para esta empresa. El Gobierno ruso acaba de terminar un extenso ferrocarril que tiende al desarrollo de Siberia, con un costo que supera considerablemente al calculado para el Ferrocarril Intercontinental y con mayores dificultades de construcción.

La República Mexicana suministra un ejemplo reciente de lo que se ha conseguido gracias al incremento de las ventajas que prestan los ferrocarriles.

En el dictamen de la Delegación Mexicana á esta Conferencia, tratando del Ferrocarril Intercontinental, se dice:

“Por lo que toca á México, no ha cesado de hacer esfuerzos y aun sacrificios para construir este sistema ferrocarrilero, extendiéndolo hacia el Sur de manera que pueda entroncar con las líneas que construyan las Repúblicas Centro-Americanas, como entronca ya en varios puntos de su frontera Septentrional con importantes líneas de los Estados Unidos de América. En estos momentos se halla en estudio una línea que deberá entroncar con el Ferrocarril Interoceánico ya construido y en explotación en el Istmo de Tehuantepec, y últimamente se ha otorgado una concesión subvencionada liberalmente para la construcción de un ferrocarril que partiendo del de Tehuantepec, se extenderá hacia la frontera de Guatemala.”

También se dice: “El constante deseo del Gobierno y del pueblo de México ha sido proporcionar todos los medios conducentes al mejoramiento de las comunicaciones interiores, aumentando de esa manera la explotación de sus recursos naturales y el tráfico mercantil con otras naciones.”

Aunque la construcción de la línea continental es sin duda una empresa de gran magnitud, los beneficios que se obtendrán de ella no son tan problemáticos, ni los obstáculos que se tendrán que vencer tan grandes como los que esperaban, ó tenían que combatir los constructores de los ferrocarriles que cruzan los Alleghanies y las Montañas Rocallosas cuando se construyeron estas líneas.

La experiencia ha probado en todas partes del mundo que al establecimiento de comunicaciones ferrocarrileras, ha seguido el desarrollo de las riquezas naturales del país y un sistema que ponga en contacto

á todas las Repúblicas de este hemisferio, contribuirá más que todo otro medio al desarrollo de las Repúblicas del Sud, especialmente en su interior. Ahora sólo es posible poner en los mercados aquellos productos de los puntos que no tocan las líneas férreas, que pueden ser conducidos á lomo de mula á los puertos de mar para su exportación, y los puntos en que tocan los buques se encuentran muy á menudo á centenares de millas de distancia. En lugares situados sobre una línea férrea se pueden hacer embarques de un punto á otro que no disten entre sí sino unas cuantas millas. Grandes áreas de depósitos minerales y ricas tierras pobladas de bosques de madera de construcción ó á propósito para la agricultura, permanecen vírgenes á causa de la falta de medios de transporte. La estadística de la mayor parte de estos países demuestra que hasta ahora solamente se han explotado los territorios próximos al mar. No solamente contribuiría esa línea de ferrocarril al desarrollo de un territorio que ahora es prácticamente inaccesible, aumentando de esa manera la riqueza general de los países que recorra, sino que las mayores ventajas que se obtuvieran, darían por resultado la competencia entre el transporte por ferrocarril y el marítimo en las regiones que ahora dependen enteramente del último. La competencia es la vida del comercio, y aunque se necesitan medios de transporte marítimo más fáciles entre las Repúblicas Americanas, y deberían fomentarse; para su completo desarrollo y progreso son necesarias las comunicaciones, tanto por agua como por ferrocarril.

En caso de guerra entre algunas de las Potencias europeas, el comercio se perjudicaría seriamente por la interrupción de las comunicaciones marítimas; pero el peligro por esta causa sería menor si las Repúblicas Americanas se comunicaran entre sí, por medio de vías férreas.

Un país ó una parte de él en que no haya ferrocarriles, se encuentra atrasado y no puede competir con buen éxito con las regiones que poseen estas ventajas. Cuando se construyó el primer ferrocarril del Río Mississippi al Pacífico, muchos temieron que no fuera remunerativo, porque el territorio por donde debía atravesar, estaba en su mayor parte despoblado. Ahora existen varias líneas, todas ellas remunerativas. Y el rápido progreso de la gran región occidental de la República del Norte, que en gran parte se debe á las ventajas obtenidas con los ferrocarriles, ha sido la maravilla del siglo. El interior de los Estados Unidos, especialmente las regiones del Oeste y del Sudoeste, así como los lugares interiores de las Repúblicas del Sud, serían los que más beneficios recibirán del establecimiento de un Ferrocarril Intercontinental, porque estos territorios tendrán comunicaciones más fáciles y directas entre sí. Apenas podrá estimarse el incremento del comercio, cuando las 195,000 millas de vía férrea de los Estados Unidos y las 10,000 de México queden ligadas con las 10,600 de la Argentina y con las de las demás Repúblicas Americanas.

Desde que se estableció la comunicación por medio de vías férreas entre México y los Estados Unidos el comercio entre los dos países ha aumentado grandemente, al grado de que ahora envía México el 70 por ciento del total de sus exportaciones á los Estados Unidos y este país exporta para México por el mismo valor aproximadamente. En el año fiscal que terminó el 30 de junio de 1901 los Estados Unidos compraron mercancías en los países de la América Central y del Sur por valor de \$121,000,000, que equivalen al 14 por ciento del total de sus importaciones, y durante el mismo período, los Estados Unidos vendieron mercancías á dichos países por valor de \$52,000,000, ó sea solamente el 10 por ciento del total de las importaciones de la América Central y del Sur.

Como demostración de la actual falta de medios fáciles de transporte entre las Repúblicas Americanas, debe bastar el hecho de que algunos de los Delegados á esta Conferencia, para llegar á la ciudad de México, han tenido que hacerlo por la vía de Europa y Nueva York, y otros por la vía de San Francisco. Una carta, ó un bulto confiado al Expreso, que se envíe de México ó de los Estados Unidos á alguna de las Repúblicas Americanas, primero tendría que ir á Europa y de allí á su destino.

Esta Comisión posee informes de algunos de los Delegados de la América Central y del Sur, acerca de los ferrocarriles de sus respectivos países, y cuando se reciban otros, suplica que se impriman como apéndice al presente.

Resumen.—Considerando: que los tres cuerpos de ingenieros empleados por la Comisión del Ferrocarril Intercontinental hicieron exploraciones experimentales, en 1892, 1893, y 1894, de que acompañaron mapas, comprendiendo desde el límite norte de Guatemala hasta el límite norte de la República Argentina, é informaron que sería practicable completar un Ferrocarril Continental de “vía ancha” que atravesase las Repúblicas del Norte, del Centro y de Sud América, y que aprovechando los ferrocarriles actualmente en explotación, la distancia que había que construir sería de 5,456 millas, siendo el presupuesto de su costo de \$174,290,271, ó sean como \$32,000 por milla, y

Considerando: que es un hecho de todos conocido que los ferrocarriles desarrollan los recursos naturales de un país, aumentan el comercio y la riqueza, y contribuyen á la prosperidad general de los países por donde atraviesan;

En consecuencia, calculando que la distancia que tendrá que construirse será de 5,000 millas y que el costo no excederá de \$200,000,000 (ó sea á razón de \$40,000 por milla), la Comisión por unanimidad, recomienda desde luego la construcción de una línea intercontinental con ramales donde fueren necesarios, para unirse con las ciudades principales, la cual pase por las diferentes Repúblicas, uniendo los sistemas de los Estados Unidos y México con los de la Argentina;

Habiéndose cumplido las recomendaciones que hizo la última Conferencia, celebrada en Wáshington, con respecto á las exploraciones preliminares, apoyamos por unanimidad las que aparecen de las actas de la Comisión del Ferrocarril Pan-Americano y de la dicha Conferencia de Wáshington, y son como sigue:

Primero. Que un ferrocarril que ponga en comunicación á todas ó á la mayor parte de las naciones representadas en esta Conferencia, contribuirá poderosamente al desarrollo de las relaciones cordiales entre dichas naciones y al aumento de sus intereses materiales.

Segundo. Que el ferrocarril, hasta donde lo permitan los intereses comunes, deberá ligar á las principales ciudades situadas en las cercanías de su trayecto.

Tercero. En caso de que no pueda alterarse sin grandes inconvenientes la dirección de la línea, con el objeto expresado en el artículo anterior, se trazarán ramales que unan á esas ciudades con la línea troncal.

Cuarto. Que para reducir el costo de la empresa deberán utilizarse los ferrocarriles en explotación hasta donde sea posible y compatible con el trayecto y condiciones del Ferrocarril Continental.

Quinto. Que todos los materiales necesarios para la construcción y trabajos del ferrocarril deben quedar exentos de derechos de importación, con sujeción á los reglamentos que se estimen necesarios para evitar los abusos de este privilegio.

Sexto. Que todas las propiedades muebles y raíces del ferrocarril, empleadas en su construcción y trabajos, deberán quedar exentas de todo impuesto, ya sea nacional, provincial, de Estado, ó municipal.

Séptimo. Que la ejecución de una obra de tal magnitud deberá ser ayudada en cuanto sea posible por medio de subsidios, concesiones de terrenos y garantías de un determinado minimum de interés.

Octavo. Que el ferrocarril debe declararse perpetuamente neutral para que así pueda asegurarse la libertad del tráfico.

Noveno. También recomendamos que los Delegados á esta Conferencia y otras personas que favorezcan el Ferrocarril, insten á sus Gobiernos con toda la urgencia compatible con las circunstancias, para que otorguen á la empresa las concesiones liberales de toda clase que se consideren más convenientes á cada país.

Décimo. Que se invite á los Estados Unidos para que envíen personas de confianza y competentes á todas las Repúblicas de América á fin de avariguar con certeza los recursos de los diferentes países, la situación y condiciones de los ferrocarriles hoy en explotación, el estado actual del comercio y las expectativas de tráfico para una línea intercontinental, en caso de que llegue á terminarse, y qué concesiones haría cada Gobierno á la empresa.

Undécimo. Que esta Comisión continúe en sus labores, que informe á la próxima Conferencia y quede facultada para convocar á sus

miembros, aumentar su número y nombrar subcomisiones, con el objeto de poder proporcionar cualquiera clase de informes, y ayudar y alentar en cuanto sea posible el feliz término de la línea del Ferrocarril Intercontinental,

H. G. DAVIS.

MÉXICO, 27 de noviembre de 1901.

En virtud de este Informe se acordó lo siguiente:

RESOLUCIÓN.

Los que subscriben, Delegados de las Repúblicas representadas en la Segunda Conferencia Internacional Americana, debidamente autorizados por sus Gobiernos. han aprobado la siguiente resolución:

La Segunda Conferencia Internacional Americana,

Considerando: Que los tres cuerpos de ingenieros empleados por la anterior Comisión del Ferrocarril Intercontinental hicieron exploraciones, desde el límite norte de Guatemala hasta el límite norte de la República Argentina, durante los años de 1893 y 1894, y presentaron su informe sobre la obra con los mapas respectivos;

Que este informe demuestra que es practicable completar la vía férrea que atravesase las Repúblicas del Continente de Norte á Sur; y que, en caso de aprovecharse los ferrocarriles en actual explotación, la longitud de las líneas por construirse sería de 5,456 millas, y el presupuesto de la obra total de \$174,290,271 oro, ó sean 32,000 pesos oro por milla;

Que los ferrocarriles desarrollan los recursos naturales de los países que atraviesan, aumentan su comercio y riqueza y contribuyen eficazmente á la prosperidad general;

Que las vías férreas internacionales consolidan las relaciones de amistad entre los Estados, los ligan con intereses comunes y aseguran la paz entre ellos;

Acuerda: I. Que se ratifique la resolución de la Conferencia de Wáshington, que recomendó la construcción de las líneas complementarias del "Ferrocarril Intercontinental," pasando éste por las diferentes Repúblicas, uniendo los sistemas de los Estados Unidos con los de la Argentina y ligando, hasta donde lo permitan los intereses comunes, las principales ciudades situadas en el trayecto del ferrocarril; ó en caso de que este último fuera inconveniente, trazando ramales que

unan esas ciudades con la línea troncal; y en fin, utilizando las líneas en explotación hasta donde sea posible y compatible con el trazo y condiciones del "Ferrocarril Intercontinental."

II. Que se auxilie por las Repúblicas interesadas la ejecución de la obra por todos los medios que estén en su poder; y especialmente, que se exceptúen de los derechos de importación los materiales necesarios para la construcción y explotación del ferrocarril, con sujeción á los reglamentos convenientes para evitar abusos; y que se exonere de todo impuesto nacional, de Estado, provincial ó municipal, las propiedades y derechos reales ó personales de la empresa; eximiéndose de derechos de aduana y de otros impuestos el tráfico en tránsito por las diversas Repúblicas; y coadyuvándose á la obra, en cuanto sea posible, mediante subsidios, concesiones de terrenos ó garantía de un mínimum de interés sobre los capitales invertidos en cada país.

Con tal objeto se recomienda que todas las personas que favorezcan la construcción del ferrocarril, gestionen ante los respectivos Gobiernos, con toda eficacia, la concesión á la empresa de esos ú otros subsidios liberales, según lo que se considere más conveniente y factible para cada país.

III. Que se invite al Gobierno de los Estados Unidos de América, para que inicie cerca de los representantes diplomáticos de las demás Repúblicas acreditados en Wáshington, las medidas más apropiadas, que den por resultado el envío, dentro del término de un año, de personas caracterizadas y competentes á los diversos países de América, que fijen con certeza los recursos de cada país, la situación y condiciones de los ferrocarriles hoy en explotación, el estado actual del comercio y las expectativas de tráfico para una línea intercontinental, en caso de que llegue á terminarse; y qué concesiones haría cada uno de los respectivos Gobiernos á la empresa.

IV. Que el Presidente de la Conferencia nombre una Comisión de cinco miembros residentes en los Estados Unidos de América, para que entre en ejercicio, después de clausurada la Conferencia, con la facultad de aumentar el número de sus miembros ó reemplazarlos en caso necesario, nombrar las Subcomisiones que estime convenientes, informar á la próxima Conferencia sobre el resultado de sus labores, proporcionar cualquiera clase de informes sobre la obra del Ferrocarril Intercontinental, y ayudar y alentar, en cuanto sea posible, el feliz término de ella, sin perjuicio de que los demás miembros de la actual Comisión sigan prestando sus servicios con igual propósito; y, finalmente, que la Comisión, de acuerdo con el Secretario de Estado de los Estados Unidos de América, y con los Ministros de los demás países interesados, residentes en Wáshington, procure que se convoque, dentro del término de un año, una reunión de representantes de todas las Repúblicas del Continente, debidamente autorizados, con el objeto de

ajustar una Convención, que provea á la construcción del proyectado Ferrocarril Intercontinental.

Hecho y firmado en la ciudad de México, el veintiuno de enero de mil novecientos dos, en tres ejemplares escritos respectivamente en castellano, inglés y francés, los cuales se depositarán en la Secretaría de Relaciones Exteriores del Gobierno de los Estados Unidos Mexicanos, á fin de que de ellos se saquen copias certificadas para enviarlas por la vía diplomática á cada uno de los Estados signatarios.

COMISIÓN PERMANENTE.

El Señor Presidente de la Conferencia, llevando á cabo lo dispuesto en el artículo cuarto de la Resolución, nombró á los Señores que siguen para formar la Comisión permanente de que allí se trata, á saber:

El Honorable Señor Don H. G. DAVIS, de West Virginia, en los Estados Unidos de América.

El Honorable Señor Don ANDREW CARNEGIE, de Nueva York, en los Estados Unidos de América.

El Honorable Señor Don MANUEL DE AZPÍROZ, Embajador de México en Wáshington.

El Honorable Señor Don MANUEL ÁLVAREZ CALDERÓN, Ministro del Perú en los Estados Unidos de América.

Y el Honorable Señor Don ANTONIO LAZO ARRIAGA, Ministro de Guatemala en los Estados Unidos de América.

MENSAJE DEL PRESIDENTE.

El 22 de abril de 1902, el Señor Presidente de los Estados Unidos de América transmitió al Congreso, con un corto mensaje, el Informe del Señor Secretario de Estado respecto á lo determinado por la Segunda Conferencia en México sobre el Ferrocarril Intercontinental.

El Mensaje dice así:

“Al Senado y la Cámara de Representantes:

“Transmito con el presente al Congreso un Informe del Secretario de Estado, con los papeles que lo acompañan, relativos á la Resolución adoptada en la Segunda Conferencia Pan-Americana de México, sobre el Ferrocarril Intercontinental.

“Recomiendo que el Congreso conceda un crédito de \$20,000, ó de lo que de esta suma pueda necesitarse, para permitir al Presidente enviar dos Comisionados á la América del Centro y del Sur para llevar á efecto los propósitos de la Resolución citada, é investigar lo que deba hacerse para extender el comercio entre los Estados Unidos y las dos partes del continente americano que antes se ha nombrado, facultándoles para dar el Informe correspondiente.

“THEODORE ROOSEVELT.”

INFORME DEL SECRETARIO DE ESTADO.

“SEÑOR PRESIDENTE: Tengo el honor de someter á la consideración de V. las adjuntas copias, una del Informe presentado en la Segunda Conferencia Pan-Americana de México, en el invierno de 1901 á 1902, por la Comisión de Ferrocarril Pan-Americano, y la otra, de la Resolución adoptada por los Delegados de las Repúblicas representadas en

aquella asamblea, refiriéndose ambas cosas al proyectado Ferrocarril Pan-Americano.

“El artículo III de la Resolución dispone:

“Que se invite al Gobierno de los Estados Unidos de América para que inicie cerca de los Representantes diplomáticos de las demás Repúblicas acreditadas en Wáshington, las medidas más apropiadas; que den por resultado el envío dentro del término de uno año de personas caracterizadas y competentes á los diversos países de América, que fijen con certeza los recursos de cada país, la situación y condiciones de los ferrocarriles hoy en explotación, el estado actual del comercio y las expectativas de tráfico para una línea intercontinental, en caso de que llegue á terminarse, y qué concesiones haría cada uno de los respectivos Gobiernos á la empresa.”

“El proyecto es de utilidad pública tan grande y el comercio con la América del Centro ó del Sur, en el que los Estados Unidos no tienen toda la participación que debieran, está creciendo tanto en importancia, que no titubeo un momento en recomendar que se solicite del Congreso un crédito de \$20,000, ó de lo que sea necesario de dicha suma, para poner al Presidente en aptitud de nombrar dos Comisionados para llevar á debido efecto los propósitos del acuerdo citado, é investigar al mismo tiempo, é incidentalmente lo que debe hacerse para extender el comercio entre esos países y los Estados Unidos, sometiendo el Informe correspondiente.

“Respetuosamente, etc.,

“JOHN HAY.

“DEPARTAMENTO DE ESTADO,

“*Wáshington, abril 19 de 1902.*”

EL FERROCARRIL INTERCONTINENTAL.

Por J. B. CALVO.

Cuando se piensa en la gran influencia que las vías de comunicación tienen, no sólo en el desarrollo de los elementos naturales y otras fuentes de la producción nacional, sino en el adelanto moral é intelectual que el ensanche de la esfera de acción proporciona al hombre, saltan á la vista los grandes beneficios que la construcción de un ferrocarril continental brindaría á las Repúblicas Americanas.

La obra es ciertamente colosal, pero no ofrece en realidad ningún obstáculo insuperable, y sólo espera para convertirse en el hecho plausible, que se tome el proyecto con ánimo resuelto hasta lograr que la empresa quede implantada.

Es evidente que el desarrollo del tráfico local por sí mismo, pagaría, en tiempo no lejano, el costo de la vía, y que el incremento de las relaciones comerciales entre unos y otros de los países vecinos sería rápido,

promoviendo así finalmente el bienestar general, político y social, de todas las naciones del Continente, y una unión más estrecha entre ellas, todo lo cual daría cada vez mayor valor al capital y sus rendimientos.

Los progresos que México viene obteniendo en los últimos años llaman con razón la atención del mundo, y el impulso que toman sus industrias demanda para la próspera República una fácil comunicación con los otros Estados vecinos, donde encontrará excelentes mercados para muchos de sus productos que la competencia del Norte encamina hacia ellos, como sucede actualmente y con particularidad respecto de las telas y géneros y artículos de cuero de todas clases.

Los Estados de la América Central progresan constantemente, y á la par que en ellos el adelanto moral se manifiesta de modo inequívoco en la tranquilidad de que hoy disfrutan, el desarrollo de sus ricas fuentes de producción toma mayor incremento cada día, alentando nuevas empresas, el mejoramiento de las vías de comunicación existentes y la construcción de otras nuevas é importantes.

Allá en el lejano Sur, la República Argentina se levanta como rival agrícola de los Estados Unidos del Norte, y Chile abre competencia en el Pacífico con las líneas de vapores de la gran nación norteamericana.

Estas demostraciones prácticas del adelanto de los países latinos del Continente, indican actividad en el movimiento de progreso que han alcanzado, y ponen de manifiesto la gran importancia del campo que ofrecen á las empresas y á los negocios.

El Brasil, con su enorme extensión territorial; el Uruguay, con su posición geográfica; el Perú, Bolivia, Ecuador, Venezuela y Colombia, con la exuberante riqueza de su suelo, participan en igual alta escala de los beneficios del progreso y de la civilización.

La empresa de un ferrocarril que una á todos estos países encontrará, pues, abundantes elementos de vida existentes hoy, y muchos otros que por sí mismo creará, ya á influencia de las facilidades del tráfico local, ya por la comunicación rápida entre unos y otros Estados.

En la primera Conferencia Internacional Americana, celebrada en Washington en 1889-1890, se adoptaron resoluciones para llevar á efecto la gran empresa; y como resultado práctico de la iniciativa tomada entonces, se hicieron los estudios correspondientes por una Comisión de ingenieros que rindió un informe completo, que existe impreso con mapas é ilustraciones en siete gruesos volúmenes.

De esos estudios aparece que la longitud de un ferrocarril de Nueva York á Buenos Aires, sería de 10,471 millas y que de esta enorme distancia la mitad está cubierta ya por líneas férreas existentes.

Concretándonos á la primera parte de la gran obra continental, fácil será demostrar que sólo requiere un ligero impulso para que pueda verse realizada en toda la porción del hemisferio, al Norte de Panamá. En efecto, la distancia de 2,187 millas de Nueva York á Laredo en la frontera de México, la de 839 millas de Laredo á la Ciudad de México

y la de 343 millas de dicha ciudad á Oaxaca, se recorren por ferrocarriles en actual explotación.

Hay dos vías férreas mexicanas que se acercan á la frontera de Guatemala: una que corre de Puebla á Oaxaca, del lado del Pacífico, la cual necesitaría una extensión de 400 millas para llegar á dicha frontera; y la otra que parte de Córdoba, en la línea del ferrocarril de Veracruz, del lado del Atlántico. Existe además otra vía férrea en construcción que conectará con el Ferrocarril Interoceánico del Istmo de Tehuantepec; y lo que al efecto es más positivo, el Gobierno de México ha hecho una concesión con liberales subsidios para la construcción, en el término de dos años, de un ferrocarril que partiendo del Istmo como un ramal de la vía Interoceánica mencionada, se extienda hasta la línea divisoria con Guatemala.

Logrado este nuevo progreso de los ferrocarriles de México en su propio territorio, quedará salvada por el mismo hecho, la mayor de las dificultades para que la vía Intercontinental pueda extenderse, uniendo los ferrocarriles de los Estados de la América Central, donde existen varios tramos perfectamente utilizables en la vía general.

Bastará á este respecto hacer notar que de las 1,107 millas que una línea sobre el lado del Pacífico recorrerá en Centro América, desde la frontera mexicana hasta la de Colombia, existen hoy construidas y en explotación 211.30 millas, principalmente en El Salvador y Nicaragua, donde los ferrocarriles más extensos siguen en su mayor parte una dirección paralela en general á la costa.

En Guatemala hay un trayecto de ferrocarril del puerto de Ocós al pueblo de Ayutla, cerca de la frontera mexicana, y las líneas construidas en éste y los otros Estados centro-americanos suman poco menos de 1,000 millas.

	Millas.
Guatemala.....	342
El Salvador.....	132
Honduras.....	50
Nicaragua.....	176
Costa Rica.....	222

Pero en Costa Rica, Guatemala y Honduras, las vías férreas principales siguen una dirección transversal, porque se dirigen del interior á los puertos; mas en los tres países se están construyendo ramales que dentro de poco tiempo no sólo podrán agregar considerable extensión á la parte ejecutada del proyecto, sino que elevarán así la garantía de buen éxito para un Ferrocarril Continental, por el crecimiento consiguiente del tráfico que resultará siempre del mayor número de sus conexiones.

No existía tan buena base en México cuando se proyectaba la construcción de la primera vía férrea entre los Estados Unidos y aquella República; la empresa no encontraba el favor del público porque se creía que no sería remunerativa; y hoy, en el trascurso escaso de cuatro

lustros, existen ya tres líneas en constante actividad, alimentadas por el comercio creciente entre las dos naciones. Estas líneas férreas, por efecto natural, fomentan el desarrollo mutuo de intereses, impulsando al propio tiempo la construcción de otras vías en conexión con ellas.

No hay, pues, razón para dudar, fundándose en estos que son hechos palpables, que la extensión de los caminos de hierro hacia el Sur, producirá iguales, si no mejores resultados para el capital, aparte de la benéfica influencia moral en el porvenir de las naciones del Continente.

Parece próxima la realización del pensamiento de unir los dos grandes océanos por un canal á través del Istmo centro-americano, entre Costa Rica y Nicaragua; y si como es justo esperarlo se resuelve pronto su ejecución, la sección septentrional del Ferrocarril Intercontinental aumentará en importancia de un modo excepcional.

En la Segunda Conferencia Internacional Americana, reunida en México de octubre á enero, 1901-2, se acordó ratificar las resoluciones de la Primera Conferencia de Wáshington y hacer entre otras recomendaciones, la de que el Gobierno de los Estados Unidos de América inicie, por medio de los representantes diplomáticos de las Repúblicas americanas acreditados en Wáshington, las medidas más apropiadas para el envío, dentro de un año, de comisionados que informen acerca de los ferrocarriles existentes, y concesiones que harían los respectivos gobiernos para la construcción de la vía continental.

El pensamiento encuentra hoy gran favor; y es de esperarse que con el nuevo impulso que se le da, llegue á convertirse en la deseada realidad.

Sea así para bien de toda la América!

WÁSHINGTON, *abril de 1902.*

CONVENCIÓN CELEBRADA ENTRE LOS ESTADOS UNIDOS DEL BRASIL Y S. M. EL REY DE LA GRAN BRETAÑA. PARA LA DETERMINACIÓN POR ARBITRAJE DE LA CUESTIÓN DE LÍMITES ENTRE EL TERRITORIO BRASILEÑO Y EL DE LA GUAYANA INGLESA.

Concluido en Londres, noviembre 6 de 1901.

Proclamado, enero 28 de 1902.

Deseando el Presidente de los Estados Unidos del Brasil y Su Majestad el Rey del Reino Unido de la Gran Bretaña é Irlanda, Emperador de la India, determinar por un arreglo amistoso la cuestión que se ha suscitado entre sus respectivos gobiernos respecto á la frontera entre

los Estados Unidos del Brasil y la Colonia denominada “Guayana inglesa,” han resuelto que la referida cuestión se someta á arbitraje, y, á fin de concluir una convención á ese efecto, han nombrado para sus respectivos Plenipotenciarios:

El Presidente de los Estados Unidos del Brasil al Señor JOAQUIM AURELIO NABUCO DE ARAUJO, Enviado Extraordinario y Ministro Plenipotenciario del Brasil, cerca de Su Majestad Británica.

Y Su Majestad el Rey del Reino Unido de la Gran Bretaña é Irlanda, Emperador de la India, al Muy Honorable Señor HENRY CHARLES KEITH PETTY FITZ MAURICE, Marqués de Lansdowne, Conde de Wycombe, Visconde de Caln y Calnstone, Señor de Wycombe, Barón de Chipping Wycombe, Barón Nairne, Conde de Kerry, Conde de Shelburne, Visconde Clanmaurice y Fitzmaurice, Barón de Kerry, Lixnav y Dunkerron, Par del Reino de la Gran Bretaña é Irlanda, Miembro del Muy Honorable Consejo Privado de Su Majestad Británica, Caballero de la muy noble Orden de la Liga, etc., principal Secretario de Estado de Su Majestad para el despacho de asuntos extranjeros.

Los que después de haberse comunicado mutuamente sus respectivos plenos poderes, y encontrádoles en buena y debida forma, han acordado y convenido los siguientes artículos:

ARTÍCULO I.

El Presidente de los Estados Unidos del Brasil y Su Majestad el Rey del Reino Unido de la Gran Bretaña é Irlanda, Emperador de la India, convienen en invitar á Su Majestad el Rey de Italia á que decida como arbitrador la cuestión de límites arriba indicada.

ARTÍCULO II.

El territorio en disputa entre los Estados Unidos del Brasil y la Colonia de la Guayana inglesa se entenderá ser el comprendido entre los ríos Takutú y Cotinga, y una línea trazada desde el nacimiento del Cotinga, en dirección al este y siguiendo el curso de su corriente, hasta llegar á un punto cerca del Monte Ayangcanna; de allí en dirección al sudeste, y siguiendo siempre en general el curso de la corriente hasta el cerro llamado Annay; de allí por el tributario más inmediato hasta encontrar el río Rupunini; de allí subiendo la corriente de este último río hasta llegar á su nacimiento; y de allí cruzando el país hasta el nacimiento del Takutú.

ARTÍCULO III.

Se suplicará al arbitrador que investigue y determine qué extensión del territorio descrito en el precedente artículo, sea el todo de él, ó una parte suya solamente, puede ser legalmente reclamada por alguna de las dos altas partes contratantes, y que se sirva fijar la línea divisoria entre los Estados Unidos del Brasil y la Colonia de la Guayana inglesa.

ARTÍCULO IV.

Para decidir la cuestión que se somete á su fallo, el arbitrador depurará todos los hechos que estime necesarios, y tendrá por guía los principios de Derecho Internacional que á su juicio sean aplicables al caso.

ARTÍCULO V.

El "Caso" impreso, de cada una de las partes, acompañado con los documentos, correspondencia oficial, y toda la demás prueba en que se apoya, será entregado, en duplicado, al arbitrador y al gobierno de la otra parte, dentro de un período que no exceda de doce meses á contar de la fecha del canje de las ratificaciones de esta convención.

ARTÍCULO VI.

Dentro de seis meses después de la presentación de los "Casos," en la manera y forma prescrita en el artículo antecedente, cada una de las partes entregará, también en duplicado, al arbitrador y al gobierno de la otra parte, la "Réplica," ó "Counter Case," acompañada de nuevos documentos, correspondencia, ó prueba, en que se dará respuesta á lo dicho por la otra parte en su respectivo "Caso," ó se expondrá lo que aparezca de los documentos, correspondencia y pruebas presentadas.

Si en la "Réplica," ó "Counter Case," se ha dicho ó indicado por alguna de las partes que hay en su poder algún informe ó documento de su propiedad exclusiva, de que no haya acompañado copia, la referida parte tendrá obligación de suministrar á la otra, si ella lo exigiere, una copia del referido informe ó documento; y cada una de las partes puede obligar á la otra, por medio del arbitrador, á producir los originales, ó copias certificadas, de los papeles ó documentos presentados como prueba, dando en cada caso noticia de ello á la otra parte dentro de cuarenta días siguientes á la entrega del "Caso," ó de la "Réplica," ó "Counter Case;" y el documento original, ó su copia certificada, será producido tan pronto como pueda hacerse, antes de que expire un plazo que no exceda de cuarenta días, á contar desde la fecha del recibo de la noticia.

ARTÍCULO VII.

Dentro del término de cuatro meses, que empezarán á correr desde la expiración del plazo fijado para entregar la "Réplica," ó "Counter Case," cada una de las partes entregará en duplicado al arbitrador y al Gobierno de la otra parte, un alegato impreso en que se arguya el respectivo punto de vista, refiriéndose á la prueba en que se descansa; y el arbitrador podrá, si deseara mayor dilucidación de cualquiera particular tocado en el alegato, requerir que se le entregue un nuevo "alegato," escrito, ó impreso, sobre el dicho particular; pero en ese

caso, la otra parte tendrá el derecho de replicar por medio de un contra alegato escrito ó impreso.

ARTÍCULO VIII.

El arbitrador podrá, por cualquiera causa que á su juicio sea suficiente, extender los plazos fijados en los artículos V, VI y VII de esta convención, concediendo treinta días más.

ARTÍCULO IX.

Las Altas Partes Contratantes convienen en suplicar al arbitrador que se sirva pronunciar el laudo, si fuere posible, dentro del término de seis meses á contar desde la fecha de la presentación de los alegatos de ambas partes.

También convienen en rogar al arbitrador que se sirva dar su laudo, por escrito, fechado y firmado, y en duplicado, de modo que pueda entregarse un ejemplar al Representante de los Estados Unidos del Brasil, y otro al Representante de la Gran Bretaña, á fin de que los remitan á sus respectivos Gobiernos.

ARTÍCULO X.

Las Altas Partes Contratantes se comprometen á aceptar el laudo del arbitrador como decisión completa, definitiva, y ejecutoria del asunto sometido á arbitraje.

ARTÍCULO XI.

Las Altas Partes Contratantes convienen en que los indios y demás habitantes de alguna localidad del territorio disputado, que por virtud del laudo queden sujetos á la jurisdicción, bien de los Estados Unidos del Brasil, bien de la Colonia de la Guayana inglesa, podrán, dentro del término de diez y ocho meses á contar desde la fecha del laudo, elegir entre trasladarse, ó no, con sus familias, y bienes muebles, al territorio de los Estados Unidos del Brasil, ó al territorio de la Colonia, según fuere el caso. Les será también potestativo á los referidos habitantes disponer libremente de sus bienes raices, y las Altas Partes Contratantes se comprometen á facilitar de cuantos modos sean posibles el ejercicio de la opción á que se refiere este artículo.

ARTÍCULO XII.

Cada Gobierno proveerá lo necesario para el pago de los gastos de preparación y presentación de su caso. Los gastos en que se incurra en los procedimientos del arbitraje serán sufragados de por mitad.

ARTÍCULO XIII.

La presente convención se llevará á efecto, inmediatamente después del canje de sus ratificaciones, y este canje se verificará en la ciudad

de Río de Janeiro, dentro de cuatro meses á partir de esta fecha, ó antes si fuere posible.

En fé de lo cual los respectivos Plenipotenciarios firman y sellan la presente, en duplicado, en Londres, hoy 6 de noviembre de 1901.

[L. s.]

LANSDOWNE.

DECLARACIÓN.

Al tiempo de firmar la antecedente convención, los infrascritos Plenipotenciarios declaran, como parte y complemento de aquella, y sujeto como ella á ratificación, que las Altas Partes Contratantes adoptan como frontera entre los Estados Unidos del Brasil, y la colonia de la Guayana inglesa, la línea que divide las aguas de la cuenca del Amazonas y las de las cuencas del Corentino y del Esequibo, desde el nacimiento del Corentino hasta el del Repununi, ó del Takutú, ó un punto entre ellos, según lo que decida el arbitrador.

CONGRESO GEOGRÁFICO EN RÍO DE JANEIRO.

Entre las diferentes medidas de carácter general tomadas en la Segunda Conferencia Pan-Americana últimamente celebrada en México, figura en lugar conspicuo la relativa al aprovechamiento de los ríos de la América del Sur para establecer un sistema de comunicación interior entre las Repúblicas de aquel continente. En el número del BOLETIN, correspondiente al mes de febrero de este año de 1902, de página 402 á página 418, se dió cuenta del notable discurso que pronunció en la Conferencia citada, el Señor Delegado de Colombia, General Don RAFAEL REYES, sobre la exploración que él mismo y dos hermanos suyos habían hecho del interior de Sud América, y en que recomendó se utilizasen las vías fluviales de aquella vasta porción de este hemisferio para propósitos de comunicación interior. La Conferencia dió forma práctica á esta idea, recomendando que las naciones cuyos territorios de encuentran bañados por aguas correspondientes á los grandes sistemas del Orinoco, el Amazonas y el río de la Plata se reúnan para estudiar el asunto, y llegar á la debida determinación. Esto se hizo por medio de un tratado que firmaron los Delegados de la República Argentina, Bolivia, Colombia, Ecuador, Paraguay, Perú y Uruguay, sujeto, por supuesto, á la ratificación de sus respectivos Gobiernos, que dice como sigue:

“CONVENCIÓN CELEBRADA POR LAS DELEGACIONES DE LA REPÚBLICA ARGENTINA, BOLIVIA, COLOMBIA, ECUADOR, PARAGUAY, PERÚ Y URUGUAY, PARA LA REUNIÓN DE UN CONGRESO GEOGRÁFICO EN RÍO DE JANEIRO.

“MÉXICO, 28 de enero de 1902.

“Considerando que, de acuerdo con la exposición de motivos anexa y la Memoria de exploraciones presentada á la Conferencia Internacional por el Señor General Don RAFAEL REYES, resulta practicable el pensamiento de comunicar entre sí las tres grandes hoyas hidrográficas de la América del Sur, estableciendo la navegación desde el Orinoco hasta el Plata por el interior del Continente;

“Que la incomunicación actual mantiene substraído en su gran parte á la industria y al comercio del mundo un territorio inmenso y dotado de inagotables riquezas naturales;

“Que entre los problemas estudiados por la Conferencia Internacional, reunida en México, el de la comunicación interior en Sud América ofrece la mayor transcendencia para la civilización;

“Que á fin de preparar la ejecución de dicho pensamiento, conviene que las naciones del Orinoco, del Amazonas y del Plata, y las de sus afluentes respectivos se reúnan en asamblea para estudiar la mejor forma de llevar á término el propósito;

“Que no encontrándose ya representadas en esta Conferencia las Repúblicas del Brasil y Venezuela, á cuyos dominios pertenecen las salidas del Amazonas y del Orinoco, es necesario arbitrar la forma en que debe ser requerido su concurso;

“Las Naciones signatarias han convenido lo siguiente:

“1. La celebración de una Conferencia Geográfica fluvial de los países ribereños, que se reunirá en la ciudad de Río de Janeiro dentro del término de un año.

“2. El Excelentísimo Gobierno de la República Argentina queda encargado de gestionar del Excelentísimo Gobierno de los Estados Unidos del Brazil, la adhesión y el asentimiento necesarios para la reunión de dicha Conferencia.

“3. Se solicita de ambos Gobiernos que gestionen las demás adhesiones de los países ribereños y hagan la convocatoria respectiva.

“4. La Conferencia mencionada funcionará con arreglo al siguiente programa, en cuanto no sea modificado por acuerdo de los Gobiernos Brasileiro, Argentino y Venezolano:

“(a) Organizar Comisiones geográficas de exploración.

“(b) Formular reglamentos para las diversas comisiones.

“(c) Establecer los presupuestos de gastos que demanden los trabajos.

“(d) Fijar las cuotas proporcionales que correspondan á cada uno de los Gobiernos interesados.

“(e) Organizar una Oficina Internacional destinada á concentrar los datos de las exploraciones y presentar á los Gobiernos un proyecto general sobre comunicación de las hoyas hidrográficas.

“(f). Estudiar todos los asuntos conexos con el propósito anterior, que se refieren á la más rápida ejecución de la obra y á las medidas que los Gobiernos interesados deben acordar particularmente ó en común, para promover el bienestar de esas regiones.

LORENZO ANADÓN,
Delegado de la República Argentina.

FERNANDO E. GUACHALLA,
Delegado de Bolivia.

CECILIO BÁEZ,
Por el Paraguay.

MANUEL ÁLVAREZ CALDERÓN,
Por el Perú.

RAFAEL REYES,
Delegado por Colombia.

JUAN CUESTAS,
Delegado del Uruguay.

L. F. CARBO,
Por el Ecuador.

EL CONGRESO INTERNACIONAL DE AMERICANISTAS.

Se ha convocado al Congreso Internacional de Americanistas para que celebre su décimatercera sesión en los salones del Museo Americano de Historia Natural, en la ciudad de Nueva York, empezando el día 20 de octubre de 1902, y concluyendo el 25 siguiente. El objeto de este Congreso es reunir á los que estudian la arqueología, la etnología y la historia primitiva de Norte y Sud América, y aumentar los conocimientos sobre estos asuntos, tanto por la lectura de documentos como por medio de discusiones.

Las disertaciones verbales ó por escrito pueden ser en cualquiera de los idiomas siguientes, á saber: inglés, castellano, francés, alemán ó italiano (no se menciona el portugués, tal vez inadvertidamente). Se espera que todos los debates sean cortos y que no se han de invertir más de treinta minutos en la lectura de ningún documento. Las memorias que se presenten á este Congreso se imprimirán con las actas, si fueren aprobadas. Los miembros del Congreso de Americanistas deberán enviar los títulos y, si fuere posible, extractos de sus Memorias, al Secretario General, antes de celebrarse la reunión.

Los temas que este Congreso ha de discutir se relacionan con (1) las razas indígenas de América, su origen, distribución, historia, rasgos físicos característicos, idiomas, inventos, costumbres y religiones; (2) la historia del primitivo contacto entre América y el antiguo mundo.

Todas las personas interesadas en el estudio de la arqueología, etnología é historia primitiva de Norte y Sud América, pueden hacerse

miembros del Congreso de Americanistas, haciendo la debida solicitud al Sr. MARSHALL H. SAVILLE, Secretario General de la Comisión de Organización, Museo Americano de Historia Natural de la ciudad de Nueva York. El Sr. MORRIS K. JESUP es el Presidente, y el Duque de LOUBAT, el Vice-Presidente de la Comisión de Organización.

LIBRE FRANQUEO DE LAS PUBLICACIONES DE LA OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS.

El Señor Ministro de Correos de los Estados Unidos de América participó al Señor Secretario de Estado, Presidente del Consejo Directivo de la Oficina, con fecha 9 de abril de 1902, que había dado las órdenes oportunas para que conforme á lo acordado se admitiesen en las estafetas de los Estados Unidos de América, libres de franqueo, las publicaciones de la Oficina, y que se les diese libre curso á donde quiera que fueren dirigidas sin más limitaciones que la de que el peso de cada paquete no exceda de 4 libras y 6 onzas, ó sea 2 kilogramos, que es el límite convenido por la Convención Postal Universal, y la de que el país de destino sea uno de los que forman la Unión Internacional de Repúblicas Americanas.

El texto del decreto es como sigue:

“MINISTERIO DE CORREOS,

“*Washington, D. C., 9 de abril 1902.*

“En cumplimiento del artículo 8º de la resolución relativa á la reorganización de la Oficina Internacional de las Repúblicas Americanas, sancionada por la Segunda Conferencia Pan-Americana, celebrada recientemente en la ciudad de México, en que se dispone que ‘las publicaciones de la Oficina se considerarán como documentos públicos y se transportarán libres de gasto en las valijas de todas las Repúblicas;’

“Se ordena por la presente, que la correspondencia y publicaciones de la expresada Oficina, cuyo peso por paquete no exceda de cuatro libras seis onzas (2 kilogramos), límite prescrito por la Convención Postal Universal, sean admitidas en los correos, libres de franqueo postal cuando estén dirigidas á los países que forman la Unión Internacional de las Repúblicas Americanas, á saber:

Argentina (República).	Ecuador.	Paraguay.
Bolivia.	Estados Unidos.	Perú.
Brasil.	Guatemala,	Salvador (El).
Costa Rica.	Haití.	Uruguay.
Columbia.	Honduras.	Venezuela.
Chile.	México.	
Dominicana (República).	Nicaragua.	

H. C. PAYNE,
Ministro de Correos.

COMERCIO DE LA GRAN BRETAÑA CON AMÉRICA EL PRIMER TRIMESTRE DE 1902.

Los “Informes relativos al tráfico y navegación del Reino Unido,” publicados en marzo de 1902, contienen los siguientes datos referentes al comercio de la nación antedicha con las demás de América. Todos estos datos están comparados con los del mismo primer trimestre de 1900 y de 1901.

ESPAÑA Y LA AMÉRICA ESPAÑOLA.

Un despacho cablegráfico dirigido al London Times, fechado en Madrid el 11 de marzo de 1902, dice que el Ministro de Relaciones Exteriores había anunciado que el Gobierno español, aprovechando la presencia en México de los Delegados de todos los países hispano-americanos, dió instrucciones á su representante en dicha capital mexicana para que hiciese las gestiones debidas á fin de celebrar tratados de arbitraje entre España y los mencionados países, y que de conformidad con estas instrucciones, el Marqués de Prat, Ministro Español en México, había firmado tratados á ese efecto con la República Argentina, Bolivia, Colombia, Guatemala, México, Paraguay, Salvador, Santo Domingo y Uruguay.

Mediante estos tratados, se ha convenido que todas las controversias que surjan entre España y los expresados países, se han de someter á arbitraje, y que el árbitro ha de ser el jefe de una República hispano-americana ó un tribunal compuesto de Españoles ó de Hispano-Americanos, “á fin de dar mayor relieve á la solidaridad de intereses que existe entre todas las ramas de la raza española.” Únicamente en los casos en que no se haya podido llegar á un acuerdo en cuanto á dicho árbitro, se someterán las cuestiones al Tribunal de La Haya.

El Ministro agrega que pronto se celebrarán tratados análogos con Costa Rica, Honduras, Perú y Venezuela.

REPÚBLICA ARGENTINA.

COMERCIO CON LOS ESTADOS UNIDOS EN 1901.

El Cónsul General de la República Argentina en Nueva York ha compilado varios datos, que ponen de manifiesto el comercio entre su país y los Estados Unidos de América en el año de 1901.

Se ve por esos datos que en el año que acaba de nombrarse salieron de los Estados Unidos de América con destino á Buenos Aires y otros puertos argentinos, 70 vapores y 190 buques de vela, de capacidad los primeros de 128,340 toneladas, y los segundos de 172,238 toneladas, cargados de mercancías americanas.

Este movimiento en detalle fue como sigue:

Puertos.	Vapores.		Buques de vela.	
	Número.	Tonelaje.	Número.	Tonelaje.
Nueva York.....	54	106,569	21	15,642
Apalachicola.....			6	3,722
Baltimore.....	2	3,081	1	698
Boston.....			21	19,209
Brunswick.....	1	1,395	4	2,262
Mobile.....	3	3,604	36	32,554
Norfolk.....	4	5,537		
Pascagoula.....	4	5,696	43	39,258
Pensacola.....			42	43,345
Philadelphia.....	2	2,458	2	2,157
Portland.....			10	7,182
Savannah.....			6	6,209
Total.....	70	128,340	192	172,238

El aumento en las exportaciones de los Estados Unidos para la República Argentina, de 1893 á 1901, se muestra por la siguiente tabla:

Años.	Número de buques.	Tonelaje.	Años.	Número de buques.	Tonelaje.
1893.....	188	150,524	1898.....	244	237,672
1894.....	191	176,956	1899.....	258	280,881
1895.....	179	181,582	1900.....	249	252,988
1896.....	235	213,078	1901.....	262	301,298
1897.....	190	184,155			

Las exportaciones de la República Argentina para los Estados Unidos de América, en 1901, se efectuaron por medio de 22 vapores y 60 buques de vela, de capacidad los primeros de 40,010 toneladas y los segundos de 40,223.

El siguiente cuadro muestra en detalle ese movimiento:

Buques procedentes de la República Argentina.

Destino.	Vapores.		Buques de vela.	
	Número.	Tonelaje.	Número.	Tonelaje.
New York.....	20	36,548	26	16,985
Boston.....	1	1,600	25	17,197
Philadelphia.....	1	1,862	9	6,041
Total.....	22	40,010	60	40,223

Comparado este comercio con el de los años anteriores desde 1893, resulta lo que sigue:

Años.	Número de buques.	Toneladas.	Años.	Número de buques.	Toneladas.
1893.....	72	53,002	1898.....	70	59,572
1894.....	77	74,220	1899.....	64	58,879
1895.....	108	95,483	1900.....	75	57,972
1896.....	68	54,986	1901.....	82	80,233
1897.....	65	88,280			

Recapitulando los datos que anteceden se encuentra que en 1901 salieron de los Estados Unidos de América para puertos de la República Argentina 262 buques, de una capacidad total de 301,290 toneladas, y que de los puertos argentinos vinieron para los Estados Unidos de América 82 buques con una capacidad total de 80,233 toneladas; ó que el comercio total entre los dos países requirió el uso de 344 buques, con capacidad total de 381,531 toneladas.

La tabla que sigue pone de manifiesto ese comercio entre los dos países desde 1893 hasta 1901, ambos inclusive:

Años.	Número de buques.	Toneladas.	Años.	Número de buques.	Toneladas.
1893.....	311	212,048	1898.....	314	297,244
1894.....	268	251,276	1899.....	322	339,760
1895.....	287	276,565	1900.....	324	310,960
1896.....	303	268,064	1901.....	344	381,531
1897.....	275	272,435			

El valor total de las exportaciones de los Estados Unidos de América, para la República Argentina en 1901, se elevó á la cifra de \$13,174,140. La siguiente tabla muestra los puertos de donde salieron las mercancías, y el destino y valor de estas:

Puertos de salida.	Puertos de destino.	Valor.	Puertos de salida.	Puertos de destino.	Valor.
New York.....	Buenos Aires.....	\$9,141,620	Norfolk.....	Buenos Aires.....	19,382
	Rosario.....	1,603,867		La Plata.....	7,029
	Ensenada.....	6,223	Pascagoula.....	Buenos Aires.....	245,181
Apalachicola.....	Buenos Aires.....	16,293		Rosario.....	100,333
	Rosario.....	4,712		Bahía Blanca.....	49,709
Baltimore.....	Buenos Aires.....	19,027	Pensacola.....	Buenos Aires.....	335,687
	La Plata.....	11,687		Rosario.....	50,775
	Ensenada.....	467,129	Philadelphia.....	Buenos Aires.....	48,812
Boston.....	Buenos Aires.....	382,608	Portland.....	do.....	43,974
	Rosario.....	112,528		Rosario.....	21,039
Brunswick.....	Buenos Aires.....	29,490		Bahía Blanca.....	38,609
	Rosario.....	5,971	Savannah.....	Buenos Aires.....	91,541
	Bahía Blanca.....	17,500			
Mobile.....	Buenos Aires.....	222,682	Total.....		13,174,140
	Rosario.....	99,732			

Las exportaciones de los Estados de América para la República Argentina, de 1896 á 1901, ambos años inclusive, fueron como sigue:

1896.....	\$8,361,195	1899.....	\$12,378,866
1897.....	5,942,912	1900.....	14,852,813
1898.....	8,066,573	1901.....	13,174,140

Las exportaciones de la República Argentina para los Estados Unidos de América en 1901 llegaron en valor á \$9,950,862, como se ve por la siguiente tabla:

Artículos.	Cantidad.	Valor en oro.	Destino.
Lana, primera clase	libras.. 1,532,358	\$151,810	New York.
Id.	do. 13,633,118	1,267,636	Boston.
Segunda clase	do. 274,686	26,370	New York.
Tercera clase	do. 1,037,658	78,251	Do.

Total	do.	9,950,862	

La siguiente tabla da el valor de las exportaciones de la República Argentina para los Estados Unidos de América de 1894 á 1901, ambos años inclusive:

1894	\$4,170,986	1898	\$5,723,969
1895	11,206,865	1899	6,164,961
1896	7,072,825	1900	8,441,495
1897	14,759,730	1901	9,950,862

CAMBIOS EN LA LEY DE ADUANAS.

Por disposiciones publicadas en el “Boletín Oficial,” enero 31 de 1902, se han hecho los siguientes cambios en la Legislación de Aduanas:

1°. “Las mercaderías y productos sujetos al pago de derechos de importación por la ley de Aduana, que están gravados con un impuesto de 10 por ciento ó más, abonarán un impuesto adicional de 2 por ciento sobre el valor.”

2°. “Además del impuesto adicional de 2 por ciento establecido por el artículo anterior, todas las mercaderías y productos sujetos al pago de derechos de importación por la ley de Aduana, pagarán otro impuesto adicional de 5 por ciento.”

3°. “Los derechos pagaderos en oro serán satisfechos en oro efectivo ó en moneda de curso legal al tipo de cotización.”

4°. “El impuesto adicional de 5 por ciento se hará efectivo desde el día 1° de febrero de 1902 inclusive.”

5°. “Queda fijado el tipo de 235 por ciento, para el cobro en moneda de curso legal, de los derechos que deben pagarse en oro, empezando el 1° de febrero próximo y continuando hasta nueva orden del Ministerio de Hacienda.”

COMUNICACIÓN POR FERROCARRIL CON BOLIVIA.

La Comisión de ingenieros enviada por el Gobierno argentino para examinar los respectivos méritos de las rutas rivales de Humahuaca y Vía del Toro para la construcción de un ferrocarril argentino-boliviano, ha dado su dictamen en favor de la ruta de Humahuaca. La principal objeción que se había hecho contra esta ruta consistía en las dificultades que presenta su región volcánica; pero la Comisión estima que esas dificultades pueden orillarse construyendo un tunel que perfore el Volcan.

Nada se ha decidido todavía con respecto al método de tracción, pero el Ingeniero en Jefe es de parecer que puede usarse fácilmente la electricidad, aprovechando para ello las aguas del río Humahuaca, que presenta una serie de cascadas, y es capaz de desarrollar una fuerza de 10,000 caballos en cada una.

BOLIVIA.

EXPORTACIONES É IMPORTACIONES EN EL PRIMER SEMESTRE DE 1901.

El “Boletin de la Oficina Nacional de Inmigración y Estadística” para el mes de febrero de 1902, publica algunos datos relativos á los importaciones y exportaciones de la República en el primer semestre de 1901. Las importaciones fueron 22,714,351 kilos de mercancías, por valor según factura de 7,167,472.84 bolivianos (\$2,960,166.28); y las exportaciones llegaron á 53,614,446 kilos, avaluadas en 18,037,644.04 bolivianos (\$7,449,546.99), lo que representa un exceso de las exportaciones sobre las importaciones de \$4,489,389.71. El total de las importaciones y exportaciones en el semestre llegó á 76,328,797 kilos de mercancías, valuadas en 25,205,116.88 bolivianos (\$10,409,713.27). La siguiente tabla muestra las importaciones y exportaciones arregladas por países:

Países.	Importaciones.		Exportaciones.		Total.	
	Cantidad.	Valor.	Cantidad.	Valor.	Cantidad.	Valor.

Un resumen general de las importaciones muestra que fueron como sigue:

	Cantidad.	Valor.
	<i>Kilos.</i>	<i>Bolivianos.</i>
Mercaderías	20, 035, 529	5, 970, 836. 00
Bebidas	2, 460, 710	751, 457. 49
Drogas	133, 995	139, 054. 12
Artículos varios	83, 317	4, 290. 33
Animales vivos	301, 835. 00
Total	22, 714, 351	7, 167, 472. 84

Un resumen de las exportaciones muestra que fueron como sigue:

	<i>Bolivianos.</i>
Productos minerales	11, 556, 593. 82
Productos de la agricultura	6, 073, 309. 14
Productos de las manufacturas	222, 965, 35
Ganado y productos de ganadería	154, 736. 70
Productos varios	330, 039. 03
Total	18, 037, 644. 04

Otro análisis de estos productos según su procedencia da el resultado siguiente:

	<i>Bolivianos.</i>
Territorio nacional de colonias	5, 393, 703. 27
Departamento de Potosí	5, 489, 708. 02
Departamento de Oruro	5, 230, 720. 84
Departamento de La Paz	1, 724, 955. 94
Departamento de Chuquisaca	112, 324. 10
Departamento de Cochabamba	77, 083. 63
Departamento de Santa Cruz	87, 544. 80
Departamento de Tarija	11, 603. 44
Total	18, 037, 744. 04

Las exportaciones en el semestre, arregrladas por artículos, fueran como sigue:

DERECHOS DE EXPORTACION.

Según un extracto de las leyes vigentes, publicado en la "Revista Comercial é Industrial" de La Paz, el erario cobra los siguientes impuestos sobre la exportación de productos bolivianos.

PLATA.

Sobre la exportación de pastas se cobra 50 centavos por marco.

Sobre exportación de minerales se cobra el impuesto con arreglo á la siguiente escala:

	Centavos.
De 1 á 50 marcos por cajón.....	por marco... 30
De 51 á 100 marcos por cajón.....	do... 35
De 101 á 150 marcos por cajón.....	do... 40
De 151 á 200 marcos por cajón.....	do... 45
De 201 á 250 marcos por cajón.....	do... 50
De 251 á 300 marcos por cajón.....	do... 55
De 301 á 350 marcos por cajón.....	do... 65
De 351 á 500 marcos por cajón.....	do... 75

Los sulfuros, ejes ó régulos beneficiados en el país, pagan 40 centavos.

Las pastas que se internan á la Casa de Moneda no están sujetas al pago de impuestos.

COBRE—ESTAÑO—BISMUTO.

El impuesto sobre su exportación es como sigue:

		Bolivianos.
Barrilla de cobre	por 46 kilos..	1.00
Estaño en barra	do.....	.80
Bismuto	do.....	2.50

GOMA.

Paga el impuesto de exportación en esta forma:

		Bolivianos.
Goma fina	por kilo..	0.16
Goma ordinaria ó Sernamby	do.....	.10
Cauchú	do.....	.08

Exceptúase la goma que se extrae de la Provincia de Velasco, Departamento de Santa Cruz, que paga así:

		Bolivianos.
Goma fina	por kilo..	0.12
Goma ordinaria ó Sernamby	do.....	.06

BRASIL.

EL NUEVO VAPOR AMAZONAS.

El vapor más grande que jamás ha navegado en el Támesis y en el Canal de Saverna, en Inglaterra, lo botó al agua en Bremescombe, Stroud, una casa constructora de buques. Á este vapor se le puso el nombre de "Islandia" y se destina al transporte de carga y pasajeros en el río Amazonas. Este buque es de acero y de hélice, tiene 72 pies de largo, y una capacidad total de 1,400 pies cúbicos. Dos camarotes, que tiene en la cubierta del combés, pueden alojar 12 personas. El buque se maneja desde la cubierta de paseo por medio de un engranaje poderoso. Está provisto de aparatos especiales para sacar el agua que pueda entrar en el casco durante los huracanes que suelen tener lugar en el Amazonas.

REGLAMENTO CONSULAR.

El día 19 de febrero de 1902, el Ministro de Relaciones Exteriores, envió una circular á los Cónsules brasileros, llamando su atención hacia el Reglamento consular que exige que se den informes anuales y trimestrales sobre el comercio y la navegación entre el Brasil y los países extranjeros. En la circular se expresa que muchos Cónsules, no envían estos informes, y algunos que efectivamente lo han hecho, no los preparan de acuerdo con el Reglamento consular ó no los envían dentro del plazo prescrito. Los informes trimestrales deben darse el día 1° del segundo mes del trimestre siguiente, á más tardar. En las tablas de importaciones y exportaciones agregadas á estos informes, el

valor de las mismas deberá expresarse en la moneda corriente del Brasil y el del país de origen, y deberá compararse con el del trimestre anterior.

Los informes anuales deberán presentarse antes del 31 de mayo. Dichos informes han de contener una relación detallada del comercio y la navegación entre el Brasil y otros países, y deberán prepararse en conformidad con los artículos 273 y 275 de las leyes consulares. Los Cónsules, en sus informes anuales, deberán hacer un resumen de sus principales actos oficiales relativos al comercio y la navegación, y dar también todas los informes posibles dar relacionados con la inmigración y colonización.

UNA CERVECERÍA EN PARÁ.

El Señor Don ANTONIO BEZERRA, Miembro Correspondiente Honorario de la Oficina de las Repúblicas Americanas en Pará, anuncia desde dicho lugar que un sindicato francés ha obtenido la concesión que se le había hecho á una Compañía organizada en Pará para llevar á cabo el establecimiento de una cervecería. Los trabajos de esta ya están muy adelantados, y el expresado sindicato espera que en septiembre de 1902 esté trabajando. Se espera, asimismo, que esta cervecería realizará pingües ganancias dentro de poco tiempo. Las acciones que se vendieron á 10 milreis cuando la Compañía se organizó, se venden en la actualidad á 50 milreis, y se cree que llegarán á venderse á 100 milreis tan luego como todo esté terminado.

COLOMBIA.

AUMENTO EN LA TARIFA POSTAL.

Según decreto número 157 bis, de 29 de enero último, regirá desde el 1 de marzo de 1902, una nueva tarifa para el servicio con los países de la Unión Postal Universal:

Cartas francas, 20 centavos, por cada 15 gramos ó su fracción; las dirigidas al Ecuador y Venezuela por vía de Ipiales ó de Cúcuta, ó cualquiera otra que no sea puerto marítimo, 10 centavos; cada tarjeta postal sencilla, 5 centavos; tarjetas postales dobles ó de respuesta pagada, 10 centavos; impresos, 4 centavos por cada 50 gramos ó su fracción (no se admiten paquetes que pesen más de 2,000 gramos, ó que tengan por alguno de sus lados una dimensión de 45 centímetros, ó que estén acondicionados de manera que no puedan examinarse sin romper las cajas ó cortar las cuerdas); muestras, 6 centavos por cada paquete que pese de 1 á 50 gramos, y de ahí en adelante, 4 centavos por cada 50 gramos ó fracción (no se admiten objetos que tengan valor comercial alguno y que pesen más de 350 gramos, ó que tengan más de

20 centímetros de largo y 10 de espesor ó ancho); papeles de negocios, 12 centavos por cada paquete que pese de 1 á 50 gramos, y de ahí en adelante, á razón de 4 centavos por cada 50 gramos ó fracción; los pliegos de autos en asuntos civiles y criminales son considerados como papeles de negocios, y no se admiten paquetes que pesen más de 2,000 gramos, ni que tengan por alguno de sus lados una dimensión mayor de 45 centímetros; derechos de recomendación, comprendido el derecho de un recibo de depósito, sea cual fuere su clase, peso ó dimensión, 20 centavos por cada objeto; derechos de aviso de recibo, 10 centavos por cada objeto recomendado.

La correspondencia para los países extraños á la Unión Postal Universal paga: cartas francas, por cada 15 gramos ó fracción, 50 centavos; tarjetas postales no se admiten; impresos, 10 centavos por cada 50 gramos ó fracción; muestras, 10 centavos de 1 á 50 gramos, y de ahí en adelante, 4 centavos por el mismo peso (no se admiten objetos que tengan valor comercial y que pesen más de 350 gramos ó que tengan más de 20 centímetros de largo y 10 de espesor ó ancho); papeles de negocios, 15 centavos de 1 á 50 gramos, y de ahí en adelante, á razón de 4 centavos; pliegos de autos en asuntos civiles y criminales, considerados como papeles de negocios (no se admiten paquetes que pesen más de 2,000 gramos ni que tengan por alguno de sus lados una dimensión mayor de 45 centímetros); derechos de recomendación, comprendiendo el derecho de un recibo de depósito, sea cual fuere su clase, peso ó dimensión, 20 centavos por cada objeto (no se admite ninguna clase de correspondencia que no esté porteadada totalmente).

La correspondencia del interior pagará: cartas francas, 10 centavos por cada 15 gramos ó fracción; tarjetas postales sencillas, 5 centavos; tarjetas postales dobles ó con respuesta pagada, 10 centavos; periódicos, 2 centavos por cada 50 gramos ó fracción; impresos, no periódicos, 4 centavos por cada paquete de 50 gramos ó fracción de ellos; papeles de negocios, 10 centavos hasta el peso de 50 gramos, y de ahí en adelante, 4 centavos; muestras, 5 centavos hasta 100 gramos, y de ahí en adelante, 4 centavos; derechos de recomendación, 20 centavos por cada paquete, sea cual fuere su precio, contenido ó dirección; derechos de aviso de recibo, 10 centavos por cada objeto recomendado; expedientes ó pliegos de autos en asuntos civiles, 10 centavos por cada 15 gramos ó fracción; valores declarados, 20 centavos desde \$10 hasta \$100; servicio postal férreo, 5 centavos por carta, sea cual fuere su peso, hasta la respectiva estación; servicio postal fluvial, 10 centavos por cada carta, sea cual fuere su peso hasta donde toquen los vapores.

Servicio urbano.—Cartas francas, 5 centavos por cada 15 gramos ó fracción; impresos de todas clases, 2 centavos por cada 50 gramos ó fracción.

Por servicio de apartado se depositarán al tomar la cajilla y recibir las llaves, \$15; derechos de uso con cerradura, mensuales, \$1; derechos

de uso sin cerradura, \$0.50. El derecho debe pagarse anticipadamente, y se cuenta del primero al último de cada mes.

CAMBIOS EN EL ARANCEL DE ADUANAS.

Según informe transmitido al Departamento de Estado de los Estados Unidos de América por el Señor OSCAR MALMROS, Cónsul de los mismos en Colón, informe que lleva la fecha de 25 de marzo de 1902, el Gobierno de Colombia ha dispuesto que se haga un recargo de 50 por ciento á los derechos de importación aduados por toda clase de mercancías, excepto el alcohol y el ron; ó en otras palabras, que el derecho de 20 por ciento ad valorem que hasta ahora estaba señalado por el Arancel se aumente á 30 por ciento.

El derecho sobre el ron y el alcohol ha sido reducido como sigue:

Por cada litro de alcohol de graduación que no pase de 42° del areómetro de Cartier, 50 centavos.

Por cada litro de alcohol de mayor graduación que 42° Cartier, 100 centavos.

Por cada litro de ron de graduación que llegue hasta 21° del mismo areómetro, 50 centavos.

Los derechos son pagaderos en moneda de plata.

El oro estaba á la fecha del informe á un premio de 150 por ciento.

RECARGO POR DEMORA DEL PAGO DE DERECHOS DE IMPORTACIÓN.

Por decreto No. 1016 de agosto de 1901, se dispone lo siguiente:

“ARTÍCULO ÚNICO. Toda cuenta por derechos de importación, cuyo valor no sea cubierto dentro de los ocho días que señala el artículo 146 del Código Fiscal, tendrá un recargo de 10 por ciento, que se tendrá como contribución de guerra, sin perjuicio del cobro de los intereses sobre el valor principal y sobre dicho recargo.”

ESTADOS UNIDOS.

COMERCIO CON LA AMÉRICA LATINA.

IMPORTACIONES Y EXPORTACIONES.

En la página 1211 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los Estados Unidos. Estos datos se refieren al valor del comercio arriba mencionando. La estadística corresponde al mes de marzo de 1902, comparada con la del mes correspondiente del año anterior, y también

comprende los datos referentes á los nueve meses que terminaron en marzo de 1902, comparados con igual período de 1901. Debe explicarse que la estadística de las importaciones y exportaciones de las diversas aduanas referente á un mes cualquiera, no se recibe en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de marzo, por ejemplo, no se publican sino en mayo.

AUMENTO EN EL CONSUMO DEL ACEITE DE CARBÓN COMO COMBUSTIBLE.

En el diario de Nueva York titulado "New York Commercial" se publica una carta de San Francisco, fechada el 25 de abril de 1902, en que se dice que desde el mes de mayo de 1899 hasta aquella fecha, se habían concedido en la ciudad últimamente nombrada, 150 licencias para usar como combustible el aceite de carbón. Estas licencias se concedieron á diversas clases de personas, que estaban acostumbradas á consumir carbón de piedra en grandes cantidades, tales, por ejemplo, como dueños ó directores de establecimientos fabriles, administradores de empresas de ferrocarriles urbanos, ó de otra clase, dueños de hoteles, propietarios de edificios destinados para oficinas, etc. Cada establecimiento fabril de San Francisco, que anteriormente consumía 10 toneladas diarias de carbón de piedra, y muchos otros que consumían menos cantidad, están usando ahora con preferencia el aceite de carbón.

Este constante movimiento de ascenso se nota también en los ferrocarriles que recorren el Estado de California, en los botes de vapor que cruzan de una á otra las orillas de los ríos, puertos, etc., y en algunos casos en los vapores costeros, y no es improbable que andando el tiempo se use también este combustible para vapores destinados á hacer largos viajes. Se dice que el Japón está hoy usando aceite de carbón en algunas de las locomotoras del país. Una Comisión de peritos en el ramo, enviada á los Estados Unidos por el Gobierno japonés con el objeto de estudiar la formación geológica de los terrenos donde se encuentra este aceite y las condiciones generales de aquellos, se ocupa de descubrir si será ó no posible encontrar en el Japón formaciones análogas. Si no se encuentran, California encontrará en el Japón un buen mercado para disponer del excedente de su aceite de carbón.

En un Informe presentado á la Institución Británica de Arquitectos Navales se dice lo siguiente:

"Las cifras resultantes de la comparación, prácticamente hecha, entre el carbón de piedra y el aceite de carbón como combustible, acusan que 2 toneladas en peso de aceite de carbón equivalen á 3 toneladas en peso de carbón de piedra, y que 36 pies cúbicos de aceite equivalen á 67 de carbón de piedra, que es el volumen usualmente

almacenado en los barcos. De aquí resulta que si se efectuase el cambio en un buque de guerra en actual servicio, ó se le introdujese en el plan de alguno otro que esté en construcción, se notaría una gran ventaja.

“La necesidad de proteger el carbón que llevan los cruceros, sean cuales fueran las ventajas que de esa protección se deriven, desaparecerá con el uso de un combustible líquido, que podrá estar almacenado debajo de la línea de agua, si no todo, á lo menos en su mayor parte.

“El número de tripulantes tendría también que reducirse. Las dificultades con que siempre se tropieza al proveerse en el mar del combustible agotado, desaparecerían casi totalmente, porque el aceite de carbón puede ponerse á bordo de un buque de guerra, en alta mar, en tiempo bueno, sin trabajo extraordinario, valiéndose de bombas.

“Por otra parte, cuando se quema el combustible líquido en aparatos á propósito y bien acondicionados, no se produce humo alguno.

“El costo del combustible líquido resultó menor en el Oriente que el del carbón de Gales, cuando al precio de éste, en un puerto del Principado, se unieron los gastos de transporte y los derechos de pasaje por el canal de Suez.

“La gran ventaja comercial del combustible líquido consiste, sin embargo, realmente, en que permite por su menor volumen, mayor espacio para el cargamento. Si 3 toneladas de carbón de piedra ocupan el mismo espacio que 2 de aceite de carbón, resulta que un vapor de primera clase de los que atraviesan el océano podría recibir como 1,000 toneladas más de carga, disfrutando además de otras ventajas.

“La operación de tomar á bordo el aceite es también mucho más limpia que la de tomar el carbón. Puede además practicarse en menos tiempo.

“Los fuegos hechos con aceite no requieren las limpiezas que exigen los de carbón, y evitan en viajes ordinarios que se disminuya la velocidad. Muchas partes de un buque que hasta ahora se han tenido por inútiles, como no sea para lastrar con agua, ó para guardar una provisión de agua dulce, etc., y que no pueden en modo alguno usarse para carboneras, pueden servir con gran ventaja para depositar el aceite.”

El “Lloyd’s Register” ha publicado un Reglamento para el uso de los barcos que deseen adoptar para su consumo el combustible líquido.

SERVICIO DE VAPORES POR EL PACÍFICO.

Las mayores facilidades introducidas en el servicio de los vapores entre el puerto de San Francisco y los de las diferentes Repúblicas hispano-americanas que están al mismo lado de este hemisferio, han tenido por resultado como era natural que en el corto espacio de los dos últimos años, el comercio de la costa del Pacífico se haya cuadru-

plicado. Antes de 1901 las exportaciones de San Francisco para la América del Sur nunca pasaron, en valor, del término medio de \$500,000 por año; pero en 1901 las exportaciones se han elevado hasta el valor de \$2,000,000.

Las empresas de navegación estimuladas por este resultado han aumentado su actividad, y el resultado es que en el día se encuentran cinco compañías de vapores dedicadas al tráfico en la costa antedicha. La línea del Kosmos, que es alemana, tiene 25 grandes vapores, que dan viajes entre los principales puertos de México, Centro América y la América del Sur, y ciertos puertos de Italia y el de Hamburgo. La Compañía de Navegación por Vapor del Pacífico (*Pacific Steam Navigation Company*) tiene 38 grandes vapores, que viajan de San Francisco á todos los puertos hispano-americanos del lado del Pacífico. La Compañía Sudamericana de Vapores hace el servicio entre San Francisco y Valparaiso, tocando en puertos intermedios. La nueva línea inglesa-americana (*British-American Line*) tiene vapores entre San Francisco y El Callao, haciendo escala en los puertos intermedios. Y hay además la antigua y conocida Compañía de la Mala del Pacífico (*Pacific Mail Company*), que hace el servicio á lo largo de aquella costa.

GUATEMALA.

DECRETO ESTABLECIENDO IMPUESTOS SOBRE EL AZÚCAR.

PALACIO DEL PODER EJECUTIVO,
Guatemala, 26 de febrero de 1902.

El Presidente Constitucional de la República acuerda:

Que como lo establece la Tarifa de Aduanas, en la forma dispuesta para percibir los derechos de importación, el azúcar que del exterior se introduzca al país por las Aduanas marítimas ó Receptorías fronterizas, pague los siguientes derechos, desde el día 1° del próximo mes de marzo, salvo en los casos en que por tratados recíprocos, esté declarada libre de derechos su importación.

MÉXICO.

MENSAJE DEL PRESIDENTE.

AL ABRIRSE EL CUARTO PERÍODO DE SESIONES DEL 20° CONGRESO DE
LA UNIÓN EL 1° DE ABRIL DE 1902.

* * * * *

En lo que concierne á nuestras Relaciones Exteriores ha habido, en
el período á que este Informe se refiere, acontecimientos extraordi-

narios, cuyo efecto ha sido la extensión de las relaciones amistosas entre México y las demás Repúblicas del Nuevo Mundo, así como la consolidación del buen crédito de nuestra patria.

Como estaba anunciado, la Conferencia Internacional Americana se reunió en esta ciudad el 22 de octubre último, y desde luego emprendió sus importantes labores, que se prolongaron hasta el 31 de enero. En ella tuvo parte muy activa la Delegación Mexicana, compuesta de nueve miembros, que supieron distinguirse por su inteligencia, laboriosidad y el tacto con que llevaron adelante, en cada caso, las instrucciones que oportunamente recibieron. De esos trabajos en particular, tomaréis conocimiento por las publicaciones que ya se han hecho, de las resoluciones, recomendaciones y tratados que parcialmente, en su mayoría, ó por unanimidad firmaron los Delegados á la Conferencia.

Se están ya, además, publicando las actas de las sesiones de dicha asamblea y el Diario de sus debates, todo ello en tres de las lenguas oficiales que se hablan en América. Lo que, sin duda, llamará especialmente vuestra atención entre esos importantes acuerdos, ninguno de los cuales carece de grave trascendencia, es el tratado de arbitraje obligatorio suscrito por los Delegados de nueve Repúblicas, ó sea la mayoría de las que á lo último se hallaban representadas en la asamblea; la adhesión á los principios proclamados en el justamente llamado Congreso de la Paz, reunido en El Haya en 1899, y la convención firmada por todos los Delegados para sujetar á un arbitraje los casos de reclamación de un gobierno por daños y perjuicios causados á sus nacionales. Este último convenio, que será remitido al Senado con los demás que importen obligaciones internacionales, tendrá notables consecuencias, siempre que sea ratificado por los principales Gobiernos cuyos representantes lo han suscrito.

El efecto general, con respecto á México, producido por la Segunda Conferencia Pan-Americana, no puede menos de ser favorable á las relaciones que nos ligan con las naciones de América y al buen nombre de nuestra República; y los esfuerzos que hizo el Gobierno General para recibir dignamente á las delegaciones respectivas, ayudado por los Gobiernos de algunos Estados, que en excursiones convenientemente arregladas fueron visitados por aquéllas, produjeron el fruto que se esperaba para dar á conocer á nuestro país y satisfacer los deseos de nuestros distinguidos huéspedes.

Decretada por el Congreso de los Estados Unidos de América la devolución á México del saldo de las reclamaciones fraudulentas de Weil y La Abra que aquel Gobierno había distribuido, nuestro Embajador en Wáshington recibió la suma correspondiente, tomada de aquel erario, que permanecía depositada en el Departamento de Estado desde que cubrimos el importe de ambas reclamaciones.

Se ha creído de alta conveniencia y por lo mismo se inicia el establecimiento de otra legación en Sud América, á fin de que haya dos, una

para las Repúblicas del Atlántico y otra para las del Pacífico, cuya residencia será alternativamente en Chile y el Perú.

Concluidos ya dos tratados de amistad y comercio, uno con el Paraguay y el otro con Bolivia, así como dos convenciones postales, la una con esta última nación y la otra con la República de Chile, se remiten esos convenios al Senado para los efectos constitucionales.

Á propuesta de la Legación de España, celebróse con esa nación un tratado de arbitraje obligatorio muy comprensivo y conforme al cual será el árbitro en cada caso, ó el tribunal internacional establecido en El Haya, ó bien un Presidente de una República hispano-americana. Dicho tratado y una convención también con España para facilitar la ejecución de los exhortos judiciales del uno al otro país, dispensando el requisito de las legalizaciones á documentos enviados por la vía diplomática, serán remitidos desde luego al Senado para su revisión constitucional.

* * * * *

Invitado el Gobierno de México para nombrar delegados que lo representaran en el Congreso Sanitario Internacional que se reunió en la Habana en el mes de febrero último, y aceptada desde luego la invitación, el Ejecutivo nombró una comisión que concurrió á aquella asamblea, en la que se ha llegado á conclusiones muy favorables para todos los países americanos en lo relativo á policía sanitaria internacional.

* * * * *

El Ayuntamiento de México continúa con empeño las obras emprendidas para el embellecimiento de la ciudad y mejora de algunos de sus servicios. Últimamente ha celebrado un nuevo contrato para la pavimentación de veinticinco calles más con lámina de asfalto; ha llevado á efecto la reconstrucción y ampliación de varios de los edificios destinados para mercados, y ha adquirido diversas fincas para la construcción de otros nuevos que el constante aumento de la población hace indispensables.

Las obras de saneamiento de la capital, á lo menos en la parte contratada con la Empresa, pueden darse por terminadas; pues apenas faltan algunas obras secundarias y de perfeccionamiento, que se concluirán dentro de algunos días.

* * * * *

La ley del notariado fué promulgada en diciembre último, después de una meditada elaboración, por los muchos y graves problemas que entrañaba el organizar tan interesante materia dentro de los principios y conceptos que le son propios. Al poner en práctica el precepto que ordena la incorporación del Registro de Hipotecas al Registro Público de la Propiedad, se presentaron serias dificultades originadas por la necesidad que había de llevar esa operación á cabo sin suspender el despacho ni lastimar los intereses del público. Á la fecha están ven-

cidas esas dificultades, y tanto la institución del notariado como la Sección de Hipotecas siguen un curso fácil.

* * * * *

El Ejecutivo ha recibido formal invitación para que México esté representado en el próximo Congreso Internacional de Americanistas que ha de efectuarse en Nueva York en octubre próximo, y en el décimo-cuarto Congreso de Medicina que ha de tener efecto en Madrid, en abril del año venidero. Una y otra de estas invitaciones han sido aceptadas, y oportunamente se nombrarán representantes oficiales, para continuar realizando el propósito de estrechar los vínculos intelectuales que México tiene con otros países.

* * * * *

De acuerdo con las leyes que rigen la propiedad industrial, se expidieron doscientas treinta y una patentes de invención, y se declaró el registro de ciento cuatro marcas de fábrica y de comercio.

* * * * *

Aceptada la invitación que se hizo á la República para su concurrencia al Certamen Internacional que ha de celebrarse en San Louis, Missouri, se ha dado principio á los trabajos relativos.

* * * * *

El desarrollo de la minería se patentiza constantemente por el mayor número de minas que se titulan y por el establecimiento de nuevas haciendas metalúrgicas.

En el primer semestre del presente año fiscal se expidieron mil ochocientos treinta y siete títulos que amparan una superficie de veintinueve mil noventa y cinco hectáreas, esto es, hubo un aumento de más de ciento por ciento con respecto á igual período del año de mil novecientos á mil novecientos uno.

Se celebraron contratos para el establecimiento de haciendas metalúrgicas en el Distrito de Zimapan del Estado de Hidalgo y en el del Fuerte de Sinaloa.

* * * * *

Se han celebrado contratos para el aprovechamiento de aguas en riego y como fuerza motriz en los ríos de Sabinas en Coahuila, Pesquería Chica en Nuevo León, Blanco en Veracruz, Moctezuma en Hidalgo, Turbio en Guanajuato y Soto la Marina en Tamaulipas.

La explotación de terrenos nacionales se contrató en la Isla de Santa Margarita y en una zona del Estado de Tabasco, lo mismo que la extracción de concha-perla en la Islas del Espíritu Santo y Cerralvo y en las costas de la Baja California, y la pesca en los Esteros "Vázquez" y "Ostiones" en la costa del Pacífico.

Fueron terminadas y aprobadas las obras hidráulicas construidas por la Compañía "La Aurora" para aprovechar como fuerza motriz las aguas del río de Cuautitlán.

Comienzan á expedirse permisos para la exploración del subsuelo, en busca de fuentes de petróleo.

* * * * *

En el primer semestre del presente ejercicio fiscal, hubo en el ramo de correos el siguiente movimiento:

Se crearon cuatro administraciones locales, dos sucursales y cuarenta y cinco agencias; siendo por consiguiente dos mil ciento treinta y tres el número de oficinas postales existentes.

Las correspondencias de todas clases han aumentado considerablemente. El movimiento en el primer semestre de este año ha sido de setenta y cuatro millones de envíos, contra setenta y dos millones en el mismo período del año anterior.

Los giros postales interiores ascendieron á dieciseis millones de pesos, contra doce millones en igual período del año anterior.

Los giros postales cambiados entre México y los Estados Unidos, tuvieron un aumento de treinta y siete por ciento sobre el resultado del primer semestre del año fiscal anterior, ó sea un movimiento de trescientos cincuenta y dos mil pesos. De esta cantidad corresponden doscientos cincuenta y dos mil á los giros expedidos en México y ciento dos mil á los girados por los Estados Unidos.

Los productos generales del ramo ascendieron á un millón ciento cincuenta y seis mil pesos y en el período de comparación un millón treinta y nueve mil pesos: aumento de once un cuarto por ciento.

Acerca del ramo de telégrafos, debo informar que se han construido doscientos dieciocho kilómetros de línea; se han cambiado ciento ochenta y cinco de hilo de hierro por de bronce, y se ha hecho una instalación completamente nueva de los hilos federales en las calles de esta capital; habiéndose emprendido, además, una formal reparación de toda la red, para lo cual se han empleado toneladas de alambre de hierro y más de diez de hilo de bronce.

* * * * *

La situación económica del país sigue mejorando visiblemente, y no tardarán en desaparecer las últimas huellas del malestar que en ciertos ramos de la producción nacional se hizo sentir el año pasado.

* * * * *

Nuevas concesiones para el establecimiento de instituciones de crédito se han otorgado en este último período. El Estado de Chiapas tiene ya un primer banco de emisión que ha comenzado sus operaciones, y se ha firmado la concesión para otro en el Estado de Hidalgo. Con estas dos entidades federales, son ya dieciocho las que poseen bancos de emisión.

La Compañía del Ferrocarril de Mérida á Valladolid, con ramal á Progreso, obtuvo del Gobierno una concesión para establecer almacenes generales de depósito en el puerto de Progreso.

* * * * *

Señores DIPUTADOS y SENADORES: Los principales hechos que os acabo de reseñar demuestran que el país continúa en su marcha progresiva, sin dejar por eso de encontrar, como acontece á la humanidad entera, momentáneos tropiezos que retardan sus adelantos. Habreis también notado que el Ejecutivo no desmaya en sus esfuerzos por facilitar ese movimiento civilizador, procurando mejorar en todos sus ramos la administración pública. El impulso debió partir como ha partido, sin duda, del seno del mismo pueblo, animado por la confianza que inspira la paz y el imperio de la ley; mas al Gobierno le corresponde sostenerlo y ayudarlo en la esfera de sus facultades con todos sus elementos, entre los cuales descuella por su eficacia, la sana y bien-hechora influencia de sus legisladores.

EL CULTIVO DEL ARROZ.

El cultivo del arroz ha aumentado muy considerablemente en el Estado de Colima. La producción de 1901 fué de 2,484,000 kilogramos, 2,484 toneladas, que alcanzó un precio de \$10, por término medio, en carga de 138 kilos, lo que representa un valor de \$180,000. En las distintas siembras de arroz establecidas en el Estado, están empleados cerca de 3,000 trabajadores, con un salario que varía entre 25 y 35 centavos al día. Gran parte del arroz de Colima es exportado por el puerto de Manzanillo para San Francisco y otras ciudades de la costa occidental americana.

LOS CUEROS SIN CURTIR.

La exportación de cueros sin curtir de México á los Estados Unidos y Francia ha hecho decrecer tanto la existencia para el consumo local, que los traficantes de la República experimentan grandes dificultades para proveerse de los necesarios para sus respectivas industrias. Como consecuencia de esto, su precio ha subido rápidamente en los mercados de México, Guadalajara, Mazatlán, Chihuahua y Tampico.

Los manufactureros de arneses y otros artículos por el estilo se quejan de la escasez y alto precio de los cueros, y unánimemente atribuyen esto á la exportación.

IRRIGACIÓN EN EL ESTADO DE SONORA.

La Secretaria de Fomento ha celebrado un contrato con el Sr. ANGEL ALMADA, para el aprovechamiento, para riego, de las aguas del río Mayo del Estado de Sonora. En virtud de dicho contrato, el concesionario queda autorizado para aprovechar, con el fin indicado, hasta la cantidad de 10,000 litros de agua por segundo de la expresada corriente, en el trayecto de río comprendido entre un punto llamado "Tierra colorada" y cinco kilómetros hacia arriba de este.

Se otorgan al concesionario las franquicias ordinarias en contratos de esta naturaleza.

SALVADOR.

CAMBIOS EN EL ARANCEL DE ADUANAS.

1. Acuerdo de 18 de octubre de 1901 aclaratorio del decreto de 17 de Mayo de igual año relativo á los sacos que contengan café.

“Habiendo ocurrido dudas con respecto al decreto legislativo de 17 de Mayo de 1901, en que se declara que los sacos que contengan café para la exportación no pagarán derechos ni impuesto alguno, el Poder Ejecutivo, por vía de aclaración, ha acordado: El impuesto de exportación de café se cobrará en las aduanas sobre el peso neto del expresado artículo, y para el efecto los administradores deducirán del peso bruto total el de dos y media libras por cada saco.”

2. Acuerdo de 19 de octubre de 1901 fijando el aforo aplicable á la pita floja de lino ó cáñamo para zapateros:

“Por el presente se acuerda asignar á la pita de lino ó cáñamo para zapateros el aforo de treinta centavos el kilogramo, agregando dicho artículo al No. 21 de la ley respectiva.”

3. Acuerdo de 23 de octubre de 1901 fijando el aforo aplicable á la harina de centeno:

“Por el presente se acuerda asignar el aforo de dos centavos por kilogramo á la harina de centeno, que no está denominada en la tarifa vigente, y agregar dicho artículo al No. 57 de la misma ley.”

3. Acuerdo de 23 octubre de 1901 fijando el aforo aplicable á los calcetines de hilo de Escocia ó sus imitaciones:

“Por el presente se acuerda asignar á los calcetines de hilo de Escocia ó sus imitaciones, que no están denominados en la tarifa vigente, el aforo de un peso cincuenta centavos el kilogramo, agregando dicho artículo al No. 14 de la ley citada.”

5. Acuerdo de 23 de noviembre de 1901 fijando al aforo aplicable á los abanicos ó ventiladores eléctricos:

“Por el presente se acuerda agregar los abanicos ó ventiladores eléctricos, que no están denominados en la tarifa al No. 315 de aquella ley y asignarles el aforo de treinta centavos por kilogramo.”

6. Acuerdo de 1º de enero de 1902 concediendo franquicia temporal de derechos al maíz y á los frijoles

“Por el presente acuerdo se declara libre de derechos é impuestos, durante un año, la introducción del maíz y de los frijoles que se necesitan para el consumo, incluyendo en dicha exención la cuenta de almacenaje.”

7. Acuerdo de 8 de enero de 1902 modificando el aforo aplicable á las cajitas cilíndricas de madera para ungüentos.

“Por el presente se acuerda asignar á las cajitas cilíndricas de madera para ungüentos el aforo de *quince centavos* cuando sean ordinarias, hechas á torno y sin ningún barniz.”

LOS TELÉGRAFOS Y TELÉFONOS.

En el año 1900 según un extracto del informe de 1901 funcionaron 117 oficinas telegráficas en toda la República; en 1901 hubo un aumento de 21 oficinas. El 31 de diciembre funcionaban 138.

Las oficinas telefónicas en 1900 fueron 49, que con el aumento de 12 habido el año próximo pasado, da, en suma, 61 oficinas telefónicas en el país.

Las 199 oficinas de telégrafos y teléfonos fueron servidas por 433 empleados.

La red telegráfica en 1900 medía 2,029 millas, que con el aumento de 69 millas instaladas en 1901, dan 2,098 millas.

La red telefónica en 1900 medía 959 millas, á las que se aumentaron, en 1901, 75 millas, lo que da 1,032 millas de red telefónica actuales.

Las redes telegráfica y telefónica juntas, miden 3,130 millas.

En las 61 oficinas telefónicas funcionan 282 aparatos oficiales y 202 para particulares.

Fueron transmitidos durante el año 1901, 232,819 telegramas oficiales, con valor de \$118,524.37 y 397,310 telegramas de particulares, pagados, con valor de \$79,049.18.

El producto de cablegramas transmitidos por los telégrafos nacionales fue de \$66,797.28, de los cuales tocaron á la compañía \$62,782.04 y al Gobierno le quedó á su favor un sobrante de \$4,015.24.

El cuadro siguiente demuestra el movimiento de caja habido durante el año próximo pasado en la Dirección de teléfonos y telégrafos.

Producto de telegramas pagados.....	\$79,049.18
Producto de teléfonos pagados	35,465.77
Producto de multas	448.21

URUGUAY.

MARCAS DE FÁBRICA Y DE COMERCIO Y PATENTES DE INVENCIÓN.

La renta del año 1900 fué de \$7,835, que corresponden á 86 marcas, 12 privilegios y 17 transferencias concedidas.

La del año 1901 acusa un exceso de 365 sobre la del año anterior, correspondiendo la cifra de \$8,200 alcanzada, á 101 marcas, 13 privilegios y 18 transferencias.

Como se ve, el aumento habido no es importante. Mientras no se reforme la ley vigente moderando convenientemente la tasa de estos impuestos, siempre habrá retrainimiento de parte del comercio y de las industrias, sobre todo de los pequeños negocios, en crear y hacer registrar las marcas y distintivos de sus respectivos giros.

Desde hace dos años se halla á estudio de una Comisión especial nombrada por el Gobierno un proyecto de reformas á la ley vigente, en que se tratan, entre otros, los puntos capitales de las rebajas de los derechos, la patente preventiva para facilitar el esfuerzo del pequeño industrial ó comerciante, hacer obligatorio el registro de las marcas extranjeras en un plazo prudencial, y el procedimiento más sumario para evitar que los falsificadores ó imitadores burlen la acción tardía de la justicia ordinaria, que aplicando los actuales procedimientos generales no reprime suficientemente la estafa habilidosa.

Convendría que la Comisión nombrada activase sus estudios, pues existe urgencia en llevar á la práctica esas reformas ú otras semejantes que son de verdadera utilidad pública.

La interpretación caprichosa, que dan á menudo los corredores ó intermediarios á la ley de 1887 en lo relativo al registro de marcas extranjeras, ha dado origen á más de una resolución del Poder Ejecutivo encaminada como la de fecha de 14 de junio de 1901, á amparar derechos legítimamente adquiridos que no es tolerable sean burlados á la sombra de maquinaciones puestas en juego por la industria de los que crean á su arbitrio marcas extranjeras ó disfrutan fraudulentamente de las que pertenecen á su verdadero dueño.

Por ese decreto, que es lástima sea poco conocido, se dispone con carácter de generalidad que una marca extranjera sólo puede registrarse en el país como tal, exhibiéndose el correspondiente certificado de registro en el país de origen.

En efecto, la ley de 1887 clasifica las marcas de fábrica y de comercio en nacionales y extranjeras. Para determinar las primeras, basta el conocimiento del giro del solicitante, ya que el registro de una marca es un acto comercial que sólo incumbe á las personas que invisten la calidad de comerciante; pero para acreditar la condición de las segundas,

como éstas (las marcas extranjeras) se consideran existiendo en el país de origen y es en tal concepto que se traen á registro aquí, surge la necesidad de probar su existencia legal con el único documento que puede constituir medio probatorio á ese efecto competente del país de procedencia.

Cualquiera otra interpretación de la ley sólo serviría para amparar el fraude, que en este caso consiste en la creación ad libitum de marcas extranjeras que con propósitos de especulación ingeniarían en nuestra plaza personas de todo punto ajenas á la profesión comercial.

El requisito exigido dimanaría necesariamente de la economía misma de la ley y tendrá la virtud de impedir trabajadas contenciones.

Otras resoluciones importantes, que han complementado la obra de la anterior, son las que han puesto en orden todo lo que se refiere á la forma de acreditar la personería invocada por apoderados de pretendidos propietarios de marcas y privilegios extranjeros. En observancia de la buena fe se ha resuelto en diversas ocasiones que los poderes deben venir en forma con todos los requisitos usuales para su inscripción en el Registro General de Poderes.

MINAS DE LA REPÚBLICA.

El Ministerio del Interior suministró al Cónsul de los Estados Unidos de América en Montevideo, los interesantes datos estadísticos que se ponen á continuación, relativos á las minas de oro del Uruguay en 1899, 1900, y 1901.

De las minas Rivera se sacó mineral en 1899 en cantidad de 5,119 toneladas, de las que se extrajeron 61,336 kilogramos, ó 139 libras y dos décimos de oro puro, representando un valor de \$7,500.26.

En 1900 se beneficiaron 7,345 toneladas de mineral de cuarzo, de las que se extrajeron 71,234 kilogramos ó 157 libras, 4 décimos de oro puro.

En 1901 el mineral beneficiado fué 7,183 toneladas, que rindieron 71,946 kilogramos ó 158 libras y 6 décimos de oro puro.

El procedimiento en uso para el beneficio es el denominado del cianuro, con el cual se obtienen hoy mucho mejores resultados que en tiempos anteriores.

Las minas son pequeñas, y en las más de ellas el metal está en la superficie. De los ensayos y experimentos que se han hecho hasta ahora, en doce de las que están en mejor estado de explotación, resulta que el rendimiento varía de 6 gramos y 75 centigramos (104 granos y 15 décimos), á 30 gramos y 79 centigramos (475 granos) de oro por cada tonelada de mineral.

* En 1901 se hicieron 25 nuevos denuncios.

Se ha observado que en muchas de estas minas hay deficiencia de agua, y de ahí proviene en ocasiones considerable retardo en los trabajos.

El Gobierno recibe un tanto por ciento de todo el oro que se extrae. Toda la maquinaria y utensilios de que se hace uso en estas minas se recibe de Francia.

VENEZUELA.

DERECHOS DE IMPORTACIÓN SOBRE EL PAPEL.

El Sr. PLUMACHER, Cónsul de los Estados Unidos de América en Maracaibo, remitió al Departamento de Estado en Washington, con fecha 15 de marzo de 1902, la traducción de dos decretos relativos á los derechos de importación á que está sujeto el papel. Por el primero de ellos se dispone que el papel de seda importado en hojas de 49 centímetros de largo por 36 de ancho, que se usa para copiadore de cartas, etc., se ponga en la clase N°. 3 del arancel, que paga á razón de 0.25 bolívares por kilogramo. Por el segundo se manda que el papel que se designa en la clase N°. 3 del arancel como “no especificado,” sea incluido, si es que lleva impreso ó litografiado algún nombre, sin que obste que se le haya importado para uso particular ó privado, en la clase N°. 5, devengando como efecto de escritorio, á razón de 1 bolivar y 25 céntimos por kilogramo.

RENDIMIENTOS ADUANEROS DE CARÚPANO.

La Aduana de Carúpano produjo en el semestre de julio á diciembre de 1901, la suma de 535,445.24 bolívares por los siguientes conceptos:

	Bolívares.
Por importación.....	344,562. 71
Por bultos postales.....	1,715. 05
Por multas.....	1,592. 10
Por remates.....	2,349. 60
Por intereses.....	127. 04
Por papel sellado.....	2,470. 05
Por impuesto de minas.....	3,117. 74
Total.....	355,934. 29
Mercancías exoneradas para la Compañía Minera de Azufrales y el Consejo Municipal.....	172,007. 60
Total.....	527,941. 89
Por exportación.....	7,503. 35
Total.....	535,445. 24

IMPUESTOS.

En el Estado Sucre se han creado los siguientes impuestos, con carácter de transitorios:

Dos bolívares por cada 50 kilos de cacao que se embarquen para el exterior por los puertos del Estado.

Tres bolívars por cada 50 kilos de harina de trigo que se introduzcan de los Estados Unidos del Norte ó de Europa.

Cinco bolívars por cada carga de aguardiente de caña, de 80 botellas, que produzcan los alambiques del Estado ó que se ofrezcan al consumo.

Estos impuestos comenzaron á regir desde el 23 de marzo.

PRODUCCIÓN DE CORCHO EN EL MUNDO.

Según un periódico oficial francés, la producción anual de corcho en el mundo asciende casi á 1,000 toneladas, y la suministran exclusivamente Portugal, España, Francia, Italia, Argelia, Túnez y Marruecos.

Debido á la falta de datos exactos sobre este asunto, resulta difícil determinar—siguiera sea aproximadamente—el área precisa del terreno que comprenden los árboles de corcho que existen en los países mencionados. Sin embargo, se sabe que los bosques donde con mayor ó menor abundancia se encuentran dichos árboles, comprenden un área como de 600,000 hectáreas en Portugal, 426,000 en Argelia, 300,000 en España, 143,000 en Francia, 82,000 en Túnez y 80,000 en Italia. También puede asegurarse que más de la mitad de los bosques de corcho que se explotan realmente se encuentran en Francia, Argelia y Túnez. Estos bosques se componen principalmente de robles de corcho mezclados con robles de pino y robles verdes. Sin embargo, en la Krumiria oriental todavía se encuentran importantes bosques vírgenes de árboles de corcho que si se explotaran aumentarían considerablemente la producción.

La demanda de corcho se aumenta constantemente, y no cabe duda de que por mucho que la producción se aumente, en seguida encontrará compradores, sobre todo las mejores clases de corcho. En la actualidad, Francia, el Reino Unido, Alemania, Rusia y los Estados Unidos absorben como un 85 por ciento de la cantidad total que se consume anualmente en el mundo.

Alemania, Rusia y los Estados Unidos imponen derechos prohibitivos á la entrada de artículos manufacturados con este material, en tanto que el corcho sin manufacturar entra casi libre de derecho. El Reino Unido es el único país que no le impone ningún derecho al corcho en bruto ni manufacturado, por más que este último lo suministran, en gran parte, Francia, España y Portugal. En 1900 este último país exportó 5,916,000 de libras de corcho á Inglaterra.

España lo exporta principalmente manufacturado. Cataluña suministra corchos para el vino de Champaña de superior calidad, cuyo precio varía de 157 á 165 francos por millar.

El corcho portugués parece ser inferior al de la costa del Mediterráneo.

El corcho africano ya no tiene la mala reputación que antes tenía, y las muestras que se exhibieron en París en 1900 disiparon la mala impresión que había contra él.

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

Uno de los folletos valiosos é interesantes que el Gobierno Mexicano publicó durante la reciente Conferencia Internacional de las Repúblicas Americanas fué el que lleva el título de *A Brief Sketch of the Drainage Works of the Valley of Mexico* (Una Breve Reseña de las Obras de Desagüe del Valle de México). Esta publicación, de la cual la Biblioteca de la Oficina Internacional de las Repúblicas Americanas acaba de recibir un ejemplar, relata los esfuerzos que se han hecho para desaguar el valle en cuyo centro está situada la Ciudad de México, desde el siglo quince hasta el 30 de junio de 1900 en que se terminaron las obras de desagüe. El presente sistema de desagüe se ha efectuado con tres fines, á saber: Impedir las inundaciones; efectuar la conducción de las aguas sucias de la Ciudad de México hasta fuera del valle, y dominar las aguas de esa región del país. Las expresadas obras constan de un canal, un túnel y un conducto de salida, cada uno de los cuales se describe cumplidamente en el folleto de referencia. Todas las obras, desde 1886, época en que la junta nacional de desagüe se hizo cargo de las mismas hasta la fecha de su terminación, han costado \$15,967,778. Dicho folleto contiene tres extensos mapas que muestran la situación de las obras y el sistema de desagüe.

Á las personas que intenten emprender en la explotación de minas en países extranjeros, ó que tengan interés en empresas ó en concesiones mineras, es de verdadera importancia y de gran utilidad consultar las leyes que rigen la adquisición y posesión de minas. Una de las pocas obras preparadas hasta ahora en beneficio de esta clase de personas es *La Guía de las Leyes Mineras del Mundo*, recopilada por *OSWALD WALMSLEY* y publicada en Londres en 1894. Este libro trata extensamente de las leyes que rigen la explotación de minas en casi todos los países civilizados del mundo. El Capítulo XVI de esta obra está consagrado á la ley de minas de los Estados Unidos de América, y el Capítulo XVII contiene anotaciones sobre las leyes de la misma clase de México, la República Argentina, Bolivia, el Brasil, Chile,

Colombia, Costa Rica, Cuba, la Guayana holandesa, el Ecuador, Guatemala, Honduras, Nicaragua, Paraguay, Perú, Salvador, Santo Domingo, Uruguay y Venezuela.

En la Biblioteca de la Oficina Internacional de las Repúblicas Americanas se ha recibido el primer número del "Boletín Oficial de la Liga Nacional Brasileira." En él se expresa que el objeto de la liga es procurar que se conozcan los recursos marítimos del Brasil y estudiar las causas que hasta ahora han impedido su desarrollo, y también publicar un anuario que ha de contener valiosos informes relativos á las Compañías de navegación brasileras, los arsenales, muelles, etc.

La Revista titulada "The Monthly Summary of Commerce and Finance of the United States," correspondiente al mes de febrero de 1902, contiene un artículo muy valioso preparado en la Oficina de Estadística del Departamento del Tesoro sobre "Los grandes canales del mundo." Además de la parte descriptiva, dicho artículo trata del comercio, y muestra el costo y las dimensiones de los diferentes canales por los cuales se transportan mercancías extranjeras.

El Capitán GEORGE P. AHERN, del Ejército de los Estados Unidos, Inspector de bosques en las Islas Filipinas, ha publicado una obra sobre las maderas más valiosas de dicho archipiélago. En ella se describen más de 600 clases de árboles en las diferentes islas.

VOL. XII.

MAIO DE 1902.

No. 5.

ESTRADA DE FERRO INTERCONTINENTAL.

SEGUNDA CONFERENCIA PAN-AMERICANA, PARECER DA COMMISSÃO DA ESTRADA DE FERRO PAN-AMERICANA.

A Comissão de Estrada de Ferro Pan-Americana, da Segunda Conferencia Internacional dos Estados Americanos, vem apresentar o seguinte relatorio:

Na primeira Conferencia celebrada em Washington durante o inverno de 1889-90, a commissão de communicações por estrada de ferro, composta de Delegados de dez e oito Governos de America, ao apresentar seu relatorio, que foi unanimemente approved e adoptado pela Conferencia, manifestou as seguintes opiniões:

Primeiro. Que uma estrada de ferro que ligue todas as nações representadas nesta conferencia ou a maioria dellas, contribuirá grandemente ao desenvolvimento de relações cordiaes entre ditas nações, e ao augmento de seus interesses materiaes.

Segundo. Que o melhor meio de facilitar sua execução, é a nomeação de uma commissão internacional de engenheiros a qual se encarregará de estabelecer os traçados possiveis, de determinar sua extensão, de calcular o custo de cada um delles e de comparar suas vantagens respectivas.

Terceiro. Que a dita commissão deverá estar constituida por um corpo de engenheiros dos quaes cada nação nomeará tres, e que estarão facultados para distribuir-se em subcommissões e para nomear todos os demais engenheiros e empregados que se considerarem necessarios para executar com maior rapidez o trabalho.

Quarto. Que cada um dos Governos que acceitem poderá nomear á sua propria custa, commissionedos on engenheiros que sirvam como auxiliares das subcommissões que tenham a seu cargo os trabalhos topographicos de cada uma das secções da linha.

Quinto. Que a estrada de ferro, em quanto o permittam os interesses communs, deverá ligar as principaes cidades situadas nas circumvizinhanças de seu trajecto.

Sexto. Que si não pode alterar-se sem grandes inconvenientes a direcção geral da linha, com os fins mencionados no artigo anterior, deverão ser traçados ramaes que tenham por objecto ligar as ditas cidades com a linha principal.

Setimo. Que com o fim de reduzir o custo da empreza, deveriam ser utilizadas as estradas de ferro existentes em quanto isto seja praticavel e compativel com o trajecto e demais condições da estrada de ferro continental.

Oitavo. Que em caso de que os resultados dos trabalhos topographicos demonstrem a exequibilidade e conveniencia da estrada de ferro, se solicitem propostas para a construcção, já seja de toda a linha ou já de suas secções.

Nono. Que a construcção, administração e funccionamento da linha, deverão fazer-se a expensas dos concessionarios ou da empreza que estes organizarem, com todas as formalidades devidas, e previa auctorização dos Governos respectivos.

Decimo. Que todos os materiaes necessarios para a construcção e funccionamento da estrada de ferro deverão ficar isentos dos direitos de importação, de accordo com os regulamentos que se julgarem necessarios para evitar o abuso deste privilegio.

Umdecimo. Que todas as propriedades pessoas e reaes da estrada de ferro, empregadas em sua construcção e em seus trabalhos, deverão ficar isentas de todo imposto, já seja nacional, provincial (dos Estados) ou municipal.

Duodecimo. Que a execução de uma obra de tal magnitude merece ser alentada por meio de subvenções, concessões de terreno ou garantias de certo minimum de juro.

Decimo-terceiro. Que os vencimentos da commissão, assim como os gastos realizados com os trabalhos topographicos preliminares e definitivos, deverão ser pagos por todas as nações que acceitem, proporcionalmente á sua população, conforme o ultimo recenseamento, ou, á falta de recenseamento, segundo convenio celebrado entre seus respectivos governos.

Decimo-quarto. Que a estrada de ferro deverá declarar-se perpetuamente neutral, afim de assegurar a liberdade do trafico.

Decimo-quinto. Que a approvação dos traçados, os termos em que devam fazer-se as propostas, a protecção aos concessionarios, a supervisão dos trabalhos e as leis que os affectem, a neutralidade da via e a

livre passagem das mercadorias de transito (no caso previsto pelo art. 8º) deverá ser objecto de convenios especiaes, entre todas as nações interessadas.

Decimo-sexto. Que tão prompto como o Governo dos Estados Unidos receba a noticia de que estas recommendações têm sido acceitas pelos demais Governos, os convide para que nomeiem a commissão de engenheiros, a que se refere o art. 2º, afim de que a dita commissão possa reunir-se na cidade de Washington na maior brevidade possivel.”

O Sr. BLAINE, que então era Secretario de Estado dos Estados Unidos, ao apresentar o anterior relatorio da commissão de Estrada de Ferro ao Presidente HARRISON, disse o seguinte:

“Nenhuma das recommendações formuladas pela Conferencia Internacional Americana é tão importante como esta, e a recommenda encarecidamente á vossa attenção, com absoluta confiança em que o Congresso dará muito prompto os passos necessarios para que este Governo possa tomar participação na promoção da empreza. Por nenhum outro caminho pode o Governo e o povo dos Estados Unidos contribuir em tão alto gráo ao desenvolvimento e á prosperidade das republicas irmãs nossas, e ao mesmo tempo á expansão de nosso commercio.”

O Presidente dos Estados Unidos, ao transmittir o relatorio ao Congresso, manifestou assim sua opinião sobre a importancia do projecto: *“Ao Senado e á Camara dos Representantes.*

“Acompanho a este um relatorio da Conferencia Internacional Americana, que ha pouco celebrou suas sessões nesta Capital, no qual recommenda o traçado de uma estrada de ferro intercontinental que ligue os systemas da America do Norte com os do Continente Meridional, e que deverá effectuar-se sob a direcção de uma junta de commissiionados que representem as differentes republicas americanas.

“A attenção publica tem sido fixada de preferencia na questão relativa ao melhoramento das communicações por agua entre os portos dos Estados Unidos e os da America Central e do Sul. O estabelecimento de novas e melhores linhas de vapores indubitavelmente proporciona o meio mais facil para desenvolver um crescente commercio com as nações latino-americanas. Mas é preciso não olvidar a possibilidade de viajar por terra desde Washington até a capital mais meridional da America do Sul, e que o estabelecimento de communicações por via-ferrea com aquelles Estados amigos, subministrará tanto a elles como a nós, grande numero de facilidades para o commercio e as permutas mercantis que teem especial valor. A obra que se projecta é vasta, mas perfeitamente praticavel.

“Será de interesse para todos e talvez surprehendente para muitos de nos saber quanto se tem feito já no Mexico e na America do Sul, no relativo á construcção de estradas de ferro que podem ser utilizadas como parte de uma linha intercontinental. Não hesito em recommen-

dar a conveniencia de que o Congresso auctorize o gasto das pequenas sommas necessarias para os trabalhos topographicos aconselhados pela conferencia, e ao mesmo tempo auctorize a nomeação dos commissiionados e auxiliares que hão de dirigir e effectuar os trabalhos topographicos preliminares que se necessitem.

“BENJAMIN HARRISON.

“PALACIO EXECUTIVO, 19 de Maio de 1890.”

Foi concedida a autorização para o gasto da quota correspondente aos Estados Unidos nos trabalhos topographicos preliminares, para o relatorio concernente á Estrada de Ferro Continental, e assim mesmo se receberam as quotas de alguns dos outros paizes interessados. Pouco depois começou seus trabalhos a Comissão da Estrada de Ferro Intercontinental, com a representação de onze dos Governos da America.

Sr. A. J. CASSAT, actual presidente da Estrada de Ferro de Pennsylvania, que é um dos systemas de vias ferreas mais grandes e que mais exito tem alcançado no mundo, foi eleito por unanimidade para que desempenhasse o cargo de Presidente da Comissão, Sr. H. G. DAVIS foi designado para o posto de presidente da Comissão de Finanças. A Comissão gastou cerca de \$360,000 em trabalhos topographicos sobre o terreno, em mappas, em impressões, etc. Puzeram-se em acção tres corpos de engenheiros, e os resultados de seus trabalhos, correspondentes a um periodo de varios annos e que foram terminados em 1895, demonstraram que a distancia approximada entre Nova York e Buenos Aires, de accordo com suas investigações topographicas e fazendo uso dos caminhos existentes, seria de 10,471 milhas, das quaes cerca da metade estavam já concluidas e em exploração. A seguinte carta official, escripta em 1896 pelo Capitão E. Z. STEEVER, secretario da Comissão da Estrada de Ferro Intercontinental, proporciona as informações mais authenticas que se podem obter acerca das estradas de ferro que poderiam ser usadas como parte de uma linha continental e o que ficaria ainda por construir.

“COMISSÃO DA ESTRADA DE FERRO INTERCONTINENTAL,

“Washington, D. C., 16 de Janeiro de 1896.

“Ao Honrado SR. HENRY G. DAVIS.

“Washington, D. C.

“ESTIMADO SENHOR: Em cumprimento de vossa ordem, que se recebeu nesta Secretaria o 14 do corrente, acompanho um calculo approximado da extensão da via que se necessita para uma estrada de ferro desde Nova York até Buenos Aires, Republica Argentina, segundo os diferentes paizes.

“Actualmente existem communicações por via-ferrea até Oaxaca, Mexico, e têm-se feito traçados e, segundo as noticias da imprensa, têm-se outorgado concessões para ligar Oaxaca com algum ponto da linha divisoria entre Mexico e Guatemala. Puebla acha-se a 129

milhas ao sudeste da cidade de Mexico pela via da Estrada de Ferro Interocéanica, e a 115.6 milhas pela da Estrada de Ferro Mexicana, sendo a primeira de bitola estreita e a ultima de bitola larga. Oaxaca está situada á distancia de 227.6 milhas ao sudeste de Puebla, pela via-ferrea Mexicana do Sul, e por conseguinte, á distancia de 356.6 milhas da cidade de Mexico por uma linha e a 343.2 milhas pela outra. Oaxaca é actualmente a cidade mais meridional que está ligada por via-ferrea com a cidade de Mexico, e se acha separada da fronteira de Guatemala por uma distancia que exigiria uma estrada de ferro de 400 milhas de extensão pouco mais ou menos.

“Os trabalhos topographicos e as explorações da Commissão da Estrada de Ferro Intercontinental começaram no noroeste da fronteira de Guatemala, e se estenderam até a região occidental da fronteira da Bolivia. A extensão approximada da via-ferrea que deverá ligar a fronteira sul-oriental do Mexico com a capital da Republica Argentina, é a seguinte:

	Milhas.
Em Guatemala.....	230
Em O Salvador.....	220
Em Honduras.....	70
Em Nicaragua	224
Em Costa Rica.....	363
Em Colombia.....	1,372
Em Equador.....	635
Am Peru.....	1,671
Em Bolivia.....	774
Em Argentina.....	1,143
Total	6,702

“A distancia de Nova York a Laredo é de 2,187 milhas; a deste ultimo ponto á cidade de Mexico, de 839 milhas; d'alli a Oaxaca, 343 milhas; até a fronteira de Guatemala, 400 milhas; 3,769 milhas como somma total, ascendendo a distancia completa desde Nova York até Buenos Aires a 10,471 milhas.

“Das 6,702 milhas anteriores se encontram em exploração os seguintes trechos:

	Milhas.
Em Guatemala, desde Escuintla até Patulul.....	30
No Salvador, desde Sonsonate até Atoz.....	20
Em Nicaragua, desde Chinandega até La Paz.....	31
Total na America Central.....	81
No Perú, desde Llacani até Puno.....	151
Em Bolivia, desde Oruro até Huanchaco.....	192
Na Argentina, desde Jujuy até Buenos Aires.....	993
Total na America do Sul.....	1,336

“Um consideravel total para America Central e America do Sul, de 1,453 milhas, já construidas e em exploração.

“Deduzindo essas 1,453 milhas das 6,702, ficam por construir-se 5,249 milhas de estrada de ferro, afim de que fique terminada uma linha completa desde a fronteira meridional de Mexico até a capital da Republica Argentina. Em outros termos, a metade de distancia entre a cidade de Nova York e Buenos Aires está já coberta por estradas de ferro existentes.

“É de crer-se que por meio de trabalhos topographicos posteriores, especialmente no Perú, se encurte a extensão das linhas que se necessitam, mas até a data, os dados anteriores são os melhores que se teem podido obter.

“Esperando que estas informações estejam de accordo com o que solicitaes, sou com respeito,

“E. Z. STEEVER, *Secretario.*”

O quadro que se dá em seguida, mostra um resumo do relatorio apresentado pelos engenheiros da Commissão da Estrada de Ferro Intercontinental, acerca do numero de milhas já construidas da linha continental proposta, entre Nova York e Buenos Aires, da situação dos trechos que serão necessarios para formar uma linha completa, e do custo que se calcula para cada um delles.

Regiões.	Construido e em projecto.		Cons-truido.		Terão que construir-se.		Custo dos aterros, das obras d'arte e das pontes.
	<i>Milhas.</i>	<i>Kms.</i>	<i>Milhas.</i>	<i>Kms.</i>	<i>Milhas.</i>	<i>Kms.</i>

	2,094.00	3,369.93	2,094.00	3,369.93	-----	-----	-----
Mexico	8,583.76	13,814.10	3,588.63	5,755.29	-----	-----	-----
	1,644.30	2,646.22	1,183.30	1,904.33	461.00	741.90	14,752,000.00
	10,228.06	16,460.32	4,771.93	7,679.61	5,456.13	8,780.61	174,290,271.84

Pelo que precede ver-se-há que os engenheiros da Commissão, na epocha em que formularam seu relatorio, em 1895, opinaram que com \$175,000,000 se construiriam as vias-ferreas necessarias para unir as linhas existentes e conseguir deste modo uma communicação completa. Com posterioridade se teem construido algumas outras estradas de ferro que poderiam ser utilizadas como parte de um systema continental, e a Commissão é de parecer que actualmente não haveriam que construir-se senão 5,000 milhas de via para estabelecer communi-

cações por via-ferrea entre os systemas da America do Norte e do Sul. Calculando em \$40,000, o custo por milha, calculo que nos parece amplo, se necessitariam \$200,000,000 para essa grande obra. Os estudos preliminares realizados pelos engenheiros da Commissão, demonstram que a construcção das linhas que faltam é practicavel e que não haveria grande difficuldade para realizar tal projecto, desde o ponto de vista economico, si se attende aos resultados que se obteriam com elle.

Os systemas de vias-ferreas dos Estados Unidos, taes como os de Pennsylvania, New York Central, Atchison, Northern Pacific, Union Pacific, Southern Pacific, Southern e outros, exploram um numero de milhas de via maior que o que se necessita para realizar a Estrada de Ferro intercontinental, e cada um desses systemas tem titulos e capitais não exhibidos que somnam uma quantia maior que o custo que se tem calculado para esta empreza. O Governo russo acaba de terminar uma extensa ferro-via que tende ao desenvolvimento de Siberia, com um custo que excede consideravelmente ao calculado para a Estrada de Ferro Intercontinental e com maiores difficuldades de construcção.

A Republica do Mexico subministra um exemplo recente do que se tem conseguido graças ao augmento das vantagens que proporcionam as vias-ferreas.

No relatorio da delegação mexicana a esta Conferencia, tratando da Estrada de Ferro Intercontinental, se diz:

“Pelo que se refere ao Mexico, não tem cessado de fazer esforços e ainda sacrificios para construir este systema ferro-viario, estendendo-o até o Sul de maneira que possa entroncar com as linhas que construiram as Republicas da America Central, como entronca já em varios pontos de sua fronteira septentrional com importantes linhas dos Estados Unidos de America. Na actualidade se acha em estudo uma linha que deverá entroncar com a Estrada de Ferro Interoceanica já construida e em trafego no Isthmo de Tehuantepec, e ultimamente se tem outorgado uma concessão subvencionada liberalmente para a construcção de uma estrada de ferro que partindo da de Tehuantepec, se estenderá até a fronteira de Guatemala.”

Tambem se diz: “O constante desejo do Governo de Mexico, tem sido proporcionar todos os meios conducentes ao melhoramento das communicações interiores, augmentando dessa maneira a exploração de seus recursos naturaes e o commercio com outras nações.”

Ainda que a construcção da linha continental é uma grande empreza, os obstaculos com que se tem de lutar não são tão grandes como os que venceram os constructores das vias-ferreas que atravessam os Alleghanies e os Montes Rochosos, quando se construíram estas linhas.

Por experiencia se tem provado em todas as partes do mundo que ao estabelecimento de communicações por vias-ferreas, tem seguido o desenvolvimento das riquezas naturaes do paiz e um systema que ponha

em contacto todas as Republicas deste hemispherio, contribuirá mais que qualquer outro meio ao desenvolvimento das Republicas meridionaes, especialmente no interior. Agora só é possível por nos mercados os productos de pontos que não tocam as linhas ferreas que possam ser conduzidos á costa de mula aos portos de mar para sua exportação e os pontos em que tocam frequentemente os navios se encontram a centenaes de milhas de distancia. Em lugares situados sobre uma linha ferrea se podem fazer embarques de um ponto a outro que não distem entre si senão umas quantas milhas.

Grandes areas de depositos mineraes e de ricas terras dotadas de florestas de madeira de construção e proprias para a agricultura, permanecem virgens por causa da falta de meios faceis de transporte. A estatistica da maior parte destes paizes demonstra que até agora sómente se têm explorado os territorios proximos ao mar. Não sómente contribuiria essa linha de estrada de ferro ao desenvolvimento de um territorio que agora é praticamente inacessivel, augmentando dessa maneira a riqueza em geral dos paizes que percorra, mas as maiores vantagens que se obtivessem, dariam por resultado a concurrencia entre o transporte por via-ferrea e por agua nas regiões que agora dependem inteiramente da ultima. A concurrencia é a vida do commercio, e ainda que se necessitam meios de transporte por agua mais faceis entre as Republicas Americanas para seu completo desenvolvimento e progresso, são necessarias as communicações, tanto por agua como por estrada de ferro.

No caso de guerra entre algumas das Potencias europeas, o commercio soffreria serios prejuizos pela interrupção das communicações por agua; mas o perigo por esta causa seria menor si as Republicas Americanas tiverem communicação entre si, por meio de vias-ferreas.

Um paiz ou uma parte do mesmo em que não haja vias-ferreas, está atrazado e não pode fazer concurrencia com as regiões que possuem estas vantagens. Quando se construiu a primeira estrada de ferro do Rio Mississippi ao Pacifico, muitos recearam que não fosse remunerativa, porque o territorio por onde devia atravessar, em sua maior parte era despovoado ainda. Agora existem varias linhas, todas ellas remunerativas. E o rapido progresso da grande região occidental da Republica do Norte, que em grande parte se deve ás vantagens obtidas com as vias-ferreas, tem sido a maravilha do seculo. O interior dos Estados Unidos, especialmente as regiões do Oeste e do Sul-Oeste, assim como os lugares interiores das Republicas meridionaes, seriam os que mais beneficios receberiam do estabelecimento de uma Estrada de Ferro Intercontinental, porque estes territorios teriam em linhas communicações mais faceis e directas entre si. Apenas poderá estimar-se o augmento do commercio, quando as 195,000 milhas de vias-ferreas dos Estados Unidos e as 10,000 de Mexico estiverem ligadas com as

10,600 da Republica Argentina e com as redes das demais Republicas Americanas.

Desde que se estabeleceu a communicação por meio de vias-ferreas entre o Mexico e os Estados Unidos, o commercio entre os dous paizes tem augmentado enormemente. Hoje o Mexico envia para os Estados Unidos 70 por cento de suas exportações totaes e este paiz exporta para o Mexico artigos pelo mesmo valor approximadamente. No anno financeiro que terminou em 30 de Junho de 1901, os Estados Unidos compraram mercadorias nos paizes da America Central e do Sul por valor de \$121,000,000 que representam 14 por cento do total de suas importações, e durante o mesmo periodo, os Estados Unidos enviaram para os ditos paizes mercadorias por valor de \$52,000,000, ou seja sómente o 10 por cento do total das importações da America Central e do Sul.

Como demonstração da actual falta de meios facéis de transporte entre as Republicas Americanas, alguns dos Delegados a esta Conferencia, para chegar á cidade de Mexico, têm tido que fazer uma viagem via Europa e Nova York e outros, via San Francisco. Uma carta, ou um pacote confiado ao Express, que se envie do Mexico ou dos Estados Unidos para alguma das Republicas Americanas, primeiro teria que ir para a Europa e d'alli ao seu destino.

Esta Commissão possui relatorios de alguns dos Delegados da America Central e do Sul, acerca das vias-ferreas de seus respectivos paizes, e quando se recebam outros, pede que se imprimam como supplemento a este relatorio.

Resumo.—Considerando: Que os tres corpos de engenheiros empregados pela Commissão da Estrada de Ferro Intercontinental fizeram explorações experimentaes, as quaes acompanharam de mappas, e que comprehendem desde o limite norte de Guatemala até o limite norte da Republica Argentina, durante os annos de 1892, 1893 e 1894, e informaram que seria praticavel completar uma estrada de ferro continental de via larga que atravessasse as Republicas do Norte, da America Central e do Sul; e que aproveitando as estradas de ferro actualmente em trafego, a distancia que havia que construir seria de 5,456 milhas, sendo o seu custo orçado em \$174,290,271, ou seja \$32,000 pór milha, e

Considerando: Que é um facto de todos conhecido que as vias-ferreas desenvolvem os recursos naturaes de um paiz, augmentam o commercio e a riqueza e contribuem para a prosperidade geral dos paizes que atravessam.

Portanto, calculando que a distancia que terá que construir-se será de 5,000 milhas, e suppondo que o custo não exceda de \$200,000,000 (ou seja \$40,000 por milha) a commissão por unanimidade recommenda desde logo a construcção de uma linha intercontinental com ramaes

onde forem necessarias as connexões com as cidades principaes, e a qual passará pelas differentes republicas, unindo os systemas dos Estados Unidos e Mexico com os da Republica Argentina.

Havendo-se cumprido as recommendações que fez a ultima conferencia celebrada em Washington, com respeito ás explorações preliminares, apoiamos por unanimidade o seguinte, tomado das actas da Commissão da Estrada de Ferro Pan-Americana e que foi approvedo pela Conferencia de Washington.

Primeiro. Que uma estrada de ferro que ponha em communicação todas ou a maior parte das nações representadas nesta conferencia, contribuirá poderosamente ao desenvolvimento das relações cordiaes entre ditas nações e ao augmento de seus interesses materiaes.

Segundo. Que a estrada de ferro, até onde o permittam os interesses communs, deverá ligar as principaes cidades situadas nas proximidades de seu tracto.

Terceiro. Em caso que não possa alterar-se sem grandes inconvenientes a direcção da linha, com o objecto exprimido no artigo anterior, serão traçados ramaes que liguem essas cidades com a linha principal.

Quarto. Que para reduzir o custo da empreza deverão ser utilizadas as estradas de ferro em trafego até onde seja possível e compativel com o tracto e condições da estrada de ferro continental.

Quinto. Que todos os materiaes necessarios para a construcção e funcionamento da estrada de ferro devem ficar isentos de direitos de importação, sujeitando-se aos regulamentos que se julgarem necessarios para evitar os abusos deste privilegio.

Sexto. Que todas as propriedades pessoas e reaes da estrada de ferro empregadas em sua construcção e funcionamento, deverão ficar isentas de todo imposto, já seja nacional, estadual ou municipal.

Setimo. Que a execução de uma obra de tal magnitude deverá ser ajudada em quanto fôr possível por meio de subvenções, concessões de terrenos e garantias de certo minimum de juros.

Oitavo. Que a estrada de ferro deve declarar-se perpetuamente neutral para que assim possa ser assegurada a liberdade do trafico.

Nono. Tambem recommendamos que os delegados a esta conferencia e outras pessoas que favoreçam a estrada de ferro, solicitem com instancia a seus Governos para que outorguem á empreza-concessões liberaes de tudo que se considerar mais conveniente a cada paiz.

Decimo. Que se convide aos Estados Unidos para que enviem pessoas de confiança e competencia para todas as Republicas de America para que fixem com certeza os recursos dos differentes paizes, a situação e condições das estradas de ferro hoje em trafego, o estado actual do commercio e as expectativas de trafico para uma linha intercontinental em caso de que chegue a concluir-se, e que concessões faria cada Governo á empreza.

Undecimo. Que esta commissão continue em seus trabalhos; que

apresente um relatório á proxima conferencia e fique facultada para convocar seus membros, augmentar seu numero e nomear subcommissões, com o objecto de poder proporcionar qualquer classe de informações, e ajudar e alentar em quanto for possivel a feliz conclusão da Estrada de Ferro Intercontinental.

MEXICO, 27 de Novembro, 1901.

RESOLUÇÃO.

APPROVADA PELA SEGUNDA CONFERENCIA INTERNACIONAL DE ESTADOS AMERICANOS, A 21 DE JANEIRO DE 1902.

Os abaixo assignados, Delegados das Republicas representadas na Segunda Conferencia Internacional Americana, devidamente auctorizados por seus Governos, approvaram a seguinte resolução:

A Segunda Conferencia Internacional Americana,

Considerando que os tres corpos de engenheiros empregados pela anterior Commissão da Estrada de Ferro Intercontinental fizeram explorações, desde o limite norte de Guatemala até o limite norte da Republica Argentina, durante os annos de 1893 e 1894, e apresentaram seu relatório sobre a obra com os mappas respectivos; que este relatório demonstra que é praticavel completar a via-ferrea que atravessasse as Republicas do Continente de Norte a Sul; e que, em caso de aproveitarem-se as estradas de ferro actualmente em trafego, a extensão das linhas por construir-se, seria de 5,456 milhas, e o orçamento da obra total, de \$174,290,271, ouro, ou seja \$32,000, ouro, por milha;

Que as estradas de ferro desenvolvem os recursos naturaes dos paizes que atravessam, augmentam seu commercio e riqueza e contribuem efficazmente á prosperidade geral;

Que as vias ferreas internacionaes consolidam as relações de amizade entre os Estados, ligam-n'os com interesses communs e asseguram a paz entre elles:

Convem: I. Que se ratifique a resolução da Conferencia de Washington, que recommendou a construcção das linhas complementarias da Estrada de Ferro Intercontinental, passando esta pelas differentes Republicas, unindo os systemas dos Estados Unidos com os da Repu-

blica Argentina, e ligando, até onde o permittam os interesses communs, as principaes cidades situadas nas proximidades da estrada de ferro; e emfim, utilizando as linhas em trafego em quanto for possivel e compativel com o traçado e condições da Estrada de Ferro Intercontinental.

II. Que se auxilie pelas Republicas interessadas a execução da obra por todos os meios que estejam em seu poder; e especialmente, que se de direitos de importação os materiaes necessarios para a construção e funcionamento da estrada de ferro, ficando elles sujeitos aos regulamentos convenientes para evitar abusos; e que se exonere de todo imposto nacional, estadual, provincial, ou municipal, as propriedades e direitos reaes ou pessoas da empresa; isentando-se de direitos aduaneiros e de outros impostos as mercadorias em transito pelas diversas Republicas, e auxiliando a obra, em quanto for possivel, por meio de subvenções, concessões de terrenos ou garantia de um minimum de juros sobre os capitaes empregados em cada paiz.

III. Que se convide ao Governo dos Estados Unidos de America, para que inicie cerca dos representantes diplomaticos das demais Republicas acreditados em Washington, as medidas mais apropriadas, que deem por resultado a expedição, dentro do prazo de um anno, de pessoas competentes para os diversos paizes da America, que fixem com certeza os recursos de cada paiz, a situação e condições das vias ferreas hoje em trafego, o estado actual do commercio e as expectativas de trafico para uma linha intercontinental, caso que chegue a concluir-se; e que concessões faria cada um dos respectivos Governos á empresa.

IV. Que o Presidente da Conferencia nomeie uma Comissão de cinco membros residentes nos Estados Unidos de America, para que entre em exercicio, depois do encerramento da Conferencia, com a faculdade de augmentar o numero de seus membros ou substituil-os quando isto fôr necessario, nomear as subcommissões que julgar convenientes, informar á proxima Conferencia sobre o resultado de seus trabalhos, proporcionar qualquer classe de informações sobre a obra da Estrada de Ferro Intercontinental, e ajudar e alentar, em quanto fôr possivel, a feliz conclusão della, sem prejuizo de que os demais membros da actual Comissão sigam prestando seus serviços com igual proposito; e, finalmente, que a Comissão, de accordo com o Secretario de Estado dos Estados Unidos de America, e com os Ministros dos demais paizes interessados, residentes em Washington, procure que se convoque, dentro do prazo de um anno, uma reunião de representantes de todas as Republicas do Continente, devidamente auctorizados, com o objecto de concluir um convenio que proveja á construção da projectada Estrada de Ferro Intercontinental.

Feito e firmado na cidade de Mexico, aos vinte-um dias de Janeiro de mil novecentos e dous, em tres exemplares escriptos respectivamente

em hespanhol, inglez e francez, os quaes serão depositados na Secretaria das Relações Exteriores do Mexico, afin de que delles sejam tiradas copias certificadas para envial-as por via diplomatica a cada um dos Estados signatarios.

COMISSÃO PERMANENTE.

O Senhor Presidente da Conferencia, em cumprimento do disposto no artigo quarto da Resolução, nomeou os seguintes Senhores para constituir a Comissão permanente de que alli se trata, a saber:

O Honrado Senhor H. G. DAVIS, de West Virginia, Estados Unidos de America;

O Honrado Senhor ANDREW CARNEGIE, de Nova York, Estados Unidos;

O Honrado Senhor MANUEL DE ASPIROZ, Embaixador de Mexico em Washington;

O Honrado Senhor MANUAL ALVAREZ CALDERÓN, Ministro do Perú, nos Estados Unidos de America; e

O Honrado Senhor ANTONIO LAZO ARRIAGA, Ministro de Guatemala nos Estados Unidos.

MENSAGEM DO PRESIDENTE.

No dia 22 de Abril de 1902, o Presidente dos Estados Unidos transmittiu ao Congresso o Relatorio do Senhor Secretario de Estado respeito ao determinado pela Segunda Conferencia em Mexico sobre a Estrada de Ferro Intercontinental.

A mensagem diz assim:

“Ao Senado e á Camara dos Representantes:

“Transmitto com a presente ao Congresso um relatorio do Secretario de Estado, com os documentos que o acompanham, relativos á Resolução adoptada na Segunda Conferencia Pan-Americana de Mexico, sobre a Estrada de Ferro Intercontinental.

“Recommendo que o Congresso conceda um credito de \$20,000, ou do que desta somma fôr necessario, para permittir ao Presidente enviar dous Commissarios para a America Central e do Sul para levar a effeito os propositos da Resolução citada, e investigar o que deva fazer-se para augmentar o commercio entre os Estados Unidos e esta parte do Continente Americano, facultando-lhes para dar o relatorio correspondente.

“THEODORE ROOSEVELT.”

RELATORIO DO SECRETARIO DE ESTADO.

“Senhor PRESIDENTE: Tenho a honra de submeter á consideração de V. Ex. as inclusas copias, uma do relatorio apresentado na Segunda Conferencia Pan-Americana de Mexico, no inverno de 1901 a 1902, pela Comissão da Estrada de Ferro Pan-Americana, e a outra, da Resolução adoptada pelos delegados das Republicas representadas naquella Assembleia, referindo-se ambas á projectada Estrada de Ferro Pan-Americana.

“O artigo III da Resolução dispõe:

“Que se convide ao Governo dos Estados Unidos de America para que inicie cerca dos representantes diplomaticos das demais Republicas acreditados em Washington, as medidas mais apropriadas que deem em resultado a expedição dentro do prazo de um anno, de pessoas auctorizadas e competentes para os diversos paizes de America, para determinar com certeza os recursos de cada paiz, a situação e condições das estradas de ferro hoje em trafego, o estado actual do commercio e as expectativas de trafego para uma linha intercontinental, caso que

chegue a terminar-se, e que concessões faria cada um dos respectivos Governos á empreza.’

“O projecto é de utilidade publica tão grande, e o commercio com a America Central e do Sul, no qual os Estados Unidos não teem toda a participação que deveriam ter, está crescendo tanto em importancia, que não hesito um momento em recommendar que se solicite do Congresso um credito de \$20,000, ou do que fôr necessario da dita somma, para por o Presidente em posição de nomear dous commissarios para levar a effeito os propositos do accordo citado, e investigar ao mesmo tempo o que deva fazer-se para augmentar o commercio entre esses paizes e os Estados Unidos, submettendo o relatorio correspondente.

“Sou com respeito,

“JOHN HAY.

“DEPARTAMENTO DE ESTADO,

“*Washington, 19 de Abril de 1902.*”

A ESTRADA DE FERRO INTERCONTINENTAL.

Por J. B. CALVO.

Quando se pensa na grande influencia que as vias de communicação teem, não só no desenvolvimento dos recursos naturaes e outras fontes da producção nacional, mas no adeantamento moral e intellectual que a ampliação da esphera de acção proporciona ao homem, torna-se evidente o grande beneficio que resultaria ás Republicas Americanas da construcção de uma estrada de ferro intercontinental.

A obra é de certo colossal, mas não offerece em realidade nenhum obstaculo insuperavel, e para que se torne uma realidade, só é necessario que a encetemos com resolução.

É evidente que o desenvolvimento do trafico local por si mesmo, pagaria, em tempo não longe, o custo da via, e que o augmento das relações commerciaes entre os paizes vizinhos seria rapido, promovendo assim finalmente o bemestar geral, politico e social de todas as nações do Continente, e uma união mais estreita entre ellas, o que daria cada vez maior valor ao capital e a seus rendimentos.

O progresso que o Mexico tem feito nos ultimos annos chama com razão a attenção do mundo e o impulso que tomam suas industrias demanda para a prospera Republica uma facil communicação com os outros Estados vizinhos, onde ella encontrará excellentes mercados para muitos de seus productos que a concurrencia do Norte encaminha para elles, como succede actualmente, especialmente com respeito ás telas e artigos de couro de todas as classes.

Os Estados da America Central progressam constantemente. Seu adeantamento moral manifesta-se na tranquillidade de que hoje desfructam e o desenvolvimento de suas ricas fontes de producção toma maior incremento cada dia, assim dando impulso a novas emprezas, ao

melhoramento das vias de communicação existentes e á construcção de outras novas e importantes.

Na America do Sul, a Republica Argentina levanta-se como rival agricola dos Estados Unidos do Norte, e o Chile faz concorrência no Pacifico ás linhas de vapores da grande nação americana.

Estas demonstrações praticas do adeantamento dos paizes latino-americanos indicam a actividade e o progresso que têm alcançado, e põem de manifesto a grande importancia do campo que offerecem ás empresas e aos negocios.

O Brazil, com sua enorme extensão territorial; o Uruguay, com sua posição geographica; e o Peru, Bolivia, Equador, Venezuela e Colombia, com a exuberante riqueza de seu solo, participam em igual alta escala dos beneficios do progresso e da civilização.

A empresa de uma via ferrea que ponha em communicação estes paizes, encontrará, pois, abundantes elementos de vida existentes hoje, e muitos outros que por si mesmo creará já pela influencia das facilidades do trafico local, já pela communicação rapida entre uns e outros Estados.

Na primeira Conferencia Internacional Americana, celebrada em Washington em 1889-1890, foram adoptadas resoluções para levar a effeito a grande empresa; e como resultado pratico da iniciativa tomada então, foram feitos os estudos correspondentes por uma Commissão de engenheiros que fez um relatorio completo que consta de sete grossos volumes, com mappas e illustrações.

Desses estudos parece que a extensão de uma via ferrea de Nova York a Buenos Aires, seria de 10,471 milhas, e que desta enorme distancia a metade está coberta já por linhas ferreas existentes.

Quanto á primeira parte da grande obra continental, é facil demonstrar que sómente requer um ligeiro impulso para que se torne uma realidade em toda a porção do hemispherio ao norte de Panama. Com effeito, a distancia de 2,187 milhas de Nova York a Laredo na fronteira do Mexico, a de 839 milhas de Laredo á cidade de Mexico e a de 343 milhas de dita cidade a Oaxaca, se cobrem por vias ferreas actualmente em trafego.

Ha duas estradas de ferro mexicanas que se approximam da fronteira de Guatemala, uma que se estende de Puebla a Oaxaca, do lado do Pacifico, a qual necessitaria uma extensão de 400 milhas para chegar á dita fronteira; e a outra parte de Cordoba, na linha da estrada de ferro de Veracruz, do lado do Atlantico. Além destas, ha outra linha em construcção que entroncará com a via ferrea interoceânica do Isthmo de Tehuantepec; e o que a este respeito é de maior importancia é o facto de ter o Governo do Mexico feito uma concessão com subvenções liberaes para a construcção, no prazo de dous annos, de uma estrada de ferro que partindo do Isthmo como um ramal da via interoceânica mencionada, se estenda até a linha divisoria com Guatemala.

Conseguindo este novo desenvolvimento das vias ferreas do Mexico em seu proprio territorio, ficará vencida a maior das difficuldades para que a via intercontinental possa ser estendida, unindo as estradas de ferro dos Estados da America Central, onde existem varios ramaes perfeitamente utilizaveis para a via geral.

A este respeito, bastará fazer notar que das 1,107 milhas que uma linha no lado do Pacifico terá de percorrer na America Central, desde a fronteira mexicana até a de Colombia, existem hoje construidas e em trafego 211.3 milhas, principalmente no Salvador e Nicaragua, onde as vias-ferreas mais extensas seguem em sua maior parte uma direcção em geral parallelá á costa.

Em Guatemala ha uma estrada de ferro que se estende do porto de Ocos ao povoado de Ayutla, perto da fronteira mexicana, e as linhas construidas neste e nos outros Estados da America Central teem uma extensão total de pouco menos de 1,000 milhas, distribuidas assim:

	Milhas.
Guatemala.....	342
O Salvador.....	132
Honduras.....	50
Nicaragua.....	176
Costa Rica.....	222

Em Costa Rica, Guatemala e Honduras, as vias ferreas principaes seguem uma direcção transversal, porque estendem-se do interior aos portos; mas nos tres paizes estão-se construindo ramaes que dentro de pouco tempo não só poderão dar consideravel extensão á parte executada do projecto, mas pelo crescimento consequente do trafico, poderão assim garantir o bom exito de uma Estrada de Ferro Intercontinental.

Não existiam condições tão favoraveis no Mexico quando se projectava a construcção da primeira via-ferrea entre os Estados Unidos e aquella Republica. A empreza não encontrava o favor do publico porque se acreditava que não seria remunerativa, e hoje, decorridos apenas vinte annos, existem já tres linhas em constante actividade, alimentadas pelo commercio crescente entre as duas nações. Estas linhas ferreas, por effeito natural, promoveu o desenvolvimento mutuo de interesses, alentando ao mesmo tempo a construcção de outras vias em connexão com ellas.

Não ha, pois, razão para duvidar, fundando-se nestes, que são factos palpaveis, que a extensão das estradas de ferro para o Sul, produzirá iguaes, si não melhores resultados para o capital sem considerar-se a benefica influencia moral para o futuro das nações do Continente.

Parece proxima a realização do pensamento de unir os dous grandes oceanos por um canal atravez do Isthmo centro-americano, entre Costa Rica e Nicaragua; e si como é de esperar, se resolve breve a sua execução, a secção septentrional da Estrada de Ferro Intercontinental augmentará consideravelmente em importancia.

Na Segunda Conferencia Internacional Americana, reunida na cidade de Mexico de Outubro a Janeiro, 1901-2, se concordou ratificar as resoluções da Primeira Conferencia de Washington e fazer entre outras recommendações, a de que o Governo dos Estados Unidos de America iniciie, por meio dos representantes diplomaticos das Republicas Americanas acreditados em Washington, as medidas mais apropriadas para a expedição, dentro de um anno, de commissarios que informem acerca das estradas de ferro existentes, e concessões que fariam os respectivos Governos para a construcção da via continental.

Este pensamento encontra hoje grande favor e pode-se esperar que com o novo impulso que se lhe dá, tornar-se há uma realidade.

Seja assim para bem de toda a America.

WASHINGTON, *Abril de 1902.*

TRATADO DE ARBITRAMENTO ENTRE O BRAZIL E A GRÃ BRETAGHA.

Tratado de Arbitramento concluido no dia 6 de Novembro de 1901, entre o Brazil e a Grã Bretanha para a fixação dos limites entre o Brazil e a Guyana Britannica, sendo trocadas as respectivas ratificações no Rio de Janeiro em 28 de Janeiro de 1902.

O Presidente dos Estados Unidos do Brazil e Sua Magestade o Rei do Reino Unido da Grã Bretanha e Irlanda, Imperador do Hindostão, desejando terminar amigavelmente o desaccordo existente entre os seus respectivos governos sobre os limites entre os Estados Unidos do Brazil e a Colonia da Guyana Britannica, resolveram submeter a arbitramento a questão suscitada, e, afim de concluir um Tratado com esse objecto, nomearam respectivamente seus Plenipotenciarios:

O presidente dos Estados Unidos do Brazil, o Senhor JOAQUIM AURELIO NABUCO DE ARAUJO, Enviado Extraordinario e Ministro Plenipotenciario dos Estados Unidos do Brazil junto a Sua Magestade Britannica;

E Sua Magestade o Rei do Reino Unido da Grã Bretanha e Irlanda, Imperador do Hindostão, o Muito Honrado HENRY CHARLES KEITH PETTY FITZ MAURICE, Marquez de Lansdowne, Conde de Wycombe, Visconde Caln e Calnstone e Lord Wycombe, Barão de Chipping Wycombe, Barão Nairne, Conde de Kerry e Conde de Shelburne, Visconde Clanmaurice e Fitzmaurice, Barão de Kerry, Lixnaw e Dunkerron, Par do Reino Unido da Grã Bretanha e Irlanda, Membro do Muito Honrado Conselho Privado de Sua Magestade Britannica, Cavalleiro da Nobilissima Ordem do Jarreteira, etc., Principal Secretario de Estado de Sua Magestade para os Negocios Estrangeiros;

Os quaes, depois de se terem communicado os seus respectivos plenos poderes, que foram achados em boa e devida forma, estipularam os artigos que se seguem:

ARTIGO 1.

O Presidente dos Estados Unidos do Brazil e Sua Magestade o Rei do Reino Unido da Grã Bretanha e Irlanda, Imperador do Hindostão, concordam em convidar Sua Magestade o Rei da Italia para decidir como arbitro a questão referente aos mencionados limites.

ARTIGO II.

O territorio em litigio entre os Estados Unidos do Brazil e a Colonia da Guyana Britannica será o territorio entre o Takutú e o Cotingo e uma linha tirada da nascente do Cotingo para léste, acompanhando o divisor das aguas, até um ponto proximo ao Monte Ayangcanna, dahi para o sudeste, seguindo ainda a direcção geral do divisor das aguas até o monte chamado Annai, dahi pelo seu tributario mais proximo até o Rupunni, subindo este rio até á nascente e della atravessando a encontrar a nascente do Takutú.

ARTIGO III.

O arbitro será solicitado a investigar e a verificar a extensão de territorio, si o todo si parte da zona descripta no precedente artigo, que qualquer das Altas Partes Contractantes possa com direito pretender, e a determinar a linha de limites entre os Estados Unidos do Brazil e a Colonia da Guyana Britannica.

ARTIGO IV.

Ao decidir a questão que lhe é submettida, o arbitro verificará todos os factos que lhe parecer necessario averiguar para a solução da controversia, e se governará pelos principios do direito internacional que julgar applicaveis ao caso.

ARTIGO V.

A Memoria impressa de cada uma das Partes, acompanhada dos documentos, correspondencia official e outros meios de prova em que cada uma se apoia, será entregue em duplicata ao arbitro e ao Governo da outra parte em un prazo que não exceda de doze mezes, contados da data em que as ratificações deste tratado tiverem sido trocadas.

ARTIGO VI.

Dentro de seis mezes depois da entrega das memorias, na forma disposta no artigo anterior, cada uma das partes poderá do mesmo modo entregar em duplicata ao arbitro e ao Governo da outra parte

uma contra-memoria e novos documentos, correspondencia e outros meios de prova, em resposta á memoria, documentos correspondencia e mais provas apresentadas pela outra parte.

Si na memoria ou contra-memoria sujeita ao arbitro alguma das partes tiver especificado ou indicado qualquer relatorio ou documento que esteja em seu exclusivo poder sem juntar copia, será ella obrigada si a outra parte julgar conveniente pedir que o faça, a communicar-lhe a respectiva copia, e qualquer das partes, por intermedio do arbitro, poderá pedir que a outra apresente os originaes ou copias authenticas de quaesquer papeis adduzidos como provas, dando para esse fim aviso, em cada um dos casos, dentro de quarenta dias depois da entrega da memoria ou contra-memoria, e o original ou copia assim reclamada deverá ser entregue logo que seja possivel, dentro de um prazo que não exceda de quarenta dias contados do recebimento do aviso.

ARTIGO VII.

Dentro de quatro mezes depois de expirar o prazo marcado para a entrega da Contra-Memoria pelas duas Partes, cada Parte entregará em duplicata ao Arbitro e ao Governo da outra Parte, um “Argumento” impresso mostrando os pontos e referindo-se ás provas em que se apoia cada Governo; e o Arbitro, si desejar maiores esclarecimentos sobre qualquer ponto do “Argumento” de alguma das Partes, poderá pedir nova exposição ou argumento escripto ou impresso a respeito delle, tendo em tal caso a outra Parte o direito de replicar do mesmo modo por uma exposição ou argumento escripto ou impresso.

ARTIGO VIII.

O Arbitro pode por qualquer causa que lhe parecer sufficiente, prorogar os prazos fixados nos Artigos V, VI e VII, ou qualquer delles, concedendo trinta dias addicionaes.

ARTIGO IX.

As Altas Partes Contractantes concordam em solicitar que a decisão do Arbitro seja dada, sendo possivel, dentro de seis mezes contados da entrega do “Argumento” das duas Partes.

Concordam tambem em solicitar que a decisão seja dada por escripto, datada e assignada, e que seja lavrada em duplicata, sendo um dos exemplares entregue ao Representante dos Estados Unidos do Brazil para o seu Governo, e o outro entregue ao Representante da Grã Bretanha para o seu Governo.

ARTIGO X.

As Altas Partes Contractantes obrigam-se a aceitar a decisão proferida pelo Arbitro como solução completa, perfeita e definitiva da questão a elle sujeita.

ARTIGO XI.

As Altas Partes Contractantes concordam que os Indios e outros habitantes de qualquer parte do territorio contestado que pela Sentença do Arbitro venha a ser attribuida ou aos Estados Unidos do Brazil ou á Colonia de Guyana Britannica terão, dentro de dezoito mezes da data da sentença, a opção de se retirarem para o territorio da Colonia ou do Brazil, como seja o caso, elles e suas familias com os bens moveis que possuam, e de disporem livremente dos seus bens de raiz, e as Altas Partes Contractantes reciprocamente se obrigam a proporcionar todas as facilidades para o uso dessa opção.

ARTIGO XII.

Cada Governo satisfará as despesas do preparo e apresentação de sua causa. As despesas occasionadas pelo processo Arbitral serão pagas repartidamente pelas duas Partes.

ARTIGO XIII.

O presente tratado, uma vez devidamente ratificado, entrará immediatamente em vigor depois da troca das ratificações, a qual terá logar na cidade do Rio de Janeiro dentro de quatro mezes desta data, ou antes si for possível.

Em testemunho do que os respectivos Plenipotenciarios firmaram o mesmo Tratado e lhe puzeram os seus sellos.

Feito em duplicata em Londres, em 6 de Novembro de 1901.

[L. s.]

JOAQUIM NABUCO.

DECLARAÇÃO.

Os Plenipotenciarios ao assignarem o Tratado que precede declaram como parte e complemento d'elle e sujeito á ratificação do mesmo, que as Altas Partes Contractantes adoptam como fronteira entre os Estados Unidos do Brazil e a Colonia da Guyana Britannica a linha divisoria das aguas entre a bacia do Amazonas e as bacias do Corentyne e do Essequibo desde a nascente do Corentyne até á do Rupununi ou á do Takutú, ou a um ponto entre ellas conforme á decisão do Arbitro.

[L. s.]

JOAQUIM NABUCO.

CONGRESSO GEOGRAPHICO NO RIO DE JANEIRO.

Um dos assumptos mais importantes estudados pela Segunda Conferencia Internacional de Republicas Americanas, reunida na cidade de Mexico, foi o da communicação interior entre as bacias hydrographicas da America do Sul. Com o fim de preparar a execução deste projecto,

a Conferencia resolveu que as nações do Orinoco, do Amazonas e do Prata, se reunissem em assemblea para estudar o melhor modo de levar a cabo o proposito. Por conseguinte, uma convenção foi concluida entre as Delegações da Republica Argentina e as da Boliva, Colombia, Equador, Paraguay, Peru e Uruguay, para a reunião de um Congresso Geographico na cidade do Rio de Janeiro dentro de um anno contado do dia 28 de Janeiro de 1902, a data da convenção.

O texto da convenção é como se segue:

Considerando: Que, de accordo com a exposição de motivos annexa e a Memoria de explorações apresentada á Conferencia Internacional pelo Sr. General D. RAFAEL REYES, resulta praticavel o projecto de communicar entre si as tres grandes bacias hydrographicas da America do Sul, estabelecendo a navegação desde o Orinoco até o Prata pelo interior do Continente;

Que devido á falta de communicação um immenso territorio dotado de inextinguíveis riquezas naturaes fica afastado da industria e do commercio do mundo;

Que entre os problemas estudados pela Conferencia Internacional, reunida em Mexico, o da communicação interior na America do Sul offerece a maior transcendencia para a civilização;

Que afim de preparar a execução de dito pensamento, convem que as nações do Orinoco, do Amazonas e do Prata, e as de seus affluentes respectivos, se reunam em assemblea para estudar a melhor forma de levar a cabo o proposito;

Que não encontrando-se já representadas nesta Conferencia as Republicas do Brazil e Venezuela, a cujos dominios pertencem as nascentes do Amazonas e do Orinoco, é necessario determinar a forma em que deve ser requerido seu concurso;

As Nações signatarias convieram no seguinte:

1º. A celebração de uma Conferencia Geographica fluvial dos paizes ribeirinhos que se reunirá na cidade de Rio de Janeiro dentro do prazo de um anno;

2º. O Excellentissimo Governo da Republica Argentina fica encarregado de conseguir do Excellentissimo Governo dos Estados Unidos do Brazil, a adhesão e o consentimento necessarios para a reunião de dita Conferencia.

3º. Solicita-se de ambos os Governos que tomem os passos necessarios para obter a adhesão dos demais paizes ribeirinhos e que façam a convocatoria respectiva.

4º. A Conferencia mencionada funcionará de conformidade com o seguinte programma, emquanto não for modificado por accordo dos Governos do Brazil, a Republica Argentina e Venezuela.

(a) Organizar commissões geographicas de exploração.

(b) Formular regulamentos para as diversas commissões.

(c) Estabelecer os orçamentos de despezas que demandem os trabalhos.

(d) Fixar as quotas proporcionaes que correspondam a cada um dos Governos interessados.

(e) Organizar uma Secretaria Internacional destinada a concentrar os dados das explorações e apresentar aos Governos um projecto geral sobre communicação das bacias hydrographicas.

(f) Estudar todos os assumptos connexos com o proposito anterior que se referem á mais rapida execução da obra e ás medidas que os Governos interessados devem adoptar individualmente ou em commum, para promover o bemestar dessas regiões.

CONGRESSO INTERNACIONAL DE AMERICANISTAS.

A decima-terceira sessão do Congresso Internacional de Americanistas foi convocada para reunir-se nas salas do American Museum of Natural History na cidade de Nova York no dia 20 de Outubro de 1902, e continuará em sessão até o dia 25, inclusive, do mesmo mez. O objecto deste Congresso é reunir os estudantes de archeologia, ethnologia e historia primitiva da America do Norte e do Sul, e desenvolver o conhecimento destes assumptos por meio de memorias e discussões.

As communicações podem ser oraes ou escriptas em qualquer das seguintes linguas: Inglez, hespanhol, francez, allemão ou italiano (não se menciona o portuguez, talvez sem intenção). As discussões deverão ser curtas e serão concedidos trinta minutos para a leitura de cada memoria. As memorias que se apresentarem a este Congresso, si forem approvadas, serão publicadas no volume das actas. Os membros do Congresso de Americanistas deverão enviar ao Secretario geral, antes da reunião do Congresso, os titulos, e, si for possivel, um resumo de suas memorias.

Os seguintes assumptos serão tratados: (1) As raças nativas da America, sua origem, distribuição, historia, caracteristicos physicos, linguas, invenções, costumes e religião; (2) A historia das primeiras relações entre a America e o velho mundo.

Todas as pessoas interessadas no estudo de archeologia, ethnologia e historia primitiva da America do Norte e do Sul, podem ser membros do Congresso de Americanistas, communicando seu desejo ao Sr. MARSHALL H. SAVILLE, Secretario Geral da Commissão de Organização, American Museum of Natural History, Nova York. O Sr. MORRIS K. JESUP é Presidente, e o DUQUE DE LOUBAT, Vice-presidente da Commissão de Organização.

FRANQUIA POSTAL PARA AS PUBLICAÇÕES DA SECRETARIA.

No dia 9 de Abril de 1902, o Director Geral dos Correios dos Estado Unidos transmittiu ao Departamento de Estado dos Estados Unidos uma ordem assignada naquella data pela qual se concede franquia postal ás correspondencias e publicações da Secretaria Intenacional das Republicas Americanas quando forem dirigidas aos paizes que formam a União Internacional das Republicas Americanas.

Essa ordem foi expedida em virtude do acto do Secretario de Estado dos Estados Unidos, quem, no dia 4 de Abril, 1902, informou ao Director Geral dos Correios do disposto no artigo 8 da resolução concernente á reorganização da Secretaria Internacional das Republicas Americanas, como adoptada pela Segunda Conferencia Internacional de Estados americanos reunida na cidade de Mexico, que é o seguinte:

“Todas as publicações da Secretaria serão consideradas como documentos publicos, e serão conduzidas gratuitamente pelos correios das Republicas.”

O texto official de dita ordem é como se segue.

“Em cumprimento do artigo oitavo da Resolução relativa á reorganização da Secretaria Internacional das Republicas Americanas adoptada pela Segunda Conferencia Internacional de Estados Americanos, reunida ultimamente na cidade de Mexico, que dispõe o seguinte.

“Todas as publicações da Secretaria serão consideradas como documentos publicos e serão conduzidas gratuitamente pelos correios das Republicas.”

Fica por esta ordenado que as correspondencias e publicações da Secretaria das Republicas Americanas, que não excedam de quatro libras e seis onças (2 kilogrammas) de peso, que é o peso maximo dos impressos prescripto pela Convenção Postal Universal de Washington, serão conduzidas gratuitamente pelos correios quando forem dirigidas aos paizes que forman a União Internacional das Republicas Americanas, a saber:

Republica Argentina.	Guatemala.	Salvador.
Bolivia.	Haití.	San Domingo.
Brazil.	Honduras.	Estados Unidos.
Chile.	Mexico.	Uruguay.
Colombia.	Nicaragua.	Venezuela.
Costa Rica.	Paraguay.	
Equador.	Peru.	

H. C. PAYNE,
Director Geral dos Correios.

HESPANHA E OS PAIZES HISPANO-AMERICANOS.

Um telegramma ao "London Times," datado de Madrid, 11 de Março de 1902, diz que o Ministro das Relações Exteriores annunciou que naquella data o Governo da Hespanha, aproveitando-se da presença no Mexico de delegados de todos os paizes hispano-americanos, deu instrucções ao seu representante naquella capital para concluir tratados de arbitramento entre a Hespanha e os paizes referidos. Em obediencia a estas instrucções, o Marquez de Prat, Ministro da Hespanha junto ao Governo do Mexico, firmou convenios com a Republica Argentina, Bolivia, Colombia, Guatemala, Mexico, Paraguay, Salvador, Santo Domingo e Uruguay.

Por estes convenios se estabelece que todas as difficuldades que se suscitarem entre a Hespanha e os paizes mencionados serão submettidas a arbitramento, e que o arbitro deverá ser, ou o presidente de um Estado hispano-americano, ou um tribunal composto de hespanhões ou hispano-americanos, "afim de dar maior importancia a solidariedade de interesses que existe entre todos os ramos da raça hespanhola." As questões serão submettidas ao tribunal de arbitramento de Haya unicamente nos casos em que as partes deixem de concordar na escolha do arbitro.

Accreseenta o ministro que tratados semelhantes serão celebrados em breve com Costa Rica, Honduras, Peru e Venezuela.

COLOMBIA.

DIREITO ADDICIONAL SOBRE CONTAS POR DIREITOS DE IMPORTAÇÃO.

O "Diario Oficial" de 23 de Agosto de 1901 publica o Decreto n. 1016, de 16 de Agosto de 1901, pelo qual se estabelece um direito addicional sobre certas contas por direitos de importação. O decreto dispõe o seguinte:

Artigo unico. Toda conta por direitos de importação, cujo valor não seja coberto dentro dos oito dias que prescreve o artigo 146 do Codigo Fiscal, terá um direito addicional de 10 por cento, que se terá como contribuição de guerra, sem prejuizo da cobrança dos juros sobre o valor principal e sobre dito direito addicional.

ESTADOS UNIDOS.

COMMERCIO COM A AMERICA LATINA.

IMPORTAÇÕES E EXPORTAÇÕES.

Na pagina 1211 apparece a ultima relação do commercio entre os Estados Unidos e os paizes latino americanos, tomada da compilação feita pela Secção de Estatistica do Departamento do Thesouro dos Estados Unidos. A relação corresponde ao mez de Março de 1902, com uma relação comparativa para o mez correspondente do anno anterior, assim como para os nove mezes findos em Março de 1902, comparados com os correspondentes de 1901. Deve-se explicar que os algarismos das diversas alfandegas, mostrando as importações e exportações de um só mez não são recebidos no Departamento do Thesouro até quasi o dia 20 do mez seguinte e perde-se algum tempo necessariamente em sua compilação e impressão. Por conseguinte as estatisticas para o mez de Março, por exemplo, não são publicadas até os primeiros dias de Maio.

DESENVOLVIMENTO DO COMMERCIO COM OS PAIZES DA AMERICA LATINA.

O "Report on the Commercial Relations of the United States" (Relatorio sobre as Relações Commerciaes dos Estados Unidos), publicado pela Secção do Commercio Estrangeiro do Departamento de Estado dos Estados Unidos, contem um estudo valioso e interessante sobre o desenvolvimento do commercio entre os Estados Unidos e os paizes latino-americanos.

Quanto ao Mexico, diz-se que as mercadorias dos Estados Unidos teem grande acceitação naquella Republica, mas que em certos generos, taes como fazendas, chapéos, calçado, mercearia e roupa para senhoras e senhores, os exportadores norte-americanos quasi não teem feito esforços para conseguir este commercio. Em geral, porém, o commercio vai augmentando e muitas firmas norte-americanas teem adoptado a praxe de enviar moços mexicanos ou cubanos como agentes commerciaes. Estes conhecem perfeitamente as necessidades deste ramo de actividade commercial e têm-se conseguido bons resultados. Diz-se que as fallencias são de pouca frequencia no Mexico e os viajantes commerciaes encontram uma classe conservadora de commerciantes que se orgulham de fazer seus negocios na base de promptos pagamentos. O empreendimento norte-americano tem figurado notavelmente no desenvolvimento da grande cidade de Monterey, sendo construidas em sua maior parte por empresas norte-americanas as obras de abastecimento de agua, rede de esgotos, installações de gaz, estradas de ferro e fundições.

Em Guatemala, as machinas norte-americanas são altamente apreciadas. A sua superioridade sobre as machinas de outras procedencias, no que diz respeito a economia de combustivel dá-lhes influencia decisiva na procura que dellas se faz.

As tres quartas partes das importações de Honduras são de procedencia norte-americana, e nas Antilhas a procura de generos dessa procedencia vai em constante augmento. Em Haiti, as importações de machinas norte-americanas vão augmentando e São Domingo importa dos Estados Unidos 85 por cento de productos alimenticios, assim como chapéos e calçado em consideravel quantidade. Toda a madeira de construcção e grande parte de outros materiaes de construcção que se usam na ilha são de procedencia norte-americana.

Julga-se que será de grande beneficio o armazem fluctuante de amostras que os Estados Unidos vão estabelecer com o fim de desenvolver o commercio com os paizes latino-americanos e as Antilhas. Um navio será enviado dos Estados Unidos com destino á costa occidental do Mexico, America Central e America do Sul, tendo a bordo, ao cargo de vendedores habilitados, amostras de mercadorias de todas as classes proprias para o commercio dos tropicos.

Os beneficios reciprocos que resultarão de relações commerciaes mais estreitas formam a idea principal de um discurso pronunciado, a 19 de Abril, na reunião do "Banker's Club" de Chicago pelo Sr. INGALLS, presidente do club. Elle declarou que os Estados Unidos ainda faltam dos meios necessarios para conseguir o commercio dos paizes que ficam ao sul deste paiz. "O que é necessario fazer," accrescentou, "para promover o commercio com as Antilhas e os paizes sul-americanos, é estabelecer um systema de transportes e communicações entre o nosso paiz e os diversos portos e cidades destes paizes. O commercio sempre segue facilidades de comunicação." É necessario, pois, demonstrar que as nações da America latina podem visitar os Estados Unidos com maior facilidade e a menor custo que a Europa; que os transportes são mais rapidos e os fretes mais baratos; que machinas as mais aperfeiçoadas podem ser obtidas neste lado do Atlantico e que ha no paiz capitaes sufficientes para conceder creditos de longo prazo sob boas garantias e á alta taxa de juros.

Quanto aos paizes da America do Sul, diz o relatorio que o carvão norte-americano encontra um excellente mercado no Brazil, e que as machinas de escrever, machinas de coser, relgios de parede, relgios de bolso e osapparelhos electricos continuam a occupar o lugar por elles ganho, ao passo que se vão conseguindo novos mercados para as bicyclettas, fechaduras, armas de fogo, cutelaria e quadros para gravuras. Insiste-se sobre a urgencia do estabelecimento de uma linha de vapores entre Nova York e o Brazil que seria de beneficio incalculavel para ambos os paizes. As ferragens norte-americanas não teem rival nos mercados do Brazil.

Os productos dos Estados Unidos que teem maior acceitação na Republica Argentina são instrumentos de diversas classes, fazendas de algodão, chapéos, calçado, etc. Pode-se ter uma idea do valor das transacções commerciaes entre as duas Republicas pelo facto de que em um dos bancos de Rosario, o augmento havido nos negocios com firmas norte-americanas durante o primeiro semestre de 1901, comparados com os do mesmo semestre do anno anterior, foi de 131 por cento.

As machinas de serração constituem a maior parte das importações no Chile procedentes dos Estados Unidos, e como a exploração de florestas é a principal industria das provincias meridionaes do Chile, a quantidade dessas machinas que se importam annualmente é consideravel. Tambem se importam dos Estados Unidos as machinas para moinhos de farinha de trigo que se usam naquelle paiz.

Na Republica de Colombia, vai augmentando a procura de camisas, collarinhos e punhos de fabricação norte-americana.

O commercio dos Estados Unidos com o Equador mostra um augmento muito satisfactorio, devido principalmente ás compras feitas para a estrada de ferro de Guayaquil a Quito, assim como ás communições mais rapidas, ás taxas de frete mais baixas e aos esforços dos agentes commerciaes.

No Uruguay, as manufacturas norte-americanas augmentam continuamente, e para conquistar por completo este mercado, só bastaria fazer esforços constantes.

COMMERCIO ESTRANGEIRO DURANTE OS PRIMEIROS NOVE MEZES DE 1901.

Segundo as estatisticas do commercio estrangeiro aos Estados Unidos durante os primeiros nove mezes do exercicio de 1902, organizadas pela secção de Estatistica do Departamento do Thesouro, houve um augmento nas importações, comparadas com as do periodo correspondente do anno anterior, de \$79,261,442, e uma diminuição nas exportações para o mesmo periodo, de \$59,551,963. O valor total das importações nos dous periodos em confronto foi de \$678,698,016 e \$599,426,674, e o das exportações foi de \$1,080,986,664 e \$1,139,668,627, respectivamente. Mais da metade da diminuição notada nas exportações foi produzida pela redução das exportações de productos agricolas, sendo estes no valor de \$693,837,455 em 1902, comparado com \$736,565,745 em 1901.

Essa redução é devida principalmente aos grandes prejuizos soffridos pela colheita do milho nos Estados Unidos. A exportação média annual deste cereal é de 200,000,000 alqueires, mas este anno a exportação deste producto não attingirá á quinta parte desta quantidade. As exportações de milho durante os nove mezes findos em Março, 1902, só chegaram a 24,369,964 alqueires, no valor de \$14,637,186, contra 146,130,059 alqueires no valor de \$66,936,873, no periodo correspon-

dente de 1901. As exportações de areia diminuíram de 24,843,967 alqueires no valor de \$7,755,362 em 1901, a 8,559,353 alqueires no valor de \$3,484,438 em 1902. Assim se vê que da diminuição total nas exportações de \$59,551,963, a quantia de \$56,470,621 foi realizada pela redução no valor das exportações de milho e aveia.

Outro producto cuja exportação durante os nove mezes de 1902 mostra uma redução consideravel sobre a do anno anterior, é o algodão. Esta diminuição, porém, é devida não a uma redução na quantidade exportada em 1902, mas á baixa no preço do producto. Ao contrario, as exportações de algodão teem augmentado notavelmente. A exportação total de algodão durante os nove mezes findos em Março de 1902, foi de 3,085,509,868 libras, contra 2,741,310,363 libras no periodo correspondente de 1901, ou seja um augmento de 344,199,505 libras. O valor desta exportação nos dous periodos foi de \$252,136,904 e \$264,340,805, respectivamente, o que mostra uma diminuição para 1902 de \$12,204,701.

Com relação á exportação de artigos manufacturados, ao passo que se nota uma ligeira diminuição na exportação total para os primeiros nove mezes de 1902, comparada com o mesmo periodo de 1901, o commercio na maior parte dos productos tem sido estacionario e em alguns nota-se um augmento. Entre estes figuram os instrumentos agricolas, livros e mappas, bicyclettas, pannos de algodão, polvora e substancias explosivas, artigos de borracha, arame de aço, machinas de escrever, tubos de ferro e accessorios, calçado, instrumentos musicos, oleos mineraes, manufacturas de tabaco, mobilia de casa e fazendas de lã. As exportações de linguados de cobre,apparelhos electricos e scientificos, trilhos de aço, etc., mostram uma diminuição. As exportações de productos manufacturados durante os nove mezes de que se trata representam o 27.75 por cento da exportação total, comparado com 27.21 por cento no mesmo periodo do anno anterior. Estas exportações representam um valor de \$294,859,812 em 1902, contra \$304,891,344 em 1901.

O confronto das estatisticas de importação para os nove mezes de 1902 e 1901, demonstra que, ao passo que houve um augmento nas importações em 1902 de \$79,261,442, desta somma \$63,008,968 representam o valor das materias primas importadas para serem empregadas nas industrias nacionaes. Dez artigos constituem a maior parte das materias primas importadas e são fibras, couros e pelles, borracha, seda crúa, estanho, madeiras não manufacturadas, lã, cobre, algodão em rama (proveniente em sua maior parte do Egypto) e grande porção dos artigos classificados como "productos chimicos."

O quadro que se dá em seguida mostra o valor total dessas importações durante os nove mezes findos em 31 de Março de 1902, comparado com o valor das do periodo correspondente de 1901. Observar-se-há que houve um augmento notavel na importação de todos estes productos em 1902, com a excepção da borracha e do estanho. No caso do

estanho, em que se nota uma ligeira diminuição no valor, os algarismos que representam a quantidade excedem aos do periodo correspondente do anno anterior, ao passo que a diminuição no valor das importações de borracha é tambem devida á baixa do preço.

	1901.	1902.
Productos chimicos	\$39, 281, 736	\$43, 339, 560
Cobre	14, 016, 009	19, 762, 870
Algodão em rama	5, 163, 487	9, 145, 333
Fibras	16, 128, 152	22, 955, 194
Couros e pelles	33, 165, 417	44, 187, 774
Borracha	20, 033, 924	18, 855, 769
Seda crúa	19, 531, 319	33, 188, 523
Estanho em linguados	14, 486, 223	13, 414, 046
Madeiras não manufacturadas	11, 132, 727	13, 959, 732
La crúa	8, 743, 510	12, 615, 874
Total	247, 783, 462	310, 792, 429

Não obstante a diminuição nas exportações durante os nove mezes de 1902, comparadas ás do mesmo periodo do anno anterior, a exportação total dos Estados Unidos é ainda superior á de qualquer outro paiz. Ha sómente dez paizes, além deste, cujas exportações excedem ás importações. Estes são a Republica Argentina, Brazil, Bulgaria, Canadá, Chile, Egypto, India Britannica, Mexico, Russia e Uruguay. A analyse das exportações médias mensaes de productos nacionaes feitas pelos diversos paizes que suprem os mercados do mundo mostra que os Estados Unidos occupam o primeiro lugar, seguindo-se-lhe o Reino Unido, Allemanha, França, os Paizes Baixos e a India ingleza, na ordem dada. Na lista das nações importadoras, o Reino Unido occupa o primeiro lugar, vindo logo em seguida Allemanha, França, os Estados Unidos, os Paizes Baixos e Belgica.

Os següintes quadros dão os valores e classificação do commercio estrangeiro dos Estados Unidos durante os dous periodos em comparação:

IMPORTAÇÃO.

Classificação.	Nove mezes findos em março de 1901.	Nove mezes findos em março de 1902.
Productos alimenticios e animaes	\$163, 177, 213	\$152, 735, 465
Materia prima que se emprega nas industrias nacionaes	189, 319, 425	243, 161, 020
Artigos em todo ou em parte manufacturados que se usam como material nas fabricas	58, 464, 036	67, 631, 409
Artigos manufacturados promptos para o consumo	100, 630, 891	113, 563, 778
Artigos de luxo, etc	87, 835, 109	101, 606, 344
Total	599, 426, 674	678, 698, 016

EXPORTAÇÃO.

Productos agricolas	\$736, 565, 745	693, 837, 455
Productos das manufacturas	304, 891, 344	294, 859, 812
Productos das minas	28, 542, 043	29, 385, 530
Productos das florestas	39, 807, 879	34, 014, 298
Productos da pesca	6, 861, 844	6, 398, 583
Productos diversos	3, 814, 807	3, 936, 480
Total dos productos nacionaes	1, 120, 483, 662	1, 062, 432, 158
Total dos productos estrangeiros	19, 184, 965	18, 554, 506
Total	1, 139, 668, 627	1, 080, 986, 664

O valor das importações de ouro nos primeiros nove mezes do exercicio de 1902 é representado por \$44,572,977, contra \$58,768,572 no mesmo periodo de 1902. As exportações de ouro nos dous periodos de que se trata representam um valor de \$43,364,814 e \$32,822,191, respectivamente. As importações de prata foram avaliadas em \$22,431,339 em 1902, comparadas com \$29,336,428 em 1901, ao passo que as exportações desse mineral representavam um valor de \$38,956,242 e \$50,370,852, respectivamente.

RELAÇÕES COMMERCIAES COM A HESPAÑHA.

As relações commerciaes que se restabeleceram entre os Estados Unidos e a Hespanha são, ao que parece, mais cordiaes que nunca. Os algarismos apresentados pela Repartição de Estatística do Departamento do Thesouro mostram que tanto as importações nos Estados Unidos provenientes da Hespanha, como as exportações dos Estados Unidos para aquelle paiz foram, com uma só excepção, maiores no anno civil de 1901 que em qualquer anno anterior. Os productos importados da Hespanha no anno de 1901, foram no valor de \$7,040,758, ao passo que as exportações dos Estados Unidos para aquelle paiz foram avaliadas em \$16,785,711. Comparando-se o commercio de 1901 com o de 1891, vê-se que as importações procedentes de Hespanha subiram de \$4,906,475 a \$7,040,758 e que as exportações dos Estados Unidos com destino a Hespanha augmentaram de \$12,887,477 a \$16,785,711. Em 1898 as importações dos Estados Unidos procedentes de Hespanha foram avaliadas em \$3,608,308, e as exportações dos Estados Unidos para aquelle paiz foram no valor de \$8,050,475.

MEXICO.

MENSAGEM DO PRESIDENTE DIAZ.

RELATORIO LIDO PELO PRESIDENTE DA REPUBLICA AO ABRIR-SE O QUARTO PERIODO DE SESSÕES DO VIGESIMO CONGRESSO DA UNIÃO, O 1º DE ABRIL DE 1902.

* * * * *

No que diz respeito ás nossas Relações Exteriores, tem havido, no periodo a que este relatorio se refere, acontecimentos extraordinarios, cujo effeito tem sido a extensão das relações amistosas entre Mexico e as demais Republicas do Novo Mundo, assim como a consolidação do bom credito de nossa patria.

Como estava annunciado, a Conferência Internacional Americana reuniu-se nesta cidade em 22 de Outubro ultimo, e desde logo emprehenheu seus importantes trabalhos, que se prolongaram até o 31 de

Janeiro. Nella teve parte muito activa a Delegação Mexicana, composta de nove membros, que souberam distinguir-se por sua intelligencia, laboriosidade e o tacto com que levaram adiante, em cada caso, as instrucções que opportunamente receberam. Desses trabalhos em particular, tomareis conhecimento pelas publicações que já se teem feito das resoluções, recommendações e tratados que parcialmente, em sua maioria, ou por unanimidade firmaram os Delegados á Conferencia.

Além disto, já se estão publicando as actas das sessões de dita assemblea e o diario de seus debates em tres das linguas officiaes que se fallam na America. O que, sem duvida, chamará especialmente vossa attenção entre esses importantes accordos, nenhum dos quaes carece de grave transcendencia, é o tratado de arbitramento obrigatorio subscripto pelos Delegados de nove Republicas, ou sejá a maioria das que ao ultimo se achavam representadas na assemblea; a adhesão aos principios proclamados no justamente chamado Congresso da Paz, reunido no Haya em 1899, e a convenção firmada por todos os Delegados para sujeitar ao arbitramento os casos de reclamação de um governo por damnos e prejuizos causados a seus nacionaes. Este ultimo convenio que será remettido ao Senado com os demais que importem obrigações internacionaes, terá notaveis consequencias, sempre que sejá ratificado pelos principaes Governos cujos representantes o subcreveram.

O effeito geral, com respeito á Republica do Mexico, produzido pela Segunda Conferencia Pan-Americana não pode menos de ser favoravel ás relações que nos ligam com as nações de America e ao bom nome de nossa Republica; e os esforços que fez o Governo Federal para receber dignamente as delegações respectivas, ajudado pelos Governos de alguns Estados que em excursões convenientemente arranjadas foram visitados por aquellas, produziram o fructo que se esperava para dar a conhecer nosso paiz e satisfazer os desejos de nossos distinctos hospedes.

Decretada pelo Congresso dos Estados Unidos de America a devolução a Mexico do saldo das reclamações fraudulentas de WEIL E LA ABRA que aquelle Governo tinha distribuido, nosso Embaixador em Washington recebeu a somma correspondente, tomada daquelle erario.

Julgou-se de alta conveniencia e pelo mesmo se inicia o estabelecimento de outra legação na America do Sul, afim de que haja duas, uma para as Republicas do Atlantico e outra para as do Pacifico, cuja residencia será alternativamente no Chile e no Peru.

Concluidos já dous tratados de amizade e commercio, um com o Paraguay e o outro com Bolivia, assim como duas convenções postaes, uma com esta ultima nação e a outra com a Republica do Chile, se remettem esses convenios ao Senado para os effeitos constitucionaes. Á proposta da Legação de Hespanha, foi celebrado com essa nação um tratado de arbitramento obrigatorio muito comprehensivo e conforme

ao qual será o arbitro em cada caso, ou o Tribunal Internacional estabelecido no Haya, ou um dos presidentes das Republicas hispano-americanas. O dito tratado e uma convenção tambem com a Hespanha para facilitar a execução das cartas rogatorias judiciaes de um ao outro paiz, dispensando o requisito das legalizações a documentos enviados por via diplomatica, serão remettidos desde logo ao Senado para sua revisão constitucional.

Convidado o Governo do Mexico para nomear delegados que o representasse no Congresso Sanitario Internacional que se reuniu na cidade de Habana no mez de Fevereiro ultimo, e acceito desde logo o convite, o executivo nomeou uma commissão que concorren áquella assemblea, na qual se tem chegado a conclusões muito favoraveis para todos os paizes americanos no que diz respeito á policia sanitaria internacional.

* * * * *

O Conselho Municipal de Mexico continua com empenho as obras emprehendidas para o embellezamento da cidade e melhoramento de alguns de seus serviços. Ultimamente celebrou um novo contracto para o calçamento com asphalto de mais vintecinco ruas; tem levado a effeito a reconstrucção e ampliação de varios edificios destinados para mercados e tem adquirido diversos predios para a construcção de outros novos que o constante augmento da população torna indispensaveis.

As obras de saneamento da capital, pelo menos na parte contractada com a empreza, podem ser consideradas terminadas; pois apenas faltam algumas obras secundarias e de aperfeiçoamento, que se concluirão dentro de alguns dias.

* * * * *

A lei do notariado foi promulgada em Dezembro ultimo, depois de uma meditada elaboração. Ao pôr em pratica o preceito que ordena a incorporação do registro de hypothecas ao registro publico da propriedade, apresentaram-se serias difficuldades oriundas da necessidade que havia de levar a cabo essa operação sem suspender o despacho, nem prejudicar os interesses do publico. Hoje estão vencidas essas difficuldades, e tanto a instituição do notariado como a secção de hypothecas seguem um curso facil

* * * * *

O executivo recebeu formal convite para que o Mexico esteja representado no proximo Congresso Internacional de Americanistas que ha de renuir-se em Nova York em Outubro proximo, e no decimo-quarto congresso de medicina que ha de ter lugar em Madrid, em Abril do anno vindouro. Esses convites foram acceitos, e opportunamente serão nomeados representantes officiaes para continuar realizando o proposito de estreitar os laços intellectuaes que Mexico tem com outros paizes.

* * * * *

De accordo com as leis que regem a propriedade industrial, foram expedidas duzentas trinta e uma patentes de invenção, e registradas cento e quatro marcas de fabrica e de commercio.

* * * * *

O desenvolvimento da industria mineira evidencia-se pelo maior numero de titulos de minas que se expedem e pelo estabelecimento de novas refinações.

Durante o primeiro semestre do presente exercicio foram expedidos 1,837 titulos que abrangem uma superficie de 29,095 hectares, isto é, houve um augmento de mais de 100 por cento com respeito ao periodo correspondente do exercicio anterior. Foram celebrados contractos para a construcção de officinas metallurgicas no Districto de Zimapam do Estado de Hidalgo e no do Euerte do Estado de Sinaloa.

* * * * *

Foram celebrados contractos para o aproveitamento de aguas em irrigação e como força motriz nos rios de Sabinas em Coahuila, Pesqueria Chica em Nuevo León, Blanco em Veracruz, Moctezuma em Hidalgo, Turbio em Guanajuato e Soto la Marina em Tamaulipas.

A exploração de terrenos nacionaes foi contractada na Ilha de Santa Margarita e em uma zona do Estado de Tabasco, assim como a extracção de concha de madreperola nas Ilhas do Espirito Santo e Cerralvo e nas costas da Baixa California, e a pesca nas lagunas Vazquez e Ostiones na costa do Pacifico.

Foram terminadas e approvadas as obras hydraulicas construidas pela Companhia La Aurora para aproveitar como força motriz as aguas do rio de Cuantitlán.

Começam a expedir-se auctorizações para a exploração do subsolo em busca de fontes de petroleo.

* * * * *

No primeiro semestre do presente exercicio fiscal, houve no ramo de correios o seguinte movimento:

Estabeleceram-se 4 administrações locaes, 2 succursaes e 45 agencias; sendo por conseguinte 2,133 o numero de repartições postaes existentes.

A correspondencia de toda a classe tem augmentado consideravelmente. No primeiro semestre deste anno foram postadas 74,000,000 de correspondencias, contra 72,000,000 no mesmo periodo do anno anterior.

Os vales postaes interiores ascenderam a \$16,000,000, contra \$12,000,000 em igual periodo do anno anterior.

Os vales postaes permutados entre o Mexico e os Estados Unidos tiveram um augmento de 37 por cento sobre os do primeiro semestre do anno fiscal anterior, ou seja um movimento de \$352,000. Desta quantia correspondem \$252,000 aos vales expedidos em Mexico, e \$102,000 aos expedidos pelos Estados Unidos.

A receita total arrecadada pela administração dos correios ascendeu a \$1,156,000, contra um \$1,039,000 no mesmo periodo do anno anterior, ou seja um augmento de 11¼ por cento.

Acerca do ramo de Telegraphos devo informar que foram construidos 218 kilometros de linha; o fio de ferro foi substituido pelo de bronze em uma extensão de 185 kilometros e foi feita uma installação completamente nova dos fios federaes nas ruas desta capital. Além disto, foram feitos reparos em toda a rede, para os quaes foram usados 27 toneladas de arame de ferro e mais de 10 toneladas de fio de bronze.

* * * * *

A situação financeira do paiz segue melhorando visivelmente, e não tardará muito tempo antes que desapparecerá por completo a depressão que se fez sentir em certas industrias no anno passado.

* * * * *

Novas concessões para o estabelecimento de instituições de credito foram outorgadas neste ultimo periodo. O Estado de Chiapas tem já um banco de emissão que começou suas operações, e já foi concedida autorização para o estabelecimento de um outro no Estado de Hidalgo. Dezoito Estados já possuem bancos de emissão.

A companhia da Estrada de Ferro de Merida a Valladolid, com ramal a Progreso, obteve do Governo uma concessão para estabelecer armazens alfandegados no porto de Progreso.

* * * * *

Senhores DEPUTADOS E SENADORES: Os principaes factos que vos acabo de expor demonstram que o paiz continua em sua marcha progressiva, sem deixar por isso de encontrar, como acontece á humanidade inteira, momentaneos tropeços que retardam seu progresso. Tereis tambem notado que o Executivo não poupa esforços para facilitar esse movimento civilizador, procurando melhorar em todas os seus ramos a administração publica. O impulso deve ser dado, como, sem duvida, tem sido dado, pelo povo mesmo, animado pela confiança que inspira a paz e a ordem publica; mas cabe ao Governo sustental-o e ajudal-o na esphera de suas faculdades com todos seus elementos, entre os quaes sobresaí por sua efficacia a sã e benefica influencia de seus legisladores.

SALVADOR.

MODIFICAÇÕES DA TARIFA.

O "Diario Oficial" publica as seguintes modificações da tarifa que tem sido decretadas pelo Governo do Salvador:

I. Decreto de 18 de Outubro de 1901, relativo aos saccos que contemham café:

"Havendo occorrido duvidas com respeito ao decreto legislativo de

17 de Maio de 1901, no que se declara que os saccos que contenham café para a exportação não pagarão direitos nem imposto algum, o Poder Executivo resolveu que o imposto de exportação sobre o café será cobrado nas alfandegas sobre o peso liquido do artigo, e para o effeito os inspectores deduzirão do peso bruto total o de duas e meia libras por cada sacco.

II. Decreto de 19 de Outubro de 1901, fixando os direitos que devem pagar os fios de linho ou canhamo não torcidos para sapateiros:

“Por este decreto, os fios de linho ou de canhamo não torcidos para sapateiros pagarão direitos de accordo com o art. 21 da tarifa, á razão de 30 centavos por kilo.”

III. Decreto de 23 de Outubro de 1901, estabelecendo a classificação da farinha de centeio.

“Este decreto dispõe que a farinha de centeio, não sendo especificada na tarifa vigente, deverá ser comprehendida no art. 57 da tarifa, para pagar a taxa de 2 centavos por kilo.”

IV. Decreto de 23 de Outubro de 1901, estabelecendo os direitos que devem pagar as meias curtas de fio de Escocia ou suas imitações.

“Este decreto dispõe que as meias curtas de fio de Escosia ou suas imitações devem ser classificadas no art. 14 da tarifa, para pagarem a taxa de 1 peso 50 centavos por kilo.”

V. Decreto de 23 de Novembro de 1901, estabelecendo os direitos que devem pagar os ventiladores electricos.

“Este decreto dispõe que os ventiladores electricos não especificados na tarifa, devem ser comprehendidos no art. 315 da tarifa, para pagarem a taxa de 30 centavos por kilo.”

VI. Decreto de 1º de Janeiro de 1902, concedendo temporariamente isenção de direitos ao milho e ao feijão.

“Por este decreto, declara-se livre de direitos e impostos, durante um anno, a introdução do milho e do feijão que se necessitem para o consumo. Essas mercadorias serão tambem isentas do pagamento da taxa de armazenagem.”

VII. Decreto de 8 de Janeiro de 1902, estabelecendo os direitos que devem pagar as caixinhas cylindricas de madeira para unguentos.

“Por este decreto, dispõe-se que as caixinhas cylindricas de madeira para unguentos, quando sejam ordinarias, feitas a torno e sem nenhum verniz, devem pagar um direito de 15 centavos.”

PRODUÇÃO DO LINHO DO MUNDO.

Segundo estatisticas organizadas pelo Departamento da Agricultura dos Estados Unidos, a produção do linho do mundo em 1900, foi de 64,466,500 alqueires, contra 61,726,600 alqueires em 1899 e 72,938,500 alqueires em 1898. Da produção total, mais de 95 por cento representa a quantidade produzida nos Estados Unidos, Russia India

e a Republica Argentina, e menos de 5 por cento, a produzida pelos outros paizes. A producção total de linho em 1900 foi distribuida assim: Russia, 32.06 por cento; Estados Unidos, 31.02 por cento; India, 18.61 por cento; Republica Argentina, 13.75 por cento e os demais paizes, 4.56 por cento.

Quasi toda a fibra de linho que se consome no mundo é produzida na Europa, pois nenhum dos grandes paizes productores de linho fora da Europa se occupa desta industria. A quantidade de fibra de linho produzida no mundo em 1900, foi de 1,312,709,000 libras, contra 1,139,077,000 libras em 1899 e 1,780,693,000 libras em 1898. Da producção total de fibra de linho em 1900, mais de 77 por cento corresponde á Russia e 25 por cento restante representa a producção dos outros paizes da Europa.

A cotação da linhaça nos Estados Unidos em 1900-1901, foi a maior havida durante os ultimos vinte annos. Em Chicago, a cotação mais alta foi a registrada em Julho de 1901, quando o preço da linhaça subiu a \$1.90 por alqueire.

Os Estados Unidos exportaram durante o exercicio findo em 30 de Junho de 1901, 2,755,683 alqueires de linhaça no valor de \$4,319,102, e importaram durante o mesmo periodo 1,631,726 alqueires no valor de \$2,098,207, o que deixa um excesso de exportações sobre importações de 1,123,957 alqueires.

Em regra, uma colheita tal como a de 1900 (20,000,000 alqueires) produz 50,000,000 gallões de oleo ou 760,000,000 libras de massa ou farinha de linhaça. Como se sabe, o oleo de linhaça que se fabrica nos Estados Unidos é destinado quasi todo ao consumo domestico, não excedendo a 100,000 gallões, em média, as exportações annuaes deste producto. A maior parte da massa e farinha de linhaça que se fabrica é exportada, tendo attingido a 455,154,866 libras as exportações desses productos no exercicio que terminou em 30 de Junho de 1901. As exportações de massa de farinha de linhaça são enviadas em maior parte para a Allemanha e o Reino Unido. Das exportações totaes desses productos feitas durante o exercicio de 1900, a Allemanha e o Reino Unido receberam 33 por cento e 28 por cento, respectivamente.

É de notar-se que dos quatro paizes que produzem de 90 a 95 por cento da colheita total de linhaça do mundo, os Estados Unidos é o mais importante como manufactureiro de oleo e massa de linhaça. A maior parte da linhaça que se produz na Russia e na India encontra-se nos mercados do mundo como materia prima para ser depois convertida em productos manufacturados nas fabricas de Europa. A Republica Argentina fabrica de 10 a 15 por cento de sua colheita annual para o consumo nacional e o restante é exportado para ser manufacturado nas fabricas de Europa. A Russia exporta para a França, Allemanha, Inglaterra e outros paizes da Europa, quasi tres quartos de sua producção total de linho.

PRODUÇÃO DA CORTIÇA DO MUNDO.

Segundo uma publicação official franceza, a produção total de cortiça do mundo é de cerea de 1,000 toneladas por anno, sendo supprida exclusivamente por Portugal, Hespanha, França, Italia, Algeria, Tunisia e Marrocos.

Devido á falta de dados exactos sobre este assumpto, é difficil calcular, mesmo approximadamente, a area que comprehendem as arvores de cortiça nestes paizes. Sabe-se, porem, que as florestas em que se encontram essas arvores cobrem uma area de cerca de 600,000 hectares em Portugal, 426,000 hectares em Algeria, 300,000 hectares em Hespanha, 143,000 hectares em França, 82,000 hectares em Tunisia e 80,000 hectares na Italia. Pode-se dizer tambem que mais que a metade das florestas que actualmente se exploram para obter a cortiça existem na França, Algeria e Tunisia. Essas florestas consistem principalmente em arvores de cortiça, pinheiros e carvalhos verdes. Na parte oriental da Kroumiria existem florestas virgens de arvores de cortiça, as quaes, si fossem exploradas augmentariam consideravelmente a actual produção de cortiça.

O consumo de cortiça augmenta de dia para dia e não ha duvida de que um augmento na produção desta, especialmente das qualidades superiores, teria prompta sahida. Na actualidade, a França, o Reino Unido, Allemanha, Russia e os Estados Unidos recebem cerca de 85 por cento da quantidade total de cortiça que se consome annualmente no mundo.

A Allemanha, Russia e os Estados Unidos impõem direitos prohibitivos sobre as importações de artigos manufacturados de cortiça, ao passo que a cortiça não manufacturada entra quasi livre de direitos. O Reino Unido é o unico paiz que não impõe direitos sobre a cortiça manufacturada e em bruto. Os artigos manufacturados de cortiça que se importam naquelle paiz vem principalmente de França, Hespanha e Portugal. Em 1900 Portugal exportou para a Inglaterra 5,916,000 libras de cortiça. A Hespana envia principalmente manufacturas de cortiça, Catalunha exportando entre outros artigos, rolhas para champagne de qualidade superior que se vendem por um preço que varia de 157 a 165 francos por milheiro.

A cortiça de Portugal que cresce com grande rapidez devido á humidade do clima é inferior em qualidade á da costa do Mediterraneo.

A cortiça de Africa não tem mais a má fama que outr'ora tinha, tendo feito desaparecer esta impressão as amostras de cortiça africana expostas na Exposição de Pariz de 1900.

EXTENSÃO DAS VIAS FERREAS DO MUNDO.

A metade do numero total de milhas de vias ferreas construidas no mundo dentro dos setenta annos que têm transcorrido desde que se demonstraram sua exequibilidade e vantagens praticas, corresponde aos Estados Unidos. A extensão total das estradas de ferro abertas ao tráfego em Janeiro de 1902 foi de 484,348 milhas. Deste total correspondem á America do Norte, 220,657 milhas; á Europa, 168,605 milhas; á Africa, 35,580 e á Australia, 15,282 milhas.

Comparando a extensão das linhas ferreas dos diversos paizes, vê-se que os Estados Unidos occupam o primeiro lugar com 199,378 milhas, seguindo-lhe em ordem o Imperio Allemão com 31,934 milhas; Russia, 29,894 milhas; França, 26,613; India, 25,035; Austria Hungria, 22,919; Grã Bretanha e Irlanda, 21,700; Canadá, 17,657; Australia Britannica, 15,266; Republica Argentina, 10,419; Italia, 9,810; Mexico, 9,603; Brazil, 81,718 e Hespanha, 8,300 milhas. Em 1830, a extensão das vias ferreas nos Estados Unidos foi de 23 milhas; havia 2,818 milhas em 1840; 9,021, em 1850; 30,626, em 1860; 52,922, em 1870; 93,262, em 1880; 166,654, em 1890 e 194,321 milhas em 1900.

O nono supplemento semi-annual da "Railroad Gazette," que sahiu á luz no dia 28 de Março de 1902, dá uma lista de todas as estradas de ferro em construção ou em projecto nos Estados Unidos (inclusive Porto Rico, Hawaii e as Philippinas), Canadá e Mexico. Segundo esta publicação, ha 1,502 estradas de ferro em projecto que representam 1,142 companhias. Deste numero, 1,308 representam estradas projectadas por 995 companhias de vias ferreas dos Estados Unidos; 157 representam as que têm em projecto 119 companhias no Canadá e 37 são linhas que serão construidas no Mexico, no interesse de 28 companhias. O numero de estradas de ferro projectadas para cuja construção já foram outorgadas concessões, é de 453, das quaes 399 correspondem aos Estados Unidos, 42 ao Canadá e 12 ao Mexico.

BIBLIOGRAPHIA.

Nesta secção do Boletim Mensal se tratará dos livros e folhetos enviados á Secretaria Internacional das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

A bibliotheca desta Secretaria recebeu ultimamente uma obra intitulada "Landwirtschaft und Kolonization im Spanischen Amerika" (Agricultura e Colonização nos Paizes Hespano-Americanos), escripta por Dr. KARL KRAEGER. O Dr. KRAEGER, que é um engenheiro

agricola addido da Legação allemã em Buenos Aires, reuniu em dous volumes grande quantidade de informações e dados estatísticos, inclusive os relatorios officiaes transmittidos ao Ministerio das Relações Exteriores da Allemanha pelas Legações allemães em Buenos Aires e Mexico durante os annos de 1895-1900. Estes relatorios são o resultado de investigações pessoaes e sua publicação é auctorizada pelo Governo Allemão. Diz o auctor que neste livro procurou tratar ligeiramente das condições politico-economicas e agricolas, mas a maior parte delle é consagrada á publicação de simples factos. Um indice detalhado faz o livro valioso como obra de consulta. O primeiro volume é consagrado quasi todo á Republica Argentina, tratando das condições agricolas nas provincias de Santa Fé, Córdoba, Entre Rios e Buenos Aires, especialmente da cultura do trigo, assucar, vinho e da criação de gado. Outros capitulos são consagrados ao Uruguay, Paraguay, o Territorio da Pampa Central e Patagonia. O volume II contem capitulos sobre o Chile, Bolivia, Perú, Equador, e Mexico. O primeiro volume contem uma carta graphica mostrando a variação dos preços do trigo e da farinha.

MAI 1902.

No. 5.

CHEMIN DE FER INTERCONTINENTAL.

**RAPPORT DU COMITÉ DU CHEMIN DE FER PAN-AMÉRICAIN
PRÉSENTE LE 29 NOVEMBRE, 1901, À LA SECONDE CONFÉ-
RENCE INTERNATIONALE DES PAYS DE L'AMÉRIQUE.**

Le Comité du Chemin de Fer Pan-Américain de la Seconde Conférence Internationale des pays de l'Amérique soumet le rapport qui suit:

A la première conférence qui a eu lieu à Washington pendant l'hiver de 1889-1890, le comité des chemins de fer, qui se composait de délégués représentant les dix-huit gouvernements américains, en soumettant son rapport qui a été approuvé et adopté à l'unanimité par les membres de la conférence, s'est exprimé ainsi:

“1°. Qu'un chemin de fer unissant toutes les nations représentées à cette conférence ou du moins la majorité d'entre elles, contribuerait d'une manière considérable au développement des relations cordiales entre les dites nations et à l'augmentation de leurs intérêts matériels.

“2°. Que le meilleur moyen de faciliter sa construction serait de nommer une commission internationale d'ingénieurs chargés de déterminer les routes possibles, leur longueur exacte, l'estimation des frais de construction de chacune d'elles, et aussi de comparer leurs avantages respectifs.

“3°. Que ladite commission doit se composer d'un groupe d'ingénieurs dont trois seront nommés par chaque nation et qu'alors cette commission aura le droit de se diviser en sous-commissions et de nommer autant d'autres ingénieurs et employés qu'elle jugera nécessaires à l'exécution plus rapide des travaux.

“4°. Que chacun des gouvernements acceptant d'en faire partie, pourra nommer à ses frais des commissionnaires ou ingénieurs pour servir en qualité d'auxiliaires dans les sous-commissions chargées de faire l'étude et le tracé des différentes sections de la ligne.

“5°. Que le chemin de fer, autant que le permettront les intérêts communs, doit relier entre elles les villes principales situées à proximité de sa route.

“6°. Que si pour remplir les conditions de l'article 5, il est impossible de changer la direction de la ligne sans s'exposer à de grands inconvénients, on devra faire des études pour établir des embranchements qui relieront ces villes à la ligne principale.

“7°. Qu'en vue de réduire les frais de cette entreprise, on devra utiliser les chemins de fer qui existent déjà, autant que le permettront la route et les conditions du chemin de fer continental.

“8°. Que si les résultats des études et du tracé montrent qu'il est vraiment possible et utile de faire cette ligne, on devra la mettre en adjudication en tout ou en partie.

“9°. Que la construction, la direction et l'exploitation soient aux frais des concessionnaires, sous-concessionnaires ou entrepreneurs qui seront tenus de remplir toutes les formalités nécessaires et surtout d'obtenir le consentement des gouvernements respectifs.

“10°. Que tous les matériaux nécessaires à la construction et à l'exploitation du chemin de fer soient exempts de droits de douane, tout en étant assujettis aux règlements nécessaires, afin d'éviter les abus qui pourraient se produire sous le couvert de ce privilège.

“11°. Que toutes les propriétés mobilières ou foncières de la ligne employées dans sa construction et dans son exploitation soient exemptes de tout impôt national, provincial, ou municipal.

“12°. Que l'exécution d'un travail de cette importance mérite d'être encouragée dans toute la mesure du possible, par des subsides, des concessions de terrains, ou des prêts faits au taux d'intérêt le plus bas.

“13°. Que les appointements des membres de la commission ainsi que les dépenses faites pour les études et tracés de la ligne soient payés par les nations adhérentes en proportion du nombre de leurs habitants en prenant pour base le dernier recensement officiel. En l'absence de ce document les différents Gouvernements s'entendront entre eux sur la somme à payer.

“14°. Que le chemin de fer soit déclaré neutre en tout temps afin d'assurer la liberté du trafic.

“15°. Que l'approbation des études, les conditions des adjudications, la protection des concessionnaires, l'inspection des travaux et les lois s'y rapportant, la neutralité du chemin de fer et le passage libre des marchandises en transit soient, dans le cas prévu par l'article 8, l'objet d'une entente spéciale entre toutes les nations intéressées.

“16°. Qu'aussitôt que le Gouvernement des Etats-Unis aura reçu l'avis officiel de l'adhésion des autres Gouvernements aux considérations

ci-dessus, il les invite à nommer la commission d'ingénieurs dont on a parlé dans l'article 2, afin qu'elle puisse se réunir à Washington le plus tôt possible."

M. BLAINE, qui était alors Ministre des Affaires Etrangères des Etats-Unis, s'est exprimé ainsi en communiquant au Président HARRISON le rapport ci-dessous du comité du chemin de fer:

"Ce rapport est le plus important qui nous a été remis par la Conférence Internationale Américaine et je le recommande sérieusement à votre attention, ayant pleine confiance que le Congrès agira avec la plus grande promptitude pour permettre à notre Gouvernement de prendre part à l'avancement de cette entreprise.

"C'est le seul moyen pour notre Gouvernement et le peuple des Etats-Unis de contribuer au développement et à la prospérité de nos Républiques sœurs ainsi qu'à l'expansion de notre commerce."

Le Président en transmettant le rapport au Congrès s'est exprimé ainsi au sujet de l'importance du projet:

"Au Sénat et à la Chambres des Députés:

"Je vous transmets ci-inclus un rapport de la Conférence Internationale Américaine qui dernièrement a tenu ses séances dans notre capitale. Ce rapport recommande des études spéciales d'une route pour construire un chemin de fer intercontinental mettant en communication les réseaux de l'Amérique du Nord avec ceux de l'Amérique du Sud.

"L'attention du public a été attirée d'une manière toute spéciale sur l'amélioration des moyens de communication par eau entre les ports des Etats-Unis et ceux de l'Amérique du Centre et du Sud; et le meilleur moyen de développer et augmenter le commerce avec les nations de l'Amérique Latine serait la création de nouvelles lignes de paquebots perfectionnés. Mais on ne doit pas oublier que l'on peut aller par terre de Washington à la capitale la plus au sud de l'Amérique Méridionale et que l'ouverture d'une ligne de chemins de fer nous mettant en communication avec ces nations amies leur fournirait, ainsi qu'à nous, des facilités de communication et d'échanges commerciaux d'une valeur toute spéciale. Les travaux à entreprendre sont immenses, mais malgré cela ils sont entièrement réalisables.

"Il est très intéressant pour tout le monde et peut-être surprenant pour la plupart d'entre nous de savoir combien de chemins de fer existent déjà au Mexique et dans l'Amérique du Sud, et jusqu'à quel point on peut les utiliser pour la grande ligne intercontinentale.

"Je n'hésite pas à demander au Congrès de voter la faible allocation nécessaire aux études et tracés suggérés par la conférence et d'autoriser la nomination de commissaires et d'officiers du génie pour diriger et conduire les premières études nécessaires.

"BENJ. HARRISON.

"FAIT À LA MAISON BLANCHE, le 19 mai 1890."

Les Etats-Unis, ainsi que plusieurs des autres pays intéressés dans la construction du chemin de fer continental, ont voté l'allocation qui leur a été demandée pour subvenir aux frais des études préliminaires destinées à servir de renseignements pour mener cette entreprise à bonne fin.

Bientôt après, la commission du Chemin de Fer Intercontinental, représentée par onze gouvernements d'Amérique, a commencé ses travaux. M. A. J. CASSATT, le président actuel du chemin de fer de la Pennsylvanie, l'un des réseaux les plus grands et les plus riches du monde, a été nommé à l'unanimité président de la commission et M. H. G. DAVIS a été élu président du comité des finances. La commission a dépensé environ \$360,000 pour les études, les cartes, les imprimés, etc. On a envoyé trois groupes d'ingénieurs sur le terrain et les résultats de leurs travaux, couvrant une période de plusieurs années, qui s'est terminée en 1895, ont fait ressortir que la distance approximative de New York à Buenos Ayres, en utilisant les voies existantes, serait de 10,471 milles, dont la moitié environ, qui était achevée à cette époque, est maintenant en exploitation.

La lettre officielle suivante, écrite par le Capitaine E. Z. STEEVER, secrétaire de la commission du Chemin de Fer Intercontinental donne les renseignements les plus dignes de foi sur le chemin de fer qu'on pourrait utiliser pour une partie de la ligne continentale et indique aussi combien il en reste encore à construire :

“COMMISSION DU CHEMIN DE FER INTERNATIONAL,
Washington, D. C., le 16 janvier, 1896.

“A l'Honorable HENRY G. DAVIS,
Washington, D. C.

“MONSIEUR: Conformément à la demande verbale que vous avez faite le 14 courant à ce Bureau, j'ai l'honneur de vous donner ci-dessous une idée approximative de la longueur qu'exigerait un chemin de fer allant de New York à Buenos Ayres (République Argentine). Il y a maintenant des communications ferrées jusqu'à Oaxaca, République du Mexique; de plus on a fait des études et d'après les journaux on a accordé des concessions pour relier Oaxaca à un point déterminé sur la frontière Mexico-guatémalienne. La ville de Puebla se trouve à 129 milles au sud-est de Mexico sur le Ferrocarril Interocéanico et à 115.6 sur le Ferrocarril Mexicano. La première de ces lignes est à voie étroite et la dernière à voie normale. Oaxaca est à 227.6 milles au sud-est de Puebla sur le Ferrocarril Mexicano del Sur, et par conséquent à 356.6 milles de Mexico sur une ligne et à 343.2 milles sur l'autre ligne.

“Oaxaca est actuellement la ville la plus méridionale ayant des communications ferrées avec Mexico et la distance qui la sépare de la frontière du Guatemala exigerait un chemin de fer d'environ 400 milles de longueur.

“Les études et tracés faits par la commission du chemin de Fer Intercontinental ont commencé à la frontière nord-ouest du Guatémala et se sont étendus jusqu'à la frontière ouest de la Bolivie. La longueur approximative du chemin de fer devant servir à relier la frontière sud-est du Mexique à la capitale de la République Argentine, serait la suivante:

	Milles.
Dans le Guatémala	230
Dans le Salvador	220
Dans le Honduras	70
Dans le Nicaragua	224
Dans le Costa Rica	363
Dans la Colombie	1, 372
Dans l'Equateur	635
Dans le Pérou.....	1, 671
Dans la Bolivie	774
Dans la République Argentine.....	1, 143
Total	6, 702

“La distance de New York à Laredo est de 2,187 milles; de Laredo à Mexico on compte 839 milles; de Mexico à Oaxaca, 343 milles et de Oaxaca à la frontière du Guatémala 400 milles, soit un total de 3,769 milles; ce qui fait que la distance totale de New York à Buenos Ayres est de 10,471 milles.

“Sur les 6,702 milles mentionnés plus haut, les embranchements suivants sont en exploitation:

	Milles.
Dans le Guatémala, d'Escuintla à Patulul	30
Dans le Salvador, de Sonsonate à Atos	20
Dans le Nicaragua, de Chinandega à La Paz.....	31
Total pour l'Amérique Centrale	81
Dans le Pérou, de Simani à Puno	151
Dans la Bolivie, de Oruro à Huanchaco	192
Dans la République Argentine, de Jujuy à Buenos Ayres.....	993
Total pour l'Amérique du Sud.....	1, 336

“Soit pour l'Amérique du Centre et du Sud, un total général de 1,417 milles déjà construits et en exploitation.

“En déduisant des 6,702 milles ces 1,417 milles, on a 5,285 milles de chemins de fer à construire afin d'assurer une voie ferrée allant de la frontière Méridionale du Mexique jusqu'à la capitale de la République Argentine, c'est-à-dire, que la moitié de la distance entre New York et Buenos Ayres est déjà couverte par des chemins de fer.

“On pense que des études additionnelles, surtout dans le Pérou, raccourciront la longueur des lignes exigées, mais les renseignements donnés ci-dessus sont les meilleurs qu'on puisse se procurer à cette date.

“Espérant que cet exposé vous fournira les renseignements que

vous désirez, veuillez agréer, Monsieur, l'assurance de mes sentiments respectueux.

“E. Z. STEEVER,
“*Le Secrétaire.*”

Le tableau ci-dessous donne un sommaire du rapport des ingénieurs de la Commission du Chemin de Fer Intercontinental en ce qui a trait à la longueur de la ligne continentale projetée déjà construite entre New York et Buenos Ayres, l'emplacement des sections nécessaires pour former une ligne directe et les estimations des frais de construction de cette même ligne.

Noms des pays.	Longueur des lignes construites ou projetées.		Lignes construites.		Lignes projetées.		Frais pour nivellements, maçonnerie et ponts.

D'après le tableau ci-dessus on voit que les ingénieurs de la Commission au moment où leur rapport a été fait, c'est-à-dire en 1895, ont estimé qu'il faudrait \$175,000,000 pour construire les chemins de fer nécessaires à relier les lignes déjà existantes afin d'établir une communication directe.

Depuis lors on a construit d'autres chemins de fer qui pourront être utilisés dans le système continental, et ce comité pense que maintenant il suffira de construire 5,000 milles de voie pour établir les communications ferrées entre les réseaux de l'Amérique du Nord et ceux du Sud.

En basant le coût à \$40,000 par mille, ce que nous croyons suffisant, une somme de \$200,000 serait nécessaire pour achever ce grand travail.

Les études faites par les ingénieurs de la Commission montrent qu'il est possible de construire les lignes dont on a besoin, et il ne doit pas être difficile de trouver l'argent nécessaire à cette entreprise quand on considère les résultats.

Les réseaux des chemins de fer des Etats-Unis maintenant en exploitation, tels que Pennsylvania, New York Central, Atchison, Northern

Pacifique, Union Pacific, Southern Pacific, Southern et autres s'étendent sur une longueur plus grande que celle nécessaire à la réalisation du Chemin de Fer Continental et chacun de ces réseaux possède des obligations et des actions dont le montant dépasse la somme nécessaire pour cette entreprise, d'après les estimations qui en ont été faites.

Le Gouvernement Russe vient de terminer un long chemin de fer dans le but de développer les ressources de la Sibérie. Les dépenses de cette ligne ont dépassé de beaucoup celles qu'on a estimées nécessaires pour le chemin de fer intercontinental et les difficultés qu'on a rencontrées dans le cours de sa construction ont été beaucoup plus difficiles à surmonter.

La République du Mexique nous donne un exemple récent des avantages que l'on peut tirer de l'accroissement des moyens de communication par chemins de fer.

Les délégués mexicains à cette Conférence s'expriment ainsi dans leur rapport au sujet du Chemin de fer Intercontinental :

“Quant au Mexique, ce pays n'a jamais cessé de faire des efforts et même des sacrifices afin d'achever son réseau de chemins de fer, le dirigeant vers le sud de manière à le relier aux lignes que pourraient construire les Républiques de l'Amérique Centrale. Le réseau mexicain s'unit déjà à plusieurs endroits sur la frontière du Nord avec plusieurs chemins de fer importants des Etats-Unis d'Amérique.

“On étudie maintenant un projet pour faire une ligne qui sera reliée au Chemin de fer Interocéanique actuellement en exploitation à travers l'Isthme de Tehuantepec; et dernièrement on a accordé une concession avec des subventions importantes pour la construction d'une ligne de chemin de fer qui, partant de la ligne de Tehuantepec, se dirigerait vers la frontière du Guatemala.”

Les délégués disent aussi que “les Mexicains et leur gouvernement ont toujours eu le désir d'augmenter et d'améliorer les facilités de communications intérieures pour développer l'exploitation des ressources naturelles et le commerce avec les autres nations.”

Quoique la construction de la ligne continentale soit un travail énorme, les profits qui pourraient en résulter ne sont pas douteux et les obstacles à surmonter ne sont pas aussi grands que ceux que les entrepreneurs ont rencontrés dans les Alleghanies et les Montagnes Rocheuses lors de la construction des chemins de fer qui les traversent.

L'expérience a partout démontré que le développement des richesses naturelles d'un pays suit l'établissement de communications ferrées, et la construction d'un réseau de chemin de fer mettant toutes les Républiques de cette hémisphère en communication, contribuerait plus que toute autre chose au développement intérieur des Républiques du Sud.

Maintenant, les pays qui n'ont pas de chemins de fer ne peuvent envoyer sur les marchés que les produits pouvant être transportés à dos de mulet ou autrement jusqu'aux ports d'exportation, et souvent

les endroits auxquels les navires font escale sont situés à des centaines de milles de distance les uns des autres. Dans les endroits situés sur une ligne de chemin de fer on peut faire des envois d'un point à un autre, à quelques milles de distance. Il y a dans l'Amérique du Centre et du Sud de grandes étendues où se trouvent des gisements de minerais, des terres susceptibles de cultures et des forêts qui sont pour ainsi dire inexploités à cause du manque de moyens de transport. Les statistiques de la plupart de ces pays démontrent que, jusqu'ici on n'a développé que les sections contiguës à la mer. Non seulement cette ligne de chemin de fer aiderait au développement d'un territoire qui, maintenant, est tout à fait inaccessible et ajouterait à la richesse générale des pays traversés, mais encore les facilités de communication feraient naître une concurrence entre les chemins de fer et les lignes de paquebots dans les régions qui dépendent maintenant de ces derniers.

La concurrence est l'âme du commerce, et tandis qu'on ressent le besoin d'augmenter et d'encourager les moyens de transport par eau plus directs entre les Républiques d'Amérique, on sait que la prospérité et le développement entier de ce pays exigent tout à la fois des moyens de transport par chemins de fer et par eau.

En cas de guerre entre quelques-unes des Puissances européennes l'interruption de communication maritime pourrait entraver sérieusement le commerce, mais le danger de ce chef serait diminué considérablement si les Républiques de l'Amérique pouvaient communiquer entre elles au moyen de chemins de fer sans avoir recours à la navigation maritime.

Un pays, ou une section d'un pays, dépourvu de chemins de fer est en arrière et ne peut pas concourir d'une manière avantageuse avec les régions dotées de ces avantages. Lors de la construction du premier chemin de fer du Mississipi jusqu'au Pacifique, il y avait beaucoup de personnes qui doutaient du succès financier de la ligne, le pays à traverser étant dépourvu en beaucoup d'endroits de toute habitation.

Il existe maintenant plusieurs lignes qui toutes sont rémunératrices. Le développement rapide de la grande région de l'ouest des Etats-Unis, dû en grande partie aux communications ferrées, a été la merveille de l'époque. L'intérieur des Etats-Unis, surtout dans l'ouest et le sud-ouest, de même que l'intérieur des Républiques méridionales, retireraient les plus grands avantages de l'établissement d'un chemin de fer continental parce que ces régions seraient alors pourvues de communications plus étroites et plus directes entre elles.

Il est difficile d'estimer quel sera le commerce, quand les 195,000 milles de voie ferrée des Etats-Unis et les 10,000 milles du Mexique seront reliés aux 10,600 milles de voie ferrée de la République Argentine et aux réseaux des autres républiques américaines.

Depuis l'établissement de communications ferrées entre le Mexique

et les Etats-Unis, le commerce entre ces deux pays a considérablement augmenté de sorte qu'aujourd'hui le Mexique expédie plus des 70 pour cent du total de ses exportations aux Etats-Unis et ce pays lui exporte des articles d'à peu près de la même valeur. Pendant l'année finissant le 30 juin 1901, les Etats-Unis ont importé de l'Amérique du Centre et du Sud des marchandises d'une valeur de \$121,000,000, soit environ 14 pour cent du total de leurs importations; et pendant la même période les exportations des Etats-Unis dans ces pays se sont élevées à \$52,000,000, soit environ 10 pour cent seulement du total des importations de l'Amérique du Centre et du Sud.

Pour montrer le manque actuel de moyens de communication entre les républiques de l'Amérique, quelques-uns des délégués de cette conférence ont été obligés, pour se rendre à Mexico, d'aller d'abord en Europe pour revenir à New York; d'autres sont venus par San Francisco. Une lettre ou un colis postal envoyé du Mexique ou des Etats-Unis à destination d'une des Républiques de l'Amérique du Sud doit d'abord être envoyé en Europe et de là réexpédié à sa destination.

Quelques-uns des délégués de l'Amérique du Centre et du Sud ont donné à ce comité des rapports sur les chemins de fer de leurs pays respectifs, et aussitôt qu'on recevra ceux des autres délégués, nous demandons qu'ils soient tous imprimés pour servir de supplément à ce rapport.

Résumé.—Considérant: Que les trois corps d'ingénieurs employés par la commission du Chemin de Fer Intercontinental pour faire des études préliminaires, avec cartes à l'appui, depuis la frontière septentrionale du Guatémala jusqu'à la limite septentrionale de la République Argentine pendant les années 1892, 1893, et 1894, ont démontré qu'il est possible de compléter un chemin de fer intercontinental à voie normale qui traverserait du nord au sud les républiques du continent américain; et qu'en utilisant les chemins de fer actuellement en exploitation, la longueur des lignes à construire serait de 5,456 milles et le coût du travail de \$174,290,271, soit \$32,000 environ par mille et, que les chemins de fer développent les ressources naturelles des pays qu'ils traversent, en augmentant le commerce et la richesse et contribuent d'une façon efficace à la prospérité générale, et aussi en calculant que la longueur restant à construire est de 5,000 milles et croyant que le coût du travail ne dépassera pas \$200,000,000 (soit \$40,000 par mille), le comité recommande à l'unanimité:

Premièrement: La construction d'une ligne intercontinentale avec embranchements où il sera nécessaire de la relier aux villes principales, cette ligne devant passer à travers les différentes Républiques pour relier les réseaux des Etats-Unis et du Mexique à ceux des Etats-Unis.

Les vœux exprimés par la dernière Conférence réunie à Washington au sujet des études préliminaires ayant été réalisés, nous votons à l'unanimité les articles suivants extraits des décisions du comité de

chemins de fer pan-américain et adoptés par la Conférence à Washington:

1° Qu'un chemin de fer unissant le tout ou la plupart des pays représentés à cette Conférence contribuera considérablement au développement des relations amicales entre les dites contrées ainsi qu'à l'augmentation de leurs intérêts matériels.

2° Qu'un chemin de fer doit relier, autant que le permettent les intérêts communs, les principales villes situées sur le trajet du chemin de fer.

3° Que s'il est impossible de changer la direction de la ligne sans de grands inconvénients, en vue du vœu exprimé dans l'article précédent, on devra construire des embranchements qui rattacheront ces villes à la grande ligne.

4° Qu'en vue de réduire le coût du travail, on doit utiliser les lignes en exploitation dans toute la mesure du possible d'après le tracé et les conditions du chemin de fer continental.

5° Que tous les matériaux nécessaires à l'exploitation du chemin de fer soient exonérés de tous droits d'importation, tout en étant soumis aux règlements nécessaires pour éviter les abus pouvant résulter de ce privilège.

6° Que toutes les propriétés foncières et mobilières du chemin de fer employées dans la construction et l'exploitation soient exonérées de tout impôt, national, provincial ou municipal.

7° Que l'exécution d'un travail d'une si grande importance doit être encouragée dans toute la mesure du possible au moyen de subsides, de concessions de terrains ou de prêts au taux d'intérêt le plus bas.

8° Que les marchandises en transit dans les diverses Républiques ne payent ni droits de douane ni taxes d'aucune sorte. Nous recommandons aussi:

9° Que les délégués à cette Conférence et les autres personnes qui favorisent la construction de cette grande ligne fassent, auprès de leurs Gouvernements respectifs toutes les démarches qui auraient pour objet d'assurer à l'entreprise des concessions importantes selon les moyens de chaque pays.

10° Que le Gouvernement des Etats-Unis d'Amérique soit invité à proposer aux représentants et ministres des autres Républiques accrédités à Washington, les mesures les plus propres à faciliter l'envoi, et cela dans le délai d'un an, de personnes autorisées et compétentes dans les divers pays d'Amérique, pour déterminer avec certitude les ressources de chaque pays, l'état du commerce et les prévisions du trafic pour une ligne intercontinentale, dans le cas où elle viendrait à être construite, et aussi quelles concessions ferait à l'entreprise chacun des Gouvernements respectifs.

11°. Que le Président de la Conférence nomme un comité de cinq membres, résidant aux Etats-Unis d'Amérique, pour entrer en fonctions

après la clôture de cette Conférence; et que ledit comité ait la faculté d'augmenter le nombre de ses membres ou de les remplacer si cela était nécessaire; de nommer les sous-commissions qu'elle jugerait convenables de faire part du résultat de ses travaux à la prochaine Conférence; de fournir toutes sortes de renseignements sur la marche des travaux du Chemin de fer Intercontinental; d'aider et de contribuer, dans toute la mesure du possible, à l'heureux achèvement de cette œuvre: sans pour cela que les autres membres de la commission actuelle cessent de prêter leur concours dans le même but; et finalement que la commission, d'accord avec le Ministre des Affaires Étrangères d'Amérique et avec les Ministres des autres pays intéressés, résidant à Washington, fasse en sorte que l'on convoque dans le délai d'un an, une réunion de représentants de toutes les Républiques de ce continent dans le but de faire des arrangements pour la construction du chemin de fer continental projeté.

**ACTION PRISE PAR LA SECONDE CONFÉRENCE INTERNATIONALE
DES PAYS AMÉRICAINS AU SUJET DU RAPPORT CI-DESSUS, LE
21 JANVIER 1902.**

DÉCISION.

Les soussignés, Délégués des Républiques représentées dans la Seconde Conférence Internationale Américaine, dûment autorisés par leurs Gouvernements, ont approuvé la décision qui suit:

La Seconde Conférence Internationale Américaine,

Considérant: Que les trois groupes d'ingénieurs employés par la Commission antérieure du Chemin de fer Intercontinental ont fait des explorations, depuis la limite septentrionale du Guatemala jusqu'à la limite septentrionale de la République Argentine, pendant les années 1893 et 1894, et qu'ils ont présenté leur rapport sur l'œuvre projetée avec les cartes respectives;

Que ce rapport démontre qu'il est possible de compléter la voie ferrée traversant du Nord au Sud les Républiques du Continent américain, et que, dans le cas où l'on utiliserait les chemins de fer actuellement en exploitation, la longueur des lignes à construire serait

de 5,456 milles et le coût du travail total de \$174,290,271 or, soit \$32,000 or par mille;

Que les chemins de fer développent les ressources naturelles des pays qu'ils traversent, en augmentant le commerce et la richesse et contribuent d'une façon efficace à la prospérité générale;

Que les voies ferrées internationales consolident les relations d'amitié entre les États, les unissant par des liens d'intérêts communs et assurent la paix entre eux;

Décide: I. Que l'on ratifie le vœu de la Conférence de Washington recommandant la construction des lignes complémentaires du Chemin de fer Intercontinental, celui-ci devant passer par les différentes Républiques pour unir les réseaux des États-Unis à ceux de la République Argentine et relier, autant que le permettent les intérêts communs, les principales villes situées sur le trajet du Chemin de fer, ou alors dans le cas où ceci serait impraticable, de construire des embranchements qui rattacheraient ces villes à la grande ligne, et enfin d'utiliser les lignes en exploitation dans toute la mesure du possible, et d'après le tracé et les conditions du Chemin de fer Intercontinental.

II. Que les Républiques intéressées facilitent l'exécution de l'œuvre par tous les moyens qui sont en leur pouvoir, et spécialement en exemptant des droits d'importation les matériaux nécessaires à la construction et à l'exploitation du chemin de fer, tout en faisant le nécessaire pour éviter les abus qui pourraient se produire par suite de ces privilèges; en exonérant de tout impôt national, gouvernemental, provincial ou municipal, les propriétés foncières et mobilières de l'entreprise; en exemptant de tous droits de douanes et autres, les marchandises en transit dans les diverses Républiques appartenant à cette entreprise; et enfin en contribuant à l'œuvre dans toute la mesure du possible, au moyen de subsides, de concessions de terrains, ou de garantie d'un minimum d'intérêts sur les capitaux employés dans chaque pays.

Dans ce but, il est recommandé à toutes les personnes qui favorisent la construction de cette grande ligne de faire, auprès de leurs gouvernements respectifs, toutes les démarches qui auraient pour objet d'assurer à l'entreprise la concession de ces avantages ou autres généreux subsides, selon le mode le plus compatible avec les usages de chaque pays.

III. Que le Gouvernement des États-Unis d'Amérique soit invité à proposer aux représentants et diplomates des autres républiques, accrédités à Washington, les mesures les plus propres à donner pour résultat l'envoi, et cela dans le délai d'un an, de personnes autorisées et compétentes dans les divers pays d'Amérique, pour déterminer, avec certitude, les ressources de chaque pays, la situation et les conditions des chemins de fer aujourd'hui en exploitation, l'état actuel du commerce et les prévisions du trafic pour une ligne intercontinentale, dans le cas où elle viendrait à être terminée, et aussi, quelles concessions ferait à l'entreprise chacun des gouvernements respectifs.

IV. Que le président de la Conférence nomme une commission de cinq membres résidant aux États-Unis d'Amérique, pour qu'elle entre en fonctions après la clôture de la Conférence, avec la faculté d'augmenter le nombre de ses membres ou de les remplacer, si cela était nécessaire; de nommer les sous-commissions qu'elle jugerait convenable, et de faire part du résultat de ses travaux à la prochaine Conférence; de fournir toutes sortes de renseignements sur la marche des travaux du Chemin de Fer Intercontinental, d'aider et de contribuer, dans toute la mesure du possible, à l'heureux achèvement de cette œuvre; sans pour cela que les autres membres de la commission actuelle cessent de prêter leur concours dans le même but, et finalement, que la commission, d'accord avec le Ministre des Affaires Étrangères des États-Unis d'Amérique et avec les Ministres des autres pays intéressés, résidant à Washington, fasse en sorte que l'on convoque, dans le délai d'un an, une réunion de représentants de toutes les Républiques du Continent, dans le but de conclure une Convention qui pourvoira à la construction du Chemin de Fer Intercontinental projeté.

Fait et signé à Mexico, le vingt-et-un janvier mil neuf cent deux, en trois expéditions rédigées l'une en espagnol, la seconde en anglais et la troisième en français, lesquelles devront être déposées au Ministère des Affaires Étrangères des États-Unis du Mexique afin d'en faire des copies certifiées qui devront être transmises, par la voie diplomatique, à chacune des Puissances signataires.

FORMATION D'UN COMITÉ PERMANENT.

La Seconde Conférence des Etats de l'Amérique a adopté à l'unanimité le rapport du Comité du Chemin de Fer Pan-Américain, et pour se conformer à l'article onze de ce rapport, le Président de la Conférence a nommé les membres suivants pour former un comité permanent du chemin de fer Pan-Américain, ayant pour but d'encourager le projet après l'ajournement de la conférence:

H. G. DAVIS, de West Virginia, Etats-Unis d'Amérique.

ANDREW CARNÉGIE, de New York, Etats-Unis d'Amérique.

MANUEL DE ASPIROZ, Ambassadeur du Mexique aux Etats-Unis.

MANUEL ALVEREZ CALDERON, Ministre du Pérou aux Etats-Unis.

ANTONIO LAZO ARRIAGA, Ministre de Guatémala aux Etats-Unis.

MESSAGE DU PRÉSIDENT ROOSEVELT.

Le 22 avril, le Président des Etats-Unis a transmis au Sénat un rapport préparé par le Ministre des Affaires Étrangères au sujet de l'action prise par la Conférence Internationale des pays de l'Amérique lors de sa seconde session qui a eu lieu à Mexico pour examiner le projet du chemin de fer Pan-Américain qui doit relier les continents Américains. En transmettant le rapport du Ministre, le Président s'exprime ainsi:

"Au Sénat:

"J'ai l'honneur de vous transmettre, ci-joint, une copie du rapport fait par le Comité du Chemin de Fer Pan-Américain à la Seconde Conférence Internationale des Etats Américains réunis à Mexico pendant l'hiver 1901-1902, ainsi qu'une copie du vœu émis et adopté par les délégués des Républiques représentées au Congrès concernant ce chemin de fer Pan-Américain.

"Je demande qu'une allocation de \$20,000 soit votée par le Congrès, ou telle partie de cette somme qui sera nécessaire pour permettre au Président de nommer deux commissaires qui se rendront dans l'Amérique du Centre et du Sud en vue de mettre ce vœu à exécution, et aussi pour examiner les lieux et faire un rapport sur les moyens propres au développement du commerce des Etats-Unis avec ces régions."

"THÉODORE ROOSEVELT."

RAPPORT DU MINISTRE DES AFFAIRES ÉTRANGÈRES.

“Monsieur le PRÉSIDENT: J’ai l’honneur de vous soumettre, ci-inclus, une copie du rapport fait par le comité du chemin de fer pan-américain à la Seconde Conférence Internationale des pays américains qui a eu lieu à Mexico pendant l’hiver 1901-2, ainsi qu’une copie du vœu émis et adopté par les délégués des républiques représentées à cette conférence, relativement à un chemin de fer pan-américain. La troisième partie du vœu stipule:

“Que le Gouvernement des Etats-Unis d’Amérique soit invité à proposer aux représentants et diplomates des autres républiques accréditées à Washington, les mesures les plus propres, pouvant donner comme résultat l’envoi dans les divers pays de l’Amérique, dans le délai d’un an, de personnes autorisées et compétentes pour déterminer avec certitude les ressources de chaque pays, la situation et les conditions des chemins de fer aujourd’hui en exploitation, l’état actuel du commerce et les prévisions de trafic pour une ligne intercontinentale dans le cas où elle viendrait à être construite et aussi, quelles concessions ferait à l’entreprise chacun des gouvernements respectifs.”

“Le projet est d’une si grande utilité publique et le commerce de l’Amérique du Centre et du Sud, dont les Etats-Unis n’ont qu’une faible part qui pourrait être facilement augmentée, prend une si grande importance que je n’hésite pas à demander au Congrès de voter une allocation de \$20,000 ou telle partie de cette somme qu’on jugera nécessaire pour permettre au Président de nommer deux commissaires chargés de mettre à exécution le but du vœu émis par la conférence pour examiner et faire un rapport sur les moyens d’augmenter le commerce des Etats-Unis avec ces régions.

Recevez l’assurance de ma parfaite considération.

JOHN HAY.

“MINISTÈRE DES AFFAIRES ÉTRANGÈRES,

“Washington, le 19 avril, 1902.”

LE CHEMIN DE FER INTERCONTINENTAL.

Par J. B. CALVO.

Quand on considère la grande influence que les moyens de communication exercent, non seulement sur le développement des ressources naturelles et autres que produit une nation, mais aussi sur le progrès moral et intellectuel que l’agrandissement de la sphère d’action offre à l’homme, il est évident que la construction d’un chemin de fer continental procurerait de très grands avantages aux républiques américaines.

L’entreprise est certainement colossale quoiqu’elle ne présente en réalité aucun obstacle insurmontable, et pour la mener à bonne fin il

suffirait que le projet fût pris sérieusement en considération et que l'affaire fût bien lancée.

Il est évident que seul le développement du trafic local payerait les frais de construction du chemin de fer dans un avenir très proche et que l'augmentation des relations commerciales entre les pays voisins serait très rapide, favorisant ainsi le bien-être général politique et social de toutes les nations de ce continent, resserrant aussi d'une manière plus étroite les liens qui les unissent et contribuant par là à augmenter journellement leur capital et leur revenu.

Les progrès faits par le Mexique pendant ces dernières années ont naturellement attiré l'attention du monde entier sur cette contrée et la grande impulsion donnée à toutes ses industries exige pour cette République prospère des moyens de communication faciles avec les Etats contigus, où se trouvent d'excellents débouchés pour un grand nombre de ses productions si variées. Par suite du manque de communications, ce pays subit aujourd'hui la concurrence du nord qui fait un grand commerce avec les Etats du Sud, spécialement pour les tissus de coton et les articles de cuir.

Il est certain que les Etats de l'Amérique Centrale progressent constamment et tandis que l'avancement moral se manifeste, par la tranquillité dont ils jouissent à présent, le développement de leurs sources de production, si nombreuses et si riches, augmente de jour en jour, encourageant ainsi de nouvelles entreprises, l'amélioration des moyens de communication et la construction de voies nouvelles répondant aux besoins qui se font sentir.

A l'extrême Sud, la République Argentine se dresse comme une rivale agricole des Etats-Unis d'Amérique, pendant que le Chili, sur la côte du Pacifique, commence à faire concurrence aux compagnies de navigation de la grande République américaine.

Ces exemples frappants du progrès des pays de l'Amérique latine indiquent l'activité et le degré d'avancement qu'ils ont déjà atteints et montrent clairement la grande étendue du champ qu'ils offrent au commerce et à l'industrie.

Le Brésil, par la grande étendue de son territoire; l'Uruguay par sa situation géographique si favorisée; le Pérou, la Bolivie, l'Equateur, le Venezuela et la Colombie, par la richesse exubérante de leur sol, jouissent au même degré des bienfaits du progrès et de la civilisation.

Donc, la construction d'un chemin de fer traversant tous ces pays trouverait d'abondants éléments de soutien existant déjà et beaucoup d'autres qui se créeraient d'eux-mêmes, soit par l'influence des facilités apportées dans le service du trafic local, soit par suite des communications rapides entre les différents pays.

A la première Conférence Internationale tenue à Washington en 1889-90, on avait émis un vœu ayant pour but l'accomplissement de cette grande entreprise, et comme résultat pratique de ce premier pas,

plusieurs corps d'ingénieurs ont commencé les études du terrain et en ont fait un rapport très étendu, publié en sept gros volumes illustrés avec cartes à l'appui,

Ces études montrent que la longueur d'un chemin de fer de New York à Buenos Ayres serait de 10,471 milles et que la moitié de cette distance énorme est déjà couverte de chemins de fer actuellement construits.

En ce qui concerne spécialement la première partie de cette grande entreprise continentale, il est facile de démontrer que sa réalisation dans toute la partie de l'hémisphère, située au nord de Panama, ne rencontrerait aucune sérieuse difficulté. En effet, la distance de New York à Laredo, frontière du Mexique, sur une distance de 2,187 milles; celle de Laredo à Oaxaca, sur une longueur de 343 milles sont couvertes de lignes de chemins de fer déjà en exploitation.

Il y a, à présent, deux chemins de fer mexicains qui se dirigent vers la frontière du Guatemala; l'un d'eux s'étend de Puebla à Oaxaca sur le versant du Pacifique, et pour arriver à ladite frontière il faudrait le prolonger sur une longueur de 400 milles; l'autre s'étend de Córdoba, ville située sur la ligne du chemin de fer de Vera Cruz, dans la chaîne des montagnes qui descend vers le golfe du Mexique. En plus de ces lignes, il y en a d'autres en voie de construction qui se relieront au Chemin de fer Interocéanique de l'Isthme de Tehuantepec, et ce qui semble encore d'une plus grande importance dans cette matière, c'est que le Gouvernement mexicain a accordé une concession ainsi que des subventions importantes pour la construction, dans un délai de deux ans, d'une voie ferrée, qui, partant de l'Isthme comme embranchement du Chemin de fer Interocéanique dont il est question, s'étendrait jusqu'à la frontière du Guatemala.

Par la construction de ce chemin de fer sur le territoire mexicain on aura surmonté la plus grande difficulté en mettant en communication les chemins de fer des pays de l'Amérique Centrale dont on pourra utiliser plusieurs sections comme ligne principale.

Il suffit d'observer à ce sujet que sur les 1,107 milles de voie ferrée qui doivent longer la côte du Pacifique entre le Mexique et la frontière de Colombie, il y a maintenant en exploitation un chemin de fer de 211.3 milles, dont la principale partie se trouve dans le Salvador et le Nicaragua en suivant dans presque toute son étendue, une direction parallèle à celle de la côte.

Au Guatemala, il y a un chemin de fer allant du Port d'Ocos au village d'Ayutla, près de la frontière du Mexique, et les lignes construites dans cette République et dans les autres Etats de l'Amérique Centrale s'élèvent à 1,000 milles environ, qui se répartissent comme il suit:

Dans le Guatemala, 342; dans le Salvador, 132; dans le Honduras, 50; dans le Nicaragua, 176; dans le Costa Rica, 222.

Mais dans le Costa Rica, le Guatémala et le Honduras, les lignes principales de chemins de fer suivent une direction transversale, parce qu'elles vont de l'intérieur jusqu'aux ports. Néanmoins dans les trois pays mentionnés ci-dessus, on construit des embranchements, contribuant beaucoup, non seulement à l'étendue du système déjà achevé, mais aussi au succès et à la garantie d'un chemin de fer intercontinental par l'augmentation croissante du trafic qui résulte toujours d'un plus grand nombre de ramifications.

Quand on a projeté la construction du premier chemin de fer entre les Etats-Unis et le Mexique, il n'existait pas de conditions aussi favorables dans ce pays.

Le public ne regardait pas cette entreprise d'un œil favorable, craignant qu'elle ne donnât aucun profit, mais aujourd'hui (et il y a de cela vingt ans à peine) trois lignes de chemins de fer sont en activité constante, alimentées qu'elles le sont, par le commerce toujours croissant qui se fait entre les deux nations. Comme conséquence naturelle, ces grandes lignes excitent naturellement le développement mutuel des intérêts, et encouragent en même temps, la construction d'autres chemins de fer auxquels ils se relieront.

En présence de faits aussi palpables, il y a tout lieu de croire que l'extension de ces chemins de fer au Sud produira des résultats très avantageux pour le capital, sans compter l'influence morale bienfaisante qu'ils exerceront sur l'avenir des nations de ce continent.

Il est probable que d'ici peu de temps on verra la réalisation du plan qui doit unir les deux grands océans au moyen d'un canal coupant l'isthme de l'Amérique Centrale entre le Costa Rica et le Nicaragua, et si, comme on a tout lieu de le croire, la mise à exécution de ce projet est promptement décidée, la section septentrionale du Chemin de fer Intercontinental augmentera beaucoup en importance.

A la Seconde Conférence Internationale tenue à Mexico d'octobre 1901 à janvier 1902, on a décidé de ratifier les vœux émis à la première conférence tenue à Washington, et de recommander entre autres choses, que par l'entremise des représentants diplomatiques des Républiques Américaines accrédités à Washington, le Gouvernement des États-Unis prenne l'initiative des mesures les plus propres pour l'envoi dans le délai d'un an, de commissaires chargés de faire un rapport sur les chemins de fer déjà achevés et les concessions que doivent accorder les gouvernements respectifs pour la construction d'un chemin de fer continental.

Jusqu'à présent ce projet a été reçu avec beaucoup de faveur et on peut s'attendre, qu'avec une nouvelle impulsion, il deviendra d'ici peu un fait accompli.

Puisse-t-il se réaliser pour le bien-être des Républiques Américaines!

WASHINGTON, D. C., *Avril, 1902.*

FRANCHISE POSTALE DES PUBLICATIONS DU BUREAU INTERNATIONAL DES RÉPUBLIQUES AMÉRICAINES.

Le 9 avril, le Directeur Général des Postes des États-Unis a communiqué au Ministre des Affaires Étrangères un ordre signé du même jour, autorisant la franchise postale de la correspondance et des publications du Bureau International des Républiques Américaines envoyées dans les pays qui forment l'Union Internationale des Républiques Américaines.

Cet ordre a été donné en conséquence de la décision prise par le Ministre des Affaires Étrangères, qui en date du 4 avril 1902, a informé le Directeur Général des Postes des stipulations comprises dans l'article 8 du projet concernant la réorganisation du Bureau International des Républiques Américaines, tel qu'il a été adopté par la Seconde Conférence Internationale des différentes contrées Américaines, tenue à Mexico. Cet article est ainsi conçu :

“Les publications du Bureau seront considérées comme documents publics et auront droit à la franchise postale dans toutes les Républiques.”

Voici le texte officiel de l'ordre donné par le Directeur-Général des Postes :

En exécution de l'article 8 du projet concernant la réorganisation du Bureau International des Républiques Américaines, adopté par la Seconde Conférence Internationale des différentes contrées de l'Amérique tenue récemment à Mexico, article ainsi conçu :

“Les publications du Bureau seront considérées comme documents publics et auront droit à la franchise postale dans toutes les Républiques.”

“Désormais la correspondance et les publications émanant du Bureau des Républiques Américaines, qui porteront l'entête de ce Bureau, et ne pèseront pas plus de 4 livres 6 onces (2 kilogrammes), limite du poids prescrit pour les paquets d'“imprimés” par la Convention Postale Universelle de Washington, auront droit à la franchise postale quand elles seront adressées aux contrées formant l'Union Internationale des Républiques Américaines, dont voici les noms :

République Argentine.	Guatémala.	Salvador.
Bolivie.	Haïti.	Saint-Domingue.
Brésil.	Honduras.	Etats-Unis.
Chili.	Mexique.	Uruguay,
Colombie.	Nicaragua.	Venezuela.
Costa-Rica.	Paraguay.	
Équateur.	Pérou.	

“H. C. PAYNE,
“*Directeur Général des Postes.*”

CONGRÈS INTERNATIONAL DES AMÉRICANISTES.

La treizième session du Congrès International des Américanistes aura lieu le 20 octobre 1902 dans une des salles du Musée Américain d'Histoire Naturelle de la ville de New-York et continuera jusqu'au 25 dudit mois inclus. Le but de ce Congrès est de réunir les personnes étudiant l'archéologie, l'ethnologie et l'histoire ancienne de l'Amérique du Nord et de l'Amérique du Sud et d'étendre les connaissances de ces sujets, par la lecture de mémoires aussi bien que par des discussions.

Les communications peuvent être orales ou écrites dans n'importe quelles langues suivantes: anglais, espagnol, français, allemand, ou italien (le portugais n'est pas mentionné, peut-être sans intention). Les débats devront être tous courts et la lecture de chaque mémoire ne devra pas durer plus de trente minutes. Les mémoires présentés à ce Congrès seront imprimés et insérés dans le registre de procès-verbaux, une fois approuvés. Les membres du Congrès des Américanistes devront adresser au Secrétaire Général, avant la réunion, les titres et, si possible, un résumé de leurs mémoires.

Les sujets qui seront discutés par ce Congrès traiteront: 1° des races natives de l'Amérique, leur origine, distribution, leur histoire, leurs caractères physiques, langues, inventions, mœurs et coutumes, religions; 2° de l'histoire du premier contact entre l'ancien et le nouveau continent.

Toutes les personnes intéressées dans l'étude de l'archéologie, l'ethnologie et l'histoire ancienne de l'Amérique du Nord et de l'Amérique du Sud peuvent devenir membres du Congrès des Américanistes en exprimant le désir à M. MARSHALL H. SAVILLE, Secrétaire Général de la Commission d'Organisation, au Musée Américain d'Histoire Naturelle, New-York City. M. MORRIS K. JESUP est Président de la Commission d'Organisation et le Duc de LOUBAT en est le Vice-Président.

L'ESPAGNE ET L'AMÉRIQUE ESPAGNOLE.

Une dépêche adressée de Madrid au "London Times," le 11 mars 1902, dit qu', à la date mentionnée, le Ministre des Affaires Etrangères a annoncé que le Gouvernement espagnol, profitant de la présence dans la ville de Mexico des Délégués de tous les pays de l'Amérique Espagnole, a donné des instructions à son Représentant dans cette capitale pour la conclusion de Traité d'Arbitration entre l'Espagne et les pays en question. Pour se conformer à ces instructions le Marquis DE PRAT, Ministre espagnol au Mexique, a signé des conventions avec la

République Argentine, la Bolivie, la Colombie, le Guatémala, le Mexique, le Paraguay, le Salvador, Saint-Domingue et l'Uruguay.

Par ces conventions il a été décidé que tous les différends qui pourraient, dans l'avenir, s'élever entre l'Espagne et ces pays, seraient soumis à l'arbitration et que l'arbitre serait ou le chef du Pouvoir exécutif d'un des États espagnols-américains ou un Tribunal composé d'Espagnols ou d'Américains-Espagnols, "afin de donner une plus grande force d'expression à la solidarité d'intérêts qui existe entre toutes les branches de la race espagnole."

RÉPUBLIQUE ARGENTINE.

STATISTIQUES DE L'IMMIGRATION ET DE LA POPULATION POUR L'ANNÉE 1901.

Ainsi qu'il a été publié dans le BULLETIN MENSUEL du mois de mars 1902, le nombre d'immigrants arrivés dans la République Argentine en 1901 s'est élevé à 125,951. Le Directeur du Département d'Immigration a fait paraître des renseignements supplémentaires avant la publication de son rapport annuel, d'après lesquels le plus grand nombre d'immigrants est arrivé pendant les mois d'octobre, de novembre et de décembre.

Dans ces 125,951 immigrants, on comptait 58,314 Italiens; 18,066 Espagnols; 21,788 Français; 2,742 Autrichiens; 2,159 Syriens; 2,086 Russes, dont la plupart étaient Polonais. Le nombre des immigrants représentant les autres nations n'a pas dépassé 1,000; la Grande Bretagne étant représentée par 439 et l'Amérique du Nord par 151.

Il y avait 56,811 adultes (hommes) et 18,672 adultes (femmes). Dans ce nombre il y avait 59,110 célibataires et 1,317 veufs. On comptait 1,485 enfants âgés de moins d'un an; 8,161 âgés de 1 à 7 ans; 4,988 âgés de 8 à 12 ans; et 11,738 âgés de 13 à 20 ans. Dans le nombre des adultes, 30,793 étaient âgés de 20 à 30 ans, et 974 avaient plus de 60 ans.

On comptait 33,992 cultivateurs, 12,021 journaliers, 4,932 domestiques, 4,685 commerçants et employés de commerce, 3,727 couturières, 1,536 blanchisseuses, 1,422 employés de bureau, 1,403 cuisiniers, 1,056 cordonniers, 948 menuisiers et charpentiers, 910 maçons en pierre et maçons en briques, 890 tisserands, 725 modistes, 697 tailleurs, 535 forgerons, 386 boulangers, et 242 barbiers.

Les immigrants pour lesquels le Département d'Immigration a trouvé du travail et qui ont été envoyés à leurs destinations respectives aux frais du Gouvernement étaient au nombre de 42,747. Ils se sont établis dans les provinces suivantes: Buenos Ayres, 12,982; Santa Fé, 12,628; Mendoza, 4,160; Córdoba, 4,002; Tucumán, 1,576; Entre

Ríos, 1,151; la capitale fédérale, 2,739, et Misiones (territoire), 1,738, le reste a été distribué dans les autres provinces et territoires.

D'après le rapport dont il est question, la population totale de la République au 31 décembre 1901 était de 4,794,149 habitants. La ville de Buenos Ayres avait une population de 821,291 habitants; dans les autres provinces on comptait: Buenos Ayres, 1,140,067; Santa Fé, 523,236; Córdoba, 419,072; Entre Ríos, 343,684; Corrientes, 277,041; Tucumán, 249,433; Santiago, 180,612; Mendoza, 141,431; Salta, 131,938; Catamarca, 99,827; San Juan, 94,911; San Luis, 91,403; Rioja, 77,783; Jujuy, 54,405.

PORT DE BUENOS AYRES.

Les Chambres ont définitivement voté et le Gouvernement argentin a promulgué la loi qui autorise la mise en adjudication des travaux de construction d'un bassin spécialement destiné aux navires charbonniers ou chargés de matières inflammables.

Les travaux, qui comprendront également la construction de dépôts, sont évalués dans ladite loi à 6,000,000 de piastres, ou 30,000,000 de francs.

BRÉSIL.

CONGRÈS GÉOGRAPHIQUE DE RIO DE JANEIRO.

Une des mesures les plus importantes et les plus utiles prises en considération à la Seconde Conférence Internationale des différentes contrées de l'Amérique qui a eu lieu à Mexico, a été le projet d'établissement d'un système général de communication entre les bassins hydrographiques de l'Amérique du Sud.

En vue de favoriser ce projet il a été convenue que les nations riveraines de l'Orénoque, de l'Amazone et de la Plata, se réuniraient pour examiner avec la plus grande attention le meilleur moyen de mettre ce projet à exécution.

Conformément à cette décision, une convention formée des délégués de la République Argentine, de la Bolivie, de la Colombie, de l'Equateur, du Paraguay, du Pérou et de l'Uruguay a eu lieu le 28 janvier 1902, et il a été convenu de réunir un Congrès Géographique à Rio de Janeiro dans le délai d'un an, à partir de cette date.

Voici le texte de la convention dont il a été question, tel qu'il a été publié dans le procès-verbal de la Seconde Conférence Internationale des différentes contrées de l'Amérique:

Considérant que, d'après l'exposé de motifs et le mémoire d'explorations, soumis à la Conférence Internationale Américaine par M. le Général RAFAEL REYES, il résulte que le projet pour faire communiquer, entre eux, les trois grands bassins hydrographiques de

l'Amérique Méridionale, en ouvrant la navigation depuis l'Orénoque jusqu'à la Plata, à travers l'intérieur du Continent, est parfaitement praticable;

Que le manque de communications actuelles soustrait, en sa majeure partie, à l'industrie et au commerce du monde, un territoire immense possédant des ressources naturelles inépuisables;

Que, parmi les problèmes étudiés par la Conférence Internationale réunie à Mexico, celui des communications intérieures dans l'Amérique Méridionale est très important pour la civilisation;

Que dans le but de préparer l'exécution de ce projet, il convient que les nations riveraines de l'Orénoque, de l'Amazone et de la Plata, ainsi que des affluents respectifs de ces grands fleuves, se réunissent pour discuter sur les meilleurs moyens à employer pour réaliser le projet en question.

Que les Républiques du Brésil et du Venezuela, sur les territoires desquelles se trouvent les embouchures de l'Amazone et de l'Orénoque, n'étant plus représentées dans cette Conférence, il devient nécessaire de chercher la forme la plus convenable pour s'assurer de leur concours.

Les nations signataires ont décidé ce qui suit:

1°. La convocation dans la ville de Rio de Janeiro, d'une Conférence Fluviale des pays riverains, et cela dans le délai d'un an.

3°. Le Gouvernement de la République Argentine reste chargé d'inviter le Gouvernement des Etats-Unis du Brésil à donner son adhésion et à prêter son concours pour la réunion de la Conférence susmentionnée.

3°. Les deux gouvernements sont priés, par la présente, de vouloir bien faire des démarches nécessaires afin d'obtenir l'adhésion des pays riverains, et aussi d'envoyer les invitations nécessaires.

4°. Les travaux de cette conférence devront être en rapport avec le programme suivant, sauf les modifications qui pourraient être apportées par la décision des Gouvernements du Brésil, de la République Argentine ou du Venezuela:

(a) Organisation de commissions géographiques d'exploration;

(b) Rédaction des règlements auxquels se conformeront les diverses commissions;

(c) Établissement d'un budget de dépenses pour l'accomplissement des travaux à entreprendre;

(d) Fixation du prorata des contributions devant être fournies par chaque Gouvernement pour faire face aux dépenses;

(e) Organisation d'un Bureau International pour la concentration des données et informations relatives aux explorations;

(f) Étude de tout ce qui aura trait au projet ci-dessus, concernant l'exécution la plus rapide des travaux, ainsi que les mesures à prendre, soit isolément, soit en commun, afin d'avancer le bien-être de ces régions.

COLOMBIE.

SURTAXE FRAPPANT LES DROITS D'IMPORTATION.

D'après le "Diario Oficial" du 23 août 1901, on frappera d'une surtaxe de 10 pour cent tout compte de liquidation de droits à l'importation qui ne serait pas soldé dans le délai de huit jours. La loi gouvernant l'application de la taxe est ainsi conçue :

Article unique.—Tout compte relatif à des droits d'importation dont le montant n'aura pas été payé dans le délai de huit jours, fixé par l'article 146 du code fiscal, sera frappé d'une surtaxe de 10 pour cent qui sera prélevée comme contribution de guerre, sans préjudice des intérêts dus sur le principal et le montant de la surtaxe dont il s'agit.

MODIFICATIONS DOUANIÈRES.

M. le Consul OSCAR MALMROS écrit de Colon, en date du 25 mars 1902, au Ministère des Affaires Étrangères des États-Unis qu'un récent décret augmente de 50 pour cent les droits d'importation actuels sur toutes les marchandises à l'exception de l'alcool et du rhum, c'est-à-dire que le droit *ad valorem* s'est élevé de 20 pour cent à 30 pour cent.

Le droit d'importation sur le rhum et l'alcool a été réduit de la manière suivante :

	Centavos.
Par litre d'alcool pesant au maximum 42° de l'aréomètre Cartier	50
Par litre d'alcool pesant plus de 42° du même aréomètre	100
Par litre de rhum pesant au maximum 21° du même aréomètre.....	50

Le droit est payable en argent.

Le Consul ajoute que maintenant l'or s'échange contre l'argent avec une prime de 150 pour cent.

ÉTATS-UNIS.

DÉVELOPPEMENT DU COMMERCE AVEC L'AMÉRIQUE LATINE.

Le "Rapport sur les Relations Commerciales des États-Unis," publié par le Bureau du Commerce Extérieur du Ministère des Affaires Étrangères des États-Unis, contient une étude importante et intéressante sur les conditions qui gouvernent le développement du commerce entre les États-Unis et les pays de l'Amérique latine.

Au sujet du Mexique, on constate que les productions des États-Unis sont bien connues et appréciées dans le pays, mais que les exportateurs des États-Unis n'ont fait, pour ainsi dire, aucun effort pour obtenir le commerce de certains articles, tels que draperies, chapeaux, chaussures, mercerie et effets d'habillements pour hommes et femmes.

Toutefois le commerce en général augmente, et plusieurs maisons des Etats-Unis ont pris l'habitude d'envoyer de jeunes mexicains ou cubains en qualité de commis-voyageurs. Ces jeunes gens connaissent très bien leur métier et leur manière d'agir a produit de bons résultats. On dit que les faillites sont rares au Mexique et les commis-voyageurs trouvent dans le pays une classe de commerçants qui ont à cœur de faire leurs achats contre paiements à courte échéance.

L'entreprise des Etats-Unis a figuré sur une grande échelle dans le développement de la grande ville de Monterey, et ce sont les Américains qui ont fourni la plus grande partie de ce qui était nécessaire à l'administration des eaux, au service des égouts, aux chemins de fer et aux fonderies.

Au Guatémala, les machines des Etats-Unis sont hautement appréciées quoiqu'il soit impossible de les confier aux ouvriers indiens qui n'en comprennent pas le mécanisme, et qui, comme on le sait, font tout le travail du pays. Le peu de combustible nécessaire pour alimenter ces machines leur donne une grande supériorité sur celles des autres contrées et en même temps exerce une grande influence sur la demande.

On dit que les trois-quarts des importations du Honduras proviennent des Etats-Unis; et dans les Antilles la demande des articles de ce pays s'accroît de jour en jour. Dans l'île d'Haïti le commerce des machines gagne du terrain et 85 pour cent des aliments importés par Saint-Domingue, ainsi qu'une quantité considérable de chapeaux et de chaussures proviennent des Etats-Unis. Tout le bois de construction importé dans l'île, de même qu'une grande partie des autres matériaux de construction sont d'origine américaine.

On espère avoir de grands résultats par l'entreprise d'un bateau spéciaux transportant des échantillons et qu'on appelle "Magasin d'échantillons flottant. C'est une innovation des Etats-Unis, ayant pour but le développement du commerce avec l'Amérique latine et les Antilles. Ce navire doit bientôt partir des Etats-Unis pour la côte occidentale du Mexique, de l'Amérique du Centre et du Sud, ayant à vendre des échantillons de toutes sortes de marchandises qui conviennent au commerce des tropiques, chaque classe de marchandises étant à la charge d'un vendeur expert.

Les avantages réciproques qu'on pourra obtenir par suite des relations commerciales plus intimes entre les nations de l'hémisphère occidentale a été l'idée principale d'un discours prononcé le 19 avril à la réunion du Cercle des Banquiers à Chicago dans lequel le Président INGALLS affirma que les Etats Unis n'avaient pas encore découvert les méthodes pour s'assurer le commerce des pays au sud. "La première chose à faire," ajouta-t-il, "pour développer le commerce avec les Antilles et les pays de l'Amérique du Sud est d'établir un système de transports et de communications entre les Etats Unis et les nombreux

ports et villes de ces contrées. Le commerce suit toujours les moyens de communications faciles et bon marché. Il reste donc, à démontrer que les nations de l'Amérique latine peuvent visiter les Etats-Unis plus facilement et à moins de frais que l'Europe; qu'on peut y transporter le frêt en moins de temps et à meilleur marché; qu'on peut trouver de ce côté de l'Atlantique des machines de meilleure qualité et qu'il y a assez d'argent dans le pays pour accorder de longs délais de crédit sur de bonnes garanties et à un taux d'intérêt raisonnable.

En ce qui concerne les pays de l'Amérique du Sud, le rapport dit que le charbon des Etats-Unis trouve au Brésil une demande constante qui ne fait qu'augmenter tous les jours, et que les machines à écrire et les machines à coudre, les horloges, les montres, les appareils électriques occupent toujours le même rang qu'autrefois, tandis qu'on trouve de nouveaux débouchés pour les bicyclettes, les serrures, les armes à feu, la coutellerie et les cadres.

On insiste sur la nécessité d'établir une ligne de vapeurs perfectionnés et on fait entrevoir qu'une ligne faisant le service entre New York et Brésil serait d'un avantage incalculable et que le frêt de retour, comprenant le café, le caoutchouc et d'autres produits similaires augmenterait les bénéfices des deux côtés. La quincaillerie des Etats-Unis est sans concurrence sur les marchés brésiliens.

Dans la République Argentine, les articles des Etats-Unis qui ont le plus grand débouché sont les outils et instruments, les cotonnades, les chapeaux, les chaussures et les spécialités. Comme indice de la valeur des affaires commerciales qui se font entre les deux Républiques, on dit que dans l'une des banques de Rosario, l'augmentation constatée dans les affaires avec des maisons des Etats-Unis pour les six mois finissant le 30 juin 1901, a été de 131 pour cent.

La principale importation des Etats-Unis au Chili consiste en scies mécaniques et comme l'industrie principale des provinces méridionales du Chili est celle des bois de construction, la quantité expédiée chaque année est assez considérable. Toutes les machines employées pour moudre le grain sont aussi importées des Etats-Unis.

En Colombie, il y a une demande croissante de chemises négligées pour hommes, de cols et de manchettes de fabrication américaine.

Le commerce des Etats-Unis avec l'Equateur montre une augmentation satisfaisante, due en grande partie aux achats faits pour le chemin de fer de Guayaquil et Quito, ainsi qu'aux communications meilleures et plus rapides, aux taux moins élevés du frêt et aux efforts des commis-voyageurs.

Dans l'Uruguay, les objets manufacturés provenant des Etats-Unis commencent à s'importer en plus grande quantité, mais il faut des efforts constants pour faire la conquête complète de ce marché.

RAPPORT SUR LA RÉCOLTE AU 1^{er} MAI, 1902.

D'après les renseignements reçus au Bureau des Statistiques du Ministère d'Agriculture au sujet de la condition des récoltes jusqu'au 1^{er} mai, il ressort que la superficie du blé d'hiver en culture à cette date était de 27,103,000 acres environ. C'est-à-dire, 4,868,000 acres ou 15.2 pour cent de moins que la superficie ensemencée à l'automne dernier d'après les données du Ministère. On n'a pas cru devoir modifier ces dernières, si ce n'est pour les chiffres indiquant la superficie des terres abandonnées, se décomposant comme suit: le Kansas, 1,935,000 acres, le Texas et le Tennessee chacun 270,000 acres, l'Indiana, 205,000 acres, la Californie, 402,000 acres, l'Oklahoma, 325,000 acres, la Pennsylvanie, la Virginie, le Kentucky, le Nebraska et l'Etat de Washington environ 100,000 et 200,000 acres chacun.

Quant à la superficie en culture, la condition moyenne au 1^{er} mai, 1902, était de 76.4 contre 94.1 au 1^{er} mai 1901, 88.5 à la même date en 1900, et 83.2 la moyenne générale du mois de mai pendant les dix dernières années. Depuis l'année 1885, il n'y a que les années 1899, 1893 et 1888 qui aient donné des chiffres inférieurs à ceux de cette année.

La condition moyenne du seigle d'hiver au 1^{er} mai était de 83.4 contre 85.4 au 1^{er} avril 1902, 94.6 au 1^{er} mai 1901, 88.5 à la même date en 1900 et 89 la moyenne générale du mois de mai pendant les dix dernières années. Depuis vingt ans, il n'y a que l'année 1893 qui ait donné un résultat inférieur à celui de cette année. Les Etats de New York et de Pennsylvanie qui ont les deux-cinquièmes de leur superficie totale ensemencés de seigle d'hiver donnent comme moyen 91 pour le premier et 93 pour le deuxième, ce qui fait une diminution de 3 pour cent pour l'Etat de New York et de 7 pour cent pour celui de Pennsylvanie sur la moyenne des dix dernières années. Le Kansas donne le chiffre de 72, soit 13 pour cent au-dessous de la moyenne des dix dernières années pour cet Etat.

Au 1^{er} mai, la condition moyenne des prairies fournissant le foin était de 86.6 contre 92.8 au 1^{er} mai, 1901, 90.8 à la même date en 1900 et 90.6 moyenne générale du mois de mai pendant les dix dernières années. Depuis 1888, il n'y a que l'année 1899 avec une moyenne de 84.9 qui ait donné un chiffre inférieur à celui de cette année. Cette diminution provient surtout des Etats suivants: le Kansas et le Missouri qui accusent 15 pour cent en moins de la moyenne des dix dernières années, l'Iowa 14 pour cent, l'Illinois et le Minnesota 9 pour cent, et l'Indiana 6 pour cent. Ce sont les seuls changements importants à signaler dans la moyenne de ces Etats depuis un certain nombre d'années.

La condition moyenne des prairies en herbes au 1^{er} mai était de 84.9 contre 91.5 au 1^{er} mai, 1901, 91.3 à la même date en 1900 et 90.1 moy-

enne du mois de mai pendant les dix dernières années. Depuis l'année 1888, il n'y a que l'année 1889 qui ait donné un chiffre inférieur à celui de cette année. On estime que sur le total prévu des terres à mettre en labour il n'y avait que 72.3 pour cent déterminé au 1^{er} mai contre 67 pour cent à la date correspondante de l'année dernière et 71 pour cent, moyenne des dix dernières années. Dans les Etats de l'Illinois, de l'Iowa et du Missouri, la proportion de l'étendue des terres en labour au 1^{er} mai dépassait de 15 pour cent pour le premier et de 16 pour cent le deuxième et de 18 pour cent pour le troisième, la proportion générale labourée à cette date. On fait connaître aussi une augmentation notable, quoique moins considérable, de la proportion labourée généralement au 1^{er} mai dans l'Indiana, le Kansas et le Nebraska. Toutefois dans les Etats produisant le blé de printemps la préparation du sol pour l'ensemencement a été sérieusement retardée par le temps défavorable, et en particulier dans la Dakota du Nord où la saison est si en retard qu'il y aura très probablement une grande diminution dans la superficie semencée de cette espèce de blé.

LES COQUILLAGES NACRÉS ET LES PERLES DES ÎLES SOULOU.

Il résulte d'une communication du Consul de France à Manille sur la production et le commerce de la nacre et des perles du groupe des îles Soulou, situées à l'extrême pointe sud-ouest des Philippines, que la valeur des coquillages bruts et travaillés, importés aux Etats-Unis pour la consommation locale, a été de \$969,349 en 1899 et de \$1,016,728 en 1900.

Pendant ces deux années \$82,640 et \$88,362 seulement représentent la valeur des coquillages et nacres livrés à la consommation par l'industrie.

C'était l'époque où Manille était le centre de ce produit rémunérateur; mais la politique économique du gouvernement a fait dévier ce commerce vers Singapore, l'entrepôt britannique des Straits Settlements. A présent, les Chinois et les Anglais en ont le monopole aux îles Soulou. Suivant des rapports de la douane, la valeur de ce trafic à Soulou seulement, depuis janvier 1900, était la suivante:

Produits.	Quantités.	Valeur.
	<i>Livres.</i>	
Coquillages nacrés.....	222,814	\$75,712
Coquillages foncés.....	1,114	440
Coquillages en forme d'escargots.....	17,707	5,619
Totaux	241,635	81,701

La même valeur a été exportée approximativement du port de Siassi, du groupe Tapoul, ce qui ajoute 483,242 livres d'une valeur de \$143,522

pour ces deux points des îles Soulou. Ces chiffres ne comprennent pas la valeur des coquillages nacrés, les plus beaux étant réservés au sultan de Soulou comme tribut royal.

On pourra se faire une idée de la richesse de ces pêcheries quand on saura que la Philippine Pearling and Trading Company, dont le siège est à Manille, appartient surtout à la Chartered Bank of India, Australia, and China, à la Hongkong and Shanghai Bank et à la maison HOLLIDAY, WISE & Co., de Manille. Elle n'a qu'un fort petit nombre d'actionnaires.

En ce qui concerne les perles, M. STREETER, un expert anglais des plus compétents, ayant passé plusieurs années à Laminusa, près de Siassi, affirme que l'archipel Soulou produit les plus belles perles rondes du monde.

La première qualité exige une parfaite sphéricité. Les eaux des îles Soulou recèlent le type le plus parfait de ce qu'on appelle "*Meleagrina Margaritifera*," le plus beau mollusque perlier.

La superficie des eaux perlières des archipels Soulou et Célèbes est de 15,220 milles carrés. De plus on suppose que plus du double de cette superficie possède toutes les conditions physiques requises pour la conservation des huîtres perlières et des coquilles nacrées.

Siassi, du groupe Tapoul de l'archipel Soulou, est en fait le centre de l'industrie perlière la plus florissante. Il comprend de nombreux villages, dont la population compte plusieurs milliers de pêcheurs. L'antique méthode du plongeur est remplacée par les équipements du style le plus moderne.

Le monopole des coquillages et des perles dans les eaux limitrophes de Soulou, la capitale de l'archipel, est entièrement entre les mains d'un capitaliste chinois possédant une flotte de 6 bateaux (de 20 tonnes), avec un équipage de sept hommes et un capitaine pour chacun.

Dans une croisière, chaque bateau a rapporté de 1,500 à 2,500 livres de coquillages; une grande quantité, au lieu d'aller à Manille, est envoyée à Singapore dans des paniers; on les paie 55 dollars le picul. Les perles sont aussi cotées. Quelques-unes ont été estimées à une valeur de 13,000 dollars.

Les principaux centres fournisseurs de nacre du monde entier sont Soulou, Tounekaits, le Queensland et l'Australie occidentale.

Manille a perdu son importance en 1886. Auparavant, elle était le centre de cet important commerce dans tout l'Extrême-Orient. Ses coquillages étaient connus sous le nom de "manille" et estimés sur le marché comme les plus beaux. Ils étaient cotés à des prix élevés.

La valeur des perles à l'état brut ou fendues importées aux Etats-Unis pour la consommation locale a été de 1,802,851 dollars en 1899, de 4,595,910 dollars en 1900 et de 1,086,480 dollars en 1901 (neuf mois).

A présent la Grande-Bretagne a monopolisé l'exportation des coquil-

lages et des perles du monde entier. L'évaluation en 1898 a été la suivante: Ceylan, 14,001 dollars; Hongkong, 175,825 dollars (presque tout ce commerce a été enlevé à Manille); Philippines et îles Ladrone, 8,757 dollars; Singapore, 561,253 dollars; Queensland, 564,149 dollars; Australie occidentale, 22,703 dollars:

MEXIQUE.

PERCEPTION DE DROITS D'IMPORTATION À VERA CRUZ.

M. W. W. CANADA, le Consul des Etats-Unis à Vera Cruz, fait connaître en date du 24 mars 1902, qu'en vertu d'un décret présidentiel, un droit additionnel de 2 pour cent (au lieu de 1½ pour cent) sur le total des droits de douane est maintenant perçu sur toute marchandise étrangère importée dans le Mexique par le port de Vera Cruz. Les revenus seront appliqués aux travaux d'égouts et des eaux qui sont actuellement en construction dans la ville.

NOUVELLE FONDERIE.

Une compagnie qui a fait récemment l'acquisition des mines de Mulatos, en Sonora, a formé le projet d'établir, près de ces mines, une grande fonderie dans laquelle 2,000 tonnes de minerai pourraient être traitées journellement.

Cette même compagnie créera, en outre, à 120 kilomètres de Mulatos, une autre fonderie, plus petite et pouvant traiter 200 tonnes de minerai par jour.

Enfin, elle fera construire une route entre ses propriétés et la voie du chemin de fer de Sonora. Une somme de \$300,000 sera affectée à ce travail.

FONDATION D'UNE ÉCOLE INDUSTRIELLE DE PUEBLA.

Les directeurs de la grande verrerie, récemment inaugurée à Puebla, ont résolu de fonder dans cette ville une école pour les ouvriers mexicains qui recevront une instruction éminemment pratique de professeurs français qu'on fera venir de Paris.

Le conseil d'administration de la fabrique de cristaux a fait part de ce projet au gouvernement de l'Etat de Puebla en lui demandant de désigner deux jeunes gens dans chaque district pour qu'ils reçoivent l'instruction dans le nouvel établissement, instruction qui se terminera par l'étude de l'industrie du verre.

Les fondateurs de la verrerie comptent, grâce à la création de leur école, former des ouvriers verriers aussi habiles que les français et les autrichiens.

FAITS DIVERS.

Il est question d'établir à Alvarado, près de Veracruz, une grande fabrique de conserves de poissons. Cette nouvelle industrie aurait pour but, non seulement d'alimenter les marchés de l'intérieur de la République mais encore ceux des Etats-Unis et principalement de la Louisiane où le *huachinango* est très apprécié.

On va prochainement entreprendre la plantation de bambou japonais dans le Huasteca Potosina. M. le Ministre du Mexique au Japon a fait un premier envoi de semences qui est attendu sous peu à Mexico. On espère que le terrain choisi sera très favorable à la culture de cette plante, car déjà des produits similaires du bambou, l'*otate* et le *carrizo*, poussent à l'état sauvage dans cette région.

Le Gouvernement mexicain vient d'accorder à M. ALBERT J. PEYTON une concession pour l'établissement d'une ligne de chemin de fer entre Morelia et Tacambaro, dans l'Etat de Michoacán.

SALVADOR.

MODIFICATIONS DOUANIÈRES.

En vertu d'un décret exécutif les modifications suivantes de la loi douanière de la République du Salvador, publiées dans le "Diario Oficial" sont entrées en vigueur.

I. Ordonnance du 18 octobre 1901, relative à la franchise applicable aux sacs contenant du café destiné à l'exportation:

"Aux effets de l'application de la loi du 17 mai 1901, stipulant la franchise pour les sacs contenant du café destiné à l'exportation, il a été ordonné que le droit d'exportation sur le café sera perçu d'après le poids net en déduisant du poids total deux livres et demi par sac."

II. Ordonnance du 19 octobre 1901, relative au régime applicable au fil non retors de lin ou de chanvre, pour cordonniers:

"En vertu de la présente ordonnance, le fil non retors de lin ou de chanvre pour cordonniers sera rangé sous le n° 21, à la taxe de 30 centavos le kilogramme."

III. Ordonnance du 23 octobre 1901, relative au régime applicable à la farine de seigle:

"En vertu de la présente ordonnance, la farine de seigle non dénommée dans le tarif en vigueur sera rangée sous le n° 57, à la taxe de 2 centavos le kilogramme."

“IV. Ordonnance du 23 octobre 1901, relative au régime applicable aux chaussettes en fil d'Ecosse et ses imitations:

“En vertu de la présente ordonnance, les chaussettes en fil d'Ecosse et ses imitations seront rangées sous le n° 14, à la taxe de 1 peso 50 centavos le kilogramme.”

V. Ordonnance du 23 novembre 1901, établissant le régime applicable aux ventilateurs électriques:

“En vertu de l'ordonnance susmentionnée, les ventilateurs électriques non dénommés dans le tarif seront rangés sous le n° 315, à la taxe de 30 centavos par kilogramme.”

VI. Ordonnance du 1^{er} janvier 1902, autorisant temporairement l'entrée en franchise du maïs et des haricots.

“En vertu de l'ordonnance susmentionnée sera exempte de tous droits et impôts pendant un an l'importation du maïs et des haricots nécessaires à la consommation. Ces denrées seront également exemptes de droits de magasinage.”

VI. Ordonnance du 8 janvier 1902, modifiant la taxe applicable aux petites boîtes cylindriques en bois pour onguents.

“En vertu de l'ordonnance susmentionnée les petites boîtes cylindriques en bois pour onguents, ordinaires, faites au tour et non vernies, seront tarifées à raison de 15 centavos.”

URUGUAY.

EXPLOITATION AURIFÈRE DE LA RÉPUBLIQUE.

Le Ministère de l'Intérieur de l'Uruguay a remis au Consulat des Etats-Unis à Montévidéo des statistiques ayant trait à l'exploitation aurifère de la République pour les années 1899, 1900 et 1901.

Ce rapport a été transmis au Ministère des Affaires Etrangères de Washington et on en a extrait les données suivantes:

La production des mines de Rivera en 1889 s'est élevée à 5,119 tonnes, ayant fourni 61,336 kilogrammes d'or, la valeur totale étant de \$7,500.26. En 1900, on a exploité 7,345 tonnes de minerais ayant produit 71,234 kilogrammes d'or; et en 1901, 1,183 tonnes ayant produit 71,946 kilogrammes d'or. On se sert maintenant de cyanure pour séparer l'or pur des minerais et on obtient de meilleurs résultats qu'auparavant. Les mines sont toutes petites, l'exploitation ayant lieu en grande partie à fleur de terre, et les essais qu'on a faits dans douze exploitations varient de 6 grammes 75 à 30 grammes 79 par tonne. Pendant 1901, on a enregistré 25 nouvelles demandes de privilèges miniers.

L'exploitation a été beaucoup retardée par le manque d'eau. Un tant pour cent sur tout l'or produit revient au Gouvernement. On emploie exclusivement des machines de fabrique française dans le développement de cette industrie.

VENEZUELA.

DROITS SUR LE PAPIER.

Le Consul des Etats-Unis, M. PLUMACHER, a transmis de Maracaïbo, en date du 15 mars 1902, des traductions de récents décrets gouvernementaux au sujet des droits vénézuéliens sur le papier. Le premier décret stipule que le papier de soie blanc importé en feuilles mesurant 49 centimètres sur 36 centimètres employé dans la manufacture de cahiers sera placé dans la classe 3 du tarif. Cette classe de marchandises paye un droit d'importation de 25 centimes de bolivar par kilogramme. L'autre décret dit que quand le papier compris dans la classe 3 du tarif "non spécifié" passe par la douane et porte un nom ou entête imprimé ou lithographié, même s'il est d'emploi privé, il sera compris dans la classe 5 du tarif, comme le sont les fournitures de Bureau. La cinquième classe est frappée d'un droit de 1 bolivar 25 centimes par kilogramme.

M. PLUMACHER ajoute: "On doit se rappeler que les boîtes d'échantillons (*muestras sin valor*) ne dépassant pas 25 kilogrammes pourront toujours passer par la douane sans payer de droits. Ceci doit intéresser les fabricants de médecines et de médicaments brevetés qui les envoient pour être distribués aux médecins et aux pharmaciens. Jusqu'à présent la plupart des médecines brevetées est d'origine française."

LONGUEUR DES VOIES FERRÉES DU MONDE.

Pendant les soixante-dix années qui se sont écoulées depuis que la praticabilité et les avantages de l'établissement des chemins de fer sont devenus des faits accomplis, une moitié de la longueur totale de ces lignes ont été construites dans les confins des Etats-Unis.

En janvier 1902, la longueur totale des lignes de chemin de fer existant dans le monde et ouvertes au trafic était de 484,348 milles, dont 220,657 milles sont situés dans l'Amérique du Nord, 168,605 milles en Europe, 35,580 en Afrique et 15,282 milles en Australie. Si on compare la longueur des voies ferrées des Etats-Unis avec celle des autres pays, les Etats-Unis sont à la tête de ces derniers avec 199,378 milles, les autres nations venant après dans l'ordre suivant: Empire d'Allemagne, 31,934 milles; Russie, 29,894 milles; France, 26,613 milles; Inde, 25,035 milles; Autriche-Hongrie, 22,919 milles; Royaume-Uni de la Grande Bretagne et d'Irlande, 21,700 milles; Canada, 17,657 milles; Australasie Anglaise, 15,266; République Argentine, 10,419 milles; Italie, 9,810 milles; Mexique, 9,603 milles; Brésil, 81,718 milles et Espagne, 8,300 milles. En 1830, la longueur des voies ferrées des Etats-Unis était de 23 milles; en 1840 elle atteignait 2,818 milles; en 1850, 9,021 milles; en 1860, 30,616 milles; en 1870, 52,922 milles; en 1880, 93,262 milles; en 1890, 166,654 milles, et en 1900, 194,321 milles.

Le neuvième supplément semestriel de la "Railroad Gazette" du 28 mars 1902, contient une liste de tous les chemins de fer en voie de construction, projetés ou incorporés aux Etats-Unis (y compris Porto-Rico, Hawaï et les îles Philippines), au Canada et au Mexique. Il y a 1,502 projets définitifs, plus ou moins avancés, et dans lesquels 1,142 compagnies sont intéressées. Ce nombre comprend 1,308 projets de 995 compagnies des Etats-Unis; 157 sont les projets de 119 compagnies canadiennes et 37 sont de nouvelles lignes au Mexique et dans lesquels 28 compagnies sont intéressées. Les entreprises pour lesquelles on a passé des contrats se chiffrent à 453, dont 399 sont aux Etats-Unis, 42 au Canada et 12 au Mexique.

LE COMMERCE DE LA GOMME ARABIQUE, DE L'IVOIRE ET DES PLUMES D'AUTRUCHE AU SOUDAN.

Les données suivantes ont été extraites du BULLETIN MENSUEL de la chambre de commerce française d'Alexandrie par l'agent et Consul général de Belgique au Caire, auxquelles ont été ajoutés les chiffres relatifs à l'année 1901:

Gomme arabique.—Pendant toute la période de la fermeture du Soudan au commerce, les transactions en gommes arabiques ont été presque nulles. Cette période a pris fin en 1899, après la prise de Kartoum. Aussi constate-t-on, dès cette année, un relèvement sensible de l'exportation des gommes. Alors que précédemment les envois à l'étranger ne dépassaient pas 100,000 à 150,000 kilogrammes par an, ils se sont élevés brusquement à 630,000 kilogrammes en 1889, à 1,863,000 kilogrammes en 1900 et à 6,709,000 kilogrammes en 1901. On s'attend même à ce que ce chiffre soit encore dépassé en 1902.

Les exportations se sont réparties comme suit en 1899 et 1900:

Pays de destination.	1900.		1901.	
	Quantités.	Valeur.	Quantités.	Valeur.
	<i>Kilog.</i>	<i>Liv. égypt.</i>	<i>Kilog.</i>	<i>Liv. égypt.</i>
Angleterre.....	605,540	30,928	237,213	11,579
Possessions anglaises d'Extrême-Orient	36,429	2,157	37,403	1,877
Allemagne.....	153,328	7,598	64,423	2,660
Amérique.....	142,379	6,899	75,676	3,441
Autriche-Hongrie.....	137,248	6,691	102,527	5,254
Belgique.....	57,939	3,215	12,516	566
Espagne.....	32,479	1,398	12,219	715
France.....	638,200	32,558	52,877	2,858
Grèce.....	689	39	698	30
Hollande.....	6,533	263	4,204	232
Italie.....	43,107	1,652	23,502	1,184
Russie.....	2,562	116
Turquie.....	6,679	333	4,866	211
Totaux.....	1,863,072	93,847	628,124	30,607

En 1901, les 6,709,332 kilogrammes (d'une valeur de 254,794 livres égyptiennes) expédiés à l'étranger, ont été dirigés surtout vers les pays suivants: Angleterre et colonies, 2,060,098 kilogrammes valant 75,922 livres égyptiennes; France, 1,649,923 kilogrammes d'une valeur de 61,314 livres égyptiennes; Autriche-Hongrie, 872,155 kilogrammes évalués à 32,837 livres égyptiennes; Etats-Unis, 829,123 kilogrammes estimés à 34,829 livres égyptiennes; Belgique, pour 8,000 livres égyptiennes environ.

L'année 1901 a été très défavorable pour les négociants locaux s'occupant du commerce de la gomme arabique. Par suite, en effet, de la forte spéculation sur place et de la baisse constante sur les marchés d'Europe,

la campagne se solde par une perte de 1,260,000 francs, dont la majeure partie retombe sur les négociants et spéculateurs indigènes. Ceux-ci, dont les craintes et les méfiances de jadis avaient été calmées par la tranquillité du pays, commencèrent à faire sortir leurs économies, tenues jusque-là cachées, auxquelles ils ajoutèrent le produit de la vente de quelques propriétés et se lancèrent dans la spéculation qui s'empara de la place de Kartoum tout entière. Profitant de ce mouvement, qui semblait justifié par le grand courant d'affaires, les banques accordaient volontiers des avances s'élevant jusqu'à 80 pour cent de la valeur des marchandises. Ainsi encouragés, les spéculateurs abandonnèrent toute prudence; quelques-uns se ruinèrent totalement et d'autres éprouvèrent des pertes dont ils se relèveront difficilement.

Les exportateurs se basèrent d'abord sur les renseignements venus d'Egypte, lesquels, au début, paraissaient très favorables. En effet, les quelques premiers lots furent vendus à de bons prix. Ce ne fut que lorsque les gros envois commencèrent, qu'il se produisit une baisse générale sur les marchés d'Europe. Malgré cela, les spéculateurs soudanais persistèrent dans leur mouvement et déclinèrent les offres les plus favorables, parce qu'ils avaient la conviction que les prix offerts n'étaient que fictifs. Aussi continuèrent-ils leurs achats aux anciennes conditions et même, dans certains cas, à un taux plus élevé.

A ce moment, la gomme du Kordofan se vendait à Omdurman au prix de 31 francs 10 centimes à 41 francs 50 centimes, le cantar de 110 rotolis (49 kilograms, 415 grains) auquel il fallait ajouter 9 francs 10 centimes pour frais d'emballage, factage, transport jusqu'en gare d'Alexandrie, ce qui donnait un prix de revient de 40 francs 20 centimes à 50 francs 60 centimes, franco Alexandrie. Par contre, les meilleures offres qu'on pouvait obtenir variaient de 29 francs 50 centimes à 37 francs 30 centimes, franco Caire ou Alexandrie, ce qui représentait une perte de 20 à 40 pour cent. Malgré cette situation peu encourageante, la spéculation restait tenace et les arrivages se maintenaient plus nombreux.

Mais les banques finirent par réclamer le remboursement de leurs avances et obligèrent leurs clients à vendre immédiatement. Les stocks ainsi jetés sur le marché firent encore baisser les prix et précipitèrent la crise.

Avec la nouvelle récolte, dont les arrivages commencent déjà, on s'attend à une amélioration générale des prix et au ralentissement des manœuvres de la spéculation. Cette prévision repose sur le fait que plusieurs négociants ont abandonné ces affaires, à cause des pertes qu'ils ont subies, et sur la réserve que montrent les banques en n'accordant qu'un prêt de 60 pour cent sur marchandises, après s'être assurées de la solvabilité des emprunteurs.

Pour les nouveaux lots, les prix se maintiennent fermes et l'on cotait comme suit, en janvier dernier, pour marchandise rendue à Omdurman :

	Francs le cantar de 110 rotolis.
Kordofan.....	23. 30 à 28. 50
Zezireh	15. 60 à 18. 20
Falh	12. 95 à 15. 68

Pour terminer, il ne sera pas inutile de faire quelques remarques au sujet de l'achat sur la base d'échantillons offerts dans le pays même. Il se comprend, en effet, que pour un produit comme la gomme, ramassé à l'intérieur par des populations ignorantes, un échantillon ne peut pas donner un aperçu de la qualité d'un lot quelconque, lorsque, dans une couffe de 8 cantars, on trouve trois ou quatre qualités différentes et que, dans une deuxième couffe du même lot, on rencontre quelquefois 20 pour cent de débris de bois, de paille, pierre, etc.

Quelques negociants se contentent d'enlever un échantillon de 200 grammes par une petite ouverture faite à la couffe, pour en faire l'envoi à leurs commettants en Europe. Ce procédé est défectueux pour les raisons suivantes :

1°. Cet échantillon ne peut représenter la qualité d'une partie composée de plusieurs centaines de cantars. 2°. Il peut arriver que cette partie soit vendue même avant la mise à la poste de l'échantillon. 3°. Les prix varient d'un jour à l'autre et il est plus que probable qu'ils auront changé lorsque l'échantillon arrivera à destination.

D'ailleurs, la gomme est un article de confiance et qui ne peut se traiter sur échantillon. C'est plutôt l'acheteur en Europe qui doit envoyer à son agent un type représentant la qualité qu'il désire, et c'est l'agent qui doit rechercher et découvrir le lot se rapprochant le plus du type demandé. Le système actuel, qui consiste à faire des offres sur échantillons, est peu pratique; il donne lieu à des chicanes, à des malentendus et finalement à des pertes; il devrait donc être abandonné.

Ivoire.—D'après les statistiques de la douane, l'exportation de l'ivoire s'est élevée en 1900 à 10.575 kilogrammes, représentant une valeur de 8,486 livres égyptiennes. D'ordinaire, l'ivoire est mis aux enchères par le gouvernement après avis préalable quelques jours avant la vente. Mais cet article étant d'un prix élevé, il ne se présente que peu d'acheteurs, ce qui tend à limiter la concurrence.

Le tableau ci-après indique les diverses qualités d'ivoire que l'on trouve au Soudan et les prix moyens qu'elles obtiennent :

Qualités.	Prix par cantar de 100 rotolis. ^a
Première	<i>Francs.</i> 775 à 830
Seconde	465 à 595
Troisième (écorcé par le soleil)	260 à 335
Barre (qualité propre, dent pesant de 8 à 15 rotolis)	570 à 625
Clénche (qualité propre, dent pesant de 1 à 8 rotolis)	570 à 625
Morceaux d'ivoire	260 à 365

^a Le rotoli = 449 grammes.

La première qualité reste ordinairement blanche; elle jaunit rarement.

Plumes d'autruche.—En 1900 les exportations de plumes d'autruche se sont chiffrées par 5,698 kilogrammes, valant 12,227 livres égyptiennes.

Les plumes d'autruche se vendent par paquets contenant 3 rotolis de plumes noires et 1 rotoli de plumes blanches. Suivant la qualité, le prix varie entre 65 et 104 francs le paquet de 4 rotolis. Il y a aussi des plumes grises appelées “ramadi” et valant de 6 francs 50 centimes à 9 francs le rotoli. Les plumes noires, lorsqu'elles sont vendues séparément, valent actuellement de 15 francs 50 centimes à 18 francs le rotoli.

PRODUCTION DU LIÈGE DANS LE MONDE.

D'après une publication officielle française, la production annuelle du liège dans le monde atteint environ 1,000 tonnes et est fournie exclusivement par le Portugal, l'Espagne, la France, l'Italie, l'Algérie, la Tunisie et le Maroc.

Par suite du manque de données précises à ce sujet, il est difficile de déterminer, même approximativement, la superficie exacte des forêts de chênes-liège existant dans ces pays. On sait cependant que les forêts où l'on rencontre le chêne-liège en plus ou moins grand nombre couvrent une superficie d'environ 600,000 hectares en Portugal, 426,000 hectares en Algérie, 300,000 hectares en Espagne, 143,000 hectares en France, 82,000 hectares en Tunisie et 80,000 hectares en Italie. On peut dire aussi que plus de la moitié des forêts exploitées réellement pour la production du liège se trouve en France, en Algérie et en Tunisie. Ces forêts se composent principalement de chênes-liège mélangés de pins et de chênes verts. Toutefois, dans la Kroumirie orientale, on trouve encore, à l'état vierge, d'importantes forêts de chênes-liège, dont la mise en exploitation viendra ajouter une quantité importante à la production actuelle du liège.

La demande pour le liège augmente constamment, et il est certain qu'un accroissement de production trouverait rapidement des preneurs, surtout pour les meilleures qualités. Actuellement, la France, le Royaume-Uni, l'Allemagne, la Russie et les Etats-Unis absorbent environ 85 pour cent de la quantité totale de liège consommée annuellement dans le monde.

L'Allemagne, la Russie et les Etats-Unis frappent de droits prohibitifs l'entrée des articles manufacturés en liège alors que le liège brut y est importé à peu près en franchise. Seul le Royaume-Uni n'impose

aucun droit sur le liège brut et manufacturé, bien que ce dernier lui soit fourni en très grande partie par la France, l'Espagne et le Portugal. En 1900, ce dernier pays a exporté 5,916,000 livres de liège en Angleterre.

L'Espagne exporte surtout les articles finis, la Catalogne, entre autres, fournissant les bouchons à champagne de qualité supérieure, dont le prix atteint de 157 à 165 francs le mille.

Le liège du Portugal, qui croît rapidement à cause de l'humidité du climat est, paraît-il, de qualité inférieure à celui du littoral de la Méditerranée.

Quant au mauvais renom dont souffrait le liège d'Afrique, il n'existe certainement plus, les échantillons exposés à Paris en 1900 ayant fait disparaître cette impression.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

Le "Rapport sur le sucre mexicain, 1900-1901," publié par, 'El Hacendado Mexicano,' qu'on vient de recevoir à la Bibliothèque du Bureau International des Républiques Américaines, est un livre de la plus grande valeur pour les renseignements que l'on peut y puiser au sujet de l'industrie sucrière du Mexique, de l'Amérique Centrale, de Porto Rico et de l'île de Cuba. Cette publication contient une liste complète des propriétaires de plantations de sucre dans les pays dont il est question, ainsi que leurs adresses, les noms des plantations, la quantité de la production, etc., et d'autres données importantes. Parmi les nombreux sujets traités, les fabriques de sucre de la République sont l'objet d'une attention toute spéciale et l'on compte que l'année prochaine la production de la grande fabrique centrale s'élèvera à environ 20,000,000 de livres de sucre; on a ajouté de nouvelles machines de sorte qu'à présent cette usine est la plus grande du Mexique. D'après les indications actuelles, on estime que la production de l'année 1901-2 dépassera de beaucoup celle des années précédentes.

Le "Crop Reporter," publié par ordre du Ministre de l'Agriculture des Etats-Unis, contient dans son numéro du mois d'avril un article très intéressant au sujet des "Productions et Exportations de la République Argentine," traitant spécialement des récoltes de céréales du pays. Par suite du progrès apporté dans le procédé frigorifique, la

République Argentine peut conserver ses viandes dans de bonnes conditions et les vendre aussi facilement que ses laines et ses peaux, et d'un autre côté le blé, le maïs, la graine de lin, le foin et autres produits agricoles sont devenus des facteurs importants sur les marchés du monde par suite de l'immigration constante qui se compose principalement de cultivateurs. Les statistiques que cet article fait ressortir sont extraites de sources officielles et autres vraiment dignes de foi et comprennent les classifications suivantes: Superficies en culture en 1890 et 1900; production et distribution de blé; production, consommation, semence et excès de production; récoltes de blé en 1899-1902; récoltes de maïs; récoltes des principales provinces agricoles; exportations des produits agricoles; exportations des produits agricoles et des produits des troupeaux; exportations de blé, de maïs, de graine de lin et exportations de foin et de certains produits des troupeaux depuis 1891.

Nuestra dirección por cable: "CLAFLIN." Usamos la clave "A. B. C.," la "Al" y "Liebers."

Se reciben productos extranjeros en consignación, ó en cambio de mercancías.

COMPANÍA INCORPORADA CON EL TÍTULO DE

WRIGHT'S INDIAN VEGETABLE PILL CO. 372 PEARL STREET, NEW YORK.

ESTABLECIDA HACE 50 AÑOS.

Es la única fabricante de las preparaciones siguientes: Píldoras Indias Vegetales de Wright, Jarabe Indio Vegetal de Wright, Elixir de Opio de McMunn, Gotas Anodinas de Clavo de comer para el dolor de muelas, Vermífugo pronto y eficaz de Perry, Píldoras de Zarzaparrilla de Leidy para la sangre, Bálsamo Romano para los Ojos, Mistura Específica de Crossman.

Los Importadores de Drogas y Medicinas en los países de la América Latina se servirán escribir pidiendo las listas de los precios, y preguntando cuáles son los términos y condiciones del pago. Estos remedios están ampliamente anunciados en los dichos países, y se venden en todas partes del mundo.

**El Corsé de Forma Erecta conocido
con el nombre de**

"W.B." ERECT FORM CORSET

ES EL ÚNICO ENTERAMENTE CORRECTO.

En la Exposición Pan-Americana le fué concedido el premio más alto. Sigue fielmente los perfiles naturales del cuerpo, y no comprime el busto. Toda la fuerza que se necesite para encintarlo se ejerce en él sobre los músculos fuertes y vigorosos de las caderas y de la espalda, y así es que con su uso se hace resaltar de la manera más admirable, como es esencial para las exigencias de la presente moda, el bien redondeado busto y las caderas. Hay un modelo especial para cada forma de cuerpo.

Para obtener catálogos, listas de precios, y cualesquiera otros informes, debe dirigirse quien los desee á

WEINGARTEN BROS., 377-379 Broadway, New York,

Que son los fabricantes de corsés, en mayor cantidad, que existen en el mundo.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES.

The rates of postage from the United States to all foreign countries and colonies (except Canada, Mexico and Cuba) are as follows:

	Cents.
Letters, per 15 grams ($\frac{1}{2}$ ounce).....	5
Single postal cards, each	2
Double postal cards, each	4
Newspapers and other printed matter, per 2 ounces.....	1
Commercial papers {	
Packets not in excess of 10 ounces	5
Packets in excess of 10 ounces, for each	
2 ounces or fraction thereof.....	1
Samples of merchandise {	
Packets not in excess of 4 ounces	2
Packets in excess of 4 ounces, for each	
2 ounces or fraction thereof.....	1
Registration fee on letters and other articles	8

Ordinary letters for any foreign country (except Canada, Mexico, and Cuba) must be forwarded, whether any postage is prepaid on them or not. All other mailable matter must be prepaid, at least partially.

Matter mailed in the United States addressed to Mexico is subject to the same postage rates and conditions as it would be if it were addressed for delivery in the United States, except that articles of miscellaneous merchandise (fourth-class matter), not sent as *bona fide* trade samples, should be sent by "Parcels Post;" and that the following articles are *absolutely excluded* from the mails without regard to the amount of postage prepaid or the manner in which they are wrapped:

All sealed packages, other than letters in their usual and ordinary form; *all* packages (including packages of second-class matter) which weigh more than 4 pounds 6 ounces, except such as are sent by "Parcels Post;" publications which violate any copyright law of Mexico.

Single volumes of printed books *in unsealed packages* are transmissible to Mexico in the regular mails without limit as to weight.

Unsealed packages of mailable merchandise may be sent by "Parcels Post" to Bolivia, British Guiana, British Honduras, Chile, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Salvador, and Venezuela, at the rates named on page xv.

RATES OF POSTAGE FROM THE UNITED STATES TO LATIN-AMERICAN COUNTRIES—Continued.

(See page IX.)

PROHIBITED ARTICLES TO ALL FOREIGN COUNTRIES.

Poisons, explosives, and inflammable articles, live or dead animals, insects (especially the Colorado beetle), reptiles, fruits or vegetable matter liable to decomposition, and substances exhaling a bad odor, excluded from transmission in domestic mails as being in themselves, either from their form or nature, liable to destroy, deface, or otherwise injure the contents of the mail bags, or the persons of those engaged in the postal service; also obscene, lewd, or lascivious books, pamphlets, etc., and letters and circulars concerning lotteries, so-called gift concerts, etc. (also excluded from domestic mails); postal cards or letters addressed to go around the world; letters or packages (except those to Mexico) containing gold or silver substances, jewelry or precious articles; any packet whatever containing articles liable to customs duties in the countries addressed (except Cuba and Mexico); articles other than letters which are not prepaid at least partly; articles other than letters or postal cards containing writing in the nature of personal correspondence, unless fully prepaid at the rate of letter postage; articles of a nature likely to soil or injure the correspondence; packets of commercial papers and prints of all kinds, the weight of which exceeds 2 kilograms (4 pounds 6 ounces), or the size 18 inches in any direction, except *rolls* of prints, which may measure 30 inches in length by 4 inches in diameter; postal cards not of United States origin and United States postal cards of the largest ("C") size (except as letters), and except also the reply halves of double postal cards received from foreign countries.

There is, moreover, reserved to the Government of every country of the Postal Union the right to refuse to convey over its territory, or to deliver, as well, articles liable to the reduced rate in regard to which the laws, ordinances, or decrees which regulate the conditions of their publication or of their circulation in that country have not been complied with.

 Full and complete information relative to all regulations can be obtained from the United States Postal Guide.

WELL THAT'S FINE!!
 TRADE MARK

LA NUEVA NAVAJA DENOMINADA "NEW GEM SAFETY RAZOR"

afeita del mismo modo, sin el menor peligro de cortar la cara, tanto la barba más recia como la más suave. Es el instrumento de su clase más simple, más seguro y más perfecto que se haya nunca inventado. No se necesita práctica alguna para que el afeitado sea perfecto. El Asentador Automático (Automatic Stropping Machine) mantiene las hojas perfectamente afiladas en todo tiempo.

Vea Usted en todos los establecimientos de cuchillería nuestro Aparato Automático para Regular las Hojas.

PRECIOS (PAGADO EL PORTE DE CORREO)

Una Navaja en su Estuche de Hoja de Lata	- - \$2.00
Id. id. con Dos Hojas, en un Hermoso	- - - 3.50
Estuche Forrado de Marroquin.	- - - 2.00

Asentador Automático

Se enviarán por el correo, sin costo alguno, catálogos de juegos completos. Ninguna de estas navajas debe comprarse en los establecimientos de cuchillería, si no tiene la anterior marca de fábrica.

MONTHLY BULLETIN

OF THE

INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS,

International Union of American Republics.

VOL. XII.

JUNE, 1902.

No. 6.

COMMISSION FOR THE STUDY OF COFFEE PRODUCTION, DISTRIBUTION, AND CONSUMPTION.

In order to prevent the possibility of error as to the dates fixed for the assembling of the various conferences agreed upon by the Second International Conference of American States at its session of January 29, 1902, in the City of Mexico, the MONTHLY BULLETIN reports that the Commission for the Study of the Production, Distribution, and Consumption of Coffee and the International Sanitary Convention have been convoked as follows:

The Commission for the Study of the Production, Distribution, and Consumption of Coffee for October 1, 1902, in New York.

The International Sanitary Convention for October 15, 1902, in Washington.

As the resolution referring to the Customs Congress requires the approval of the respective Governments participating in the International Conference, the assembling of that Congress has had to be postponed.

In the report made by Señor Don ANTONIO LAZO ARRIAGA, Delegate for Guatemala to the Second International Conference of American States, to his Government under date of March 15, 1902, the coffee question is discussed as follows:

“In the session of December 30, 1901, our delegation submitted the following plan:

“1. That within a period of one year from the closing of the sessions of the Second International Conference of American States, there

shall be held in the City of New York, United States of America, a Commission composed of one or more delegates, having technical or expert knowledge concerning the production, distribution, and consumption of coffee, appointed by the Governments that desire to take part in the same.

“2. The Governing Board of the International Bureau of the American Republics shall fix the date on which this Commission shall assemble, and which, with the assistance of the Bureau mentioned, shall be organized as the Commission shall determine, and shall have for its object the study of the causes that have produced the present crisis through which this great industry is passing, and the proposing of practical means of preventing or diminishing it.

“At that time I made some remarks, a résumé of which appeared in the minutes of that day, as follows:

“‘His Excellency Mr. LAZO ARRIAGA, Delegate for Guatemala, said that he desired to call the attention of the Conference to a matter of vital importance to all, or to almost all, the countries of this Continent, namely, the crisis through which, at the present moment, the coffee-growing industry is passing. Fifteen of the said countries produce that precious berry and the other four consume it. All, therefore, suffer considerably in their commercial relations as a consequence of that crisis.

“‘The problem which it presents is not only a commercial but an economical, political, and social one. The falling off in the price of coffee has diminished very considerably the revenues of some of the American countries, and it might be possible to find in that loss the cause of some of the revolutions which afflict several of those countries, finding in a great measure their explanation in the poverty and misery which exist in them as the result of the terrible crisis which the coffee industry is undergoing.

“‘To find a remedy for such great evils is a task worthy of this Conference, and the speaker submits, therefore, and as a conclusion, a proposition for the approval of the Conference which may tend to bring about the desired result.’

“I added that in my judgment it was possible to discover practicable means to avoid, or to at least diminish, the bad effects caused by the anomalous situation through which the coffee industry is now passing, but that if the meeting of experts proposed by the delegation of Guatemala should give none other than a negative result, and these experts after a careful examination of the matter should declare that there was no remedy possible, that alone would be an advantage not to be despised, inasmuch as the coffee growers would be indefinitely discouraged by the uncertain future of that industry, and in place of continuing to make useless sacrifices in sustaining their plantations,

would employ their capital and efforts in the development of other industries, procuring in this manner a diversity of national production and securing at the same time a greater development of public wealth.

“The Conference adopted the plan as recommended.”

Under the title of “Coffee: Its History, Cultivation, Preparation, Varieties, Production, Exportation, Importation, Consumption, etc.,” the International Bureau of the American Republics has prepared an extensive report, which will be submitted to the consideration of the Commission as soon as it assembles. In it the delegates will find important information that will assist them in the satisfactory performance of their high mission.

In order that the scope of this work may be known beforehand, it has been considered proper to publish at this time the index of the subjects of which it treats and the remarks with which it is prefaced.

The index is as follows:

Preface—Remarks.

History of Coffee—Natural History of Coffee—Varieties of Coffee—Countries and Places that Produce Coffee. [It was not possible to obtain exact data of places producing coffee not included in this list.]

America: North America, Mexico.

Central America: Costa Rica, Salvador, Guatemala, Honduras, British Honduras, Nicaragua.

South America: Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Venezuela.

West Indies: Barbados, Cuba, Dominica, Guadeloupe, Haiti, Jamaica, Marie Galante, Martinique, Porto Rico, Dominican Republic.

Guiana: British (Demerara), French (Cayenne), Dutch (Surinam).

Asia: Arabia (Moka), Burma, Philippine Islands (Mourlu), British India.

Africa: Dutch (Reunion Island), Liberia.

Oceania: Dutch Indian Colonies, Borneo, Java, Sumatra.

Polynesia: Fiji, Hawaii, New Guinea, Samoa.

Australasia: Australia.

Production of Coffee in the World.

Consumption of Coffee in the World.

General Consumption of Coffee by Countries

General Consumption of Coffee per capita.

Consumption of Coffee in Germany.

Consumption of Coffee in France.

Consumption of Coffee in Austria-Hungary.

Consumption of Coffee in Italy.

Consumption of Coffee in Russia.

United States:

Importation of Coffee.

Consumption of Coffee.

Exportation of Coffee.

Coffee Exchange in New York.

Great Britain:

Importation, Consumption, and Exportation of Coffee.

Import Duties on Coffee in the Principal Countries of the World.

Great Britain—Continued.

Export Duties on Coffee in the Countries where it is Produced.

Soil and Climate Suitable for the Cultivation of Coffee.

Cultivation of Coffee.

Harvesting of Coffee.

Improved Preparation of Coffee.

Diseases of Coffee and the Manner of Combating Them.

Preservation of Coffee.

Roasting of Coffee.

Preparation of Coffee for Domestic Use.

Chemical Composition of Coffee.

Adulteration of Coffee.

Mixing of Coffees.

Modifications made in the Use of Coffee as a Beverage.

Effects of Coffee on the Human System.

The League of Coffee Producing Countries. (By J. A. OLAVARIA.)

Coffee in the United States. (By F. DE ASSIS BRASIL.)

A Treatise on Coffee. (By J. B. CALVO.)

Recommendations to the Delegates to the Coffee Congress. (By A. LAZO ARRIAGA.)

Bibliography.

The preface says: "Coffee being one of the principal articles of exportation of all the countries of Latin America, except the Argentine Republic, Chile, and Uruguay, where it is not produced, and, bearing in mind that, in conformity with a resolution of the Second International Conference of American States, the Coffee Congress will convene in New York on October 15, next, to discuss the most efficacious means of protecting the coffee industry in the Western Hemisphere, as well as to recommend the adoption of such measures as, in its judgment, will give immediate practical results, and with this object in view and in compliance with the instructions of the Governing Board of the International Union of American Republics as manifested in its session of the 19th of March last, the International Bureau of the American Republics has collated in this pamphlet all the data obtainable in relation to coffee, and has the honor of submitting same to said Congress in the hope that it may be useful for reference in the discussion of such an important and interesting subject, inasmuch as coffee has become one of the principal articles of commerce and has fallen completely into speculative hands, which fact exposes it to great fluctuations in prices and may cause, in the course of a year, large pecuniary losses to coffee growers, regardless of the results that may follow from said speculation. On the other hand, the ruin of the coffee plantations of a country may raise prices, and the cultivation of coffee in new regions may cause prices to fall in the same manner as if the production of this fruit should continue to exceed the demand of the markets of the world, said overproduction undoubtedly resulting in even a greater fall in the price of this article.

"The fact should not be lost sight of that the zone suitable for the cultivation of coffee is very extensive, being embraced within the isothermal lines of 25° north and 30° south latitude.

"The majority of civilized countries have adopted the rule of uniting the productive forces of all articles of large consumption in order to give strength to production and to avoid exaggerated fluctuations in prices. Following this precedent, a well-arranged combination that would take into immediate consideration the principal points of importance and the necessity of devising practical plans to decrease the interest, generally speaking, on capital in Latin America, especially on that destined to agricultural purposes, as the cultivation of coffee, would cause the work to result more favorably to the producer, because it would reduce the cost of production, make the accumulation of the product easier, the profits greater, the increase of capital more considerable, and would therefore augment the productive powers to a remunerative degree.

"With this pamphlet and with the foregoing observations, the International Bureau of the American Republics contributes to the arduous and complex undertakings of the Congress whose object it is to protect and improve the coffee industry in America.

"WASHINGTON, D. C., *June, 1902.*"

COFFEE CROP OF THE WORLD.

According to the best statistical information at hand, the world's production of coffee for the year 1901 was 15,460,000 bags of 132 pounds each. Of this immense product, Brazil's quota was 11,500,000 bags, in round numbers. Thus it is shown that the Brazilian plantations supply nearly four-fifths of the total crop at present and the production is increasing yearly.

The Central American States and Mexico and the South American Republics—Venezuela, Colombia, Ecuador, and Peru—contributed 2,200,000 bags to the supply of the coffee market in 1901. The Republic of Haiti made a remarkable showing, the product of last year amounting to 450,000 bags. The berry of Haiti is particularly esteemed in France, which takes two-thirds of the exports of the Republic. Porto Rico and Jamaica supplied 200,000 bags. The other producers were the Dutch East Indies, 480,000 bags; British India, Ceylon, and the Philippines, 315,000; Africa and Mocha, 225,000, and Padang and Celebes, 90,000.

CONSUMPTION OF COFFEE IN THE UNITED STATES.

Coffee consumption in the United States is steadily on the increase, as the following table, compiled by the United States Treasury Depart-

ment, demonstrates, the figures showing the annual imports during the twelve years from 1890 to 1902:

Fiscal year—	Imports.
	<i>Pounds.</i>
1890.....	499,159,120
1891.....	519,528,432
1892.....	640,210,788
1893.....	564,469,068
1894.....	550,934,337
1895.....	652,208,975
1896.....	580,597,915
1897.....	737,645,670
1898.....	870,514,455
1899.....	881,827,063
1900.....	787,991,911
1901.....	854,871,310
1902 (eight months).....	768,550,026

GENERAL ARBITRATION TREATY CELEBRATED BETWEEN BOLIVIA AND PERU.

The President of the Republic of Bolivia and the President of the Republic of Peru, being desirous of firmly cementing the bonds which exist between the two States and of establishing arbitration in the relations of both Republics, have named, for this purpose, as their plenipotentiaries:

His Excellency, the President of the Republic of Bolivia, Dr. Don FEDERICO DIEZ DE MEDINA, Minister of Foreign Relations, and His Excellency, the President of the Republic of Peru, Dr. Don FELIPE DE OSMA, Envoy Extraordinary, who have celebrated the following

TREATY OF ARBITRATION.

ARTICLE I.

The high-contracting parties bind themselves to submit to arbitration all controversies now pending, and which may arise between them during the duration of the present treaty, whatever may be their nature and causes, if it be not possible to settle them by direct negotiations.

ARTICLE II.

In every case which may arise, the high contracting parties shall celebrate an especial convention for the purpose of determining the matter of the controversy, to fix upon the points to be settled, the extent of the power of the arbitrator, and the methods of procedure to be observed.

ARTICLE III.

In case the high contracting parties can not agree concerning the points covered in the preceding article, the arbitrator shall be empow-

ered to determine, in view of the pretensions of both parties, the points of fact and right which are to be decided for the settlement of the controversy, and to establish the method of procedure.

ARTICLE IV.

The high contracting parties agree that the arbitrator shall be the Permanent Tribunal of Arbitration to be established in accordance with the resolutions adopted by the Second International Conference of American States now sitting in Mexico.

ARTICLE V.

In these two eventualities: (a) If The Tribunal referred to in the preceding article be not established, and, (b) if the necessity for having recourse to arbitration arises before the establishment of the Tribunal, the high contracting parties agree to designate as arbitrator the Government of the Argentine Republic, that of Spain, and that of the United States of Mexico, that they may exercise the office, one in default of the other, and in the order named.

ARTICLE VI.

If, during the existence of the treaty and in the two eventualities referred to in the preceding article, there shall arise distinct cases for arbitration, their settlement shall be successively undertaken by the Governments indicated, in the order established.

ARTICLE VII.

The arbitrator is also empowered (1) to determine the regularity of his appointment, the validity of the arbitration bond and its interpretation; (2) to adopt the necessary alternatives, and to settle all difficulties which may arise in the course of debate. Concerning questions of a technical or scientific character which may present themselves, the opinion shall be immediately sought of the Royal Geographical Society of London or the International Geodetic Institute of Berlin. (3) He shall determine the time for the exercise of his office.

ARTICLE VIII.

The arbitrator shall render judgment strictly in accordance with the prescriptions of international law and in regard to boundaries he shall conform to the American principle of "*uti possidetis*" of 1810, unless in the convention mentioned in Article II, there is established the application of special rules or the arbitrator be not authorized to act as a friendly peacemaker (*amigable componedor*).

ARTICLE IX.

The sentence shall decide finally each point in dispute with reference to its fundamental principles. It shall be prepared in duplicate and remitted to each of the parties by means of his representative before the arbitrator.

ARTICLE X.

The sentence legally pronounced shall decide, within the limits of its authority, the contention between the parties.

ARTICLE XI.

The arbitrator shall determine in the sentence the period of time within which it shall be executed.

ARTICLE XII.

The sentence is without appeal, and its fulfilment is confided to the honor of the nations signatory to this agreement.

Nevertheless, recourse for revision may be had to the same arbitrator who pronounced it, provided it be presented before the limit fixed for its execution, in the following cases:

(1) If the sentence has been delivered by reason of a false or untrustworthy document.

(2) If the sentence be wholly or in part the result of error of action arising from the proceedings or documents in the case.

ARTICLE XIII.

An appeal for revision will not be considered in any case whatsoever after six months from the notification of the sentence.

ARTICLE XIV.

The high contracting parties shall name their representatives in the case, shall place at the disposition of the arbitrator all means of information at their command, and shall defray their own expenses and one-half the general expenses of the arbitration

ARTICLE XV.

The same arbitrator who pronounced the sentence shall decide the questions which may arise in its execution.

ARTICLE XVI.

The present treaty shall remain in force ten years from the date of the exchange of ratifications. If it be not denounced six months previous to its expiration it shall continue operative for another ten years, and so on successively.

ARTICLE XVII.

The ratifications of the present treaty shall be exchanged in La Paz or in Lima within a year from the date.

In testimony whereof, the undersigned sign and seal the present treaty, made in duplicate, in the city of La Paz on the twenty-first day of November, 1901.

FEDERICO DIEZ DE MEDINA.

FELIPE DE OSMA.

ARGENTINE REPUBLIC.

GENERAL CONDITIONS IN THE REPUBLIC.

Among the valuable papers presented for the consideration of the Second International Conference of American States, held in the City of Mexico, the report of the Argentine delegation was of especial interest and scope. This report (*"Informe que la Delegación de la República Argentina presenta á la Segunda Conferencia Pan-Americana"*) has been received at the library of the International Bureau of the American Republics, and furnishes the source of information for the following statements concerning the general conditions prevailing in the Republic:

In the matter of sanitation the City of Buenos Ayres is cited as the foremost of the Republic, the waterworks and sewerage systems having engaged the best engineering skill available, and have been enlarged and extended to meet the growing requirements of the city. The waterworks consist of two tunnels, subfluvial and subterranean, 5,700 meters in length, with two pumps capable of raising 172,000 cubic meters of water to a height of 15 meters in twenty-four hours, the distributing reservoir being provided with forcing pumps having three distinct flows and 12 tanks elevated one above the other to a height of 12, 17, and 22 meters, respectively. The annual consumption exceeds 36,000,000 kiloliters, or a daily average of 123 cubic meters, per capita. The sewerage system adopted is that known as the "circulating" or dynamic, and the cost of the drainage works up to the end of 1899 was nearly \$34,000,000 gold. A tabular statement showing the death rate of the principal cities of the world, demonstrates that the proportion of Buenos Ayres is 17 for every 1,000 inhabitants, as against 17.4 for Hamburg, 18.4 for New York and Geneva, 19.2 for London, 20.1 for Paris, 20.7 for Vienna, and in an increasing ratio up to 31.5 for Nuremberg. Public hygiene is also the object of municipal and governmental aid in Rosario, La Plata, Bahia, and the rest of the Argentine ports, Rosario especially possessing as complete an equipment as the capital city.

Railroad construction in the Argentine Republic was signalized by the opening of the first line to traffic in 1857, 10 kilometers being the total extent. In 1867, this had grown to 572 kilometers; in 1875, to 1,384; in 1880, to 2,313; in 1885, to 4,451; and in 1890, to 9,254 kilometers. From the latter period railroad construction has advanced with rapidity, the total extent in 1891 being 11,700 kilometers; in 1895 this had grown to 14,222 kilometers, while in 1901, 17,062 kilometers of line were in operation throughout the Republic. Of this number, 2,000 kilometers belong to the Government and the rest to private companies. The capital invested amounts to about \$553,000,000 gold.

Maritime communication between the Argentine Republic and the various ports of the United States and Europe is primarily by the North German Lloyd and the Hamburg-American lines, while almost daily communication is maintained with Montevideo and the ports of Brazil and Europe by means of the *Navigazione Generale Italiana*, a line of 4 steamships, of from 5,000 to 6,000 tons burden, with sailings every 15 days; the *Transports Maritimes à Vapeur*, served by 9 steamships of from 2,000 to 4,300 tons burden, sailing every 10 days; *Messageries Maritimes*, served by 6 steamships, of from 5,550 to 6,500 tons burden, sailing every week; *Vapores Transatlánticos Españoles*, served by 6 steamships of from 8,000 to 9,000 tons burden, sailing monthly; *Hamburgische und Süd-Amerika*, served by 6 steamships of from 8,000 to 9,000 tons burden, sailing weekly; *La Veloce*, served by 13 steamships of from 1,000 to 4,900 tons burden, sailing every 10 days; the Royal Mail Steam Packet Company, served by 10 steamships of from 3,140 to 6,000 tons burden, sailing twice a month; and the *Compañía Transatlántica Española*, of 6 steamships of from 3,100 to 5,300 tons burden. The service between the Argentine Republic and United States ports is performed by several navigation companies, viz, the Lamport and Holt, the Prince Line, the Norton Line, and others of lesser importance.

The harbor of Buenos Ayres comprises two basins with a surface of 154,000 and 112,600 square meters, respectively. Each is connected with the docks, four in number, with a total water surface of 66 hectares. Two dry docks, 150 and 180 meters in length, respectively, also form part of the harbor equipment. The total wharfage extent is 9,790 meters, on which are situated 21 fiscal warehouses, with a frontage of 2,466 meters, and having a capacity of 566,000 cubic meters. The service of the docks and wharves includes 133 hydraulic derricks, fixed, movable, and steam-power of 1,500, 5,000, 10,000, and 30,000 kilos; 36 elevators; 50 capstans; 14 fire engines; 5 drawbridges; sluices; floating derricks; 1 32-kilometer railway, and 2 plants for electric illumination. The cost of the improvements effected at the port was \$35,624,000 gold. The port of La Plata has

also been recently improved at an expenditure of \$24,000,000, and Bahía Blanco has important improvements under contract. The value of the large inland ports, such as Rosario and Colastiné, is restricted by the inadequate canalization of the streams on which they are situated.

A review of the banking conditions and establishments at the capital city of the Argentine Republic shows that these institutions have ample facilities for satisfying the needs of the commercial transactions maintained abroad and at home. The most important is the *Banco de la Nación*, established on October 16, 1891, having a capital stock of 50,000,000 *pesos*, national currency. The balance sheet of June 30, 1901, shows deposits of 100,000,000 *pesos*; discounts, 84,000,000 *pesos*, and cash on hand, 72,000,000 *pesos*. This bank has eight branches in various sections of the Republic. Other banks of importance are the *Banco Alemán Transatlántico*, *Banco Británico de la América del Sud*, *Banco del Comercio*, *Banco Español del Río de la Plata*, *Banco Francés del Río de la Plata*, *Banco Italia y Río de la Plata*, *Banco de Londres y Río de la Plata*, *Banco de Londres y Brasil*, *Nuevo Banco Italiano*, *Banco Popular Argentino*, *Banco Popular Italiano*, and the Tarapacá and London Bank, Limited. The Bankers' Clearing House of Buenos Ayres in 1900 showed transactions aggregating 3,402,660.743.12 *pesos*, the total in gold being 696,584,994.16 *pesos*, and in paper 1,794,209,766.10 *pesos*. Several of the banks do not, however, settle their operations through the clearing house.

An interesting résumé of the agricultural and cattle-raising industries of the Republic is embodied in the report, as follows:

"The Argentine Republic is essentially an agricultural and cattle-breeding country. Its extensive plains, the fertility of its soil, and its temperate climate, favorable to the raising of cereals and cattle, offer to the labor of the colonist and farmer exceptionally advantageous conditions and cause the Argentine to stand among the larger grain and meat exporting countries of the world. Argentine crops of wheat and Indian corn (maize) represent a per capita production of 42.33 bushels, against 42 in the United States and in Denmark, 30 in Canada, 23 in Sweden, 20 in Russia, 19 in France, and 8 in the United Kingdom of Great Britain.

"In 1872 the area of cultivated land did not reach more than 130,000 hectares; in 1888 it had increased to 815,438 hectares, and in 1895 to 2,040,638 hectares. In 1899 the area of wheat-sown land amounted to 3,200,000 hectares, which yielded 2,697,417 tons of wheat.

"To Indian corn (maize) belongs the second place in the cereal production of the Republic. In 1899 there were about 1,000,000 hectares under cultivation, which, at the rate of 18 fanegas (of 100 kilos each), yielded 1,800,000 metrical tons of corn.

"The cultivated land, according to the Agrarian-Pecuarian Census of 1833, amounted to 2,422,995 hectares, and in 1895 had reached

4,895,000 hectares. Again, in 1899 the area devoted to the culture of wheat, Indian corn (maize), flax, and fruit trees, sugar cane, and vineyards attained a total of 7,000,000 hectares, as may be seen by the following table, where is also shown the value of the different harvests in the same year:

Products.	Hectares.	Value in gold.
Wheat	3,400,000	\$95,000,000
Indian corn (maize).....	1,400,000	23,000,000
Flax	700,000	27,000,000
Other cereals	80,000	2,800,000
Lucern	950,000	90,000,000
Maní (peanut).....	18,000	1,260,000
Sugar cane.....	50,000	4,750,000
Vineyards	35,000	9,500,000
Tobacco.....	15,000	3,900,000
Other cultures.....	350,000	17,500,000
Total	6,938,000	274,710,000

“The exports of the chief agricultural products since 1894 have been, in metrical tons, as follows:

Years.	Wheat.	Maize.	Flax.
1894	1,608,000	54,876	104,435
1895	1,010,000	722,318	276,443
1896	523,000	1,570,517	229,675
1897	101,845	374,942	152,477
1898	645,161	717,105	158,904
1899	1,713,429	1,116,276	217,713
1900	2,042,167	740,685	201,093

“The value of agricultural products exported has increased these last years in a most remarkable manner, the year 1897 excepted, in which natural causes, as drought, the invasion of grasshoppers, etc., caused the total amount of our trade in that class of products to decrease. In 1896 the exports reached \$41,406,438 in gold. In 1897 the above amount decreased to \$23,336,369 gold, amounting in 1898 to \$42,692,922 gold, and in 1899 to \$65,155,995 gold.

“For moving the immense volume of her harvests, the Argentine Republic has at her command all the help and the facilities which the most improved agricultural machinery can afford, and yearly increases the capital invested in agricultural implements by adding a considerable number of mowers, harrows, steam plows, etc., to her immense stock. In order to have an idea of the importance attained by the imports in agricultural machines, which are admitted duty free, it will suffice to state that the value of said machines imported was, in 1893, \$3,707,130 gold; in 1896, \$1,202,570 gold; in 1897, \$1,072,128 gold; and, lastly, in 1899, \$2,227,332 gold. Almost all of these machines and implements come from the United States of America, and constitute one of the most important items of the shipments from that country to the Argentine markets.

“Notwithstanding the considerable development attained by agriculture, the mother industry of the Argentine Republic has been, and continues to be, cattle breeding. In 1899 the exports in products of this industry reached a total value of \$115,546,906 in gold, or 625 per thousand of the total value of all the exports in that year. According to the census of 1895, the figures of which, on this subject, have proved to be quite deficient, the Argentine Republic had 21,701,526 head of horned cattle, 4,446,859 horses, 74,379,562 sheep, 562,766 hogs, 483,369 mules, and 2,748,860 goats—that is to say, a total of 104,322,942 head of all kinds of cattle. estimated at \$1,136,780,411 in national currency.

“The rapid propagation of sheep in the southern territories of the Republic and the invasion of new lands by horned cattle have brought the number of sheep up to over 90,000,000, and the horned cattle have considerably increased, not only in quantity, but also in quality, owing to the constant improvement of breeds, aimed at by *estancieros* (farmers or cattlemen). The introduction into the country of full-blooded animals, destined to breeding purposes, has attained a high figure of late. Referring only to the time elapsed from 1896 to 1900, it will suffice to mention that the cattlemen of the Argentine Republic have imported as many as 6,231 head of horned cattle, 235,734 sheep, and 1,227 horses, all of these animals proceeding from the first breeders in Europe and the United States of America.

“The export trade of live cattle is extremely important, although not so great as that of dried, salted, and iced or frozen meat. In 1895 the amount of the exports of that kind to different countries—among which are to be counted Chile, Uruguay, and Bolivia—reached 408,126 head of horned cattle and 496,946 sheep; in 1896 it reached 385,539 head of horned cattle and 512,016 sheep; in 1897, horned cattle, 238,121, sheep, 504,128; in 1898, horned cattle, 359,296, sheep, 577,813; in 1899, horned cattle, 312,150, sheep, 543,458. The foregoing figures give a total export, during the five years quoted, of 1,703,232 head of horned cattle, and of 2,634,361 sheep, all alive.

“The chief meat market of the Argentine Republic is England. The following tabular statement shows the export of heifers, in different forms, destined to that country from 1894 to 1900:

Heifers exported to England.

Years.	Alive.	Frozen.	Salted.	Total.
1894	7,500	800	8,300
1895	49,908	4,000	53,908
1896	66,000	8,000	74,000
1897	83,000	11,500	94,500
1898	97,000	16,500	113,500
1899	91,200	28,356	119,556
1900 (3½ months)	66,500	34,000	20,000	120,500

"The exports of frozen sheep in the latter years are not less considerable, and are shown in the following statement:

Years.	Frozen sheep.
1898.....	2, 464, 941
1899.....	2, 485, 949
1900.....	2, 372, 969

"The industry of salting is also a very important one, and it is represented in the census of 1895, the figures of which have become obsolete by 39 establishments, commanding a capital of \$37,000,000 gold.

"The abundance of flocks makes the Argentine Republic one of the chief wool-producing countries of the world. During the fiscal year, from October 1, 1899, to September 30, 1900, the amount of wool exported was 182,000 tons, of a value of \$61,000,000 gold. The fall in the prices of wool, after that date, is the cause of the decrease in exports of 1900-1901, which will not reach the above amount, although they will certainly exceed \$40,000,000 gold.

"The considerable increase in the area of cultivated lands, as well as the increase of cattle breeding and of the industries in the Argentine Republic, must be credited to the influx of European immigrants. From 1857, when the immigrating current began to flow toward the Republic, commencing with the modest total of 4,951 persons, up to December 31, 1899, immigrants to the number of 2,564,391 have arrived in the Republic; of these, 882,596 have since left, and consequently 1,681,795, or an average of 39,111 per annum, have remained."

COMMERCIAL RELATIONS WITH GREAT BRITAIN.

The section of the Argentine Republic embraced in the British Consular District of Buenos Ayres includes the whole of the Republic with the exception of the four Provinces of Córdoba, Santa Fé, Corrientes, and Entre Rios. This district is made the subject of an interesting report forwarded to the British Foreign Office by His Majesty's Consul Ross, with special reference to its commercial and industrial aspects. He states that the Buenos Ayres district accounts for 89.2 per cent of the whole import trade of the country and for 69.5 per cent of the export trade. In the year 1901 imports from Great Britain are shown to have decreased while exports thither increased, whereas in the trade of Germany and the United States with the Argentine Republic both imports and exports show substantial gains. Textiles, iron and articles produced therefrom, foodstuffs, stones, minerals (including coal), glass and china, wooden articles, and drinkables form the bulk of imports, and there is a steadily increasing demand for all manner of electric appliances for domestic use, such as elevators, automatic and otherwise, fans, and ventilators, and also for electric tramway rolling stock and installations.

A large sum of money has been expended in pipes, pumping and other machinery for the utilization of the salt marshes near San Blas, in the southern portion of the Province of Buenos Ayres. The Consul adds that there is a large demand for salt not only for personal use, but also for dried-meat establishments. Soda ash and caustic soda are also required in large quantities.

In the huge district covered by this report there are in the tropical and subtropical sections in the north vast forests of hard wood, unequaled for the manufacture of railroad sleepers, wharf piles, and kindred uses. One of these woods (*quebracho*) also produces an excellent tanning substance. Other articles produced in sufficient quantities to support an extensive export trade are tobacco, jute, ramie, sugar, castor oil, and tropical fruits. In the extreme south the collecting and storing of natural ice and the killing of seals are profitable employments.

The rapidly increasing area under crops is shown by the following comparative statement for the years 1900 and 1901:

	1900.	1901.
	<i>Acres.</i>	<i>Acres.</i>
Wheat	3,000,000	8,500,000
Maize	2,062,000	3,137,000
Linseed	95,000	1,520,000
Alfalfa	1,550,000	2,500,000
Sugar cane.....	63,700	115,200
Vines	73,000	110,900
Tobacco.....	13,000	31,750

Among the factories in operation in the city of Buenos Ayres, which is the eleventh city of the world in respect to population, are included 20 for trunks and boxes; carriages, 185; boots and shoes, 68; cooking stoves, 43; iron beds and mattresses, 45; coffins and funeral wreaths, 44; shirts and collars, 28; brushes, 50; gloves, 23; liquors, 132; furniture, 250; tiles, 45; hats and caps, 47; weaving, 25, and soap, 26.

The importance of improving the means of interior communication and connection with markets by means of railways is dwelt upon. Mr. Ross is, however, of the opinion that land transportation should not, in view of the long coast line and the splendid internal waterways, absorb all the commercial movement of the country. He regards the possibilities of water transport as a means of employing capital profitably and of opening up hitherto unexplored and unimproved sections of the country.

LIVE STOCK TRADE WITH GREAT BRITAIN.

The reopening of British ports to Argentine live stock renders the following trade statement, compiled from the "Times" of London for May 13, 1902, of present interest:

The total imports of live cattle and frozen and chilled beef received

from the River Plate in the year 1897, estimated as quarters of beef, amounted to 341,888 quarters; in 1898 they advanced to 439,480 quarters; in 1900 a decline was noted, the figures reaching a total of 403,120 quarters, and in 1901 the amount was 465,471 quarters. During the last eight months of 1900 and for the whole of 1901 British ports were closed to Argentine cattle on the hoof, the same conditions prevailing throughout 1901. The slight check in 1900 is seen to have been more than made up in 1901, when the maximum receipts of River Plate meat products were recorded in the markets of Great Britain since 1896.

In the first four months of 1900, when British ports were open to Argentine live stock, the total receipts in the ports of the United Kingdom were, from all sources, 151,938 cattle and 218,221 sheep, and in the first four months of the present year (1902), with no arrivals from the Argentine districts, the totals have been 121,338 cattle and 124,904 sheep. Out of a total importation of fresh mutton by Great Britain of 1,098,629 hundredweight during the first four months of 1902, the Argentine Republic has contributed 418,607 hundredweight. During 1901 the Argentine Republic exported 2,728,094 frozen sheep and 499,292 frozen cattle, the three leading refrigerating works being those of Campaña, Las Palmas, and Sansimena.

TRADE WITH SOUTH AFRICA.

According to data compiled by the *Dirección de Comercio del Ministerio de Agricultura* (Bureau of Commerce of the Department of Agriculture), the value (in gold) of agricultural and live-stock products shipped to South Africa was as follows in the periods named:

1897	\$573, 447
1898	518, 118
1899	953, 365
1900	3, 240, 270
1901	2, 891, 259
Total	8, 176, 459

AGRICULTURAL EXPORTS.

According to official statistics published by the Argentine Government, the agricultural exports of the Republic for the three years 1899, 1900, and 1901, were as follows:

	1899.	1900.	1901.
Butter.....pounds..	2, 594, 891	2, 322, 663	3, 322, 891
Cattle.....number..	312, 150	150, 550	110, 180
Cheese.....pounds..	18, 161	1, 883	2, 968
Frozen beef.....tons..	9, 079	24, 590	44, 904
Frozen mutton.....do...	56, 827	56, 412	63, 013
Hay.....do.....	105, 598	102, 836	95, 120
Jerked beef.....do....	19, 164	16, 449	24, 296
Linseed.....do.....	217, 713	223, 257	338, 828
Maize.....do.....	1, 116, 276	713, 248	1, 112, 290
Sheep.....number..	543, 458	198, 102	25, 746
Wheat.....tons....	1, 713, 429	1, 929, 676	904, 269
Wool.....do.....	237, 111	100, 913	223, 358

The falling off in cattle and sheep noted is due to the exclusion of live animals from British ports in the greater part of 1900 and the whole of 1901.

BOLIVIA.

RAILWAY CONSTRUCTION IN THE PROVINCES OF YUNGAS.

Mr. MANUEL V. BALLIVIAN, Director of the Department of Statistics of Bolivia, and Honorary Corresponding Member of the International Union of American Republics, has furnished the Consul-General of that Republic at New York with interesting data respecting the resources available for the support of a railway between La Paz and Chilumani, and a branch line to Coroico, as follows:

In 1890 the Province of Yungas was divided by the Bolivian Government into two parts, known as North and South Yungas, both of which are comprised in the Department of La Paz, and are reputed to be the richest and most highly cultivated provinces of that Department. Generally speaking, the climate of both North and South Yungas is warm and humid, the principal vegetable products being coca, cacao, coffee, Peruvian bark, maize, medicinal drugs, vanilla, a great diversity of timber and fine woods for cabinet work and construction purposes, and an infinite variety of edible fruits, such as bananas, oranges, limes, lemons, etc. Of all these products, coca is the most important and forms the principal object of commerce and occupation of the majority of the people.

Extensive mountains covered with forests and luxuriant vegetation make up the northeastern portion of these provinces, the southern part of which terminates in the great chain of the Andes. This mountain range contains numerous veins of gold-bearing quartz and abounds in argentiferous and lead ores. The principal rivers that water this region and contribute to its fertility are the Coroico River, which is formed by the waters of the Chucura, Chairó, Elena, Yolosa, and Santa Barbara rivers; the Tamampaya River, which originates in the Pongo cordillera and receives the waters of the Choilla, Chirca, and Solacam rivers; the La Paz River, and the Miguilla River which has its source in the Choquetanga cordillera, and whose principal tributaries are the Covendo and Quetolo rivers. The sands of all these streams contain gold, and at some future time when properly exploited will be a powerful factor in increasing the natural wealth of this privileged region.

A railway into the Yungas can rely upon the known productions of the two provinces, as well as the existing commerce of importation, in addition to which would be added a considerable passenger traffic that would result from the opening of the line. Mr. BALLIVIÁN esti-

mates that the length of the main line would be about 150 kilometers, so that this railway system when constructed from La Paz to Chulumani, with a branch to Coroico, would approximate 200 kilometers. The cost of a railway into this region, according to figures prepared by Dr. FEDERICO DIEZ DE MEDINA in 1889 was approximately \$1,200,000 gold.

The export traffic that could be secured for a railway penetrating these provinces, based upon reliable statistics compiled by the Bolivian Government, would consist of about 3,450,000 kilos of coca annually, and an equal quantity of products such as fruits, coffee, Peruvian bark, etc., or a total yearly freight traffic in the products above mentioned of about 7,000 tons of 1,000 kilos each, while the annual commerce of importation would probably exceed 5,000 tons of 1,000 kilos each, making the total exports and imports aggregate 12,000 tons per annum from the very inception of the enterprise, to say nothing of the traffic that would naturally result from the rapid development of the territory through which the railway passed.

The agriculturists and persons engaged in other occupations in the provinces of Yungas earnestly desire the building of a railway into that rich and promising territory, for they realize that its construction would bring in its train a wonderful increase in the commerce of that region, stimulating the existing industries and opening new ones, as, for instance, the building up of a great trade in the exportation of building and cabinet woods, and a considerable traffic in firewood for the markets of La Paz, all of which is now rendered impossible on account of the lack of facilities for handling and transporting these useful products.

Again, the lands of this region are exceedingly appropriate for colonization purposes, and undoubtedly with a little effort on the part of the Government and railway management, immigration would naturally flow into this fertile and highly favored district, developing it to a remarkable extent and increasing its production an hundred-fold. The rivers of Coroico and La Paz, which flow through these provinces, are navigable at the present time, and communication could easily be established through this channel with the rich Beni territory. The provinces to which Mr. BALLIVIAN refers are promising ones, and when their natural resources are properly understood, can not fail to interest in a substantial manner enterprising capitalists seeking sure and profitable investments of their surplus funds.

RUBBER EXPORTS FROM ACRE IN 1901.

In a review of the crude-rubber market, published in the "India Rubber World" for May, 1902, the rubber exports from the Acre Territory during the twelve months of 1901 are stated as follows:

	Kilograms.		Kilograms.
January	269, 112	August	80, 737
February	1, 112, 247	September	58, 441
March	75, 913	October	24, 091½
April	24, 349	November	59, 131
May	125, 374	December	76, 422
June	49, 383		
July	77, 222	Total	^a 2, 032, 422½

The export duty on rubber from the Acre district has been fixed at 15 per cent ad valorem.

BRAZIL.

MESSAGE OF PRESIDENT CAMPOS SALLES.

At the opening of the Brazilian Congress on the 3d of May, 1902, President CAMPOS SALLES presented his last presidential message, in which he gives an account of what has been done during his administration.

The President begins by relating the difficulties which he had to face upon taking up the reins of government. Gold payments were suspended; the paper money in circulation amounted to 788,364 *contos*; the rate of exchange averaged $7\frac{3}{16}$; amount required for the redemption of the funding loan was 115,997 *contos*; Brazilian bonds were at 50 per cent discount; the amount due on the 1897 loan was £1,122,083; Treasury notes to the amount of 20,350 *contos* of *reis* were in circulation; the Treasury owed 11,000 *contos* of *reis* to the Banco da Republica; £274,694 were due for war material. To meet these various debts there were in the Treasury 5,500 *contos* and £81,713 in the agency at London.

The situation to-day is in striking contrast to that of 1898. Gold payments have been resumed in accordance with the agreement of June 15, 1898; the paper money in circulation has been reduced by 107,000 *contos* of *reis*; the rate of exchange is 12d.; the paper money in circulation, which formerly was worth only £23,500,000, is now worth £34,000,000; Brazilian bonds abroad are quoted 35 per cent higher; the rest of the 1897 loan has been paid; there is not a single Treasury bill in circulation. There are £2,000,000 in cash in London, besides 1,000,000 in consols, and 12,000 *contos* deposited in the Banco da Republica. The surplus at the present rate of exchange amounts to 80,000 *contos* of *reis*. Finally, the era of deficits has been banished, and that of surpluses has been instituted. The Government has redeemed £4,400,000 worth of gold bonds and 6,200 *contos* of internal bonds.

^a 4,471,374 pounds.

The message points out that these results have been obtained without issues of paper money, without loans, and without alienating the public domain.

In order to show what this work of financial restoration cost, the President cites the preceding Presidential period when the budgets failed to suffice the national needs. During this period the Government contracted foreign loans to the amount of £8,122,000, and an internal loan of 160,000 contos; Treasury bills were issued to the amount of 20,350 contos; it owed 11,000 contos to the Banco da Republica; 35,000 contos were withdrawn from circulation, but new issues were made amounting to 55,000 contos; £457,194 was obtained from the sale of war vessels and £560,000 from the sale of debentures of the Leopoldina Railway Company.

A considerable part of the message is devoted to the purchase of the guaranteed railways. The Recife and São Francisco and the Bahia and São Francisco railways were redeemable by 7 per cent bonds, but the Government succeeded in purchasing them by bonds yielding only 5 per cent. This operation resulted in a saving to the Government of £38,000 annually. The amount which the Government will pay for the other railways is £9,900,000, whereas the commutation of the guarantees due to them would have required £9,300,000, and the railways would have remained the property of the companies. The Government has already leased a number of these railways. The Bahia and São Francisco, which has always been operated with deficits, showed a surplus during the first half of the lease of 129 *contos*; the Conde d'Eu, which has given deficits for the last ten years, now yields to the treasury 50 *contos* annually; the Recife and São Francisco is leased for £18,000; the Sul de Pernambuco now yields the Government £9,375 per year.

The President gives a detailed account of what has been done in the different departments during his administration and states that a number of public improvements have been made. Important negotiations are under way looking to the establishment of commercial reciprocity with France, England, and Italy.

The message dwells at considerable length upon the leasing to an English-American syndicate of the disputed territory known as Acre, and states that the Government has sent a vigorous note of protest to the Minister of Bolivia.

TAX ON EXPORTS OF HERVA MATTÉ.

Decree No. 449, of March 22, 1902, provides as follows:

“The Legislature of the State of Paraná has decreed and I approve the following law:

“ARTICLE 1. There is hereby established a tax of 450 *reis* on every 10 kilograms of herva matté exported, whether prepared or in the crude state.

"ART. 2. Herva matté, prepared or unprepared, may be exported only in barrels, wooden boxes, or leather bags.

"ART. 3. Herva matté, prepared or crude, which is exported from the region known as 'Foz do Ignassú,' on the Paraná River, shall pay a tax of 600 *reis* per 10 kilograms.

"ART. 4. Herva matté exported from this region may be put up in receptacles other than those made of wood and leather, the provision of article 2 of this decree not being applicable to this zone.

"ART. 5. The Government is hereby authorized to establish fiscal agencies required in the zone called 'Foz do Ignassú,' on the Paraná River, providing them with a personnel and fixing their salaries.

"ART. 6. The provisions of articles 1 and 2 of this decree shall go in force July 1, 1902.

"ART. 7. The Government is hereby authorized to issue the necessary regulations and make such an appropriation as may be necessary to put the present decree in force.

"ART. 8. All provisions to the contrary are hereby revoked.

"FRANCISCO XAVIER DA SILVA.

"ANTONIO AUGUSTO C. CHAVES.

"GOVERNMENT PALACE,

"*State of Paraná, March 22, 1902.*"

THE MINERAL WEALTH OF THE REPUBLIC.

The following paper, prepared by Senhor FONTOURA XAVIER, Consul-General of Brazil in New York, is reproduced from the "International Economist:"

"With the exception of Chile, the United States of Brazil bounds all of the South American Republics. Two-thirds of its frontier are washed by the sea, and in this large extent of coast many ports are to be found. Its greatest length is 2,500 English miles and its greatest width 4,000 miles. The great river of the lowlands is the Amazon, sometimes called the 'Mediterranean of South America,' which, considered from any point of view, is the largest river in the world, and, together with its affluents and tributaries, has 30,000 miles of navigable waterways situated exclusively within the confines of the Republic. It is claimed that long ago, in the distant past, the River Plate and the Amazon were two inland seas communicating with each other. During that period Brazil, like a great island, was in itself a continent, but alluvial deposits and upheavals of the bottom of that Mediterranean Sea annexed it to the eastern base of the Andes.

"The topography of Brazil, with respect to the altitude, is divided into the table-lands of the higher regions, the mountain chains, and the broad open valleys which cover all the territory to the south of the latitude of San Roque, and the extensive lowlands forming the basin of the Amazon, and extending inland to the foot of the Andes of Peru,

Ecuador, and Colombia, penetrate to the extreme north, and form the mountain chains that constitute the boundary lines with Venezuela and the Guianas. The principal formation of all the mountain chains of the highlands of the South is gneiss (a rock composed of feldspar and mica), which varies from a schist to argillaceous slate, porphyritic, homogeneous, and granitic, containing auriferous veins, as in the State of Minas Geraes and in the neighborhood of Cuyaba in the State of Matto Grosso, metamorphosed throughout to such an extent that all traces of fossil remains have been destroyed.

“There are true carboniferous veins in the outcroppings of coal that are found to the south of the Tropics, and which make up the formation of the unexplored territory to the north of the Amazon. There are also carboniferous rocks in the country traversed by the Guapore River, a tributary of the Madeira, on the Bolivian frontier. In the State of Sergipe, and covering a considerable portion of that State, red sandstone abounds underneath a cretaceous formation. Probably the subsoil of the great Amazon Valley is formed of cretaceous rocks. These do not appear in the southern coast of the Abrolhos Rocks in latitude 18° south, but are found at intervals to the north, and have been examined in the affluents of the Purus River in the upper basin of the Amazon. Tertiary clay and sandstone in horizontal and unbroken layers extend over the cretaceous rocks in a uniform manner through the coast plains at a lower elevation than the tablelands, and in the Valley of San Francisco the horizontal deposits of the São Paulo Valley evidently form a part of the same group. Deposits of immense bowlders of volcanic tufa and gneiss, probably rocks which were at the foot of exceedingly ancient local glaciers, were first described by Agassiz, who found them in many places along the coast.

“Following the northern coast, and at irregular intervals, there are found true coral reefs. Another class of these reefs known as ‘recifes,’ but of a entirely different origin, are the shores of compact rock seen in Bahia and Pernambuco, where the reefs form breakwaters which protect and shelter the ports. These are, properly speaking, of a uniform character and have been described by Hartt as the compact center of an ancient playa which was separated from the mainland by the invasion of the waters of the sea.¹ The calcareous rocks of the upper basin of the San Francisco River contain caves of considerable interest due to there having been found in them bones of animals now extinct belonging to a remote antiquity, such as those of the mastodon, the glyptodon, and the megatherium. At the same time there have been encountered in some of these caves utensils, tools, and human remains, buried with the bones of an extinct fauna that leaves no doubt that man was contemporaneous therewith.

¹Geology and Physical Geography of Brazil by F. C. HARTT.

“There are no traces of volcanic disturbances, unless the hot springs that exist in various States, such as Bahia, Santa Catarina, Goyaz, and Minas Geraes, may be so called. The variety of metals and ores that are encountered in this geologic formation are very numerous. Diamonds were first discovered in the States of Minas, Bahia, Goyaz, Matto Grosso, Paraná, Rio Grande do Sul, and San Paulo, and are often of considerable size. Burton mentions one that came from Bahia that weighed $72\frac{1}{2}$ carats, and after it left the hands of the polisher was found to be a very clear gem, of magnificent reflective power. Black diamonds, emeralds, sapphires, rubies, topaz, beryls, amethysts, garnets, opals, chalcedonies and sapphirines, agates and cornelians, are found, particularly in the State of Minas Geraes. Garnets are encountered in great abundance, although of inferior quality. Rock crystals, entirely pure and of great size, are found in Minas, Goyaz, São Paulo, and Paraná. Chalcedonies, agates, and cornelians are met with almost everywhere, and have become one of the principal articles of exportation from the banks of the Uruguay River, in the State of Rio Grande do Sul.

“One of the carboniferous basins of Brazil is in the State of Santa Catarina. In the State of Rio Grande do Sul, in the valleys of Jaguarão, Candiota, Jacuby, and Arrolho dos Ratos, there have been discovered four large outcrops of coal. Bitumen exists in nearly all of the States, and is exploited on a large scale near the southern coast of Bolivia. Native sulphur is found in Rio Grande do Norte, and in reduced quantities in the States of Rio Grande do Sul and Minas. Nitrate, as well as salt, is found over a vast area in the States of Minas and Bahia, and is also obtained in abundance on the floors of the calcareous caves of the San Francisco River. Flowers of salt and sulphate of magnesia in an almost pure state are also encountered in the States of Minas, Bahia, and Ceara. Gold is found in quartz veins, traversing the ancient metamorphic rocks, such as chalk slate, mica slate, or iron schists, and in sandstone and quartz pebbles, as well as clay and alluvial sands proceeding from the disintegration of said quartz.

“There are many mines in exploitation. The total amount of gold and diamonds exported shows a yearly average of £1,500,000. Brazilian gold is always found in combination with silver, and the white metal also occurs in many of the lead formations encountered in nearly all the States, as well as in the copper mines of Rio Grande do Sul. There are rich quicksilver mines in the State of Paraná, and copper abounds in the States of Matto Grosso, Goyaz, Minas, Bahia, Maranhão, Ceará, and particularly in Rio Grande do Sul, in which State the minerals extracted contain 60 per cent of copper. Manganese exists in abundance in Minas, Rio, Bahia, and Matto Grosso, and is considered to be of the best quality. There are galena mines in

exploitation in many parts of the Republic, and lead mines are to be found throughout the ancient region of the coast between Santa Catarina and Maranhão, those situated in the Ibiapaba chain of mountains on the banks of the Ceara and Piahy rivers being very important. In some form or other iron is to be found almost everywhere in the Republic, and seems to exist in inexhaustible quantities in the mountains of Minas and Geraez.

A country as large as Brazil, and with such a diversified surface, necessarily presents a great variety of climates. The immense lowlands of the north, situated entirely within the tropics, are hot, and the year in that region is divided into wet and dry seasons. The elevation of the highlands in the central and southern portions of the Republic produces a great variety of seasons, which is true also of the climates of the intertropical portions of said regions. To the south, beyond the tropics, a temperate zone exists in which the four seasons of the year are well defined, although not in such a marked degree as in central Europe. With reference to the temperature, the vast basin of the Amazon is noted for the slight variation of heat encountered there, which is explained by its equatorial situation and by the immense surface of water and woods. Within its limits the thermometer never rises above 90° F. nor falls below 75° F. In the high plains of the States of Rio Grande do Sul and São Paulo the mercury sometimes falls to the freezing point. The country, in general, is healthful.

“The mortality in the most populous city does not exceed, but, on the contrary, is somewhat less than that of cities of Europe of the same size. No words can express the wonderful exuberance of the vegetation. The flora of the valleys differs from that of the mountains, as does that of the latter from that of the remote regions of the interior. The forests abound in almost every species of useful, medicinal, and ornamental trees, supplying precious woods for cabinet work and for construction purposes. It is well known that the flora of Brazil is the most beautiful in the world, having not only the exuberance and variety of the flora common to hot countries, but possessing also special classes of its own which impart to it extraordinary splendor, especially in the equatorial region.”

SUGAR PRODUCTION IN SERGIPE AND BAHIA.

An interesting report was sent to the Département of State of the United States under date of April 5, 1902, by Consul H. W. FURNISS at Bahia, and contains the following data:

“The most important product of the State of Sergipe is sugar, and in its manufacture more than one-half of the population is engaged. It is impossible to give the extent of land under cultivation, because no statistics have been compiled on the subject, but, estimating the acreage by the yield of sugar, it must cover at least 15,000 acres.

"A large part of the State is suitable for cane production, but the cultivation is limited to the numerous valleys and the land adjoining the rivers, to the south and east of the mountainous chain traversing the center of the State from northeast to southwest. The land in this section is very fertile, and though parts of it have been in constant use for a long series of years, yet to-day it is capable of large production. With proper rotation of crops, fertilization of land, and with modern agricultural implements to replace the crude hoe and knife now used, the yield would doubtless be phenomenal. As it is, with scarcely any cultivation or attention worthy of mention, cane once planted yields on an average from four to six crops in successive years, while I have been shown lands upon which good cane is growing from a planting of fourteen years ago, though of course this is the exception.

"In years gone by, when sugar was higher in price, this section was most prosperous. Considerable money was spent in erecting houses for the plantation owners, and every large planter had his own mill, retinue of servants, etc., but as sugar has dropped lower and lower in price, more and more economy has had to be exercised.

"In the State of Sergipe there are 671 sugar factories, 269 of which in some way utilize steam as power, 13 are run by water, and 389 by animal power. Of those using steam about 8 are more or less modern vacuum-pan factories, while the others only employ steam to grind the cane, and boil their juice to sugar by the old-fashioned open-kettle-train process. All of those run by water and animal power make sugar by this method.

"The largest and best equipped sugar factory is the Engenho Central, near Riachuelo. Riachuelo is a small town about 35 kilometers (21.7 miles) above Aracajú, upon a branch of the Sergipe River, which is navigable for small boats at flood tide. The factory is distant about 6 kilometers (3.7 miles) from Riachuelo, at which point it embarks its sugar for Aracajú. It is situated in the heart of the best cane section of the State, and owns about 300 hectares (741 acres) of land, upon a small portion of which it plants. It buys vast quantities of cane from near-by planters.

"The factory has 22 kilometers (13.6 miles) of railroad, 84 cars, and 3 engines to convey cane from the fields and to the different stations for delivery. Two of the locomotives and about all of the cars are of United States manufacture.

"At this factory 25,204 tons of cane were ground in the season of 1900-1901, from which 1,970 tons of sugar and 209,280 liters (54,986 gallons) of rum and alcohol were made. It is anticipated that 45,000 tons of cane will be ground during the season of 1901-1902, from which it is estimated 36,000 tons of sugar will be produced. On account of the low prices of rum and alcohol, coupled with the high Federal and

State taxes, it has been burning its molasses with the bagasse rather than distill. There is no market whatever for molasses or sirups as such, their use in the household being practically unknown.

"The factory has good machinery, but does not seem to be getting a sufficiently high percentage of sugar from the cane. The cane of the locality contains from 13 to 15 per cent of sugar, but the factory succeeds in obtaining only 8.2 per cent. The average density of the juice is 11.2 Baumé, while the juice extracted averages about 62 per cent of the weight of the cane.

"It has United States centrifuges, pumps, lathes, plate-bending machines, and numerous small tools; but its engines, mills, triple effect and vacuum pans and machinery pertaining thereto, clarifiers, sedimenters, etc., are of Dutch manufacture; and there is now a Dutch engineer there, taking measurements for a United States system slicer and chopper, a Dutch mill, and other machinery for the diffusion process, which it is the intention of the company to introduce at the close of the present season. With this apparatus the managers hope to recover at least 11 per cent of the sugar of the cane.

"The following tables show the cost of cane culture on one "*tarefa*"—66 by 66 meters, or about 0.72 acre:

New plantation.

Description.	Cost.	
	<i>Milreis.</i>	
Clearing ground and planting.....	95	\$22.80
Cane for planting, 4 tons at 5 milreis (\$1.20) per ton.....	20	4.80
Cleaning four times, at 5 milreis (\$1.20) for each cleaning.....	20	4.80
Cutting 30 tons, yield first year, at 400 reis (9.6 cents) per ton.....	12	2.88
Transportation to mill, 30 tons, at 600 reis (14.4 cents) per ton.....	18	4.32
Total expenses of first year's crop.....	165	39.60

"This would make the actual cost of production of 1 ton of cane 5.500 *milreis* (\$1.32), which is a very conservative estimate; but for this the planter this year receives 4.500 *milreis* (\$1.08), or a loss of 1 *milreis* (24 cents) a ton.

Second year's growth.

Description.	Cost.	
	<i>Milreis.</i>	
Cleaning and other preparation.....	65	\$15.60
Cutting 25 tons, at 400 reis (9.6 cents) per ton.....	10	2.40
Transportation, 25 tons, at 600 reis (14.4 cents) per ton.....	15	3.60
Total expenses.....	90	21.60

"This gives the actual cost of production for the second year and thereafter at 3.400 *milreis* (81.6 cents) per ton, which would seem to

be a profit of 1.100 *milreis* (26.4 cents) were there not other things to be taken into consideration.

"In the above figures nothing is calculated as interest on capital invested in land, animals, wagons, etc., but the following would be a fair estimate: Land producing from 25 to 30 tons of cane per year is worth at least 72 *milreis* (\$17.28); proportionate value of animals, and wagons for same, 73 *milreis* (\$17.52). Calculating money to be worth 10 per cent (a low rate of interest for these times), each of the 30 tons should yield a profit of 243 *reis* (5.8 cents) to meet the interest charge, and each of the 25 tons should yield a profit of 294 *reis* (7 cents).

"The lands considered in these deductions yield more than the average lands of the smaller owners, but as the expenses would be the same in either case, this would lower profits. It must also be remembered that all the figures given are calculated on the price of work to-day, while earlier in the season labor was at least 30 per cent higher and the initial cost of planting much of the cane that is now being harvested was more than double what it is at present.

"The following tables, also compiled from information received at many factories in Sergipe, show the cost of production of sugar for the season of 1901-2:

Description.	Cost.	
	<i>Milreis.</i>	
Price current of ton of cane	4.500	\$1.08
Labor of sugar making	1.200	.288
Firewood900	.216
Total.....	6.600	1.584

"One ton of cane at a good factory will produce 6 per cent of sugar or 60 kilograms (136 pounds—1 bag), but the average production of the smaller and less careful factories is not more than 55 kilograms (121.2 pounds). Taking the maximum production as a basis, we have the following additional expenses:

Description.	Cost.	
	<i>Milreis.</i>	
Cost of manufacture of 1 bag—60 kilograms (136 pounds).....	6.600	\$1.58
Cost of sack700	.168
Freight to market.....	.500	.12
Total cost of bag delivered.....	7.800	1.868
Less value of molasses remaining630	.151
Net cost of sugar.....	6.170	1.717

"For a bag of 60 kilograms (136 pounds) of sugar, the maker has received from 3.500 *milreis* (84 cents) to 4 *milreis* (96 cents) at best, and, taking the higher price together with the 630 *reis* (15 cents)

obtained from the molasses, he has received 4.630 *milreis* (\$1.11) for what has cost him 6.970 *milreis* (\$1.717), or a loss of 2.340 *milreis* (60.6 cents) on each bag. In other words, his cane, which has cost him 3.400 *milreis* (81.6 cents) to grow, if it is other than first year's growth, has a value to him of only 2.180 *milreis* (52.3 cents).

"A few years ago, all of the molasses produced in Sergipe was distilled into rum and alcohol, which found a ready market at good prices. Two years ago, a pipe of 1,680 liters (1,775.8 quarts) brought 150 to 175 *milreis* (\$36 to \$42); to-day, the same quantity is a drug on the market at 30 *milreis* (\$7.20).

"Connected with all of the larger mills are distilleries, but the greater part of them have not been working this year, because of the low price of rum and alcohol. The smaller mills sell their molasses on the premises for the price given, and it is taken to distilleries in skins holding about 40 liters (42.2 quarts) each, two constituting a cargo for a pack animal.

"The export of sugar for 1901 was 487,396 bags, weighing 28,313 metric tons, having an official value of 3,807,588.072 *milreis* (about \$900,000) and paying 266,531.165 *milreis* (\$60,000) in export tax.

"There is no reason why sugar should not pay here, if, when prices were good, attention had been paid to increasing yield and installing better methods of extraction. With 6 per cent and less of sugar from each ton of cane, the business could not be expected to pay anywhere, but with 10 per cent and more it would pay in almost any place where fuel and water were abundant.

"In this large sugar district it is surprising to see how little is known of United States sugar-working machinery and methods, and during my trip I had many requests for information."

SUGAR INDUSTRY IN BAHIA.

Like other States in Brazil where the raising of cane and the manufacture of sugar constitute a considerable industry, the State of Bahia, with its numerous factories, is experiencing its share of the loss suffered by the industry this year.

The principal sugar-cane region in this State is within a radius of 30 miles from Bahia and is located chiefly upon the tide-water rivers which flow into Bahia Bay. The factories are usually considered as forming three groups, consisting of eighteen vacuum-pan plants, capable of producing Demerara, white and yellow crystals, and numerous small ones with trains of open kettles, capable of making only crude sugar, "*muscovado*," wet or dry.

The factories of Bahia can be divided into two classes, the central ones, with vacuum pans and centrifuges, and the small, open-kettle-system factories.

The former may be subdivided into factories in which interest on

the capital invested is guaranteed by the Federal Government, factories which the State has aided by loans, and factories which depend upon private resources.

From figures furnished at several of the central factories, Consul FURNISS compiled the following table, showing the cost of the production of Demerara sugar testing 96°:

Description.	Cost.	
	<i>Milreis.</i>	
Cost of cane per ton.....	4.500	\$1.08
Freight on same to factory.....	.500	.12
Wood and other fuel.....	1.350	.324
Sugar makers and laborers.....	1.250	.30
Diverse.....	.100	.024
Freight to Bahia.....	.700	.168
Sack.....	.700	.168
Necessary repairs in factory.....	.700	.168
Commissions in Bahia.....	.230	.055
Total cost of 75 kilograms (165 pounds) of sugar.....	9.930	2.407

A ton of cane will produce 75 kilograms (165 pounds) of Demerara—a high average—and this sugar selling at 158 *reis* (3.79 cents) would bring 11.850 *milreis* (\$2.84). The molasses from a ton of cane is worth 1.300 *milreis* (31.2 cents), or a total of (13.150 *milreis* (\$3.15) from the product of 1 ton, which cost 10.330 *milreis* (\$2.40); profit, 2.720 *milreis* (75 cents) per ton.

In this calculation, the salary of manager, percentage of depreciation of factory, and interest on capital invested are not taken into account.

A ton of cane gives from 30 to 40 liters (31.7 to 52.8 quarts) of molasses, which sold in November for 32 *milreis* (\$7.68) per pipe of 800 liters (845.3 quarts), but now has a price of 20 *milreis* (\$4.80), with no buyers.

The following table shows the cost of planting in Bahia:

New plantation.

Description.	Cost.	
	<i>Milreis.</i>	
Clearing land.....	80	\$19.20
Burning brush.....	4	9.60
Opening ground.....	10	2.40
Planting.....	10	2.40
Cane for planting, at 4.500 <i>milreis</i> (\$1.08) per ton.....	18	4.80
Cleaning four times, at 6 <i>milreis</i> (\$1.44).....	24	5.76
Cutting 30 tons, at 400 <i>reis</i> (9.6 cents) per ton.....	12	2.88
Transportation, 30 tons at 2 <i>milreis</i> (48 cents) per ton.....	60	14.40
Net cost first year on 1 tarefa.....	218	61.44

With a yield of 30 tons, this would make each ton cost 7.200 *milreis* (\$1.728); but similar cane can be purchased for 4.500 *milreis* (\$1.08), therefore the farmer has lost 2.700 *milreis* (64.8 cents) per ton. He

has in reality lost more, as the calculation is made upon the present cost of labor, and there has been a great reduction in prices this season.

Cost of second year and thereafter.

Description.	Cost.	
	<i>Milreis.</i>	
Cleaning cane and care of same	60	\$14.40
Cutting 25 tons, at 400 reis (9.6 cents) per ton	10	2.40
Transportation of 25 tons, at 2 milreis (48 cents) per ton	50	12.00
Total cost	120	28.80

This would make the actual cost of a ton of cane in the second year and thereafter 4.800 *milreis* (97.9 cents), or a loss of 300 *reis* (7.2 cents), as similar cane can be purchased for 4.500 *milreis* (97.2 cents).

The sugar industry in this State has been favored by a low export tax. In fact, no sugar except crude pays any tax, and crude sugar only pays 1 per cent upon value.

The "*Sociedade Nacional de Agricultura*" (National Agricultural Society), of Brazil, has decided to hold a conference at Bahia, Brazil, for the purpose of discussing and adopting measures for the protection of the sugar industry in that country. The governors of the sugar-producing States have been requested to appoint delegates to the conference.

WATERWORKS AT BAHIA.

United States Consul-General EUGENE SEEGER, at Rio de Janeiro, under date of April 11, 1902, forwards a report to the Department of State of the United States, containing the following interesting data:

"The Brazilian coast city of Bahia has about 200,000 inhabitants, who live in 17,000 houses.

"The water supply available for this population is entirely inadequate. A local company, called 'Queimado,' has had the contract of furnishing the city with water ever since 1852. It conducts the water from neighboring mountains, and altogether has spent about \$1,500,000 for waterworks, a pipe system, fountains, fire plugs, etc. Long negotiations between the Queimado Company and the city of Bahia for the purpose of adequately increasing the waterworks came to a conclusion three days ago. The Queimado monopoly is renewed for forty-five years and the company is awarded some valuable franchises and privileges. On the expiration of the contract the city has the option to buy the company's plants at the valuation of experts. The use of water is made obligatory for each dwelling, and the municipality of Bahia regulates the price—\$3 a month for the average dwelling for 400 liters (422 quarts) a day and 20 *reis* per 20 liters (21 quarts) for water furnished at the public fountains and hydrants.

“The improvements called for in the Queimado Company’s new contract would cost about \$600,000. Plans and specifications have been made by experts. Owing to the financial crisis at present prevailing in Brazil, the company is unable to obtain the money required to complete the Bahia water system, and for this reason desires to sell its plant and privileges. The price asked is \$1,100,000. The earning power of the Bahia waterworks, when completed in accordance with the new contract, is estimated at \$300,000 per year. The agent of the above-mentioned company assures me that the person or corporation furnishing the city of Bahia with water under the new contract will also be awarded the contract for establishing a drainage system in the city and for furnishing the houses with sanitary plumbing.

“I am well acquainted in Bahia, and would advise Americans in this line of business to investigate this proposition.

“The above-named facts and figures I have extracted from the statutes of the company and a report submitted to me at my request. If desired, I can easily procure all the necessary details.”

IMPROVEMENT WORKS IN THE PORT OF RECIFE.

The Government of Brazil has called for proposals for the construction of improvement works in the port of Recife, State of Pernambuco. Proposals must be presented at the Department of Public Works not later than 1 o’clock, July 22, 1902. The concessionaire is required to build two wharves, one having a depth of water of 8 meters at low tide, and the other a depth of 6 meters, and to equip the same with a complete set of hydraulic or electric cranes, tramways, warehouses, etc.; to extend these wharves whenever the needs of the port require the same; to cut away the submerged rock in Barra Grande so that there will be a depth of water of 9 meters at low tide; to construct a breakwater on the submerged reefs; to repair breaks in the reef and extend the same to the south; to dredge the port and fill in the space between the wharves and mainland.

The contractor must submit the definite plans for the approval of the Government within one year from the date of the contract. The work must be begun within six months from the date of the approval by the Government of the plans, and must be finished within six and nine years.

In compensation for the capital invested in the works the contractor will be permitted to collect the same dues as the Santos Dock Company. If the net income should exceed 12 per cent, these taxes must be reduced.

The Government reserves the right to purchase the works at any time after the first ten years of their completion.

PREMIUMS IN AID OF AGRICULTURE.

To encourage the agricultural industry, the municipality of Itabira, Minas Geraes, has decided to offer the following premiums to agriculturists of that district: Six premiums of the value of 200 *milreis* each will be distributed as follows: Two to the agriculturist who shall first produce 10 kilograms of silkworm cocoons; two to those first producing 50 kilograms of tea, and two to the two agriculturists who shall first have 100 cacão trees bearing fruit. Six premiums of 100 *milreis* each are offered to agriculturists who shall first produce 3 kilograms of silkworm cocoons or 25 kilograms of tea or 50 cacão trees.

A premium of 500 *milreis* is offered to the agriculturist who shall first produce a crop of 500 arrobas of seed cotton, and one of the value of 250 *milreis* will be awarded to the first producer of a crop of 250 arrobas of cotton.

CONSTRUCTION OF TELEGRAPH LINES.

By a decree dated the 14th of April, 1902, the Department of Industry, Communications, and Public Works is authorized to spend the sum of 200 *contos* in the construction of telegraph lines in the States of Minas Geraes, Ceará, Piahy, Espirito Santo, and Santa Catharina. This sum will be distributed as follows: Construction of a line from Itabira to Sant' Anna dos Ferros and S. Miguel de Guanhões, State of Minas Geraes, 30 *contos*; from Sobral to Sant' Anna and Aracahú, State of Ceará, 40 *contos*; from Oeiras to Pamaguá, with a branch line extending from Oeiras to Valença, Picos, and Jaicós, State of Piahy, 60 *contos*; from Cachociro do Itapemirim to Rio Novo and Alfredo Chaves, State of Espirito Santo, 40 *contos*; and the line to Campos Novos, passing through Corytibanos, in Santa Catharina, 30 *contos*.

THE IRON ORES OF THE REPUBLIC.

At a meeting of the Iron and Steel Institute, held in London during the week ending May 10, 1902, an interesting paper treating of the iron-ore deposits of the State of Minas Geraes was read by Mr. H. K. SCOTT. The deposits are said to be of immense extent and exist either as huge strata forming the body of extensive mountains or as surface layers of rubble or conglomerate ore resulting from the erosion of the stratified deposits. The paper in reference states that they exceed in quantity and quality the Lake Superior deposits in the United States, and possess equal or better facilities for mining. The field is situated within a zone of about 3,200 square miles, from 3,280 to 5,000 feet above sea level. Rio de Janeiro, the nearest port, is about 310 miles distant. The iron country is crossed by the Central Railway, under Government ownership, this line being the means of transport for the manganese ores exported from the same district.

The cost for mining, administration, and other first expenses is estimated at about 48 cents per ton; for transport to Rio de Janeiro, \$1.44; for handling in Rio, 24 cents; and for ocean freight to England, \$2.16; or a total cost of about \$4.32. It is thought, therefore, that with proper handling financially and technically, the iron ore of Brazil might be as successfully mined as manganese, and, of course, on a much greater scale.

An abstract of Mr. SCOTT's paper, made for the "Mining Journal, Railway and Commercial Gazette," states that the geologic formation of the deposits affects two distinct mountain ranges. The first contains rocks which appear to run into micaceous schists and schistose quartzites, which, in turn, pass into almost pure hematite, the whole formation resting on a base of gneiss or granite. The iron formations are probably residual, metamorphosed deposits of limestones, originally containing carbonate of iron; and the intimate association with manganese would support this view. The second range consists of gneiss, with injected diorites and granites, the iron deposits consisting exclusively of magnetite, and being of less importance than those of the first range.

The principal deposits may be divided into three classes, (1) massive hematites, (2) micaceous iron schists, and (3) rubble or conglomerate ores. Their purity is remarkable, phosphorus existing only in small quantity in the last variety, the original ore being practically free from it. The metallic iron in classes 1 and 2 runs from 66 to 70 per cent, with very small quantities of impurities other than silica, frequently with entire absence of sulphur. The hematite beds are from 30 to 50 yards in thickness, generally very much tilted, and outcropping at the summit or along the side of the mountains. The ore has been worked for some years in a small way by a sort of Catalan forge process, and a small blast furnace 10 meters in height and producing 5 tons of pig iron per day has been at work on the rubble ore since 1884. The iron from the last named contains about 0.01 per cent of sulphur, about 0.15 to 0.20 per cent phosphorus, and from 1.15 to 2.40 per cent of silicon, according to the deposit worked. The development of the industry has been retarded principally by the want of a satisfactory fuel. Wood is plentiful, but the production of charcoal is locally expensive and irregular. Owing further to the low-temperature blast and the purity of the ore, the iron does not contain sufficient silicon or phosphorus for foundry purposes, although good enough for chill castings. However, a blast furnace which is in process of construction at Rio de Janeiro, to use coke made from Pocahontas coal and to work with hot-blast stoves, will probably prove successful.

PROPAGANDA FOR NATIVE PRODUCTS.

The Brazilian Government has resolved to start a propaganda in Latin-American countries in favor of her principal agricultural products, for the purpose of opening up new markets and increasing the exchange of products between these countries and Brazil. Captain JOSÉ CARLOS DE CARVALHO has recently been appointed to have charge of this service in Chile, the Argentine Republic, and Uruguay.

FISCAL REVENUE FOR THE FIRST QUARTER OF 1902.

The fiscal revenue for the first quarter of 1902, compared with that for the same period, 1901, was as follows:

	1902.	1901.
	<i>Reis.</i>	<i>Reis.</i>
Imports	13,893,918,058	13,398,512,799
Consumption	728,211,545	864,014,565
Total	16,142,679,992	15,512,600,546
Gold surplus	3,643,203,731	3,132,355,657

The revenue from redemption and guaranty funds was as follows:

	1902.	1901.
Redemption fund, paper	29,668,970	30,539,601
Guaranty fund, gold	719,890,663	487,605,200
Amount collected by revenue agencies during first quarter	5,480,590,648	5,408,360,986

BREWERIES IN THE REPUBLIC.

The brewing industry has undergone a great development recently in the Brazilian Republic, owing to the levying by the Government of an import duty of 8 cents per pint on imported beer. As a consequence of this duty, the German merchants, who were chief importers, started breweries at Rio de Janeiro, São Paulo, and Mendes. These establishments were fitted up with the latest improved machinery and as the beer made was a success, the consumption has greatly increased during the last few years. The five leading breweries which formerly worked independently of one another have now amalgamated under the title of "*Companhia Antartica Paulista*." The statutes of the company, as published in the "*Diario Official*," cover the following purposes: (1) To work and develop the five original breweries and others; (2) to manufacture ice for use in the breweries and for sale; (3) to prepare malt; (4) to cultivate barley; and (5) to operate a bottle factory for their own requirements and for sale generally. The capital of the enterprise is estimated at about \$5,000,000. Up to the present time the barley, hops, and bottles employed have all been imported, chiefly from Germany.

United States Consul K. K. KENNEDAY, writing to the Department of State at Washington, from Pará, under date of April 7, 1902, states that a large quantity of beer is consumed in that city, and adds that he has been semiofficially informed that the municipal government is ready to place a local tax on beer from Rio de Janeiro in favor of the Pará product if a responsible company will take charge of the brewery formerly operated in the latter city. A large modern building has been erected and a complete outfit of first-class machinery purchased by the company, which recently went out of business.

MISCELLANEOUS NOTES.

In a report made by the German Consul at Pará to his home government, it is stated that the falling off in the import trade of the Republic of Brazil must, in a measure, be ascribed to the growth of industries throughout the country, more particularly in the southern Provinces. Merchants in Pará prefer to sell native goods, wherever possible, one reason being the fact that the profits on domestic products are higher than on foreign. Industries which are cited as being in a specially flourishing condition are the manufacture of beer, matches, linen goods, cheap dress fabrics, prepared chemicals, furniture, pins, and boats, the importations of which have consequently declined.

Madame CONDREAU, widow of the geographer, the late HENRI CONDREAU, is continuing the work of exploring the principal rivers of the State of Pará, which was begun by her distinguished husband. She has explored the Cuminá, Nhãmundá, and Curuá de Alémquer rivers, and established communications between the Mapuera and Nhãmundá rivers. A work giving the results of the exploration of the Curuá River is in press, and a similar work on the Mapuera and Jamundá rivers is in process of preparation. Madame CONDREAU has started on an expedition for the purpose of exploring the Maycurú River.

During the month of March, 1902, 56,437 bags of coffee were exported from the State of Espirito Santo, of which 36,161 bags were sent to the United States and 1,500 to Europe. The exports of coffee from Espirito Santo from July, 1901, to the 31st of March, 1902, amounted to 520,451 bags.

The German Brazilian Association held its annual meeting in Berlin during the week ending May 10, 1902. One of the developments of the work of the association in the course of the year has been the furnishing of information to intending emigrants and the furtherance of colonizing enterprises in the southern States of Brazil.

The port improvements at Bahia Blanca include the construction of a large T-shaped pier, chiefly of steel, which, when completed, will accommodate about 16 ocean-going steamers, thereby doubling the

present facilities. The pier in question will be the property of the Southern Railway Company.

HENRIQUE RUCCOLINE, representing an Italian-Brazilian syndicate, has signed a contract with the Government of the State of Sao Paulo for the establishment of an Italian colony in the districts M. Boy and Carapicubiba.

A custom-house will shortly be established at the mouth of the Oyapock River. The Brazilian Government has renewed its contract with the Steam Navigation Company of Maranhão for another period of five years, beginning with the 1st of January, 1902.

By a decree dated the 17th of March, 1902, an extension of time has been granted to the "*Companhia Brasileira Torrens*" for beginning the improvement works in the Port of Victoria, State of Espirito Santo.

The National Museum of Rio de Janeiro has sent a scientific expedition, composed of botanical and zoological experts, to make a careful examination of the fauna and flora in the region of Itatyia.

The Government of Brazil has approved the International Code of Signals, which will hereafter be employed in communications between Brazilian merchant vessels.

COLOMBIA.

CONCESSION FOR THE FREE IMPORTATION OF COAL.

"ARTICLE 1. The Government exempts the Bolivar Railway Company from the payment of import duties on coal imported for the exclusive use of the company.

"ART. 2. The exemption referred to in the foregoing article shall continue in force for a period of five years from the date of the approval of this contract.

"ART. 3. The company agrees to sell to the Government at cost such coal as the latter may need.

"ART. 4. The Government, through the Department of the Treasury, may declare the present contract forfeited, provided always that it be proved that the company has converted the coal imported to any other purpose than for the use of the railway company.

"ART. 5. The present contract requires for its validity the approval of the Cabinet, and of the Vice-President of the Republic in representation of the Executive power.

"In testimony whereof this contract has been signed in duplicate in Bogota, January 14, 1902."

The foregoing contract was duly approved by the Cabinet on January 22, 1902, and by the Vice-President on the 23d of the same month and year.

COSTA RICA.

THE INAUGURATION OF PRESIDENT ESQUIVEL.

The inauguration of the new President of the Republic of Costa Rica, Señor LICENCIADO DON ASCENCIÓN ESQUIVEL, occurred at noon on May 8, 1902, being attended with the customary ceremonies.

The inaugural message, addressed to the Constitutional Congress of the Republic, was as follows:

“HONORABLE DEPUTIES: In assuming the Presidency of the Republic, to which I have been called by the majority votes of my fellow-citizens, my first word is to felicitate Costa Rica on having thus affirmed the power of her political institutions. I beg her worthy representatives to accept the homage of my profound respect and the expression of my sincere congratulations.

“Nothing is so significant in the life of a nation democratically constituted as the simple act in which, in obedience to the law and in conformity with the popular will, the supreme power of the state is transmitted from one man to another. This ceremony is irrefutable evidence that the majesty of the Constitution is no mere outburst of political clamor, but a practical and living reality. In the expression of such sentiments, I feel a heartfelt satisfaction in emphasizing, with all the energy in my power, the fact that at the termination of my constitutional term of office I shall be glad to retire to private life and intrust the command to whomsoever the people shall designate to succeed me. With this formal declaration, which I am moved to make at the beginning of my first message, and whose fulfillment will satisfy not only my duty to the written law, but also the distinct obligation of my conscience and convictions, I hope that you will feel assured that, so far as I am concerned, every initiative for constitutional reform which shall tend to establish more firmly the principle of rotation in office will receive my hearty support.

“It appears to me to be of great urgency that the municipal regimen should be amplified and greater independence granted to corporations, so that all towns of importance, whether through population or wealth, might enjoy their own resources, might deliberate and decide concerning their own affairs, and might develop apart from tutelage and centralization, to which, at all times unjust and on many occasions detrimental to progress, they are now unfortunately subject. The extension of municipal boards should be combined with the system of direct suffrage. In this manner the political education of our citizens will be advanced and the democratic government be settled upon firmer foundations. In order to compass such an important reform it will be necessary to modify the Constitution. For my part, I shall support the proposition for amendment.

“The Government to-day inaugurated will not form a political party. It is not proper that, under the circumstances existing in the Republic, there should be strife of factions and sectarianism. The need of the country demands the entire consecration of the new administration, and what the new administration most ardently desires is to consecrate itself entirely to the country, free from outside preoccupations, to meet the grave and complicated economic problems which so justly occupy our minds.

“Thus it will be seen that an inflaming of party spirit and a serious compromise of social tranquility would result should religious conflicts arise either on the part of the Government or on the part of the citizens. My Government, in accordance with the avowed intention, will continue in its relations with the church in the maintenance of the most frank and cordial harmony, without provoking or consenting to any change in the respective positions occupied by the civil and ecclesiastical powers. Within these limits the church can be granted all aid compatible with our present well-being, and this shall form the standard of my conduct in regard to this section of the Government. I do not doubt for an instant that, in the development of this plan, springing only from the desire of conciliation which animates me, I shall be able to rely upon the patriotism and prudence of the venerable Bishop so worthily designated by the Holy See to preside over the church of Costa Rica.

“The situation of the public Treasury, as is well known to all, will oblige the Government, as an imperative, though unfortunate, measure, to simplify the service of the Administration, to reduce the personnel of employees, and to curtail all expenses other than those of an absolutely indispensable character. I am not unaware that this resolution may work injury to some and that the system of economy may appear unpleasant, but it is necessary to enter upon this path notwithstanding its thorns.

“The Government will proceed in no capricious or unjust manner. It will retain the necessary employees; it will require from the public functionaries the same assiduous labor and the same precise punctuality which any private enterprise demands of its dependents; but, in exchange, it will guarantee them their positions during good conduct, and, for promotion, will consider competence and probity before political opinion.

“Agriculture will receive the especial protection of my Government. As a means of giving an impetus to and reanimating the productive resources of the nation, a fair proportion of the Treasury receipts will be dedicated to the extension, improvement, and preservation of the highways. Indirect, but important protection will be obtained by the prosecution of vagrancy and the unlawful manufacture of spirits, and by the prohibition of the maintenance of liquor stores outside of centers of population.

“Existing laws against the clandestine manufacture and sale of spirits will be executed rigorously. Modifications tending toward a more severe sentence for the delinquent and greater facility for the action of justice would be beneficial. To use tolerance in this matter would be highly censurable, not only as it operates directly against revenue, but principally that it creates habits of resistance against authority and law; that it permits the drinking of unhealthy articles which tend to produce disease and a debility of the race, and that it fomented vice and bad habits, and increases, to a notable degree, the criminal class. To energetically combat this social plague is to labor for the good name, the morality, and vigorous constitution of our people.

“My Government will endeavor to contribute to the material and moral well-being of the working people. It will encourage the formation of trade unions as beneficial, as much in the feeling of mutual aid as in the discipline of the workingmen. As soon as the resources of the exchequer will permit, public works to provide occupation for them will be undertaken. They will be further aided in every way possible for their advancement that they may obtain general and technical education by the means of which they may become skillful operatives as well as exemplary citizens.

“Touching international relations, the new Government will follow the traditions observed by Costa Rica; will legally and strictly fulfill the obligations imposed upon it by existing treaties; will discharge the duties which the rights of peoples prescribe for all nations; and, especially, will refrain from interfering, either directly or indirectly, in the internal affairs of other States. The latter proposition will be most carefully regarded so far as it concerns the neighboring countries.

“Public instruction will continue to receive the same merited attention as heretofore. Doubtless, it will be found convenient to render the instruction imparted in the rural schools of a more practical nature, and to abolish the function that the State has assumed as superintendent of secondary instruction, now that special conditions of the Republic should give it firm support.

“As to other matters my Government will lend a willing ear to every manifestation of public opinion, and particularly to criticisms of which it is the object, in order to make use of the salutary advice, if such should be given, or to pass unnoticed an insult if one should be proffered; and it will solicit the cooperation of all true patriots and men of merit, without considering their political affiliation, and especially does it require and hope for the aid of your wisdom and patriotism.

“Permit me, honorable deputies, before closing to offer my sincere congratulations to the distinguished Costa Rican who vacates the Presidential chair for having known how to preserve order and promote progress, and for having endeavored during his term of office—one of

the most glorious in national history—to secure the well-being of his country. On retiring from the post which he has so honored with his talents and great ability as a statesman, he enjoys the satisfaction of knowing that there will not follow him into private life any personal hates or rancors that cry aloud for vengeance, and that even though his administration may be criticised by some, all of his fellow-citizens acknowledge that he has been a patriotic and progressive President.

“On manifesting to you by this act my cordial good will, I not only bow to the citizen who retires from the executive power, leaving behind him a brilliant record, but I also respectfully salute, in the name of the whole country, the Constitution which the founders of our Government established and which we should look to as one of the sacred arches of our political institutions.”

NEW CABINET.

ASCENSIÓN ESQUIVEL, Constitutional President of the Republic of Costa Rica, decrees:

ARTICLE 1. That the Cabinet shall be organized as follows:

Licenciado Don LEONIDAS PACHECO, Secretary of State in the Department of Foreign Relations, Justice, Worship, Charities, and Public Instruction.

Don MANUEL J. JIMÉNEZ, in the Department of Government, Police, and Improvements.

Licenciado Don CLETO GONZÁLEZ VÍQUEZ, in the Department of Agriculture and Commerce.

Don TOBÍAS ZÚÑIGA, in the Department of War and Navy.

ART. 2. The Assistant Secretary of State is charged with the execution of the decree.

Given at the Executive Palace on the 18th day of May, 1902.

ASCENSIÓN ESQUIVEL.

BIOGRAPHICAL SKETCH OF PRESIDENT ESQUIVEL.

Señor Don ASCENSIÓN ESQUIVEL, President of the Republic of Costa Rica, is one of the most eminent statesmen of that progressive commonwealth, and at the same time is one of the most distinguished characters of Central America. Nature has richly endowed him with great talents and high gifts, among which may be mentioned strict integrity, a calm judgment, a reflective mind, and untiring industry, all of which commendable traits manifested themselves in a marked manner in his early youth while still a student of law, and were enlarged and developed as he grew to manhood and became known, endearing him to all with whom he associated and giving him great prestige and influence in the Republic. He is a celebrated lawyer, and has taken an important part in the introduction of those salutary legislative reforms that are such a credit to the country because they are the embodiment of true liberty, and which were adopted and observed in so conserva-

tive and unpretentious a manner as to give rise to universal admiration and praise.

On reviewing his political career it is found that, whether occupying an important office in the Department of Justice, or of Foreign Relations, or in the diplomatic service, or as Chief Magistrate of the Republic, the distinguished services of Señor ESQUIVEL have invariably reflected his strength of character, the rectitude of his intentions, and his ardent patriotism. He was a candidate for President in the electoral campaign of 1889, and was called upon, in conformity with the law, as "Designado" (similar to Vice-President), to exercise the duties of the executive power. He resigned that post in order to become a Presidential candidate, in compliance with the wishes of his party and in accordance with his own convictions and desires. He was not then elected, but his prestige instead of waning grew, as is attested by the fact of the immense majority which he received at the polls recently, and the general rejoicing of the whole country on account of his elevation to the Presidential chair.

FREE ENTRY FOR ORANGE CRATES.

"The Constitutional Congress of the Republic of Costa Rica, in conformity with section 4 of article 94 of the Constitution, decrees:

"ONLY ARTICLE. Decree No. 5 of February 7 last, in which the payment of customs duties and wharfage charges on wooden boxes brought in from the United States of North America to be used in the packing and exportation of oranges, is hereby approved."

The foregoing decree was duly signed and promulgated by President ESQUIVEL on May 23, 1902.

COSTA RICA RAILWAY COMPANY (LIMITED).

The report of the Costa Rica Railway Company (Limited) for 1901 states that the gross receipts were £260,896, and the net receipts £131,041. Including the credit balance brought forward, interest on deposits, investments, etc., the total is £135,505. From this is deducted interest on debentures, legal charges, etc., leaving a balance of £43,252. The directors recommend a dividend of 4s. per share (less tax), equal to 2 per cent, and that the balance of £7,252 be carried forward. The increase in gross receipts was £1,759, and the increase in working expenditure amounted to £6,270. Included in the total expenses for the past year are sums of £10,414 for rolling-stock renewals, £3,915 for extraordinary bridge renewals, and £2,800 placed to the credit of relaying fund.

MISCELLANEOUS NOTES.

The three leading countries interested in the Costa Rican import trade in 1901 occupied the following rank: United States, 46.77 per cent; United Kingdom, 21.83; Germany, 13.50. As compared with the

two preceding years, there is a slight decline for the United States, while the average valuation for the United Kingdom and Germany remains practically stationary.

The annual value of foodstuffs imported into Costa Rica is estimated by the British Consul in that Republic, Mr. Cox, at about \$982,640. He also states that increasing attention is being given to the cultivation of maize, beans, rice, and tobacco.

ECUADOR.

GOLD MINING.

The Zaruma Mines, at Zaruma, are now the only gold-quartz mines controlled by United States capital in the Republic of Ecuador. These mines are in the district of Zaruma, Province of El Oro, about 60 miles southeast from Guayaquil, in the western cordillera of the Andes, at from 2,500 to 4,000 feet elevation and about $3^{\circ} 45'$ south latitude. The district contains numerous gold-bearing quartz veins, many of which were worked by the Spaniards one hundred years ago. The principal veins vary from 15 to 16 meters in width. The usual dip is 75° easterly; one system has a course of northeast by southeast, while it is faulted by another with northwest by southeast course. The formation is andesitic.

The ore is mostly blue and white quartz, containing about 10 per cent in sulphides of iron, copper, zinc, and lead. Free gold is occasionally seen. Oxidation occurs very rapidly in the atmosphere. The ores are extracted by two methods—stoping large chambers and filling with surface rock, and stoping small chambers, which are left open until convenient filling is had. The latter method has not yet been extensively tried here. It is necessary to employ methods without timber because of the scarcity of that article and its consequent cost. The common timber of this section rots in a few years.

The ores are treated in a usual type 40-stamp mill, stamps of 850 pounds each. The pulp passes over three 5-foot copper plates for outside amalgamation, and thence to steel cyanide vats. Amalgamation secures about 30 per cent, while 80 per cent of the weight of the pulp (the balance being discarded slimes) yields 70 per cent of the gold in the cyanide method. The slimes and water are separated in large dams adjacent to the vats. A 0.075 per cent cyanide solution is used. In the metallurgy of these ores many features have been encountered which make usual practice of little service. The extraction was for a long time very unsatisfactory.

Freights come from the coast by mules, at a cost of \$1 to \$2 per 100 pounds, according to the time of year and class of goods. From January to April the rainy season causes the roads to be very heavy, and travel is difficult.

The wages of a common native laborer are \$0.50 gold, while native miners receive from 50 cents to \$2 per day by contract system.

After considerable time spent in developing, construction, experiments, etc., the mines are now in condition to produce and treat large quantities of ore.

GUATEMALA.

TRADE CONDITIONS.

The Bureau of Foreign Commerce of the United States Department of State issues in its number for June 4, 1902, of "Advance Sheets of Consular Reports," a comprehensive résumé of the existing trade conditions in the Republic of Guatemala, furnished on May 2, by Consul-General JAMES C. McNALLY at Guatemala City, as follows:

"The opportunity for the introduction of United States goods into Guatemala was never so good as at present. Shoes and haberdashery are constantly in demand, while other articles of United States manufacture are sought. The business houses here, while partially yielding to these incessant demands, say that the conditions imposed by United States firms will not permit them to handle American goods exclusively, although they freely acknowledge their superiority. A general complaint is that American houses will not send representatives to show their goods.

"The catalogue or circular system of advertising does not appeal to the dealers of Guatemala unless the goods be already known. I have no doubt that an actual display of American goods would win an order where a catalogue or other printed advertisement would not be noticed. This has been recently demonstrated in the matter of shoes. Numerous display cards showing the perfect style of our shoes had been sent to dealers here, but with no good result. A few months ago a representative of one of our large Western houses arrived in Guatemala and displayed his wares for inspection. His success was a complete surprise to him, and he informed me that, in future, he believed his orders would be increased. The same is true of other articles. Many houses in the United States write the consul, inclosing a sample of their goods, with the polite request that he hand it to one of the leading business houses dealing in that particular line. While every consular officer in the service feels a degree of pride in having goods of American make come into his territory, he may not have enough technical information as to cotton fabrics, hardware, paints, oils, varnish, etc., for his recommendation of the goods to be accepted. Dealers usually know what they want, and know also the quality of the articles presented for their inspection.

"While all concede the superior quality of American machinery, the universal complaint is that it is too delicately and intricately con-

structed, and necessitates the importation of a machinist to operate it. It is said that the smaller appurtenances, together with rivets and bolts, come singly, and that the inefficient American packing usually causes a breakage of these parts, which must be supplied before the machine can be operated, necessitating a delay of months. On the other hand, the people say that European machinery is so simply constructed that almost anyone can operate it after it has been put together; that the smaller parts come in duplicate, and if one is lost or broken no delay in sending for another is necessary.

"United States flour is universally used, being imported from San Francisco by the Pacific Mail steamers.

"The threadbare complaint against American packing is reiterated by local dealers as one of the drawbacks to our trade. While in some cases their criticism is just, I can say that we are improving. I have seen some American packing that will compare favorably with the French, which is most artistic and practical. The French use a light wood for cases, which are then wrapped with burlap. This is an advantage to the importer, as the freight and tariff are estimated on the gross weight. The American shipper is said to use heavy material for packing cases.

"The tax on United States tobacco is prohibitory, and all tobacco is imported into Guatemala from the neighboring Republics, there being a treaty between Salvador, Costa Rica, Nicaragua, Honduras, and Guatemala for the free exchange of natural products.

"In the matter of stationery, cheapness rules the market; and this, with the credits granted by Europeans, wins the trade for them. Credits for six and nine months are freely given, after which time 6 per cent interest on the account is charged.

"The proprietor of the leading furnishing house in Guatemala tells me that American dealers are too independent and do not always keep their promises. This man, however, buys many American goods and has ordered a large line of shoes. He says that any advice offered as to packing is reparded as an attempt to interfere with the business of the exporter. Since shippers, as a rule, have never been in this country, and therefore can have no knowledge of the peculiar system of handling goods, the wishes of the buyer should be law in this regard. The goods are lowered from the ship to the lighter and are often roughly handled. The same process is repeated in taking the goods from the lighter to the pier.

"The sons of German business men shipping to this country come over and take a place with some firm here and remain for two or three years. They thus become acquainted with conditions of trade, as well as with the manner of catering to it. Their knowledge of the wants of the natives is one of the reasons why German goods control this market. The representatives of European houses make almost any

concession to obtain orders. They conform to the style demanded, cut the goods in any lengths, or manufacture any pattern to suit the local trade. Until American manufacturers meet these conditions their competitors will control the commerce of these countries.

“It would be an advantage for local dealers to buy from American houses direct, saving the commission charge—5 per cent.”

The following information is contained in a report received at the British Foreign Office concerning the class of agricultural machinery required in the Republic:

“The large majority of the machinery employed in Guatemala is that used in the coffee and sugar raising industries, and while most of the coffee-cleaning plant is brought from England that which is used on sugar plantations comes from the United States of America. The smaller implements come in about equal quantities from both countries. There are only one or two houses in Guatemala which manufacture machinery and agricultural implements. It has been ascertained that the following are the articles which are made by them for use here: Coffee drying machines, worked with hot air, live steam, or exhaust steam, and of 20, 30, 60, or 90 quintal capacity; coffee pulpers, coffee washing machinery, coffee sorters or separators, coffee peelers, elevators for coffee; sugar-cane mills for steam and water power, iron sugar pans, sugar evaporating pans, Pelton wheels of all sizes, iron water wheels, under and overshot, ironwork for water wheels, turbine wheels, steam boilers (Heine’s patent), tubular, up to 60 horsepower, Corliss engine up to 50 horsepower, lift and force pumps, couplings and bearings and cast-iron pulleys, single and double circular sawmills, and all kinds of castings of brass and iron.

“Although these local works no longer do the business they did in former years, they are still in a flourishing condition, and are largely employed for works of repair and in making smaller pieces of machinery. * * * There is a considerable demand for some improved form of plow. It appears that the ordinary plow imported from the United States or Europe is not very satisfactory. The soil here becomes baked to a hardness of steel, and the share or knife of the plow generally in use glances and slips on the earth’s surface. What is wanted is a plow so shaped as to point its share deeper into the ground, so as to turn over a good furrow and not to slip on the top of the hard earth.”

DECREE IMPOSING TAXES FOR RELIEF OF EARTHQUAKE SUFFERERS.

The National Legislative Assembly of the Republic of Guatemala, considering that the earthquakes of the 18th of the present month have caused great damages in several districts, and in view of the fact that the President of the Republic has made a special appeal to the

Congress in order that that body may take measures demanded by so great a national calamity, and considering it the duty of the legislative power to take such action as will tend to alleviate as much as possible the effects of the disaster, and believing that the imposition of sundry taxes of a transitory nature is equitable and will permit the furnishing to the injured families of the necessary assistance,

DECREES:

“ARTICLE 1. For a period of five years from the 1st of May, next, there shall be collected in the offices of the Department of the Treasury the following additional charges:

“a. Ten per cent additional upon the present rates fixed for the payment of licenses or permits for the sale of liquors and alcohol.

“b. Twenty per cent additional upon the import duties on wines, beer, and liquors imported from abroad.

“c. Five dollars annually for each *manzana* of sugar cane in all plantations which exceed five *manzanas* in size.

“d. Ten per cent, gold, on the import duties on leaf and manufactured tobacco coming from abroad.

“ART. 2. The customs collection offices shall keep a separate account of the collection of these taxes.

“ART. 3. The entire proceeds of said taxes shall be used exclusively for the assistance of persons who have been injured by reason of these earthquakes.

“ART. 4. The Executive Power may at once raise funds with this object in view from these or other revenues.

“ART. 5. For a period of five years the urban properties of the injured communities are exempt from the payment of the tax of \$6 per \$1,000.

“ART. 6. The Executive Power is also authorized to grant favors, concessions, or exemptions of taxes in favor of those who were injured by the earthquakes.

“ART. 7. The inhabitants of the communities that suffered severely in consequence of the last earthquake are exempt for a period of five years from all personal service in favor of the State, so that without any hindrance whatever they may proceed to the reparation of the injuries caused.

“ART. 8. The following articles shall be free for a period of two years from all Federal and municipal taxes:

“Tar and carboleine.

“Galvanized-iron gutters.

“Wooden or iron houses, in whole or in part.

“Roman cement.

“Galvanized sheet iron for roofs.

“Iron or wooden pillars and their accessories.

“Doors and windows of wood or iron.

“White paint in oil, and tiles of all kinds.

“ART. 9. In the regular sessions an especial account shall be given to Congress of the collection and investment of the funds collected by reason of the present law.

“Let it be transmitted to the Executive for publication and observance.

“Given in the Palace of the Executive Power in Guatemala, on April 24, 1902.”

The above law was duly approved and promulgated by President ESTRADA on April 25, 1902.

HAITI.

MINING LAW.

(December 10, 1860.)

TITLE I.—GENERAL PROVISIONS.

ARTICLE 1. All mineral and fossil substances are classified into three great groups, viz, mines, “*minières*,” and quarries.

ART. 2. The term *mines* includes all those substances found in veins, strata, or deposits, either within the interior or upon the surface of the earth, as, for example, gold, silver, platinum, mercury, lead, iron, copper, tin, zinc, calamine, bismuth, cobalt, antimony, molybdenum, tungsten, nickel, chromium, or other metallic substances; arsenic, tellurium, iodine, sulphur, plumbago, coal, petrified wood, bituminous substances, alum, sulphates having metallic bases, rock salt, and other similar substances.

ART. 3. The term *minières* includes all those iron ores denominated alluvium, pyritic earths that may be converted into sulphate of iron, aluminous earth, peat, and other substances of the same class and origin.

ART. 4. The term *quarries* includes slate, filtering stones, construction and other rocks, marble, granite, limestone, gypsum, pozzolana, hydraulic clays, basalt, lavas, marl and chalkstone, sands, flint, clay, kaolin, galactine, potters clay, earthy substances, pebbles of all kinds, and pyritic earths used as fertilizers.

ART. 5. The substances included in the term *mines* belong to the nation, as do also those of the class designated *quarries* that are only exploitable by means of subterranean tunnels.

The exploitation of all these substances is under the direction of the State.

ART. 6. The substances enumerated under the head of *minières*, and those embraced under the term *quarries* that may be exploited on the surface, belong to the owner of the land.

ART. 7. The exploitation of these substances not only as concerns the State, but also with regard to the private owner, are subject to the provisions of this law.

TITLE II.—OF THE MINERAL SUBSTANCES OR FOSSILS THAT BELONG TO THE NATION.

SECTION 1.—*Of the particular nature of this property.*

ART. 8. The mines and quarries belonging to the State, as well as the buildings, machinery, shafts, tunnels, and other works of a permanent character, the animals used in the interior of the works, and the instruments, tools, and utensils employed in exploitation, are real estate subject to the provisions contained in articles 247 and 428 of the Civil Code.

ART. 9. The products of these mines and quarries, as well as the other movable objects, not included in the foregoing article, are real property.

ART. 10. These mines and quarries are not subject to prescription.

ART. 11. They shall not be exploited except under a concession granted by the Council of Ministers.

ART. 12. Their management is under the Department of Interior, in which there shall be a branch or special division that shall be duly organized for this purpose by the issuance of the proper decree.

SECTION 2.—*Of the acts and formalities that must precede the concession.*

ART. 13. No one shall make investigations for the purpose of discovering mines or quarries or open shafts or make excavations on land without the consent of the owner thereof, and in the absence of this consent, without the permission of the Government, which shall not be given until after the owner has been heard and a satisfactory indemnity fixed.

ART. 14. There shall be granted to the persons who successfully engage in these explorations an indemnity which shall include the expenses made, duly verified, and a just reward.

ART. 15. The investigation shall include, in addition to that required for determining the existence of the mine, the examination that may be necessary to demonstrate the possibility of a useful exploitation.

ART. 16. The Government shall make known by means of the proper advertisement its intention of conceding the exploitation of the mines and quarries in order to encourage the submission of bids. Nevertheless when one or more persons having the necessary notice of a mine or quarry, request a concession from the Government, the Government may grant the same without previous notice.

ART. 17. Persons who announce their desire to make bids to obtain a

concession, may, either personally or through their agents, examine or explore the subject of the concession, a previous authorization from the Government having been obtained.

ART. 18. In case several persons submit bids, the concession shall be granted to the one making the most favorable offer.

ART. 19. Foreigners, as well as Haitians, whether as individuals or companies, may make bids and obtain concessions for the exploitation of mines or quarries.

ART. 20. The individuals or companies making the request shall prove that they have the necessary powers to undertake and direct the works, and that they have sufficient means to pay the expenses and indemnities that it may be necessary to make, as well as to reimburse the rewards paid and costs that may have been incurred and which must be settled.

ART. 21. Before granting a concession one month's time will be allowed the owners of the land or those persons interested therein in which to prepare and present to the Department of the Interior any claims that may have arisen.

ART. 22. The executive power shall decide the amount of these damages or claims, unless the same should be founded on acts that can only be determined by the ordinary tribunals, in which case the matter shall be laid before the courts, either by the parties themselves or by the Government, and a decision rendered promptly. All disputes must be settled before the granting of the concession.

SECTION 3.—*Of the consequences of the concession.*

ART. 23. The concession shall remain in force as long as the work of exploitation continues.

ART. 24. The decree granting the concession shall specify its extent, which shall be surveyed, and marked when possible by fixed corner stones erected on the surface of the soil, and by vertical planes which pass through these points into the interior of the earth to an indefinite depth. This will be done where the circumstances and locality do not require other methods of survey.

ART. 25. The decree granting the concession shall always be accompanied with a regular drawing showing the surface of the ground.

ART. 26. The concession shall give to the concessionaire, whether one or more persons, the exclusive right of exploiting the land covered by the grant, and by virtue of which the concessionaire or concessionaires shall be owners of the products exploited. The provisions of the Civil Code shall govern in these matters except where they have been annulled, directly or indirectly, by the present law.

ART. 27. The concessionaires shall not transfer their right of exploitation, either in whole or in part, except with the consent of the Government.

ART. 28. A number of concessions may be collected in the hands of one concessionaire, whether he be an individual doing business in the name of another or the representative of a company; but it is understood that each one of them shall be continued in active exploitation.

ART. 29. When a concession has been granted in favor of several persons or of a company, the concessionaires or the company must prove that they have arranged by means of a special agreement that the work of exploitation shall be continued under one management and direction. They shall also designate by means of an authentic declaration, whether among themselves or some other person, who has the necessary authority to receive advices or notifications, and who in general shall represent the concessionaires or the company before the Government, either as plaintiffs or defendants. Every concessionaire of mines or quarries shall name the domicile that he selects, and this designation, as well as the other provisions of this article, shall be included in the concession.

ART. 31. A concession granted for the exploitation of a mineral or fossil substance does not include the deposits of other substances within the same boundary, which may form the subject of other concessions.

ART. 32. The concession gives the right to occupy and utilize every part of the surface that may be necessary for the exploitation.

ART. 33. The right of occupation, not only with respect to the exploitation but also as to the investigation, shall not be extended without the consent of the owner of that part of the surface that may be occupied by factories, shops, or establishments, or by buildings, houses, and dwellings within a radius of 300 feet. They may, nevertheless, continue underneath these factories, shops, or establishments, and buildings, houses, or dwellings the underground works that are in course of operation, on condition, however, that the concessionaire furnish bond, if there is occasion for so doing, for the payment of the damages and injuries that may arise therefrom.

ART. 34. The owners, who, by virtue of the provisions of article 32 may be deprived in whole or in part of the enjoyment of their properties, shall have a right to the payment of the indemnity referred to in a future article.

ART. 35. The value of the indemnities shall serve as a security for the creditors of the proprietor in the same manner and on the same basis that the surface occupied will serve.

ART. 36. The concessionaire, whether he be an individual or a collection of individuals, shall pay the State a fixed sum, and another sum in proportion to the quantity of the products exploited.

ART. 37. The amount of these quotas shall be determined by the Government, and shall be expressed, together with all the other conditions, in the decree granting the concession. A sheet of conditions shall be duly prepared.

ART. 38. The Government may concede, should there be occasion for so doing, either in the decree granting the concession or by a subsequent disposition, the total or partial withdrawal of the proportional quota. This shall be for the purpose of stimulating the mining industry, or in consideration of difficulties which the work offers, or by means of an indemnity in case of accident, or unforeseen circumstances happening during the exploitation.

ART. 39. Of the product of these quotas a special fund shall be formed, the account of which shall be kept separately.

ART. 40. The owners of the surface, comprised within the limits conceded to those who by virtue of the concession are restrained in their right from making excavations on the land and from disposing of the products thereby obtained, and who are also prohibited by the terms of the concession from exploiting the subsoil, compelling them to forego the profits of their property except in so far as they do not prejudice the rights of those who can do the underground work, have a right to a part of the profits.

ART. 41. This part shall be fixed by the Government at the same time that the part belonging to the State is determined, but it shall never be less than 5 per cent of the proportional quota. The basis of distribution of this portion between their respective owners shall be determined later. The provisions of article 35 are applicable to this portion.

ART. 42. The concession may be suspended or annulled for the non-exploitation of the mines conceded, or for the nonpayment at the proper time of the quotas established by law, or for failure to perform the conditions specified in the decree of concession if such consequences are justly derived from it.

SECTION 4.—*Regarding indemnities.*

ART. 43. The settlement of questions concerning indenmities for damages, and all other indemnities, as well as sums which represent expenses the refund of which is provided in the present law, until other disposition is made by a special law and provided that the parties can not arrive at a friendly understanding, shall be referred to the courts of justice.

ART. 44. These tribunals shall appoint experts, and shall see that the acts of same shall strictly conform to the provisions of the Civil Code of Procedure.

ART. 45. These experts shall be selected, in so far as may be possible, from persons learned and experienced in mining subjects and mining operations.

ART. 46. The Commissioner of the Government shall always be heard, and shall make his report after the experts have rendered theirs, and upon the subjects treated therein.

ART. 47. The courts shall determine the compensation to be paid to the experts, as well as the other expenses that the examination by experts may occasion, and may order said amount deposited beforehand by the party soliciting the examination.

ART. 48. The indemnity which shall be paid to the owner of the surface shall be double the actual value of the property appropriated at the time of the occupation.

ART. 49. If the works undertaken, either by prospectors or the concessionaires, are only preliminary—that is to say, the duration of which has not exceeded one year—and provided the soil, after being restored, is capable of being cultivated as before, the indemnity shall be double what the land would have produced during that time.

ART. 50. When the occupation of the soil for the purpose of making explorations, or mining or quarrying operations, has deprived the proprietor of its use for a longer period than one year, or, if, after the works have been accomplished it should be found that the land is not suitable for cultivation, the proprietor shall have the right to demand that they purchase his property.

ART. 51. When the occupation of the land has been such that the owner of the surface can not derive from it the results that correspond to it by nature, the said owner may demand that it be expropriated, and if he is successful in this demand he shall lose the right to participate in any indemnity.

ART. 52. When land is necessary for exploitation and the concessionaire is a foreigner, the State shall acquire the same, but the value shall be paid by the concessionaire, to whom, at the termination of the exploitation, the amount of the resale shall be charged.

ART. 53. In questions of indemnity concerning the value of property, there shall be borne in mind in case of dispute, the State and the owners of the surface; in those regarding damages and injuries resulting from the exploitation, the presence of the concessionaires and of the persons who claim to have been damaged is required.

TITLE III.—OF THE MINERAL SUBSTANCES OR FOSSILS BELONGING TO THE OWNER OF THE SURFACE.

ART. 54. The owners of land who desire to extract from it, either personally or through the intervention of other persons, the substances which the present law recognizes to be theirs, shall declare their intention to so do before the Department of the Interior, and await the receipt of the necessary authorization.

ART. 55. This authorization shall not be refused and must necessarily be conceded within six months from the date of the declaration.

ART. 56. These exploitations shall be confined within the limits designated, and are subject to the inspection of the administration and of the police.

SECTION 5.—*Provisions in the interest of public order.*

ART. 57. The administration and the police shall have the right to inspect the mines and quarries subject to the rules that shall later be adopted for that purpose.

ART. 58. The provisions of the laws and rules relating to mines and quarries shall be protected by a penal code, which shall be established at some future time, for the purpose of preventing or punishing the violation of the same.

The execution of the present law devolves upon the Department of the Interior and Agriculture.

HONDURAS.

TRADE-MARK LAW.

“La Gaceta” of April 12, 1902, publishes the following law:

“The National Congress, in compliance with the recommendations of the Executive power concerning the necessity for the passage of a law governing trade-marks, decrees the following trade-mark law:

“ARTICLE 1. Any device of whatever nature that distinguishes in commerce an industrial product shall be considered a trade-mark.

“ART. 2. No form, color, phrase, or designation that does not constitute of itself the distinguishing devices of the manufactured product shall be considered a trade-mark, and in no case shall this device be contrary to good morals.

“ART. 3. Any proprietor of a trade-mark, whether a citizen or a foreigner, resident in the country, may acquire the exclusive right to use same in the Republic by duly observing the provisions of the present law. Citizens and foreigners who reside out of the country may register their trade-marks, provided they have an agency or an industrial or mercantile establishment in the Republic for the sale of their products, except where, as to foreigners, it is otherwise provided for by treaties.

“ART. 4. To acquire exclusive property in a trade-mark the party in interest shall apply, either in person or by means of his representative, to the Department of Fomento (Public Works), alleging that he reserves his rights and presenting the following documents:

“1. The power of attorney granted to the agent, if the party in interest does not appear in person.

“2. Two copies of the trade-mark, or a representation of same by means of a drawing or engraving.

“3. In case a trade-mark is shown either in high or low relief upon the products, or appears in any other special form, it shall be accompanied by two separate specifications which shall describe fully its na-

ture by means of one or more detailed drawings or by an explanatory inscription illustrating the same.

“4. In the case referred to in the second paragraph of the foregoing article, the written contract, duly acknowledged, by virtue of which the agency is established, shall be presented.

“ART. 5. The petition shall contain the name of the factory, the name of the place in which it is located, the domicile of the proprietor, and the nature of the commerce or industry in which the solicitor desires to use the trade-mark.

“ART. 6. An industrial or mercantile trade-mark belonging to a foreigner not residing in the Republic shall not be registered in this country if it has not been previously regularly registered in the country of its origin.

“ART. 7. The person who has first legally made use of a trade-mark is the only one who shall solicit a property right therein. In case of dispute between two proprietors of the same trade-mark, the ownership thereof shall belong to the one who came first into possession, and if the possession can not be proved, then to the first solicitor.

“ART. 8. The exclusive property of a trade-mark can not be enjoyed except by virtue of a declaration made by the Department of Fomento, to the effect that the party in interest has reserved his rights, after having duly complied with all the requisites prescribed by law.

“ART. 9. The declaration referred to in the foregoing article shall be made without a previous examination, under the exclusive responsibility of the solicitants, and without prejudicing the rights of third persons. The Department of Fomento shall publish the application of the party in interest, and in case of opposition, presented within the ninety days following the publication, the registration of the trade-mark shall be withheld until the judicial authority decides in whose name it shall be recorded.

“ART. 10. Trade-marks are not transferable except with the establishment for whose objects of manufacture or of commerce they serve as distinguishing marks, but their transfer is not subject to any particular formality and takes place in conformity with the rules of the common law.

“ART. 11. The duration of the property in trade-marks is indefinite, but it shall be understood to be abandoned by the closing or lack of production for more than one year of the establishment, factory, or company that has employed it.

“ART. 12. The trade-marks that have been deposited shall be preserved in the Department of Fomento, where any person who so desires may examine the register and obtain at his expense a certified copy of the same.

“ART. 13. The property of a trade-mark obtained in contravention

of the foregoing provisions shall, on petition of the adverse party, be declared judicially void.

“ART. 14. A certified copy of the decision declaring the trade-mark void shall be forwarded to the Department of Fomento by the judge rendering the same.

“ART. 15. A trade-mark is counterfeited:

“1. When trade-marks are used that are exact and complete duplicates of another, the ownership of which has already been reserved.

“2. When the imitation is of such a nature that, on the whole, an almost exact reproduction results, and, although varying in certain details, the trade-mark is liable to be taken for another one legally registered.

“ART. 16. Any one who shall have counterfeited a trade-mark or made use of a counterfeited trade-mark, provided always that it is applied to objects of the same industrial or mercantile nature, shall be considered guilty of the crime of counterfeiting, regardless of the place where it may have been done.

“ART. 17. The crime of counterfeiting is subject to the penalties provided for in the penal and common code.

“ART. 18. Drawings and industrial models are included under the provisions of this law.

“ART. 19. The protection that the present law gives to industrial or mercantile trade-marks does not protect the goods covered by them except when manufactured and sold in the country.

“ART. 20. The present law shall be in force from the date of its promulgation, and the applications that are pending on that date shall be decided in conformity therewith.

“Done at Tegucigalpa, in the Hall of Sessions, on the seventh day of the month of March, 1902.”

CONCESSION FOR THE CULTIVATION OF WHEAT.

The Government of Honduras has granted a concession to THOMAS W. TROY & Co., a corporation organized under the laws of the State of Georgia, United States, for the establishment of a farm for the cultivation of wheat, using modern machinery for the sowing and harvesting of the same. The concessionaire agrees to erect and keep in operation a flour mill with a capacity of 50 barrels of flour daily. The Government concedes to the concessionaire 1,000 hectares of Government lands in the departments of Cortes and Santa Barbara, one-fourth of which must be kept under cultivation. The Government agrees to maintain the present duty on flour, but in case of great scarcity, or an extraordinary emergency, may declare the free importation of this article. The concession will remain in force for a period of ten years.

MEXICO.

QUICKSILVER MINING.

As one of the heaviest items in mining for gold and silver is quicksilver, the following data prepared by one of the leading mining engineers of the Mexican Republic and published in the "Mexican Herald" for May 11, 1902, has value for operators. The larger part of the product of commercial quicksilver in Mexico comes from Huitzuco, a small town about 18 miles east of Iguala, in the State of Guerrero, where the "Mina Cruz and Anexas" is located. It was discovered in 1874 and has been worked without interruption ever since. The plant represents an expenditure of about \$250,000. Three thousand five hundred tons of crude ore are mined monthly, from which from 250 to 300 flasks of quicksilver are produced.

The cost of production is stated to be lower in the Republic of Mexico than in the other producing countries of the world. In United States currency the relative cost is as follows:

	Cents per pound.
Russia	39
United States	37
Spain	31
Mexico	27

The world's product, represented in round numbers, for the various producing countries is led by Spain, with 50,000 flasks annually, followed by the United States, with 30,000 flasks; Russia, 20,000 flasks, and Mexico, 5,000 flasks.

Mexico's annual importation during the last five years has been 10,000 flasks, at prices ranging from \$72 to \$105 per flask of 72 pounds. Taking an average valuation of \$90 per flask, the total outlay annually made in the Republic for this staple is about \$900,000.

The ore at Huitzuco is not found in a vein but in a gigantic cone of limestone formation. The process of treating is very primitive. The limestone is broken into lumps of from 5 to 6 pounds each, and then placed in a furnace of native construction and roasted. The smoke is conducted through long flues and then precipitated into chambers. Once a month the soots are collected and placed upon a hot sheet-iron floor, the iron being laid at an angle, and by gently stirring the soots the quicksilver runs into an iron pot, from which it is dipped into flasks and sent to market.

The shaft of the "Mina Cruz and Anexas" is 750 feet deep. The ore at the lower levels is low grade, said to be about three-fourths of 1 per cent per ton, but near the surface it runs as high as 14 per cent. The great bulk of the ore worked is from the lower levels, but every

month a small portion of the rich ore near the surface is roasted to maintain the monthly output of from 250 to 300 flasks.

Although the mine at Huitzuco is the only one in the district worked for mercury at present, the country in the vicinity, in all directions, has the remains of old workings and dumps, which plainly show that in the past mining for quicksilver was vigorously prosecuted. In the low hills surrounding the town samples of ore can be found containing quicksilver, which, if worked by modern methods, would doubtless be profitable.

REPORT OF THE MEXICAN RAILWAY COMPANY (LIMITED).

The report of the Mexican Railway Company (Limited) reproduced from the "Times" of London, for the half-year ended December 31 states that the average earnings per mile per week amounted for the second half of 1901 to \$259.07, for the first half of 1901 to \$267.02, and for the second half of 1900 to \$254.11. The sum at the disposal of the company, after payment of the interest on the debenture stock and providing £6,329 for a special reserve, is £6,768. Adding to this the balance of £481 standing to the credit of the first preference stockholders, there is a total of £7,250, which will suffice for the payment of a dividend for the half-year on the first preference stock at the rate of one-half per cent per annum, absorbing £6,385 and leaving a balance of £865 to be carried forward.

The gross earnings of the line in the half-year amounted to a total of \$2,185,968, an increase of \$41,887 over the corresponding period of 1900. The working expenses were increased by \$160,811, chiefly in consequence of the night passenger-train service, which adds greatly to the train mileage. The pier and launch service, which shows a substantial profit instead of a loss, produced a result better by \$30,099; thus the resulting reduction of revenue was \$88,825, the net profit being \$781,319. This, at the average exchange of 22.25d., produces in sterling £72,435, to which being added interest and fees in London, there is a net revenue balance of £73,097, which is £18,249 less than in the corresponding half of 1900.

The fall in exchange causes over £12,250 of this reduction by increasing working expenses and reducing the sterling value of the profit to be remitted. The average sterling value of the dollar in the half year under review was 22.25d., compared with 24.40d. in the corresponding half of 1900. The latest market price per ounce is equivalent to 20.09d. per dollar. The board has agreed with the board of the Inter-oceanic Railway, as from March 1, last, for a pool of all competitive traffic, both import and national, for a period of not less than seven years, subject to four years' notice, if given as on March 1, 1905, or not less than five years' notice, if given at any subsequent date. The objects the two

boards have in view are to encourage trade through the port of Veracruz, and to secure economies in the cost of administration and expense of working the traffic over the two lines which the recent keen competition has so largely increased. The four lines constituting the Mexican Traffic Association have entered into a new pooling arrangement dealing with European goods imported into Mexico. The severe competition via New Orleans and Galveston for this traffic—a competition which has been most injurious to the company and the other lines serving the Mexican Gulf ports—will cease under the new arrangement.

ANNUAL REPORT OF THE MORTGAGE BANK.

The report of the manager of the Mortgage Bank of Mexico made to the shareholders at a meeting in London, England, on April 15, 1902, for the year 1901, shows that the mortgage operations undertaken by the institution during the year amounted to a sum of \$2,376,000 against \$2,370,700 in 1900, of which \$427,000 were discharged in 1901. The accounts current during the year were: Debtor, \$13,416,335.55, and creditor, \$14,110,435.49, making the total operations \$27,526,771.04, against \$21,414,299.91 in 1900. The deposits in 1901 were \$346,466.39, against \$384,982.82 in 1900. The discount operations in 1901, though reaching a larger amount than in the preceding year, gave less profits to the bank on account of the smaller rate of interest, which in 1900 was 10 per cent, while in 1901 it fell to 6 per cent in some transactions. In 1901 the discount operation represented a sum of \$2,272,407.79 against \$2,209,279.61 in 1900 and in 1901 the profits were \$92,576.07 against \$100,422.37 in 1900. In the interest account the earnings in 1901 were \$209,784.64 against \$212,635.19 in 1900. This result was occasioned by the same reasons that affected the discounts—the decrease of the rate and not the decrease of business.

In the commission account of 1900 the redemption of nearly \$2,000,000 of mortgage loans gave the favorable result of \$12,706.94 earnings, while in 1901 the year's operations gave a charge against the bank of \$192.76, showing a minus difference of \$12,989.70 in the account of 1901, as compared with the preceding year. The expense account shows a decrease, the amount in 1901 being \$74,467.39 against \$81,265.32 in 1900. In exchange, the fluctuations in the price of silver, especially in the last month of 1901, together with the light demand for operation in the preceding months, very considerably reduced the profits in this account, which were \$37,023.12 against \$53,343.74 in 1900. The operations in exchange during 1901 were: Bought and sold on New York, \$9,620,002.06; on London, \$5,667,713.71; on Paris, \$2,227,749.74, making a total for the year of \$17,515,465.51 against a total for 1900 of \$18,007,498.84, in which operations with

New York were represented by \$7,127,046.78; London, \$9,057,181.91, and Paris, \$1,823,270.15.

The agencies' accounts in 1901 amounted to \$1,445,000.09 and \$4,216,128.44 in 1900, including debt and credit in both years. In the safety-deposit vaults the earnings showed a decided increase, being \$6,205.93 in 1901 against \$5,186 in 1900. The profits earned in 1901 were \$257,511.35 against \$264,999.04 in 1900, showing a decrease of \$7,487.69. Added to the profits for the year (\$257,511.35) were \$51,899.04 brought forward from the previous year, giving a total for distribution of \$309,410.39, of which the following disposal was made:

Dividend at 5 per cent.....	\$175,000.00
To reserve fund.....	13,000.00
To doubtful debts.....	63,402.63
To fees of bond.....	27,166.31
To new account.....	30,841.45
Total.....	309,410.39

RAILWAY BETWEEN TAMPICO AND MEXICO.

Consul S. E. MAGILL, writing from Tampico under date of April 24, 1902, states that the Mexican Central Railway Company is building a railroad connecting Tampico with the City of Mexico, and that the company, after a number of careful surveys, has selected a route that is only 60 kilometers (37 miles) longer than the shortest line from Veracruz to the capital. The work of construction will be begun within 60 days and rapidly pushed to completion. This road means much for Tampico in its rivalry with Veracruz for commercial supremacy. Tampico now leads in the combined value of the exports and imports, in the tonnage of imports, the vessel tonnage, and in the value of the exports. Veracruz, on the other hand, holds first place in the value of the imports and in the amount of duty collected. With a direct route to the City of Mexico of less than half the length of the present line, Tampico would, no doubt, capture a considerable amount of the imports now shipped via Veracruz.

SHIPMENT OF MERCHANDISE.

The following suggestions and instructions published in "Dun's Review" for May 31, 1902, regarding the shipment of merchandise from the United States to Mexico are of interest to all manufacturers having business relations with that country:

"I. Packages of merchandise must contain only one mark and number in order to facilitate identification. When packages bear marks and numbers other than appear on consular invoice and manifest, a fine will be imposed on shipper, not to exceed \$1 for each package

found in this condition. In this case the inscription or address of the factory which may be found stamped uniformly on the packages is not to be considered as mark, but the initials, figures, and numbers by which each shipper can be distinguished from all others.

“II. Shippers should state gross and net weight and value of each package, even when the entire shipment is made of one class of goods. In case there should be different articles in one package, great care must be taken to give net weight, legal weight, and value of each article; also its classification in accordance with the provisions of the customs tariff. Weights, etc., should be stated in terms of the metric system.

“III. A great difference exists between net weight and legal weight. Net weight represents the intrinsic weight of the merchandise itself, while legal weight includes all kinds of interior packing, such as boxes of paper or light wood, bottles, flasks, vials, jugs, etc., directly containing the respective articles, and packed with the same in a large case. The customs tariff states plainly when duties are to be charged on net weight and on legal weight.

“IV. When several boxes, bundles or packages are strapped or bound together, so as to form a single package, the weight and number of each should invariably be stated, in addition to the gross weight of the package as a whole. An exception, however, is made to the above in the case of articles in bulk, which usually come bound together, such as iron bars or sheets, staves, or other similar effects.

“V. When shipping oils, and other like goods, which generally come in large cases, the number of cans contained in each case must be stated.

“VI. In dry goods, the exact length and width of each piece, as well as the texture and kind of material (whether mixture, or wool, cotton, or linen), must be expressed, as well as the gross and net weight of each package, and the weight of each article. The measurement of handkerchiefs, towels, etc., must be stated in square inches. The number of threads of warp and wool in a square of half a centimeter should be stated when shipping “*rebozos*,” or their imitations (Mexican scarfs or shawls) of cotton, hemp, wool, or silk, or a mixture of any of the materials above named.

“VII. When shipping drugs, care must be taken not to use flasks or vials bearing a label varying from the actual contents, as in such cases duties will be collected on the article subjected to the higher rate.

“VIII. All articles, even when imported with machinery and forming part thereof, but which can be put to another use than that for which they were designedly imported, must pay the duty as set forth in the tariff. Under this head are included bolts and nuts (except in very small quantities); iron, round, flat, octagonal, or square; oils; textures of wool and other material; skins, tanned or untanned, etc.

“IX. Extreme care should be taken to give the exact number of packages shipped. Any excess over the number specified in the manifest will incur heavy penalties, which are always rigidly enforced.

“X. When shipping crockery or glassware, care must be taken to state whether the same is plain, or with mountings or ornaments of metal, and if such metal be gilt or plated. When plain, such articles pay a lower rate of duty, hence the necessity of proper specification as above, and of giving separately the respective weights of each kind.

“XII. When shipping goods in bond, the proper entry must be made at the custom-house or port of shipment, so as to allow of the importation into Mexico without making new entry at the United States custom-house at the frontier.”

PETROLEUM DEPOSITS.

In a report to the State Department of the United States, Consul P. MERRILL GRIFFITH, at Matamoras, under date of April 26, 1902, says: “In view of the scarcity of fuel in Mexico, the exploration and exploitation of oil lands is attracting considerable attention in this country. The recent discoveries at Beaumont, Texas, have given rise to the hope that oil in paying quantities will also be found in Mexico. Very favorable indications of its presence have been discovered at several places, and liberal concessions for the development of petroleum deposits on national lands have recently been granted by the Federal Government to prospectors.

“Almost certain indications of the existence of petroleum are to be seen in many States, and especially in Tamaulipas, where in places there is an abundance of asphalt, sulphur, and oil on the surface. Besides these signs, some of the topographical features, according to the opinion of an expert engineer and oil prospector, are due to the great pressure of the confined natural gas beneath. It seems, as a result of powerful erosive action during past ages, that the upper strata of earth, which served as a protection, were broken up and removed, after which the pressure of the gas below was sufficient to cause a local upheaval. Through the seams thus formed the oil, deprived of its lighter gases, escaped in the form of very heavy oil and asphaltum. In most cases the exudation does not consist of any one substance in a paying quantity, but passes through all the grades, from an inferior, dark-colored oil to massive asphaltum rock, as hard as flint. There are also other equally encouraging indications of an abundance of gas and oil in the shale below.

“Several companies, formed principally with United States capital, have been organized in order to prospect and drill for oil in Mexico. The Mexican Petroleum Company has invested extensively and is now operating in the district west of Tampico. The Mexican National Oil and Development Company, recently organized under the laws of

New Jersey, with a capital of \$1,000,000, has had its charter filed in Mexico. This company has secured valuable leases embracing over 1,000,000 acres of land, and will soon begin drilling a series of wells throughout the central part of the State of Tamaulipas. Its office is at Monterey.

"Should an abundance of fuel oil be discovered in Mexico, one can scarcely conjecture the beneficial effect it would have upon her commercial and industrial development."

RUBBER PLANTING AND CULTURE.

The "India Rubber World" for May, 1902, publishes information concerning the various plantations in Mexico interested in the planting and cultivation of rubber trees, stating that they have, on the whole, made steady progress since their inception. Much preliminary development work has been done, a considerable amount of rubber has been planted, and a great number of rubber nurseries are in existence or are being planned for the coming season. It is the reasonable anticipation of the managers of the companies that rubber can be cultivated profitably under right conditions and proper methods of exploitation.

Following are the names and status of some of the important companies engaged in this form of enterprise:

The Imperial Plantation Company, incorporated under the laws of Maine, United States, with \$3,000,000 capital, and owning 3,000 acres on the Cazones River in northern Veracruz. It is purposed to plant 250,000 rubber trees this year with "short crops" on a portion of ground, besides which considerable space will be devoted to tobacco, it being intended that the tobacco crop shall afford dividends while the rubber is developing. The Laguna Chica Plantation Company was organized and commenced operations in October, 1901, in the State of Veracruz. There are now reported to be in bearing 225,000 coffee trees (second crop) and 50,000 pineapples, besides 500,000 banana plants, and lemons and oranges. The company has not as yet attempted to cultivate rubber plants, as further developments in this line are being awaited. The company is capitalized at \$300,000, of which \$200,000 has been placed. La Trinidad Mexican Plantation Association owns 1,400 acres in the State of Veracruz, the total cost of which was \$16,200, gold. On the "Ixtal" estate, embracing 1,000 acres, 40,000 trees are being grown, ranging from 1 to 5 years of age and covering about 75 acres of land. The cost of planting and caring for these trees is estimated at about \$22,875. On the same tract, at the beginning of 1902, were 30,000 rubber plants in nurseries, and on "La Trinidad" there were 70,000, since which time 15,000 additional plants have been transplanted on the Ixtal estate, mainly on land planted in corn and beans.

It is planned to begin tapping the trees when they shall be 6 years old. A good income is anticipated from the sale of rubber seed (*Castilloa elástica*) to other planters. The yield of seed this year is estimated at 4,000 pounds, part of which is under contract for shipment to India, at \$1.13½ per pound. The Isthmus Plantation Association of Mexico is situated in the State of Oaxaca, and clearing was begun in the natural forest in February, 1900, since which time 1,271 acres had been cleared up to February 28, 1902. Coffee planting began in August, 1900, and there are now 191,335 trees, some with natural forest shade and some among rubber trees. From the first rubber planting, in June, 1900, there are 4,242 trees, from 8 to 15 feet in height, and from the planting of 1901 there are 41,678 trees, a total of 45,920. The nurseries contain 315,000 coffee and 40,000 rubber plants. About 1,200 cacao plants have been set out and the corn grown last year was sold for \$7,149. The Jumiapa Plantation Company, situated in the State of Oaxaca, states in its first annual report (1901) that 125 acres were cleared for coffee and 60,000 plants set, and 100 acres cleared for planting coffee and rubber. The nurseries contained at the beginning of the year 1902: Coffee trees, 200,000; rubber, 50,000; cacao, 15,000; orange, 10,000, and new nurseries will be made during the year.

Numerous other companies are engaged in rubber culture throughout the Republic, on tracts ranging from 500 to 4,000 acres, all of which are in various stages of development, both as regards the primary object of the plantations and also in respect to the secondary or subsidiary growing of coffee, corn, cacao, vanilla, and other "short crops."

COAL MINING IN SONORA.

The "Mexican Economist" states that the San Marcial coal mines, in the State of Sonora, will soon be exploited on a large scale. Tunnels have been opened and the mines placed in a condition to produce 150 to 200 tons of coal daily. In order to facilitate the handling of this coal, a branch railway is being constructed from the main line of the Sonora Railway to the San Marcial mines, and early in July next it is proposed to begin large shipments of coal consigned to cities in the interior of the Republic.

NAVIGATION CONCESSIONS.

The Tabasco-Chiapas Trading and Transportation Company has been granted a concession by the Mexican Government for the establishment of navigation between the Gulf ports of Veracruz, Coatzacoalcos, and Frontera and one or more ports of the United States, South America, and Europe. The company is also obligated to engage in the coastwise trade between the ports of the Gulf of Mexico. The

contract is in force from the date of its promulgation and will continue in effect for a period of ten years, after which time it may be renewed for ten years longer at the mutual request of the parties in interest.

NEW TANNERY AT AGUASCALIENTES.

The State of Aguascalientes has granted a concession for the establishment of a tannery at Aguascalientes. The concessionaries, Messrs. GARIA, CHAVEZ, and QUIRIN agree to invest at least 50,000 *pesos* in the new plant, and to commence operations within a year from the date of the contract. The capital, plant, and products of the company are exempt from all State and municipal taxes for a period of ten years.

ARBITRATION TREATY BETWEEN MEXICO AND SPAIN.

The "*Diario Oficial*" has published the text of a treaty celebrated between the Government of Mexico and that of Spain, in virtue of which the two countries agree to submit to the decision of arbitrators all the disputes that may arise between them and which they are not able to settle in an amicable manner, provided that, in the opinion of the contracting States, said controversies do not affect the independence or national honor of the signatory powers. The treaty will continue in force for ten years from the date of the exchange of the respective ratifications.

MINING COMPANIES IN DURANGO.

According to official data recently published in "*La Evolución*," of Durango, the State of Durango has 1,846 mines, covering an area of 10,260 hectares, distributed as follows:

District.	Number of mines.	Hectares.
Durango.....	46	324
Nombre de Dios.....	13	88
Santiago Papasquiaro.....	81	346
San Dimas.....	36	210
Tamazula.....	74	402
San Juan del Río.....	267	2,046
El Oro.....	111	1,076
Nazas.....	29	398
Cuanacame.....	294	2,093
Mapimi.....	136	1,842
Inde.....	64	495
Other districts.....	695	940
Total.....	1,846	10,260

RAILWAY CONCESSION IN SONORA.

The Mexican Government has granted a concession to the Mexican Anthracite Coal Mining Company for the construction of a railway from Cananea, in the State of Sonora, to Imuris, or some other station of the Sonora Railway. The preliminary survey must be commenced within six months. The concessionnaire agrees to complete 10 kilometers of the line within eighteen months; at least 15 kilometers more

within the following year, and the entire line within a period of time not exceeding six years. The gauge of the road is to be 1 meter 435 millimeters. The general office of the company will be in Guaymas. At the termination of the concession, on the expiration of the ninety-nine years for which it is granted, the property reverts to the Government.

MISCELLANEOUS NOTES.

The Mexican Consul at Cardiff, Wales, has reported to the National Government that a new market for Mexican tamarinds is to be found in Cardiff, and urges that samples be sent thither. He affirms that, should the tamarinds prove equal in quality to those received from Brazil, a large demand will arise for their use in the manufacture of dental washes and other medicinal preparations. Leaves and fruits have on several occasions been furnished to firms in Paris with satisfactory results.

The Mexican International Railway is extending its line to Papasquiari, Tepehuanes, and Santa Catarina, in the State of Durango. The extension will be 56 miles long, and when completed will give the International Railway a total trackage of 220 kilometers in the State of Durango.

The town of Mezquital, State of Durango, is preparing to make a fine exhibit of cereals, fruit, woods (both cabinet and building), specimens of minerals and other products of the district, at the local exposition which will soon be held at Durango. This district is one of the least developed in the State.

Pennsylvania capitalists are contemplating the erection of a shoe factory at Linares or Montemorelos, on the Mexican Gulf Railway, in the State of Nuevo Leon. The plans of the company will necessitate the investment of 500,000 *pesos*. The machinery will be purchased in the United States.

The Mexican Government has granted the American Smelting and Refining Company the privilege of importing 5,000,000 ounces of silver to be coined at the Government mint. The silver consists of silver bullion and will be allowed to enter Mexico free of duty.

The International Bureau of the American Republics has received information from the Consulate-General of Mexico in New York that, owing to the absence on leave of Señor Don JUAN N. NAVARRO, Consul-General, the affairs of the Consulate will be under the direction of Vice-Consul Señor Don A. LEÓN GRAJEDA.

The inspector of public highways in the State of Sinaloa, having completed a minute inspection of some of the most important roads, will render a report to the State Government recommending improvements and extensions.

The commission of Yucatan, in charge of the collection of exhibits to be sent to St. Louis, has established agencies in all the districts of the State.

The commission appointed by the State of Queretaro is actively at work preparing an exhibit which will be sent to the Exposition at St. Louis.

At Mineral Station, Chihuahua, the Torreon smelter will establish sampling works, a site for the erection of which has been purchased.

NICARAGUA.

ACQUISITION OF PUBLIC LANDS.

[Diario Oficial Managua, September 27, 1901.]

The President of the Republic, considering that in the tract of lands which are not denounceable in the Atlantic littoral there exist numerous farmed lands which the Government is in duty bound to advance and protect, for the security of landed property and to facilitate the acquisition of the right of possession of these lots of land, in conformity with the decree of July 6, 1899, resolves:

“ART. 1. To allow the actual possessors of public lands in the tract which has not been denounced in the eastern coast of the Republic to acquire the right of property of the lots which they have cultivated or marked off.

“ART. 2. The petition shall be filed before the governors of Bluefields or of Cabo de Gracias á Dios, according to the jurisdiction in which the land may be located, within precisely three months from the date of the publication of the present resolution, the petitioner being obliged to express in his petition the boundaries, the kind of agricultural pursuits in which he has engaged, and the number of *manzanas* cultivated.

“ART. 3. The officials referred to will secure information from two suitable witnesses to prove whether the land has really been cultivated or marked off, and when this information is complete they will order it to be published by proclamations, inserting one in the newspaper of Bluefields. In case that there has been no opposition, after twenty days have elapsed they will award the land to the party interested, who must previously deposit its value in the corresponding subtreasury within the eight following days, complying with everything else relating to the agrarian law in force until they obtain the grant of the title.

“ART. 4. After the term referred to in article 2 has elapsed, or the eight days to which the foregoing article makes reference, and the deposit has not been made, the possessors will be considered as lessees and will pay annually, in advance, the rent hereinafter expressed.

“ART. 5. The governors of Bluefields and of Cabo de Gracias shall

appoint engineers who will form the registry of the survey of lands, which in future may be possessed by lease according to this enactment; the expense of measurement and marking off of each lot being payable by the interested parties.

“ART. 6. While the measure is being made said officials shall procure information, by means of witnesses, to ascertain which lots of cultivated or marked-off land have not been procured by right of title according to article 2, and the approximate extent of each one of them. Having obtained full information in regard to this matter, they shall notify the possessors that they are considered as lessees, cautioning them in the same act that they have to deposit the value of their lease within fifteen days. When a possessor of public lands be considered as lessee because he has not paid the deposit within the eight days referred to in article 3, the term for the payment of the lease will be reckoned from the following day after the expiration of the eight days.

“ART. 7. If after the measure has been made it is ascertained that the number of *manzanas* is in excess of that which has served as a basis to fix the rent, the parties interested shall pay the difference in the Subtreasury; and in case of excess it shall be discounted in the ensuing payments.

“ART. 8. If, after the possessors have been notified that they are lessees, any one of them contends right of property or any other real right to the land and appeals or brings up opposition without presenting a title in due form and registered, he is obliged to accompany a certification of the deposit of the value of the rent to get a hearing.

“ART. 9. The price of each *manzana* will be the following:

If it is suitable for breeding live stock	\$5.00
If suitable for agriculture	8.00
If suitable for agriculture and comprised in a zone 2,000 <i>varas</i> broad along the margins of navigable rivers for large vessels	10.00
For each <i>manzana</i> of irrigable land \$2 in excess will be paid.	

“ART. 10. The value of the lease will be:

For each <i>manzana</i> of land suitable for grazing live stock.....	1.50
For each <i>manzana</i> of land suitable for raising live stock or for agriculture	2.50
For each <i>manzana</i> of land suitable for raising live stock, if it is comprised in a zone 2,000 <i>varas</i> broad along the margin of navigable rivers for large vessels.	3.00

“ART. 11. The governors of Bluefields and of Cabo de Gracias á Dios will at once notify the department of finance each time that a petition is filed before them according to article 2, and of the acts they may issue, considering as lessees the actual possessors of land according to article 6, expressing in either case the limits, the kind of agricultural pursuit, and the number of *manzanas* of the lot.

“Be it communicated.

“ZELAYA, R.,

“*The Minister of Finance.*

“MANAGUA, *September 20, 1901.*”

ESTIMATE OF THE COFFEE CROP.

United States Consul C. DONALDSON reported to the Department of State, from Managua, on March 25, 1902, that the crop of coffee now nearly gathered is the largest ever produced in Nicaragua. The greatest increase has been made in the Department of Matagalpa, where many planters from the United States have recently settled, and whose young plantations are just beginning to bear a full crop. It is calculated that they will have about 50,000 sacks, which is over double the production of last year in that Department. The older plantations in the Department of Managua, Carazo, and Granada, adds the Consul, are also giving a large crop, and it is estimated that altogether the whole country will produce about 300,000 sacks, equal to 30,000 000 pounds, valued at about \$3,000,000.

PARAGUAY.**MESSAGE OF VICE-PRESIDENT CARVALLO.**

On April 1, 1902, the Vice-President of the Republic of Paraguay, as representative of the Chief Executive, delivered an important message to the Congress, in which he sets forth, among other details, the fact that the nation is enjoying a period of profound peace, which it was the policy and intention of the Government to prolong, so that the efforts of the people in the development of the latent industries of the country might not be checked or delayed, but, on the contrary, that every incentive might be offered for accelerating and encouraging the material progress and development of the Republic.

The conditions requisite for increasing the commercial and industrial activity of the nation were never brighter than at the present time, notwithstanding the fact that the economic status of the country is not as favorable as might be desired; still the Executive is of the opinion that under a wise and conservative administration, such as the present, a future full of hope and promise for the ultimate welfare and prosperity of the Republic in the respective departments of commerce, legislation, and finance may be anticipated. National production, and especially agriculture, continues to increase, although not so rapidly nor on so large a scale as might be expected when one takes into consideration the favorable conditions existing in the Republic for the exploitation of this industry, as well as the fertility of the soil throughout the entire national domain. One of the greatest obstacles to the rapid development of the agricultural resources of Paraguay is the lack of sufficient capital to carry on operations upon a large scale, and with which to secure the necessary agricultural machinery for the cultivation of the fields and plantations, many of which lie idle and

untouched, due not so much to the lack of labor as to the want of funds with which to properly develop and cultivate them.

The educational facilities of the Republic advance from year to year, and the proportion of uneducated persons diminishes yearly. The Government continues to take, as always, the liveliest interest in the cause of education, and earnestly endeavors in every way possible to encourage and promote it.

Referring to the foreign relations of the nation, the Vice-President states that the Republic is at peace with all the world. The troublesome boundary question with Bolivia is in a fair way, it is hoped, to be settled in an equitable and amicable manner, and to the entire satisfaction of both nations.

The domestic affairs of the nation remain in a satisfactory condition, and the inhabitants of the Republic continue to devote their time and energies to the performance of their accustomed duties and occupations. Abundant crops have been harvested, and the live-stock industry is in a flourishing condition, the foot-and-mouth disease, which appeared in some sections during the year in a mild form, having entirely disappeared.

Commerce, generally speaking, has prospered throughout the country. Incomplete data collected up to the present time show that during the year 1901 there were established in the capital of the Republic 160 commercial and industrial establishments. The total approximate commerce during the time mentioned, according to the latest data obtainable, was as follows: Commercial transactions, \$67,242,437; industrial operations, \$139,047,095; live stock, 2,953,757 head. During the year 1901 112,650 hectares of agricultural lands were under cultivation, the total production of which aggregated 1,381,126,421 kilograms of farm products, such as maize, manioc, beans, peanuts, sugar cane, cotton, rice, coffee, tobacco, etc.

The receipts of the Central Railway during the year rose to \$1,838,-600.96. During the same period the Post-Office Department sent 97,044 telegrams and handled 2,099,640 pieces of mail matter.

Attention was called to the fact that Paraguay is the only South American Republic that has not a diplomatic representative near the Government of the United States of North America, and bearing in mind that American capital is now seeking investment in Paraguay, and for the purpose of stimulating and developing as much as possible the commercial relations between the two countries, the Government of Paraguay has decided to establish a legation at Washington, the representative of which will be Señor Don ALEJANDRO AUDIVERT. For the same reasons enumerated in the foregoing, Paraguay will also establish a legation near the Governments of Chile, Bolivia, and Peru, and has appointed Señor Don JUAN COGORNO as Envoy Extraordinary and Minister Plenipotentiary near the Governments of those States.

The revenues of the Republic in 1901 amounted to \$11,412,746.98, as compared with \$9,856,063.02 in 1900, and were made up as follows:

Custom-houses	\$9, 930, 348. 41
Internal taxes	1, 220, 246. 97
Posts and telegraphs	181, 128. 85
Real estate	10, 736. 40
Mortgages	4, 980. 10
Direct taxes	65, 306. 25
Total	11, 412, 746. 98

The movement of imports and exports during the same period was \$5,532,964.42, made up of imports to the amount of \$3,003,657.83, and exports aggregating \$2,529,306.59, or an excess of imports over exports of \$474,351.24 in 1901.

The public debt of the Republic on December 31, 1901, was \$4,787,077.86 gold the internal debt on the same date being \$827,300.

PERU.

TRADE OF CALLAO, 1901.

Minister I. B. DUDLEY transmits from Lima, April 17, 1902, to the Department of State of the United States, copies of an official statement showing the value of importations during the calendar year 1901, through Callao, the principal port of Peru. Imports in 1901, according to countries of origin, were:

Country.	Value.	
	<i>Soles.*</i>	
England	6, 897, 607	\$3, 359, 132
United States	4, 069, 056	1, 981, 630
Germany	3, 245, 267	1, 580, 445
France	1, 426, 932	694, 916
Italy	959, 905	467, 474
Belgium	871, 481	424, 411
Australia	698, 414	340, 128
China	694, 696	338, 317
Chile	439, 173	213, 877
Spain	188, 149	89, 629
Central America	92, 703	45, 146
India	46, 762	22, 773
Ecuador	31, 038	15, 116
Other countries	86, 671	42, 209
Total	19, 747, 854	9, 615, 203

The following table shows the values of the classes of imports in 1901:

Article.	Value.	
	<i>Soles.*</i>	
Cotton	2, 987, 211	\$1, 454, 772
Wool	1, 568, 282	763, 753
Linen	188, 409	91, 755
Silk	448, 440	218, 390
Furniture	1, 265, 819	616, 454
Fancy articles	8, 867, 621	4, 221, 132
Provisions and groceries	3, 231, 392	1, 573, 688
Wines and liquors	321, 695	153, 665
Drugs and chemical products	804, 661	391, 870
Specialties	64, 327	31, 327

*1 Peruvian sol = 48.7 cents,

MISCELLANEOUS NOTES.

MESSRS. GARLAND and READ, acting for a British syndicate, have purchased for £150,000 the Morococha mines in the Yauli district. These mines are reputed to be as good as those of Cerropasco.

The Peruvian Government, in a decree dated March 14, 1902, prohibited the importation into the Republic of articles of food preserved with boracic acid.

SALVADOR.
MESSAGE OF PRESIDENT REGALADO.

On May 1, 1902, the President of the Republic of Salvador delivered an interesting message to the National Congress, in which he stated that the political, economic, and social affairs of the nation were in a satisfactory condition and that peace and tranquillity reigned throughout the land.

The Chief Executive refers in the most laudable terms to the results obtained by the holding of the Second International Conference of American States, the Second Judicial Central American Congress, and the Conferences of the Presidents of the Central American States.

Discussing the foreign relations of Salvador with the rest of the world, President REGALADO notes the fact that the diplomatic relations between Salvador and the United States, as well as those existing between all the countries of the Old and New World, remain unchanged, bound together, as it were, by closer bonds of friendship and good will than have ever existed before. Special reference is made to the Republic of Mexico, the Chief Executive saying that, "The Government of Mexico, in addition to having our sympathies for its repeated proofs of frank and cordial friendship, has also our profound thanks." The Government of Chile has shown its confidence and sympathy by establishing a first-class legation near the five Central American Republics.

The Department of Posts and Telegraphs is in a satisfactory condition, and a marked increase has taken place in the business done in this branch and also in the character of the service performed.

In January last work was begun on the Union Railway, the plans having been previously approved by the Government, and in due time this important iron highway, now in course of construction, will be added to the railway system of the Republic.

During the past year the cause of education has received the especial attention of the Government. The number of teachers assigned to the primary schools has been considerably increased, and a notable improvement has occurred in the general efficiency of elementary instruction. Interest in the higher seats of learning has not waned,

and the colleges and universities of the nation continue to be largely patronized and ably managed.

The President's message contains a lengthy exposition of the finances of the country, in which it appears that the receipts of the nation from taxation in 1901 amounted to \$6,556,721.56, made up of the following items:

Customs duties.....	\$4,168,564.59
Tax on liquors.....	1,814,761.99
Sundry taxes.....	315,283.14
Telegraphs, post-offices, etc.....	258,111.84
Total.....	6,556,721.56

In 1900 the revenues from the same sources were \$6,337,729.06, or \$218,992.50 less than those collected in 1901. To the \$6,556,721.56 produced in 1901 from the sources mentioned above, there must be added \$1,133,958.17 proceeding from licenses, deposits, and moneys returned, which, added to the balance of \$135,084.67 on hand in the Treasury at the beginning of the year 1901, makes the total receipts for that year amount to \$7,825,764.40. The disbursements in 1901 were \$7,640,891.17, as is shown in the following table:

Legislative, executive, and judicial branches of the Government.....	\$4,378,948.31
Payment of different credits.....	3,197,956.09
Return of deposits and other expenditures.....	63,986.77
Balance December 31, 1901.....	184,873.23
Total.....	7,825,764.40

The public debt on the 31st of December, 1901, was as follows:

Bonds of Salvador, capital.....	\$5,561,562.68
Interests.....	515,325.93
Other bonds, together with interest.....	2,249,015.82
Total.....	8,325,904.43

The exports in 1901 were as follows:

	Exports.	Value in silver.
	<i>Sacks.</i>	
Coffee.....	326,588	\$8,308,466
Other products.....	90,574	2,647,579
Total.....	417,162	10,956,045

The imports during the same period consisted of 195,204 packages of merchandise, valued at \$2,615,150.64 gold, which, with exchange at 150 per cent, equals \$6,537,876.60 silver. Comparison with the value of the exportations during the same period shows a balance in favor of the latter of \$4,418,168.40.

MISCELLANEOUS NOTE.

FRANCISCO BOGEN, an old German resident of San Salvador, has made a contract with the Salvadorian Government for the establish-

ment of an automobile service, the vehicles to be run by alcohol power. Mr. BOGEN is to import all lamps and necessary apparatus for the service.

UNITED STATES.

TRADE WITH LATIN AMERICA.

STATEMENT OF IMPORTS AND EXPORTS.

Following is the latest statement, from figures compiled by the Bureau of Statistics, United States Treasury Department, showing the value of the trade between the United States and Latin-American countries. The report is for the month of April, 1902, with a comparative statement for the corresponding month of the previous year; also for the ten months ending April, 1902, as compared with the corresponding period of the fiscal year 1901. It should be explained that the figures from the various custom-houses, showing imports and exports for any one month, are not received at the Treasury Department until about the 20th of the following month, and some time is necessarily consumed in compilation and printing, so that the returns for the month of April, for example, are not published until some time in June.

FOREIGN COMMERCE IN APRIL, 1902.

The following figures, compiled by the Bureau of Statistics of the Treasury Department of the United States, show the condition of the general foreign trade of the Republic during the month of April, 1901 and 1902, as well as for the ten months' period ending April 30 of the two fiscal years under consideration. The classification of imports is as follows:

	April—		Ten months ending April—	
	1901.	1902.	1901.	1902.
Articles of food, and animals.....	\$19,858,324	\$15,466,694	\$183,099,207	\$168,201,815
Articles in a crude condition which enter into the various processes of domestic industry.....	27,844,640	30,643,028	215,689,939	273,804,176
Articles wholly or partially manufactured for use as materials in the manufactures and mechanic arts.....	7,244,893	7,221,029	65,111,468	74,852,885
Articles manufactured ready for consumption.....	10,402,110	11,778,182	113,024,958	123,342,206
Articles of voluntary use, luxuries, etc.....	11,348,164	10,719,545	99,201,233	112,321,935
Total imports of merchandise.....	76,698,131	75,828,478	676,124,805	754,523,017

The classification of exports is as follows:

	April—		Ten months ending April—	
	1901.	1902.	1901.	1902.
DOMESTIC.				
Products of—				
Agriculture	\$75,044,996	\$59,216,879	\$811,610,741	\$753,054,585
Manufactures	34,416,279	38,961,391	339,307,623	333,820,809
Mining	3,088,357	3,254,368	31,650,400	32,639,943
Forest	4,950,077	4,108,835	44,757,956	38,123,133
Fisheries	311,488	447,983	7,173,332	6,846,566
Miscellaneous	275,199	653,515	4,090,006	4,590,003
Total domestic	118,086,396	106,642,881	1,238,870,058	1,169,074,989
FOREIGN.				
Free of duty	1,430,407	1,259,879	10,496,835	11,113,020
Dutiable	1,237,387	1,270,723	11,355,924	9,972,988
Total foreign	2,667,794	2,530,602	21,852,759	21,086,008
Total exports	120,754,190	109,173,483	1,260,422,817	1,190,160,997

An examination of the details covered by this summary shows that manufacturers' materials formed one-half of the importations during the month of April, and in the ten months formed over 16 per cent of the total; while the exports of manufactures in the month of April formed 36.54 per cent of the total exports against 29.15 per cent in April, 1901, and for the ten months ending with April, 1902, they formed 28.55 per cent of the total exports as compared with 27.40 per cent in the corresponding months of the preceding fiscal year. The total value of manufacturers' materials imported in the ten months ending with April this year is \$348,657,061, as against \$280,801,407 in the corresponding months of last year, an increase of \$67,855,654, or 24 per cent. Exports of manufactures, it will be observed, are nearly overtaking those of last year, the gain in the month of April alone being \$4,500,000 over April, 1901, while for the ten months the total value of manufactures exported falls but \$5,486,814 below that for the corresponding months of last year. Manufactures formed considerably more than one-third of the exports in the month of April, having formed 36.54 per cent of the total, against 29.05 per cent in April, 1901, while for the ten months the percentage which manufactures form of the total exports is higher than in any preceding year except 1900.

In imports of manufacturers' materials the growth is found in almost every important class of articles. Comparisons, in round numbers, show the following results in 1901 and 1902: Chemicals, which are largely used in manufacturing, show a growth from \$44,500,000 in the ten months of last year to over \$48,000,000 in the ten months of the present fiscal year; raw cotton, from 39,000,000 to 87,000,000 pounds; copper ore, from \$8,000,000 in value to over \$12,000,000; fibers, for use in manufacturing, from \$18,000,000 to \$25,000,000; hides and skins, from

\$37,000,000 to \$49,000,000; raw silk, from \$23,000,000 to \$36,000,000; tin, from 59,000,000 to 64,000,000 pounds; leaf tobacco, from 12,000,000 to 15,000,000 pounds; wool, from less than \$10,000,000 to over \$15,000,000, and wood from \$12,000,000 to \$15,000,000.

On the export side the largest increase in manufactures is in cotton goods, which in the present fiscal year will exceed by 25 per cent the figures of any preceding year. For the ten months ending with April the total exports of cotton manufactures were \$26,436,379, and for the single month of April were \$3,032,718, indicating that for the full fiscal year the total will exceed \$30,000,000. The highest figure in exports of cotton manufactures ever reached in any preceding year was \$24,003,087, in 1900.

A comparison of the figures of the present fiscal year with those of the earlier part of the past decade shows that the exports of cotton manufactures have doubled since 1895. Prior to that year their total value had never reached so much as \$15,000,000. In 1897 the total value of cotton manufactures exported was \$21,000,000; in 1899, \$23,000,000; in 1900, \$24,000,000, and in 1902 will, as above indicated, exceed \$30,000,000. This increase is chiefly in cotton cloths, and a large proportion of the growth is in exports to China. Exports of cotton cloths to China have more than doubled since 1900, the total for ten months having advanced from 164,000,000 yards in 1900 to 372,000,000 yards in 1902. The total exports of manufactures, as already indicated, have nearly overtaken the figures of last year, and for the full fiscal year seem likely to be quite as large as those of last year. The exports of domestic manufactures for the ten months total \$333,820,809, against \$339,307,623, a decrease of \$4,500,000; while the fact that April alone made a gain of \$4,500,000 over April of last year indicates that the fiscal year 1902 will probably equal the record of 1901. An analysis of the exports of manufactures indicates that the chief reduction is in iron and steel manufactures, and that there are marked increases in other lines. Iron and steel manufactures alone, chiefly by reason of the unusual home demand, fell \$16,000,000 below the exports of last year; while the fact that the total exports of manufactures are but \$5,500,000 less than those of last year indicates that in other lines of manufacture there has been a marked gain.

RECOGNITION OF LATIN-AMERICAN CONSULAR OFFICERS.

The Department of State of the United States has informed the International Bureau of the American Republics, under date of June 9, 1902, that the following foreign consular officers, accredited to Latin-American countries, have been recognized by the Government:

SERAFIN S. WITHERS, Consul-General of Ecuador, at New York.

EDUARDO VILLAR, Vice-Consul of Venezuela, at San Juan, Porto Rico.

THE MANUFACTURE OF RUBBER BOOTS AND SHOES.

United Census Bulletin No. 171, issued on May 20, 1902, contains a complete exposition of the conditions and advancement of the rubber boot and shoe manufacturing industry in the census year 1900, comparative statistics being also given for the two preceding decades. The following data is reproduced as of interest and value to the various rubber-growing countries of the International Union of American States:

"Although the rubber boot and shoe industry was successfully established in the United States prior to 1850, it was not reported as a separate industry until the census of 1880. At previous censuses it was reported together with rubber coats, druggists' supplies, and various other rubber sundries, under the general captions of india-rubber and elastic goods, and india-rubber goods. The growth and development of the industry during the past two decades has been constant, and in many respects remarkable, as is shown by the statistics presented in the following tables. Table 1 is a comparative summary of the returns for this industry from 1880 to 1900, inclusive:

TABLE 1.—*Comparative summary, 1880 to 1900, with per cent of increase for each decade.*

	Date of census.			Per cent of increase.	
	1900.	1890.	1880.	1890 to 1900.	1880 to 1890.

Value of products, including custom work and repairing	\$41,089,819	\$18,632,060	\$9,705,724	120.5	92.0

^a Includes proprietors and firm members, with their salaries; number only reported in 1900.

^b Not reported separately.

^c Decrease.

^d Not reported.

"The apparently abnormal increase in capital from \$2,425,000 in 1880 to \$17,790,970 in 1890, or 633.6 per cent, is probably due in part to the fact that a return of live capital was first called for at the census of 1890.

"Table 5 shows the cost of materials used in the manufacture of rubber boots and shoes, the cost of each item, and its proportion of the whole amount for 1900.

TABLE 5.—*Cost of materials, 1900.*

	1900.	
	Amount.	Per cent of total.
Total.....	\$22,682,543	100.0
Principal materials.....	22,223,946	98.0
Purchased in raw state.....	14,582,768	64.3
Purchased in partially manufactured form.....	7,641,178	33.7
Fuel.....	242,619	1.1
Mill supplies.....	123,869	0.5
Freight.....	92,109	0.4

The largest item is that reported for principal materials, or those which actually enter into the product. These are subdivided into materials purchased in a raw state and those purchased in a partially manufactured form. Materials purchased in the raw state are those upon which no manufacturing force has been expended, and consist chiefly of crude rubber. The cost of this class of materials was \$14,582,768, or 64.3 per cent of the total. Materials purchased in a partially manufactured form cost \$7,641,178, or 33.7 per cent of the total. This item includes reclaimed rubber, felt goods, chemicals, sheeting, and other necessary materials. It is impossible to estimate the exact quantity or value of reclaimed rubber used in 1900; many establishments included this item with the cost of all other materials, yet the fact that five establishments reported having used 2,971,806 pounds of reclaimed rubber, valued at \$337,371, shows it to be an important factor in this industry.

“Some establishments were unable to separate the amount paid for freight from the cost of materials, and reported the two together. For that reason the \$92,109 shown in Table 5 does not represent the actual cost of freight, and should be considered only in connection with the cost of materials. The amount paid for fuel, \$242,619, comprises that used for both motive power and heating purposes. Each establishment engaged in this industry produced its own power and heat. Mill supplies, including oil, waste, belting, tools, etc.—materials which do not enter into the product, but are necessary in the process of manufacture—cost \$123,869. The three items of fuel, mill supplies, and freight, together form but a small per cent of the total.

“Table 6 is an extract from the report on commerce and navigation issued by the United States Treasury Department, showing the entire amount of crude rubber imported into this country during the fiscal year ending June 30, 1900, and the countries from which it was exported.

TABLE 6.—*Quantity and value of total imports of crude rubber for the fiscal year ending June 30, 1900.*

Countries from which imported.	Pounds.	Value.

Hongkong.....	1,423	383

“During the year ending June 30, 1900, the total amount of crude rubber imported into the United States was 49,377,138 pounds, valued at \$31,376,867. Of this amount, 29,811,978 pounds, valued at \$18,831,082, were shipped from South America; 16,998,907 pounds, valued at \$11,231,915, from Europe; 1,922,179 pounds, valued at \$1,028,504, from North America; and 644,074 pounds, valued at \$285,366, from Asia. Of the total amount imported, 28,026,714 pounds, valued at \$17,876,121, or more than half, were received from Brazil, the chief rubber-producing country, shipments being made directly from Brazilian to American seaports. In the quantity of rubber furnished, Brazil is followed by the United Kingdom, Belgium, Portugal, Germany, and France, in the order named. From these six countries were received about nine-tenths of the importation of crude rubber for the year.

“Table 6 is not intended to show the source of the crude rubber used in this country, but rather the quantity received. Large amounts were shipped from nonproducing countries, while none whatever came from Africa to the United States direct. Table 7 shows that 4,917,281

pounds of African rubber, costing \$3,624,442, were used in the manufacture of rubber boots and shoes. This rubber reached the United States by way of other countries. The entire importation of crude rubber for the year, shown in Table 6, should be considered in connection with Table 7, which shows the quantity, value, and source of that used in the manufacture of rubber boots and shoes.

TABLE 7.—*Quantity and value of the imports of crude rubber used in the manufacture of rubber boots and shoes, 1900.*

Countries from which imported.	Pounds.	Value.
Total.....	17, 684, 657	\$14, 582, 768
Brazil.....	10, 891, 367	9, 638, 992
Africa.....	4, 917, 281	3, 624, 442
Central America.....	1, 858, 473	1, 304, 754
Asia.....	17, 536	14, 580

“Table 7 shows that in 1900 there were consumed in this industry 17,684,657 pounds of crude rubber, valued at \$14,582,768. A comparison of these figures with those of Table 6 shows that 35.8 per cent of the total quantity and 46.5 per cent of the total value of crude rubber imported during the year was used in the manufacture of rubber boots and shoes. Of the amount so used, 10,891,367 pounds, valued at \$9,638,992, came from Brazil; 4,917,281 pounds, valued at \$3,624,442, from Africa; 1,858,473 pounds, valued at \$1,304,754, from Central America; and 17,536 pounds, valued at \$14,580, from Asiatic countries.

“The aggregate value of the products of this industry during the census year was \$41,089,819. There were produced 49,979,229 pairs of rubber boots and shoes of all kinds, or more than one pair for every two persons in the United States, the value of the output, including men’s, women’s, and children’s, being \$38,761,320.

“Table 10 is a comparative statement of the exports of rubber boots and shoes for 1890 and 1900, giving the number of pairs, their value, and the countries to which they were exported, as shown in the reports of the Bureau of Statistics of the United States Treasury Department.

“While rubber is produced in South America, Central America, Africa, Asia, and many tropical islands, the best quality is that known as Pará rubber, which derives its name from the seaport whence it is exported. This is abundantly produced in the moist, warm regions of the Amazon River, where the annual rainfall is about 7 feet and inundations are frequent. Authorities are divided as to the species of rubber-yielding tree which produces the best quality of rubber, some claiming that it is the *Hevea guyanensis* (also called *Siphonia elástica*),

while others designate *Hevea brasiliensis* (also called *Siphonia brasiliensis*) as the actual rubber tree. The milky sap of the rubber plant is obtained by either tapping or felling the tree, and the juice, when collected, is prepared for export in various ways. The best and most practical way of preparing the rubber for market is that used in the preparation of Pará rubber, and has much to do with its superior quality. This is known as the process of fumigation. A fire of brushwood or palm nuts is kindled, and over it is placed a clay funnel. The *seringueiro* or rubber gatherer dips a paddle-shaped stick into his gourd of milky sap, then holds it in the dense smoke issuing from the funnel until the latex acquires sufficient density. This process is repeated, adding layer after layer, until the mass on the end of the paddle reaches the desired thickness, when it is slit up, and, after drying in the open air, is ready for market. By this process a good workman can cure 5 or 6 pounds of rubber in an hour.^a

“The first importations of rubber into the United States did not come as articles of commerce, but were brought here by sailors as a curious product of tropical lands. No particular commercial value was placed upon ‘gum elastic,’ as it was called, and it could readily be purchased at 5 cents a pound. In the year 1823 a Boston sea captain, returning from a tropical voyage, brought with him a pair of gilded rubber shoes, which, though heavy and awkward, aroused general interest because of their imperviousness to water. A few years later several hundred pairs of these rubber shoes, without the gilding, were brought into this country and readily sold at prices ranging from \$3 to \$5 per pair. The low cost of crude rubber and its relatively high value when made into shoes soon suggested to enterprising minds that considerable profit could be realized from the manufacture and sale of rubber goods, and both in the United States and Europe attention was given to the study and development of this product of the tropics. In 1831 Mr. Chaffee, a manufacturer of leather goods in Roxbury, Massachusetts, discovered that crude rubber dissolved in spirits of turpentine and combined with a quantity of lampblack would produce a varnish which would give to leather or cloth a surface smooth, hard, and impervious to water, and in 1833 the Roxbury India Rubber Company was organized to place this discovery upon the market. This is said to have been the pioneer company in the American rubber trade. The manufacture of rubber goods offered so broad a field for development that others followed the lead of the Roxbury company. Several millions of dollars were invested in this new industry, and a large and profitable business seemed assured. But the rubber problem had not been solved. Hardly had the product of these factories been placed upon the market when it was discovered that for practical purposes it was almost useless. In warm weather the rubber melted and became

^a India Rubber, Gutta-percha, and Balata; WILLIAM T. BRANNT, pp. 7-37.

sticky, and when exposed to cold it became brittle and cracked. The demand for rubber goods ceased, and large quantities which were on the market were returned to the manufacturers. Efforts to remedy this fault having proved unsuccessful the factories closed, and in 1835 the rubber industry was in a state of absolute collapse.^a

“Experiments were being carried on, however, simultaneously in the United States and in Europe, which were leading toward the correct solution of the rubber problem. In 1832 LUEDERSDORF, a German chemist, discovered that sulphur would deprive rubber dissolved in oil of turpentine of its stickiness. About the same time NATHANIEL HAYWARD noticed that flowers of sulphur scattered upon leaves of rubber weakened their adhesive power. No further development of this process seems to have been made by either LUEDERSDORF or HAYWARD, and it remained for CHARLES GOODYEAR to discover the method by which rubber could be put to practical use. To those who are interested in the manufacture of rubber the story of GOODYEAR’S discovery of the process of vulcanization is familiar. While surrounded by a small group of friends and neighbors to whom he was explaining his theories, based on the discovery of HAYWOOD, he accidentally overturned a small quantity of rubber and sulphur upon a hot stove. It was by this accident that the remarkable discovery was made that heat was the one thing needed to make rubber insensible to both heat and cold. With the key to the solution of the problem thus exposed the process of vulcanization was rapidly developed. GOODYEAR’S original method consisted in combining rubber with melted sulphur and heating the compound to about 300° F. A product similar to GOODYEAR’S was shortly afterwards prepared by HANCOCK by immersing rubber in melted sulphur heated to about 302° F., and allowing it to remain until thoroughly permeated. ALEXANDER PARKES, of Birmingham, discovered the process of ‘cold vulcanization,’ which is accomplished by means of chloride of sulphur; and GERARD has demonstrated that small thin articles can be vulcanized by the use of alkaline sulphur. But of all methods of treating rubber the most important and the one in most general use is that invented by GOODYEAR, which consists in mechanically mixing rubber and sulphur at a moderate temperature and subsequently curing the mixture by the use of superheated steam at a temperature ranging from 248° to 302° F.^b Color, softness, and other properties are given to rubber by the use of litharge, white lead, chalk, lampblack, and other materials.

“Vulcanized rubber possesses the following properties: It retains its elasticity at a temperature as high as 248° F. and as low as —22°

^a One Hundred Years of American Commerce; American Rubber Manufactures, by CHARLES L. JOHNSON, Vol. II, pp. 498–500.

^b India Rubber, Gutta-percha, and Balata; WILLIAM T. BRANNT, pp. 110–120.

F.;^a it can not be dissolved by ordinary solvents; it acquires extraordinary powers of resisting compression, with a great increase of strength and elasticity. Thus, by the process of vulcanization, the almost useless 'gum elastic' has been transformed into a useful article of commerce, and the field for further development seems almost unlimited.

"When crude rubber is imported into this country it must first of all be purified. The impurities either originate in the rubber itself or consist of pieces of bark, dirt, stones, or other substances which become mixed with the mass in course of preparation. In cleansing the rubber it is first softened by immersion in water heated by steam, where it is allowed to remain from three to twenty-four hours. The lump is then cut into slices, either by machine or by hand, and the larger impurities removed. The next step is that of rolling and washing, accomplished by passing the rubber between two massive iron rolls—usually corrugated—directly over the point of contact of which is an iron water pipe. The rubber is fed into this machine, ground and crushed by the rolls, while the water from the pipe directly above permeates the mass and washes away the small particles of bark, fiber, and other foreign substances. After the rubber has been repeatedly passed through these rolls it is placed in drying chambers, where it remains until entirely free from moisture, when it is stored away, in rooms protected from light and dampness until needed for further working.^b

"In the manufacture of boots and shoes the cleansed rubber is first ground and masticated. It then undergoes the compounding process by which it is mixed with the various ingredients, chiefly sulphur and litharge. After that it is rolled and pressed, the whole mass being kneaded into one homogeneous substance. The boots and shoes of the present day are not made of one solid piece of rubber as were those first brought into this country. The ordinary rubber shoe consists of seven or eight different parts, and twenty-three parts are necessary to make the rubber boot. The rubber which is to form the uppers is coated with a tricotie tissue by passing through a calender; that which is to make the soles is passed through another calender, from which it comes with the sole pattern marked out; and each of the other parts is prepared by being passed through the proper calender. From the sheets so formed the pieces are cut out, usually by hand, and cemented together over a smooth last. They are then varnished with asphalt lacquer and revulcanized for seven or eight hours at a temperature of 260° F. The product is then ready for the market. Another important feature of the industry is the process by which waste rubber is reclaimed and again used in manufacturing. This waste, which con-

^a India Rubber, Gutta-percha, and Balata; WILLIAM T. BRANNT, p. 5.

^b *Ibid.*, pp. 92-99.

sists of old rubber boots, shoes, belting, and innumerable other rubber articles, is first run through masticating machines, which reduce it to a powder-like mass. It is then passed over magnetic plates, by which all metallic substances are withdrawn, and by another machine the dirt is sifted out. The waste is next boiled in a vat with an acid solution, which destroys the fibrous matter, and after being washed in large tubs, is thoroughly dried and returned to the mills for refining.^a

"The manufacture of rubber boots and shoes, as it exists in the United States, dates its inception from the granting of the GOODYEAR patent in 1844; and from the very beginning to the present time the industry has shown a strong, steady development. This is noticeable not only in the quantity of goods produced but also in the style and quality of the product, which has been constantly improved, until to-day, considering shapes and sizes, fully 1,000 varieties of rubber boots and shoes are produced.^b One of the greatest improvements has been the lessening of the feeling of tightness and uncomfortable heat caused by the wearing of rubber shoes. In the early days of the industry rubber boots and shoes were classed as luxuries to be enjoyed only by the well-to-do, but with the assistance of new machinery and improved methods the product of this industry is now offered to the public at a price within the reach of all. The rubber shoe has demonstrated its usefulness and to-day is generally considered a necessity."

EXPORTS OF BEEF.

The "Boston Herald," in a statistical résumé of the beef exports of the United States, publishes the following data:

In the month of April the exports of cattle from the principal customs districts of the United States are given at 18,902 head, valued at \$1,648,942, against 35,368 head, valued at \$3,146,018, in April, 1901. Combining the four different exports of beef—that is, cattle, canned beef, fresh beef, and other beef—the exports in April, 1902, from the principal customs districts amounted to \$5,212,204, against \$6,729,230 in April, 1901, a loss of \$1,517,226. This loss came entirely from the exports of cattle and fresh beef, for there was a gain in the exports of canned beef and other forms of preserved beef.

April is the tenth month of the fiscal year, and these ten months may be considered as giving a fair measure of what may be expected in the figures for the whole year. In the first ten months of the fiscal year 1901 the exports of cattle and beef amounted to \$62,570,680, while in the first ten months of the current fiscal year the exports were but \$56,476,544, a decrease of \$6,194,136. The largest part of this

^a Rubber, W. E. SIMPSON, Wall Street Journal, October, 1900.

^b One Hundred Years of American Commerce: American Rubber Manufactures, by CHARLES L. JOHNSON, Vol. II, p. 503.

decrease was accounted for by the falling off in the shipments of cattle, which so far this year were \$5,257,273 less than in the corresponding period of 1901.

The decline in fresh-beef shipments in the ten months of 1902 amounted to \$1,605,673, and there was an increase of \$758,110 in the export of canned beef. Other forms of preserved beef showed a decrease of \$89,300. In considering these figures it should be remembered that the comparison is made with 1901, a record year. In 1901 the exports of cattle and beef were over \$12,000,000 more than the average for the previous four years. If the exports for May and June should continue on the same scale as the exports for April, the figures for the current fiscal year would be in excess of those for either 1898 or 1899, and almost equal to those of 1897 and 1900, so that, though there has been a decline, it has not been a phenomenally large one. New York stands first as regards cattle shipments, and, comparing April, 1902, with April, 1901, her shipments decreased \$361,500, while the shipments from Boston decreased \$348,440. The other two largest ports for cattle shipment, Philadelphia and Baltimore, lost, respectively, \$227,000 and \$187,000. In the ten months ending with April the cattle shipments from New York, contrasting the present with the previous fiscal year, declined only \$373,517, while the figures for Boston declined \$2,267,460; the figures for Baltimore, \$1,594,290, and the figures for Philadelphia, \$625,910. It will be seen that in exports of cattle New York has, during the current fiscal year, held well up to her figures for 1901, while there has been a very marked decline in the figures for Boston.

In the exports of canned beef, comparing ten months of the current year with the first ten months of the previous year, New York shows an increase of more than \$1,000,000, while Boston shows a decrease of \$472,269, the present figures standing \$254,411, against \$676,680 for 1901. In other words, while New York has almost doubled her exports of canned beef, Boston has lost very nearly two-thirds of hers. Philadelphia shows a gain in exports of canned beef over last year, while the figures for Baltimore have declined on something like the same ratio as those of Boston. In 1901 Boston was the fourth largest export port for canned beef, and it now drops to fifth place, while Baltimore, that was third in 1901, now drops to seventh, and New Orleans, that was eighth, advances to third. In the exports of fresh beef New York shows a gain this year over last, while Boston shows a loss of almost \$1,000,000. In the exports of salted, pickled, or other cured beef, New York, which does more than half the export business of the country in this line, has practically held her own, while the figures for Boston have dropped almost a third.

POSTPONEMENT OF THE LOUISIANA PURCHASE EXPOSITION.

Formal action for the postponement of the Louisiana Purchase Exposition to the year 1904 was taken on May 2, 1902, when the Secretary of State of the United States transmitted to the Senate a letter stating the necessity for an additional year in which to prepare the exposition. The reasons for the postponement exist in the fact that many foreign Governments would be unable to participate in the Exposition in a fitting manner if compelled to be ready in 1903. An amendment to the Sundry Civil Bill in the United States Senate provides for the necessary postponement, and arranges for the dedication of the buildings on April 30, 1903; for the opening of the Exposition to visitors not later than May 1, 1904, and for closing not later than December 1, 1904. The amendment also provides for the coinage of \$250,000 in gold dollar pieces, to be used as souvenir coins and to be part of the \$5,000,000 appropriated for the Fair by Congress.

SILK MANUFACTURE.

The figures published by the Census Bureau of the United States concerning silk manufacturing in the Republic from 1850 to 1900 show that the value of domestic manufacture of silk in the last six decennial census periods is steadily increasing.

In 1850 there were 67 establishments reported as engaged in the manufactures of silk goods. Their total product was valued at \$1,809,476, an average of \$27,007 for each establishment. In 1900 the establishments had increased in number to 483 and the value of the products to \$107,256,258, an average product of \$222,063 for each establishment.

The imports of raw silk in 1850 amounted to 120,010 pounds, valued at \$401,385, and it is probable that the total amount was consumed in the silk mills.

The imports of raw silk for 1900 amounted to 11,259,310 pounds, valued at \$44,549,672, exceeding those for any fiscal year of the Government.

During the fiscal years 1898 and 1900 there was imported an annual average of 10,421,872 pounds of raw silk, valued at \$35,941,178. In the census year 1900 there were consumed, in the manufacture of silk goods and silk braids and trimmings, 9,760,770 pounds of raw silk, costing \$40,721,877. Making allowance for the amount carried over as a raw material from year to year, and the considerable quantity used by the wool and textile industries, the consumption of raw silk as obtained for this report agrees closely with the quantities of the imports as reported by the Treasury Department.

During the year 1880 the manufactured silk goods of all varieties imported into the United States were valued at \$31,348,948 (foreign

value). The gross value of manufactured silk products for the United States for that year was \$41,033,045. In 1880 the value of the imports of silk manufactures was \$37,363,143, while the gross value of the domestic product was \$87,298,454. In 1900 these values were \$26,903,549 and \$107,256,258, respectively.

In 1860 the silk goods made in the United States as compared with the entire consumption was only 13 per cent. The percentage rose to 38 in 1880 and to 55 in 1890. In broad silk fabrics the domestic production in 1900 was 67.3 per cent of the total estimated consumption of such goods. The United States now produces 85 per cent of the annual consumption of silk ribbon, the value of imported ribbons representing only 15 per cent.

The classes of goods now principally imported from Europe are high novelties, handmade silk velvets, and handmade silk lace, which are not as yet made to any appreciable extent here, but, without doubt, will be in due time. From Japan we are also receiving Habutai and Kaiki silk, which, by reason of their extreme lightness in weight, have been in considerable demand in the United States markets. United States manufacturers expect, however, that international trade returns will show a considerably diminishing percentage of this class of goods in the next few years.

The census tables show a production of 8,970,933 yards of velvets and plushes made in the United States by power-loom weaving in the census year. The value of this product is \$4,959,971, which is 55.5 per cent of the annual consumption. The annual import of foreign manufactures of velvets and plushes during the census year was \$2,335,576, foreign invoice value, and allowing 70 per cent additional for revenue duties, freight, insurance, and importers' profits, we find the approximate value to the consumers to be \$3,970,497.

The domestic production of sewing silks and machine twist, 1,465,575 pounds, valued at \$9,274,800, practically represents the entire United States consumption, there being no importations of any consequence.

In fact, the United States product is universally acknowledged as superior in finish and purity of dye to that of any other country, chiefly because only the best Japan and China filatures, dyed unweighted, are used. It is noteworthy that at the Paris Exposition of 1900, the *grand prix d'honneur*, the highest award given, was awarded to a United States exhibitor of this class of silks.

The development of broad silk weaving in the United States during the past decade has been along the following lines:

First. The production of silk taffetas in both black and colors by power looms. This method of producing these goods was first employed in the United States, the production being on a scale of sufficient commercial importance to entitle this country to credit for its success. Later, power-loom weaving of taffetas was adopted in

Europe as a profitable commercial proposition. Foreign countries are now, therefore, close competitors in the manufacture of these goods, but the credit of original achievement remains with the United States. The importance of this fact is best realized when it is considered that fully one-half of the fabrics produced to-day in the United States on silk power looms are properly included in the "taffetas" class.

Second. While a small proportion of the high-class "fancies" consumed in this country is of French origin, the great bulk is made by domestic mills. The United States is indebted for this result to the energy and versatility of the manufacturers who during the last decade seized upon the possibility of reproducing here the grades of French and Swiss "fancies" which by their attractiveness dominated the United States market. The United States have succeeded in manufacturing every variety of checks, stripes, and figured goods (Jacquards) in popular grades. The United States silk industry can fairly claim to be unexcelled at the present time in the production of this class of goods.

Marked progress in the manufacture of piece-dyed goods woven with raw-silk warps and continually expanding facilities for piece dyeing in silk manufacturing establishments and in dye houses have largely increased the output of this description of fabrics. Both piece dyeing and printing have been for many years features of the foremost silk manufacturing establishments in the United States, but recent favoring circumstances have given a great impetus to these branches of the industry.

At the present time piece-dyed and printed goods of domestic manufacture have largely replaced the imports for Europe. Formerly the European productions were printed exclusively in Europe. As a consequence of the United States tariff, European manufacturers have been shipping a considerable quantity of their goods to this side in the raw or gum to be printed. At the present time both the manufacture and the printing of the fabric are so successfully accomplished in the United States that the domestic production dominates native markets in these specialties.

Warp-print fabrics have also been manufactured to a large extent in the United States during the past ten years, both in broad silks and ribbons. Warp-print goods, including the silks made in this country, have reached such a degree of perfection that at the Paris Exposition of 1900 gold medals were awarded to two United States exhibitors of these fabrics.

A similar award was also made to an United States exhibitor of plain black silks for the superior weave and finish of the fabric.

A striking feature of the industry is the increase in the number of power looms and the decrease in hand looms.

In 1880 there were, in all, on both broad and narrow goods, 5,321 power looms; in 1890 there were 20,822; in 1900 there were 44,257 power looms on both broad and narrow silk goods, while the figures for hand looms have gone in the opposite direction. There were 3,153 hand looms in 1880; in 1890 there were 1,747, while in 1900 there were only 173 hand looms.

RAILWAY MILEAGE.

Within the seventy years which have elapsed since the practicability and advantages of railroad construction became assured facts, one-half the total number of miles constructed have been within the confines of the United States. In January, 1902, the total mileage of the railroad lines of the world open to traffic aggregated 484,348 miles, of which 220,657 are located in North America, 168,605 in Europe, 35,580 in Africa, and 15,282 in Australia.

Comparing the mileage of the United States with that of other countries, the United States stands first with 199,378 miles, followed in order by the German Empire, with 31,934 miles; Russia, 29,894; France, 26,613; India, 25,035; Austria-Hungary, 22,919; Great Britain and Ireland, 21,700; Canada, 17,657; British Australia, 15,266; the Argentine Republic, 10,419; Italy, 9,810; Mexico, 9,603; Brazil, 8,718; and Spain, 8,300 miles. In 1830 the railway mileage of the United States was 23; in 1840, it had increased to 2,818; in 1850, to 9,021; in 1860, to 30,626; in 1870, to 52,922; in 1880, to 93,262; in 1890, to 166,654, and in 1900, to 194,321 miles.

The ninth semiannual supplement of the "Railroad Gazette," which appeared on March 28, 1902, contained a list of all the railroads in course of construction, proposed, or incorporated in the United States (including Porto Rico, Hawaii and the Philippines), Canada, and Mexico. There are 1,502 definite projects recorded, representing many stages of advancement, in the interest of 1,142 companies.

Of this number, 1,308 are the projects of 995 companies within the United States; 157 are the projects of 119 Canadian companies, and 37 are new lines in Mexico, in the interest of 28 companies. Projects for which contracts have been let number 453, of which 399 are in the United States, 42 in Canada, and 12 in Mexico.

IMMIGRATION, 1821-1900.

The United States Census Bulletin of Immigration shows that the immigration into the United States from 1821 to the census year 1900 was slightly in excess of 19,000,000. Those eighty years cover the entire period since official statistics of American immigration began to be collected. Every country figures in this movement. Germany has contributed more than any other single nation, sending, from 1821 to 1900, a little over 5,000,000 persons to the United States. Ireland

stands next on the roll with 3,869,268. Then comes Great Britain (England, Scotland and Wales) with 3,026,207, the Scandinavian union of Sweden and Norway with 1,246,312, and Canada and Newfoundland with 1,049,939. Two other countries, Austria-Hungary (including Bohemia) and Italy, each also contributed a little over 1,000,000 to the total; Russia (including the Russian section of Poland) gave almost as many, while the other countries made smaller contributions to the sum of the United States inhabitants.

CEREAL VALUES IN 1901.

The Statistician of the Department of Agriculture has completed his estimates of the acreage, production, and farm value of the cereal crops of the United States in 1901, the grand totals being as follows:

	Acre.	Bushels.	Value.
Corn.....	91,349,938	1,522,519,891	\$921,555,968
Wheat.....	49,895,514	748,460,218	467,350,156
Oats.....	28,541,476	736,808,724	293,658,777
Barley.....	4,295,744	109,932,924	49,705,163
Rye.....	1,987,505	30,344,830	16,909,742
Buckwheat.....	811,164	15,125,941	8,523,318

In the preparation of this report all proper weight has been given to the recently published census report on the crops of 1899.

URUGUAY

FOREIGN COMMERCE IN 1901.

The gross statistics of the foreign commerce of the Republic of Uruguay for 1901, as published in the "South American Journal" for May 10, 1902, show a small decrease in the imports and a large decrease in the exports and general total as compared with the preceding year. The figures for the year, compared with those for 1901, are as follows, the principal items only being given consideration:

Imports.—Beverages in general, \$2,284,627, a decrease of \$78,940; comestibles, cereals, and spices, \$5,129,837, increase \$177,160; textiles, \$3,936,184, decrease \$365,599; ready-made clothing, \$954,333, decrease \$152,390; raw and industrial material and machinery, \$7,755,510, increase \$496,330 (mostly attributable to material for the port works); various, \$2,576,905, decrease \$196,391; live stock, \$822,713, decrease \$187,246; total imports, \$23,691,932, showing a net decrease of \$286,274 for 1900. This total compares with an average of \$24,900,000 for the period 1894–1896, and of \$24,800,000 for the period of 1898–1900.

Exports.—Live stock, \$473,422, decrease, \$60,794; slaughterhouse products, \$25,931,115, decrease, \$674,547; agricultural products, \$572,668, decrease, \$1,096,855; other products, \$619,551, increase, \$182,016; various articles, \$6,493, decrease, \$14,817; provisions for vessels, \$127,877, increase, \$7,936; total exports, \$27,731,126, showing a net decrease of \$1,679,736 from 1900. This total compares with an average total of \$31,700,000 for the seven years 1894–1900. The failure of the wheat crop, due to the wet winter of 1900, was responsible for the decrease in the exportations of wheat, bran, and pollards, which amounted to \$1,569,650, while the item of jerked beef (*tasajo*) showed a decrease of \$1,149,435. On the other hand, there was an improvement in figures for wool shipments which reduced the net result materially.

Attention is called to the fact that since 1891 the exports of the Republic have steadily exceeded the imports by amounts varying from \$4,000,000 in 1901 to \$11,000,000 in 1899 and nearly \$10,900,000 in 1894 and 1897. In round numbers, the exports for the eleven years 1891–1901 amount to \$330,000,000, as against \$249,000,000 for imports—a difference in favor of the trade balance of the Republic of about \$81,000,000, or a yearly average of \$7,300,000. It is also stated that the current year shows decided improvement in the export statistics as compared with those for 1901.

MISCELLANEOUS NOTES.

The German Vice-Consul at Fray Bentos reports that Liebig's Extract of Meat Company, Limited, have purchased and leased large *estancias* in Corrientes, thus considerably extending the area of their grazing land in that district. These new additions amount to about 7,700 hectares (19,136 acres) and will provide pasturage for about 50,000 head of cattle, half of which are for breeding purposes and the remainder for fattening and killing. In this way the company can count on from 25,000 to 30,000 additional head of cattle, each year, for slaughtering. There has been an increase in the quantities of corned beef and prepared soups for export.

A new distillery has been started at Montevideo with a working staff of forty hands and a daily output of 800 gallons. The new venture is capitalized at \$140,000, of which \$100,000 have been paid up and devoted to the purchase of materials and machinery procured chiefly from France.

VENEZUELA.

RENEWAL OF DIPLOMATIC RELATIONS WITH FRANCE.

On the 19th of February of 1902, a protocol was arranged between the Plenipotentiary of Venezuela and the Minister for Foreign Affairs of the French Republic, for the establishment of the former political relations between the two nations, the tenor of which is as follows:

“The subscribers, H. MAUBOURGUET, Plenipotentiary of the United States of Venezuela, and TH. DELCASSÉ, Deputy Minister for Foreign Affairs of the French Republic, duly authorized by their respective Governments, have agreed as follows:

“ARTICLE 1.

“On the Governments of Venezuela and France naming their Ministers in Paris and Caracas, each shall appoint an arbitrator and shall choose as umpire, in case of discord, His Excellency Señor E. de LEÓN CASTILLO, Marqués del MUNI, Ambassador Extraordinary and Plenipotentiary of His Majesty the King of Spain near the Government of the French Republic.

“The said arbitrators shall meet in Caracas immediately after the delivery of his credentials by the French Minister to the President of the United States of Venezuela, for the purpose of examining, by agreement, the claims for indemnification presented by French citizens for damage suffered in Venezuela arising out of the revolution of 1892. All claims which can not be amicably arranged between these two arbitrators shall be submitted by them to the umpire.

“If nothing should be definitely decided either by the two arbitrators or the umpire within the term of one year, from the arrival of the French arbitrator at Caracas, the Venezuelan Government shall deliver to that of France, to be distributed among the rightful claimants, one million bolivars of 3 per cent Diplomatic Debt, by means of which payment of all the claims arising out of the revolution of 1892 shall be definitely settled.

“ARTICLE 2.

“Claims for indemnity other than those mentioned in article 1, but based on acts anterior to the 23d of May, 1899, shall be examined by agreement, by the Minister of Foreign Affairs of Venezuela and the French Minister at Caracas. If, within the term of six months, from the delivery of his credentials by the Minister of France in Caracas, no agreement shall have been reached as to the amount of the claims claims to be admitted, the claims shall be submitted by them to the umpire designated in the foregoing article.

“The Minister for Foreign Affairs of Venezuela and the French Minister at Caracas, may delegate, in all that concerns them, the execution of the preceding provisions to the arbitrators named by his Government.

“If various claims for indemnity based on different facts be presented by the same claimant, and one of these could be submitted to the procedure established by the preceding article, the others shall be joined to it for the purpose of making one settlement.

“It is understood that this procedure, like that adopted for the 1892 claims, is only allowed by way of exception, and does not invalidate the agreement of the 26th of November, 1895.

“ARTICLE 3.

“There shall be no appeal from the decision of the umpire.

“All indemnities shall be paid to the French Government in scrip of the 3 per cent Diplomatic Debt, within three months after the agreement or award.

“ARTICLE 4.

“The Venezuelan Government shall ask Congress to include in the estimates of expenditure the sums necessary for the payment of the overdue monthly installments of the Diplomatic Debt, and the holders of scrip of that debt shall further rest, participate in all the benefits which may accrue to them from the strict application of the organic laws of Venezuela on the subject.

“The present arrangement shall be ratified, and the ratifications exchanged in Paris and Caracas as soon as possible, and at latest by the 30th of April, 1902.

“In testimony whereof the subscribers, thereto authorized by their respective Governments, have executed these presents and affixed their seals thereto.

“Made in duplicate, in Paris, the 19th day of February, 1902.

“H. MAUBOURGUET.

“DELCASSÉ.”

And whereas, on the said 19th day of February of the present year 1902, the said H. MAUBOURGUET, Plenipotentiary of the United States of Venezuela, and TH. DELCASSÉ, Minister of Foreign Affairs of the Republic of France, subscribed an instrument annexed to the preceding protocol which reads as follows:

“Mr. H. MAUBOURGUET, Plenipotentiary of the United States of Venezuela, has communicated to Mr. TH. DELCASSÉ, Deputy Minister for Foreign Affairs of the French Republic, the Government resolution of the 22d March, 1898, a copy of which is hereto annexed.

“The French Government has noted the provisions contained in the said resolution.

“In testimony whereof they have signed these presents, which shall be added to the ratifications of the protocol signed this day.

“Made in duplicate, in Paris, this 19th day of February, 1902.

“H. MAUBOURGUET.

“DELCASSÉ.

And whereas the National Congress, in exercise of its powers and in pursuance of the law of the 15th of the present month of April, approved the protocol and hereinbefore inserted instrument, the ratifications of which were exchanged in this city yesterday, the 17th instant;

It is therefore ordered that they should be published and carried into execution by Venezuela.

Given, signed, sealed with the seal of the National Executive Power and countersigned by the Minister for Foreign Affairs in Caracas this 18th day of April, 1902, year 91 of the Independence and 44 of the Federation.

CIPRIANO CASTRO.

(Countersigned:)

The Minister of Foreign Affairs,

J. R. PACHNAO.

FORMATION OF A NEW CABINET.

On June 2, 1902, the International Bureau of the American Republics was informed by the Department of State of the United States that a communication had been received from United States Minister Bowen, at Caracas, under date of May 13, announcing the formation of a new Cabinet in Venezuela, as follows:

Minister of Internal Affairs, Dr. RAFAEL LOPEZ BARALT.

Minister of Foreign Affairs, Gen. DIEGO B. FERRER.

Minister of Finance and Public Credit, Gen. R. TELLO MENDOZA.

Minister of War and Marine, Gen. JOAQUÍN GARRIDO.

Minister of Fomento, Dr. ARNALDO MORALES.

Minister of Public Works, Gen. RAFAEL MARÍA CARABAÑO.

Minister of Public Instruction, Dr. RAFAEL MONSERRATE.

NEW RAILWAY CONCESSION.

The Department of Public Works has granted a concession to Mr. ALBERTO TINEDO VELASCO to construct a railway which, starting from the port of Barranquitas, on the west coast of Lake Maracaibo, will terminate at some suitable point in the plains of San Ignacio, District of Perijá. The work of construction must commence within a period of twelve months from the date of the approval of the contract by

Congress, and within one year after the commencement of the work the entire line must be concluded and opened to public traffic. The railway shall consist of a single track having a gauge of 1 meter 7 centimeters, and with a minimum radius of curves of 60 meters. The concession permits the building of branch lines penetrating to the north and south of the station of San Ignacio and passing through the villages of Rosario and Machiques. An additional twelve months are given the concessionaire in which to complete the construction of these branches. The duration of the concession is 99 years, at the expiration of which time the railway, together with its rolling stock, etc., becomes the property of the Government.

COMMERCE OF CIUDAD BOLIVAR IN 1901.

In a report received at the British Foreign Office on April 7, 1902, the trade of the consular district of Ciudad Bolivar is shown to have increased during the year 1901 over the preceding twelve months by £9,375, having aggregated £706,388 for the year. As compared with the average of the previous ten years, which was £624,743, the increase in the volume of trade is £81,645. In imports, an advance of £3,296 is noted in a total valuation of £266,095, and the Consul making the report states that British manufactured goods continue to hold their own in this market.

The total exports for the year under review were £440,293. The only articles calling for especial comment are heron feathers, which show a falling off, as compared with the previous year, of 3,798 kilograms in weight and of £25,507 in value. The heavy drop in prices in the home markets no doubt accounts for this reduction, as the rates now ruling, although still covering cost, no longer make the killing of these birds for the collection of feathers so remunerative an industry as formerly.

British Consul DE LEMOS further reports that communication between the port of Ciudad Bolivar and the outer world depends at present almost entirely on one moderate-sized Venezuelan steamer, running once a fortnight between the island of Trinidad and the port and return. This vessel carries nearly all the goods received and takes down to Port of Spain, Trinidad, nearly all the produce exported. In addition it transports passengers and cattle.

The goods imported, as a rule, come through on bills of lading from the United Kingdom, the United States, and Continental countries to Trinidad, while the exports are sent abroad on through bills of lading to Europe and America. The goods and produce are transshipped at Port of Spain. The freights for both imports and exports are high, it being reported that flour from the United States is carried to Trini-

dad at from 40 to 50 cents per barrel, while the freight to Ciudad Bolivar via Trinidad (an additional 300 miles) is \$1 per barrel. Balata rubber shipped through to London costs £3 per ton and Pará rubber is £5 per ton.

Shipping returns for the port show a total registered tonnage of 18,369 tons entered, as against 22,917 in the year 1900. Of this, Venezuelan vessels (steam and sailing) covered 13,940 tons; French, 2,212; British, 1,228; German, 344; and other nationalities, 645 tons. The clearances represent 18,912 tons, as against 23,470 during the preceding year. Of this amount, Venezuela is credited with 15,097 tons; France, 2,212; Great Britain, 981; Germany, 344; and all others, 278.

The following table shows the principal articles of export from Ciudad Bolivar during the years 1900 and 1901, and the respective valuations for the two years:

Articles.	1900.		1901.	
	Quantity.	Value.	Quantity.	Value.
	<i>Kilos.</i>		<i>Kilos.</i>	
Cocoa	38,481	£2,327	33,810	£1,924
Coffee	13,107	431	66,997	1,828
Copaiba oil	8,474	860	16,287	1,578
Rubber (Pará)	47,730	11,561	142,797	31,363
Rubber (balata)	1,205,612	185,141	1,164,778	167,574
Hides	1,495,937	80,513	1,486,582	81,100
Deerskins	35,169	2,985	52,192	4,336
Other skins			12,060	545
Gold bullion	600	63,904	842	89,151
Gold and silver specie			63	190
Tonka beans	86,460	9,272	7,571	904
Tobacco	43,211	1,488	57,008	1,865
Heron feathers (egret)	5,811	35,882	2,013	10,375
Other articles	71,018	8,075	25,542	937
Cattle	*6,496	30,777	*9,613	45,699
Other animals, number*	*309	998	*237	924
Total		434,214		440,293

* Number.

The import valuations at the port and the countries of origin, so far as obtainable, were as follows:

Country.	Value.	
	1900.	1901.
Trinidad (principally transit from the United States, United Kingdom, etc.)	£259,166	£254,234
Germany, direct	3,633	9,736
United States, direct		2,125
Total	262,799	266,095

ELECTRIC LIGHTING AND POWER PLANTS.

United States Consul GOLDSCHMIDT, at La Guaira, has sent the following data to the Department of State of the United States, concerning the electrical development of the Republic:

“There are three electric plants run by water in Venezuela; the principal one is located at El Encantada, 16 kilometers (10 miles) from Caracas. During the rainy season it develops 400 horsepower, but from December to April this is reduced to 100 or less, as in the dry months the water is used for irrigating the adjoining lands. This enterprise was organized in 1897 with a capital of about \$200,000 gold. Three vertical turbines are employed, and the generators are alternating current, and develop power of 5,000 volts. Most of the apparatus is of Swiss manufacture; the wires came from Italy.

“The power developed is used by small corn mills; also by printing offices, coffee mills, etc. At night, it is employed to light Caracas, 12 cents per horsepower per night being paid for this purpose. The other industrial concerns pay from 30 to 50 cents per horsepower per day of ten hours. The company is now erecting a new plant, $1\frac{1}{4}$ miles farther away, at a point where there is a waterfall of 300 feet. When this new station is finished, the company expects to obtain 1,500 horsepower.

“Another enterprise is at Merida (State of Los Andes). This was established about two years ago, to light the city; only about 150 horsepower is developed. All the machinery is of United States make, and direct current.

“San Cristobal (Los Andes) has an electric station of 200 horsepower to light the city and furnish power for a few industrial concerns. A small plant at Barquisimeto, with French machinery, stopped running two years ago.

“The following electric plants have steam as motive power:

“*Caracas*.—Compania de Gas y Luz Electrica de Caracas; capital, 2,300,000 bolivars (\$443,900); 300 horsepower; uses patent fuel (4 tons daily) and 7,350 gallons of water. The plant has a capacity of 96 voltaic arc lamps of 2,000 candlepower, which are used in the streets, and 4,000 incandescent lamps of 16 candlepower for private houses. For arc lights, 50 cents is paid per night of six and one-half hours; for incandescent, \$1.80 per month. These last are the Edison system.

“*Maracaibo*.—An electric plant furnishes light for 300 arc lights of 1,000 candlepower and about 4,000 incandescent lamps. Fuel being cheap, the price of the latter is 80 cents per month for all night.

“*Valencia*.—A plant furnishes electric power for 60 arc and 600 incandescent lights.

“*Puerto Cabello*.—A plant furnishes power for 50 arc and 300 incandescent lights; the arc lights are of 800 candlepower.

“*La Guayra*.—The plant has not been used for some years, and is in bad shape. An effort was made a year ago to start a new company, but nothing has been accomplished.”

MISCELLANEOUS NOTES.

Consul E. H. CHENEY reports to the Department of State of the United States from Curaçao, April 25, 1902, that by an ordinance of the Government issued April 16, 1902, coal-laden vessels entering the harbor of Curaçao are exempt from tonnage and light dues. It may be proper to add in this connection, says Mr. CHENEY, that whereas formerly nearly all the coal used here came from Cardiff, only a single cargo of Cardiff coal has arrived in the last two years, all the rest coming from the United States.

Consul E. H. PLUMACHER writes from Maracaibo, April 16, 1902, to the Department of State of the United States, that a recent decree issued by the President of Venezuela orders the coining of 2,000,000 bolivars (\$386,000) in silver money, three-fourths of this to be in 5-bolivar (96 cents) pieces and the rest in 2-bolivar (38 cents) pieces.

TRADE OPPORTUNITIES IN LATIN AMERICA.

A report to the British Foreign Office from Buenos Ayres states that there appear to be openings in the Argentine Republic for the following classes of goods: Agricultural implements and machinery resembling those imported from the United States, made to standard sizes and accompanied by spare parts duly numbered to make replacing easy; light carriages of two or four wheels, such as come from the United States; railway and electric tramway rolling stock and all manner of appliances for mechanical transport; soft steel girders of various shapes, used very largely in house building; iron windmills, which are used in increasing numbers to pump water on the cattle ranches; weigh bridges for use on the ranches, which should be simple, accurate, and durable; raw material used in the manufacture of soap and candles.

JULIUS A. ARCE, C. E. PIZARRO 11, Arequipa, Peru, is reported to be in the market for the supply of 6,240 feet of 3-inch and 6,300 feet of 2-inch wrought iron pipe f. o. b. New York for the works now being built at Aplao. Prices are desired by cable, giving cable code. Another work that has been decided upon is the improvement of the Mollendo Waterworks. In connection with this work a new steam pumping plant is to be established. It is required to pump a maxi-

mun of 210 gallons per minute of filtered water. The water is to be lifted 276 feet through an old 8-inch pipe, 6,500 feet in length. Boilers, pump, and about 500 water meters will be imported from the United States.

A combination of interests in the lake district about Zapotlan and Sapula, west of Guadalajara, Mexico, is reported to have resulted in an important irrigation project, which is expected to be shortly realized. It consists of a series of canals, tunnels, dams, etc., and the acquisition of a force equal to 10,000 horsepower. Lake Zapotlan is to be the base of operations and the source of water supply, which is estimated at 100,000,000 cubic meters. There are to be two main tunnels, the first to run from the lake to a point named Huescalapa, about 5 miles in length, and the second, at Barranca de la Muerte, is to be about 3 miles long. To complete this large system of works two main canals 30 meters wide by 3 meters in depth are to be constructed. Several large reservoirs are also to be built, and will be connected to Lake Zapotlan. Motive power is to be obtained at five points.

The Abangares Gold Fields Company of Costa Rica, which concern, with Anglo-American capital, operates three mines in Central America, has placed contracts for the conversion of its present steam plant into a water-power plant. The initial electrical equipment will have a capacity of 300 horsepower, which, it is said, will be added to in the near future. The General Electric Company has been allotted the contract for the electrical apparatus. The Pelton Water Wheel Company, of 143 Liberty street, has secured the water-wheel contract, as well as an order for $1\frac{1}{2}$ miles of pipe. The company, it is reported, is also about to add to its cyanide plant.

It is reported that a syndicate is being organized in London for the construction of a railroad from Coatzacoalcos, the Mexican Gulf terminus of the National Tehuantepec Railway, to a point of junction with the Merida-Campeche road. The main object of the project, it is said, is to open up the large tracts of agricultural lands held by American and English investors, by building various branch lines through the State of Tabasco, and at the same time tapping the oil wells on the Macuspana River, which are now reported to be yielding fifty barrels daily and of which a consignment has been made to the London market.

The Belgian Consul-General in Central America reports that the Nicaraguan Government has entered into a contract with Mr. HERBERT C. EMERY for the construction of a steam railway from Matagalpa to the Rio Grande. River steamers will run in connection with the line and will join the vessels which sail from the mouth of the Rio Grande to United States ports.

The Cerro Escarlata Gold Mines Company is making preparations to erect a ten-stamp mill in the Huacal district and take the large custom work that the district will doubtless offer. The San Jose mines, now being operated by a French syndicate, have sunk a shaft 350 feet on a large vein of high-grade free-milling ore. A ten-stamp mill is being put in. The El Globo mines have been sold to Chicago parties, and ore is being shipped into Arizona.

C. R. STAPLES, of Monterey, will shortly let contracts for considerable woodworking machinery, which is to be installed in a large factory about to be erected in that Mexican city for the purpose of manufacturing handles for picks, axes, hammers, shovels, spades, etc. This will be the first plant of its description in the Southern Republic.

The municipality of the city of Valparaiso, Chile, invites tenders for the construction of an electric traction system and the supply of electric lighting. Bids will be received up to September 1.

L. B. SHEPHERD, of the City of Mexico and Monterey, it is reported, will build a power plant at Montemorelos. An electric traction system, 23 miles in length, is also proposed to be constructed.

The Puebla electric tramways (Mexico), which are controlled by the Mexican Tramways Company, Limited, of the City of Mexico, are to be considerably extended. The equipment, etc., will be purchased in the United States.

Bids have been called for for the establishment of a sewerage system in Belem, Pará, Brazil.

BOOK NOTES.

Books and pamphlets sent to the Bureau of the American Republics, and containing subject-matter bearing upon the countries of the International Union of American Republics, will be treated under this caption in the Monthly Bulletin.

The March Bulletin of the Yellow Fever Institute, a section of the United States Marine-Hospital Service, contains bulletins from 1 to 7 of the proceedings of the Institute, and embraces in its subject-matter the following contents: "Organization and progress of the Institute;" "Why did not New Orleans have yellow fever in early times, while Boston did?" "Yellow fever in Europe, a general historical review;" "Yellow fever in Portugal;" "Yellow fever in Spain;" "A note on mosquitoes in baggage;" "Yellow fever, its occurrence and quaran-

time management at the port of Marseille, France." An abstract of the proceedings of the various meetings of the Executive Board from October 11, 1901, up to February 26, 1902, shows that the cooperation of scientists and physicists in all quarters of the world has been solicited, and that they have been invited to enroll themselves as corresponding members of the Institute, and further that papers written by experts on the several aspects of the disease in question will be published from time to time under its auspices.

The United States Department of Agriculture has published as Bulletin No. 41 of the Bureau of Animal Industry a pamphlet treating of "Mexico as a Market for Pure-Bred Beef Cattle." The exports of cattle, sheep, hogs, and horses from the United States to Mexico during the years 1893-1900, inclusive, are given, as also instructions as to the best methods of introducing United States cattle into the Mexican Republic. It is also stated that a recent amendment to the tariff laws of Mexico, providing for the free entry of blooded cattle during the year ending June 30, 1902, will doubtless be continued, thus maintaining an occasion for increased exports. The reports of the consular officers of the United States serving in Mexico are included in the pamphlet and give adequate information on the subject.

"Modern Mexico" for May, 1902, contains an interesting article concerning the cattle and meat industry of the Mexican Republic. It is stated that while it is impossible to give the exact figures as to the number of cattle and hogs in Mexico, yet it may be said with considerable accuracy that Chihuahua has, in round numbers, 450,000 head; Sonora, 240,000 head; Nuevo Leon, 145,000 cattle and 50,000 hogs; and Tamaulipas, 250,000 cattle and hogs. From 60,000 to 90,000 cattle are annually shipped to the United States through El Paso, Texas, and about 32,000 by way of Nogales. The consumption of packing-house products within the Republic is given an annual valuation of \$46,000,000 Mexican currency (the figures of 1899), of which \$31,000,000 was paid for beef, \$10,000,000 for pork, and \$5,000,000 for sheep and goats. Without including Chihuahua and Sonora, it is probable that 85 per cent of all the cattle and hogs in the Republic are within a radius of 225 miles of the capital city. Within this district the movement is toward the center of population in and around the Federal District and to Yucatan, Campeche, and Cuba.

The "Monthly Summary of Commerce and Finance of the United States" for April, 1902, prepared by the Bureau of Statistics, Treasury Department, makes an exhaustive survey of "Commercial Africa in 1901." A detailed study of the physical, political, and commercial conditions of the "Dark Continent" is made, with special reference

to opportunities offered for increasing the trade interests of the various nations sending merchandise thither. In this connection, it may be stated that in the latter part of May about 630 head of Texas cattle were shipped from the United States port of Pensacola for the Natal. The shipment, consisting of bulls and heifers, high grades and pure bloods, none of which were over three years of age, will be followed by others aggregating 10,000 head. The Argentine Republic has received intimations from its Consul at Cape Town of the possibilities of establishing a frozen-meat trade in that quarter of the world.

The Columbus Memorial Library has received from the Legation of the Republic of Uruguay in Washington, two interesting volumes entitled "Annual Statistics of the Republic of Uruguay for the years 1899-1900." These books have been prepared and published under the direction of the Department of Statistics of the Government of Uruguay, and are detailed and comprehensive compilations of the statistics of that progressive Republic in every field of useful industry during the period in question. The subjects of foreign and domestic commerce are handled in a masterful manner and are accompanied by numerous comparative tables illustrative of the growth and volume of the business of the nation for the last thirty-five years. During all this time not only has Uruguay grown from a commercial point of view, but her population has also steadily increased, until in 1900 the total number of inhabitants in the Republic, as shown by the official census returns of that year, was 936,120. The second volume of this useful publication treats extensively of the finances of the nation, and is the most complete official exposition of this subject that has been compiled in recent years, and an exceedingly valuable acquisition to the files of the Columbus Memorial Library.

"The Forum," for June, 1902, contains an article of great pertinence on "Our Growing Dependence upon the Tropics," written by Mr. O. P. AUSTIN, Chief of the Treasury Bureau of Statistics of the United States. The writer quotes the increasing consumption, as articles of necessity rather than of luxury, of tropical and subtropical products in the United States. Coffee and sugar consumption in the past thirty years is shown to have increased twofold; cacao, sixfold; while the use of tea is still as great per capita as in 1870 despite the increase noted for coffee and cacao. India rubber which, a generation ago, was almost unknown, is now utilized everywhere, for clothing, for household requirements, for machinery, and even for the tires of carriages. From South and Central America practically all the imports received by the United States may be classed as tropical or subtropical, and the same may be said of the products of Mexico and the West Indies.

Of the importations for 1901, the ten articles—sugar, coffee, raw silk, india rubber, cacao, fibers, fruits and nuts, tobacco, cotton, and tea—aggregated a valuation of \$340,954,707, or 84 per cent of the total imports of what may be termed tropical or subtropical products. In 1870 the total valuation of articles so classed amounted to \$144,000,000; in 1875, to \$207,000,000; in 1880, to \$246,000,000; in 1890, to \$333,000,000; in 1895, to \$325,000,000 and in 1901, to \$405,000,000. This is a relative increase of 165 per cent in import value as compared with 65 per cent of increase for other products imported by the United States.

A copy of the interesting account of the travels of the Capucin monk, Père YVES D'ÉVREUX, through the northern part of Brazil in 1613 and 1614 has been added to the works of travel and description in the Columbus Memorial Library of the International Bureau of the American Republics. This work, now rare, has been printed in French, from the original copy preserved in the Bibliothèque Imperiale at Paris, and was issued in 1864. An introduction and notes have been added by M. FERDINAND DENIS, of the Library of St. Geneviève. A biographical sketch of YVES D'ÉVREUX and a history of his connection with the first missions established at Maranham is given in a preface. The narrative of the monk is divided into two treatises. In the first he gives a detailed account of the work of the early French missionaries in Brazil, describes the characteristics and customs of the Indians, and dwells at length on the great natural beauty and vast resources of the north Brazilian country, giving accounts of the animals, birds, trees, and flowers which are peculiar to that locality. The second part is devoted mainly to the myths and religious ceremonies of the inhabitants of Brazil. The work concludes with critical and historical notes concerning the Capucin. There is a comprehensive index.

The former Consul-General of Great Britain in Peru, H. GUILLAUME, F. R. G. S., has prepared for the "India Rubber World" for June 1, 1902, an interesting paper concerning the rubber industry of the upper Amazon basin, which he states is centered at Iquitos, a Peruvian port which has risen from the status of a fishing village to a wealthy town of 7,000 inhabitants. He alludes to the work of the United States cruising corvette *Wilmington* as having demonstrated the navigability of the upper Amazon waters, and thus rendering the rubber forests of the districts bordering thereon accessible for commercial purposes. The new railway recently authorized from Oroya to Cerro de Pasco will also prove of enormous service, as it is near the navigable waters of the Perené, Pachitea, Apurimac, and Rio Camba, thus offering easy access to the Pacific and, via Lima and Callao, to Liverpool. The same

subject is also treated in the journal referred to by LIONEL GARNIER, who gives some practical suggestions as to the planting and collecting of rubber.

The Bulletin of the American Geographical Society for April, 1902, contains the concluding chapters of a study by Alexander Brownlie on the "Tides in the Midst of the Pacific Ocean," which has been treated at length in successive numbers of that publication. The various headings under which the subject is considered embrace: The time of high water in the midst of the Pacific; the rate of tidal speed in the midst of the Pacific; what the tides in the midst of the Pacific teach; a consideration of the power by which flood tide is lifted; and tidal basins in the Pacific Ocean. Referring to the two South American basins, known as the Cape Horn and the Juan Fernandez basins, respectively, the writer states that high water takes place at the island of Juan Fernandez five hours and fourteen minutes after Cape Horn. The Fernandez basin makes the third tidal basin stretching across the entire width of the South Pacific from New Britain to Chile. Proceeding still further north another basin is found, known as the Panama tidal basin, which is co-tidal from about Santa Elena Bay, Ecuador, to Panama (Naos Island) and thence to Port Elena, Costa Rica, and includes Galapagos Islands. Further northward is the San Diego tidal basin, reaching to the west coast of Mexico.

The Bureau of Commercial Statistics (*Serviço de Estatística Commercial*) of Brazil has sent to the International Bureau of the American Republics its report on the general import trade of the Republic from January to September, 1901 (*Importação Geral da Republica dos Estados Unidos do Brazil*). This is a very comprehensive résumé of the articles of import and their respective valuations delivered at the various ports of the Republic during the time in reference, the country of origin being also given.

The artificial production of ice forms the subject of Bulletin No. 174, issued on May 22, by the Census Bureau of the United States. This industry, which has attained commercial importance only within the past fifteen or twenty years, has aided greatly in the development of the natural resources of different sections of the country, as artificial refrigeration has given a great stimulus to the production of early vegetables and small fruits in the South and on the Pacific coast, which, owing to previous lack of insurance against decay during transport, had been consumed locally only. The number of ice-making establishments is shown to have increased from 4 in 1870 to 787 in 1900, and the value of the product from \$258,250 to \$13,874,513 in the period named. The total capital invested is given as \$38,204,054 in 1900.

The "Scientific American" for June 7, 1902, contains a study of the *Gynerium argenteum* (Pampas Grass), which is indigenous to the La Plata region of South America and forms a characteristic botanical growth of the country. The cultivation of this plant in the State of California is described, and while it is acknowledged that its economic value is *nil*, aside from its esthetic usage, yet it forms one of the standard crops of the State, and is produced to the extent of 2,500,000 plumes per annum, which are sent to all sections of the United States and Europe.

United States Census Bulletin No. 168, issued May 15, 1902, treats of the manufacture of flax, hemp, and jute products in the census year 1900, showing a capital of \$41,991,762 invested in such manufacture in the 141 establishments engaged. The value of the products is returned at \$47,601,607, while the quantity and cost of materials used is given as 545,449,566 pounds and \$32,197,885, respectively. In these figures sisal grass is represented by 146,352,853 pounds and \$8,827,131.

BOLETÍN MENSUAL

DE LA

OFICINA INTERNACIONAL DE LAS REPÚBLICAS AMERICANAS,

Unión Internacional de Repúblicas Americanas.

VOL. XII.

JUNIO, 1902.

No. 6.

COMISIÓN PARA EL ESTUDIO DE LA PRODUCCIÓN, DISTRIBUCIÓN Y CONSUMO DEL CAFÉ.

Á fin de evitar toda duda que pudiera ocurrir sobre el particular, se hace presente en este lugar preferente del BOLETÍN, que la Comisión para el estudio de la producción, distribución y consumo del café, y la Convención Internacional Sanitaria, cuya celebración se acordó por la Segunda Conferencia Internacional Americana en 29 de enero del corriente año en la capital de México, han sido convocadas como sigue:

La Comisión para el estudio de la producción, distribución y consumo del café, para el 1° de octubre de 1902, en la ciudad de Nueva York.

La Convención Internacional Sanitaria para el 15 de octubre de 1902, en esta ciudad de Wáshington.

Como la resolución referente al Congreso Aduanero necesita la aprobación de los respectivos Gobiernos, su convocación ha tenido que posponerse.

En el Informe que el Señor Don ANTONIO LAZO ARRIAGA, Delegado por Guatemala en la Segunda Conferencia Internacional Americana, dirigió á su Gobierno con fecha 15 de marzo de este año, se dice con respecto al asunto del café lo que sigue:

“PROTECCIÓN Á LA INDUSTRIA DEL CAFÉ.

“En la sesión del 30 de diciembre de 1901, nuestra delegación presentó el siguiente proyecto:

“1. Que dentro de un año, contado desde la clausura de las sesiones de la segunda Conferencia Internacional Americana, se reúna en la

ciudad de Nueva York, Estados Unidos de América, una Comisión compuesta de uno ó más delegados nombrados por cada Gobierno que desee estar representado en ella, los cuales deberán tener conocimientos técnicos ó periciales acerca de la producción, distribución y consumo del café.

“2. El Consejo Directivo de la Oficina Internacional de las Repúblicas Americanas fijará la fecha en que habrá de reunirse esta Comisión, que se organizará como ella decida, con el auxilio de la Oficina mencionada, y tendrá por objeto el estudio de las causas que producen actualmente la crisis por que esta gran industria atraviesa, y proponer los medios prácticos de evitarla ó disminuirla.

“Pronuncié entonces unas cuantas frases que, reasumidas, fueron consignadas así en el acta del día:

“‘S. E. el Señor LAZO ARRIAGA, Delegado de Guatemala, dijo que deseaba llamar la atención de la Conferencia sobre un asunto de vital importancia para todas, ó casi todas, las naciones de este continente: la crisis por que atraviesa en la actualidad la industria cafetera. Quince de dichas naciones son productoras de tan precioso grano, y las cuatro restantes consumidoras de él. Todas, por lo mismo, sufren grandes trastornos en sus relaciones comerciales como consecuencia de esa crisis.

“‘El problema que ésta plantea, no sólo es un problema comercial, sino también un problema económico, político y social. La baja en el precio del café ha disminuido considerablemente los ingresos del tesoro de algunos países americanos, y quizás deba verse en ella la causa de algunas de las revoluciones que afligen á varios de los referidos países, y que bien puede explicarse, en gran parte, por la pobreza y la miseria que en ellos reina, como resultado de la terrible crisis por que atraviesa la industria cafetera.

“‘Buscar un remedio á tan grandes males, es tarea digna de esta Conferencia, y por eso tengo el honor de someter á su aprobación una proposición encaminada á lograr propósito tan laudable.

“Agregué, además, que á mi juicio, era posible encontrar medios prácticos que eviten ó, cuando menos, disminuyan los malos efectos que se originan en el estado anómalo por que en la actualidad pasa la industria cafetera; pero que si la reunión de expertos que la delegación de Guatemala proponía, no diere otro resultado que el negativo de que éstos, después del examen detenido del asunto, declaren que no hay remedio posible, eso sólo constituiría ya ventaja no despreciable, pues los productores, desalentados definitivamente por el incierto porvenir de la industria, en vez de continuar haciendo sacrificios estériles para sostener sus plantaciones, dedicarían su capital y sus esfuerzos al desarrollo de otros ramos, dando así variedad á la producción nacional y mayor ensanche á la riqueza pública.

“La Conferencia aceptó el proyecto en la misma forma en que lo propusimos.”

Con el título de “El Café: su historia, cultivo, beneficio, variedades, producción, exportación, importación, consumo,” etc., ha preparado la Oficina Internacional de las Repúblicas Americanas una extensa Memoria, que será sometida á la consideración de esta Comisión tan pronto como se reúna. En ella encontrarán los Señores Delegados importantes informes que podrán ayudarles para el satisfactorio desempeño de su alta misión.

Á efecto de que se conozca de antemano el alcance de ese trabajo ha parecido conveniente publicar desde ahora el Índice de las materias que aquél comprende, y el Prólogo con que va encabezado.

El Índice de las materias es como sigue:

PRÓLOGO.

PRELIMINARES:

Historia del café—Historia natural del café—Variedades de café.

Países y lugares que producen café.^a

América:

América del Norte: México.

América del Centro: Costa Rica, El Salvador, Guatemala, Honduras, Honduras Británica, Nicaragua.

América del Sur: Bolivia, Brasil, Colombia, Ecuador, Paraguay, Perú, Venezuela.

Antillas: Barbados, Cuba, Dominica, Guadalupe, Haití, Jamaica, María Galante, Martinica, Puerto Rico, República Dominicana.

Guayanas: Británica (Demerara), Francesa (Cayena), Holandesa (Surinam).

Asia: Arabia (Moka), Birmania, Islas Filipinas (Manila), India Británica.

África: Borbón (Isla de la Reunión), Liberia.

Oceanía: Colonias Índicas de Holanda—Borneo, Java, Sumatra.

Polinesia: Fiji, Hawaii (Islas), Nueva Guinea, Samoa.

Australasia: Australia.

Producción de café en el mundo.

Consumo de café en el mundo.

Consumo general de café por países.

Consumo general de café por unidad de población.

Consumo de café en Alemania.

Consumo de café en Francia.

Consumo de café en Austria-Hungría.

Consumo de café en Italia.

Consumo de café en Rusia.

Los Estados Unidos:

Su importación de café.

Su consumo de café

Su exportación de café.

Bolsa de café en Nueva York.

La Gran Bretaña: Importación, consumo y exportación de café.

Derechos de importación impuestos al café en los principales países del mundo.

Derechos de exportación impuestos al café por los países que lo producen.

Suelo y clima apropiados para cultivar el café.

Cultivo del café.

^a No fué posible obtener datos exactos de los lugares productores de café que no figuran en esta nomenclatura.

Cosecha del café.

Beneficio perfeccionado del café.

Enfermedades del café y medios de combatirlas.

Conservación del café.

Torrefacción del café.

Preparación del café para el uso doméstico.

Composición química del café.

Falsificaciones del café.

Mezclas de cafés.

Modificaciones efectuadas en el uso del café como bebida.

Efectos del café en el organismo humano.

La Liga de los Países Cafeteros (por J. A. OLAVARÍA).

El café en los Estados Unidos (por F. DE ASSIS BRASIL).

Estudio sobre el café (por J. B. CALVO).

Recomendaciones á los Delegados al congreso cafetero (por A. LAZO ARRIAGA).

Bibliografía.

El prólogo dice así:

“Siendo el café uno de los principales artículos de exportación de gran parte de los países de la América Latina, con excepción de la República Argentina, de Chile y del Uruguay que no lo producen, y debiéndose reunir en Nueva York, el 15 de octubre del presente año, según lo acordado en la Segunda Conferencia Internacional Americana, la Comisión que discutirá los medios más eficaces de proteger la industria cafetera en el Hemisferio Occidental y recomendará la adopción de las medidas que, á su juicio, den resultados prácticos inmediatos en tal sentido, de conformidad con el acuerdo del Consejo Directivo de la Unión Internacional de las Repúblicas Americanas, en su sesión de 19 de marzo próximo pasado, la Oficina Internacional de las Repúblicas Americanas ha reunido, en este folleto, el mayor número asequible de datos sobre el café, y tiene la honra de presentarlos á dicha Comisión, abrigando la esperanza de que sean utilizables, como referencia, para deliberar sobre un asunto tan importante y transcendental, puesto que el café ha llegado á ser uno de los artículos de mayor tráfico y ha caído, por completo, en manos de la especulación, lo que expone su precio de venta á grandes fluctuaciones, pudiendo ser considerable, en un año, el producto pecuniario de los cafetales y mucho menor, al siguiente, debido á la mencionada especulación. Por otra parte, la ruina de los cafetales de un país puede hacer subir los precios, y el cultivo del café en nuevas regiones puede hacerlos bajar, así como si la producción de este fruto continúa excediendo á la demanda que tiene en los mercados del mundo, esta superabundancia dará, indudablemente, por resultado, aun mayor depresión en el precio de venta de este artículo; y merece ser tomado en cuenta, que es muy vasta la zona favorable al cultivo del café, pues está comprendida en las líneas isotermas de los 25 grados de latitud norte y de los 30 grados de latitud sur.

“La mayoría de los países civilizados ha adoptado la regla de unir las fuerzas productoras de todo artículo de consumo para darle vigor

á la producción y evitar las fluctuaciones exageradas de los precios de venta. Siguiendo, pues, este precedente, una unión, bien entendida, que tomase en consideración inmediata, entre los diferentes puntos de importancia capital, la necesidad de escogitar medios prácticos de abaratar el precio que tiene, por regla general, el capital en la América Latina y, especialmente, el destinado á labores agrícolas como las que precisa el café—lograría que el trabajo resultara más provechoso para el productor, pues reduciríase el costo de la producción y sería más fácil la acumulación del trabajo, mayores las utilidades, más considerable el incremento del capital y, por consiguiente, mayor la fuerza de producir por modo verdaderamente remunerador.

“Con este folleto y con las someras consideraciones que anteceden, contribuye la Oficina Internacional de las Repúblicas Americanas á las árduas y complexas labores de la Comisión destinada á proteger y mejorar la industria del café en América.

“WÁSHINGTON, D. C., *junio de 1902.*”

COSECHA DE CAFÉ EN EL MUNDO.

Conforme á las mejores estadísticas que se tienen á mano, la producción de café en el mundo en el año de 1901 fué 15,460,000 sacos de 132 libras cada uno; en otros términos: 2,040,720,000 libras.

De esta inmensa cantidad corresponden al Brasil, en números redondos, 11,500,000 sacos, ó sean 1,518,000,000 libras, lo que equivale á casi los cuatro quintos del total.

Los Estados de Centro América, México, y las Repúblicas de Venezuela, Colombia, Equador y Perú, contribuyeron á la producción con 2,200,000 sacos, ó sean 290,400,000 libras.

La República de Haití figuró en este respecto con gran crédito. La producción, 450,000 sacos, ó 59,400,000 libras, fué grande para el país; y la calidad del grano fué excelente. El café de Haití es particularmente estimado en Francia, para donde se exportan todos los años las dos terceras partes de la cosecha.

Puerto Rico y Jamaica suministraron 200,000 sacos, ó sea 26,400,000 libras.

Las Colonias holandesas del Oriente produjeron 480,000 sacos, ó sea 63,360,000 libras.

La India británica, Ceilán y las Filipinas, 315,000 sacos, ó 41,580,000 libras.

África y Moca, 225,000 sacos, ó 29,700,000 libras.

El exceso de la producción sobre el consumo fué de 1,342,000 sacos, ó sea 177,000,000 de libras.

CONSUMO DE CAFÉ EN LOS ESTADOS UNIDOS.

Según los datos estadísticos publicados por la Oficina del ramo en el Departamento del Tesoro de los Estados Unidos de América, el con-

sumo del café en este país ha ido en notable aumento desde el año de 1890.

Las cifras oficiales son como sigue :

Año fiscal.	Cantidad im- portada.	Año fiscal.	Cantidad im- portada.
	<i>Libras</i>		<i>Libras.</i>
1889-1890	499, 159, 120	1896-1897	737, 645, 670
1890-1891	519, 528, 432	1898-1899	831, 827, 063
1891-1892	640, 210, 788	1900-1901	854, 871, 310

TRATADO DE ARBITRAJE GENERAL CELEBRADO ENTRE BOLIVIA Y EL PERÚ.

Concluido en La Paz, noviembre 21 de 1901.

El Presidente de la República de Bolivia y el Presidente de la República del Perú, deseosos de estrechar firmemente los vínculos que existen entre los dos Estados, estableciendo el arbitraje en las relaciones de ambas Repúblicas, han nombrado á ese fin, por sus plenipoten-
ciarios:

S. E. el Presidente de la República de Bolivia al Doctor Don FEDERICO DIEZ DE MEDINA, su Ministro de Relaciones Exteriores; y S. E. el Presidente de la República del Perú al Doctor Don FELIPE DE OSMA, su Enviado Extraordinario, quienes han celebrado el siguiente:

TRATADO DE ARBITRAJE.

ARTÍCULO I.

Las altas partes contratantes se obligan á someter á arbitraje todas las controversias hasta hoy pendientes y las que durante la vigencia del presente Tratado surgieren entre ellas, cualesquiera que sean su naturaleza y causas y siempre que no hayan podido ser solucionadas por negociaciones directas.

ARTÍCULO II.

En cada caso ocurrente, las partes contratantes celebrarán un convenio especial, con el objeto de determinar la materia de la controversia, fijar los puntos que deben ser resueltos, la extensión de las facultades del árbitro y los procedimientos que han de observarse.

ARTÍCULO III.

En caso de que las altas partes no lleguen á ponerse de acuerdo sobre los puntos á que se refiere el artículo anterior, el árbitro queda facultado para determinar, en vista de las pretensiones de ambas partes, los

puntos de hecho y de derecho que deberán ser decididos, para la solución de la controversia, y establecer el procedimiento á seguir.

ARTÍCULO IV.

Las altas partes convienen en que el árbitro sea el tribunal permanente de arbitraje que se establezca en virtud de los acuerdos que adopte la Conferencia Panamericana que funciona actualmente en México.

ARTÍCULO V.

Para estos dos casos: (*a*) si no llegara á constituirse el tribunal á que se refiere el artículo precedente, y (*b*) si hay necesidad de ocurrir al arbitraje, antes de que se constituya ese tribunal, las altas partes convienen en designar árbitro al Gobierno de la República Argentina, al de España y al de los Estados Unidos Mexicanos, para que respectivamente ejerzan el cargo uno por impedimento de otro y en el orden en que están nombrados.

ARTÍCULO VI.

Si durante la vigencia del presente Tratado, y en los dos supuestos á que se refiere el artículo anterior, ocurriesen distintos casos de arbitraje, serán sucesivamente entregados para su solución á los Gobiernos indicados, en el orden que se halla establecido.

ARTÍCULO VII.

El árbitro es también competente: 1º para determinar sobre la regularidad de su constitución, la validez del compromiso y su interpretación; 2º para adoptar las providencias necesarias y resolver todas las dificultades que surjan en el curso del debate. Sobre las cuestiones de carácter técnico ó científico que se presentaren en éste, se pedirá dictamen precisamente á la Real Sociedad Geográfica de Londres ó al Instituto Geodésico Internacional de Berlín; y 3º para designar la época de su funcionamiento.

ARTÍCULO VIII.

El árbitro fallará con estricta sujeción á las prescripciones del Derecho Internacional, y en las cuestiones de límites, al principio americano del “*uti possidetis*” de 1810, siempre que en el convenio á que se refiere el Artículo II no se estableciese la aplicación de reglas especiales ó se autorizara al árbitro para fallar como amigable componedor.

ARTÍCULO IX.

La sentencia deberá decidir definitivamente cada punto en litigio, con expresión de sus fundamentos. Será extendida en doble ejemplar

y notificada á cada una de las partes por medio de su representante ante el árbitro.

ARTÍCULO X.

La sentencia legalmente pronunciada decide dentro de los límites de su alcance la contienda entre las partes.

ARTÍCULO XI.

El árbitro establecerá en la sentencia el plazo dentro del cual debe ser ejecutada.

ARTÍCULO XII.

La sentencia es inapelable y su cumplimiento está confiado al honor de las Naciones signatarias de este pacto.

Sin embargo, se admitirá el recurso de revisión ante el mismo árbitro que la pronunció, siempre que se deduzca antes de vencido el plazo señalado para su ejecución, en los siguientes casos:

1°. Si se ha dictado sentencia en virtud de un documento falso ó adulterado.

2°. Si la sentencia ha sido en todo ó en parte la consecuencia de un error de hecho, que resulte de las actuaciones ó documentos de la causa.

ARTÍCULO XIII.

El recurso de revisión, no podrá ser interpuesto, en ningún caso, después de los seis meses de notificada la sentencia.

ARTÍCULO XIV.

Las altas partes nombrarán su representante en el juicio, pondrán á disposición del árbitro todos los medios de información que de ellas dependan y sufragarán sus propios gastos y la mitad de los gastos generales del arbitraje.

ARTÍCULO XV.

El mismo árbitro que pronunció la sentencia decidirá sobre las cuestiones que se susciten en su ejecución.

ARTÍCULO XVI.

El presente Tratado durará diez años á partir del canje de las ratificaciones. Si no fuere denunciado seis meses antes de su vencimiento continuará rigiendo por otros diez años y así sucesivamente.

ARTÍCULO XVII.

Las ratificaciones del presente Tratado serán canjeadas en La Paz ó en Lima, dentro del término de un año de la fecha.

En fe de lo cual los infrascritos firman y sellan el presente Tratado, hecho en doble ejemplar, en la ciudad de La Paz, á los veintiún días del mes de noviembre del año de mil novecientos uno.

FEDERICO DIEZ DE MEDINA.

FELIPE DE OSMA.

REPÚBLICA ARGENTINA.

ESTADÍSTICAS DE INMIGRACIÓN.

La División de Estadística en el Ministerio de Agricultura de la República Argentina ha publicado, entre otras cosas, á mediados de febrero de este año, el interesante cuadro que se pone á continuación, comparativo de la superficie, número de habitantes, número de inmigrantes, y proporción en que están los unos con los otros, en aquella República y los Estados Unidos de América.

Asunto de comparación.	Los Estados Unidos.	La República Argentina.
Superficiekilometros cuadrados..	7,752,810	2,885,620
Población.....	77,395,000	1,794,149
Inmigración en el último año.....	487,918	90,127
Kilómetros cuadrados por inmigrante.....	15,000	32,000
Inmigrantes por kilómetro cuadrado.....	0.063	0.032
Inmigrantes por cada mil habitantes.....	6.30	18.80

El Sr. Jefe de la Oficina que publica este cuadro dice con referencia á él lo que sigue:

“El cuadro en que se relaciona la inmigración con la superficie y población del país revela números relativos, satisfactorios y demostrativos. Se sabe que la capacidad económica no se calcula solamente por la extensión del territorio, sino también por la población, que es el elemento consumidor, productor y creador del trabajo. Para mayor claridad sólo se ha tomado la cifra de 90,127 inmigrantes de Ultramar, haciéndose las comparaciones con los Estados Unidos. Resulta que la República ha recibido en 1901 diez y ocho inmigrantes por cada millar de habitantes, mientras que los Estados Unidos sólo recibieron seis, lo que revela una poderosa actividad individual en nuestro país, y un poder de receptividad triple, merced á nuestras riquezas matrices constituidas por las industrias de los campos, la ganadería y la labranza.”

EL PRECIO DEL AZÚCAR.

En un artículo sobre el precio á que se paga el azúcar en la República Argentina, “El Tiempo” de Buenos Aires establece una comparación entre lo que allí pasa á este respecto y lo que pasa en Inglaterra, y deduce conclusiones favorables á la doctrina del libre cambio.

En Inglaterra, que no produce un grano de azúcar, se importaron en enero del corriente año (1902) nada menos que 183,090,978 kilogramos de azúcar refino, los que se pagaron á razón de 5 centavos en oro americano, que son poco menos de 13 centavos en la moneda corriente de la República Argentina. Este azúcar fué llevado de las primeras refinerías de Francia, Bélgica y Holanda, que son los países en que generalmente se abastece Inglaterra.

En la República Argentina, donde hace veinte años se están haciendo esfuerzos para proteger el desarrollo de la industria azucarera, valiéndose entre otros medios de la imposición de un fuerte derecho de importación á los azúcares extranjeros, los habitantes tienen que pagar el artículo, de calidad las más veces muy inferior al consumido en Inglaterra, á razón de 40 centavos en la moneda del país, ó sea cerca de 15 centavos en oro americano, lo que es como tres veces más.

“El Tiempo” dice que si se redujeran los derechos de importación se abarataría el artículo, aumentaría el consumo y se favorecería también la misma renta aduanera, porque aunque el derecho fuera de menor importancia la ocasión de cobrarlo sería mucho mayor.

De este artículo ha tomado nota el semanario que se publica en París con el título de “Le Nouveau Monde” en su editorial del 23 de abril de este año, donde se le publica traducido textualmente al francés.

COMERCIO CON EL ÁFRICA MERIDIONAL.

Según datos compilados por la Dirección de Comercio del Ministerio de Agricultura, la República Argentina exportó, durante los últimos cinco años, para el África meridional, en productos agrícolas y ganaderos, los valores siguientes:

1897.....	\$573, 447
1898.....	518, 118
1899.....	953, 365
1900.....	3, 240, 270
1901.....	2, 891, 259
Total	8, 176, 459

ESTADÍSTICA DE EXPORTACIONES.

Son de interés los siguientes datos estadísticos publicados oficialmente en Buenos Aires, relativos á la exportación de ciertos artículos en el primer trimestre de 1899, 1900 y 1901:

	1899.	1900.	1901.
Mantequillalibras..	1, 594, 891	2, 322, 663	3, 322, 391
Ganado mayornúmero..	312, 150	150, 550	110, 180
Quesolibras..	18, 161	1, 883	2, 968
Carnes de vaca heladas.....toneladas..	9, 079	24, 590	44, 904
Id. de carnero, id.....id.....	56, 827	56, 412	63, 013
Henoid.....	105, 598	102, 836	95, 120
Tasajoid.....	19, 164	16, 449	24, 296
Linazaid.....	217, 713	223, 257	338, 828
Maízid.....	1, 116, 276	713, 248	1, 112, 290
Carnerosnúmero..	543, 458	198, 102	25, 746
Trigotoneladas..	1, 713, 429	1, 929, 676	904, 269
Lanaid.....	237, 111	100, 913	223, 358

La baja en el ganado mayor y lanar se debe á haber estado prohibida su importación en los puertos británicos, durante una gran parte de 1900 y todo el año de 1901.

BOLIVIA.

FERROCARRIL DE YUNGAS.

El Señor DON MANUEL V. BALLIVIÁN, Director de la Oficina Nacional de Estadística, Inmigración y Propaganda Geográfica, y Miembro correspondiente honorario de la Unión Internacional de Repúblicas Americanas, ha enviado al Cónsul General de Bolivia en Nueva York datos muy interesantes sobre los recursos con que se cuenta para sostener un ferrocarril entre La Paz y Chulumani con un ramal á Coroico.

* * * * *

La provincia de Yungas, dice el Sr. BALLIVIÁN, fué dividida en dos, y cada una de éstas, á su turno, en dos secciones, por decreto supremo de 1° de julio de 1890, expedido por la Junta de Gobierno. Dicho supremo decreto fué corroborado por la Convención Nacional, en la forma de una ley el 12 de enero de 1900.

Esta nueva organización sólo consulta la mejor administración de esa rica región que se considerará en este artículo como un todo completo é indivisible. Yungas del Norte y del Sud son, pues, provincias del Departamento de La Paz y las más ricas entre todas, siendo las posesiones que están en esta superficie las mejor cultivadas en todo él.

El clima de ambas es, en general, cálido y bastante húmedo. Sus producciones vegetales son coca, cacao, café, cascarilla, maíz, drogas vainilla, numerosa variedad de maderas finísimas de construcción y ebanistería, é infinidad de variadas y sabrosas frutas, como el plátano, naranja, lima, limón, etc. La coca forma el comercio y principal ocupación de sus habitantes. Dilatadas montañas, provistas de bosques y una vegetación constante, ocupan la parte del N. E., y al S. termina esta región por la gran cadena de los Andes.

* * * * *

Esta cordillera encierra con abundancia en su seno, ricos veneros de cuarzo aurífero, metales de plata y plomo. Los ríos que surcan la región, contribuyendo á su fertilidad, son el Coroico, formado con las aguas de Chucura, Chairó, Elena, Yolosa y Santa Bárbara; el Tamampaya, que tiene su origen en la cordillera de Pongo, los llamados Chojlla, Chirca y Solacam, el río de La Paz, el Miguilla, que baja de la cordillera de Choquetanga y los denominados Covendo y Quetolo.

Todos estos torrentes acarrean oro, y en el porvenir contribuirán á aumentar la riqueza natural de esta privilegiada región;

* * * * *

El proyecto de ferrocarril á Yungas cuenta, cual pocas empresas de este género en Bolivia, con una base ya conocida, en cuanto á la producción de las dos provincias y su comercio de importación, factores á los que habría de agregar el considerable tráfico de pasajeros.

El Señor BALLIVIÁN juzga que la longitud de la línea principal del ferrocarril no podría alcanzar á más de treinta leguas ó sean 150 kilómetros. Así, pues, la base itineraria del ferrocarril de La Paz á Chulumani, con ramal á Coroico, puede estimarse en 40 leguas, ó sean 200 kilómetros.

El costo de un ferrocarril en esa región, según el informe del Doctor DON FEDERICO DIEZ DE MEDINA, fué calculado, en 1889, en cuatro millones de bolivianos, cantidad á la que había que agregar, por lo menos, un 50 por ciento, á causa de la diferencia del cambio en los mercados extranjeros, á donde se tiene que recurrir para la adquisición del material propio para la proyectada vía férrea. Es decir, el capital que sería menester invertir sería de seis millones de bolivianos.

Para fijar la garantía de esta cantidad habrá que estudiar la estadística de la exportación de esa región. La principal producción es la de la coca, cuyo guarismo averiguado es de trescientos mil cestos, ó arrobas, ósea en quintales (de 46 kilogramos) 75,000. Los demás productos (fruta, cacao, café, cascarilla, etc.) pueden calcularse en una cifra igual, ó sean 75,000. Total para la exportación, 150,000.

El tráfico para la importación, tomando como base un cálculo prudencial, en ningún caso puede ser inferior á cien mil quintales, si se atiende á que no siempre todas las acémilas que entran á las expresadas provincias llevan carga, ó por lo menos, carga completa.

Tendríase, pues, como tráfico de ida y regreso, 250,000 quintales.

* * * * *

Un ferrocarril á Yungas ha sido y es la vehemente aspiración de los hacendados de esa feraz porción del suelo del Departamento de La Paz. Su implantación de inmediato traería un asombroso movimiento en el tráfico del comercio; pues entre los factores, que se han tenido en consideración, no se ha hecho referencia á la madera para la construcción y ebanistería, ni á la leña para combustible, en sustitución del escaso y malo que hoy se consume en la ciudad de La Paz. Al presente el alto precio de los fletes hace imposible todo negocio respecto á esta riqueza natural de Yungas.

* * * * *

Como tierras adaptables á la colonización y aún con la misma red de caminos que en la actualidad existe, los Yungas pueden recibir, desde el día en que se establezca un ferrocarril, los contingentes de la inmigración, que encontraría provechoso acomodo y porvenir halagador.

* * * * *

Para tener cabal idea de los elementos que concurrirán al progreso de las provincias de Yungas del Norte y del Sud, conviene indicar, que

los ríos Coroico y el de La Paz, en una y otra circunscripción respectivamente, son ya navegables, á pesar de los malos pasos que vencería la ciencia del ingeniero. Hoy en día se viaja por dichos ríos hácia las regiones del Beni, hallándose el embarcadero del Coroico á 25 leguas de la ciudad de La Paz, y el de La Paz, engrosado con el Miguilla á unas 34 leguas de la misma.

GOMA ELÁSTICA DEL TERRITORIO DE ACRE EXPORTADA EN 1901.

Según el “Indian Rubber World” de mayo de 1902, la goma elástica del Territorio de Acre, exportada en los doce meses de 1901, fué como sigue:

	Kilogramos.		Kilogramos.
Enero	269, 112	Setiembre	58, 441
Febrero.....	1, 112, 247	Octubre.....	24, 091½
Marzo	75, 913	Noviembre.....	59, 131
Abril	24, 349	Diciembre	76, 422
Mayo.....	125, 374		
Junio.....	49, 383	Total	2, 032, 422½
Julio	77, 222	Igual 4,471,374 libras.	
Agosto	80, 727		

El derecho de exportación de este artículo es 15 por ciento ad valorem.

BRASIL.

LA RIQUEZA DEL BRASIL.

(Del “Economista Internacional,” por el Cónsul General del Brasil en Nueva York.)

Los Estados Unidos del Brasil tienen como limítrofes á todos los Estados de la América del Sur, con excepción de Chile. Unas dos terceras partes de sus fronteras están formadas por el mar, y en esta dilatada costa hay muchos puertos. Su mayor longitud es de unas 2,500 millas inglesas, siendo su mayor anchura de unas 4,000 millas. El gran río de las tierras bajas es el Amazonas, al que suele darse el nombre de “Mediterráneo de Sud-América,” y es el río mayor del mundo, bajo cualquier aspecto que se le considere, proporcionando en sus grandes afluentes ó tributarios una navegación de 30,000 millas, sólo dentro del territorio brasileño. Dícese que, allá, en tiempos remotos, el río de la Plata y el Amazonas eran dos mares interiores que estaban unidos el uno con el otro. El Brasil, como una gran isla, formaba por sí sólo un continente; pero los aluviones y las conmociones del fondo de aquel mar Mediterráneo lo adhirieron, andando el tiempo, á la base oriental de los Andes.

La superficie del Brasil, respecto de su elevación, se divide en la región más alta en mesetas escalonadas, en cordilleras, y en amplios

valles abiertos, que ocupan todas las comarcas al sur de la latitud del Cabo San Roque, y las vastas tierras bajas que forman la cuenca del Amazonas, y que se extienden, tierra adentro, hasta la base de los Andes del Perú, del Ecuador, y de Colombia, volviendo á ascender en la extremidad norte, formando las cordilleras que constituyen los límites con Venezuela y las Guayanas. El gran constituyente de todas las cadenas de montañas de las tierras altas del Sur, parece ser el *gneiss* (roca compuesta de feldspato y mica), que varía desde el esquisto hasta la pizarra arcillosa, porfírica, homogénea y granítica, conteniendo vetas auríferas, como en Minas-Geraes, y en las cercanías de Cuyaba, en Matto-Grosso, tan metamorfoseado por todas partes que se han obliterado todas huellas de fósiles. Hay verdaderas capas carboníferas en los yacimientos de carbón, que están al Sur de los trópicos, que son la formación de aquella costa, no conocida al Norte del Río. Hay, también, rocas carboníferas en el Guapore, que es un tributario del Madeira, en la frontera con Bolivia.

En el Estado de Sergipe abunda la piedra arenosa rojiza, ocupando una área considerable de dicho Estado, y debajo de la formación cretácea. Probablemente, el subsuelo del gran valle del Amazonas está formado de rocas cretáceas; no aparecen en la costa sur de la Rocas Abrolhos, en los 18° sur, pero sí se encuentran á intervalos, hácia el norte, y han sido examinadas en el afluente del río Purus, en la cuenca superior del Amazonas. Arcillas terciarias y piedras arenosas, en capas horizontales y no interrumpidas, extiéndense sobre las rocas cretáceas, de una manera informe. Por las planicies de la costa, más abajo de las mesetas y en el valle de San Francisco, los depósitos horizontales del valle de San Paulo, forman parte, evidentemente, del mismo grupo. Depósitos de inmensas peñas de toba volcánica y de gneis, evidentemente las rocas que estaban al pié de antiquísimos ventisqueros locales, fueron descritos, primero que por ningun otro, por Agassiz, quien los encontró en muchos puntos á lo largo de la costa.

Siguiendo la costa Norte, y á irregulares intervalos á lo largo de ella, se encuentran verdaderos arrecifes de coral. Otra clase de estos bancos, á los que dan el nombre de "fecifes," pero de un origen completamente distinto, son las playas de piedra consolidada, como se ven en Bahía y en Pernambuco, en donde los arrecifes forman un verdadero rompe-olas que protege y abriga el puerto. Estos son, propiamente, de un carácter uniforme y han sido descritos por HARTT como el corazón consolidado de una antigua playa que fué separada de la tierra firme por la invasión de las aguas del mar. (Geología y Geografía física del Brasil, por C. F. HARTT.) Las piedras calcáreas de la cuenca superior del San Francisco, forman cavernas que han alcanzado celebridad por haberse encontrado en ellas osamentas de animales extintos, de muy remota antigüedad, tales como el Mastodonte, Glyptodonte y Megaterio. Al mismo tiempo, han sido encontrados,

en algunas de esas cuevas, útiles, herramientas y restos humanos, enterrados con los huesos de una fauna extinguida, que no dejan duda de que el hombre fué contemporáneo de aquellos.”

No han sido observadas huellas volcánicas, á no ser manantiales de aguas calientes, que existen en varios Estados como Bahía, Santa Catarina, Goyaz y Minas Geraes. Los productos en metales y minerales, que existen en esta formación geológica, son de los más variados. Los diamantes fueron descubiertos, por vez primera, en los Estados de Minas, Bahía, Goyaz, Matto Grosso, Paraná, Río Grande do Sul, y San Paulo. Con frecuencia son de un tamaño considerable. Burton hace mención de uno, procedente de Bahía, que pesaba $72\frac{1}{2}$ quilates y que, una vez salido de las manos del lapidario, resultó ser un brillante muy limpio y de magníficas luces. Diamantes negros, esmeraldas, zafiros, rubíes, topacios, berilos, amatistas, granates, ópalos, calcedonias y zafirinas, ágatas y cornalinas se encuentran con especialidad en el Estado de Minas-Geraes. Los granates se encuentran en gran profusión, aunque de calidad inferior. El cristal de roca, perfectamente puro y de gran tamaño, se obtiene en Minas, Goyaz, San Paulo y Paraná. Las calcedonias, las ágatas y las cornalinas, se encuentran casi en toda la extensión del país; pero han llegado á ser artículo de exportación principalmente de las orillas del Uruguay, en el Estado de Río Grande do Sul.

Una de las cuencas carboníferas del Brasil está en el Estado de Santa Catarina. En el Estado de Río Grande do Sul, en los Valles de Jaguarao, de Candiota, de Jacuby y de Arrolho dos Ratos, se han descubierto cuatro grandes yacimientos de carbón. Se encuentra betumen en casi todos los Estados, y se explota en grande escala cerca de la costa sur de Bahía. El azufre existe en estado nativo en Río Grande do Norte y en reducidas cantidades en los Estados de Río Grande do Sul y Minas. El salitre, así como la sal, se hallan en una vasta área de Minas y Bahía, y también se produce en abundancia en el piso de las cuevas calcáreas del Río San Francisco. Encuéntranse también eflorescencias salinas y de sulfato de magnesia, casi puro, en Minas, Bahía y Ceara. Se encuentra oro en vetas de cuarzo que atraviesan las viejas rocas metamórficas tales como pizarra-greda, pizarra-mica, ó exquisto de hierro, en arenillas y pequeñas guijas, en barros y arenas de aluvión procedentes del desgaste de dichas guijas.

Hay muchas minas en explotación. El monto total de la exportación de oro y diamantes arroja un promedio anual de £1,500,000. El oro brasileño está siempre ligado con plata, y este metal se presenta en muchas de las formaciones galénicas que se conocen en casi todos los Estados, así como también en las minas de cobre de Río Grande do Sul. Hay ricas minas de mercurio en el Estado de Paraná. El cobre abunda en los Estados de Matto-Grosso, Goyaz, Minas, Bahía Maranhao, Ceara, y principalmente en Río Grande do Sul, en cuyo último

Estado el mineral que allí se extrae rinde un 60 por ciento de metal puro. El manganeso existe en abundancia en Minas, Río, Bahía y Matto-Grosso, y está considerado como el de la mejor calidad. Hay en explotación minas de galena en muchas partes de la República. Existen minas de plomo á lo largo de la antigua región de la costa, entre Santa Catarina y Maranhao, siendo muy importantes las que se encuentran en la cadena de cerros de Ibiapaba, á orillas del Ceara y del Piahy. Por todas partes, en el Brasil, hay hierro en metal ó en otras formas, y una cantidad de él, casi inagotable, parece existir en las montañas de Minas Geraes.

Un país tan extenso como lo es el Brasil, y de una superficie tan diversificada, necesariamente presenta considerable variedad de climas. Las inmensas tierras bajas del norte, comprendidas en su totalidad entre los trópicos, son muy calientes, y el año allí está dividido en estación de aguas y estación de seca. La elevación de las tierras altas, centrales y del sur, hace que haya gran variedad en las estaciones y en los climas de la parte intertropical de aquella región, y, rumbo al sur, más allá del tropico, se llega á una zona templada en la que están bien marcadas las cuatro estaciones, aunque no de una manera tan distinta como en la Europa central.

Respecto de temperatura, la vasta cuenca del Amazonas es notable por la pequeña variación que allí se experimenta en cuanto al calor, lo que se explica por su posición ecuatorial y por la inmensa superficie de agua y de selvas dentro de sus límites; el termómetro nunca sube á más de 90°, ni baja de 75°. En las altas llanuras de los Estados de Río Grande do Sul y de San Paulo, suele bajar el termómetro á la línea de congelación. El país, en lo general, es sano. La mortalidad en la ciudad más populosa no sube y más bien se mantiene inferior á la de sus iguales de Europa. No hay palabras con que ponderar la exuberancia de la vegetación. La de los valles se diferencia de la de los *sertoes*. Los bosques abundan en casi todas las especies de árboles útiles, medicinales y de ornato, proporcionando maderas ricas para la ebanistería y para construcciones. Sabido es que la flora brasileña es la más hermosa del mundo; no sólo presenta la exuberancia y la variedad comunes á la flora de las tierras calientes, sino que posee clases especiales suyas que le dan extraordinario esplendor, sobre todo en la región ecuatorial.

PRODUCCIÓN DE AZÚCAR EN EL ESTADO DE SERGIPE.

Según un Informe de Mr. H. W. FURNISS, Cónsul de los Estados Unidos en Bahía, enviado con fecha 5 de abril de 1902 al Departamento de Estado y publicado el 27 de mayo siguiente por la Oficina de Comercio Extranjero del mismo Departamento, el producto principal del Estado de Sergipe, en la Unión brasilera, es la azúcar. Unos

quince mil acres de su suelo, y más de la mitad de la población total del Estado se encuentran dedicados á esta industria.

Están ya en operación 671 ingenios, de los cuales hay 269 movidos por vapor, 13 por máquinas hidráulicas, y 389 por fuerza animal.

Ocho de los ingenios de la primera clase emplean trenes al vacío, más ó menos perfeccionados. En los demás se usa por regla general el antiguo sistema de hervir el guarapo, defecarlo, y cristalizar el azúcar.

El ingenio mas grande y mejor montado es el llamado “Engenho Central” de Riachuelo, que es un pueblo pequeño á cosa de 21 millas de Aracajú, sobre un brazo del río Sergipe. Tiene 741 acres de tierra, y compra en vastas cantidades la caña que cultivan los agricultores de la vecindad. Tiene también para su servicio un ferrocarril de cerca de trece millas de longitud, con 84 carros y tres locomotoras.

En la zafra de 1900 á 1901 se molieron 25,204 toneladas de caña, de las cuales se sacaron 1,970 toneladas de azúcar, dedicándose el resto á hacer aguardiente.

En la de 1901 á 1902 estaba calculado que se molarían 45,000 toneladas de caña, y que de ellas se sacarían 36,000 de azúcar.

Mr. FURNISS dice que allí se sigue con alarma el movimiento iniciado en los Estados Unidos de América para favorecer el azúcar de Cuba. Sergipe exporta una gran parte de su azúcar para los Estados Unidos y recibirá perjuicio de cualquier favor que se conceda á sus competidores. En esta zafra se trajeron de Sergipe á los puertos de esta Unión 97,200 sacos de azúcar, conteniendo cada uno de ellos 136 libras.

La total exportación de azúcar de Sergipe en 1901 fué de 487,396 sacos, con un peso de 28,313 toneladas métricas, y un valor de 3,807,-588,072 milreis, ó como \$900,000.

La mayor parte de la maquinaria empleada ha venido de Glasgow. Los principales talleres de reparación de maquinaria están dirigidos por ingleses. Hay dos talleres alemanes por cuya influencia ha empezado ya á introducirse maquinaria alemana.

PRODUCCIÓN DE AZUCAR EN EL ESTADO DE BAHÍA.

Otro Informe del mismo Cónsul, Mr. H. W. FURNISS, fechado el 19 de abril del corriente año, y publicado el 6 de este mes de junio, referente á la “Industria azucarera en Bahía,” contiene los siguientes datos:

La principal región azucarera en este Estado se encuentra en derredor de la ciudad y puerto de Bahía, en un radio de 30 millas, y se considera que los ingenios pueden todos agruparse en dos clases—una que comprende diez y ocho ingenios, provistos de trenes al vacío, y otra, que es muy numerosa, en que se emplean los trenes ordinarios y producen solamente azúcar crudo, moscabado, húmedo ó seco.

La mayor parte de los ingenios compran la caña que muelen, pero no por eso dejan de cultivarla por si mismos en mayor ó menor escala.

Algunos de los grandes ingenios centrales están auxiliados por el Gobierno federal, con la garantía de un interés sobre el capital invertido. Otros están auxiliados directamente por el Estado, por medio de préstamos de dinero. Otros, en fin, dependen solamente de sus propios recursos.

El costo de producción de 75 kilogramos, ó 160 libras de azúcar, de la calidad llamada de Demerara, del tipo 96°, que es por término medio todo lo que puede sacarse de una tonelada de caña debe calcularse como sigue:

Costo de una tonelada de caña.....	\$1. 08
Acarreo de la misma al trapiche.....	0. 12
Combustible	0. 324
Maestro de azúcar y trabajadores.....	0. 30
Gastos diversos	0. 024
Transporte á Bahía.....	0. 168
Saco.....	0. 168
Reparaciones en la factoría.....	0. 168
Comisiones en Bahía	0. 055

Costo total de las 160 libras de azúcar.....	2. 407
--	--------

Las tierras dedicadas en este Estado al cultivo de la caña son de tres clases.

Las llamadas de “massape,” que son las mejores, y de color casi negro, se venden á 70 milreis (\$16.80) por “tarefa.” La “tarefa” es una fracción del acre, equivalente á 0.72.

Las llamadas “salao” son de calidad inferior, y se venden á 50 milreis (\$12) la tarefa.

Las llamadas de “areia,” ó de arena, son las peores de todas.

ABASTECIMIENTO DE AGUA EN BAHÍA.

La ciudad de Bahía, en el Estado del mismo nombre, de los Estados Unidos del Brasil, tiene una población de 200,000 habitantes, que viven en 17,000 casas. Según un informe enviado al Departamento de Estado en Washington, con fecha 11 de abril del corriente año de 1902, por Mr. EUGENE SEEGER, Consul de los Estados Unidos de América en Río de Janeiro, el abastecimiento de agua de aquella ciudad, había por largo tiempo dejado mucho que desear. Una Compañía local, del nombre de “Queimado,” tenía por contrato la obligación de atender á este servicio desde 1852, y había gastado grandes sumas en la construcción de acueductos, fuentes, etc., etc., que no siempre dieron satisfacción completa. Nuevos arreglos se han hecho ahora, asegurando mejor servicio, y renovando la concesión por cuarenta y cinco años, al cabo de los cuales podrá la municipalidad, si así lo quiere,

comprar, á precio fijado por peritos, los talleres y propiedades de los concesionarios.

Sucede, sin embargo, que bien sea por virtud de la presente crisis económica que aflige al Brasil, bien por otras causas, no le es posible de momento á la Compañía de Queimado obtener el dinero necesario para completar el sistema de abastecimiento que tiene que poner en planta; y que por esta razón ha decidido vender la concesión y todo lo hecho hasta ahora, á la persona^o compañía, que quiera subrogársele. El precio pedido es 1,100,000 pesos, y el rendimiento se calcula que será 300,000 pesos por año.

La municipalidad ha hecho obligatorio el uso del agua en cada casa, fijando en 3 pesos por mes el precio de cada 400 litros por día, que en ella se consuman. El agua de las fuentes se paga á razón de 20 reis por cada 20 litros.

COLOMBIA.

CONCESIÓN AL FERROCARRIL DE BOLÍVAR PARA LA LIBRE IMPORTACIÓN DE CARBÓN DE PIEDRA.

“ARTÍCULO 1°. El Gobierno concede á la Compañía del Ferrocarril de Bolívar extención de derechos de importación para el carbón que ésta introduzca, destinado exclusivamente para el servicio de la misma empresa.

“ART. 2°. La concesión hecha por el artículo anterior durará por el término de cinco años, que principiarán á contarse desde la fecha de la aprobación de este contrato.

“ART. 3°. La compañía se obliga á vender al Gobierno, á precio de costo, el carbón que éste pueda necesitar.

“ART. 4. El Gobierno, por conducto del Ministerio de Hacienda, podrá declarar administrativamente caducado el presente contrato, si llegare á comprobar que la compañía ha dado inversión distinta al carbón que introduce destinado para el uso de la empresa del ferrocarril.

“ART. 5. El presente contrato necesita para su validez, de la aprobación del Honorable Consejo de Ministros y del Excmo. Sr. Vicepresidente de la República, encargado del poder ejecutivo.

“En fe de lo expuesto se firman dos ejemplares de un mismo tenor, en Bogotá, á catorce de enero de mil novecientos dos.”

El contrato que antecede fué debidamente aprobado por el Honorable Consejo de Ministros, y el Excmo. Vicepresidente de la República, Encargado del poder ejecutivo, en 22 y 23 de enero próximo pasado respectivamente.

COSTA RICA.

INAUGURACIÓN DEL NUEVO PRESIDENTE.

La inauguración del nuevo Presidente de la República de Costa Rica, Señor Licenciado Don ASCENSIÓN ESQUIVEL, tuvo lugar con las solemnidades de costumbre el 8 de mayo último, á las doce del día.

Su mensaje inaugural, dirigido al Congreso constitucional de la República, fué como sigue:

“SEÑORES DIPUTADOS: Al tomar posesión de la Presidencia de la República, á que me ha llamado la mayoría de mis conciudadanos, sea mi primera palabra para felicitar á Costa Rica por haber afirmado el imperio de sus instituciones políticas.

“Recibid vosotros, sus dignos Representantes, el homenaje de mi profundo respeto y la expresión de mis sinceros parabienes.

“Nada tan significativo en la vida de las naciones democráticamente constituidas, como el acto sencillo en que, en obediencia á la ley y en acatamiento de la voluntad popular, se trasmite de unos hombres á otros la autoridad suprema del Estado. Patentiza esta ceremonia, de manera irrefutable, que la majestad de la Constitución no es mero anhelo de soñadores políticos, sino práctica y viviente realidad.

“Al congratularme por tal motivo con vosotros, siento verdadera satisfacción en manifestar, con toda la energía de que soy capaz, que á mi vez, corrido que sea el período constitucional, me será muy grato volver á la vida privada y entregar el mando á quien los pueblos libremente designen para sucederme.

“Tan formal declaración, que me complazco en estampar al frente de mi primer mensaje y con cuyo cumplimiento satisfaré no sólo mi deber según la ley escrita, sino lo que mi conciencia y mis convicciones conceptúan ineludible obligación, espero que lleve á vuestros ánimos la seguridad de que, por mi parte, favoreceré cualquiera iniciativa de reforma constitucional que tienda á consolidar la alternabilidad en el poder.

“De suma urgencia me parece ampliar el régimen municipal y conceder á los ayuntamientos mayor independencia, á fin de que todos los pueblos de significación, sea por número de habitantes, sea por riqueza, gocen de sus propios recursos, deliberen y decidan acerca de sus propios negocios y salgan de la tutela y centralización, á todas luces injusta y en más de una ocasión reñida con su progreso, á que en el día, por desgracia, se encuentran sujetos.

“La extensión de los cuerpos municipales debería combinarse con el sistema de sufragio directo. De esta suerte se contribuiría á la educación política de los ciudadanos y se asentaría sobre más firmes fundamentos el Gobierno democrático. Para conseguir mejora tan impor-

tante, sería preciso modificar la Constitución. De mi parte, apoyaría la proposición de enmienda.

“El Gobierno que hoy se inaugura no hará política de partido. Ni conviene que en las circunstancias por que atraviesa la República haya luchas de bandería ó sectarismo. El país lo que realmente desca es que la nueva Administración se consagre, y la nueva Administración lo que más ardientemente anhela es consagrarse de lleno, exenta de otras preocupaciones, á atender los graves y complicados problemas económicos que tan justamente tienen embargados todos los espíritus.

“Desde luego tendría que haber acaloramiento de los partidos, y se comprometería seriamente la tranquilidad social, si de parte del Gobierno ó de parte de los ciudadanos, se suscitasen conflictos religiosos. Mi Gobierno, consecuente con el propósito enunciado, procurará en sus relaciones con la Iglesia, mantener la más franca y cordial armonía, sin que por eso provoque ó consienta alteración en las posiciones que respectivamente ocupan el poder civil y la autoridad eclesiástica. Dentro de esa fórmula, otorgar á la Iglesia todo auxilio compatible con nuestro modo de ser actual: he aquí el criterio que informará mi conducta de gobernante en este asunto. No dudo ni por un instante que para llevar á cabo este plan, único que se aviene con el deseo de conciliación que me anima, podré contar con el patriotismo y la cordura que distinguen al venerable sacerdote que tan merecidamente ha sido designado por la Santa Sede para regir la Iglesia de Costa Rica.

“La situación del Tesoro público, de todos conocida, obligará al Gobierno, como medida imprescindible, aunque dolorosa, á simplificar los servicios de la Administración, á reducir el personal de empleados y á abstenerse de todo gasto que no tenga carácter de indispensable. No se me oculta que con esta resolución habrá muchos intereses lesionados y que el sistema de economías aparejará descontento; pero es preciso entrar por ese camino, no obstante sus abrojos.

“El Gobierno, sin embargo, no procederá de modo caprichoso é injusto. Conservará los empleos que sean necesarios; exigirá á los funcionarios públicos el mismo trabajo asiduo y la misma severa puntualidad que cualquier particular ó empresario pide á sus dependientes; pero en cambio les garantizará su posición mientras haya buen desempeño, y al elegir buscará, antes que opinión política, competencia y probidad.

“La agricultura recibirá especial protección de mi Gobierno. Como medio, el más eficaz de darle impulso y de reanimar las fuerzas productoras de la nación, se dedicará buena parte de las entradas del Tesoro al ensanche, mejoramiento y conservación de los caminos. Protección indirecta pero de gran trascendencia obtendrá igualmente con la persecución de la vagancia y del contrabando de aguardiente y con la prohibición de mantener puestos de licores fuera de los centros de población.

“Las leyes vigentes contra la fabricación y el expendio clandestinos de aguardiente, se ejecutarán con todo rigor, y aún resultaría provechoso modificarlas en un sentido de mayor severidad contra el delincuente, y de mayor facilidad para la acción de la justicia.

“Usar de tolerancia en esta materia sería altamente censurable, no sólo porque refluye directamente contra la renta, sino principalmente por que cría hábitos de resistencia á la autoridad y á la ley, por que con ella se permite la bebida de artículos malsanos, que en mayor escala producen enfermedades y traen la debilidad de la raza, y por que abaratándose el aguardiente se fomentan los vicios y las malas costumbres y crece de modo notable la criminalidad.

“Combatir enérgicamente esta plaga social, es trabajar por el buen nombre, moralidad y vigorosa constitución de nuestras gentes.

“Mi Gobierno tratará de contribuir al bienestar material y moral de las clases obreras. Fomentará la agremiación de artesanos, que es provechosa tanto en el sentido de mutuo apoyo, como en el de disciplina de los agremiados. Tan pronto como los recursos del Erario lo permitan, promoverá obras públicas que les den ocupación. Y desde luego les facilitará los medios á su alcance para que obtengan una educación general y técnica, mediante la cual, lleguen á formarse operarios hábiles al par que ciudadanos ejemplares.

“En punto á relaciones internacionales, el nuevo Gobierno seguirá la conducta que tradicionalmente ha observado Costa Rica: cumplir leal y estrictamente las obligaciones que le imponen los tratados vigentes; llenar los deberes que el derecho de gentes prescribe para todas las naciones; y especialmente, no intervenir ni directa ni indirectamente en los asuntos internos de los otros Estados. Este propósito será aun más cuidadosamente cumplido en cuanto se refiere á los países limítrofes.

“La instrucción pública continuará recibiendo del Gobierno la misma esmerada atención que hasta ahora ha tenido. Sin embargo, será conveniente hacer más práctica la enseñanza que se imparte en las escuelas rurales y quitar al Estado el papel que ha asumido de empresario de la segunda enseñanza, ya que por condiciones especiales de la República, deba otorgarle franco apoyo.

“Por lo demás mi Gobierno pondrá oído atento á toda manifestación de la opinión pública y en primer término á las críticas que se le enderecen, para aprovechar el consejo saludable, si lo hubiere, ó para hacer caso omiso del insulto, si de él llegare á usarse; y solicitará la cooperación de los buenos patriotas y hombres de mérito, sin reparar en su filiación política. Especialmente requiere y espera el concurso de vuestras luces y patriotismo.

“Permitid, señores diputados, que antes de terminar ofrezca mi congratulación muy respetuosa al distinguido costarricense que descende del solio presidencial, por haber sabido conservar el orden y promover el adelanto, y por haber procurado en su período de Gobierno—uno

de los más laboriosos que registra la historia nacional—hacer la dicha de su patria. Al retirarse del puesto que tanto ha ilustrado con su talento y con sus preclaras dotes de estadista, lleve la satisfacción de que no le seguirán á la vida privada ni odios personales ni rencores que clamen venganza, y de que, si bien su administración podrá ser por algunos discutida, todos sus conciudadanos reconocemos que ha sido un gobernante patriota y progresista.

“Al presentarle en este acto mi cordial enhorabuena, no sólo saludo al ciudadano que baja del poder, dejando tras de sí brillante estela, sino que también saludo en él, con toda efusión y con el país entero, á la Constitución que dictaron los fundadores de nuestra República y que nosotros debemos mirar como arca santa de nuestras instituciones.”

EL NUEVO GABINETE.

Ascension Esquivel, Presidente constitucional de la República de Costa Rica, decreto:

ARTÍCULO 1°. Organízase el Gabinete en la forma siguiente:

Licenciado don LEONIDAS PACHECO, Secretario de Estado en las Carteras de Relaciones Exteriores, Justicia, Gracia, Culto, Beneficencia é Instrucción Pública.

Don MANUEL J. JIMÉNEZ, en las de Gobernación, Policía y Fomento.

Licenciado don Cleto GONZÁLES VÍQUEZ, en las de Hacienda y Comercio.

Don TOBIÁS ZÚÑIGA, en las de Guerra y Marina.

ART. 2°. El Subsecretario de Gobernación queda encargado de la ejecución de este decreto.

Dado en la Casa Presidencial, á los ocho días del mes de Mayo de mil novecientos dos.

ASCENSIÓN ESQUIVEL

El Subsecretario de Estado en el despacho de Gobernación.

PEDRO LORÍA

NOTICIA BIOGRÁFICA DEL SEÑOR PRESIDENTE ESQUIVEL.

El Señor don ASCENSIÓN ESQUIVEL es uno de los estadistas más prominentes de Costa Rica, y uno de los más distinguidos de Centro América.

Sus dotes elevadas de hombre recto, de juicio calmado y reflexivo, notadas desde el tiempo en que era estudiante de Derecho muy aprovechado, le dieron aunque muy jóven aún, un gran prestigio que fué creciendo á medida que iba siendo conocido.

Abogado notable, ha sido factor importante en las reformas de la legislación de Costa Rica, que tanto honra al país por la manera prudente con que allí se han introducido los principios modernos, y se practicar sin jactancias las doctrinas que informan la verdadera idea liberal.

Al recorrer la escala que lo ha elevado, ya en la administración de justicia, en el Ministerio de Relaciones Exteriores, en el servicio diplomático, ó en el ejercicio de la Primera Magistratura de la República, los eminentes servicios del Señor ESQUIVEL han reflejado invariablemente su carácter honorabilísimo, la rectitud de sus miras, su ardiente patriotismo.

Candidato á la Presidencia en la campaña electoral de 1889, y llamado á ejercer el Poder Ejecutivo en calidad de Designado, conforme á la ley, renunció aquel puesto para entrar en la lucha á que le obligaba su partido y lo llevaban sus propias convicciones. No obtuvo entonces la elección, pero sus prestigios lejos de declinar más bien crecieron, y de ello dá evidencia la inmensa mayoría que lo ha elevado, y el regocijo general con que todo el país ha celebrado su exaltación al Poder Ejecutivo.

LIBRE IMPORTACIÓN DE CAJAS DE MADERA.

El Congreso Constitucional de la República de Costa Rica, de conformidad con la fracción 4ª del artículo 94 de la Constitución, decreta:

ARTÍCULO ÚNICO. Apruébase el decreto n°. 5 de 7 de febrero último, por el cual se exceptúan del pago de derechos de aduana y muellaje las cajas de madera que se introduzcan de los Estados Unidos de Norte América para el empaque y exportación de naranjas.

Al poder ejecutivo:

Dado en el Salón de Sesiones del Congreso. Palacio Nacional. San José, á los veintitres días del mes de mayo de mil novecientos dos.

FRANCISCO M. IGLESIAS, *Presidente*.

CARLOS SAENZ, *1er Secretario*.

PEDRO ZUMBADO, *2º Secretario*.

San José, á los veintitres días del mes de mayo de mil novecientos dos.

Ejecútese:

ASCENSIÓN ESQUIVEL.

El Secretario de Estado en el despacho de Hacienda y Comercio:

CLETO GONZÁLEZ VÍQUEZ.

ESTADOS UNIDOS.

COMERCIO CON LA AMÉRICA LATINA.

IMPORTACIONES Y EXPORTACIONES.

En la página 1475 aparece la última relación del comercio entre los Estados Unidos y la América latina, tomada de la compilación hecha por la Oficina de Estadística del Departamento de Hacienda de los

Estados Unidos. Estos datos se refieren al valor del comercio arriba menciondo. La estadística corresponde al mes de abril de 1902, comparada con la del mes correspondiente del año anterior, y también comprende los datos referentes á los nueve meses que terminaron en abril de 1902, comparados con igual período de 1901. Debe explicarse que la estadística de las importaciones y exportaciones de las diversas aduanas referente á un mes cualquiera, no se recibe en el Departamento de Hacienda hasta el 20 del próximo mes, necesitándose algún tiempo para su compilación é impresión, de suerte que los datos estadísticos correspondientes al mes de abril, por ejemplo, no se publican sino en junio.

MANUFACTURA DE BOTAS Y ZAPATOS DE GOMA ELÁSTICA.

El Boletín del Censo relativo á este asunto, publicado el 20 de mayo del corriente año de 1902, pone de manifiesto el notable incremento que ha habido en esta industria.

En 1880 había 9 factorías de botas y zapatos de goma; en 1890, el número subió á 11; y en 1900 han sido 22.

Todo el capital empleado en este negocio en 1880 era \$2,429,000. El empleado en 1890 fué \$17,790,970, y el de 1900 llegó á \$33,667,533.

El valor de los productos en 1880 fué \$9,705,724. En 1890 subió á \$18,632,000, y en 1900 llegó á \$41,089,819.

La manufactura de botas y zapatos de goma, tal como existe en los Estados Unidos, data desde 1844 cuando se concedió la patente llamada de Goodyear. El progreso efectuado desde entonces, así en la cantidad como en la calidad de los productos, ha sido muy notable. Hoy se hacen como mil clases distintas de botas y zapatos de goma, y entre las grandes ventajas que se ha logrado obtener, está la de haber conseguido que estas botas y zapatos no sean ya tan intolerablemente calientes como lo eran al principio.

En un tiempo estos artículos se consideraban como cosas de lujo, de que sólo podían gozar las gentes acomodadas. Hoy se encuentran fácilmente al alcance de todos.

El siguiente cuadro muestra la cantidad y el valor de la goma elástica cruda ó en bruto, importada en los Estados Unidos en el año fiscal que terminó el 30 de junio de 1900, y los países de donde vino.

NOTAS SOBRE EL COMERCIO MARÍTIMO DE SAN FRANCISCO DE CALIFORNIA.

Según un Informe dirigido en 1° de febrero de este año de 1902, por el Cónsul de Chile en San Francisco de California al Ministro de Relaciones Exteriores en Santiago de Chile, sobre el comercio general de importación y exportación entre el puerto citado y los de aquella República, durante el año de 1901, pocas veces ha habido una situación de mayor prosperidad comercial entre los dos países que la que se

presentó en ese año. El progreso ha consistido no tanto en el volumen del comercio marítimo, como en el desenvolvimiento de relaciones comerciales más dilatadas, y en el desarrollo de métodos comerciales enteramente distintos de los que se han seguido en San Francisco por muchos años.

Este Informe ha sido publicado en el “Diario Oficial” de la República de Chile el 1° de mayo último, y muestra que antes de mucho el puerto de San Francisco será reconocido como el primer puerto de distribución en todo el Pacífico. Gradualmente se han ido abriendo las puertas de los mercados del Oriente, y millones de habitantes en China y en Japón consumen ahora más harina americana que la que jamás habían consumido. Los pedidos de calzado y de géneros de algodón han aumentado y continúan constantemente aumentándose.

La siguiente tabla muestra la importancia del comercio de exportación por el puerto de San Francisco, comparado con los otros del Pacífico septentrional, de 1890 á 1900, ambos inclusive:

Distritos.	1890.	1892.	1894.	1896.	1898.	1900.
Alaska	\$4,845	\$20,561	\$7,142	\$17,449	\$64,419	\$2,532,887
Arizona			569,501	1,031,317	1,347,486	2,300,000
Humboldt	139,012	156,107	111,251	141,174	151,594	248,020
Los Angeles	220		2,151	30,376	8,614	
Oregón	757,580	892,335	77,367	395,534	257,365	87,125
Puget Sound	4,021,669	5,129,254	5,567,113	10,549,137	15,649,512	19,612,077
San Diego	316,410	98,574	195,597	204,153	144,928	1,537,606
San Francisco	35,819,585	31,711,450	22,147,050	39,786,024	31,998,805	37,940,334
Willamette	3,408,880	6,048,943	3,789,745	6,972,428	12,801,913	9,007,043
Total	44,468,201	44,057,224	32,466,917	59,127,592	62,424,636	73,265,092

Las exportaciones de San Francisco, por mar, en 1901, excedieron de \$40,000,000 en valor, y no hay duda que hubieran llegado á mucho más si no hubiera sido por las huelgas que tuvieron paralizado el comercio por espacio de unos tres meses.

La exportación en octubre de 1896 fué por valor de \$5,750,000, y en octubre de 1901 ha llegado hasta \$6,000,200.

Las exportaciones para Hawaii en 1899 fueron por valor de \$11,500,000.

En 1895 no había más que tres líneas de vapores que daban viajes regulares entre San Francisco y los demás puertos. Hoy hay doce líneas que pertenecen á diez grandes compañías, con vapores á veces magníficos de doce y diez y séis mil toneladas. En estas líneas no se cuentan las establecidas para el servicio entre San Francisco y el Canadá y Alaska.

Además de los transportes militares que salen de San Francisco para Manila hay ahora un vapor mercante que hace el viaje mensualmente. Existe la esperanza de que estos viajes sean semanales dentro de un año ó año y medio.

Las mercancías importadas en San Francisco en 1901 son como sigue:

Bananas	racimos..	9, 920	Aceite castor	cajas..	695

ESTADÍSTICAS DE RENTAS ADUANERAS EN 1901.

El monto total de los derechos de importaciones recibidos en la aduana de San Francisco, durante el año que terminó el 30 de noviembre último, refleja gran crédito en este puerto.

El resumen mensual de la aduana consta de las siguientes entradas:

Meses.	1898-99.	1899-1900.	1900-1901.
Diciembre	\$487, 534. 40	\$424, 750. 65	\$531, 639. 41
Enero	536, 100. 28	754, 582. 84	636, 396. 20
Febrero.....	519, 902. 95	500, 343. 81	482, 861. 43
Marzo	681, 104. 89	552, 544. 95	538, 488. 34
Abril	570, 945. 17	706, 377. 95	586, 721. 52
Mayo	585, 407. 47	543, 740. 14	575, 359. 75
Junio	655, 677. 57	567, 902. 43	585, 360. 82
Julio.....	556, 860. 99	653, 927. 73	657, 026. 63
Agosto.....	747, 385. 81	690, 641. 81	577, 945. 03
Septiembre	522, 202. 11	562, 285. 00	595, 855. 43
Octubre	603, 644. 63	778, 632. 66	695, 251. 74
Noviembre	508, 560. 23	790, 651. 79	564, 122. 03
Total	6, 975, 326. 50	7, 526, 381. 76	7, 027, 008. 33

IMPORTACIONES.

Las importaciones marítimas de mercaderías extranjeras en los doce meses, que incluyen hasta el 30 de noviembre de 1901, son muy estimables.

Los valores de dichas importaciones van expresados a continuación, de modo que la comparación con los totales de las que se hicieron durante el mismo número de los dos años anteriores, sea más fácil:

Meses.	1899.	1900.	1901.
Diciembre	\$2, 049, 968	\$3, 152, 722	\$2, 108, 898
Enero	2, 642, 027	3, 256, 912	2, 390, 408
Febrero	4, 302, 850	4, 424, 063	2, 764, 920
Marzo	4, 295, 267	3, 471, 780	3, 894, 737
Abril	3, 212, 989	5, 793, 547	3, 717, 294
Mayo	3, 867, 493	3, 733, 988	3, 538, 973
Junio	3, 743, 452	3, 485, 298	3, 730, 410
Julio	2, 446, 936	2, 218, 830	2, 538, 142
Agosto	5, 087, 695	3, 641, 613	3, 058, 851
Setiembre	4, 604, 737	2, 198, 529	2, 713, 149
Octubre	4, 444, 967	2, 569, 440	2, 964, 923
Noviembre	3, 876, 839	3, 118, 089	2, 814, 980
Total	44, 575, 170	41, 064, 811	36, 235, 690

La clasificación de las mercaderías importadas en 1901, demuestra que poco más de la mitad de ellas entraron libres de derechos.

Las procedencias de las mercaderías ya citadas, se declaran en el cuadro que aparece a continuación:

Países.	1900	1901	Países.	1900	1901
Japón	\$9, 468, 240	\$10, 726, 500	Australia	\$593, 450	\$675, 920
China y Hongkong	8, 059, 523	6, 138, 720	Méjico	460, 354	487, 330
América Central	2, 327, 085	4, 668, 240	Columbia Británica	3, 409, 782	2, 525, 860
Gran Bretaña	2, 463, 214	2, 127, 400	Sud América	840, 979	991, 470
Islas Hawaii	5, 578, 833	Indias Orientales	2, 992, 293	2, 742, 400
Francia	1, 346, 654	1, 345, 980	Filipinas	452, 286	339, 510
Alemania	1, 424, 815	1, 432, 240	Islas del Mar Austral	407, 343	496, 760
Bélgica	750, 435	840, 780	Siberia y otros	15, 327	105, 640
Italia	224, 594	337, 960	Total	41, 064, 811	36, 235, 690
Cuba	249, 604	252, 980			

El siguiente cuadro expresa los destinos y valores de las exportaciones marítimas de San Francisco durante los doce meses concluidos el 30 de noviembre de 1901, y, para que se puedan comparar con los del año anterior, se incluyen también éstos.

Destino.	1900.	1901.	Destino.	1900.	1901.
Estados del Oriente	\$3, 293, 988	\$3, 232, 320	Islas Fonga	\$2, 400	\$920
Gran Bretaña	13, 705, 374	12, 708, 490	Islas Carolinas	10, 896	2, 640
Bélgica	100, 183	33, 370	América Central	1, 577, 284	2, 228, 190

San Francisco es el desembocadero occidental de todo el comercio de los Estados Unidos.

California es el único Estado que produce asfalto y roca bituminosa.

San Francisco es el primer puerto ballenero del mundo.

Las minas de oro de California produjeron \$17,000,000 en 1901.

Las transacciones bancarias en los once meses, terminados el 30 de noviembre de 1901, ascendieron á \$1,175,301,571.50.

Los depósitos naturales de petróleo de este Estado dan al presente 16,000,000 de barriles anuales, cuyo valor es de \$12,000,000.

Las exportaciones de San Francisco, por mar, fueron, en 1901, de \$41,000,000.

En el año ya citado se acuñaron en esta ciudad \$70,000,000.

La producción de lana fué de 17,000,000 de libras.

Las Cajas de ahorros tuvieron un aumento en los depósitos de más de \$7,000,000.

En el mismo año (1901) los depósitos en los bancos comerciales aumentaron \$8,000,000.

San Francisco es la tercera ciudad (en cuanto á importancia comercial) de los Estados Unidos.

La cosecha de trigo de California en 1901 consistió en 1,000,000 de toneladas, cuyo valor fué de \$19,000,000.

La cantidad de azúcar importada en San Francisco el año pasado llegó á 600,000,000 de libras, y la de arroz, á 30,000,000.

California produce mucha miel, habiendo llegado la producción de este artículo el año pasado hasta poder cargar, 220 carros de ferrocarril.

El comercio marítimo de San Francisco en octubre del año pasado fué de más importancia que el de ningún otro mes en la historia de la ciudad.

La cosecha de cebada en 1901 fué de 500,000 toneladas, y su valor \$7,500,000.

En San Francisco hay diecisiete bancos de comercio; sus recursos son más de \$87,000,000.

La producción de vino en el año ya expresado ascendió á 18,000,000 de galones.

APLAZAMIENTO DE LA EXPOSICIÓN DE SAN LUIS.

La exposición que ha de celebrarse en San Luis, Missouri, para conmemorar la compra de la Louisiana, ha sido aplazada para el año de 1904. Entre las diferentes razones que ha habido para ello está la de que muchos Gobiernos extranjeros no podrían tomar parte en el certamen, si este hubiese de efectuarse en 1903, como se había pensado.

La apertura de la Exposición tendrá lugar, cuando más tarde, el 1° de mayo de 1904, y su clausura el 1° de diciembre del mismo año.

Se han mandado acuñar \$250,000 en monedas de oro, de valor de un peso cada una, que se venderán como “recuerdos” de la Exposición. Esta suma forma parte de los \$5,000,000 que el Congreso votó para auxiliarla en sus gastos.

GUATEMALA.

RECURSOS PARA AUXILIAR Á LAS VÍCTIMAS DE LOS ÚLTIMOS TERREMOTOS.

[Abril 25 de 1902.]

La Asamblea Nacional Legislativa de la República de Guatemala, Considerando: Que los terremotos ocurridos el 18 del corriente han ocasionado lamentables pérdidas en varios pueblos, y que el Presidente de la República ha dirigido una excitativa especial á fin de que la Asamblea dicte las providencias que exige esa desgracia nacional.

Considerando: Que el Poder Legislativo está en el deber de tomar todas aquellas medidas que tiendan á aliviar en lo posible los efectos del desastre, y que el establecimiento de varios impuestos, con un carácter transitorio, es de equidad y permitirá llevar á las familias perjudicadas los socorros necesarios.

Por tanto, decreta:

ARTÍCULO 1°. Por el término de cinco años, contados desde el 1° de mayo entrante, se recaudarán en las oficinas de hacienda los siguientes impuestos adicionales.

1°. Diez centavos por cada botella de aguardiente que con la capacidad y grados de ley salgan de los depósitos respectivos para el consumo.

2°. Un diez por ciento más sobre las cuotas actuales que se pagan por licencias ó patentes para expendio de licores y aguardiente.

3°. El veinte por ciento más sobre los derechos de importación de vinos, cervezas y licores procedentes del extranjero.

4°. Cinco pesos anuales por cada manzana de caña de azúcar, en aquellas plantaciones que excedan de cinco manzanas.

5°. El diez por ciento más, en oro, sobre los derechos de importación del tabaco en rama ó elaborado procedente del extranjero.

ART. 2°. Las oficinas fiscales llevarán cuenta separada de la recaudación de estos impuestos.

ART. 3°. El producto integro de tales impuestos se destinará exclusivamente al socorro de las personas que hubieren sido perjudicadas á consecuencia de los terremotos.

ART. 4°. El Poder Ejecutivo podrá, desde luego, obtener fondos, con el indicado objeto, haciendo consignación de éstas ú otras rentas.

ART. 5°. Por el término de cinco años se exceptúan del pago de la contribución del seis por millar, las propiedades urbanas de las poblaciones dañadas.

ART. 6°. Queda además autorizado el Ejecutivo, para hacer gracias, concesiones ó exenciones de impuestos, en favor de los damnificados por los terremotos.

ART. 7°. Por el término de cinco años, quedan exceptuados de todo servicio personal en favor del Estado los habitantes de los pueblos que hubieren sufrido gravemente á consecuencia de los últimos terremotos, á efecto de que, sin dificultad alguna, se entreguen á la reparación de los males causados.

ART. 8°. Por el término de dos años, será libre de todo impuesto fiscal y municipal, la importación de los siguientes artículos:

Alquitrán y carbolina.

Cañerías de hierro galvanizado.

Casas de madera ó hierro completas ó en parte.

Cemento romano.

Láminas de hierro galvanizado para techos.

Pilares de hierro ó madera y sus anexos.

Puertas y ventanas de madera ó hierro.

Pintura blanca en aceite; y teja de cualquier sustancia.

ART. 9°. En las sesiones ordinarias respectivas, se dará cuenta especial á la Asamblea de la recaudación é inversión de los fondos creados por la presente ley.

En Guatemala, á los veinticuatro días del mes de abril de mil novecientos dos.

LIBRE FRANQUEO DE LAS PUBLICACIONES DE LA OFICINA.

El 20 de mayo de 1902, se dictó por conducto de la Secretaría de Fomento el acuerdo que dice:

“De conformidad con el artículo 8 de la resolución que se refiere á la reorganización de la Oficina Internacional de las Repúblicas Americanas, sancionada por la Segunda Conferencia Internacional de los Estados Americanos, que se efectuó recientemente en la ciudad de México, resolución que dispone que ‘las publicaciones de la Oficina se considerarán como documentos públicos y se transportarán libres de gastos en las valijas de todas las Repúblicas,’ el Presidente Constitucional acuerda: que las publicaciones y correspondencia que tengan su origen en la oficina expresada, y no pesen más de cuatro libras seis onzas (dos kilogramos), límite del peso prescrito por la Convención Postal Universal, de Wáshington, á los paquetes de ‘impresos,’ serán admitidas en los correos de esta República, libres de franqueo postal, cuanda estén dirigidas á los países que forman la Unión Internacional de las Repúblicas Americanas.”

HAITI.

LEY DE MINAS.

(Diciembre 10 de 1860.)

TÍTULO I.

DISPOSICIONES GENERALES.

ARTÍCULO 1. Todas las sustancias minerales ó fósiles se entenderán clasificadas en tres grandes grupos, á saber: Las minas, las mineras (minières) y las canteras.

ART. 2. Se comprenden bajo el nombre de minas todos los yacimientos de sustancias, que se encuentran en filones, capas, ó montones, en el seno de la tierra, ó en su superficie, como por ejemplo el oro, la plata, el platino, el mercurio, el plomo, el hierro, el cobre, el estaño, el zinc, la calamina, el bismuto, el cobalto, el antimonio, el molibdeno, el tungsteno, el níquel, el cromo, ú otras materias metálicas, el arsénico, el teluro, el iodo, el azufre, la plumbagina, el carbón de piedra, la madera fósil, las sustancias bituminosas, el alumbre, los sulfatos de base metálica, la sal gemma y los demás cuerpos análogos.

ART. 3. Bajó la denominación de mineras se comprenden los minerales de hierro llamados de aluvión, las tierras piritosas capaces de convertirse en sulfato de hierro, las tierras aluminosas, las turbas y las demás sustancias de la misma clase y yacimiento.

ART. 4. En el término canteras se comprenden las pizarras, las piedras de filtrar, las de construcción y de otras clases, los mármoles, el granito, las piedras de hacer cal, las de yeso, las pouzolanas, las arcillas hidráulicas, los basaltos, las lavas, gredas y cretas, las arenas, piedras de chispa, arcilla, kaolinas, galachitas, barro de alfarería, las sustancias terrosas, las guijarros de todas clases y las tierras piritosas consideradas como abonos.

ART. 5. Las sustancias comprendidas bajo el nombre de minas pertenecen á la nación. También pertenecen á esta las de la clase de “canteras,” que no son explotables sino por medio de galerías subterráneas.

Todas estas sustancias están puestas á disposición del Estado para ser explotadas.

ART. 6. Las sustancias enumeradas en la categoría de “mineras” y aquellas de las comprendidas bajo el nombre de “canteras” que pueden ser explotadas á cielo abierto pertenecen á dueño de la superficie.

ART. 7. La explotación de estas sustancias, así en lo que concierne al Estado, como en lo que se relaciona con el propietario particular, está sometida á las reglas que en esta ley se establecen.

TÍTULO II.

DE LAS SUSTANCIAS MINERALES Ó FÓSILES QUE PERTENECEN Á LA NACIÓN.

SECCIÓN 1.^a*De la naturaleza particular de esta propiedad.*

ART. 8. Las “minas” y las “canteras” de la propiedad del Estado, así como los edificios, máquinas, pozos, galerías, y demás trabajos de carácter permanente, los animales dedicados á su servicio interior, y los instrumentos, útiles y utensilios que sirven para su explotación, son bienes raíces, sujetos á los principios establecidos en los artículos 427 y 428 del Código Civil.

ART. 9. Los productos de estas minas y canteras, así como los demás objetos movibles, no comprendidos en el artículo anterior, son bienes muebles.

ART. 10. Estas minas y canteras no están sujetas á la prescripción.

ART. 11. No podrán ser explotadas sino en virtud de una concesión que haya sido objeto de deliberación en Consejo de Ministros.

ART. 12. Su administración radica en el Ministerio del Interior, en que habrá una rama ó división especial, que para este objeto se organizará después debidamente, por medio del decreto oportuno.

SECCIÓN 2.^a*De los actos y formalidades que deben preceder á la concesión.*

ART. 13. Nadie podrá hacer investigaciones para descubrir minas ó canteras, ó abrir pozos y hacer excavaciones en un terreno, sin el consentimiento de su dueño, y á falta de este consentimiento sin autorización del Gobierno, que no será dada sino después de oír al dueño, y de fijarse la indemnización previa que habra de satisfacerse.

ART. 14. Se concederá á las personas que se dediquen con éxito á estas investigaciones una indemnización que comprenda los gastos hechos, debidamente probados, y una justa gratificación.

ART. 15. La investigación comprenderá además de lo necesario para hacer constar la existencia de la mina, los reconocimientos que sean precisos para demostrar la posibilidad de una explotación útil.

ART. 16. El Gobierno hará saber por medio del correspondiente anuncio su intención de conceder la explotación de minas y canteras, á fin de incitar á que se hagan proposiciones.

Sin embargo, cuando una ó varias personas, provistas de todas las noticias necesarias acerca de una mina ó cantera, soliciten del Gobierno su concesión, ésta podrá otorgarse sin anuncio previo.

ART. 17. Las personas que por virtud del anuncio deseen hacer

proposiciones para obtener la concesión podrán por sí mismas, ó por medio de sus agentes, previa autorización del Gobierno, emprender el examen ó exploración de lo que ha de ser el asunto de la concesión.

ART. 18. En caso de concurrir varias personas, la concesión se otorgará en favor de quien haya hecho las proposiciones más ventajosas.

ART. 19. Tanto los extranjeros, como los haitianos, ya sea individualmente, ya reunidos en sociedad, podrán hacer proposiciones y obtener concesiones de minas ó canteras.

ART. 20. El individuo ó sociedad que haga la solicitud habrá de probar que tiene las facultades necesarias para emprender y dirigir los trabajos, y que cuenta con medios suficientes para pagar los gastos é indemnizaciones que hayan de hacerse, así como también para reembolsar la gratificación y costos en que se hubiere incurrido y fueren de satisfacerse.

ART. 21. Se concederá siempre el plazo de un mes, antes de otorgarse la concesión, á los propietarios de la superficie, ó á todas las personas que creyeren estar interesadas en élla, para que puedan hacer sus observaciones, ó presentar al Departamento del Interior las reclamaciones á que hubiere lugar.

ART. 22. La autoridad administrativa decidirá cual corresponda acerca de estas observaciones, ó reclamaciones, á menos que versen sobre puntos que no pueden resolverse sino por los tribunales ordinarios.

En este caso, se llevará el asunto, bien por las partes mismas, bien por el Gobierno, á los referidos tribunales, y se le despachará con presteza.

Todas las disputas habrán de estar zanjadas antes de que se otorgue la concesión.

SECCIÓN 3.^a

De las consecuencias de la concesión.

ART. 23. La concesión durará tanto cuanto dure la explotación.

ART. 24. El decreto que la otorgue determinará su extensión, la cual se deslindará, en cuanto sea posible, por medio de puntos fijos marcados en la superficie del suelo, y por planos verticales que pasen por estos puntos continuando al interior de la tierra á profundidad indefinida. Esto se entiende cuando las circunstancias y las localidades no obliguen á adoptar otro método de deslinde.

ART. 25. El decreto de concesión irá siempre acompañado con un plano regular de la superficie del terreno.

ART. 26. La concesión dará al concesionario, sea uno sólo, ó sean muchos, el derecho exclusivo de explotar lo concedido, por lo cual el concesionario ó concesionarios serán dueños de los productos explotados.

Se aplicarán á estos asuntos, salvas las derogaciones directas ó indirectas de la presente ley, los principios del Código Civil.

ART. 27. Los concesionarios no podrán ceder su derecho de explotación, sea en todo, sea en parte, sin el consentimiento del Gobierno.

ART. 28. Podrán reunirse en manos de un mismo concesionario, sea este un individuo actuando en su nombre propio, sea un representante de alguna Compañía, diversas concesiones; pero esto se entiende á condición de que cada una de ellas se mantenga en explotación activa.

ART. 29. Cuando la concesión se haya otorgado en favor de varias personas, ó de una Compañía, los concesionarios, ó la Compañía, tendrán que probar, haber arreglado por medio de un convenio especial, que los trabajos de explotación estén sometidos á una dirección única y coordinada.

Tendrán también que designar por medio de una declaración auténtica cual será la persona, bien de entre ellos mismos, bien de fuera, que esté provista del poder necesario para recibir avisos ó notificaciones, y para representar, en general, ante el Gobierno á los concesionarios ó á la Compañía, ya sea como demandantes ya como demandados.

ART. 30. Todo concesionario de minas ó canteras tendrá que designar el domicilio que escoge, y esta designación así como las otras prescritas en este artículo, se harán constar en la concesión.

ART. 31. La concesión otorgada para la explotación de una sustancia mineral ó fósil no abraza los yacimientos de otras sustancias dentro del perímetro marcado. Estas sustancias podrán ser materia de otras concesiones.

ART. 32. La concesión da el derecho de ocupar y utilizar toda la parte de la superficie que sea necesaria para la explotación.

ART. 33. El derecho de ocupación, tanto para la explotación, como para la investigación, no podrá hacerse extensivo, sin el consentimiento del dueño, á aquella parte de la superficie que esté ocupada por fábricas, talleres, establecimientos ó construcciones, casas y habitaciones, en un radio de 300 pies. Podrán, sin embargo, continuarse por debajo de estas fábricas, talleres, establecimientos, construcciones, casas ó habitaciones, los trabajos subterráneos que estén haciéndose, á condición, no obstante, de que el concesionario dé fianza, si para ello ha lugar, de pagar los daños y perjuicios que puedan sobrevenir.

ART. 34. Los dueños que, por virtual de lo dispuesto en el artículo 32 queden privados en todo ó en parte del goce de sus propiedades, tendrán derecho á que se les pague la indemnización de que se tratará más adelante.

ART. 35. El valor de las indemnizaciones constituirá prenda en favor de los acreedores del propietario, del mismo modo y bajo el mismo fundamento que lo constituiría la superficie ocupada.

ART. 36. El concesionario, bien sea individual, ó colectivo, tendrá que pagar al Estado dos cuotas, una fija y otra proporcional á la cuantía de los productos explotados.

ART. 37. El monto de estas cuotas se determinará por el Gobierno,

y se hará constar junto con todas las demás condiciones en el decreto de concesión. Se formulará debidamente un pliego de condiciones.

ART. 38. El Gobierno podrá otorgar, si así fuere de hacerse, bien en el decreto de concesión, bien en una disposición ulterior, la dispensa total ó parcial de la cuota proporcional. Esto se hará con el objeto de estimular la industria minera, ó en consideración á las dificultades que ofrezca el trabajo, ó por vía de indemnización, en caso de accidente, ó de fuerza mayor, sobrevenido durante la explotación.

ART. 39. Con el producido de estas cuotas se formará un fondo especial, de que se llevará por separado la contabilidad correspondiente.

ART. 40. Se pagará una renta (redevance) á los dueños de la superficie comprendida en el perímetro de la concesión, por cuanto se les restringe su derecho de hacer excavaciones en el terreno y de disponer de los productos que de ellas obtengan, privándolos de explorar el subsuelo, y forzándolos á no sacar provecho de su propiedad sino en cuanto no se perjudican los derechos del que puede hacer los trabajos subterráneos.

ART. 41. Esta renta se determinará por el Gobierno al tiempo en que se determinen las cuotas corresponden al Estado; pero nunca podrá ser menos que un 5 por ciento de la cuota proporcional.

Las bases del reparto de esta porción entre sus respectivos dueños se determinarán ulteriormente. Lo que se provee en el artículo 35 se entiende aplicable á esta renta.

ART. 42. Se podrá retirar ó anular la concesión bien por el hecho de no estar en exploración las minas concedidas, bien por que no se hayan satisfecho á su debido tiempo las cuotas prescritas, ó bien por la falta de cumplimiento de las condiciones estipuladas en el decreto de concesión, si es que de ella se deriva rectamente la tal consecuencia.

SECCIÓN 4.ª

De las indemnizaciones.

ART. 43. La determinación de toda cuestión relativa á indemnización por perjuicios, ó por otra causa, y al pago de gastos, cuyo reembolso esté dispuesto por la presente ley, corresponderá, mientras no se disponga otra cosa por ley especial, y cuando no haya podido llegarse entre las partes á un acuerdo amigable, á los tribunales de justicia.

ART. 44. Estos tribunales nombrarán peritos y cuidarán de que en todo lo hecho por éstos se observen puntualmente las disposiciones del Código de procedimientos civiles.

ART. 45. Deberán elegirse estos peritos, en cuanto sea posible, entre personas notables y experimentadas en materia de minas y trabajos mineros.

ART. 46. Se oír á siempre al Comisionado del Gobierno, el cual dará su Informe después que los peritos hayan evacuado el suyo y con vista de lo que en él expresen.

ART. 47. Los honorarios de los peritos, y lo demás que deba pagarse por gastos del examen pericial, se determinarán por los tribunales de justicia, que también podrán mandar que se deposite previamente su importe por la parte que solicitó dicho examen.

ART. 48. La indemnización que ha de pagarse al dueño de la superficie deberá representar el doble del valor que, en el momento de la ocupación, tenga la propiedad de que definitivamente se le priva.

ART. 49. Si los trabajos emprendidos, ya sea por simples exploradores, ya por concesionarios, no son más que pasajeros, es decir, de no más de un año de duración, y si el suelo, después de la restitución, es todavía capaz de cultivarse como antes, la indemnización será el doble de lo que el terreno habría producido durante aquel tiempo.

ART. 50. Cuando la ocupación del suelo, para hacer en él exploraciones ó trabajos de minas y canteras, haya privado de su uso á los propietarios por más de un año, ó cuando después de los trabajos resulta que el terreno no es ya propio para el cultivo, tendrá derecho el propietario á exigir que se le compre la propiedad.

ART. 51. Cuando la ocupación del terreno sea tal que no permita al dueño de la superficie sacar de ella el partido que por su naturaleza corresponde, el referido dueño podrá exigir que se le expropie de aquél totalmente.

Si tiene éxito en esta demanda, dejará de tener derecho á que se le pague renta alguna.

ART. 52. Cuando un terreno es necesario para la explotación, y el concesionario es extranjero, será aquel comprado por el Gobierno, pero el valor será pagado por el concesionario, á quien se cargará al fin de la explotación el montante de la reventa.

ART. 53. En las cuestiones de indemnización habrán de ser partes, en caso de disputa, el Estado y los dueños de la superficie. En las relativas á daños y perjuicios resultantes de la explotación, lo serán, además de los concesionarios las personas que pretendan haber sido perjudicadas.

TÍTULO III.

DE LAS SUSTANCIAS MINERALES Ó FÓSILES PERTENECIENTES AL DUEÑO DE LA SUPERFICIE.

ART. 54. Los dueños de un terreno que por sí directamente, ó por medio de otras personas, deseen sacar de él las sustancias que por la presente ley se reconocen ser suyas, deberán declarar ante el Departamento del Interior su declaración de hacerlo, y esperar á que se les conceda la correspondiente autorización.

ART. 55. Esta autorización no podrá ser negada; y tendrá que ser concedida, necesariamente, dentro del término de seis meses, que empezarán á contarse desde la fecha de la declaración.

ART. 56. Estas explotaciones estarán sometidas dentro de los límites que se les fijen, á la vigilancia de la Administración y de la policía.

SECCIÓN 5.^a

Disposiciones en el interés del orden público.

ART. 57. La vigilancia de la Administración y de la policía se ejercerá sobre las explotaciones de minas y canteras, conforme al Reglamento que se promulgará oportunamente.

ART. 58. Las disposiciones de las Leyes y Reglamentos sobre minas y canteras estarán protegidas por una sanción penal, que se establecerá ulteriormente, destinada á impedir ó castigar las infracciones de aquéllas.

El cumplimiento de la presente Ley queda encargado al Ministerio del Interior y Agricultura.

HONDURAS.

LEY DE MARCAS DE FÁBRICA.

(Marzo 7 de 1902.)

ARTÍCULO 1. Se considera como marca de fábrica cualquier signo que determine la especialidad para el comercio de un producto industrial.

ART. 2. No se consideran como marca, la forma, color, locuciones ó designaciones, que no constituyan por sí solas el signo determinante de la especialidad de productos. En ningún caso este signo podrá ser contrario á la moral.

ART. 3. Cualquier propietario de una marca de fábrica, ya sea nacional ó extranjero, residente en el país, puede adquirir el derecho exclusivo de usarla en la República, sujetándose á las formalidades de la presente ley.

Los nacionales y extranjeros que residan fuera del país, pueden registrar propiedad de marca, con tal que tengan en éste agencia ó establecimiento industrial ó mercantil para la venta de sus productos, salvo lo que para los extranjeros dispongan los tratados.

ART. 4. Para adquirir la propiedad exclusiva de una marca de fábrica, el interesado ocurrirá, por sí ó por medio de su representante, á la Secretaría de Fomento, haciendo constar que se reserva en sus derechos, acompañando los siguientes documentos:

1. El poder otorgado al mandatario, si el interesado no se presenta por sí mismo.

2. Dos ejemplares de la marca ó de su representación, por medio del dibujo ó del grabado.

3. En el caso de que la marca se ponga en hueco ó en relieve sobre los productos, ó de que presente alguna otra particularidad, se remitirán también dos hojas separadas, en las cuales se indicarán aquellos pormenores, sea por medio de una ó varias figuras de detalle, sea por una leyenda explicativa.

4. El contrato de comisión escrito, á cuya virtud se haya establecido la agencia, debidamente legalizado, en el caso á que se refiere el párrafo segundo del artículo anterior.

ART. 5. En el ocurso deberá expresarse el nombre de la fábrica, el lugar de su ubicación, el domicilio del propietario y el género de comercio ó de industria para el cual el solicitante debe servirse de la marca.

ART. 6. La marca industrial ó mercantil que pertenezca á un extranjero no residente en la República no podrá ser registrada en ésta si no lo hubiere sido previa y regularmente en el país de su origen.

ART. 7. Él que primero hubiere hecho uso legalmente de una marca, es el único que puede pretender adquirir su propiedad. En caso de disputa entre dos propietarios de la misma marca, la propiedad pertenecerá al primer poseedor; si la posesión no pudiere comprobarse, al primer solicitante.

ART. 8. La propiedad exclusiva de una marca no puede ejercitarse sino en virtud de la declaración hecha por la Secretaría de Fomento, de que el interesado se ha reservado sus derechos, después de haberse llenado todos los requisitos legales.

ART. 9. La declaración de que habla el artículo anterior se hará sin examen previo, bajo la exclusiva responsabilidad de los solicitantes, y sin perjuicio de los derechos de tercero. La Secretaría de Fomento hará publicar la solicitud del interesado y en el caso de oposición presentada dentro de los noventa días siguientes á la publicación, no se procederá al registro de una marca hasta que la autoridad judicial decida en favor de quién debe hacerse el registro.

ART. 10. Las marcas de fábrica no se transmiten sino con el establecimiento para cuyos objetos de fabricación ó de comercio sirven de distinción; pero su transmisión no está sujeta á ningún formalidad especial y se verifica conforme á las reglas del Derecho común.

ART. 11. La duración de la propiedad de las marcas de fábrica es indefinida; pero se entenderá abandonado por la clausura ó falta de producción por más de un año, del establecimiento, fábrica ó negociación que la haya empleado.

ART. 12. Las marcas de fábrica depositadas se conservarán en la Secretaría de Fomento, donde podrá examinar su registro toda persona que lo pretenda, y obtener á su costa copia certificada del mismo.

ART. 13. La propiedad de una marca obtenida en contravención á las prescripciones anteriores, será declarada judicialmente nula á petición de parte.

ART. 14. De la sentencia ejecutoriada en que se declare nula la propiedad de una marca, se dirigirá copia certificada á la Secretaría de Fomento, por el juez que hubiere conocido del asunto.

ART. 15. Hay falsificación de marca de fábrica:

1. Cuando se usen marcas de fábrica que sean copias exactas y completas de otra cuya propiedad esté ya reservada.

2. Cuando la imitación sea de tal naturaleza que, presentando una identidad casi absoluta en el conjunto, aunque no en ciertos detalles, sea susceptible la marca de confundirse con otra legalmente depositada.

ART. 16. Serán considerados como culpables del delito de falsificación, cualquiera que sea el lugar en que éste se haya cometido, los que hubieran falsificado una marca ó hecho uso de una falsificada, siempre que se aplique á objetos de la misma naturaleza industrial ó mercantil.

ART. 17. Los delitos de falsificación de marcas de fábrica están sujetos á las penas que señala el Código Penal y Común.

ART. 18. Quedan comprendidos en las disposiciones de esta ley los dibujos y modelos industriales.

ART. 19. La protección que la presente ley otorga á las marcas industriales ó mercantiles, no ampara de los efectos cubiertos por ellas más que á los fabricados y vendidos en el país.

ART. 20. La presente ley comenzará á regir desde la fecha de su promulgación; y conforme á ella se decidirán las solicitudes que en esa fecha estuvieren pendientes.

MÉXICO.

TRATADO DE ARBITRAJE ENTRE MÉXICO Y ESPAÑA.

Concluido en México en 11 de enero de 1902.

Ratificado por España el 10 de marzo de 1902.

Ratificado por México el 14 de abril de 1902.

Promulgado el 19 de abril de 1902.

El Presidente de los Estados Unidos Mexicanos y Su Majestad el Rey de España, y en su nombre Su Majestad la Reina Regente del Reino, con el propósito de resolver pacíficamente toda cuestión que pudiera alterar las relaciones de buena amistad que felizmente existen entre ambas naciones, han resuelto celebrar un Tratado de Arbitraje, y para este fin han nombrado sus Plenipotenciarios respectivos:

El Presidente de los Estados Unidos Mexicanos al Señor Licenciado Don IGNACIO MARISCAL, Secretario de Estado y del Despacho de Relaciones Exteriores; y

Su Majestad el Rey de España, y en su nombre Su Majestad la Reina Regente del Reino, á Don PEDRO DE PRAT, Marqués de Prat de

Nantouillet, Su Enviado Extraordinario y Ministro Plenipotenciario en México.

Quienes, después de haber examinado sus plenos poderes respectivos y de haberlos encontrado en buena y debida forma, han acordado lo siguiente:

ARTÍCULO I.

Las Altas Partes signatarias se comprometen á someter al juicio de Árbitros todas las controversias que puedan surgir entre ellas en el período de existencia del presente Tratado, y para las cuales no se hubiere podido lograr una solución amistosa, por negociaciones directas, siempre que á juicio de ambas Naciones contratantes dichas controversias no afecten ni á la independencia ni al honor nacional.

ARTÍCULO II.

No se considerarán comprometidos ni la independencia ni el honor nacional en los siguientes casos:

A. Cuando se trate de daños y perjuicios pecuniarios sufridos por uno de los Estados contratantes, ó por sus nacionales, por razón de actos ilegales ú omisiones del otro Estado contratante, ó de sus nacionales.

B. Cuando se trate de la interpretación y aplicación de los tratados, convenios y convenciones sobre protección de propiedad artística, literaria é industrial, así como sobre privilegios, patentes de invención, marcas de fábrica, firmas comerciales, moneda, pesos y medidas, precauciones sanitarias, veterinarias ó para evitar la filoxera.

C. Cuando se trate de la interpretación y aplicación de tratados, convenios y convenciones sobre sucesiones, ayuda y correspondencia judicial.

D. Cuando se trate de tratados, convenios y convenciones en vigor, ó que en lo futuro se celebren, para poner en práctica principios de Derecho Internacional Público ó Privado, ya del orden civil ó del penal.

E. Cuando se trate de cuestiones que se refieran á la interpretación ó ejecución de los tratados, convenios y convenciones de amistad, comercio y navegación.

ARTÍCULO III.

Para la decisión de las cuestiones que en cumplimiento de este Tratado se sometieren á arbitraje, las funciones de Árbitros serán encomendadas con preferencia á un Jefe de Estado de una de las Repúblicas Hispano-Americanas, ó á un Tribunal formado por Jueces y Peritos mexicanos, españoles ó hispano-americanos.

En caso de no recaer acuerdo sobre la designación de Árbitros, las Altas Partes signatarias se someterán al Tribunal Internacional Permanente de Arbitraje, establecido conforme á las resoluciones de la

Conferencia de El Haya de 1899, sujetándose en éste y en el anterior caso á los procedimientos arbitrales especificados en el Capítulo III de dichas resoluciones.

ARTÍCULO IV.

El presente Tratado permanecerá en vigor durante diez años, contados desde la fecha del canje de sus ratificaciones.

En caso de que, doce meses antes de cumplirse dicho término, ninguna de las Altas Partes contratantes hubiere declarado su intención de hacer cesar los efectos del presente Tratado, continuará siendo éste obligatorio hasta un año después de que una ú otra de las Altas Partes signatarias lo hubiere denunciado.

Este Tratado se ratificará y las ratificaciones se canjearán en México á la mayor brevedad posible.

En fe de lo cual los Plenipotenciarios lo han firmado y sellado, en dos ejemplares, en México á los once días del mes de enero del año mil novecientos dos.

[L. S.]

IGNACIO MARISCAL.

[L. S.]

EL MARQUÉS DE PRAT DE NANTOUILLET.

NUEVA TENERÍA EN AGUASCALIENTES.

El Gobierno del Estado de Aguascalientes ha otorgado una concesión á los Señores GARCÍA, CHÁVEZ Y QUIRÍN, de Aguascalientes, para el establecimiento de una tenería en dicha ciudad. Los concesionarios deben invertir en la negociación un capital cuando menos de 50,000 pesos, y comenzar sus operaciones á más tardar dentro de un año contado desde la fecha del contrato. Los capitales empleados en la explotación de la tenería, sus edificios y obras anexas destinadas á la misma industria, las producciones y expendios donde sólo estos se realicen, así como las obligaciones, acciones y bonos que ésta emita, quedan exceptuados durante diez años de toda contribución ó impuesto del Estado ó municipal establecido ó que en adelante se estableciere.

CONTRATO DE NAVEGACIÓN POR VAPOR.

La compañía denominada “Tabasco-Chiapas Trading and Transportation Company,” ha hecho un contrato con el Gobierno mexicano para hacer un servicio de navegación por vapor entre los puertos mexicanos de Veracruz, Coatzacoalcos y Frontera, y uno ó más puertos de los Estados Unidos de Norte América, Sud América ó de Europa. La compañía se compromete también á hacer un servicio de cabotaje entre puertos mexicanos del Golfo. El referido contrato comenzará á surtir sus efectos desde la fecha de su promulgación y durará diez años, prorrogables por otros diez, si las partes así lo desearan.

ESTABLECIMIENTOS MINEROS EN DURANGO.

Según datos oficiales publicados recientemente en “La Evolución” de Durango, existen en dicho Estado 1,846 minas con una superficie de 10,260 hectáreas distribuidas de la manera siguiente:

Partidos.	Número de minas.	Hectáreas.	Partidos.	Número de minas.	Hectáreas.
Durango	46	324	Nazas.....	29	398
Nombre de Dios.....	13	88	Cuancame.....	294	2,093
Santiago Papasquiaro.....	81	346	Mapimi.....	136	1,842
San Dimas	36	210	Inde.....	64	495
Tamazula	74	402	Otros partidos	695	940
San Juan de Río	267	2,046			
El Oro	111	1,076	Total	1,846	10,260

MINAS DE CARBÓN EN SONORA.

El “Economista Mexicano” dice que las minas de carbón de piedra de San Marcial, Estado de Sonora, estarán próximamente en condiciones de explotarse en grande escala. Se han abierto túneles y las minas no tardarán en producir de 150 á 200 toneladas diarias de carbón. Para facilitar el envío de este carbón se está construyendo actualmente un ramal de ferrocarril de Sonora y para principios del próximo mes de julio los dueños de dichas minas se proponen empezar á hacer remisiones de carbón á las ciudades interiores de la República.

MINAS DE AZOGUE.

Según el “Mexican Herald” de mayo 11 de 1902, la mayor parte del azogue mexicano procede de Huitzuco, en el Estado de Guerrero, donde está situada la propiedad minera conocida con el nombre de “Mina Cruz y anexas”. Estas minas han estado en explotación desde el año de 1874, y su actual rendimiento se calcula en 3,500 toneladas de mineral crudo cada mes, de que se sacan de 250 á 230 frascos de azogue.

El costo de producción parece ser menor en México que en ningún otro de los países en que se trabajan estas minas. En Rusia, los Estados Unidos y España, el costo es á razón de \$0.39, \$0.37 y \$0.31, respectivamente, por libra de azogue. En México, es solamente \$0.27.

España es el país que más produce; y después de ella vienen por su orden los Estados Unidos, Rusia y México.

La producción anual de España es de 50,000 frascos; la de los Estados Unidos, 30,000; la de Rusia, 20,000; y la de México, 5,000.

Durante el último quinquenio México importó á razón de 10,000 frascos por año, á precios que variaron de \$72 á \$105 por frasco de 72 libras. Si se toma el término medio de \$90, resulta que en México se gastan anualmente en este importante artículo cerca de \$900,000.

El mineral de Huitzuco no se encuentra en venas, sino en un vasto

depósito de forma cónica y formación caliza. El procedimiento de extracción es simple y primitivo. Después de roto el mineral en trozos ó fragmentos de 5 ó 6 libras de peso cada uno, se le somete á torrefacción en hornos especiales. Los humos y vapores van á parar á una vasta cámara donde el azogue se precipita, mezclado con el negro de humo y otras sustancias sólidas. Una vez al mes se recoge todo este depósito, y se le coloca sobre láminas de hierro, calentadas hasta cierta temperatura y colocadas con cierta inclinación. Revolviendo suavemente estas sustancias, el azogue se separa y corre hacia la parte más baja, de donde se le hace caer en un caldero de hierro. De allí se saca para ponerlo en frascos y enviarlo al mercado.

En todo el territorio alrededor de estas minas hay señales abundantes de la existencia de este metal tan importante.

DEPÓSITOS DE PETRÓLEO.

Con el descubrimiento no hace mucho de los depósitos de petróleo en el Estado de Texas, se abrigó la esperanza de que esta riqueza se encontraría también en abundancia y sin gran dificultad en el territorio mexicano. Y como de los trabajos que se han hecho parece deducirse que hay razón para creer que la referida esperanza se convierta en una realidad, hay ya formadas diversas Compañías, con capital en su mayor parte americano, que tienen por objeto explorar los terrenos y hacer las excavaciones necesarias para encontrar este producto.

Hay una que se llama "The Mexican Petroleum Company," ó "Compañía Mexicana de Petróleo," que tiene ya invertidas grandes sumas de dinero, y que trabaja actualmente al oeste de Tampico.

Otra compañía es la denominada "The Mexican National Oil and Development Company," ó "Compañía Nacional Mexicana de Aceite y de Fomento," organizada de conformidad con las leyes de New Jersey, y que tiene un capital de \$1,000,000. Su oficina principal está en Monterrey. Esta compañía tiene arrendados por un cierto número de años como 1,000,000 acres de tierra, y pronto empezará á abrir sus pozos en la parte central del Estado.

Nadie puede apreciar debidamente cuán beneficioso sería para el desenvolvimiento comercial é industrial de México el descubrimiento de abundantes depósitos de este valioso combustible.

NOTAS DIVERSAS.

Capitalistas del Estado de Pennsylvania, Estados Unidos de América, están interesados en un proyecto para el establecimiento de una fábrica de calzado en Linares ó Montemorelos, ciudades situadas en el Estado de Nuevo León, sobre la línea del Ferrocarril de Monterrey al Golfo Mexicano. Los planes de la compañía requieren la inversión de un capital de medio millón de pesos. La maquinaria para la instalación se comprará en los Estados Unidos.

La Compañía del Ferrocarril Internacional Mexicano está extendiendo su línea á Papasquiario, Tepehuanes y Santa Catarina. Esta extensión abarcará una distancia de 56 kilómetros, y luego que esté abierta al tráfico, el total de la línea del Ferrocarril Internacional en operación en el noroeste del Estado de Durango será 220 kilómetros.

La Compañía Manufacturera de Singer, según "El Economista Mexicano," ha resuelto establecer una nueva fábrica para la construcción de sus máquinas en el puerto de Mazatlán, Estado de Sinaloa.

NICARAGUA.

ADQUISICIÓN DE TIERRAS PÚBLICAS.

El Presidente de la República, en atención á que en la faja de tierras no denunciabile del litoral atlántico existen numerosas labores agrícolas que el Gobierno está en el deber de fomentar y proteger para la seguridad de la propiedad raíz, facilitando la adquisición del dominio de esos lotes de terreno, de conformidad con el decreto de 6 de julio de 1899, acuerda:

ARTÍCULO 1º. Permitir á los actuales poseedores de terrenos baldíos en la faja no denunciada de la costa oriental de la República, que puedan adquirir la propiedad de los lotes que tuvieren cultivados á acotados.

ART. 2º. La solicitud se presentará ante los Gobernadores de Bluefields ó el Cabo de Gracias á Dios, según la jurisdicción en que esté situado el terreno, dentro de tres meses improrrogables á contar de la fecha de la publicación del presente; debiendo expresar en ella el interesado los linderos, la clase de labores agrícolas á que se haya dedicado y el número de manzanas que éstas comprendan.

ART. 3º. Los empleados en referencia seguirán información de dos testigos idóneos para comprobar si el terreno está efectivamente cultivado ó acotado, y concluida que sea, la mandarán publicar por edictos, insertando uno en el periódico de Bluefields. Trascurridos veinte días sin que haya habido oposición, adjudicarán el terreno al interesado, previo depósito de su valor en la subtesorería correspondiente, hecho dentro de los ocho días siguientes; ciñéndose en lo demás hasta el libramiento del título á la ley agraria vigente.

ART. 4º. Pasado el plazo señalado en el artículo 2º, ó los ocho días á que se refiere el que antecede, sin hacerse el depósito, los poseedores se considerarán como arrendatarios y pagarán cada año anticipadamente el canon que se expresará adelante.

ART. 5º. Los Gobernadores de Bluefields y el Cabo de Gracias designarán ingenieros que formen el catastro de los terrenos que en lo adelante se posean por arrendamiento, de conformidad con esta disposición; siendo los gastos de mensura y amojonamiento de cada lote de cuenta de los interesados.

ART. 6°. Mientras se hace la medida, dichos empleados seguirán información de testigos para averiguar de qué lotes de terreno cultivado ó acotado, no se hubiere solicitado la adquisición del dominio, según el artículo 2°, y la cabida aproximada de cada uno de ellos. Con la prueba plena del caso notificarán á los poseedores su condición de arrendatarios, previniéndoles en el mismo auto que dentro de los quince días subsiguientes deberán hacer el depósito del valor del arrendamiento.

Cuando se tenga al poseedor de un terreno baldío como arrendatario por no haber hecho el depósito de su valor dentro de los ocho días de que trata el artículo 3°, el plazo para el pago del arrendamiento se contará desde el siguiente á los expresados ocho días.

ART. 7°. Si hecha la medida se viere que el número de manzanas es mayor que el que ha servido de base para fijar el canon, los interesados enterarán la diferencia en la subtesorería correspondiente; y en caso contrario, el exceso se abonará en los pagos posteriores.

ART. 8°. Si notificada á los poseedores su condición de arrendatarios alguno de ellos alegare dominio ú otro derecho real en el terreno y apelar ó hiciere oposición sin presentar título en forma registrado debidamente, deberá acompañar certificación del depósito del valor del canon para que sea oído.

ART. 9°. El precio de cada manzana será el siguiente:

Si es propia para la crianza de ganado.....	\$5. 00
Si es de pan llevar ó de agricultura	8. 00
Si fuere de esta calidad y además estuviere comprendida en una zona de 2,000 varas de ancho á lo largo de los ríos navegables para embarcaciones mayores	10. 00

Se pagarán \$2 más por cada manzana si el terreno fuere de regadío.

ART. 10. El valor del canon será—

Por cada manzana de terreno propio para la crianza de ganado.....	\$1. 50
Por cada manzana de pan llevar ó de agricultura	2. 50
Por cada manzana si estuviere comprendida en una zona de 2,000 varas de ancho, á lo largo de los ríos navegables por embarcaciones mayores.....	3. 00

ART. 11. Los Gobernadores de Bluefields y el Cabo de Gracias á Dios darán inmediatamente aviso al Ministerio de Hacienda de cada solicitud que se les presente, de acuerdo con el artículo 2°, y de los autos que provean, teniendo como arrendatarios á los actuales poseedores de terrenos, de conformidad con el artículo 6°, expresando, en uno y otro caso, los linderos, la clase de cultivos y el número de manzanas de los lotes.

Comuníquese.

MANAGUA, 20 de setiembre de 1901.

ZELAYA.

El Ministro de Hacienda: ZELAYA R.

PARAGUAY.

MENSAJE DEL SEÑOR VICEPRESIDENTE DE LA REPÚBLICA, EN EJERCICIO DEL PODER EJECUTIVO, AL CONGRESO DE LA NACIÓN, EL 1° DE ABRIL DE 1902.

Señores SENADORES y Señores DIPUTADOS:

* * * * *

La República se encuentra en completa paz y mi mayor anhelo será que se mantenga así, porque lo conceptúo como uno de los factores principalísimos para el desenvolvimiento progresivo de los pueblos; y para conseguirlo creo de imprescindible condición la unión franca de los elementos útiles de la República.

Si bien tenemos condiciones muy favorables para el desarrollo de la actividad industrial y comercial, la situación económica del país no presenta los caracteres del mejoramiento que todos anhelamos. El malestar que de año en año va en aumento, en este período toma un matiz más pronunciado. Abrigo, sin embargo, la firme convicción de que, normalizados todos los resortes administrativos, despejados los recelos é incertidumbres nacidos á raíz de los últimos acontecimientos políticos, y cuando llegue el convencimiento á todos los gremios industriales de que mis actos de gobernante estarán fielmente ajustados á la ley y que las medidas que lleguen á adoptarse estarán siempre en consonancia estricta con los verdaderos y nobles propósitos que requiere el país para su prosperidad, entraremos en un período de franca reacción que influirá favorablemente en el orden económico y en las finanzas nacionales.

La producción nacional, y en especial la agrícola, avanza muy lentamente y es uno de los problemas capitales á resolverse.

Los factores que la constituyen, algunos de ellos, hasta ahora no tienen la importancia que debían de tener.

Tierras feracísimas esperan inútilmente el surco del arado, y brazos pacientes, aunque no tan abundantes, se mantienen en continua somnolencia por la falta de capital.

* * * * *

La cultura intelectual de la República sigue en aumento y cada año que pasa, palmo á palmo, conquistamos terreno á la ignorancia, y no está lejano el día en que la cantidad de analfabetos forme una mínima proporción. Gran parte de sus rentas distrae la patria para este servicio, pero á pesar de esto, todo sacrificio es poco al considerar que es la base de nuestro engrandecimiento.

Cordial y franca amistad mantenemos con todas las naciones civilizadas. La única diferencia que tenemos es con la República hermana

de Bolivia, y abrigo la más firme esperanza de que tanto aquel Gobierno como el nuestro llegarán á una solución satisfactoria en su cuestión de límites.

* * * * *

INTERIOR.

* * * * *

El orden público no ha sido alterado ni en la Capital ni en la campaña y todos los habitantes se dedican á sus trabajos y faenas ordinarios.

Las cosechas en general no han sufrido perjuicios. La industria pecuaria sigue en aumento: en el año transcurrido no hemos tenido ninguna epidemia que le perjudicara, habiendo desaparecido por completo la fiebre aftosa, que el año anterior se desarrolló con carácter benigno.

* * * * *

La industria en general ha prosperado sensiblemente en el país. Los datos incompletos de que se puede disponer dan el siguiente resultado para el año 1901:

Se han establecido en la capital 160 casas comerciales é industriales.

Comercio, \$67,242,437 é industrias, \$139,047,095; ganadería, mayor y menor, 2,953,757; agricultura, 112,650 hectáreas cultivadas con una producción de 1,381,126,421 kilogramos de maíz, mandioca, porotos, maní, caña de azúcar, algodón, arroz, tártago, cafetos y tabaco. Es de sentir que este renglón aparezca con datos muy incompletos y que están muy por debajo de la verdad por la falta de una buena organización de estadística. Á este fin oportunamente os pediré la reorganización completa de la Oficina General de Estadística, institución de gran valía para toda buena administración.

* * * * *

Ferrocarril Central.—Las entradas del año han dado un resultado de \$1,838,600.96. Esta empresa no presta todavía los servicios completos que corresponden al desenvolvimiento de nuestras riquezas en la campaña y el estancamiento de muchas importantes industrias se debe en mucho en la deficiencia del servicio del ferrocarril. Esta deficiencia obedece, sin duda, á diversas causas, y la primordial creo es la falta de un arreglo definitivo entre el Estado y la empresa en la discusión que sostienen de varios años á esta parte. Tratándose de la única línea férrea que poseemos y de lo perjudicial que es para el progreso nacional la subsistencia de este estado de cosas, os recomiendo principalmente que fijeis vuestra atención en esta cuestión y coopereis con vuestras luces al desenlace feliz de este asunto. En vuestro poder se encuentran todos los antecedentes.

Si el corto período de mi Gobierno me dá tiempo para abordar esta

cuestión tan transcendental aplicaré toda mi actividad á su estudio para proponeros en la estación oportuna mis vistas al respecto.

Sociedades anónimas.—Funcionan actualmente doce sociedades cuyos nombres y capitales son:

La Industrial Paraguaya	\$5, 000, 000
Banco Mercantil	\$5, 000, 000
Matte Larangeira.....	\$3, 000, 000
Banco Territorial.....	\$2, 000, 000
Sociedad de Seguros Económica	\$2, 000, 000
La Rural Belga Sud Americana.....	fr. 1, 130, 000
La Exportadora del Paraguay	\$1, 000, 000
La Edificadora	\$1, 000, 000
Caja de Crédito Comercial	\$500, 000
Anglo-Paraguay Land Company, Limited	£120, 000
Compañía Telefónica	\$150, 000
Tramway V. Kraus.....	\$30, 000

Estos capitales son los anotados en sus estatutos en la fecha de inscripción, así pues, en el día, por la prosperidad de sus negocios han aumentado considerablemente.

Correos y Telégrafos.—Su funcionamiento es bastante regular, pero dista mucho para que respondan en un todo á su fin. Diversas causas se oponen á que lleguen al límite deseado, y una de ellas, la principal, es la mala remuneración á los empleados y el corto número de éstos. Á Oficinas de esta naturaleza es necesario rodearlas de todos los elementos indispensables para que presten un señalado servicio al país, y no debemos escatimar nada para colocarlas en condiciones de perfecto funcionamiento.

El movimiento de correos fué 2,099,640 piezas, y el de telégrafos de 97,044 telégramas.

RELACIONES EXTERIORES.

* * * * *

En consideración á que el Paraguay es el único Estado americano que no tiene representación diplomática en los Estados Unidos de Norte América, y por otra parte, en vista de que los capitales de aquel país principian á buscar colocación en el nuestro, y con el propósito de vigilar y estimular cuanto sea posible el desarrollo de las relaciones comerciales entre ambas naciones, el Gobierno ha tenido que acreditar una legación en Wáshington, confiándola al ciudadano Doctor Don ALEJANDRO AUDIVERT. De los trabajos de dicha legación esperamos halagüeños beneficios á los intereses comerciales é industriales de la República.

Igualmente con el objeto de cultivar más de cerca la amistad de la República, tanto con la de Chile como con las de Bolivia y Perú, y considerando mi Gobierno de imprescindible necesidad acreditar otra

legación ha resuelto confiar al ciudadano Don JUAN COGORNO el cargo diplomático de Enviado Extraordinario y Ministro Plenipotenciario ante esos Estados.

* * * * *

HACIENDA.

Sé han recaudado por impuestos—

Aduanas.....	\$9, 930, 348. 41
Impuestos internos	1, 220, 246. 97
Correos y telégrafos.....	181, 128. 85
Registro de propiedades.....	10, 736. 40
Contaduría de hipotecas	4, 980. 10
Recaudaciones directas	65, 306. 25
	<hr/>
	11, 412, 746. 98
El año 1900 se recaudó.....	9, 856, 063. 02
	<hr/>
Siendo superior lo recaudado en 1901 en.....	1, 556, 683. 96

El valor del movimiento comercial por importación y exportación en las aduanas de la República, ha ascendido á \$5,532,964.42 oro, según tarifa de avalúos, que se descompone en la siguiente manera:

Importación	\$3, 003, 657. 83
Exportación	2, 529, 306. 59
	<hr/>
Resultando á favor de la importación.....	474,351. 24

Las erogaciones efectuadas por el Gobierno durante el ejercicio del año pasado, no pueden precisarse aún en su monto total, por razón de que las operaciones sólo deberán cerrarse definitivamente en 31 de marzo, conforme la ley de contabilidad; no obstante, consignaré los desembolsos efectuados por varios servicios, atendidos con puntualidad.

DEUDA PÚBLICA.

Deuda externa.

Los empréstitos de Londres montaron en 31 de diciembre:

De 1900 á oro	\$4, 946, 333. 96
Medio por ciento amortización en 1901.....	\$24, 866. 04
Amortización con el sobrante exportación de yerba.....	17, 756. 06
Amortización proveniente de la compra de títulos en	
Londres con las remesas del año 1900.....	116, 634. 00
	<hr/>
	159, 256. 10

Deuda en 31 de diciembre de 1901

4, 787, 077. 86

El servicio de la misma ha costado al Tesoro las siguientes partidas:

Por amortización.....	oro sellado..	\$42, 622. 10
Por intereses.....	do.....	74, 598. 00
Por comisión.....	do.....	1, 491. 96
Por cambios.....	moneda nacional..	858, 648. 42
		<hr/>
		977, 360. 48

El derecho de exportación de yerba recaudado, que se halla afectado á este servicio, asciende á oro \$47,082.46, cuyo equivalente á papel es de \$393,830.84, que para completar la cantidad abonada se hizo uso de rentas generales por la suma de \$583,529.64.

<i>Deuda interna.</i>	
Títulos en circulación en 1900.....	\$1, 163, 340. 00
Amortización en 1901.....	336, 040. 00
Existente en 31 de diciembre de 1901	827, 300. 00
<hr/>	
Para el servicio de esta deuda se han invertido:	
Por amortización	336, 040. 00
Por intereses.....	93, 404. 39
	429, 444. 39
<hr/>	
Emisión de billetes:	
En circulación en 31 de diciembre de 1900.....	11, 291, 325. 44
Emitido en el año para el Palacio Episcopal.....	50, 000. 00
	11, 341, 325. 44
Amortizado durante el año.....	775, 154. 25
	10, 566, 171. 19
<hr/>	
Sumas á emitirse de acuerdo á la ley de 1° de julio de 1897	150, 000. 00
De acuerdo á la ley de 18 de noviembre de 1899	3, 000, 000. 00
	3, 150, 000. 00

BANCO AGRÍCOLA.

Capital en 1901, \$2,781,827.77; este capital está íntegramente invertido en la siguiente forma:

Negociado tabaco y secaderos	\$800, 000. 00
Escuela de Agricultura	334, 000. 00
Bienes muebles é inmuebles y útiles de agricultura	200, 000. 00
Deudores	1, 447, 827. 87
	2, 781, 827. 77

Es urgente aumentar el capital del banco para ponerle en condiciones de satisfacer las necesidades cada vez mayores de las industrias nacionales.

Si no se hace así, el banco llenará cada día más incompletamente su misión.

Valor de la cartera:

Descuentos agrícolas.....	\$1, 434, 489. 39
Descuentos industriales.....	1, 461, 435. 24
	2, 895, 924. 63

Todos los documentos de la cartera están garantidos por caución personal, hipotecaria ó prendaria.

Préstamos acordados:

Agrícolas	\$958, 324. 36
Industriales.....	568, 119. 81
	1, 526, 444. 17

Este total representa el mayor que el banco ha concedido en un año y para otorgarlo ha tenido necesidad de hacer uso del crédito, no quedándole nada de su capital para nuevas operaciones.

Intereses:

Percibidos	\$413, 427. 57
Pagados	58, 836. 59

INSTRUCCIÓN PÚBLICA.

Consejo Nacional de Educación.—Esta importante institución sigue progresando lentamente arreglado á sus escasos recursos y es bastante halagadora la difusión que vá tomando. Con el aumento en sus rentas, que habeis decretado en el mes de febrero último, es de esperar que tome un vuelo más acentuado.

Los autoridades encargadas de esta institución, me es honroso declarar, se empeñan, afanosamente para darle una vasta y buena organización.

Sus rentas en 1901 montan á \$1,045,809.56.

El número de educandos inscritos llega á 21,617, y el de examinados á 16,199.

El costo efectivo de cada alumno examinado es de \$4.87 mensual.

Enseñanza secundaria y superior.—Esta rama de la instrucción sigue un progreso creciente y cada año dá nuevos elementos ilustrados que se incorporan á la sociedad, aumentando la intelectualidad del país.

Las rentas durante el año montan á	\$800, 120. 28
Los gastos durante el año montan á.....	549, 314. 71

Saldo que pasa á 1902.....	250, 805. 57
----------------------------	--------------

Alumnos matriculados en la Universidad y colegios nacionales ascienden á 690; presentados á examen, 621 regulares y 491 libres.

Han terminado sus estudios en la Facultad de Derecho, 4; en Colegios Nacionales: de la Capital, 26; de Villa Rica, 5; de Villa del Pilar, 6; de Villa Concepción 4 y de Villa Encarnación, 1.

PERÚ.

COMERCIO DEL CALLAO.

Según informes transmitidos con fecha 17 de abril último al Departamento de Estado en Wáshington, por Mr. I. B. DUDLEY, Enviado Extraordinario y Ministro Plenipotenciario de los Estados Unidos en el Perú, el siguiente movimiento de importación se ha efectuado en el Callao en el año de 1901:

Países.	Valor.	
	<i>Soles.</i>	
Inglaterra	6,897,607	\$5,359,132
Estados Unidos	4,069,056	1,981,630
Alemania	3,245,267	1,580,445
Francia	1,426,932	694,916
Italia	959,905	467,474
Bélgica	871,481	424,411
Australia	698,414	340,128
China	694,696	338,317
Chile	439,173	213,877
España	188,149	89,629
América Central	92,703	45,146
India	46,762	22,773
Ecuador	31,038	15,116
Otros países	86,671	42,209
Total	19,747,854	9,615,203

La siguiente tabla muestra la clase y valor de las importaciones en 1901:

Artículos.	Valor.	
	<i>Soles.</i>	
Algodón	2,987,211	\$1,454,772
Lana	1,568,282	763,753
Hilo	188,409	91,755
Seda	448,440	218,390
Muebles	1,265,819	616,454
Artículos de fantasía	8,867,621	4,221,132
Provisiones y comestibles	3,231,392	1,573,688
Vinos y licores	321,695	153,665
Drogas y productos químicos	804,661	391,870
Especialidades	64,327	31,327

SALVADOR.

MENSAJE DEL PRESIDENTE DE LA REPÚBLICA DE EL SALVADOR Á LA ASAMBLEA NACIONAL LEGISLATIVA EN LAS SESIONES ORDINARIAS DE 1902.

* * * * *

Al manifestaros hoy que la República ha marchado sin tropiezo por las vías de su engrandecimiento político, económico y social, dicho queda que la tranquilidad, base indispensable del orden y el progreso, no ha sufrido menoscabo alguno; y bien sabéis, honorables Diputados, que sin este elemento precioso no es posible impulsar á la colectividad hacia el ideal á que tiende para su desarrollo.

* * * * *

El mantenimiento de la paz exterior entra por mucho en el adelanto de los Estados, y mi Gobierno no ha desperdiciado ocasión de estrechar más cada día los lazos de amistad con las demás naciones, y en especial con nuestras hermanas del continente americano. Con ese fin ha concurrido á la segunda Conferencia Internacional Americana, que abrió sus sesiones en la ciudad de México el 22 de octubre del año próximo pasado y las clausuró el 31 de enero último, nombrando como delegados á los Señores Doctores don FRANCISCO ANTONIO REYES y don BAL-TASAR ESTUPINIÁN, con las instrucciones necesarias para suscribir todos

aquellos convenios que tendieran al progreso de los pueblos americanos y al afianzamiento de la paz general.

En mi Mensaje anterior os dirigí estas palabras: “Consolidados los vínculos de una política de lealtad y franqueza, mantenida á todo trance por una ley natural en la evolución de estos pueblos que convergen siempre á un centro común, las relaciones sociales, en lo que de más vital tienen, demandan que sus Gobiernos busquen una fórmula que los armonice y dirija á un mismo fin, por medio de los pactos internacionales en que se consigne la estrecha solidaridad de los destinos de estos países.”

Esos pactos han llegado. Primero fueron los tratados del segundo Congreso Jurídico Centro-Americano, con que se dió cuenta á la Honorable Asamblea Nacional del año próximo pasado; hoy es el protocolo de paz y amistad suscrito en Corinto el 20 de enero último, y resultado de las conferencias de los Jefes de Estado de Nicaragua, Honduras, Costa Rica y El Salvador.

* * * * *

Me es en extremo grato también poner en vuestro conocimiento que nuestras relaciones diplomáticas con los Estados Unidos y con las naciones del viejo continente se han mantenido inalterables, cultivando y estrechando cada día más los vínculos de nuestra antigua y leal amistad, á lo cual han contribuido, sin duda, en primer término, los buenos oficios y hábil dirección de nuestra Cancillería y las francas y espontáneas disposiciones en el mismo sentido de los distinguidos Agentes diplomáticos extranjeros acreditados cerca de nuestro Gobierno.

En la Memoria del Ministerio de Relaciones Exteriores hallaréis consignados los pormenores concernientes á esta Cartera.

Nuestras relaciones con los demás Gobiernos de la América se han mantenido y estrechado con el más vivo interés. El de México, además de nuestras simpatías por sus repetidas muestras de amistad franca y leal, es acreedor á nuestro más profundo reconocimiento. La actitud benévola de aquel Gobierno ilustrado y magnánimo hacia este pueblo, cuyo parentesco de raza y armónicas tendencias no deja de reconocer á cada paso, es digna de especial mención.

El Gobierno de Chile, además de la señalada muestra de simpatía que dió á las cinco Repúblicas de Centro América con el envío de una Legación de primera clase, que primero estuvo á cargo del distinguido caballero señor don BELTRÁN MATHIEU y hoy lo está al de no menos distinción don GALO IRARRÁZABAL ZAÑARTU, mandó después uno de los buques de su escuadra, *Ministro Zenteno*, con una escogida oficialidad á bordo, á hacer una visita de cortesía á las cinco Repúblicas. Por lo que á mi Gobierno toca, se esforzó en corresponder dignamente á tan señalada muestra de amistad, haciendo al capitán y oficiales del vapor un cumplido recibimiento.

* * * * *

Los ramos de Correos y Telégrafos, que han tomado un incremento considerable en el país, han sido dotados de los elementos indispensables para que llenen debidamente su cometido.

* * * * *

El contrato para la construcción del ferrocarril de La Unión á esta Capital, celebrado con el señor JOSÉ CABEZAS BONILLA y aprobado por la Honorable Asamblea del año último, ha entrado ya en vías de realización, habiéndose inaugurado formalmente los trabajos á mediados del mes de enero anterior. Estamos, pues, en camino de ver realizada la obra que colmará las aspiraciones del país y á la cual se han dirigido todos los empeños de mi Gobierno.

* * * * *

El Consejo de Instrucción Pública ha dedicado el mayor empeño en el cumplimiento de sus importantes deberes.

Los nuevos estatutos universitarios adoptaron las reformas aconsejadas por la experiencia, y aquellos han regido sin la menor dificultad.

La Universidad ha dado lleno á su civilizadora misión, desempeñando con loable dedicación las funciones de su cargo.

Los estudios de Cirugía dental han quedado completamente organizados bajo la competente dirección de profesores expertos.

El Observatorio Astronómico ha funcionado con exactitud recomendable y ha sido dotado de los instrumentos científicos de que carecía, habiéndose recibido ya en perfecto estado los deteriorados que se mandaron componer á California.

Así el Instituto Nacional, como los colegios privados de segunda enseñanza, han empleado sus energías, con esmero recomendable, á las labores docentes, según el nuevo plan de estudios.

Ensanche notable ha tomado en el año transcurrido la instrucción primaria, base primordial de la educación pública.

* * * * *

Debiera entrar en extensa exposición de los asuntos del ramo de Hacienda, el más importante de los que forman la labor administrativa; pero en obsequio á la brevedad, me concretaré á ponerlos al corriente de una manera ligera del estado de nuestras rentas y de todo lo que se relaciona con la Hacienda Pública.

Los rendimientos generales de las rentas ascendieron á \$6,556,721.56, así:

Rentas aduaneras	\$4, 168, 564. 59
Rentas de licores	1, 814, 761. 99
Rentas diversas	315, 283. 14
Telégrafos, Correos y otros servicios	285, 111. 84
	<hr/>
	6, 556, 721. 56

Comparados con los productos del año de 1900 que fueron de \$6,337,729.06, resulta un aumento de \$218,992.50, correspondiendo

A rentas aduaneras	\$144,991.70
A rentas diversas y servicios.....	87,200.57
	<hr/>
	232,192.27
Menos baja en las rentas de licores	13,199.77
	<hr/>
	218,992.50

A los \$6,556,721.56 que produjeron las rentas, hay que agregar \$1,133,958.17 por negociaciones, depósitos y devoluciones y \$135,084.67 por existencias anteriores y saldo de traslaciones, con lo que los ingresos generales, alcanzaron la suma de \$7,825,764.40.

Los egresos fueron \$7,640,891.17, compuestos de lo siguiente:

Diferentes ramos del servicio administrativo	\$4,378,948.31
Pago de diferentes créditos.....	3,197,956.09
Devolución de depósitos y otros egresos.....	63,986.77
	<hr/>
	7,540,891.17
Queda para este año una existencia de	184,873.23

Los \$3,197,357.09 que pagó de créditos, se descomponen así:

Amortización de bonos de El Salvador	\$29,622.38
De intereses de los mismos.....	514,468.87
Amortización de créditos por contratas, préstamos, pedidos de mercaderías, etc	2,683,487.22
	<hr/>
	3,227,578.47

Tomadas en cuenta las emisiones de bonos durante el año y los intereses que les corresponden, resulta que la deuda pública, representada en diferentes bonos, quedó así en 31 de diciembre último:

Bonos de El Salvador, capital	\$5,561,562.68
Intereses	515,325.93
Diferentes bonos:	
Capital	\$2,184,523.55
Intereses	64,492.27
	<hr/>
	2,249,015.82
Formando un total de	8,325,904.43

La exportación por los puertos de la República en el año de 1901 fue como sigue:

	Plata.
326,588 bultos de café, con valor de	\$8,308,466
90,574 bultos de otros artículos	2,647,579
	<hr/>
417,162	10,956,045

Las importaciones fueron de 195,204 bultos, con un valor en oro de \$2,615,150.64, que agregándole un cambio calculado al 150 por ciento son \$6,537,876.60. Comparada esta cantidad con la que da la exportación, resulta en favor de la última un saldo de \$4,418,168.40.

Como veréis, en al año se ha pagado por amortización de créditos, contratas de préstamos, pedidos al exterior, etc., la respetable suma

de \$2,683,487.22, en cuyo hecho se basa el crédito del país y del Gobierno, el que me complace deciros, es en extremo satisfactorio.

Según los datos que anteceden, existía el 31 de diciembre del año próximo pasado, un pasivo de deuda flotante representada en bonos de diversas clases de \$2,249,015.82, suma que, casi en su totalidad, procede de las erogaciones causadas para la reposición de los elementos de guerra destruidos por el siniestro de que os he hablado. Sin ese lamentable contratiempo nuestra deuda flotante habría quedado casi totalmente amortizada en el mes de diciembre.

URUGUAY.

COMERCIO EXTRANJERO EN 1901.

Según el "South American Journal" de 10 de mayo de 1902, ha habido disminución en el valor tanto de las importaciones como de las exportaciones de 1901, comparadas con las del año anterior.

El total importado en 1901 fué \$23,691,932, lo que acusa \$286,274 menos que en el año anterior.

El de las exportaciones fué \$27,731,126, lo que acusa \$1,679,736 menos que en 1900.

VENEZUELA.

ACUÑACIÓN DE PLATA.

I.

EL CONGRESO DE LOS ESTADOS UNIDOS DE VENEZUELA

decreta:

ARTÍCULO 1. Se acuerda la acuñación de 2,000,000 de bolívars en plata, 1,500,000 bolívars en piezas de 5 bolívars y 500,000 bolívars en piezas de 2 bolívars.

ARTÍCULO 2. Se autoriza al Poder Ejecutivo Nacional para que disponga y lleva á cabo la acuñación de que se habla en el artículo anterior, ajustándose en todo á las prescripciones legales sobre la materia.

Dado en el Palacio Federal Legislativo, en Caracas, á 21 de marzo de 1902—año 91° de la Independencia y 44° de la Federación.

II.

CIPRIANO CASTRO, Presidente Constitucional de la República, decreto:

ARTÍCULO 1. En conformidad con el decreto legislativo fecha 21 del corriente mes, que autoriza al Ejecutivo Nacional para la acuñación de 2,000,000 de bolívars en moneda de plata, procédase por la Casa

de Moneda que se juzgue más conveniente, á dicha acuñación, llenándose los requisitos que establece la ley de 9 de julio de 1891 vigente.

ARTÍCULO 2. La acuñación á que se refiere el artículo anterior se hará como lo dispone el referido decreto legislativo en las siguientes proporciones:

Un millón quinientos mil bolívares en monedas de á 5 bolívares, de 900 milésimos de ley y 25 gramos de peso, y

Quinientos mil bolívares en monedas de 2 bolívares, de 835 milésimos milésimos de ley y 10 gramos de peso.

ARTÍCULO 3. La circulación de esta moneda será obligatoria para los particulares, en la proporción que establece para la de plata el aparte único del artículo 17 de la ley de 9 de julio de 1891 sobre moneda nacional, y bajo la pena que señala el artículo 23 de la misma ley.

ARTÍCULO 4. Por el Ministerio de Hacienda se indicarán las aduanas de la República por donde debe hacerse la introducción de dicha moneda.

ARTÍCULO 5. El Ministro de Hacienda queda encargado de la ejecución de este decreto y de comunicarlo á quienes corresponda.

Dado, firmado de mi mano, etc., en Caracas, á 26 de marzo de 1902. Año 91° de la Independencia y 44° de la Federación.

RESTABLECIMIENTO DE RELACIONES CON FRANCIA.

EL PRESIDENTE CONSTITUCIONAL DE LOS ESTADOS UNIDOS DE
VENEZUELA.

Por cuanto el 19 de febrero del corriente año de 1902 se ajustó en París entre el Plenipotenciario de Venezuela y el Ministro de Relaciones Exteriores de la República Francesa, un protocolo para dejar restablecido el antiguo trato político entre las dos naciones y cuyo tenor es como sigue:

“Los suscritos, el Señor H. MAUBOURGUET, Plenipotenciario de los Estados Unidos de Venezuela, y el Señor TH. DELCASSÉ, Diputado, Ministro de Negocios Extranjeros de la República Francesa, debidamente autorizados por sus respectivos Gobiernos, han convenido lo siguiente:

“ARTÍCULO 1.

“Al propio tiempo que nombren sus Ministros en París y Caracas, los Gobiernos Venezolano y Francés designarán cada uno un árbitro y elegirán por tercero al Excelentísimo Señor Don F. DE LEÓN CASTILLO, Marqués del MUNI, Embajador Extraordinario y Plenipotenciario de Su Majestad el Rey de España cerca del Presidente de la República Francesa.

“Los dos primeros árbitros se reunirán en Caracas inmediatamente después de la entrega por el Ministro de Francia al Presidente de los Estados Unidos de Venezuela de sus credenciales, á efecto de examinar

de concierto las demandas de indemnizaciones presentadas por Franceses por daños sufridos en Venezuela con motivo de los acontecimientos revolucionarios de 1892. Las demandas de indemnizaciones que no pudieren arreglarse amigablemente entre estos dos árbitros serán sometidas por ellos al tercero en discordia.

“Si no se hubiere estatuido nada definitivamente, ya por los dos árbitros, ya por el tercero, dentro del plazo de un año contado desde la llegada del árbitro francés á Caracas, el Gobierno venezolano entregará al Gobierno francés, para distribuirse por él entre los derechos-habientes, 1,000,000 de bolívares en deuda diplomática del 3 por ciento, mediante el cual pago quedarán definitivamente arregladas todas las reclamaciones motivadas por los sucesos revolucionarios de 1892.

“ARTÍCULO 2.

“Las demandas de indemnización extrañas á las que son objeto del artículo 1º, pero que estén fundadas en hechos anteriores al 23 de mayo de 1899, serán examinadas de concierto por el Ministro de Relaciones Exteriores de Venezuela y por el Ministro de Francia en Caracas. Si dentro de un plazo de seis meses, contado desde la entrega de las credenciales del Ministro de Francia en Caracas, no se pusieren de acuerdo sobre el monto de las indemnizaciones que hayan de concederse, las demandas serán sometidas por ellos al tercero en discordia, designado en el artículo precedente.

“El Ministro de Relaciones Exteriores de Venezuela y el Ministro de Francia en Caracas, podrán delegar, cada uno en lo que le concierna, la ejecución de las disposiciones que preceden, en el árbitro nombrado por su Gobierno.

“Si varias demandas de indemnizaciones fundadas en hechos diferentes se presentaren por el mismo reclamante y una de ellos estuviere en el caso de someterse al procedimiento establecido en el presente artículo, las demandas se juntarán á ella para ser objeto de un arreglo único.

“Queda entendido que este procedimiento, como el adoptado para las reclamaciones de 1892, no se instituye sino á título excepcional y no invalida la Convencion del 26 de noviembre de 1895.

“ARTÍCULO 3.

“El tercero en discordia decidirá sin apelación.

“Las indemnizaciones se pagarán al Gobierno francés en títulos de la deuda diplomática del 3 por ciento, dentro de los tres meses que sigan al acuerdo ó al fallo.

“ARTÍCULO 4.

“El Gobierno venezolano pedirá al Congreso que inscriba en el presupuesto de gastos las sumas necesarias para al pago de las mensual-

dades atrasadas de la deuda diplomática, y los tenedores de títulos de esa deuda deberán, por lo demás, participar de todas las ventajas que resulten para ellos de la estricta aplicación de las leyes venezolanas orgánicas sobre la materia.

“El presente Arreglo será ratificado, y las ratificaciones se canjearán en París ó en Caracas, cuanto antes se pueda, y á más tardar el 30 de abril de 1902.

“En fe de lo cual, los suscritos, debidamente autorizados por sus Gobiernos respectivos, han extendido el presente acto y puesto en él sus sellos.

“Hecho por duplicado en París, el 19 de febrero de 1902.

“Firmado:

“H. MAUBOURGUET.

“Firmado:

“DELCASSÉ.”

Y por cuanto en la misma fecha de 19 de febrero del corriente año de 1902, suscribieron en París el citado Señor H. MAUBOURGUET, Plenipotenciario de los Estados Unidos de Venezuela, y el Señor TH. DELCASSÉ, Ministro de Negocios Extranjeros de la República Francesa, un acto anexo al Protocolo precedente y que dice así:

“El Señor H. MAUBOURGUET, Plenipotenciario de los Estados Unidos de Venezuela, da comunicación al Señor TH. DELCASSÉ, Diputado, Ministro de Negocios Extranjeros de la República francesa, de la resolución gubernativa el 22 de marzo de 1898, cuya copia se anexa al presente.

“El Gobierno Francés toma razón de las disposiciones contenidas en dicha Resolución.

“En fe de lo cual han firmado el presente Acto que será agregado á las ratificaciones del Protocolo firmado con fecha de hoy.

“Hecho en duplicado en París, el 19 de febrero de 1902.

“Firmado:

“H. MAUBOURGUET.

“Firmado:

“DELCASSÉ.”

Y por cuanto el Congreso Nacional, en uso de sus atribuciones y mediante la Ley del 15 de abril en curso, prestó su aprobación al Protocolo y Acto preinsertos, cuyas ratificaciones fueron canjeadas en esta ciudad ayer, 17 del presente;

Por tanto, dispone que se publiquen para que tengan cumplimiento en lo que á Venezuela corresponde.

Dado, formado, sellado con el Sello del Poder Ejecutivo Nacional, y refrendado por el Ministro de Relaciones Exteriores en Caracas, á 18 de abril de 1902—Año 91° de la Independencia y 44° de la Federación.

CIPRIANO CASTRO.

Refrendado.

El Ministro de Relaciones Exteriores.

J. R. PACHANO.

NUEVA CONCESIÓN FERROCARRILERA.

El Ministerio de Obras Públicas de los Estados Unidos de Venezuela ha concedido una concesión al Señor TINEDO VELASCO para la construcción de un ferrocarril que unirá el puerto de Barranquitas en la costa oeste del Lago de Maracaibo con un punto conveniente de las Sabanas de San Ignacio del distrito de Perijá. Los trabajos principiarán á más tardar dentro de doce meses, terminándose y abriéndose al servicio público la línea dentro de otros 12 meses, á partir de la fecha de la aprobación del contrato por el Congreso. El ferrocarril será de una sola vía, con anchos entre rieles de un metro siete centímetros. En la estación de San Ignacio, el ferrocarril puede bifurcarse en un ramal hacia el norte que pase por la Villa del Rosario, y un ramal hácia el sur que pase por la Villa de Machiques. El concesionario hará el estudio de los dos ramales durante 24 meses fijados para principiar y ofrecer al público la línea de Barranquitas á San Ignacio. La concesión durará 99 años después de cuyo tiempo las líneas férreas con todo su material fijo y rodante, incluyendo los almacenes, oficinas, etc., pasarán á ser propiedad del Gobierno de Venezuela.

COMERCIO DE CIUDAD BOLÍVAR EN 1901.

Según informes publicados oficialmente en Londres en 7 de abril de 1902, el comercio de ciudad Bolívar en 1901 superó en valor en £9,375 al de 1900. El volúmen total de ese comercio representó £706,388, en 1901.

El aumento en las importaciones fué de £3,296. El total importado fué £266,095.

El total exportado representó un valor de £440,293.

Todos los medios de comunicación con el resto del mundo que tiene ahora Ciudad Bolívar consisten, según el cónsul británico que da estos informes, casi exclusivamente en un vapor venezolano, de mediano tamaño, que hace viajes quincenales de Ciudad Bolívar á la isla de Trinidad. Los fletes son crecidos.

La siguiente tabla muestra los principales artículos exportados por Ciudad Bolívar en 1900 y 1901, expresando su cantidad y valuación:

Artículos.	1900.		1901.

BIBLIOGRAFÍA.

En esta sección del Boletín Mensual se tratará de los libros y folletos enviados á la Oficina de las Repúblicas Americanas, que se refieren á asuntos relacionados con los países de la Unión Internacional de Repúblicas Americanas.

Con el título "The Hacendado Mexicano's Mexican Sugar Report, 1900-1901," se ha publicado en México, parte en castellano, y parte en inglés, un interesante folleto de 86 páginas que contiene multitud de noticias sobre el cultivo de la caña, y la fabricación del azúcar en México, la América Central y Puerto Rico. La cantidad total producida por los ingenios de México de 1899 á 1900 se calcula haber sido de 79,600,370 kilogramos, ó 79,600 toneladas.

Entre las publicaciones de interés que la Oficina ha recibido se nallan las siguientes: (1) El Boletín del mes de marzo del Instituto de la Fiebre Amarilla (March Bulletin of the Yellow Fever Institute), en que están recopilados todos los Boletines expedidos anteriormente, que son desde el No. 1 hasta el 7 inclusive, y en que se da la historia entera del Instituto y sus procedimientos. (2) El Boletín del Departamento de Agricultura titulado "Mexico as a market for pure-bred beef cattle" (México como mercado para ganado mayor de raza pura). (3) La publicación de la Oficina de Estadística del Departamento del Tesoro, titulada "Commercial Africa in 1901" (El África desde el punto de vista del comercio en 1901). (4) El libro titulado "Anuario Estadístico de la República del Uruguay, 1899-1900." (5) El Boletín del Censo de los Estados Unidos de América sobre las industrias del lino, cáñamo, etc. (6) Y la publicación del mismo género relativa á la industria del hielo artificial.

Á la lista de los libros regalados á la Biblioteca de Colón por el Señor Ministro de Bolivia, Don FERNANDO E. GUACHALLA, de que se dió cuenta en la página 1065 del BOLETÍN de abril de este año de 1902, hay que agregar los siguientes:

Ley de responsabilidad de los altos dignatarios del Estado.

Ley de timbres y papel sellado.

Ley y reglamento de imprenta.

Código penal.

La Biblioteca se complace en hacer público su agradecimiento á su distinguido favorecedor.

BOLETIM MENSAL

DA

SECRETARIA INTERNACIONAL DAS REPUBLICAS AMERICANAS,
União Internacional das Republicas Americanas.

VOL. XII.

JUNHO DE 1902.

No. 6.

COMISSÃO PARA O ESTUDO DA PRODUÇÃO, DISTRIBUIÇÃO E CONSUMO DE CAFÉ.

Afim de evitar toda duvida que pudesse ocorrer a este respeito, se faz presente neste lugar preferente do BOLETIM, que a Comissão para o estudo da produção, distribuição e consumo do café, e a Convenção Internacional Sanitaria, cuja celebração se accordou pela Segunda Conferencia Internacional Americana, em 29 de Janeiro do corrente anno, na capital de Mexico, foram convocadas como segue:

A Comissão para o estudo da produção, distribuição e consumo do café, para 1º de Outubro de 1902, na cidade de Nova York.

A Convenção Internacional Sanitaria para 15 de Outubro de 1902, nesta cidade de Washington.

Como a resolução referente ao Congresso Aduaneiro necessita approvação dos respectivos Governos, sua convocação foi adiada.

No relatorio que o Senhor ANTONIO LAZO ARRIAGA, Delegado por Guatemala na Segunda Conferencia Internacional Americana, dirige ao seu Governo em 15 de Março deste anno, se diz com respeito ao assumpto do café o que segue:

PROTECÇÃO Á INDUSTRIA DO CAFÉ.

Na sessão de 30 de Dezembro de 1901, a nossa delegação apresentou o seguinte projecto:

“1. Que dentro de um anno, contado desde o encerramento das sessões da Segunda Conferencia Internacional Americana, se reuna na cidade de Nova York, Estados Unidos de America, uma comissão

composta de um ou mais delegados nomeados por cada governo que deseje estar representado nella, os quaes deverão ter conhecimentos technicos acerca da producção, distribuição e consumo do café.

“2. O Conselho Directivo da Secretaria Internacional das Republicas Americanas fixará a data em que haverá de reunir-se esta commissão, que será organizada como ella decidir, com o auxilio da Secretaria mencionada, e terá por objecto o estudo das causas que produzem actualmente a crise que esta grande industria atravessa, e propor os meios praticos de evital-a ou diminuila.”

Pronunciei então umas phrases que resumidas, foram consignadas assim na acta do dia:

“Sua Excellencia o Senhor LAZO ARRIAGA, delegado de Guatemala, disse que desejava chamar a attenção da Conferencia sobre um assumpto de grande importancia para todas, ou quasi todas as nações deste continente—a crise por que atravessa na actualidade a industria do café. Quinze das ditas nações são productoras de tão precioso grão, e as quatro restantes consumidoras delle. As relações commerciaes de todas soffrem grandes perturbações como consequencia dessa crise.

“O problema que esta occasiona, não só é um problema commercial, mas tambem um problema economico, politico e social. A baixa no preço do café tem diminuido consideravelmente as rendas de alguns paizes americanos, e talvez deva ver-se nella a causa de algumas das revoluções que affligem varios dos referidos paizes, e que bem pode explicar-se, em grande parte, pela pobreza e a miseria que nelles reina, como resultado da terrivel crise que atravessa a industria do café.

“Buscar um remedio a tão grandes males, é tarefa digna desta Conferencia, e por isso o orador conclue submittendo á sua approvação uma proposição encaminhada para lograr proposito tão laudavel.

“Accrescenteí, alem disto, que na minha opinião, era possivel encontrar meios praticos que evitem ou, quando menos, diminuam os maos effeitos que se originam no estado anomaló por que na actualidade passa a industria do café; mas si a reunião de peritos que a delegação de Guatemala propunha não desse outro resultado que o negativo de que estes, depois do exame detido do assumpto, declarem que não ha remedio possivel, isso só constituiria já vantagem não desprezivel, pois os productores, desanimados definitivamente pelo incerto porvir da industria, em vez de continuar fazendo sacrificios esteris para manter suas plantações, dedicariam seu capital e seus esforços ao desenvolvimento de outras culturas, dando assim variedade á producção nacional e augmentando a riqueza publica.

“A Conferencia acceitou o projecto na mesma forma em que o propozemos.”

Com o titulo de “O Café: sua historia, cultivo, beneficio, variedades, producção, exportação, importação, consumo, etc.,” preparou a

Secretaria Internacional das Republicas Americanas uma extensa memoria, que será submettida á consideração desta Commissão tão prompto como se reuna. Nella encontrarão os Senhores delegados importantes informações que poderão ajudar-lhes para o satisfactorio desempenho de sua alta missão.

Para que se conheça de antemão o alcance desse trabalho parece conveniente publicar o indice das materias que aquelle comprehende, e o prefacio com que o apresentou seu distincto auctor, o Senhor NICOLÁS VELOZ GOITICOA, Secretario da Secretaria.

O indice das materias é como segue:

Prefacio.

Historia do café—Historia natural do café—Variedades de café.

Paizes e lugares que produzem café:

America:

America do Norte: Mexico.

America Central: Costa Rica, Salvador, Guatemala, Honduras, Honduras Britannica, Nicaragua.

America do Sul: Bolivia, Brazil, Colombia, Equador, Paraguay, Peru, Venezuela.

As Antilhas: Barbados, Cuba, Dominica, Guadalupe, Haiti, Jamaica, Maria Galante, Martinica, Porto Rico, Republica Dominicana.

Guyana: Ingleza (Demerara), Franceza (Cayenna), Hollandeza (Surinam).

Asia: Arabia (Moka), Birmania, as Ilhas Philippinas, India Britannica.

Africa: Burbon (Ilha da Reunião), Liberia.

Oceania: Colonias Indicas de Hollanda, Borneo, Java, Sumatra.

Polynesia: Fiji, Hawaii, Nova Guineia, Samoa.

Australasia: Australia.

Produção de café no mundo.

Consumo de café no mundo.

Consumo geral de café por paizes.

Consumo geral de café por unidade de população.

Consumo de café em Allemanha.

Consumo de café em França.

Consumo de café em Austria-Hungria.

Consumo de café em Italia.

Consumo de café em Russia.

Os Estados Unidos:

Sua importação de café.

Seu consumo de café.

Sua exportação de café.

Bolsa de café em Nova York.

A Grã Bretanha: Importação, consumo e exportação de café.

Direitos de importação sobre o café nos principaes paizes do mundo.

Direitos de exportação sobre o café nos paizes que o produzem.

Solo e clima apropriados para cultivar o café.

Cultivo de café.

Colheita do café.

Beneficio do café.

Enfermidades do café e meios de combatel-as.

Conservação do café.

Torrefacção do café.

Preparação do café para o uso domestico.

Composição chimica do café.

Falsificações do café.

Mistura de cafés.

Modificações effectuadas no uso do café como bebida.

Efeitos do café no organismo humano.

A Liga dos paizes que produzem o café (por J. A. OLAVARIA).

O Café nos Estados Unidos (por F. DE ASSIS BRASIL).

Estudo sobre o café (por J. B. CALVO).

Recommendações aos Delegados ao Congresso do Café (por A. LAZO ARRIAGA).

Bibliographia.

O prefacio diz assim:

“Sendo o café um dos principaes artigos de exportação de grande parte dos paizes da America Latina, com excepção da Republica Argentina, do Chile e do Uruguay que não o produzem, e devendo-se reunir em Nova York, em 15 de Outubro do presente anno, segundo a resolução da Segunda Conferencia Internacional Americana, o Congresso que discutirá os meios mais efficazes de proteger a industria do café no Hemispherio Occidental e recommendará a adopção das medidas que, a seu juizo deem resultados praticos immediatos em tal sentido, de conformidade com o accordo do Conselho Directivo da União Internacional das Republicas Americana, em sua sessão de 19 de Março proximo passado, a Secretaria Internacional das Republicas Americanas reuniu neste folheto, o maior numero possivel de dados sobre o café e tem a honra de apresental-os ao dito Congresso, abrigando a esperanza de que sejam utilizaveis, como referencia, na discussão de um assumpto tão importante e transcendental, posto que o café chegou a ser um dos artigos de maior trafico, e tem cahido por completo, em mãos de especulação, o que expõe seu preço de venda a grandes flutuações, podendo occasionar grandes prejuizos aos cultivadores de café. Por outra parte, a ruina dos cafezaes de um paiz, pode fazer subir os preços e o cultivo do café em novas regiões pode fazel-os baixar, assim como si a producção deste fructo continua excedendo á procura que tem nos mercados do mundo, esta superabundancia dará, indubitavelmente, por resultado, ainda maior depressão no preço de venda deste artigo. Deve-se ter em conta o facto que é muito vasta a zona favoravel ao cultivo do café, pois está comprehendida nas linhas isothermicas de 25° de latitude norte e de 30° de latitude sul.

“A maioria dos paizes civilisados adoptaram a regra de consolidar as forças productoras de todo artigo de consumo para dar vigor á producção e evitaras flutuações exaggeradas dos preços de venda. Seguindo, pois, este precedente, uma união, bem entendida, que tomasse em consideração immediata, entre os pontos de importancia capital, a necessidade de determinar meios praticos de reduzir os juros que vence o capital na America Latina e especialmente, o destinado á industria do café, daria resultados muito proveitosos para o productor, pois seria reduzido o custo da producção e seria mais facil a accumulção do producto, maiores as utilidades, mais consideravel o incremento do capital

e, por conseguinte, maior a força de produzir por modo verdadeiramente remunerador.

“Com este folheto e com as considerações que antecedem, contribue a Secretaria Internacional das Republicas Americanas aos arduos e complexos labores do Congresso destinado a proteger e melhorar a industria do café na America.

“WASHINGTON, D. C., *Junho de 1902.*”

COLHEITA DE CAFÉ NO MUNDO.

Conforme as melhores estatisticas que se têm á mão, a produção de café no mundo no anno de 1901 foi 15,460,000 saccos de 132 libras cada um, ou seja 2,040,720,000 libras.

Desta immensa quantidade correspondem ao Brazil, em numeros redondos, 11,500,000 saccos, ou sejam 1,518,000,000 libras, o que equivale a quasi os quatro quintos do total.

Os Estados da America Central, Mexico, e as Republicas de Venezuela, Colombia, Equador e Peru, contribuíram á produção com 2,200,000 saccos, ou sejam 290,400,000 libras.

A Republica de Haiti figurou neste respeito com grande credito. A produção, 450,000 saccos, ou sejam 59,400,000 libras, foi grande para o paiz; e a qualidade do grão foi excellente. O café de Haiti é muito apreciado em França, para onde se exportam todos os annos as duas terças partes da colheita.

Porto Rico e Jamaica subministraram 200,000 saccos, ou seja 26,400,000 libras.

As colonias hollandezas do Oriente produziram 480,000 saccos, ou seja 63,360,000 libras.

A India Britannica, Ceylão e as Philippinas, 315,000 saccos ou 41,580,000 libras.

Africa e Moka, 225,000 saccos, ou 29,700,000 libras.

O excesso da produção sobre o consumo foi de 1,342,000 saccos, ou 177,000,000 libras.

CONSUMO DE CAFÉ NOS ESTADOS UNIDOS.

Segundo os dados estatisticos publicados pela Secção de Estatistica do Departamento do Thesouro dos Estados Unidos, o consumo do café neste paiz tem ido em notavel augmento desde o anno de 1890.

As cifras officiaes são como segue:

Anno fiscal.	Quantidade importada.
	<i>Libras.</i>
1889-1890.....	499, 159, 120
1890-1891.....	519, 528, 432
1891-1892.....	640, 210, 788
1894-1895.....	652, 208, 975
1896-1897.....	737, 645, 670
1898-1899.....	831, 827, 063
1900-1901.....	854, 571, 310

TRATADO DE ARBITRAMENTO GERAL CELEBRADO ENTRE BOLIVIA E O PERU—MEXICO ASSIGNALADO COMO UM DOS ARBITROS.

O Presidente da Republica de Bolivia e o Presidente da Republica do Peru, desejosos de estreitar firmemente os vinculos que existem entre os dous Estados, estabelecendo o arbitramento nas relações de ambas as Republicas, nomearam para este fim, por seus plenipotenenciarios—

Sua Excellencia, o Presidente da Republica de Bolivia, o Doutor Dom FEDERICO DIEZ DE MEDINA, Ministro das Relações Exteriores; e Sua Excellencia, o Presidente de Republica do Peru, o Doutor Dom FELIPE DE OSMA, Enviado Extraordinario e Ministro Plenipotenciario, os quaes celebraram o seguinte:

TRATADO DE ARBITRAMENTO.

ART. I.

As Altas Partes Contractantes obrigam-se a submeter a arbitramento todas as controversias ate hoje pendentes e as que durante a vigencia do presente tratado surgirem entre ellas, quaesquer que sejam sua natureza e causas e sempre que não tiverem podido ser resolvidas por negociações directas.

ART. II.

Em cada caso occorrente, as Partes Contractantes celebrarão um convenio especial, com o objecto de determinar a materia da controversia, fixar os pontos que devem ser resolvidos, a extensão das faculdades do arbitro e o modo de proceder que ha de ser observado.

ART. III.

Em caso de que as Altas Partes não chegarem a por-se de accordo sobre os pontos a que se refere o artigo anterior, o arbitro fica facultado para determinar em vista das pretensões de ambas as partes, os pontos de facto e de direito que deverão ser decididos para a solução da controversia e estabelecer o procedimento que se deve seguir.

ART. IV.

As Altas Partes concordam em que o arbitro será o Tribunal permanente de arbitramento que se estabelecer em virtude dos accordos que a Conferencia Pan-Americana que funciona actualmente em Mexico adoptar.

ART. V.

Para estes dous casos: (a) si não chegar a constituir-se o Tribunal a que se refere o artigo precedente, e (b) si ha necessidade de occorrer ao arbitramento antes de se constituir esse Tribunal, as Altas Partes concordam em designar como arbitro, o Governo da Republica Argentina, o de Hespanha e o dos Estados Unidos Mexicanos, para que respectivamente exerçam o cargo um por impedimento de outro e na ordem em que estão mencionados.

ART. VI.

Si durante a vigencia do presente tratado e nos dous casos suppostos a que se refere o artigo anterior, occorrerem distinctos casos de arbitramento, serão successivamente entregues para sua solução, aos governos indicados, na ordem que se acha estabelecida.

ART. VII.

O arbitro é tambem competente: 1º, para determinar sobre a regularidade de sua constituição, a validade do compromisso e sua interpretação; 2º, para adoptar as providencias necessarias e resolver todas as difficuldades que surgirem no curso do debate. As questões de character technico ou scientifico que se apresentarem, serão submettidas para solução á Real Sociedade Geographica de Londres ou ao Instituto Geodesico Internacional de Berlim; e 3º, para fixar a epoca de seu funcionamento.

ART. VIII.

Ao decidir a questão que lhe é submettida, o arbitro se governará pelos principios do Direito Internacional, e nas questões de limites, pelo principio americano do “*uti possidetis*” de 1810, sempre que no convenio a que se refere o artigo 2º não se estabelecer a applicação de regras especiaes ou se auctorizar o arbitro a decidir como arbitro amigo.

ART. IX.

A sentença deverá decidir definitivamente cada ponto em litigio, com expressão de seus fundamentos. Será lavrada em duplicata e remettida a cada uma das partes por meio de seu representante perante o arbitro.

ART. X.

A sentença legalmente pronunciada decidirá dentro dos limites de seu alcance a difficuldade entre as partes.

ART. XI.

O arbitro estabelecerá na sentença o prazo dentro do qual deve ser executada.

ART. XII.

A sentença é inappellavel e seu cumprimento está confiado á honra das nações signatarias deste pacto.

Sem embargo, se admittirá o recurso de revisão perante o mesmo arbitro que a pronunciou, sempre que se deduzir antes de vencido o prazo fixado para sua execução nos seguintes casos:

1°. Si a sentença tiver sido dictada em virtude de um documento falso ou adulterado.

2°. Si a sentença tiver sido em todo ou em parte a consequencia de um error de facto, que resulte dos documentos da causa.

ART. XIII.

O recurso de revisão não poderá ser interposto, em caso algum, depois de passados seis mezes contados da notificação da sentença.

ART. XIV.

As Altas Partes nomearão seu representante no caso, porão á disposição do arbitro todos os meios de informação que dellas dependam e satisfarão suas proprias despezas e a metade dos gastos geraes do arbitramento.

ART. XV.

O mesmo arbitro que pronunciou a sentença decidirá sobre as questões que se suscitarem em sua execução.

ART. XVI.

O presente tratado durará dez annos a contar da data da troca das ratificações. Si não for denunciado seis mezes antes de seu vencimento, continuará regendo por outros des annos, e assim successivamente.

ART. XVII.

As ratificações do presente tratado serão trocadas em La Paz ou em Lima, dentro do prazo de um anno da data. Em fê do que os abaixo assignados firmam e sellam o presente tratado, feito em duplicata na cidade de La Paz, aos vinte-um dias do mez de Novembro do anno de mil novecentos e um.

FELIPE DE OSMA.

REPUBLICA ARGENTINA.

SITUAÇÃO GERAL DA REPUBLICA.

Entre os relatorios apresentados á Segunda Conferencia Internacional de Estados Americanos que se reuniu na cidade de Mexico, o da Delegação da Republica Argentina, foi de interesse especial. Esse relatorio foi recebido na bibliotheca da Secretaria Internacional das Republicas Americanas e contem as seguintes informações sobre a situação geral da Republica.

No que diz respeito á condição sanitaria, a cidade de Buenos Aires é citada como a que figura em primeiro lugar. Suas obras de abastecimento de agua e rede de esgotos foram executadas pelos mais distinctos engenheiros que se podiam obter, e teem sido ampliadas e extendidas devido ao crescimento da população da cidade. As obras de abastecimento de agua consistem em dous tunneis, sub-fluvial e subterraneo, de 5,700 metros de comprimento, com machinas elevadoras que podem levantar, em 24 horas, 172,000 metros cubicos de agua a 15 metros de altura. O consumo annual passa de 36,000,000 kilolitros, ou seja 123 litros por habitante por dia.

O systema de esgotos adoptado é o que se denomina circulante ou dinamico, com canalização mixta, arrojando-se todas as materias, aguas servidas e pluviaes ao Rio da Prata, a 25 kilometros ao sul. O custo da rede de esgotos em fins de 1899, se approximava a \$34,000,000, ouro. Um quadro da proporção dos fallecimentos nas principaes cidades do mundo mostra que a proporção de Buenos Aires foi de 17 por 1,000 habitantes contra 17.4 em Hamburgo, 18.4 em Nova York e Geneva, 19.2 em Londres, 20.1 em Paris, 20.7 em Vienna, e em proporção ascendente até 31.5, em Nurenberg. Tambem têm-se melhorado as condições sanitarias em Rosario, La Plata, Bahia e demais portos argentinos, tendo a cidade de Rosario os dous serviços tão completos como a mesma capital.

A primeira linha ferrea foi aberta ao trafego na Republica no anno de 1857, com só 10 kilometros de extensão. Em 1867 a extensão de vias ferreas tinha ascendido a 572 kilometros; em 1875, a 1,384 kilometros; em 1880, a 2,313 kilometros; em 1885, a 4,451 kilometros, e em 1890 a 9,254 kilometros. Desde então, a construcção de vias ferreas tem augmentado com rapidez. Em 1891 a extensão total de vias ferreas foi de 11,700 kilometros; em 1895, chegou a 14,222 kilometros, e finalmente, em 1901, a 17,062 kilometros. Deste numero correspondem a linhas de propriedade do Governo Nacional pouco mais de 2,000 kilometros, e o resto a empresas estrangeiras. O capital empregado nestas linhas ascende a 553,000,000 pesos, ouro, approximadamente.

A communicação marítima entre a Republica Argentina e os diversos portos dos Estados Unidos e da Europa é feita principalmente pelas linhas de vapores, Lloyd Norte Allemão e Hamburgo Americana. As principaes empresas de vapores que põem em communicação quasi diaria a Republica Argentina com Montevidéo, os portos do Brazil e Europa, são a *Navigazione Generale Italiana*, com quatro vapores de 5,000 a 6,000 toneladas, fazendo viagens quinzenaes; a *Transports Maritimes à Vapeur*, servida por nove vapores de 2,000 a 4,300 toneladas, que faz viagens cada 10 dias; a *Messageries Maritimes*, servida por seis vapores de 5,550 a 6,500 toneladas, que faz o serviço cada semana; a *Vapores Transatlánticos Españoles*, servida por seis vapores de 8,000 a 9,000 toneladas, fazendo viagens mensaes; a *Hamburgische und Sud-Amerika*, servida por seis vapores de 8,000 a 9,000 toneladas, com saídas semanaes; a *La Veloce*, servida por treze vapores de 1,000 a 4,900 toneladas, que faz viagens cada dez dias; a Royal Mail Steam Packet Company, servida por dez vapores de 3,140 a 6,000 toneladas, fazendo duas viagens por mez; e a *Compañía Transatlántica Española*, com seis vapores de 3,100 a 5,300 toneladas.

O serviço de navegação entre os portos argentinos e os dos Estados Unidos, é feito por varias companhias de navegação: A de *Lamport & Holt*, a *Prince Line*, a *Norton Line* e outras de menor importancia. O porto de Buenos Aires comprehende duas bacias com 154,000 e 112,600 metros quadrados de superficie. Cada uma das bacias se une com os diques que teem um total de 66 hectares de superficie de agua. Ha dous arsenaes de 150 e de 180 metros de comprimento. A extensão dos molhes é de 9,790 metros, havendo nelles 21 depositos fiscaes, com 2,466 metros de frente e 566,000 metros cubicos de capacidade. Em materia de elementos destinados ao serviço podem citar-se 133 guindastes hydraulicos, entre os quaes ha fixos, moveis e a vapor, de 1,500, 5,000, 10,000 e 30,000 kilos; 36 elevadores; 50 cabrestantes; 14 machinas de incendio; 5 pontes giratorias; comportas; guindastes fluctuantes; uma estrada de ferro de 32 kilometros de extensão e duas installações para illuminação electrica. O custo das obras do porto foi de 35,624,000 pesos, ouro. Obras de melhoramento tambem foram realizadas ultimamente no porto de La Plata ao custo de \$24,000,000, e o Porto de Bahia Blanco já contractou importantes obras de melhoramento.

A revista das instituições bancarias existentes na Capital da Republica Argentina, demonstra que esses estabelecimentos estão em condições de satisfazer as necessidades das transacções commerciaes que se effectuam entre a Republica Argentina e os paizes estrangeiros. O mais importante destes bancos é o *Banco de la Nación*, fundado por lei promulgada em 16 de Outubro de 1891, com um capital de 50,000,000 pesos, moeda nacional. O seu balanço de 30 de Junho de 1901, mostra depositos de 100,000,000 pesos; descontos, 84,000,000 pesos e effectivo em caixa, 72,000,000 pesos. Este banco tem oito succursaes em di-

versas partes da Republica. Outros bancos de importancia são o Banco Allemão Transatlantico; o Banco Britannico da America do Sul; Banco do Commercio; Banco Hespanhol do Rio da Prata; Banco Francez do Rio da Prata; Banco Italia e Rio da Prata; Banco de Londres e Rio da Prata; Banco de Londres e Brazil; Novo Banco Italiano; Banco Popular Argentino; Banco Popular Italiano e o Tarapacá and London Bank, Limited. As operações do Bankers' Clearing House montaram a 696,584,994.16 pesos ouro e 1,794,209,766.10 pesos papel, ou seja um total de 3,402,660,743.12 pesos. Varios bancos, porém, não liquidam suas operações por meio do Clearing House.

O relatório contem o seguinte resumo interessante das industrias agricolas e pecuarias da Republica:

“A Republica Argentina é um paiz essencialmente agricola e creador de gado. Suas extensas planicies, a fertilidade de seu solo, seu clima temperado, favoravel para o cultivo dos cereaes e para a criação do gado, offerecem aos labores do colonizador condições excepcionalmente favoraveis, e fazem a Republica figurar já entre as mais grandes nações exportadoras de grãos e de carnes. A produção de trigo e de milho é de 42.33 alqueires por habitante, contra 42 nos Estados Unidos e Dinamarca, 30 no Canadá, 23 em Suecia, 20 em Russia, 19 em França e 8 no Reino Unido da Grã Bretanha.

“Em 1872, a superficie de terra cultivada não alcançava a 130,000 hectares; em 1888, ella tinha subido a 815,438 hectares e em 1895 a 2,049,683 hectares. Em 1899, a area semeada de trigo chegava a 3,200,000 hectares, que produziram 2,697,417 toneladas de grão.

“Ao milho corresponde o segundo lugar na produção de cereaes da Republica. Em 1899, havia approximadamente um milhão de hectares semeados, que, á razão de 18 fanegas de 100 kilos por hectare, deram um rendimento de 1,800,000 toneladas metricas de milho.”

As terras cultivadas, segundo o recenseamento agro-pecuario de 1888, sommavam 2,422,995 hectares, e em 1895 chegavam já a 4,895,005 hectares. Finalmente, em 1899, a superficie consagrada ao cultivo de trigo, milho, linho, arvores fructiferas, canna de assucar e vinhedos, chegava a 7,000,000 hectares, como se vê do seguinte quadro que con-signa a area semeada e o valor das differentes colheitas no mesmo anno.

Productos.	Hectares.	Valor (ouro).
Trigo.....	3,400,000	\$95,000,000
Milho.....	1,400,000	23,000,000
Linho.....	700,000	27,000,000
Outros cereaes.....	80,000	2,800,000
Alfafa.....	950,000	90,000,000
Amendoim.....	18,000	1,260,000
Canna de assucar.....	50,000	4,750,000
Vinhedos.....	35,000	9,500,000
Tabaco.....	15,000	3,900,000
Outros productos.....	350,000	17,500,000
Total.....	6,998,000	274,710,000

A exportação dos principaes productos agricolas desde 1894 tem sido em toneladas metricas a seguinte:

Anno.	Trigo.	Milho.	Linho.
1894.....	1, 608, 000	54, 876	104, 435
1895.....	1, 010, 000	722, 318	276, 443
1896.....	523, 000	1, 570, 517	229, 675
1897.....	101, 845	374, 942	162, 477
1898.....	645, 161	717, 105	158, 904
1899.....	1, 713, 429	1, 116, 276	217, 713
1900.....	2, 042, 167	740, 685	201, 093

O valor dos productos exportados tem augmentado notavelmente nos ultimos annos, com excepção do de 1897, em que causas naturaes como a secca, a invasão dos gafanhotos, etc., fizeram decrescer o commercio naquella classe de productos. Em 1896 a exportação foi avaliada em \$41,406,438 ouro. Em 1897 esta quantia tinha descendido a \$23,236,369 ouro, para subir em 1898 a \$42,692,922 ouro e chegar em 1899 a \$65,155,995 ouro.

Para mover o volume immenso de suas colheitas, a Republica Argentina dispõe de machinas agricolas as mais aperfeiçoadas e incorpora annualmente a seu capital de instrumentos agricolas um numero consideravel de ceifeiras, grades, arados a vapor, etc. Para ter uma idea da importancia que alcançam as importações de machinas agricolas admittidas na Republica livres de direitos aduaneiros, basta dizer que seu valor em 1895 foi de \$3,707,130 ouro; em 1896, de \$1,202,570 ouro; em 1897, de \$1,072,128 ouro, e, finalmente, em 1899, de \$2,227,332 ouro. Quasi todas essas machinas vêm dos Estados Unidos e constituem a maior parte das importações na Republica Argentina procedentes dos Estados Unidos.

Apezar do desenvolvimento consideravel tomado pela agricultura, a principal fonte de riqueza continúa sendo a criação de gado. Em 1899 a Republica Argentina exportou productos desta industria por valor de \$115,546,906 ouro, ou seja o 625 por mil do valor total de sua exportação naquelle anno. Segundo o recenseamento de 1895, a Republica Argentina possuia 21,701,526 animaes vaccuns; 4,447,859 cavallos; 74,379,562 ovelhas; 562,766 porcos; 483,369 mulas e 2,748,860 cabras, ou seja um total de 104,412,942 cabeças de gado de todas as classes, avaliado em \$1,136,780,411, moeda nacional.

A rapida propagação do gado lanigero nos territorios do sul da Republica faz que a Republica conta hoje com mais de 90,000,000 carneiros. O gado vaccum tem augmentado tambem consideravelmente, não só em quantidade mas em qualidade, devido ao melhoramento das raças. A introducção no paiz de animaes de sangue puro, destinados a reproductores alcança a cifras notaveis nos ultimos tempos. Referindo-se sómente ao periodo de 1896-1900, basta consignar que os criadores de gado da Republica Argentina importaram para reproductores 6,231

cabeças de gado vaccum; 235,734, de gado lanigero e 1,227, de gado cavallar.

O commercio de exportação de gado em pé é summamente importante, ainda que não tanto como o de carnes salgadas e congeladas. Em 1895 a Republica Argentina exportou para differentes paizes, entre os quaes figuram Chile, Uruguay e Bolivia, 408,126 cabeças de gado vaccum e 496,946 cabeças de gado lanigero; em 1896, 385,539 cabeças de gado vaccum e 512,016 cabeças de gado lanigero; em 1897, 238,121 cabeças de gado vaccum e 504,128 cabeças de gado lanigero; em 1898, 359,296 cabeças de gado vaccum e 577,813 cabeças de gado lanigero, e em 1899, 312,150 cabeças de gado vaccum e 543,458 de gado lanigero. As cifras anteriores dão uma exportação total, durante os cinco annos, de 1,700,232 animaes vaccuns e 2,567,361 lanigeros em pé.

O principal mercado para as carnes da Republica Argentina é a Inglaterra. O seguinte quadro mostra a quantidade de novilhos exportados em diversas formas, com destino áquelle paiz, de 1894 a 1900:

Novilhos exportados para Inglaterra.

Annos.	Em pé.	Congelados.	Salgados.	Totaes.
1894	7,500	800	8,300
1895	49,908	4,000	53,908
1896	66,000	8,000	74,000
1897	83,000	11,500	94,500
1898	97,000	16,500	113,500
1899	91,200	28,356	119,556
1900 (em 3½ mezes).....	66,500	34,000	20,000	120,500

As exportações de carneiros gelados nos ultimos annos não são menos consideraveis e estão consignadas nas cifras seguintes:

Annos.	Carneiros gelados.
1898.....	2,464,941
1899.....	2,485,949
1900.....	2,372,969

A industria das salgadeiras é tambem muito importante, estando representada, segundo o recenseamento de 1895, cujas cifras já são antiquadas, por 39 estabelecimentos com um capital de \$37,000,000 ouro.

A abundancia dos rebanhos faz que a Republica Argentina seja um dos principaes paizes productores de lã do mundo. Durante o anno economico comprehendido de 1º de Outubro de 1899 a 30 de Setembro de 1900, a Republica exportou 182,000 toneladas de lã, de um valor de \$61,000,000 ouro. A forte baixa produzida depois na cotação deste textil faz que as exportações de 1900 a 1901 não cheguem á somma anterior, ainda que excederão de \$40,000,000 ouro.

O augmento consideravel na superficie das terras cultivadas, assim como o incremento que tem tomado na Republica Argentina a indus-

tria de criação de gado e as diversas industrias relacionadas com ella, se devem em grande parte á affluencia da immigração europea. Desde 1857, epoca em que se iniciou a corrente immigratoria para a Republica, com a modesta cifra de 4,951 pessoas, até o 31 de Dezembro de 1899, teem chegado á Republica 2,564,391 immigrants e teem sahido 882,596, permanecendo, portanto, 1,681,795, ou seja um termo médio de 39,111 annuaes.

BRAZIL.

MENSAGEM DO PRESIDENTE CAMPOS SALLES.

No dia 3 de Maio ultimo, o Senhor CAMPOS SALLES, presidente da Republica do Brazil, enviou ao Congresso Nacional sua mensagem annual, na qual relata os principaes factos occorridos na administração de 1898 a 1902.

O presidente começa dando conta dos intuitos da politica que adoptou ao subir á cadeira da suprema magistratura do paiz, declarando haver tudo feito para bem cumprir o seu dever. Diz que as difficuldades que tinha de enfrentar ao assumir o Governo eram gravissimas. Expõe a situação das finanças a 15 de Novembro de 1898 e mostra o programma adoptado para resolver as difficuldades. Comparando a situação em 1898 com a presente diz o Presidente o seguinte:

“As condições de hoje, em frisante contraste com aquellas que vim encontrar, são estas:

“Os pagamentos em especie, restabelecidos no prazo preciso do convenio de 15 de Junho de 1898, vão sendo feitos com rigorosa e honesta pontualidade.

“A circulação do papel-moeda, alliviada pelo resgate de 107,913,356\$ acha-se reduzida a 680,415,258\$.

“Taxa cambial ao nivel de 12 d.

“A grande massa de papel em circulação, que em sua primitiva totalidade apenas representava o valor de £23,500,000, representa hoje, após a reducção, £34,000,000, frações desprezadas.

“Os titulos brasileiros alcançaram uma alta de cerca de 35 por cento nas cotações da bolsa estrangeira.

“O resto do emprestimo de 1897, £1,122,083, foi pago por prestações mensaes no decurso do exercicio de 1899, na forma estipulada.

“Os debitos por encomendas e contratos estão pagos.

“Não existe em circulação um só bilhete do Thesouro. O nosso deposito em Londres é de £2,000,000 (que se restaura pelas remessas mensaes quando desfalcado pelos pagamentos) e mais de £1,000,000 em consolidados.

“Na conta corrente do Banco da Republica (excluida a conta da liquidação antiga que apresenta £300,000 a nosso favor), temos 12,000,000\$.

“Por conseguinte a somma dos saldos actuaes, reduzido o ouro a papel ao cambio do dia, é de 80,000,000\$.

“Finalmente, banio-se o deficit e institutio-se o regimen dos saldos orçamentarios.

“A divida publica, computando-se os novos encargos provenientes do *funding loan*, não chegou a ter um acrescimo de 2 milhões esterlinos.”

Para mostrar o valor dos esforços empregados nesta obra de reparação financeira, recorda o periodo antecedente, no qual o orçamento não bastava ás necessidades da vida nacional, e acrescenta que conseguiu os resultados mencionados sem emissão, sem empréstimos, restabelecendo o regimen da pontualidade dos pagamentos em especie e comprando 1,970 kilometros de estradas de ferro para a União.

Depois a mensagem trata da encampação e arrendamento das estradas de ferro. O Governo contractou o resgate das estradas de ferro do Recife ao São Francisco, da Bahia ao São Francisco, da Natal á Nova Cruz, da Parahyba ao Pilar e Cabedello, Central da Bahia, Minas e Rio, da Santa Maria da Bocca do Monte ao Uruguay, Paraná a Cuyabá e seu prolongamento e da Dona Thereza Christina—estes dous ultimos contractos dependem ainda da approvação dos accionistas e credores das referidas empresas. O resgate da Recife ao São Francisco foi contractado na base do rendimento liquido de 5 por cento. O total que o Governo pagará para aquisição das outras estradas será de cerca de 9,900,000 libras esterlinas em apolices de 4 por cento. O Governo já tem arrendado algumas destas estradas. A estrada de ferro de Bahia ao São Francisco, a do Conde d’Eu, e a do Recife ao São Francisco, que antes do seu arrendamento nunca deixaram de apresentar *deficits*, agora dão saldos.

O Presidente trata minuciosamente de tudo o que se passou nas diferentes Secretarias de Estado durante a sua administração. Diz que no Ministerio das Relações Exteriores encetou-se nova politica de reciprocidade commercial, tendo o Governo já conseguido affirmar um ajuste com os Governos da França e da Italia, pelo qual foi concedida uma redução de 20 francos na taxa sobre a sacca de 100 kilos de café do Brazil.

A mensagem trata particularmente da questão do arrendamento feito pelo Governo da Bolivia a um syndicato anglo-americano do territorio do Acre e cita trechos da nota de protesto dirigida pelo Ministro do Exterior ao Ministro da Bolivia.

CONFERENCIA ASSUCAREIRA.

Uma Conferencia Assucareira foi convocada para reunir-se na capital do Estado da Bahia no dia 25 do corrente mez. O Dr. ANTONINO FIALHO, Presidente da Sociedade Nacional de Agricultura, por cuja iniciativa foi promovida a Conferencia, dirigiu uma nota circular aos

Governadores dos Estados pedindo-lhes que se façam representar na mesma reunião.

OBRAS DE MELHORAMENTO DO PORTO DE PERNAMBUCO.

O Governo do Brazil resolveu abrir concorrência para a construção de obras para melhoramento do porto do Recife, Estado de Pernambuco. As propostas deverão ser apresentadas no Ministerio da Industria, Viação e Obras Publicas até 1 hora da tarde do dia 22 de Julho. O concessionario obrigar-se-ha a executar á sua custa as seguintes obras para o melhoramento do porto:

“1º. Um caes para atracação, carga e descarga de navios, em oito metros de profundidade em aguas minimas, desde as proximidades da estação da Estrada de Ferro do Recife ao Limoeiro até junto ao edificio da Associação Commercial. Este caes será dotado de todos os apparelhos necessarios ao seu fim, guindastes hydraulicos ou electricos, vias-ferreas para o serviço do caes e ligação com as vias-ferreas do Estado, armazens para abrigo e guarda das mercadorias, illuminação electrica, etc.

“2º. Um caes para identicos fins em seis metros livres de profundidade em aguas minimas, nas praias de Santa Rita e do Ramos, tendo em vista a regularização da confluencia desse braço do rio com o estuario da primera secção, e com identico aparelhamento para guarda e movimento das mercadorias, illuminação, etc.

“3º. Prolongamento desses caes aguas acima, á medida que o exigirem as necessidades do porto.

“4º. Arrazamento a nove metros de profundidade em aguas minimas da rocha que obstrue a Barra Grande.

“5º. Quebra-mar com cerca de 500 metros de comprimento sobre o recife existente entre a Barra Grande e o pharol.

“6º. Melhoramento sobre o recife apparente, consistindo em reparação da muralha antiga alli construida e seu prolongamento ao sul e enrocamentos nas quebradas do recife.

“7º. Dragagem até oito metros de profundidade no estuario desde a Barra Grande até proximidades da alfandega actual, de modo a permittir as evoluções dos navios nesse ultimo ponto, em largura de 300 metros no minimo, e até seis metros na zona fronteira e correspondente aos caes de Santa Rita e do Ramos.

“8º. Aterro do espaço comprehendido entre os caes a construir e a terra firme.”

O concessionario submeterá á aprovação do Governo o plano definitivo e o orçamento das obras, dentro do prazo de doze mezes, contados da data do contracto. As obras começarão no prazo de seis mezes contados da data da aprovação dos planos definitivos, devendo ficar concluidas dentro de 6 e 9 annos.

Para remuneração e amortização do capital empregado nas obras o contractante perceberá taxas de accordo com a lei n. 1,746 de 13 de Outubro de 1869.

Quando a renda liquida exceder 12 por cento, as taxas soffrerão redução geral.

O Governo tem o direito de resgatar todas as obras em qualquer tempo depois dos 10 primeiros annos de sua completa conclusão.

DIREITOS DE EXPORTAÇÃO SOBRE A HERVA MATTE.

LEI N. 449, DE 22 DE MARÇO DE 1902, VOTADA PELO CONGRESSO LEGISLATIVO DO ESTADO DO PARANÁ.

O Congresso Legislativo do Estado de Paraná decretou e eu sanciono a lei seguinte:

ART. 1º. Fica creado o imposto de 450 reis por dez kilogrammas de herva matte que for exportada, quer seja beneficiada ou não.

ART. 2º. A exportação de herva matte, beneficiada ou não, só poderá ser feita em barricas, caixas de madeira e em surrões de couro.

ART. 3º. O imposto de exportação para a herva matte que sahir do Estado pela zona denominada “Foz do Iguassú,” no rio Paraná, será de 600 reis per dez kilogrammas, quer seja beneficiada ou não.

ART. 4º. A herva matte por essa zona exportada poderá ser acondicionada em quaesquer outros envoltorios que não sejam de madeira ou de couro, derogada para essa mesma zona a disposição do artigo 2º desta lei.

ART. 5º. Fica o Governo autorizado a crear as collectorias ou agencias fiscaes que forem necessarias na zona denominada “Foz do Iguassú,” no rio Paraná, provendo-as do respectivo pessoal e fixando-lhe porcentagens ou vencimentos.

ART. 6º. As disposições dos artigos 1º e 2º desta lei entrarão em execução no principio do anno financeiro 1 de Julho de 1902.

ART. 7º. Fica o Governo autorizado a expedir os regulamentos necessarios e abrir os credits precisos para a execução da presente lei.

ART. 8º. Revogam-se as disposições em contrario.

O Secretario de Estado dos Negocios de Finanças, Commercio e Industrias assim a faça executar.

Palacio do Governo do Estado do Paraná, 22 de Março de 1902, 14º da Republica.

FRANCISCO XAVIER DA SILVA.
ANTONIO AUGUSTO C. CHAVES.

COLOMBIA.

DISPOSIÇÕES VIGENTES SOBRE PATENTES DE INVENÇÃO E REGISTRO DE MARCAS DE FABRICA.

[Lei 35 de 1869 (13 de Maio).]

SOBRE PATENTES DE INVENÇÃO, MELHORAMENTO OU INTRODUÇÃO DE NOVAS INDUSTRIAS.

O Congresso dos Estados Unidos de Colombia decreta:

ART. 1º. Toda descoberta ou invenção nova em qualquer genero de industria, dá ao seu autor, sob as condições e pelo prazo prescripto nesta lei, o direito de aproveitar-se exclusivamente de sua invenção ou de sua descoberta. Este direito é garantido por titulos expedidos pelo Poder Executivo da União, sob o nome de “Patentes de Invenção.”

ART. 2º. Todo colombiano ou estrangeiro que inventar ou aperfeiçoar alguma machina, apparelho mechanico, ou processo de util applicação á industria, artes ou sciencias, ou alguma manufactura ou producto industrial, poderá obter do Poder Executivo uma patente de privilegio que lhe assegure exclusivamente por um prazo de cinco a vinte annos, para si ou para quem representar com justo titulo seus direitos, a fabricação, venda ou exercicio de sua invenção ou melhoramento.

ART. 3º. Não serão concedidos privilegios para a introdução de productos naturaes ou fabricados de procedencia estrangeira.

ART. 4º. Os inventores privilegiados em outros paizes podem obter o reconhecimento dos seus direitos na Republica de Colombia, requerendo a confirmação delles, comtanto que as suas invenções não sejam do dominio do publico.

Quando se expedir patente de invenção em Colombia em favor de invenção ou melhoramento já privilegiado em outro paiz, a patente colombiana ficará nulla logo que terminar o prazo da patente estrangeira.

ART. 5º. Para obter privilegio de invenção ou de melhoramento, o interessado recorrerá ao Poder Executivo por si, ou por procurador devidamente habilitado, declarando a invenção ou melhoramento de que é autor, explicando-a com clareza e solicitando o privilegio; e no caso de ser-lhe concedido, ficará obrigado, para entrar em posse delle ou obter a patente, a apresentar dentro do prazo de quarenta dias um desenho ou modelo exacto da respectiva machina ou apparelho mechanico, ou uma descripção circunstanciada e completa do methodo ou processo novo e uma amostra da manufactura ou producto, si é de possivel conservação, para que se deposite na respectiva Secretaria de Estado e possa servir em caso de suscitar-se controversia acerca do privilegio.

ART. 6º. As patentes destes privilegios se expedirão citando nellas a presente lei, insertando o decreto de concessão em que será mencionado a invenção, melhoramento ou nova industria sobre que recai, e o prazo que comprehende, e declarando ao interessado em posse do privilegio, e serão publicadas integralmente no periodico official da nação, duas vezes pelo menos.

ART. 7º. A concessão de uma patente de invenção, melhoramento ou de nova industria, se expedirá sem exame previo sobre a utilidade do objecto, nem da questão de saber si é realmente invenção ou melhoramento. O Governo não declara, ao concedel-a, que é verdadeira ou util a invenção ou melhoramento, nem que o privilegiado é realmente o autor, nem que o objecto é novo, nem fieis as descripções ou modelos; pois é facultado aos demais interessados provar em juizo o contrario.

Paragrapho: O Poder Executivo annunciará no Diario Official, antes de conceder a patente e com a antecipação de trinta dias, o pedido que se tiver feito para obter dita patente.

ART. 8º. Não se concederão patentes no caso de que não forem preenchidas as formalidades desta Lei, ou de que a invenção, melhoramento ou nova industria forem contrarios á saude ou segurança publica, a moral ou a leis anteriores.

ART. 9º. Terminado o prazo da patente, é livre a fabricação, venda ou exercicio da invenção ou melhoramento privilegiado; publicar-se-hão as descripções apresentadas pelo inventor e poderão dar-se copias dos desenhos ou modelos respectivos a quem as pedir, á sua custa. O mesmo terá lugar si antes de terminar-se o dito prazo, for declarado nullo ou insubsistente o privilegio.

ART. 10. Os delictos de imitação, falsificação e demais contra a propriedade dos artigos ou industrias privilegiados, serão processados e julgados de conformidade com a legislação criminal em vigor.

ART. 11. Fora do caso do artigo 4º, as patentes caducarão quando tiverem sido expedidas em prejuizo de direitos de terceiros, o que será julgado pelos Tribunaes dos Estados.

ART. 12. A patente por nova industria caducará tambem quando o concessionario não tiver feito uso effectivo da invenção por mais de um anno, salvo motivo de força maior.

ART. 13. Os concessionarios de patentes pagarão, em favor dos cofres publicos, uma taxa de cinco (\$5) a dez pesos (\$10), por cada anno de concessão uma só vez e ao tempo de receber a patente. Em todo caso, a pessoa que solicitar uma patente declarará o numero de annos dentro do maximo fixado e depositará no Thesouro Geral dez pesos (\$10), que perderá em favor do Thesouro si a patente não for concedida, e que lhe serão restituídos, si o for.

ART. 14. Fica abrogada a lei de 15 de Maio de 1848, sobre "Patentes de invenção ou melhoramento de machinas ou apparatus industriaes."

Dada em Bogotá, aos treze dias de Maio de 1869.

O Presidente do Senado de Plenipotenciarios, A. GONZÁLEZ CARAZO. O Presidente da Camara de Representantes, MIGUEL S. VALENCIA. O Secretario do Senado de Plenipotenciarios, ERNESTO DEL VILLAR. O Secretario da Camara de Representantes, NICOLÁS ESGUERRA.

Bogotá, 13 de Maio de 1869.

Publique-se e execute-se.

[L. S.]

SANTOS GUTIÉRREZ.

O Secretario do Interior e Relações Exteriores, encarregado do Despacho de Fazenda e Fomento.

ANTONIO M. PRADILLA.

Decreto numero 217 de 1900 (23 de Novembro):

Sobre as formalidades que se devem satisfazer para obter o registro das marcas de fabrica e de commercio.

O Vice-Presidente da Republica, encarregado do Poder Executivo, Considerando:

1º. Que são muito frequentes as petições que se apresentam ao Governo, para o registro de marcas de fabrica e de commercio;

2º. Que as leis colombianas não estabelecem o procedimento que se deve seguir para solicitar e fazer effectivo tal registro, como é costume em todos os paizes civilizados, com o objecto de garantir os direitos dos fabricantes e dar a conhecer a legitima procedencia dos artigos fabricados; e

3º. Que emquanto o Congresso legisla sobre a materia, é necessario, pelo menos, regulamentar o procedimento que tenha de observar-se para fazer a petição e para despachal-a;

Decreta:

ART. 1º. Todo cidadão, colombiano ou estrangeiro, proprietario de uma marca de fabrica ou de commercio, pode adquirir o direito exclusivo de usal-a no territorio da Republica, mediante a formalidade do registro na repartição respectiva, para obter o qual se submeterá ao procedimento seguinte:

1º. O interessado ou seu procurador especial apresentará no Ministerio da Fazenda a petição do registro da Marca de Fabrica, explicando com precisão e clareza os caracteristicos da marca, o producto ou artigo a que se destina, e o lugar onde este se fabrica;

2º. A petição de que trata o ponto anterior deve fazer-se em papel sellado de terceira classe e acompanhada de dous exemplares, pelo menos, da marca ou de sua representação por meio de desenho ou de gravura, datados e firmados pelo interessado. Cada um dos exemplares levará uma estampilha de Timbre Nacional de primeira classe.

3º. A petição se publicará no jornal official' e dentro de trinta dias contados da data da publicação se fará o registro da marca, em caso de que esta for de fabrica e não tiver mediado reclamação em contrario.

Ao interessado será expedido um certificado de registro que constituirá o titulo de propriedade da respectiva marca, o qual deverá ser publicado por tres vezes no jornal citado.

ART. 2º. O interessado publicará na folha official, á sua custa, tanto a petição como a certidão do registro que lhe for expedida.

ART. 3º. Nas petições que se fizerem para o registro de marcas de commercio, se procederá de accordo com o disposto no artigo 1º, mas não se expedirá o certificado de registro salvo passados sessenta dias contados da data da publicação da petição.

ART. 4º. Para os effeitos do presente decreto, se entende por marca de fabrica qualquer phrase, lettra ou cifra empregada para distinguir ou determinar um producto especial destinado á industria ou ao commercio, e por marca de commercio, a phrase, lettra ou cifra distinctiva de um artigo de commercio destinado a uma pessoa ou casa commercial.

ART. 5º. Os poderes conferidos no estrangeiro para requerer o registro de marcas de fabrica ou de commercio, devem vir authenticados pelo respectivo Ministro ou Agente Consular da Republica no lugar em que se concedam, ou pelo Ministro ou Agente Consular de uma nação amiga, no caso de que a Colombia não tiver acreditado taes empregados no paiz ou lugar onde residir o procurador habilitado.

ART. 6º. A marca de fabrica ou de commercio que pertencer a um individuo ou companhia estrangeira, não residente na Republica, não poderá ser registrada nesta si não o houver sido previa e regularmente no paiz de sua origem, o que se provará com a copia authenticada do titulo expedido no estrangeiro, que deverá acompanhar á petição.

ART. 7º. O individuo ou companhia que primeiro fizer uso de uma marca de fabrica ou de commercio é o unico que tem direito de adquirir a propriedade della. Em caso de disputa entre dous ou mais possuidores de uma mesma marca, a propriedade pertencerá áquella que provar posse anterior da marca, e si a antiguidade de posse for a mesma, ao primeiro que tiver solicitado o registro na repartição respectiva.

ART. 8º. O registro das marcas, já seja de fabrica ou de commercio, se fará sem exame previo acerca da utilidade do objecto e da qualidade e propriedades dos productos a que se destinam, sob a exclusiva responsabilidade do requerente, e deixando, em todo caso, a salvo os direitos de terceiro.

Paragrapho: Os que se julgarem prejudicados poderão interpor recurso ao Ministerio da Fazenda dentro do prazo de trinta e sessenta dias, segundo o caso, contados da data da publicação da petição no jornal official, que resolverá definitivamente sobre o assumpto, podendo as partes interessadas recorrer ao Poder Judicial, caso não se conformarem com a decisão.

ART. 9º. Os falsificadores de marcas de fabrica ou de commercio estarão sujeitos ás penas assignaladas nos artigos 663 e 664 do Codigo Penal.

Publique-se e execute-se.

Dado em Bogotá, a 23 de Novembro de 1900.

O Ministro da Fazenda.

JOSÉ MANUEL MARROQUÍN.
PEDRO ANTONIO MOLINA.

Decreto numero 218 de 22 de Novembro de 1900 sobre patentes de privilegio e registro de marcas de fabrica e de commercio.

O Vice-Presidente da Republica, encarregado do Poder Executivo, em uso de suas faculdades constitucionaes, e considerando:

Que devido ao augmento progressivo de pedidos de patentes de privilegio e de registro de marcas de fabrica e de commercio, pode o Governo, augmentando as taxas exigidas para a concessão de titulos de patentes, summamente baixas na actualidade, e fixando as que tiverem de ser pagas pelo registro de marcas de fabrica e de commercio, obter fundos com que attender ás necessidades occasionadas pela actual situação de guerra.

Decreta :

ART. 1º. Desde a data do presente decreto eleva-se a vinte pesos (\$20) a favor do Thesouro Nacional o deposito de que trata o artigo 13º da lei de 13 de Maio de 1869. O deposito de que trata o mesmo artigo será daqui em diante de vinte pesos (\$20), que o requerente perderá a favor do Thesouro, si a patente, por qualquer causa, não for concedida, e que será posto a sua conta como parte da taxa de titulo, si o for.

Paragrapho: Quando a patente de privilegio for solicitada com o fim de assegurar o uso exclusivo de qualquer invenção ou melhoramento de machinas, appparelhos mechanicos, combinação de materias ou processo de util applicação á industria, artes ou sciencias, ou de alguma manufactura ou producto industrial, pertencentes á cidadãos colombianos ou a estrangeiros residentes no paiz, e que possam considerar-se invenções ou melhoramentos nacionaes, a taxa de que trata este artigo será de cinco (\$5) a vinte pesos (\$20), segundo o caso, a juizo do Ministro da Fazenda.

ART. 2º. Além da taxa de que trata o artigo anterior, o interessado pagará, por uma só vez, na ocasião da expedição do titulo respectivo, a quantia de cincoenta pesos (\$50) no Thesouro Nacional.

ART. 3º. Fixam-se em cincoenta (\$50) e trinta pesos (\$30) os impostos do Thesouro Nacional pelo registro de cada marca de fabrica e de commercio respectivamente.

ART. 4º. Não se expedirá titulo algum referente a patentes de privilegio ou a registro de marcas de fabrica ou de commercio, sem que se tiver provado devidamente o deposito no Thesouro das taxas de que trata o presente decreto.

ART. 5º. As petições que se achem pendentes na repartição respectiva, ficam sujeitas ás disposições do presente decreto, com excepção daquellas nas quaes já se tiverem pago as taxas correspondentes.

Publique-se e execute-se.

Dado em Bogotá, a 22 de Novembro de 1900.

JOSÉ MANUEL MARROQUÍN.

O Ministro do Governo, GUILLERMO QUINTERO C. O Ministro das Relações Exteriores, CARLOS MARTÍNEZ SILVA. O Ministro da Fazenda, Pedro ANTONIO MOLINA. O Ministro da Guerra, JOSÉ DOMINGO OSPINA C. O Ministro de Instrução Publica, MIGUEL ABADÍA MÉNDEZ. O Ministro do Thesouro, ENRIQUE RESTREPO GARCÍA.

NOTA.—A casa recebe por sua intervenção na obtenção de patentes de invenção em Colombia:

	Ouro.
Por 20 annos.....	\$30
Por 15 annos.....	25
Por 10 annos.....	15

mais as despesas e emolumentos ao cambio, em moeda colombiana.

	Ouro.
Pela intervenção no registro de marcas de fabrica.....	\$10
E marcas de commercio	8

mais as despesas e emolumentos, em moeda colombiana.

Os poderes podem ser conferidos indistinctamente a qualquer dos socios SAMUEL J. LEMUS, JOSÉ JOAQUÍN PÉREZ, LÁZARO MARÍA PÉREZ ou MILCIADES A. HERRÁN; devem trazer clausula de substituição e devem vir authenticados pelo respectivo agente diplomatico ou consular colombiano, ou de uma nação amiga, caso este paiz não o tiver acreditado no lugar em que residir o outorgante.

LEMUS, PÉREZ & Co.,
Bogotá Colombia.

COSTA RICA.

INAUGURAÇÃO DO NOVO PRESIDENTE.

A inauguração do novo Presidente da Republica de Costa Rica, Senhor Licenciado ASCENCIÓN ESQUIVEL, teve lugar com as solemnidades de costume em 8 de Maio ultimo, ás 12 horas do dia.

Sua mensagem inaugural, dirigida ao Congresso Constitucional da Republica, foi como segue:

“SENHORES DEPUTADOS: Ao tomar posse da Presidencia da Republica, a que me tem chamado a maioria de meus cidadãos, seja minha primeira palavra para felicitar a Costa Rica por haver affirmado o imperio de suas instituições politicas.

“Recebei, vós, seus dignos Representantes, a homenagem do meu profundo respeito e a expressão de meus sinceros parabens.

“Nada é tão significativo na vida das nações democraticamente constituidas, como o acto simples em que, em obediencia á lei e á vontade

popular, se transmite de uns hombros a outros a auctoridade suprema do Estado. Patenteia esta cerimonia, de maneira irrefutavel, que a magestade da Constituição não é mero anhelos se sonhadores politicos, mas pratica e vivente realidade.

“Ao congratular-me por tal motivo convosco sinto verdadeira satisfacção em manifestar, com toda a energia de que sou capaz, que, passado o periodo constitucional, me será muito grato volver á vida privada e entregar o mando a quem o povo livremente designar para succeder-me.

“Tão formal declaração, que me comprazo em estampar á frente de minha primeira mensagem e com cujo cumprimento satisfarei não só meu dever segundo a lei escripta, mas o que minha consciencia e minhas convicções julgam obrigação, espero que leve a vossos animos a segurança de que por minha parte, favorecerei qualquer iniciativa de reforma constitucional que tenda a consolidar a alternacção no poder.

“Parece-me de summa urgencia ampliar o regimen municipal e conceder aos conselhos municipaes maior independencia, afim de que todos os povoados de importancia, seja por numero de habitantes, seja por riqueza, gozem de seus proprios recursos, deliberem e decidam acerca de seus proprios negocios e saiam da tutela e centralização, a que hoje, por desgraça, se encontram sujeitos.

“A extensão dos corpos municipaes deveria combinar-se com o systema de suffragio directo. Desta sorte se contribuiria á educação politica dos cidadãos e se assentaria sobre mais firmes fundamentos o Governo democratico. Para conseguir melhora tão importante, seria preciso modificar a constituição. De minha parte, apoiaria a proposição de emenda.

“O Governo que hoje se inaugura não fará politica de partido. Nem convem que nas circumstancias por que atravessa a Republica haja luctas sectarias. O que realmente deseja o paiz é que a nova administração se consagre a attender aos graves e complicados problemas economicos que tão justamente tem embargados todos os espiritos.

“Desde logo teria que haver exaltação dos partidos, e se comprometteria seriamente a tranquillidade social, si de parte do Governo ou de parte dos cidadãos, se suscitassem conflictos religiosos. Meu Governo procurará em suas relações com a Igreja, manter a mais franca e cordial harmonia, sem que por isso provoque ou consinta alteracção nas posições que respectivamente occupam o poder civil e a auctoridade ecclesiastica. Dentro dessa formula—conceder á Igreja todo o auxilio compativel com nosso modo de ser actual—tenho aqui o criterio para minha conducta neste assumpto. Não duvido por um instante que para levar a cabo este plano, unico que está em harmonia com o desejo de conciliação que me anima, poderei contar com o patriotismo

e o juizo que distinguem o veneravel sacerdote que tão merecidamente foi designado pela Santa Sé para reger a Egreja de Costa Rica.

“A situação do thesouro publico, de todos conhecida, é tal que o Governo será obrigado, como medida imprescindivel, a simplificar os serviços da Administração, a reduzir o pessoal e a abster-se de todo gasto que não tenha character de indispensavel. Não se me occulta que com esta resolução haverá muitos interesses prejudicados e que o systema de economias produzirá descontentamento; mas é preciso entrar por esse caminho, não obstante seus abrolhos.

“O Governo, sem embargo, não procederá de modo caprichoso e injusto. Conservará os empregos que sejam necessarios; exigirá aos funcionarios publicos o mesmo trabalho assiduo e a mesma severa pontualidade que qualquer particular pede a seus empregados, e lhes garantirá sua posição enquanto desempenharem bem seus cargos. Ao eleger os funcionarios publicos buscará, antes que opinião politica, competencia e probidade.

“A agricultura receberá especial protecção de meu governo. Como meio o mais efficaz de dar-lhe impulso e de reanimar as forças produtoras da nação, se dedicará boa parte das entradas do thesouro á extensão, melhoramento e conservação dos caminhos. * * *

“Meu governo tratará de contribuir ao bem-estar material e moral das classes operarias. Promoverá a reunião de artesanos, que é proveitosa tanto no sentido de mutuo apoio, como no de sua disciplina. Tão prompto como os recursos do thesouro o permittam, promoverá obras publicas que lhes dêem occupação. E desde logo lhes facilitará os meios a seu alcance para que obtenham uma educação geral e technica, mediante a qual, cheguem a formar-se operarios habéis a par de cidadãos exemplares.

“Quanto a relações internacionaes o novo Governo seguirá a conducta que tradicionalmente tem observado Costa Rica; cumprir leal e estriktamente as obrigações que lhe impõem os tratados vigentes; satisfazer os deveres que o direito internacional prescreve; e especialmente, não intervir nem directa nem indirectamente nos assumptos internos dos outros Estados. Este proposito será ainda mais cuidadosamente cumprido em quanto se refere aos paizes limitrophes.

“A instrucção publica continuará recebendo do Governo a mesma attenção que até agora tem tido. * * *

“Pelo demais o meu Governo prestará attenção a toda manifestação da opinião publica e ás críticas que se lhe endereçarem, para aproveitar o conselho saudavel, si o houver, e solicitará a cooperação dos bons patriotas e homens de merito, sem reparar em sua filiação politica. Especialmente requer e espera o concurso de vossas luzes e patriotismo.

“Permitti, Senhores Deputados, que antes de terminar offereça minha congratulação muito respeitosa ao distincto costariquense que

deixa a cadeira presidencial, tendo sabido conservar a ordem e promover o adeantamento, e procurado em seu periodo de Governo—um dos mais laboriosos que registra a historia nacional—fazer a felicidade de sua patria. Ao retirar-se do posto que tanto tem illustrado com seu talento e com seus preclaros dotes de estadista, leve a satisfacção de que não lhe seguirão á vida privada nem odios pessoas nem rancores que clamem vingança, e de que, si bem sua administração poderá ser por alguns discutida, todos seus concidadãos reconhecemos que o seu foi governo patriótico e progressista.

“Ao apresentar-lhe neste acto minhas cordiaes felicitações, não só saúdo o cidadão que baixa do poder, deixando atraz de si brilhante esteira, mas tambem saúdo nelle, com toda effusão e com o paiz inteiro, a Constituição que dictaram os fundadores de nossa Republica e que nós devemos admirar como arca santa de nossas instituições.”

O NOVO GABINETE.

No. I.

ASCENSIÓN ESQUIVEL, Presidente Constitucional da Republica de Costa Rica, decreta:

ART. 1º. Organiza-se o Gabinete na forma seguinte:

Senhor LEONIDAS PACHECO, Ministro de Estado das Relações Exteriores, Justiça, Culto, Beneficencia e Instrucção Publica.

Senhor MANUEL J. JIMÉNEZ, Ministro de Governacção, Policia e Fomento.

Senhor CLETO GONZÁLEZ VÍQUEZ, Ministro de Fazenda e Commercio.

Senhor TOBIÁS ZÚNIGA, Ministro de Guerra e Marinha.

ART. 2º. O Subsecretario de Governacção fica encarregado da execução deste decreto.

Dado na Casa Presidencial, aos oito dias do mez de Maio de mil novecentos e dous.

ASCENSIÓN ESQUIVEL.

O Subsecretario de Estado no Despacho de Governacção.

PEDRO LORÍA.

NOTICIA BIOGRAPHICA DO SENHOR PRESIDENTE ESQUIVEL.

O Senhor ASCENSIÓN ESQUIVEL é um dos estadistas mais proeminentes de Costa Rica, e um dos mais distinctos da America Central.

Suas dotes elevadas de homem recto, de juizo calmo e reflexivo, notadas desde o tempo em que era estudante de direito, lhe deram ainda que muito moço ainda, um grande prestigio que foi crescendo á medida que ia sendo conhecido.

Advogado notavel, tem sido factor importante nas reformas da legis-

lação de Costa Rica, que tanto honra o paiz pela maneira prudente com que alli se têm introduzido os principios modernos, e se praticam as doutrinas que informam a verdadeira idea liberal.

Os eminentes serviços do Senhor ESQUIVEL na administração de justiça, no Ministerio de Relações Exteriores, no serviço diplomatico, ou no exercicio da Primeira Magistratura da Republica, tem reflectido invariavelmente seu character honroso, sua probidade e seu ardente patriotismo.

Candidato á Presidencia na campanha eleitoral de 1889, e chamado a exercer o Poder Executivo em qualidade de Designado, conforme a lei, renunciou aquelle posto para entrar na lucta a que o obrigava seu partido. Não obteve então a eleição, mas seu prestigio longe de declinar cresceu, como foi evidenciado pela immensa maioria que o elegeu e pelo regosijo geral com que todo o paiz tem celebrado sua elevação á Presidencia.

ESTADOS UNIDOS.

COMMERCIO COM A AMERICA LATINA.

IMPORTAÇÕES E EXPORTAÇÕES.

Na pagina 1475 apparece a ultima relação do commercio entre os Estados Unidos e os paizes latino-americanos, tomada da compilação feita pela Secção de Estatistica do Departamento do Thesouro dos Estados Unidos. A relação corresponde ao mez de Avril de 1902, com uma relação comparativa para o mez correspondente do anno anterior, assim como para os diez mezes findos em Avril de 1902, comparados com os correspondentes de 1901. Deve-se explicar que os algarismos das diversas alfandegas, mostrando as importações e exportações de um só mez não são recebidos no Departamento no Thesouro até quasi o dia 20 do mez seguinte e perde-se algum tempo necessariamente em sua compilação e impressão. Por conseguinte as estatisticas para o mez de Avril, por exemplo, não são publicadas até os primeiros dias de Junho.

MEXICO.

CULTURA DA BORRACHA.

O "India Rubber World," em sua edição de Maio, publica um artigo sobre a cultura da borracha no Mexico, no qual diz que a condição das plantações, em geral, é muito satisfactoria. Os trabalhos preliminares

nas plantações já foram feitos e um numero consideravel de arvores de borracha foram plantadas. É a opinião geral dos gerentes das companhias que a borracha pode ser cultivada com proveito si se empregam processos modernos de exploração.

Dão-se em seguida a denominação e a condição de algumas das principaes companhias que se dedicam a esta industria:

A "Imperial Plantation Company," incorporada de conformidade com as leis do Estado de Maine, Estados Unidos, com o capital de \$3,000,000. A companhia é proprietario de 3,000 geiras de terrenos situados nas margens do rio Cazonas na parte septentrional de Vera Cruz. É o proposito da companhia plantar este anno 250,000 arvores de borracha. Um espaço consideravel será consagrado ao cultivo do tabaco. A "Laguna Chica Plantation Company" começou operações em Outubro de 1901, no Estado de Vera Cruz. A companhia tem 225,000 cafeeiros em estado de produção e 50,000 abacaxis, além de 500,000 bananeiras, limoeiros e laranjeiras. Ainda não tentou o cultivo da borracha, pois aguarda o resultado das experiencias feitas para apurar os factos concernentes á sua cultura. O capital da companhia é de \$300,000. A "Trinidad Mexican Plantation Association" adquiriu 1,400 geiras de terras situadas no Estado de Vera Cruz, pela somma de \$16,200 ouro. Na plantação denominada "Ixtal," que comprehende 1,000 geiras, ha 40,000 arvores de borracha de um a cinco annos de idade, que cobrem uma area de 75 geiras. As despesas realizadas com a plantação e cuidado das arvores são calculadas em cerca de \$22,875.

Na mesma plantação, houve, no principio do corrente anno, 30,000 plantas de borracha em viveiros, e 70,000 na plantação de "La Trinidad." É a intenção da companhia começar a fazer incisões nas arvores quando tiverem seis annos de idade. A companhia espera obter um bom rendimento da venda de sementes de borracha. A "Isthmus Plantation Association" escolheu um local no Estado de Oaxaca e começou a derrubar o matto em Fevereiro de 1900 e em 28 de Fevereiro de 1902, tinha 1,271 geiras de terreno preparado.

A primeira plantação de cafeeiros foi realizada em Agosto de 1900, e hoje tem a companhia 191,335 cafeeiros, protegidos por meio de arvores silvestres e arvores de borracha. Da primeira plantação de arvores de borracha, realizada em Junho de 1900, resulta 4,242 arvores de 8 a 15 pés de altura, e da plantação feita em 1901, 41,678 arvores, ou seja um total de 45,920 arvores. Os viveiros contêm 315,000 plantinhas de café e 40,000 de borracha. Foram plantadas 1,200 plantas de cacao e a produção de milho o anno passado foi no valor de \$7,149.

A "Juniapa Plantation Company," em seu relatorio annual de 1901, diz que 125 geiras de terrenos foram limpos para a plantação de café

e 60,000 cafeeiros foram plantados. Tambem tem esta companhia um terreno de 100 geiras preparado para a plantaço de arvores de borra-cha e de café. Os viveiros, no principio do anno de 1902, continham 200,000 cafeeiros, 500,000 plantas de borraça, 15,000 plantas de cacao, e 10,000 laranjeiras. A companhia tenciona estabelecer outros viveiros no curso do anno.

Ha muitas outras companhias na Republica que se dedicam á cultura da borraça, tendo plantaço de 500 a 4,000 geiras, em diferentes estados de desenvolvimento.

PARAGUAY.

MENSAGEM DO VICE-PRESIDENTE.

O Vice-Presidente da Republica do Paraguay, em exercicio do Poder Executivo, enviou ao Congresso Nacional no dia 1º de Abril de 1902, a habitual mensagem, na qual declara que a paz reina em todo o paiz. As condições para o desenvolvimento da actividade industrial e commercial são muito excellentes, mas a situação economica do paiz não é tão favoravel como se pode desejar. Nutre, porem, a esperanza de que entrará o paiz em um periodo de franca reacção que influirá favoravelmente na ordem economica e nas finanças nacionaes.

A producção nacional, especialmente a agricola, desenvolve-se com lentidão, devido á falta de capitaes.

A instrucção publica tem encontrado da parte do Governo a mais franca animação e não tem sido pequenos os auxilios que lhe tem sido dispensados.

Referindo-se ás relações exteriores da nação, diz o Presidente que o paiz mantem cordial e franca amizade com todas as nações civilizadas. A unica differença que tem é com a Republica de Bolivia, e abriga a esperanza de que aquelle Governo e o seu chegarão a uma solução satisfactoria em sua questão de limites.

A situação no interior do paiz é muito satisfactoria e todos os habitantes dedicam-se a seus trabalhos ordinarios. As colheitas são abundantes. A industria pecuaria segue em augmento, tendo desaparecido por completo a febre aphtosa que o anno anterior se desenvolveu com caracter benigno.

A industria em geral tem desenvolvido consideravelmente no paiz. Segundo as estatisticas de que se pode dispor foram estabelecidas na capital da Republica durante o anno, 160 casas commerciaes e industriaes. O commercio do paiz é representado por \$67,242,437; as industrias, por \$139,047,095; gado vaccum e lanigero, 2,953,757 cabeças; agricultura, 112,650 hectares cultivados com uma producção de

1,381,126,421 kilogrammas de milho, mandioca, feijão, amendoim, canna de assucar, algodão, arroz, café, tabaco, etc.

O rendimento da Estrada de Ferro Central durante o anno foi de \$1,838,600.96. O movimento dos correios foi 2,099,640 peças e telegraphos de 97,044 telegrammas.

O Presidente chama a attenção para o facto de que o Paraguay é o unico Estado Americano que não tem representação diplomatica nos Estados Unidos da America do Norte, e em vista de que os capitães daquelle paiz principiam a buscar collocação no Paraguay, e com o proposito de estimular quanto for possivel o desenvolvimento das relações commerciaes entre as duas nações, o Governo resolveu estabelecer uma Legação em Washington, nomeando como seu representante, o Senhor ALEJANDRO AUDIVERT. Tambem o Paraguay nomeou Senhor JUAN COGORNO como Enviado Extraordinario e Ministro Plenipotenciario junto aos Governos do Chile, Bolivia e o Peru.

A renda da Republica em 1901 foi de \$11,412,746.98, comparada com \$9,856,063.02 em 1900, e foi arrecadada sob os seguintes titulos:

Alfandegas	\$9, 930, 348. 41
Impostos internos	1, 220, 246. 97
Correios e telegraphos	181, 128. 85
Registro de propriedades.....	10, 736. 40
Hypothecas.....	4, 980. 10
Impostos directos	65, 306. 25
	<hr/>
	11, 412, 746. 98

O commercio total para o anno foi por valor de \$5,532,964.42, dos quaes \$3,003,657.83 representam as importações e \$2,529,306 as exportações.

A divida externa em 31 de Dezembro de 1901, montou a \$4,946,-333.96, e a divida interna a \$827,300.

BIBLIOGRAPHIA.

Nesta secção da Boletim Mensal se trará dos livros e folhetos enviados á Secretaria Internacional das Republicas Americanas que se referem a assumptos de interesse aos paizes da União Internacional das Republicas Americanas.

O "Monthly Summary of Commerce and Finance of the United States," correspondente ao mez de Abril de 1902, faz um exame cuidadoso do commercio da Africa em 1901. As condições physicas, politicas e commerciaes do continente africano são tratadas, fazendo-se referencia especial ás oppportunidades que se offerecem aos diversos paizes que enviam productos para a Africa, para augmentar seu commercio com este paiz. Em fins de Maio proximo findo, embarcaram-se

do porto de Pensacola, com destino a Natal, 630 cabeças de gado proveniente do Estado de Texas. Este carregamento foi composto de bois e vitellas de raças finas e puras e de não mais de tres annos de idade, e lhe seguirão em breve outros carregamentos fazendo um total de 10,000 cabeças. O consul da Republica Argentina em Cape Town já chamou a attenção do seu Governo para as oppportunidades que se offerecem nesta parte do mundo para a venda de carnes geladas.

O Boletim de Março do Instituto de Febre Amarella (dependente do Serviço dos Hospitaes da Marinha dos Estados Unidos) reúne os nos. 1, 2, 3, 4, 5, 6 e 7 do Boletim do Instituto, e abrange as seguintes materias: Organização e progresso do Instituto; Por que appareceu a febre amarella em Boston em tempos passados, e não em Nova Orleans? A febre amarella na Europa, uma revista historica geral; A febre amarella em Portugal; A febre amarella na Hespanha; Uma nota sobre mosquitos em bagagens; A febra amarella, suas occurrencias e os regulamentos de quarentena no porto de Marselha, França. Um resumo das actas das reuniões do conselho Executivo que se realizaram no periodo decorrido de 11 de Outubro de 1901 até 26 de Fevereiro de 1902, mostra que scientistas e physicos de todas as partes do mundo foram convidados para desempenhar o cargo de membros correspondentes do Instituto e que memorias escriptas por peritos sobre as diversas phases da molestia em questão serão publicadas de tempo em tempo sob os auspícios do Instituto.

O Departamento da Agricultura dos Estados Unidos publicou como Boletim No. 41 da Divisão da Industria Animal. um folheto intitulado "Mexico as a market for pure bred beef cattle" (Mexico como um mercado para gado vaccum de raça pura). O folheto consigna o numero de gado (vaccum, lanigero, suino e cavallar) que os Estados Unidos exportaram para o Mexico no periodo de 1893-1900, e dá instrucções para a introdução na Republica do Mexico de gado norteamericano. Tambem faz-se notar que a modificação que se fez ultimamente na lei de tarifa do Mexico, em virtude da qual gado de raça pura entra no Mexico livre de direitos até 30 de junho de 1902, sem duvida continuará em vigor, assim favorecendo nossa exportação. Os relatorios dos agentes consulares dos Estados Unidos em Mexico são-compreendidos no folheto e proporcionam informações completas sobre o assumpto.

O numero do "Modern Mexico" correspondente ao mez de Maio, contem um artigo interessante sobre a industria do gado na Republica do Mexico. Diz o artigo que, ainda que é impossivel consignar o numero exacto de gado vaccum e gado suino no Mexico, se pode dizer que Chihuahua tem, em numeros redondos, 450,000 cabeças de gado;

Sonora, 240,000; Nuevo Leon, 145,000 cabeças de gado vaccum e 50,000 de gado suino, e Tamaulipas, 250,000 cabeças de gado. De 60,000 a 90,000 cabeças de gado são enviadas annualmente para os Estados Unidos por via de El Paso, Tex., e cerca de 32,000 cabeças, por via de Nogales. O consumo nacional de productos animaes representa um valor de \$46,000,000 por anno, moeda mexicana. O consumo annual de carne de vacca representa um valor de \$31,000,000; o de carne de porco, um valor de \$10,000,000, e o de carneiros e cabras, \$5,000,000. É provavel que 85 por cento de todo o gado da Republica, excluindo-se o dos Estados de Chihuahua e Sonora, encontra-se dentro do radio de 225 milhas da capital da Republica. Os principaes mercados para os gados da Republica são o Districto Federal, Yucatan, Campeche e Cuba.

Os nos. 1º e 2º do “Boletim Official da Liga Naval Brasileira” foram recebidos na Bibliotheca desta Secretaria. Este é o orgão official da Liga Naval Brasileira que foi ultimamente organizada no Rio de Janeiro com o objecto de estudar as causas que têm impedido maior desenvolvimento da marinha mercante e das industrias maritimas do Brazil.

JUIN 1902.

No. 6.

COMMISSION POUR L'ETUDE DE LA PRODUCTION, DE LA DISTRIBUTION ET DE LA CONSOMMA- TION DU CAFÉ.

Afin d'éviter les erreurs possibles dans les dates fixées pour la réunion des différentes conférences décidées par la Seconde Conférence Internationale des Pays Américains dans sa réunion tenue à Mexico le 29 janvier 1902, le BULLETIN MENSUEL fait connaître que la Commission pour l'étude de la production, de la distribution et de la consommation du café, ainsi que la Convention sanitaire internationale ont été convoquées comme il suit:

La Commission pour l'étude de la production, de la distribution et de la consommation du café se réunira à New York le 1^{er} octobre 1902. La Convention sanitaire internationale se réunira le 15 octobre 1902 à Washington.

Comme la décision prise au sujet du Congrès douanier exige l'approbation des gouvernements adhérents, la date de ce Congrès a dû être remise.

Dans le rapport que Señor Don ANTONIO LAZO ARRIAGA, délégué du Guatemala à la Seconde Conférence Internationale Américaine, a soumis à son Gouvernement, en date du 15 mars de cette année, la question du café est discutée de la manière suivante:

A la réunion du 30 décembre 1901 notre délégation a soumis le projet suivant:

“1. Que dans le délai d'un an à partir de la clôture des séances de la Seconde Conférence Internationale Américaine, une commission se réunira dans la ville de New York; que cette commission sera com-

posée d'un ou de plusieurs délégués nommés par chaque gouvernement qui désirerait y être représenté et que ces délégués devront posséder des connaissances techniques ou pratiques au sujet de la production, de la distribution et de la consommation du café.

“2. Le Conseil d'Administration du Bureau International des Républiques Américaines fixera la date à laquelle devra se réunir cette commission qui s'organisera, ainsi qu'elle le jugera convenable, avec l'aide du Bureau mentionné ci-dessus. Elle aura pour but l'étude des causes qui produisent actuellement la crise que traverse cette grande industrie et proposera les moyens pratiques de l'éviter ou de la diminuer.”

A cette date, j'ai fait quelques remarques dont voici le résumé qui a paru dans le procès-verbal de ce jour:

“Son Excellence M. LAZO ARRIAGA, délégué du Guatemala, a dit qu'il désirait attirer l'attention de la Conférence sur un sujet d'une importance vitale pour tous les pays du continent ou par la plupart d'entre eux: à savoir, la crise que traverse actuellement l'industrie de la production du café. Quinze de ces pays produisent ce grain précieux et les quatre autres pays le consomment. Donc, tous souffrent considérablement dans leurs relations commerciales, en conséquence de cette crise.

“Cette crise présente, non seulement un problème commercial, mais un problème économique, politique et social. La baisse dans le prix du café a diminué considérablement les revenus de quelques-uns des pays américains, et l'on pourrait peut-être attribuer à cette perte, quelques-unes des révolutions qui affligent plusieurs de ces pays. On en peut trouver l'explication dans la pauvreté et la misère qui y existent à cause de la crise terrible que traverse l'industrie caféière.

“Trouver un remède pour ces grands maux est une tâche digne de cette conférence et celui qui parle soumet donc, comme conclusion, à l'approbation de la Conférence une proposition qui pourrait contribuer à l'accomplissement du résultat désiré.”

J'ai ajouté de plus, qu'à mon avis, il était possible de trouver des moyens pratiques pour éviter, ou du moins, diminuer les mauvais effets causés par la situation anormale que traverse l'industrie caféière; mais, si la réunion des experts proposée par le délégué du Guatemala ne donne qu'un résultat négatif, et si ces experts déclarent, après avoir examiné sérieusement ce sujet, qu'il n'y a aucun remède possible, cela même aurait un avantage qui n'est pas à mépriser. En effet, les producteurs de café, étant découragés par l'avenir incertain de cette industrie, au lieu de continuer à faire des sacrifices inutiles pour maintenir leurs plantations, pourraient utiliser leurs capitaux et leurs efforts au développement d'autres industries, procurant ainsi une variété dans les produits nationaux et assurant en même temps un plus grand développement dans la richesse publique.

La Conférence a adopté le projet tel qu'il a été proposé.

Sous le titre de “Café: son histoire, sa culture, sa préparation, ses

espèces, sa production, son exportation, son importation, sa consommation," etc., le Bureau International des Républiques Américaines a préparé un rapport étendu qui doit être soumis à l'examen de cette Commission aussitôt qu'elle se sera réunie. Les délégués y trouveront des renseignements utiles pour accomplir d'une manière satisfaisante la tâche qui leur a été confiée.

Afin que le but de cet ouvrage soit connu à l'avance, on a jugé bon de publier à cette époque la table des matières dont il traite, ainsi que la préface. Voici la table des matières:

Préface—Remarques.

Histoire du café—L'histoire naturelle du café—Espèces de café.

Pays et endroits qui produisent le café:^a

Amérique:

Amérique du Nord: Mexique.

Amérique Centrale: Costa Rica, Salvador, Guatémala, Honduras, Honduras Britannique, Nicaragua.

Amérique du Sud: Bolivie, Brésil, Colombie, Equateur, Paraguay, Pérou, Venezuela.

Indes Occidentales: Barbadoes, Cuba, Dominique, Guadeloupe, Haïti, Jamaïque, Marie Galante, Martinique, Porto Rico, République Dominicaine.

Guayane: Anglaise (Demerara), Française (Cayenne), Hollandaise (Surinam).

Asie: Arabie (Moka), Burmah, Iles Philippines (Mourlu), Inde Anglaise.

Afrique: Bourbon (île de la Réunion), Libérie.

Océanie: Colonies Indiennes Hollandaises, Bornéo, Java, Sumatra.

Polynésie: Fiji, Hawaï, Nouvelle Guinée, Samoa.

Australasie: Australie.

Production du café dans le monde.

Consommation du café dans le monde.

Consommation générale du café par pays.

Consommation générale du café par tête.

Consommation de café en Allemagne.

Consommation de café en France.

Consommation de café en Autriche-Hongrie.

Consommation de café en Italie.

Consommation de café en Russie.

Etats-Unis:

Importation de café.

Consommation de café.

Exportation de café.

Bourse de café à New York.

Grande Bretagne: Importation, consommation et exportation du café.

Droits d'importation sur le café dans les principaux pays du monde.

Droits d'exportation sur le café dans les pays de production.

Sol et climat convenables à la culture du café.

Culture du café.

Récolte du café.

Préparation améliorée du café.

Maladies du café et moyens de les combattre.

^a Il a été impossible d'obtenir des données exactes sur les pays produisant le café qui ne sont pas mentionnés dans cette liste.

Préservation du café.

Préparation du café pour l'usage domestique.

Composition chimique du café.

Mélange des cafés.

Modifications apportées dans l'emploi du café comme boisson.

Effets du café sur le système.

La ligue des pays produisant le café (par J. A. OLAVARIA).

Café aux Etats-Unis (par F. de ASSIS BRASIL).

Traité sur le café (par J. B. CALVO).

Recommandations aux délégués au Congrès caféier (par A. LAZO ARRIAGA).

Bibliographie.

Voici la préface:

“Le café étant l'un des principaux articles d'exportation de la plupart des pays de l'Amérique Latine, à l'exception de la République Argentine, du Chili et de l'Uruguay, qui n'en produisent pas, et étant donné que, conformément à une décision de la Seconde Conférence Internationale Américaine, le Congrès du café se réunira à New York le 15 octobre prochain, afin de discuter les moyens les plus efficaces pour protéger l'industrie caféière de l'Hémisphère occidentale, ainsi que pour proposer l'adoption de certaines mesures qui, à son avis, doivent donner immédiatement des résultats pratiques; en vue de ce projet et pour se conformer aux instructions du Conseil Directif de l'Union Internationale des Républiques Américaines dans sa séance du 19 mars dernier, le Bureau International des Républiques Américaines a réuni dans cette brochure toutes les données qu'il lui a été possible de se procurer au sujet du café et qu'il a l'honneur de les présenter audit congrès, dans l'espoir qu'elles puissent être utiles comme source de renseignements dans la discussion d'un sujet si important et si transcendantal, car le café est devenu un des principaux articles de commerce, et est tombé complètement entre les mains des spéculateurs, ce qui l'expose à de grandes fluctuations de prix et peut causer aux producteurs de café dans le cours d'une année, de grandes pertes pécuniaires sans compter les résultats qui peuvent se produire par suite de cette spéculation. D'autre part la ruine des plantations caféières d'un pays peut faire hausser les prix et la culture du café dans de nouvelles régions peut les faire baisser aussi bien que si la production de cet article continuait à dépasser les besoins du marché, cette surabondance donnerait certainement pour résultat encore une plus grande baisse dans les prix de cet article; et on ne doit pas oublier que la zone qui convient à la culture du café est très étendue, étant comprise entre les lignes isothermes de 25° latitude nord et 30° de latitude sud.

“La plupart des pays civilisés ont adopté pour règle celle de réunir les forces productives de tous les articles consommés en grandes quantités, afin d'augmenter la production et éviter les fluctuations exagérées dans les prix. En suivant ce précédent une combinaison habilement arrangée qui prendrait en considération immédiate les points principaux d'importance et établirait des données pratiques pour dimi-

nuer l'intérêt du capital dans l'Amérique Latine en général et spécialement du capital destiné aux produits agricoles, tels que le café, atteindrait un résultat favorable pour le producteur, parce que le coût de production serait réduit et rendrait plus facile l'accumulation du travail, donnant de plus grands bénéfices, accroissant de beaucoup le capital, et par conséquent augmentant les forces productives à un degré vraiment rémunérateur.

“Avec cette brochure et avec les considérations qui précèdent, le Bureau International des Républiques Américaines contribue pour sa part aux labeurs difficiles et compliqués du Congrès, qui a pour but de protéger et d'améliorer l'industrie caféière dans l'Amérique.

“WASHINGTON, D. C., *Juin 1902.*”

PRODUCTION GÉNÉRALE DU CAFÉ.

D'après les meilleures statistiques, la production générale du café dans le monde pour l'année 1901 a été de 15,460,000 sacs de 132 livres chacun. Sur cette production énorme le Brésil seul figure pour 11,500,000 sacs en chiffres ronds. Il ressort donc que les plantations du Brésil fournissent à présent les quatre-cinquièmes environ de toute la récolte et que la production augmente d'année en année.

En 1901 les Etats de l'Amérique du Centre, le Mexique, les Républiques sud-américaines du Venezuela, de la Colombie, de l'Equateur et du Pérou ont envoyé sur le marché 2,200,000 sacs. La République d'Haïti en a aussi envoyé une grande quantité, le produit de l'année dernière s'étant élevé à 450,000 sacs. Le café d'Haïti est surtout très apprécié en France où l'on reçoit les deux-tiers de la totalité exportée.

Porto Rico et la Jamaïque ont fourni 200,000 sacs. Voici les noms des autres pays producteurs, ainsi que les quantités exportées: les Indes Orientales Hollandaises, 480,000 sacs; l'Inde Anglaise, Ceylan et les Iles Philippines, 315,000; l'Afrique et Mocha, 225,000, et Padang et les Celèbes 90,000.

CONSOMMATION DU CAFÉ AUX ETATS-UNIS.

La consommation du café aux Etats-Unis augmente constamment, ainsi que le démontre le tableau suivant compilé par le Ministère des Finances des Etats-Unis. Les chiffres montrent les importations annuelles depuis 1890 jusqu'en 1902.

Année fiscale.	Importations de café.	Année fiscale.	Importations de café.

TRAITÉ GÉNÉRAL D'ARBITRAGE CONCLU ENTRE LA BOLIVIE ET LE PÉROU.

Le Président de la République de la Bolivie et le Président de la République du Pérou étant désireux de consolider les liens qui existent entre les deux nations et d'établir l'arbitrage, en ce qui concerne les relations des deux Républiques, ont nommé à cet effet comme Plénipotentiaires:

Son Excellence le Président de la République de Bolivie, le Docteur Don FÉDÉRICO DIEZ DE MEDINA, son Ministre des Affaires Étrangères; et Son Excellence le Président de la République du Pérou, le Docteur Don FELIPE DE OSMA, son Envoy Extraordinaire, lesquels ont convenu de ce qui suit:

TRAITÉ D'ARBITRAGE.

ARTICLE I.

Les hautes parties contractantes s'engagent à soumettre à l'arbitrage toutes les questions présentement non décidées et tous les différends qui pourraient s'élever pendant la durée du présent traité quelles que soient leur nature et leurs causes, et toutefois que ce n'eût pas été possible de les régler par des négociations directes.

ARTICLE II.

Dans chaque cas qui se présentera, les parties contractantes devront conclure une convention spéciale afin de déterminer le sujet en litige, établir les points à résoudre, l'étendue des pouvoirs de l'arbitre et la procédure à suivre.

ARTICLE III.

Dans le cas où les hautes parties ne tomberaient pas d'accord au sujet des différents points contenus dans l'article ci-dessus, l'arbitre sera autorisé à déterminer, en tenant compte des prétensions des deux parties, les points de fait et de droit qui devront être décidés pour le règlement du différend et à établir le mode de procédure.

ARTICLE IV.

Les hautes parties s'accordent à reconnaître que l'arbitre sera le tribunal permanent d'arbitrage qui doit être établi selon les décisions qui puissent être adoptées par la Seconde Conférence Internationale des Pays de l'Amérique qui siège en ce moment à la ville de Mexico.

ARTICLE V.

Pour ces cas-ci : (a) si le tribunal, dont il est question dans l'article précédent, ne serait pas établi, et (b) s'il fut nécessaire d'avoir recours

à l'arbitrage avant l'établissement dudit tribunal, les hautes parties s'engagent à désigner comme arbitre, le Gouvernement de la République Argentine, celui de l'Espagne, et celui des Etats-Unis du Mexique, pour qu'ils exercent respectivement la fonction, l'un en défaut de l'autre dans l'ordre qu'ils sont désignés ci-dessus.

ARTICLE VI.

Si, pendant la durée du présent traité et dans les éventualités dont il est question dans l'article précédent, il survenait des cas différents d'arbitrage, leur règlement devra être établi successivement par les gouvernements mentionnés dans l'ordre déjà indiqué.

ARTICLE VII.

L'arbitre est aussi autorisé: 1°, à déterminer la régularité de sa nomination, la validité de l'engagement et de son interprétation; 2°, à adopter les démarches nécessaires, et à régler toutes les difficultés qui pourraient survenir dans le cours des débats. Quant aux questions d'un caractère technique ou scientifique qui pourraient s'y présenter, on aura recours précisément à l'opinion de la Société Royale de Géographie de Londres, ou à celle de l'Institut Géodésique International de Berlin, et pour déterminer l'époque de ses fonctions.

ARTICLE VIII.

L'arbitre devra rendre son jugement en se conformant strictement aux principes du Droit International et dans les questions de frontières, il se conformera au principe américain de "uti possidetis" de 1810, pourvu que, dans la convention dont fait mention l'article 2, on n'ait pas établi l'application de règles spéciales ou que l'arbitre soit autorisé à rendre son jugement en qualité d'arbitre amical.

ARTICLE IX.

La sentence devra décider finalement chaque point en litige, et mentionner sur quoi elle se base. Elle devra être faite en double expédition et transmise à chacune des parties par l'entremise de leurs représentants auprès de l'arbitre.

ARTICLE X.

La sentence légalement prononcée décidera, dans les limites de sa portée, le litige entre les parties.

ARTICLE XI.

L'arbitre devra déterminer dans sa sentence le délai dans lequel elle devra être exécutée.

ARTICLE XII.

Le jugement est sans appel et les Nations signataires devront s'y conformer sur l'honneur.

Néanmoins dans les cas suivants le recours de révision sera admis devant l'arbitre qui aura prononcé la sentence, pourvu que la demande en soit faite avant l'expiration de l'époque fixée pour son exécution; savoir:

1. Si la sentence a été rendue à la suite d'un document faux ou frauduleux.

2. Si la sentence, en tout ou en partie, est le résultat d'une erreur de fait provenant de la procédure ou de documents de la cause.

ARTICLE XIII.

Le recours de révision ne pourra pas avoir lieu, dans aucun cas, après six mois de la notification de la sentence.

ARTICLE XIV.

Les hautes parties nommeront leurs représentants dans le litige, mettront à la disposition de l'arbitre tous les moyens d'informations qui sont en leur pouvoir et devront payer leurs propres dépenses ainsi que la moitié des frais généraux de l'arbitrage.

ARTICLE XV.

Le même arbitre qui aura prononcé le jugement devra décider les questions qui pourraient survenir dans son exécution.

ARTICLE XVI.

Le présent Traité continuera en vigueur pendant 10 ans à compter de la date de l'échange des ratifications. S'il n'est pas dénoncé six mois avant la date de son expiration, il subsistera pendant une autre période de dix ans et ainsi successivement.

ARTICLE XVII.

Les ratifications du présent Traité seront échangées à La Paz ou à Lima dans l'espace d'une année à partir de la date ci-dessous.

En foi de quoi les soussignés signent et apposent leurs cachets au présent Traité, fait en double exemplaire, à la ville de La Paz, le vingt et un novembre de l'année 1901.

FEDERICO DIEZ DE MEDINA. [L. s.]

FELIPE DE OSMA. [L. s.]

RÉPUBLIQUE ARGENTINE.

CONDITIONS GÉNÉRALES.

Parmi les documents importants présentés à l'examen de la Seconde Conférence Internationale des Pays Américains, tenue à Mexico, le rapport du délégué de la République Argentine a été d'un intérêt tout spécial. Ce rapport (Informe que la Delagación de la República Argentina presenta á la Segunda Conferencia Pan-Americana) que le Bureau International des Républiques Américaines vient de recevoir fournit les renseignements suivants au sujet des conditions générales qui existent dans la République.

Sous le rapport des règlements sanitaires, on cite la ville de Buenos Ayres en premier lieu parmi les villes de ce pays. Les travaux pour les eaux et les égouts ont été faits par les ingénieurs les plus habiles et ils ont été modifiés et augmentés de manière à faire face aux exigences croissantes de la ville. Le système des eaux consiste en deux tunnels, l'un sous fluvial et l'autre souterrain, ayant chacun 5,700 mètres de longueur, munis de deux pompes capables d'élever 172,000 mètres cubes d'eau à une hauteur de 15 mètres en 24 heures. Le réservoir de distribution est pourvu de pompes foulantes ayant trois cours distincts de 12 réservoirs placés les uns au-dessus des autres à une hauteur de 12, 17 et 22 mètres, respectivement. La consommation annuelle dépasse 36,000,000 de kilolitres, ou une moyenne journalière de 123 mètres cubes par tête. Le système des égouts que l'on a adopté est connu sous le nom de "circulant" ou dynamique, et la dépense de l'installation des égouts jusqu'à la fin de 1899 a été de \$34,000,000 or environ. D'après un état présentant la proportion des décès dans les principales villes du monde, la proportion pour la ville de Buenos Ayres est de 17 par 1,000 habitants, contre 17.4 à Hambourg; 18.4 à New York et Genève; 19.2 à Londres; 20.1 à Paris; 20.7 à Vienne, et ainsi de suite en augmentant jusqu'à 31.5 à Nuremberg. L'hygiène publique est aussi l'objet des soins les plus constants de la part de la municipalité et du gouvernement des villes de Rosario, de La Plata, de Bahia et dans les autres ports de la République Argentine. La ville de Rosario spécialement possède un système aussi complet que celui de la capitale.

La construction des chemins de fer dans la République Argentine a été signalée en 1857 par l'ouverture et la mise en exploitation de la première ligne sur une longueur totale de 10 kilomètres. En 1867, cette ligne avait 572 kilomètres de longueur; en 1875, 1,384; en 1880, 2,313; en 1885, 4,450, et en 1890, 9,254. Depuis lors la construction des chemins de fer a augmenté rapidement. En 1891, on constatait dans tout le pays 11,700 kilomètres de chemins de fer en exploita-

tion; en 1895, 14,222 kilomètres, et en 1901, 17,062. Sur ce nombre 2,000 kilomètres appartiennent à l'Etat et le reste aux compagnies particulières. Le capital versé s'élève à \$553,000,000 or environ.

Les communications maritimes entre la République Argentine et les différents ports des Etats-Unis et de l'Europe sont assurées premièrement par les lignes des compagnies *North German Lloyd* et *Hamburg-American*, et des communications presque journalières entre Montévidéo et les ports du Brésil et de l'Europe sont assurées par les compagnies ci-dessous: La *Navigazione Generale Italiana*, ligne de 4 paquebots à vapeur de 5,000 à 6,000 tonnes, avec départs tous les quinze jours; les *Transports Maritimes à Vapeur*, possédant 9 paquebots de 2,000 à 4,300 tonnes, partant tous les dix jours; les *Messageries Maritimes*, ayant 6 vapeurs de 5,550 à 6,500 tonnes, avec départs toutes les semaines; les *Vapores Transatlánticos Españoles*, ayant 6 vapeurs de 8,000 à 9,000 tonnes, partant tous les mois; la *Hamburgische und Sud Amerika*, qui possède 6 vapeurs de 8,000 à 9,000 tonnes, avec départs hebdomadaires; la *Veloce*, qui possède 13 vapeurs de 1,000 à 4,900 tonnes, avec départs tous les dix jours; la *Royal Mail Steam Packet*, qui a 10 vapeurs de 3,140 à 6,000 tonnes, avec départs bi mensuels, et la *Compañía Transatlántica Española*, ayant 6 vapeurs de 3,100 à 5,300 tonnes. Le service maritime entre la République Argentine et les ports des Etats-Unis est assuré par plusieurs compagnies de navigation, à savoir; les lignes Lamport & Holt, Prince, Norton et autres de moins d'importance.

Le port de Buenos Ayres se compose de deux bassins, l'un d'une surface de 154,000 mètres et l'autre d'une surface de 112,600 mètres carrés. Chaque bassin est relié aux docks qui sont au nombre de 4 ayant une surface totale de 66 hectares. Il y a aussi dans le port deux bassins de radoub, dont l'un a 150 mètres de longueur et l'autre 180. La superficie totale des quais est de 9,790 mètres. On y voit 21 entrepôts ayant une façade de 2,466 mètres et une capacité de 566,000 mètres cubes. Le service des docks et des quais comprend 133 grues hydrauliques, les unes fixées les autres mobiles, mues par la vapeur et ayant une force de 1,500, 5,000, 10,000 et 30,000 kilos; 36 ascenseurs; 50 cabestans; 14 pompes à incendie; 5 ponts-levis; des écluses; des grues flottantes; une ligne de chemin de fer de 32 kilomètres, et 2 usines pour l'éclairage électrique. Le coût des améliorations faites au port s'est élevé à \$35,624,000 or. On vient aussi de faire de grandes améliorations au port de La Plata pour une somme s'élevant à \$24,000,000 et Bahia Blanca a des améliorations importantes en adjudication. L'importance des grands ports intérieurs comme Rosario et Colastiné se trouve restreinte à cause du peu de profondeur des cours d'eau sur lesquels ils sont situés.

Un rapport sur les conditions des banques dans la capitale de la

République Argentine fait voir que ces établissements possèdent de grandes facilités pour faire face aux besoins des transactions commerciales à l'intérieur et à l'étranger. La banque la plus importante est la Banco de la Nación, fondée le 16 octobre 1891, ayant un capital de 50,000,000 pesos, en monnaie nationale. Cette banque a huit succursales dans les différentes parties du pays.

Ce même rapport contient aussi le résumé ci-dessous qui est très intéressant au point de vue de l'agriculture et de l'élevage dans la République.

La République Argentine est un pays essentiellement consacré à l'agriculture et à l'élevage. Ses plaines immenses, la fertilité de son sol, son climat tempéré propres à la culture des céréales et à l'élevage des bestiaux offrent des conditions exceptionnellement avantageuses au colon et à l'agriculteur et mettent cette contrée au rang des pays qui exportent de grandes quantités de grains et de viande. Les récoltes de blé et de maïs de la République Argentine représentent une production de 42.33 boisseaux par tête, contre 42 aux Etats-Unis et au Danemark, 30 au Canada, 23 en Suède. 20 en Russie. 19 en France et 8 en Angleterre.

En 1872 la superficie des terrains en culture n'atteignait que 130,000 hectares environ; en 1888 elle était de 815,438 hectares et en 1895 de 2,040,638 hectares; en 1889 la superficie du terrain ensemencé en blé était de 3,200,000 hectares d'un rendement de 2,697,417 tonnes de blé.

Le maïs vient en second lien dans la production des céréales de la République Argentine. En 1899 il y avait en culture 1,000,000 d'hectares environ qui, au taux de 18 fanegas, ou 100 kilos chacun, ont produit 1,800,000 tonnes métriques de blé. D'après le recensement agricole de 1833 la superficie des terrains cultivés était de 2,422,995 hectares; et en 1895 de 4,895,000. En 1899 la superficie consacrée à la culture du blé, du maïs, du lin, des arbres fruitiers, de la canne à sucre et de la vigne a atteint un total de 7,000,000 d'hectares, ainsi que le démontre le tableau suivant, qui donne aussi la valeur des différents produits récoltés pendant la même année:

Produits.	Hectares.	Valeur, or.
Blé.....	3,400,000	\$95,000,000
Maïs.....	1,400,000	23,000,000
Lin.....	700,000	27,000,000
Autres grains.....	80,000	2,800,000
Luzerne.....	950,000	90,000,000
Arachides.....	18,000	1,260,000
Cane à sucre.....	50,000	4,750,000
Vignobles.....	35,000	9,500,000
Tabac.....	15,000	3,900,000
Autres cultures.....	350,000	17,500,000
Total.....	6,938,000	274,710,000

Voici, en tonnes métriques, le tableau des principaux produits agricoles depuis 1894:

Années.	Blé.	Maïs.	Lin.
1894.....	1,608,000	54,876	104,435
1895.....	1,010,000	722,318	276,443
1896.....	523,000	1,570,517	229,675
1897.....	101,845	374,942	152,477
1898.....	645,161	717,105	158,904
1899.....	1,713,429	1,116,276	217,713
1900.....	2,042,167	740,685	201,093

La valeur de tous les produits exportés a augmenté pendant les dernières années d'une manière remarquable, à l'exception de l'année 1897, pendant laquelle le commerce de ces articles a diminué par suite des causes naturelles, telles que la sécheresse, l'invasion des sauterelles, etc.

En 1896 les exportations ont atteint le chiffre de \$41,406,438 or. En 1897 elles n'ont atteint que le chiffre de \$23,336,369 or, accusant ainsi une grande diminution, mais elles se sont élevées de nouveau en 1899, à \$65,155,995 or.

La République Argentine tient à sa disposition pour déplacer le volume immense de ses récoltes toutes les facilités que peuvent offrir les machines agricoles les plus perfectionnées et elle augmente chaque année le capital placé dans les instruments agricoles en ajoutant à son stock immense un nombre considérable de faucheuses, de herses, de charrues à vapeur, etc.

Afin de donner une idée de l'importance des machines agricoles importées en franchise de droits, il suffit de montrer que la valeur desdites machines en 1893 a atteint le chiffre de \$3,707,130 or; en 1896, celui de \$1,202,570 or; en 1897, celui de \$1,072,128 or, et enfin en 1899, celui de \$2,227,332 or. Presque toutes ces machines et tous les outils viennent des Etats-Unis d'Amérique et constituent l'un des articles les plus importants expédiés de ce pays sur les marchés de la République Argentine.

Malgré le développement considérable atteint par l'agriculture, l'élevage a toujours été et continue à être l'industrie nationale.

En 1899 les exportations provenant de cette industrie ont atteint une valeur totale de \$115,546,906 or, ou 625 pour mille de la valeur totale de toutes les exportations de cette année. D'après le recensement de 1895, qui présente à ce sujet des chiffres un peu douteux, la République Argentine avait à cette époque 21,701,526 têtes de bêtes à cornes, 4,446,859 chevaux, 74,379,562 moutons, 562,766 porcs, 483,369 mulets et 2,748,860 chèvres, c'est-à-dire un total de 104,322,942 têtes de toutes espèces de bétail, d'une valeur de \$1,136,780,411 en monnaie du pays.

L'accroissement rapide des moutons dans les territoires méridionaux de la République en a fait monter le nombre à plus de 90 millions, et

l'occupation des nouvelles terres par les bêtes à cornes en a augmenté considérablement le nombre et la qualité, grâce aux efforts constants des *estanceiros* (agriculteurs ou éleveurs) pour améliorer les races.

L'introduction dans le pays d'animaux pur sang destinés à la reproduction a atteint depuis peu un chiffre assez élevé. Pendant la période de 1896 à 1900 seulement les éleveurs de la République Argentine ont importé 6,231 têtes de bêtes à cornes, 235,734 moutons et 1,227 chevaux; tous ces animaux proviennent des établissements des premiers éleveurs de l'Europe et des Etats-Unis d'Amérique.

Le commerce d'exportation de bétail sur pied est d'une importance considérable, quoiqu'il ne soit pas si grand que celui des viandes séchées, salées, gelées ou frigorifiées. En 1895 le total de ces exportations dans les différents pays parmi lesquels on peut compter le Chili, l'Uruguay et la Bolivie a atteint le chiffre de 408,126 têtes de bêtes à cornes et 496,946 moutons; en 1896 il a atteint celui de 385,539 têtes de bêtes à cornes et 512,016 moutons; en 1897, celui de 238,121 têtes de bêtes à cornes et 504,128 moutons; en 1898, celui de 359,296 têtes de bêtes à cornes et 577,813 moutons; en 1899, celui de 312,150 têtes de bêtes à cornes et 543,458 moutons. Les chiffres précités donnent pour les cinq ans en question une exportation totale de bêtes sur pied, se décomposant comme il suit: 1.703,232 têtes de bêtes à cornes et 2,634,361 moutons.

L'Angleterre est le principal débouché pour la viande provenant de la République Argentine. Le tableau suivant montre les exportations de génisses, sous différentes formes, destinées à ce pays, depuis 1894 jusqu'en 1900:

Génisses exportées à l'Angleterre.

Années.	Sur pied.	Gelées.	Salées.	Totaux.
1894	7,500	800	8,300
1895	49,908	4,000	53,908
1896	66,000	8,000	74,000
1897	83,000	11,500	94,500
1898	97,000	16,500	113,500
1899	91,200	28,356	119,556
1900 (3½ mois)	66,500	34,000	20,600	120,500

Les exportations de moutons gelés pendant ces dernières années n'en sont pas moins considérables:

1898	2,464,941
1899	2,485,949
1900	2,372,969

Dans le recensement de 1895, dont les chiffres ne font plus autorité, l'industrie de la salaison, qui est aussi très importante, est représentée par 39 établissements, disposant d'un capital de \$37,000,000 or.

La République Argentine, par suite de ses nombreux troupeaux, peut être comptée au nombre des pays qui produisent le plus de laine.

Pendant l'année fiscale du 1^{er} octobre 1899 au 30 septembre 1900, les exportations totales de laine ont été de 182,000 tonnes, estimées à \$61,000,000, or. La baisse dans les prix de la laine, après cette date, à causé une diminution dans les exportations de l'année 1900-1901, qui n'atteindront pas le total précité mais elles dépasseront sûrement le chiffre de \$40,000,000, or.

L'augmentation considérable dans la superficie des terrains en culture, ainsi que celle de l'élevage et des industries de la République Argentine est due à l'immigration européenne. Depuis 1857, année où l'immigration a commencé à se diriger vers la République Argentine avec un chiffre presque sans importance de 4,951 personnes, jusqu'au 31 décembre 1899, 2,564,391 immigrants sont arrivés dans ledit pays. Sur ce nombre 882,596 sont partis depuis et par conséquent 1,681,795 sont restés, donnant une moyenne de 39,111 immigrants par an.

RELATIONS COMMERCIALES AVEC LA GRANDE BRETAGNE.

Le consulat anglais de Buenos Ayres comprend dans sa juridiction toute la République, à l'exception des quatre provinces de Córdoba, de Santa Fé, de Corrientes et d'Entre Rios.

M. le Consul Ross, a envoyé au Ministère des affaires Etrangères d'Angleterre un rapport très intéressant sur le commerce et l'industrie des provinces faisant partie de sa juridiction.

Le consul dit que le district de Buenos Ayres entre pour 89.2 pour cent dans les importations du pays et pour 69.5 pour cent dans les exportations.

En 1901, les importations provenant de la Grande Bretagne accusent une diminution et les exportations dans ce pays accusent une augmentation; tandis que dans le commerce de l'Allemagne et des Etats-Unis avec la République Argentine les importations, ainsi que les exportations, font ressortir une augmentation considérable.

Les textiles, le fer et leurs produits, les denrées alimentaires, les pierres, les minéraux (y compris le charbon), la verrerie et la faïence, les articles de bois et les boissons constituent la majeure partie des importations. Le demande de toutes sortes d'appareils électriques à l'usage domestique, tels que, ascenseurs automatiques et autres, éventails et ventilateurs, ainsi que les installations pour les tramways électriques et leur matériel roulant, augmente d'une manière constante.

On a dépensé des sommes considérables en tuyaux, pompes et autres machines dont on s'est servi pour exploiter les marais salants situés près de San Blas au sud de la province de Buenos Ayres. Le Consul ajoute qu'il y a aussi une demande considérable de sel non seulement pour l'usage des particuliers, mais aussi pour les établissements où l'on prépare les viandes de conserves. On demande aussi de grandes quantités de sodium et de sodium hydroxide.

On trouve dans les régions tropicales et intertropicales au nord de

l'immense étendue de terre dont il est question dans ce rapport, de vastes forêts de bois dur qui est sans égal pour faire les traverses de chemins de fer, les pilotis et d'autres choses de même genre. Un de ces bois (le quebracho) produit une excellente essence employée dans la tannerie. Les autres articles produits en quantités suffisantes pour alimenter un grand commerce d'exportation sont le tabac, le jute, la ramie, le sucre, l'huile de ricin et les fruits tropicaux. A l'extrême sud le travail du coupage et de l'emmagasinage de la glace naturelle ainsi que la chasse aux loutres sont très lucratifs.

Le tableau synoptique ci-dessous fait ressortir l'augmentation rapide de la superficie en culture pendant les années 1900 et 1901.

Dans la ville de Buenos Ayres, qui, par sa population occupe le onzième rang dans le monde entier, on compte un grand nombre de fabriques en activité. Parmi ces dernières on remarque 20 fabriques de malles et caisses, 185 fabriques de voitures, 68 fabriques de bottes et chaussures, 43 fabrique de fourneaux, 45 fabriques de lits de fer et de matelas, 44 fabriques de cercueils et de couronnes funéraires; 28 fabriques de cols et manchettes; 50 fabriques de brosses; 28 fabriques de gants; 132 fabriques de liqueurs; 250 fabriques de meubles; 45 fabriques de tuiles; 47 fabriques de chapeaux et casquettes; 25 fabriques de tissage et 26 fabriques de savon.

On compte beaucoup sur l'amélioration des voies de transport intérieures et aussi sur la mise en communication avec les marchés au moyen des chemins de fer. Toutefois M. Ross pense qu'avec un littoral aussi étendu et de bonnes voies fluviales intérieures on ne doit pas laisser les chemins de fer absorber la totalité du mouvement commercial du pays.

Il considère que les facilités offertes par le transport des voies fluviales offrent un moyen lucratif d'employer avantageusement le capital et d'ouvrir au commerce certaines parties du pays qui sont restées jusqu'ici inexplorées ou même inexploitées.

CONSTRUCTION D'UN NOUVEAU BASSIN DE RADOUB À BAHIA BLANCA.

Le nouveau bassin de radoub, construit à Bahia Blanca (République Argentine) par l'ingénieur LUGGI, pourra servir aux plus grands navires. Ce bassin est divisé en deux sections et peut recevoir deux vaisseaux en même temps. On le remplit avec 50,000 tonnes d'eau en quarante minutes, et cette eau peut être vidée en deux heures. La cloison s'ouvre et se ferme en trois minutes au moyen de puissantes machines hydrauliques.

Pour cette construction, on a employé 75,000 tonnes de béton, 15,000 de ciment et 1,500 de fer. Ce bassin répondait à une nécessité de premier ordre.

COMMERCE DES BESTIAUX AVEC LA GRANDE BRETAGNE.

Le rapport commercial qui suit, extrait du journal le "Times" de Londres, en date du 13 mai 1902, est très intéressant en ce moment par suite de la réouverture des ports anglais au commerce des bestiaux provenant de la République Argentine.

En prenant pour base le quartier de bœuf, le total des importations de bétail sur pied et de bœuf frigorifié et gelé, expédiés par le Rio de la Plata en 1897, s'est élevé à 341,888 quartiers; en 1898, à 439,480 quartiers, faisant ressortir une augmentation; en 1900 à 403,120 quartiers faisant ressortir une diminution, et en 1901 à 465,471 quartiers.

Pendant les huit derniers mois de l'année 1900 et pendant toute l'année 1901, les ports anglais ont été fermés au bétail sur pied provenant de la République Argentine. La petite diminution qui a été constatée en 1900 a été plus que couverte en 1901. En effet, c'est pendant cette dernière année que les exportations de viande du Rio de la Plata en Angleterre ont été les plus importantes depuis l'année 1896.

Dans les quatre premiers mois de l'année 1900, quand les ports anglais étaient ouverts au bétail argentin, les recettes totales de toute provenance dans les ports du Royaume-Uni se montaient à 151,938 bœufs et 218,221 moutons; dans les quatre premiers mois de l'année courante (1902), sans aucun arrivage des districts argentins, les totaux ont été de 121,238 bœufs et 124,904 moutons. Sur un total de 1,098,629 quintaux de viande de mouton importés par la Grande-Bretagne pendant les quatre premiers mois de 1902 la République Argentine figure pour 418,607 quintaux.

BRÉSIL.**ÉTABLISSEMENT DU SERVICE DES EAUX À BAHIA.**

M. EUGÈNE SEEGER, Consul des Etats-Unis à Rio de Janeiro, transmet au Ministère des Affaires Etrangères, en date du 11 avril 1902, un rapport qui contient des données très intéressantes que nous reproduisons ci-dessous:

La ville brésilienne de Bahia, située sur le bord de la mer, a une population de 200,000 inhabitants environ, occupant 17,000 maisons.

La quantité d'eau dont la ville dispose pour cette population est tout-à-fait insuffisante. Une compagnie locale connue sous le nom de "Queimado" a l'adjudication des eaux depuis 1852. Cette compagnie l'a fait venir des montagnes voisines et a dépensé en tout \$1,500,000 environ pour les machines, la pose des tuyaux, les fontaines et les bouches à incendie.

On a conclu, il y a trois jours, les négociations qui avaient été entamées depuis longtemps entre la Compagnie Queimado et la ville de Bahia en vue d'augmenter suffisamment la distribution des eaux.

Le monopole de la Compagnie Queimado a été renouvelé pour une période de 45 ans, et on a accordé à la compagnie des franchises et des privilèges importants. A l'expiration du contrat la ville aura la faculté d'acheter les établissements de la compagnie au prix fixé par des experts. L'emploi de l'eau est obligatoire pour chaque demeure et la municipalité de Bahia en fixe le prix de la manière suivante: \$3 par mois pour des maisons pouvant dépenser en moyenne 400 litres d'eau par jour et 20 reis par 20 litres d'eau puisée aux fontaines publiques.

Les améliorations spécifiées dans le nouveau contrat de la Compagnie Queimado coûteront \$600,000 environ. Les plans et les devis ont été faits par des experts. En vue de la crise financière que traverse le Brésil en ce moment il est impossible à la compagnie de trouver l'argent nécessaire pour finir le système des eaux de Bahia, et par conséquent elle désire vendre ses établissements et ses privilèges. Elle en demande \$1,100,000. On estime à \$300,000 le bénéfice annuel qui doit résulter du service des eaux quand il sera terminé d'après les nouveaux contrats. L'agent de la compagnie m'a donné l'assurance que la personne ou la corporation fournissant l'eau à la ville de Bahia sous le nouveau contrat aura aussi l'adjudication pour installer un système d'égouts dans la ville ainsi que la plomberie sanitaire dans les maisons.

PRODUCTION DU CAOUTCHOUC EN 1901.

Dans son dernier rapport, le consul des Etats-Unis à Para a publié quelques intéressantes données sur le commerce du caoutchouc dans la vallée de l'Amazonas en 1901. Les expéditions de Para, dit-il, ont une tendance à augmenter et sont en plus-value sur celles de l'année antérieure. C'est ainsi qu'il a été exporté 3,255 tonnes de plus en 1901, dont 500 tonnes de plus pour l'Europe et 2,755 tonnes pour les Etats-Unis. L'exportation totale du caoutchouc de l'Amazonas a été de 14,755 tonnes pour l'Europe et de 15,376 tonnes pour les Etats-Unis en 1901, contre 14,254 tonnes pour l'Europe et 12,621 tonnes pour les Etats-Unis en 1900.

Ce même rapport fait également remarquer que l'exportation directe du caoutchouc de Manaos a considérablement augmenté par suite d'une loi qui a obligé d'exporter de Manaos même tout le caoutchouc provenant de l'Etat d'Amazonas qui était jusqu'alors exporté de Para. En effet, si, en 1900, 8,012 tonnes de caoutchouc ont été expédiées directement de Manaos pour les marchés consommateurs et 18,467 tonnes de Para, en 1901 Manaos en a exporté 15,469 tonnes et Para 13,639.

Le Consul constate encore le développement des expéditions d'Iquitos, qui, de 920 tonnes en 1900, ont passé à 1,391 tonnes en 1901.

Depuis cinq ans, les arrivages de caoutchouc à Para, y compris celui que est passé en transit de Manaos, s'établissent comme suit: 1897-98, 22,257 tonnes; 1898-99, 25,374 tonnes; 1899-1900, 36,693 tonnes;

1900-1901, 27,660 tonnes, et second semestre de 1901, 13,619 tonnes; les arrivages de janvier et de février ont été de 3,836 tonnes.

LES OPÉRATIONS COMMERCIALES: DIVERS MODES DE PAIEMENTS.

M. HÉNAULT, le Secrétaire général de la Chambre de Commerce française à Rio de Janeiro, a préparé le très intéressant rapport suivant au sujet des transactions commerciales au Brésil et les divers modes de paiements employés par les maisons étrangères.

Dans ce rapport M. HÉNAULT dit que les maisons européennes ou de l'Amérique du Nord, en transactions commerciales avec le Brésil, en ce qui concerne les produits à y importer, peuvent se diviser, comme pour les autres pays, en deux catégories principales:

“1°. Les fabricants ou industriels qui exportent directement dans cette République leurs produits manufacturés;

“2°. Les négociants-commissionnaires, qui sont les intermédiaires dans les achats entre les maisons manufacturières et la clientèle brésilienne.

“Les premiers ne peuvent accorder de longs crédits dans les paiements, parce que leurs lourds frais industriels les en empêchent; en effet, les ouvriers, ainsi que les matières premières nécessaires à la fabrication devant être payés au comptant et le capital immobilisé dans le matériel—comme celui employé dans la main-d'œuvre—étant parfois considérable, il y a urgence de faire rentrer dans de brefs délais celui qui est consacré aux crédits de la clientèle, afin qu'il soit utilisé à nouveau sans retard par de nouvelles transactions.

“L'utilité et l'avantage des seconds, des négociants-commissionnaires, consistent, au contraire, à offrir des facilités dans les groupements collectifs d'achats de tous produits, comme à accorder des facilités de paiement que les industriels ne peuvent pas concéder par les motifs exposés ci-dessus.

“*Modes de paiement employés par les fabricants et industriels.*—Les industriels français travaillant directement avec la clientèle brésilienne, par l'entremise ou non de correspondants ou d'agents commerciaux, obtiennent leurs règlements par des traites tirées à diverses échéances, principalement de 90 à 180 jours de vue ou de la date du connaissance.

“Les traites sont mises en circulation de préférence par l'entremise de banquiers ayant une succursale dans la ville du tiré et elles doivent être acceptées dès que ce dernier est en pouvoir du connaissance ou déclaration de l'état des marchandises chargées sur navire.

“*Modes de paiement employés par les négociants commissionnaires.*—La plupart des négociants commissionnaires travaillent avec la clientèle du Brésil par le système du compte-courant aux intérêts réciproques de 6 pour cent l'an, commission d'achat généralement fixée à 5 pour cent.

“Certains commissionnaires traitent le compte-courant avec la condition de l'arrêter rigoureusement tous les six mois, c'est-à-dire que le client doit liquider ponctuellement et semestriellement toutes les factures ayant atteint 180 jours de date. En cas de non-paiement de ces dernières, le client est débité d'une commission supplémentaire, appelée commission de retard et dont le taux aura toujours été fixé préalablement d'un commun accord entre l'acheteur et le vendeur.

“Depuis trois ans environ, certains négociants-commissionnaires ont pris la résolution de restreindre en principe et jusqu'à nouvel ordre le système du compte-courant, ne le conservant qu'avec le groupe de maisons vraiment irréprochables qui, malgré la crise, s'étaient toujours correctement conduits. Pour les autres, comme pour quelques nouveaux clients en général, ces négociants-commissionnaires opèrent leurs transactions par traites tirées à échéances diverses, mais principalement de 90 à 180 jours de vue.

“Il existe également une catégorie de négociants-commissionnaires ayant succursale au Brésil et traitant directement pour leur propre compte des affaires en tous produits, principalement en comestibles et matériaux de constructions. Cette catégorie de négociants-commissionnaires n'accorde que très rarement le compte-courant et obtient règlement du client par les conditions habituelles de la place où ils travaillent. Il existe plusieurs maisons anglaises et américaines de ce genre et beaucoup plus de maisons allemandes.

“I. *Maisons anglaises.*—Les négociants-commissionnaires d'Angleterre ont appliqué les mêmes facilités comme les mêmes restrictions à leur clientèle que les commissionnaires de la France, en ce qui concerne l'ouverture des crédits et le système de compte-courant.

“Leurs industriels opèrent également leurs transactions par le système des traites acceptées de 90 à 180 jours de vue, généralement à 90 jours de vue. Quelques rares manufacturiers anglais emploient le système de la traite documentaire, soit contre acceptation, soit contre paiement.

“II. *Maisons de l'Amérique du Nord.*—Ces maisons appliquent très rarement aussi le système de la traite documentaire, ne le réservant que pour les grosses opérations traitées avec des maisons de premier ordre. Leurs affaires générales se règlent donc par traites acceptées de 90 à 180 jours de vue, principalement à 90 jours de vue, lorsque les affaires sont faites avec les industriels, et par compte-courant pour l'ensemble de celles traitées avec les commissionnaires en marchandises.

“III. *Maisons allemandes.*—Les conditions de paiement des négociants allemands sont généralement très larges et leur servent même d'excellents arguments contre celles des industriels français et anglais. En effet, partout où les agents de ces derniers offrent des crédits de 90 à 120 jours les correspondants de maisons allemandes accordent comme

avantage 180 jours et même aussi parfois du compte-courant de commissionnaire.

“IV. *Maisons belges et suisses.*—Les commerçants de ce pays se basent généralement sur les modes de paiement appliqués selon les cas par les maisons françaises. Cependant, la Belgique, pour ses importations au Brésil de gros matériel et fournitures importantes, par chargements entiers, applique parfois, mais exceptionnellement, le système de la traite documentaire. Mais les opérations par traite à 90 et 120 jours de vue sont également les plus fréquentes.

“V. *Maisons d'Italie, Espagne et Portugal.*—Les commerçants de ces pays traitent principalement leurs transactions avec ceux de leurs nationaux résidant au Brésil. Ils appliquent généralement les conditions exposées ci-dessus pour les autres pays, lorsqu'il s'agit de transactions courantes et régulières; cependant, comme une grosse partie de leurs affaires se traite par le système des consignations.

“EXCEPTIONS DANS LES CONDITIONS GÉNÉRALES DE PAIEMENT.

“I. *La traite documentaire contre acceptation.*—Pour les raisons indiquées plus haut, les maisons qui expédient à leurs clients aux conditions d'acceptation contre documents en dehors de gros chargements sont très rares.

“Il en existe cependant et ces maisons prennent pour prétexte de leur exigence, soit le commencement de relations avec un client nouveau pour elles, soit un manque précis d'informations sur son compte.

“II. *La traite documentaire contre paiement.*—C'est également par exception et plus rarement encore que les maisons françaises expédient au Brésil aux conditions de la remise des documents contre paiement et pour des transactions courantes d'importance secondaire.

“Le cas se produit généralement avec des maisons qui, étant peu habituées à traiter avec ce pays, exigent cette condition d'un client sur le compte duquel les informations obtenues n'auraient pas été rigoureusement excellentes; quelques-unes de ces maisons vont même jusqu'à exiger le versement par avance de 10 pour cent de l'importance approximative de la facture pour garantie des frais de retour en cas de refus de marchandises à l'arrivée. Enfin, il y a des industriels qui n'acceptent l'exécution directe de produits ou d'articles fabriqués exclusivement pour un client sur un modèle spécial établi par lui et avec un poinçon et une marque également au nom exclusif de ce client (ce qui rend l'article complètement invendable à toute autre maison), qu'à la condition de recevoir par avance 40 à 50 pour cent du total de la commande et le complément contre la remise du connaissance.

“Il convient de faire remarquer à nouveau que les cas qui précèdent sont bien de véritables exceptions: en effet, il résulte d'une enquête faite auprès des principales banques de la place que 40 pour cent des traites tirées par les maisons françaises sont à présenter à l'acceptation

sans aucune exigence des tireurs (les documents étant adressés directement aux clients), 15 pour cent des traites sont tirées avec documents contre acceptations (D. A.) et 5 pour cent avec documents contre paiement (D. P.).

“III. *La traite documentaire conventionnée.*—La traite documentaire peut être créée à la suite d'un commun accord entre l'acheteur et le vendeur lorsqu'il s'agit d'affaires spéciales traitées dans des conditions également spéciales. Car, dans le cas contraire, si le vendeur, pour une raison quelconque lance une traite documentaire contre son acheteur non prévenu, ce dernier, en représailles, s'empressera presque toujours de laisser en douane les marchandises pour le compte de l'envoyeur.

“IV. *Expédition sans traite conventionnée.*—Il y a des maisons qui ne disposent pas de traites sur quelques clients, désirant leur démontrer tout d'abord de cette façon la confiance qu'elles ont en eux et désirant aussi obtenir par ce procédé de meilleures et plus fréquentes commandes. Mais cette confiance est souvent basée sur l'ancienneté et l'excellence des relations que les fournisseurs entretiennent avec ces maisons d'honorabilité et de solvabilité parfaites.

“V. *Refus d'acceptation de traites.*—Il y a également des clients qui refusent radicalement d'accepter les traites, invoquant mille prétextes d'intérêts ou de susceptibilité. C'est à l'intermédiaire du tireur sur place qu'il appartient d'examiner la question, d'essayer de rallier le client aux affaires par acceptation et d'informer les tireurs sur la valeur et la solvabilité de ces maisons. Ces acheteurs prétendent qu'ils ont ainsi plus de liberté pour choisir la date de leur paiement, et par conséquent, pour profiter d'un change plus ou moins favorable; mais ils oublient qu'avec les banques, ils peuvent procéder de même et payer également avant son échéance une traite dûment acceptée. Dans ce cas, le banquier doit être autorisé par le tireur à accorder au tiré l'escompte habituel du paiement par avance. Certaines banques se refusant à faire cet escompte, on recommande aux maisons françaises de donner dans ce sens les instructions à leur banquier ou à leur chargé de recouvrement.

“VI. *Règlements par traites divisées en plusieurs échéances.*—Les maisons qui ne font généralement pas plus de 90 jours de crédit peuvent exceptionnellement diviser en deux parties le paiement d'une facture, lorsqu'elle est de quelque importance; une première traite peut être lancée à 90 jours de vue pour le montant de la moitié de la facture et la seconde être mise en circulation pour solde à échéance des 30, 60 ou 90 jours qui suivent. Ce mode facilite les paiements à la clientèle et l'encourage à acheter davantage.

“VII. *Encaissements obtenus par l'entremise des agents sur place.*—Quelques maisons, pour éviter les nombreux menus frais facturés par les correspondants banquiers, peuvent charger leur intermédiaire sur place de l'acceptation et de l'encaissement de leurs traites.

AVANCEMENT RAPIDE DE BÉLEM, CAPITALE DE L'ÉTAT DE PARÁ.

Il peut être intéressant de reproduire les impressions de voyage d'un collaborateur de la "Gazeta Commercial," de Rio de Janeiro, qui, après avoir été à Manaos, a fait un séjour à Bélem et a eu l'occasion de constater les heureux résultats de l'administration municipale de M. le Sénateur ANTONIO LEMOS.

A Bélem, dit-il, le progrès est plus évident: on y devine facilement ce que valent la volonté et l'énergie d'un homme qui, depuis des années déjà, se donne tout entier à l'administration que lui ont confiée ses concitoyens.

Tout ce qui est à la portée de son gouvernement a été l'objet de constantes améliorations et il a su tirer parti de tous les éléments.

Les places publiques de la capitale, ses avenues, ses rues et ses ruelles sont sans cesse l'objet d'une surveillance ininterrompue qui fait qu'elles sont entretenues dans un parfait état de propreté; presque partout le système de pavage a été amélioré, et, sur certains points, comme la place de la République, on a adopté le pavage en bois. Les avenues présentent un joli coup d'œil; les jardins, que l'on entretient avec le plus grand soin, sont un point de réunion des habitants et offrent tout à la fois aux regards les attraits d'une végétation luxuriante et des embellissements que l'on y a exécutés. Le service d'hygiène, bien organisé, est l'objet d'une surveillance continuelle qui fait qu'il tend toujours à s'améliorer, et celui des transports est relativement bien fait; les tramways à traction animale seront, dit-on, remplacés par des tramways électriques; comme Manoas, Bélem possède un théâtre, un des premiers du Brésil, construit selon toutes les règles de l'art. Lorsque les travaux pour l'approvisionnement d'eau potable seront terminés, la capitale du Para disposera d'un service que l'on pourra considérer comme un modèle du genre.

Toutes les améliorations apportées ou en voie d'exécution, on les doit à la municipalité et au gouvernement qui ne cessent de travailler ensemble au progrès constant de la capitale. Aussi peut-on dire que Bélem est une ville qui présente toutes les commodités et où rien ne manque de ce que l'on peut et doit exiger d'une municipalité.

CHILI.

SOCIÉTÉ ITALIENNE POUR FAVORISER LE COMMERCE AVEC L'AMÉRIQUE DU SUD.

D'une communication de la mission de Belgique à Santiago, publiée par le "Bulletin Commercial," de Bruxelles, il résulte que par un récent décret le Gouvernement chilien a autorisé la "Società Italiana

di Esportazione, Enrico dell' Acqua," à établir des agences sur le territoire de la République.

Voici quelques détails concernant l'organisation de cette société et les conditions auxquelles a été soumis l'établissement d'agences au Chili:

La Société italienne d'exportation a été fondée à Milan en 1899, pour un terme de trente ans, au capital de 10 millions de lire, représenté par 40,000 actions de 250 liras chacune. Elle a pour objet l'exportation surtout de produits italiens vers l'Amérique du Sud et l'importation de produits américains en Italie, quand cette dernière opération constitue un remboursement avantageux des exportations. La Société s'occupera aussi de l'industrie des tissus et se propose d'établir des manufactures dans l'Argentine et au Brésil. Elle compte également s'occuper de commissions pour compte de tiers et participer à des entreprises ayant pour objet le commerce des tissus de fil, coton, laine et produits similaires.

Les conditions auxquelles est soumis l'établissement d'agences de ladite société au Chili sont énumérées comme suit au décret:

Les agents devront être accrédités avec des pouvoirs suffisants pour représenter la société dans toutes les affaires judiciaires et extra-judiciaires entreprises au Chili, soit par la société, soit contre elle.

Tous les biens, meubles et immeubles de la société, situés au Chili, seront affectés spécialement aux obligations qui se contractent dans le pays et doivent être satisfaites sur son territoire.

Il est entendu que, pour tous ses actes, responsabilités, droits et obligations, relatifs au pays, la société est domiciliée au Chili, soumise aux autorités judiciaires et administratives, et, en général, à toutes les lois et dispositions actuelles, qui traitent des agences de sociétés anonymes étrangères, ainsi qu'à celles qui seraient promulguées dans la suite à ce sujet.

En cas d'augmentation ou de diminution du capital de la société, de révision de ses statuts, de prolongation de sa durée, de dissolution ou de liquidation pour n'importe quel motif, y compris celui d'aliénation ou de fusion de la société, l'article 427 du code de commerce sera appliqué.

La société devra certifier, dans les huit mois, à partir de la date du présent décret, avoir modifié ses statuts conformément aux dispositions qui précèdent.

FAITS DIVERS.

La Légation du Chili à Paris reçoit les propositions pour l'établissement de l'éclairage électrique et des lignes de tramways électriques à Valparaíso.

D'après une information publiée par la "Gazette Officielle d'Italie," une exposition internationale de matériel scolaire sera tenue au mois de septembre prochain à Santiago du Chili, à l'occasion d'un Congrès d'instruction publique ouvert dans cette ville.

ÉTATS-UNIS.

COMMERCE AVEC L'AMÉRIQUE LATINE.

IMPORTATIONS ET EXPORTATIONS.

On trouvera à la page 1475 le dernier rapport du commerce entre les Etats-Unis et l'Amérique Latine, extrait de la compilation faite par le Bureau des Statistiques du Ministère des Finances. Le rapport a trait au mois d'avril 1902 et donne un tableau comparatif de ce mois avec le mois correspondant de l'année 1901. Il donne aussi un tableau des neuf mois finissant le 31 mars en les comparant avec la période correspondante de l'année précédente. On sait que les chiffres des différents Bureaux de Douane montrant les importations et les exportations pour un mois quelconque ne sont reçus au Ministère des Finances que le 20 du mois suivant et qu'il faut un certain temps pour les compiler et les faire imprimer de sorte que les résultats pour le mois d'avril ne peuvent être publiés avant le mois de juin.

MANUFACTURE DE CHAUSSURES EN CAOUTCHOUC.

Le Bulletin No. 171 du Recensement des Etats-Unis, publié le 20 mai 1902, contient un exposé détaillé des conditions et du progrès dans l'industrie de la manufacture de chaussures en caoutchouc pendant l'année du recensement de 1900, avec statistiques comparatives pour les vingt années précédentes. Les renseignements suivants présenteront un grand intérêt aux différents pays producteurs de caoutchouc de l'Union internationale des pays américains, et ils le seront d'une grande utilité.

Cette industrie qui avait été établie avec succès dans ce pays avant l'année 1850, n'a été considérée comme industrie sérieuse qu'au recensement de 1880.

Lors des recensements précédents, cette industrie avait été comprise avec celles des vêtements en caoutchouc, des fournitures de pharmacies et de divers autres articles en caoutchouc, sous la rubrique générale des articles en élastique et en caoutchouc et articles de caoutchouc.

L'augmentation et le développement de l'industrie pendant les vingt dernières années ont été constants et même remarquables sous beaucoup de rapports, ainsi que le démontrent les statistiques publiées dans les tableaux suivants. L'état No. 1 est un sommaire comparatif des résultats de cette industrie depuis 1880 à 1900 inclusivement.

TABLEAU 1.—Sommaire comparatif, 1880 à 1900, avec le tant pour cent d'augmentation de tous les dix ans.

	Date de recensement.			Tant pour cent d'augmentation.	
	1900.	1890.	1880.	1890 à 1900.	1880 à 1890.
Nombre d'établissements	22	11	9	100.0	22.2
Capital	\$33,667,533	\$17,790,970	\$2,425,000	89.2	633.6
Fonctionnaires, employés, etc., nombre.....	483	130	271.5
Appointements	\$597,239	\$153,802	288.3
Ouvriers, nombre moyen.....	14,391	9,134	4,662	57.6	95.9
Total des gages	\$6,426,579	\$3,813,073	\$1,469,038	68.5	159.6
Hommes âgés de 16 ans et au-dessus	8,248	5,126	2,514	60.9	103.9
Gages	\$4,338,480	\$2,524,209	71.9
Femmes âgées de 16 ans et au-dessus.....	5,942	3,924	1,984	51.4	97.8
Gages	\$2,052,462	\$1,273,580	61.2
Enfants au-dessous de 16 ans	201	84	164	139.3	48.8
Gages	\$35,637	\$15,284	133.2
Frais divers	\$2,089,154	\$943,918	121.3
Coût des matériaux employés	\$22,682,543	\$11,650,787	\$6,023,053	94.7	93.4
Valeur des produits, y compris le travail sur commande et les réparations.....	\$41,089,819	\$18,632,060	\$9,705,724	120.5	92.0

L'augmentation du capital qui semble anormale, s'étant élevée de \$2,485,000 en 1880 à \$17,790,970 en 1890, soit 633.6 pour cent, est probablement due en partie au fait qu'au recensement de 1890 on a demandé les rendements du capital actif.

HAÏTI.

LOI CONCERNANT LES MINES, MINIÈRES ET CARRIÈRES.

(Le 10 décembre 1860.)

FABRE GEFFRARD, Président d'Haïti, sur le rapport du Secrétaire d'Etat au Département de l'Intérieur et de l'Agriculture, et de l'avis du Conseil des Secrétaires d'Etat à proposé, et le Corps Législatif, après avoir reconnu et déclaré l'urgence, a rendu la loi suivante:

TITRE I.—DISPOSITIONS GÉNÉRALES.

ARTICLE 1^{er}. Toutes les substances minérales ou fossiles sont comprises dans les trois classes suivantes: Mines, minières ou carrières.

ARTICLE 2. Les mines comprennent les substances existant en filons, couches ou amas au sein de la terre ou affleurant à la surface, telles que l'or, l'argent, le platine, le mercure, le plomb, le fer, le cuivre, l'étain, le zinc, la calamine, le bismuth, le cobalt, l'antimoine, le molybdène, le tungstène, le nickel, le chrome ou autres matières métalliques, l'arsenic, le tellure, l'iode, le soufre, la plumbagine, le charbon de terre, ou de pierre, le bois fossile, les bitumes, l'alun et les sulfates à base métallique, le selgemme et toutes autres analogues.

ARTICLE 3. Les minières comprennent les minerais de fer dite d'alluvion, les terres pyriteuses propres à être converties en sulfate de fer, les terres allumineuses, les tourbes et autres substances analogues du même gisement.

ARTICLE 4. Les carrières comprennent les ardoises, les grès, pierres à bâtir et autres, les marbres, granit, pierres à chaux, pierres à plâtre, les pouzzolanes, le trass, les basaltes, les laves, les marnes, craies, sables, pierres à fusil, argiles, kaolins, terre à foulon, terres à poterie, les substances terreuses, les cailloux de toute nature et les terres pyriteuses regardées comme engrais.

ARTICLE 5. Les substances comprises dans la classe des mines appartiennent à la nation; appartiennent également à la nation celles de la classe des carrières qui ne sont exploitables que par galerie souterraine.

Toutes ces substances sont mises à la disposition de l'Etat pour être exploitées.

ARTICLE 6. Les substances énumérées dans la catégorie des minières et celles placées parmi les carrières qui pourront être exploitées à ciel ouvert sont la propriété du propriétaire de la surface.

ARTICLE 7. L'exploitation de ces substances, tant pour ce qui concerne l'Etat que le propriétaire de la surface, est soumise à des règles qui sont ci-après établies.

TITRE II.—DES SUBSTANCES MINÉRALES OU FOSSILES APPARTENANT À LA NATION.

SECTION 1^{re}.—*De la nature particulière de cette propriété.*

ARTICLE 8. Les mines et carrières du domaine, ainsi que les bâtiments, machines, puits, galeries et autres travaux établis à demeure, les animaux attachés au service intérieur, les agrès, outils et ustensiles servant à leur exploitation, sont immeubles conformément aux principes posés par le code civil aux articles 427 et 428.

ARTICLE 9. Les produits de ces mines et carrières, ainsi que les autres objets mobiliers, non compris dans les dispositions de l'article précédent, sont meubles.

ARTICLE 10. Ces mines et carrières ne sont pas soumises à la prescription.

ARTICLE 11. Elles ne pourront être exploitées qu'en vertu d'un acte de concession délibéré au Conseil des Secrétaires d'Etat.

ARTICLE 12. Leur administration relève du Département de l'Intérieur dont elle formera une nouvelle branche organisée par un arrêté ultérieur.

SECTION 2.—*Des actes et formalités qui devront précéder la concession.*

ARTICLE 13. Nul ne peut faire des recherches pour découvrir des mines ou carrières, enfoncer des sondes ou tarières sur un terrain que du consentement du propriétaire de ce terrain, ou à défaut de ce consentement, avec l'autorisation du Gouvernement, après que le propriétaire aura été entendu et à la charge d'une préalable indemnité envers lui.

ARTICLE 14. Il devra être accordé aux personnes qui se seront livrées avec succès à ces recherches une indemnité comprenant les frais dûment justifiés qu'elles auront faits et une juste gratification.

ARTICLE 15. La recherche comprendra, outre la constatation de l'existence de la mine, une certaine reconnaissance établissant la possibilité d'une exploitation utile.

ARTICLE 16. Le Gouvernement fera connaître, au moyen d'avis, son intention de concéder l'exploitation des mines et carrières, afin de provoquer des propositions.

Toutefois, lorsqu'une ou plusieurs personnes munies de tous les renseignements nécessaires sur une mine ou carrière en demandent la concession, le Gouvernement pourra accorder la concession sans qu'il y ait un avis.

ARTICLE 17. Les personnes qui, par suite de l'avis, voudront faire des propositions pour une concession pourront, par elles-mêmes ou leurs agents, après avoir obtenu l'autorisation du Gouvernement, se livrer à l'examen ou à l'exploration de l'objet à concéder.

ARTICLE 18. En cas de concurrence, la concession sera accordée aux propositions jugées les plus avantageuses.

ARTICLE 19. Les étrangers comme les Haïtiens agissant isolément ou en société peuvent faire des propositions et obtenir une concession de mines ou de carrières.

ARTICLE 20. L'individu ou la société devra justifier des facultés nécessaires pour entreprendre et conduire les travaux et des moyens de satisfaire aux redevances et indemnités à payer et au remboursement de la gratification et des recherches, s'il y en a.

ARTICLE 21. Un délai d'un mois devra toujours être donné avant la concession aux propriétaires de la surface ou à toutes personnes qui croiront y être intéressées, pour qu'ils adressent leurs observations ou réclamations au Département de l'Intérieur.

ARTICLE 22. L'autorité administrative prononcera sur ces observations ou réclamations, à moins qu'il ne s'agisse de décisions qui ne sauraient émaner que des tribunaux ordinaires.

Dans ce dernier cas, l'affaire sera portée devant ces tribunaux, soit par l'administration, soit par la partie adverse et requerra célérité.

Toutes les contestations devront être réglées avant la concession.

SECTION III.—*Des conséquences de la concession.*

ART. 23. La concession aura pour durée celle de l'exploitation même.

ART. 24. L'acte qui l'accordera en déterminera l'étendue; cette étendue sera établie autant que possible, au moyen de points fixes pris à la surface du sol, et de plans verticaux passant par ces points et menés de la surface à l'intérieur de la terre à une profondeur indéfinie, à moins que les circonstances et les localités ne déterminent l'adoption d'un autre mode de limitation.

ART. 25. Un plan régulier de la surface sera annexé à l'acte de concession.

ART. 26. La concession donnera à celui ou ceux qui l'auront obtenue un droit exclusif d'exploitation en vertu duquel le ou les concessionnaires seront propriétaires des produits exploités.

Les principes du code civil sont applicables en cette matière, sauf les dérogations directes ou indirectes qui résulteront des dispositions de la présente loi.

ART. 27. Les concessionnaires ne pourront céder, ni en totalité, ni en partie, leur droit d'exploitation sans le consentement du gouvernement.

ART. 28. Plusieurs concessions pourront être réunies, entre les mains du même concessionnaire, soit comme individu, soit comme représentant une compagnie, mais à la charge de tenir en activité l'exploitation de chaque concession.

ART. 29. Lorsque la concession aura été faite à plusieurs personnes ou à une société, le concessionnaire ou la société devra justifier qu'il est pourvu, par une convention spéciale, à ce que les travaux d'exploitation soient soumis à une direction unique et coordonnée.

Ils seront tenus de désigner, par une déclaration authentique, celui des concessionnaires ou tout autre individu, qu'ils auront pourvus de pouvoir nécessaire pour recevoir toute notification ou signification; et en général pour le représenter vis-à-vis de l'administration, tant en demandant qu'en défendant.

Tout concessionnaire de mine ou de carrière devra faire une élection de domicile qui sera indiquée dans l'acte de concession, ainsi que les désignations prescrites par l'article précédent.

ART. 31. La concession accordée pour l'exploitation d'une substance minérale ou fossile ne concerne pas les gîtes d'autres substances qui se trouveront dans le même périmètre, ces derniers pourront faire l'objet de nouvelles concessions.

ART. 32. La concession donne le droit d'occuper et d'utiliser toute partie de la surface qui sera nécessaire pour l'exploitation.

ART. 33. Le droit d'occupation pour l'exploitation aussi bien que pour la recherche ne pourra s'étendre sur la portion de la surface occupée par des usines et établissements bâtis ou maisons sur les habitations dans un rayon de 300 pieds, sauf le consentement du pro-

priétaire. Néanmoins les travaux souterrains pourront être poussés sous ces dits usines, établissements ou maisons à la charge pour le concessionnaire de donner, s'il y a lieu, caution pour le dommage qui pourrait en résulter.

ART. 34. Les propriétaires qui, par suite des dispositions de l'article 32, seront privés, soit partiellement, soit totalement de la jouissance de leurs propriétés, auront droit à une indemnité réglée comme il sera dit ci-après.

ART. 35. La valeur des indemnités sera le gage des créanciers du propriétaire, au même titre que l'avait été la surface occupée.

ART. 36. Le ou les concessionnaires paieront à l'Etat une redevance fixe et une redevance proportionnelle aux produits exploités.

ART. 37. Le chiffre de ces redevances, ainsi que toutes autres conditions, sera déterminé par le gouvernement dans l'acte de concession. Un cahier des charges et conditions devra être rédigé.

ART. 38. Le Gouvernement pourra accorder, s'il y a lieu, soit dans l'acte de concession, soit ultérieurement, la remise en tout ou en partie de la redevance proportionnelle; et ce, comme encouragement, en raison de la difficulté des travaux ou comme dédommagement, en cas d'accident ou de force majeure qui surviendrait pendant l'exploitation.

ART. 39. Le produit des redevances formera un fonds spécial dont il sera tenu un compte particulier à la comptabilité des finances de l'Etat.

ART. 40. Les propriétaires de la surface comprise dans le périmètre concédé, restreints dans l'exercice de leurs droits de fouille, et d'extraction de produits des dites fouilles, et obligés, par suite de la concession de l'exploitation du tréfonds, de ne tirer de leur propriété que des services non préjudiciables à l'industrie souterraine, auront droit à une redevance.

ART. 41. Cette redevance sera réglée par l'administration avec et en même temps que celle de l'Etat, et ne pourra pas être moindre de 5 pour cent de la redevance proportionnelle.

Les bases de sa répartition entre ces propriétaires seront ultérieurement déterminées. Les dispositions de l'article 35 sont aussi applicables à cette redevance.

ART. 42. La concession pourra être retirée par suite, soit de la non-exploitation, soit du non-paiement des redevances dans les délais prévus et fixés, et encore, par suite de l'inexécution des conditions consignées dans l'acte de concession et dont le non-accomplissement devait entraîner cette conséquence.

SECTION IV.—*Du règlement des indemnités et dommages-intérêts.*

ART. 43. Le règlement de toutes indemnités, dommages-intérêts et frais à rembourser dans les différents cas prévus par la présente loi,

s'il n'a pas pu se faire à l'amiable, sera porté, en attendant une loi spéciale sur la matière, pardevant les tribunaux ordinaires.

ART. 44. Ces tribunaux nommeront des experts. Les dispositions du code de procédure civile relative à l'expertise seront à suivre.

ART. 45. Les experts doivent être choisis, autant que possible, parmi les hommes notables et expérimentés dans le fait des mines et de leurs travaux.

ART. 46. Le commissaire du Gouvernement sera toujours entendu et donnera des conclusions sur le rapport des experts.

ART. 47. Les frais et vacations des experts seront réglés par lesdits tribunaux qui pourront en ordonner la consignation par celui qui poursuivra l'expertise.

ART. 48. L'indemnité à payer au propriétaire de la surface devra représenter le double de la valeur au moment de l'occupation de la portion ou de la totalité de la propriété dont il est définitivement privée.

ART. 49. Si les travaux entrepris, soit par les explorateurs, soit par les concessionnaires, ne sont que passagers, ne devant pas durer plus d'un an, et que le sol, après la restitution est susceptible de culture, comme il était auparavant, l'indemnité est réglée au double de ce qu'aurait produit le terrain pendant ce temps.

ART. 50. Lorsque l'occupation, pour la recherche et les travaux des mines et carrières, aura privé les propriétaires du sol de la jouissance au-delà d'une année, ou lorsqu'après les travaux les terrains ne sont plus propres à la culture, le propriétaire pourra exiger l'acquisition de ces terrains.

ART. 51. Lorsque le propriétaire de la surface aura subi une telle occupation de sa propriété, qu'il ne lui sera plus permis d'en tirer le parti que comportait sa destination, il pourra demander à en être exproprié totalement.

S'il réussit dans sa demande, il n'aura plus droit à la redevance.

ART. 52. Lorsqu'un terrain sera nécessaire à une exploitation, et que le concessionnaire sera étranger, l'Etat en fera l'acquisition, mais la valeur en sera payée par le concessionnaire auquel le montant de la revente sera compté à la fin de l'exploitation.

ART. 53. Dans les questions d'indemnité, seront en présence, en cas de contestation, l'Etat et les propriétaires de cette surface; et dans celles relatives aux dommages-intérêts pour préjudice résultant de l'exploitation, les concessionnaires et les personnes qui prétendront avoir éprouvé le préjudice.

TITRE III.—DES SUBSTANCES MINÉRALES OU FOSSILES APPARTENANT AU PROPRIÉTAIRE DE LA SURFACE.

ART. 54. Les propriétaires qui voudront extraire ou faire extraire de leurs terrains les substances reconnues leur appartenir par la

présente loi, devront en faire la déclaration au Département de l'Intérieur et attendre l'autorisation de l'Administration.

ART. 55. Cette autorisation ne pourra être refusée et devra être accordée, au plus tard, dans les six mois qui suivront la déclaration du propriétaire.

ART. 56. Ces exploitations seront soumises à la surveillance de l'Administration et de la police, dans les limites qui seront établies.

SECTION V.—*Dispositions dans l'intérêt de l'ordre public.*

ART. 57. La surveillance de l'Administration et de la police s'exercera sur les exploitations des mines et des carrières, conformément à des règles qui seront ultérieurement établies.

ART. 58. Les dispositions des lois et règlements relatifs aux mines et carrières seront protégées par une sanction pénale qui sera ultérieurement établie, contre les infractions aux dits règlements et lois.

La présente loi sera exécutée à la diligence du Secrétaire d'Etat, de l'Intérieur et de l'Agriculture.

Donné à la Maison Nationale, au Port-au-Prince, le 28 novembre 1860, an 57^e de l'Indépendance.

Le Président du Sénat,

J. J. MENDOZA.

Les Secrétaires,

ANE LAFOREST.

D. LABONTÉ.

Donné à la Chambre des Représentants au Port-au-Prince, le 4 décembre 1860, an 57^e de l'Indépendance.

Le Président de la Chambre,

W. CHANLATTE.

Les Secrétaires,

PANAYOTY,

J. THÉBAUD.

AU NOM DE LA RÉPUBLIQUE.

Le Président d'Haïti ordonne que la loi ci-dessus du Corps Législatif soit revêtue du sceau de la République, publiée et exécutée.

Donné au Palais National du Port-au-Prince, le 10 décembre 1860, an 57^e de l'Indépendance.

GEFFRARD.

Par le Président:

Le Secrétaire d'Etat de l'Intérieur et de l'Agriculture.

F. JN JOSEPH.

PARAGUAY.

MESSAGE DU VICE-PRÉSIDENT.

Le 1^{er} avril 1902, le Vice-Président de la République du Paraguay, en sa qualité de représentant du Chef du Pouvoir Exécutif, a prononcé un message important devant le Congrès. Dans ce message le Vice-Président fait voir, entre autres choses, que la nation jouit d'une période de tranquillité complète et que le gouvernement s'efforcera de prolonger cet état de choses afin que les efforts du peuple pour le développement des industries latentes du pays ne soient ni arrêtés ni retardés, mais au contraire que tout encouragement soit offert en vue d'accélérer et de favoriser le progrès et le développement matériel de la République.

Les conditions nécessaires à l'augmentation de l'activité commerciale et industrielle de la nation n'ont jamais été meilleures qu'à présent, quoique la situation financière du pays ne soit pas aussi favorable qu'on pourrait le désirer. Toutefois, le Président pense que sous une administration sage et conservatrice, comme celle qui existe à présent, on peut prévoir un avenir plein d'espoir et de promesses pour le bien-être et la prospérité de la République au point de vue du commerce, de la législation et des finances. La production nationale, et surtout l'agriculture continue à augmenter, quoique cette augmentation ne soit ni aussi rapide ni aussi importante qu'on pourrait s'y attendre quand on considère non seulement les conditions favorables qui existent dans la République pour l'exploitation de cette industrie, mais encore la fertilité du sol dans tout le domaine national.

Un des plus grands obstacles au développement des ressources agricoles du Paraguay est le manque de capitaux suffisants pour entreprendre les affaires sur une grande échelle, et pour acheter les machines agricoles nécessaires à la culture des champs et des plantations dont plusieurs restent incultes et abandonnés. Cette situation est plutôt due aux besoins d'argent pour les cultiver et les développer d'une manière convenable qu'au manque de main-d'œuvre.

Les moyens de s'instruire augmentent tous les ans et le nombre des illettrés diminue chaque jour. Le Gouvernement continue à prendre, comme toujours, le plus grand intérêt dans l'enseignement, et il l'encourage par tous les moyens possibles.

Au sujet des relations extérieures de la nation, le Vice-Président dit que la République entretient des relations cordiales avec le monde entier. La question embarrassante des frontières avec la Bolivie est en bonne voie, et on espère qu'elle sera réglée à l'amiable à la pleine satisfaction des deux nations.

Les affaires intérieures du pays sont dans une condition satisfaisante et les habitants de la République continuent à consacrer leur temps et leur énergie à l'accomplissement de leurs devoirs et de leurs occupations usuelles.

Les récoltes ont été abondantes et l'industrie du bétail est dans une condition florissante; la fièvre aphteuse qui a fait son apparition dans quelques endroits pendant l'année a complètement disparu.

Le commerce a, en général, augmenté dans tout le pays. Les données incomplètes ayant trait à la période actuelle, font ressortir que pendant l'année 1901 il y avait sur le territoire de la République 160 établissements industriels et commerciaux. Le total approximatif du commerce fait pendant l'année en question, d'après les dernières données, s'est élevé à \$67,242,436 pour les transactions commerciales, \$139,047,095 pour les opérations industrielles et \$2,953,757 pour le bétail.

Pendant l'année 1901, il y avait en culture 118,650 hectares de terres agricoles, dont la production totale s'est élevée, à 1,381,126,421 kilogrammes de produits agricoles, tels que le maïs, le manioc, les haricots, les arachides, la canne à sucre, le coton, le riz, le café, le tabac, etc.

Les recettes du Chemin de fer Central pendant l'année se sont élevées à \$1,838,600.96. Pendant la même période, l'Administration des Postes a envoyé 97,044 télégrammes et 2,099,640 lettres, journaux, etc.

Le Vice-Président attire l'attention sur le fait que le Paraguay est la seule République de l'Amérique du Sud, qui n'a pas de représentant diplomatique auprès du Gouvernement des Etats-Unis de l'Amérique du Nord, et comme le capital américain cherche des placements dans le Paraguay, le Gouvernement se décide d'établir une légation à Washington, dont le représentant sera Señor Don ALEJANDRO AUDIVERT, afin de stimuler et de développer, autant que possible, les relations commerciales entre les deux pays.

Le Paraguay établira aussi pour les mêmes raisons, une légation auprès des Gouvernements du Chili, de la Bolivie et du Pérou, et il a nommé Señor Don JUAN COGORNO, envoyé Extraordinaire et Ministre Plénipotentiaire près des Gouvernements de ces pays.

Les recettes du Gouvernement, qui en 1900 étaient de \$9,856,063.02, se sont élevées en 1901 à \$11,412,746, se décomposant comme suit:

Douanes	\$9, 930, 348. 41
Impôts	1, 220, 246. 97
Postes et télégraphes	181, 128. 85
Domaines.....	10, 736. 40
Hypothèques	4, 980. 10
Contributions directes	65, 306. 25
Total	11, 412, 746. 98

La mouvement des importations et des exportations pendant la même période a été de \$5,532,964.42, dont \$3,003,657.83 pour les importations et \$2,529,806.59 pour les exportations, soit un excédent de \$474,351.24 pour les importations en 1901.

La dette publique était de \$4,187,077.86 or au 31 décembre 1901, et à la même date la dette intérieure était de \$827,360.

COMMERCE DES VOITURES ET DES MEUBLES.

Le commerce des voitures, qui était nul jusqu'à ces dernières années, a pris une certaine extension depuis que les rues de l'Assomption ont été pavées. Quelques voitures importées par les Etats-Unis ont été récemment vendues au Paraguay, grâce à leur bon marché relatif. Il ne faudrait expédier dans ce pays, à cause du mauvais état des routes, que des voitures solides, légères à bon marché et munies de roues d'un grand rayon. Pour les voitures à 4 roues, les deux essieux devront être d'égale longueur.

Tant que les Boliviens seront privés de voies de communications avec les provinces nationales des Yungas et de Santa-Cruz, il leur sera difficile d'utiliser les bois d'ébénisterie de ces riches régions. Aussi, malgré les progrès réalisés dans l'ameublement par l'industrie indigène, la fabrication du meuble est loin de suffire encore aux besoins de la clientèle qui continue à s'approvisionner en Europe et aux Etats-Unis.

L'Allemagne, les Etats-Unis et l'Angleterre tiennent les première, deuxième et troisième places.

La France, dont les envois se chiffrent par 4,641\$93, n'occupe que le cinquième rang après le Chili.

BIBLIOGRAPHIE.

Les livres et les brochures qui seront envoyés au Bureau des Républiques Américaines, et qui contiendront des sujets ou matières traitant des pays de l'Union Internationale des Républiques Américaines, seront mentionnés dans le Bulletin Mensuel sous le titre "Bibliographie."

Le journal "Modern Mexico" du mois de mai 1902, contient un intéressant article au sujet de l'industrie du bétail et des viandes dans la République du Mexique. On constate que malgré l'impossibilité de donner les chiffres exacts au sujet du nombre des bestiaux et des porcs dans le Mexique, on peut sans hésitation donner en chiffres ronds l'évaluation ci-dessous: Chihuahua, 450,000 têtes de bétail; Sonora, 240,000;

Nuevo Leon, 145,000 têtes de bétail et 50,000 porcs, et Tamaulipas, 250,000 têtes de bétail et porcs. On expédie chaque année aux Etats-Unis par El Paso, Texas, de 90,000 têtes de bétail, et par Nogales environ 32,000. La valeur de la consommation des saladeros dans la République est estimée par an à \$46,000,000 en monnaie mexicaine, dont \$31,000,000 ont été payés pour le bœuf, \$10,000,000 pour le porc et \$500,000 pour les moutons et chèvres (ces chiffres se rapportent à l'année 1899). A l'exception de Chihuahua et de Sonora, il est probable que 85 pour cent de tout le bétail et des porcs du pays se trouve dans un rayon de 225 milles de la capitale. Dans ce district, le mouvement est vers le centre de population du District Fédéral et des environs et aussi vers Yucatan, Campêche et Cuba.

Le Résumé Mensuel du Commerce et des Finances des Etats-Unis pour le mois d'avril 1902, préparé par le Bureau des Statistiques du Ministère des Finances, publie un aperçu détaillé de l'Afrique commerciale en 1901. Dans cet aperçu on a fait une étude sérieuse des conditions physiques, politiques et commerciales du "continent noir" en faisant ressortir d'une manière spéciale les occasions offertes pour l'augmentation des intérêts commerciaux des nombreuses nations qui y expédient des marchandises. A la fin du mois de mai, on a expédié à destination de Natal, du port de Pensacola (E. U.), environ 630 têtes de bétail provenant du Texas. L'envoi qui se composait de taureaux et de génisses de première qualité et de pur sang, n'ayant pas plus de trois ans, sera suivi par d'autres formant un total de 10,000 têtes de bétail. Le Consul de la République Argentine à Cape Town a fait connaître à son Gouvernement que l'établissement d'un commerce de viandes frigorifiées dans cette contrée donnerait de grands résultats.

Le Bulletin de l'Institut de la Fièvre Jaune, section du service de l'Hôpital de la marine des Etats-Unis pour le mois de mars, contient les articles 1 à 7 des travaux de l'Institut et comprend dans la table des matières les sujets suivants: Organisation et progrès de l'Institut: Pourquoi la Nouvelle-Orléans n'avait-elle pas la fièvre jaune autrefois, en même temps que Boston? La fièvre jaune en Europe, revue générale historique; La Fièvre jaune au Portugal; La fièvre jaune en Espagne; Note sur les moustiques dans les bagages; La Fièvre jaune, son apparition et les règlements de quarantaine pour le port de Marseille, France. Un résumé des procès-verbaux des différentes réunions du Comité d'Administration depuis le 11 octobre 1901, jusqu'au 26 février 1902, montre que les hommes de science et les médecins du monde entier ont été invités à s'inscrire comme membres correspondants de l'Institut, et que les écrits des experts sur les différentes formes de la maladie en question seront publiés sous les auspices de l'Institut, de temps en temps.

Le Ministère de l'Agriculture des Etats-Unis a consacré le Bulletin No. 41 du Bureau de l'Industrie Animale à une étude parlant du marché des bestiaux pur sang au Mexique. On y donne les exportations de bestiaux, de moutons, de porcs et de chevaux provenant des Etats-Unis sur le marché du Mexique pendant les années 1893-1900 inclusivement. On y donne aussi des renseignements relatifs aux meilleures méthodes pour introduire le bétail des Etats-Unis dans la République du Mexique. De plus cette brochure dit qu'il est stipulé dans un amendement récent aux lois douanières du Mexique que l'entrée en franchise du bétail pur sang pendant l'année finissant le 30 juin 1901 se continuera sans doute, augmentant ainsi les exportations. Les rapports des agents consulaires des Etats-Unis, en fonction au Mexique, sont compris dans la brochure et donnent des renseignements complets sur le sujet.

UNITED STATES CONSULATES.

Frequent application is made to the Bureau for the address of United States Consuls in the South and Central American Republics. Those desiring to correspond with any Consul can do so by addressing "The United States Consulate" at the point named. Letters thus addressed must be delivered to the proper person. It must be understood, however, that it is not the duty of Consuls to devote their time to private business, and that all such letters may properly be treated as personal, and any labor involved may be subject to charge therefor.

The following is a list of United States Consulates in the different Republics:

ARGENTINE REPUBLIC—

Buenos Ayres.
Cordoba.
Rosario.

BOLIVIA—

La Paz.

BRAZIL—

Bahia.
Para.
Pernambuco.
Rio de Janeiro.
Santos.

CHILE—

Antofagasta.
Arica.
Coquimbo.
Iquique.
Valparaiso.

COLOMBIA—

Barranquilla.
Bogotá.
Cartagena.
Colón (Aspinwall).
Medellin.
Panama.

COSTA RICA—

San José.

DOMINICAN REPUBLIC—

Puerto Plata.
Samana.
Santo Domingo.

ECUADOR—

Guayaquil.

GUATEMALA—

Guatemala.

HAITI—

Cape Haitien.
Port au Prince.

HONDURAS—

Tegucigalpa.
Utiilla.

MEXICO—

Acapulco.
Chihuahua.
Ciudad Juarez.
Ciudad Porfirio Diaz.
Durango.
Ensenada.
La Paz.
Matamoros.
Mazatlan.
Mexico.
Monterey.
Nogales.
Nuevo Laredo.
Progreso.
Saltillo.
Tampico.
Tuxpan.
Vera Cruz.

NICARAGUA—

Managua.
San Juan del Norte.

PARAGUAY—

Asunción.

PERU—

Callao.

SALVADOR—

San Salvador.

URUGUAY—

Colonia.
Montevideo.
Paysandu.

VENEZUELA—

La Guayra.
Maracaibo.
Puerto Cabello.

WEIGHTS AND MEASURES.

The following table gives the chief weights and measures in commercial use in Mexico and the Republics of Central and South America, and their equivalents in the United States.

Denomination.	Where used.	United States equivalents.
Are	Metric	0.02471 acre.
Arobo	Paraguay	25 pounds.
Arroba (dry)	Argentine Republic	25.3171 pounds.
Do	Brazil	32.38 pounds.
Do	Cuba	25.3664 pounds.
Do	Venezuela	25.4024 pounds.
Arroba (liquid)	Cuba and Venezuela	4.263 gallons.
Barril	Argentine Republic and Mexico	20.0787 gallons.
Carga	Mexico and Salvador	300 pounds.
Centaro	Central America	4.2631 gallons.
Cuadra	Argentine Republic	4.2 acres.
Do	Paraguay	78.9 yards.
Do	Paraguay (square)	8.077 square feet.
Do	Uruguay	2 acres (nearly).
Cubic meter	Metric	35.3 cubic feet.
Fanega (dry)	Central America	1.5745 bushels.
Do	Chile	2.575 bushels.
Do	Cuba	1.599 bushels.
Do	Mexico	1.54728 bushels.
Do	Uruguay (double)	7.776 bushels.
Do	Uruguay (single)	3.888 bushels.
Do	Venezuela	1.599 bushels.
Frasco	Argentine Republic	2.5096 quarts.
Do	Mexico	2.5 quarts.
Gram	Metric	15.432 grains.
Hectare	do	2.471 acres.
Hectoliter (dry)	do	2.838 bushels.
Hectoliter (liquid)	do	26.417 gallons.
Kilogram (kilo)	do	2.2046 pounds.
Kilometer	do	0.621376 mile.
League (land)	Paraguay	4,633 acres.
Libra	Argentine Republic	1.0127 pounds.
Do	Central America	1.043 pounds.
Do	Chile	1.014 pounds.
Do	Cuba	1.0161 pounds.
Do	Mexico	1.01465 pounds.
Do	Peru	1.0143 pounds.
Do	Uruguay	1.0143 pounds.
Do	Venezuela	1.0161 pounds.
Liter	Metric	1.0567 quarts.
Livre	Guiana	1.0791 pounds.
Manzana	Costa Rica	1.5-6 acres.
Marc	Bolivia	0.507 pound.
Meter	Metric	39.37 inches.
Pie	Argentine Republic	0.9478 foot.
Quintal	do	101.42 pounds.
Do	Brazil	130.06 pounds.
Do	Chile, Mexico, and Peru	101.61 pounds.
Do	Paraguay	100 pounds.
Do. (metric)	Metric	220.46 pounds.
Suerte	Uruguay	2,700 cuadras (<i>see Cuadra</i>).
Vara	Argentine Republic	34.1208 inches.
Do	Central America	33.874 inches.
Do	Chile and Peru	33.367 inches.
Do	Cuba	33.384 inches.
Do	Mexico	33 inches.
Do	Paraguay	34 inches.
Do	Venezuela	33.384 inches.

METRIC WEIGHTS AND MEASURES.

METRIC WEIGHTS.

Milligram ($1/1000$ gram) equals 0.0154 grain.
Centigram ($1/100$ gram) equals 0.1543 grain.
Decigram ($1/10$ gram) equals 1.5432 grains.
Gram equals 15.432 grains.
Decagram (10 grams) equals 0.3527 ounce.
Hectogram (100 grams) equals 3.5274 ounces.
Kilogram (1,000 grams) equals 2.2046 pounds.
Myriagram (10,000 grams) equals 22.046 pounds.
Quintal (100,000 grams) equals 220.46 pounds.
Millier or tonneau—ton (1,000,000 gram^s) equals 2,204.6 pounds.

METRIC DRY MEASURE.

Milliliter ($1/1000$ liter) equals 0.061 cubic inch.
Centiliter ($1/100$ liter) equals 0.6102 cubic inch.
Deciliter ($1/10$ liter) equals 6.1022 cubic inches.
Liter equals 0.908 quart.
Decaliter (10 liters) equals 9.08 quarts.
Hectoliter (100 liters) equals 2.838 bushels.
Kiloliter (1,000 liters) equals 1.308 cubic yards.

METRIC LIQUID MEASURE.

Milliliter ($1/1000$ liter) equals 0.27 fluid dram.
Centiliter ($1/100$ liter) equals 0.338 fluid ounce.
Deciliter ($1/10$ liter) equals 0.845 gill.
Liter equals 1.0567 quarts.
Decaliter (10 liters) equals 2.6417 gallons.
Hectoliter (100 liters) equals 26.417 gallons.
Kiloliter (1,000 liters) equals 264.17 gallons.

METRIC MEASURES OF LENGTH.

Millimeter ($1/1000$ meter) equals 0.0394 inch.
Centimeter ($1/100$ meter) equals 0.3937 inch.
Decimeter ($1/10$ meter) equals 3.937 inches.
Meter equals 39.37 inches.
Decameter (10 meters) equals 393.7 inches.
Hectometer (100 meters) equals 328 feet 1 inch.
Kilometer (1,000 meters) equals 0.62137 mile (3,280 feet 10 inches).
Myriameter (10,000 meters) equals 6.2137 miles.

METRIC SURFACE MEASURE.

Centare (1 square meter) equals 1,550 square inches.
Are (100 square meters) equals 119.6 square yards.
Hectare (10,000 square meters) equals 2.471 acres.

The metric system has been adopted by the following-named American countries: Argentine Republic, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Honduras, Mexico, United States of America, and Venezuela.

PUBLICATIONS.

The International Bureau of the American Republics was established as the representative of the International Union entered into in 1890 by the independent States of this continent, for the publication in four languages of their tariff laws and all laws and provisions which might be enacted by them relating to trade and navigation, for the collection and publication of useful statistics and information, and for the promotion by these and other proper means of greater and closer commercial relations between the countries of the Union. In pursuance of this purpose, the Bureau has published for distribution a number of Handbooks, Reports, Codes of Commercial Nomenclature, a Commercial Directory of the American Republics, including the European dependencies in Central and South America and the West Indies, and a Monthly Bulletin, which is now in its ninth year and is the official organ of the Bureau. Many of these publications, especially the Handbooks, have naturally through the course of time become obsolete, and it is therefore necessary to bring them down to date. New editions have been published of the Handbooks of Guatemala, Venezuela, Mexico, and Brazil, but the work of revising the others has not as yet been completed. In the meantime, it has been deemed prudent to withdraw from circulation all those which need revision.

Below is given a list of the publications of the Bureau available for distribution.

Payment is required to be made in cash, money orders, or by bank drafts on banks in New York City or Washington, D. C., payable to the order of the INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS. Individual checks on banks outside of New York or Washington, or postage stamps, can not be accepted.

PRICE LIST OF PUBLICATIONS.

July 1, 1901.

BIBLIOGRAPHY OF BRAZIL.

PREPARED BY

P. LEE PHILLIPS, F. R. G. S.,

Chief of Division of Maps and Charts, Library of Congress.

The most complete list of Books, Magazine Articles, and Maps relating to Brazil that has ever been published, embracing everything of value upon history, biography, government, laws, religion, education, inducements and advantages offered immigrants, topography, coast line, soil, mineral wealth, flora, fauna, climate, natural advantages, transportation facilities, and all other subjects of whatever nature concerning the country.

Of special interest to librarians and specially useful in libraries.

The work is published under the auspices of the International Bureau of the American Republics, and it will be sent to any who may desire it on receipt of one dollar.

ADDRESS THE

INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS,
WASHINGTON, D. C.

BIBLIOGRAFÍA DEL BRASIL.

PREPARADA POR

P. LEE PHILLIPS, F. R. G. S.

Jefe de la Sección de Mapas y Cartas, Biblioteca del Congreso.

La lista más completa de Libros, Artículos de Revistas y Mapas referentes al Brasil que se ha publicado, y que comprende todo lo de valor relativo á historia, biografía, gobierno, leyes, religión, educación, alicientes y ventajas ofrecidas á inmigrantes, topografía, la costa, suelo, riqueza mineral, flora, fauna, clima, ventajas naturales, facilidades de transporte y á todas las otras materias concernientes á la naturaleza del país.

De especial interés á los bibliotecarios y particularmente útil en las bibliotecas.

Este trabajo está publicado bajo los auspicios de la Oficina Internacional de las Repúblicas Americanas y será remitido, mediante el recibo de un dollar, á las personas que lo soliciten.

VALUE OF LATIN-AMERICAN COINS.

The following table shows the value, in United States gold, of coins representing the monetary units of the Central and South American Republics and Mexico, estimated quarterly by the Director of the United States Mint, in pursuance of act of Congress:

ESTIMATE APRIL 1, 1902.

Countries.	Standard.	Unit.	Value in U. S. gold or silver.	Coins.
ARGENTINE REPUBLIC	Gold ----	Peso ----	\$0.965	{ Gold—Argentine (\$4.824) and ½ Argentine. Silver—Peso and divisions.
BOLIVIA	Silver ----	Boliviano	.403	Silver—Boliviano and divisions.
BRAZIL	Gold ----	Milreis --	.546	{ Gold—5, 10, and 20 milreis. Silver—½, 1, and 2 milreis.
CENTRAL AMERICAN STATES— Costa Rica	Gold ----	Colon ----	.465	{ Gold—2, 5, 10, and 20 colons (\$9.307). Silver—5, 10, 25, and 50 cen- timos.
British Honduras	Gold ----	Dollar --	1.000	
Guatemala	Silver ----	Peso ----	.403	Silver—Peso and divisions.
Honduras				
Nicaragua				
Salvador				
CHILE	Gold ----	Peso ----	.365	{ Gold—Escudo (\$1.825), doub- loon (\$3.650), and condor (\$7.300). Silver—Peso and divisions.
COLOMBIA	Silver ----	Peso ----	.403	{ Gold—Condor (\$9.647) and double condor. Silver—Peso and divisions.
CUBA	Gold ----	Peso ----	.926	{ Gold—Centen (\$5.017) al- phonse (\$4.823). Silver—Peso.
ECUADOR	Gold ----	Sucre ----	.487	{ Gold—10 sucres (\$4.8665). Silver—Sucre and divisions.
HAITI	Gold ----	Gourde --	.965	{ Gold—1, 2, 5, and 10 gourdes. Silver—Gourde and divisions.
MEXICO	Silver ----	Dollar --	.437	{ Gold—Dollar (\$0.983), 2½, 5, 10, and 20 dollars. Silver—Dollar (or peso) and divisions.
PERU	Gold ----	Sol ----	.487	{ Gold—Libra (\$4.8665). Silver—Sol and divisions.
URUGUAY	Gold ----	Peso ----	1.034	{ Gold—Peso. Silver—Peso and divisions.
VENEZUELA	Gold ----	Bolivar --	.193	{ Gold—5, 10, 20, 50, and 100 bolivars. Silver—5 bolivars.

Paraguay has no gold or silver coins of its own stamping. The silver peso of other South American Republics circulates there, and has the same value as in the countries that issue it.
